Blai Guarné
Stanford University, United States & Universitat Autònoma de Barcelona, Spain [0668] No Paper

**9. ACAH - Session Topic: Arts: Interdisciplinary - Panel A
Friday 9:00-10:30**

Session Chair: Bojan Milan Koncarevic

Allied Art Advisors and the Confiscation of Japanese War Art

Vincent Louie Tan
Kyoto Institute of Technology, Japan [0434] p. 90

Gray House, Black House: Japanese House 5 centuries before Le Corbusier 5 points

Bojan Milan Koncarevic
Tokyo University, Japan [0749] p. 100

**10. ACSS - Session Topic: Economics and Management - Panel A
Friday 9:00-10:30**

Session Chair: André Mellet

Environment Kuznets curve for GHG emissions: A panel co-integration analysis

Cho Chin-Ho
Chu Yun-Peng
Yang Hao-Yen
National Central University, Taiwan [0144] p. 122

The Simultaneous Evolution of Growth and Inflation

Chih-Chuan Yeh
Shu-Hui Wu
Overseas Chinese University, Taiwan [0772] p. 139

The challenge of South Africa to reduce its high unemployment

André Mellet
North West University, South Africa [0216] p. 162

FRIDAY SESSION 1 – 9:00-10:30

47. ACAH - Session Topic: Literature, Literary Studies - Panel E
Friday 9:00-10:30

Session Chair: Cansu Ozge Ozmen

East Meets West - the visual imagery of journeys.

Andrew Stark
Australia [0190] No Paper

An Account of the Travels in Asia of Sir Thomas Herbert
John Butler
University College of the North, Canada [0675] No Paper

Commodore David Porter's Constantinople and Its Environs: An Official and Personal Testimony by an Apologist for the East
Cansu Ozge Ozmen
Jacobs University, Germany [0155] p. 179

55. ACSS - Session Topic: Media and Communications - Panel A
Friday 9:00-10:30

Session Chair: Jennifer Stokes

Development of a Game for Collaborative Story Drawing on Facebook
Wei Hao Chuang
Chien Hsu Chen
National Cheng Kung University, Taiwan [0457] p. 188

Politics, Media and Youth: Political Efficacy through New Media
Qurratul Ann Malik
International Islamic University, Pakistan [0079] p. 198

Digital Limits: Global networks and the 21st century citizen
Jennifer Stokes
University of South Australia, Australia [0418] No Paper

81. ACAH - Session Topic: Religion, Spirituality & Ecology
Friday 9:00-10:30

Session Chair: Wen-Yan Chiau

The Awkward Position of "Earth" in the Chinese Trinity of "Heaven, Earth and Man"
Tao Jin
Illinois Wesleyan University, United States Minor Outlying Islands [0314] No Paper

Ecological Implications of Mahayana Bodhisattva
Wen-chung Huang
Tamkang University, Taiwan [0623] p. 209

Controversy over a biotechnology park in a sensitive wetland area of the 202 Arsenal of Taipei, Taiwan
Wen-Yan Chiau
National Taiwan Ocean University, Keelung City, Taiwan
Deputy Minister, Environmental Protection Administration, Executive Yuan, Taiwan [SP1] p. 227

FRIDAY SESSION 1 – 9:00-10:30

**95. ACAH - Session Topic: Teaching and Learning - Panel C
Friday 9:00-10:30**

Session Chair: Yasuko Okada

The effectiveness of two instructional methods on teaching Chinese speaking students with learning disabilities to learn to read

Fuk Chuen Ho

Hong Kong Institute of Education, Hong Kong [0158] No Paper

Reading non-academic texts in the EFL classroom

Yasuko Okada

Seisen University, Japan [0532] No Paper

Cultural Values Transmitted through Language Learning and Teaching

Amber Wang

National Taichung University, Taiwan [0385] No Paper

Poster Sessions

**102. ACSS - Session Topic: Education and Social Welfare - Poster Session A
Friday 9:00-10:30**

Service-Learning, Teacher Efficacy, and the Sustainability of Teacher Professionals

Trae Stewart

Kay Allen

University of Central Florida, United States [0634] No Paper

Plastic language elements and nonverbal communication in the intercultural context

Elena-Simona Indreica

Faculty of Psychology and Educational Sciences, Transylvania University of Brasov, Romania [0657] No Paper

FRIDAY SESSION 2 – 10:45-12:15

**2. ACAH - Session Topic: Aesthetics, Design - Panel B
Friday 10:45-12:15**

Session Chair: Chao-Ching Fu

Tokyo Fever in Taiwan: The De-contextualized Interpretation of Tokyo
Ya-Ling Yang
Chih-Peng Chang
National Kaohsiung University of Applied Sciences, Taiwan, Taiwan [0465] p. 238

Quality Survey of Movie-Based Games using the Kano Model
Elim Liu
Chih-Huan Hsu
National Tainan University, Taiwan [0552] p. 244

In search of Cultural Sustainable Architecture in 21st Century Taiwan
Chao-Ching Fu
National Cheng Kung University, Taiwan [0595] p. 263

**10B. ACSS - Session Topic: Economics and Management - Panel B
Friday 10:45-12:15**

Session Chair: Murad Ali

Indo Japan Trade Potentials in the Context of Bilateral Relations
J K Sachdeva
Meenu Sachdeva
Pillai's Institute of Management Studies and Research, India [0246] p. 275

The Octagon of Globalization: A Model and a Tool to Measure the Global Distance Between Two Countries. Case Study: Canada and the Asian Countries
Camelia Dumitriu
UQAM, Canada [0256] No Paper

War on terror, Pakistan and US bilateral aid
Murad Ali
Massey University, New Zealand [0311] p. 287

**17. ACSS - Session Topic: Education and Social Welfare - Panel A
Friday 10:45-12:15**

Session Chair: Abraham Yogev

Attitudes of Israeli Executive Students toward the University: Will the Public Save the Public University?
Abraham Yogev
Tel Aviv University, Israel [0113] No Paper

The Impact of the WTO on Higher Education in Taiwan
Hsin-yi Hsueh
National Sun Yat-sen University, Taiwan [0450] p. 303

**20B. ACSS - Session Topic: Education and Social Welfare - Panel D
Friday 10:45-12:15**

Session Chair: Wei-Ju Chen

The Correlates of the Parental Anxiety Test
May Shu Ying
Li Chen Tsai
Chen Hui Huang
National Chengchi University, Taiwan [0196] No Paper

What's the difference? Teachers' response in primary education between immigrants and native-born students in Taiwan
Wei-Ju Chen
Kai-Yuan Ho
National Chiayi University, Taiwan [0301] No Paper

FRIDAY SESSION 2 – 10:45-12:15

38. ACAH - Session Topic: Language, Linguistics - Panel A
Friday 10:45-12:15

Session Chair: Pakpoom Hannapha

Strategies in Dubbing American Films' Titles in Thai
Pakpoom Hannapha
Mahasarakham University, Thailand [0094] No Paper

A Geographical Look at the Word Geography of Thailand
Sirivilai Teerarojanarat
Kalaya Tingsabadh
Chulalongkorn University, Thailand [0133] p. 320

54. ACAH - Session Topic: Literature, Literary Studies - Panel K
Friday 10:45-12:15

Session Chair: Amin Malak

Orhan Pamuk between east and west
Henning Mathias Goldbæk
University of Southern Denmark, Denmark [0068] No Paper

Put Yourself in Their Shoes: Representations of terrorism in post 9/11 literature
Maria Diaconu
University of Heidelberg, Germany [0665] p. 334

Between the Artist and the General: Discursive Contrasts in Two War Memoirs on Baghdad
Amin Malak
Grant MacEwan University, Canada [0473] No Paper

56. ACSS - Session Topic: Media and Communications - Panel B
Friday 10:45-12:15

Session Chair: Habibe Ongoren

Partnering Bourdieu's theory with Guanxi: a study on TV work practices of Taiwanese TV producers in Mainland China
Shu Fei Chang
University of Queensland, Australia [0221] No Paper

He says, She Says: The dynamic rumour process on the internet forum
Yin Bai
Zeyi Hi
University of York, United Kingdom [0471] p. 344

The reflections of Turkish society's family values on the television series; the example of Yaprak Dökümü
Habibe Ongoren
Istanbul University, Turkey [0566] No Paper

FRIDAY SESSION 2 – 10:45-12:15

**61. ACAH - Session Topic: Media, Film Studies, Theatre, Communication - Panel C
Friday 10:45-12:15**

Session Chair: Xiaorui Xu

The Needs for Long-Distance Collaboration

Kuan-Lun Su
Chien-Hsu Chen
Tay-Sheng Jeng
National Cheng Kung University, Taiwan [0482] p. 354

Film and World's Sustainability

YC Chan
City University, Hong Kong [0193] No Paper

A journey to the West: a film auteur's response to globalization?

Xiaorui Xu
Southampton University, United Kingdom [0391] p. 360

**82. ACSS - Session Topic: Research Methodologies, Quantitative and Qualitative Methods
Friday 10:45-12:15**

Session Chair: Meg Carter

Environmental design model determining the effectiveness of autistic treatment in early childhood

Niphattha Noiprawat
Nopadon Sahachaisaeree
King Mongkut's Institute of Technology Ladkrabang, Thailand [0093] No Paper

Survey Studies and Qualitative Research: Uncovering Cover Stories

Meg Carter
Swinburne University of Technology, Australia [0348] No Paper

**96. ACAH - Session Topic: Teaching and Learning - Panel D
Friday 10:45-12:15**

Session Chair: Meng Feng Hsieh

EFL Learners' and Teachers' Beliefs about, and Strategy Use of, Translation in English Learning

Meng Feng Hsieh
National Changhua University of Education, Taiwan [0310] p. 371

Understanding English Research Articles: Using Genre-based Approach to Teach Thai Engineering Students to Read

Issra Pramoolsook
Suranaree University of Technology, Thailand [0525] No Paper

Adapting to change: A study on Taiwanese EFL teachers' teaching belief

Gregory Ching
Yu-Li Chen
Lunghwa University of Science and Technology, Taiwan [0530] No Paper

**103. ACSS - Session Topic: Education and Social Welfare - Poster Session B
Friday 10:45-12:15**

Developing an Adult Health Literacy Scale for Chinese in Taiwan

Frank Pan
Che-Long Su
Ching-Hsuen Chen
Tajen University, Taiwan [0678] p. 386

The effects of support group on dementia caregivers' burden, coping and depression

Kuei-Ru Chou
Yen-Hsueh Liao
Taipei Medical University, Taiwan [0135] No Paper

FRIDAY SESSION 3 – 12:30-14:00

**3. ACAH/ACSS - Session Topic: Aesthetics, Design & Globalization
Friday 12:30-14:30**

Session Chair: Laila Albassam

Beyond Typography – Inspired by the past, stimulated by the future

Jesvin Puayhwa Yeo
Nanyang Technological University, Singapore [0363] p. 408

The Impact of Modernization/Westernization on Traditional Dress Patterns

John S. Gaikwad
Mansour Lakooraj
University of Pune, India [0737] p. 419

Effects of cultural changes on jewelry in the age of globalization

Alia Alfadda
Princess Noura university, Saudi Arabia [0147] p. 441

The Art of Using Appliqué and Batch Work in Decorating the Traditional Costume of Saudi Arabia

Laila Albassam
Princess Norah Bint Abdulrahman University, Saudi Arabia [0487] p. 454

**18. ACSS - Session Topic: Education and Social Welfare - Panel B
Friday 12:30-14:00**

Session Chair: Lilian Ya-Hui Chang

Characteristics of Good Language Teachers: TESOL Teachers' Divergent Reflective Thinking

Lilian Ya-Hui Chang
Wenzao Ursuline College of Languages, Taiwan [0259] p. 466

Effect of technical training on the organization in manufacturing industries

Azad Abdul Kader
Narashiman K
Anna University, India [0472] p. 480

**57. ACSS - Session Topic: Media and Communications - Panel C
Friday 12:30-14:00**

Session Chair: Chien-Hsu Chen

Uncovering Hidden Needs of the Elderly through Social Computing

I-Fang Hsieh
Sheng-Fen Chien
National Cheng Kung University, Taiwan [0513] p. 494

A social communication device for the strangers who live nearby to the dormitory

Wei-Chung Tseng
Chien-Hsu Chen
Fei-Pi Chu
Chien-Huan Chien
National University of Tainan, Taiwan [0746] p. 502

The social capital and identity perspectives in virtual communities

Ho Kyoung Shin
Ho Lee
Ji Myoung Shin
Yonsei University, Korea, Republic of [0165] p. 513

FRIDAY SESSION 3 – 12:30-14:00

**60. ACAH - Session Topic: Literature, Literary Studies - Panel M
Friday 12:30-14:00**

Session Chair: Walid Ghabbour

East VS West: With Special Reference to E.M. Forster's "A Passage to India"

Adli Odeh

Walid Ghabbour

King Saud University, Saudi Arabia [0326] p. 524

Ana Spiric

University of Banja Luka, Bosnia and Herzegovina [0635] p. 568

The image of park. Spain vs Japan in a study on civics and everyday values

Patricia de Diego

Hitomi Tsujikawa

School of Architecture and Geodesy, Spain [0659] p. 585

**96B. ACAH - Session Topic: Teaching and Learning - Panel E
Friday 12:30-14:00**

Session Chair: Eiko Kawagoe

Acquisition of soft skills

Berrington Ntombela

Caledonian College of Engineering, Oman [0222] p. 597

E-learning for Medical English Education in Japan

Eiko Kawagoe

Kobe City College of Nursing, Japan [0332] No Paper

English Language and the Impact of Globalization in India

Sujatha Rao

Maniben Nanavati Women's College, India [0319] p. 609

FRIDAY SESSION 3 – 12:30-14:00

**97. ACAH - Session Topic: Teaching and Learning the Arts
Friday 12:30-14:00**

Session Chair: Mehmet Alan

Frigien (Kurdi) Mode Structure in Turkish Primary School Children's Songs
Mehmet Alan
Anadolu Universite, Turkey [0448] No Paper

Teaching English, Teaching Architecture, Teaching Identity
Thomas Cline
The University of Oklahoma, United States [0664] p. 624

The Use of Webblog Enhancing English Literacy in Globalization Society
Ornsiri Wimontham
Nakhon Ratchasima Rajabhat University, Thailand [0278] p. 634

**104. ACSS - Session Topic: Interdisciplinary - Posters Session C
Friday 12:30-14:00**

Nursing Students' Interpretation on Excellent Paramedics
Chang Chu-Ling
Hu Ting-Chen
HungKuang University, Taiwan [0369] p. 637

Evaluating the Possibility of Improving Conservation of the Genius Loci of Cultural Heritage in Taiwan by an Educational Program from the Experience of the National Park Service in America
Prof. Szu-Ling Lin
National Pingtung University of Education, Taiwan [0602] p. 648

Network Embeddedness and Relationship Learning on New Product Development Performance
Jung-Tang Hsueh
Hung Tzu-Hsuan
Yuanpei University, Taiwan [0242] p. 659

FRIDAY SESSION 4 & 5 – 14:15-17:30

ACAH/ACSS SPECIAL TOPIC: TAIWAN

When the West meets the East: How the Cultural Gap remains and transforms in Taiwan

FEATURED SPEAKER

Dr. Tien-Hui Chiang, Department of Education, National University of Tainan, Taiwan

The Influence of Sino-Culture on the Meanings of University Diplomas in Taiwan: The Cultural Gap between the West and Taiwan [687] p. 673

ACAH INVITED PANEL

Chaired by Dr. Tien-Hui Chiang, Department of Education, National University of Tainan, Taiwan

Relationships among Self-directed Learning Readiness, English Learning Motivation, and Learning Satisfaction of University Students in Taiwan

Professor Cheng-Ping Chang

Dr. Shu-Ming Hsieh

Center for Teacher Education, National Chi-Nan International University, Taiwan [0706] p. 757

Treating and Curing Diseases, and Trying Local Cases— the Written Records of the Dream Promises Chronicled by Scholars Themselves in the Ming and Qing Dynasties

Dr. & Assistant Professor I-Jung Lin

National Chi Nai University, Taiwan [0753] p. 769

The Study on Teacher evaluation for professional development policy implementation from Local Government and School Level Leadership

Dr. Juei-Hsin Wang

National Chiayi University, Taiwan [0317] p. 787

FRIDAY SESSION 4 – 14:15-15:45

13. ACSS - Session Topic: Economics and Management - Panel E
Friday 14:15-15:45

Session Chair: Niel Kenneth Jamandre

Urban Farmers Market Sustainability and its Potential as a Marketing Channel for Horticulture Producers: A Case Study of the Satok Weekend Market, Malaysia

Abdul Rahman Sali
Maria Fay Rola-Rubzen
Curtin University of Technology, Australia [0492] No Paper

Gasoline Prices and the Demand for Fuel-efficiency Automobiles: The Case of Taiwan

Jin-Long Liu
Yi-In Liu
National Central University, Taiwan [0514] p. 792

Communication Factors that Sustain Employability of Call Center Agents in the Philippines

Niel Kenneth Jamandre
University of the Philippines Diliman, Philippines [0235] p. 805

21. ACAH - Session Topic: Ethnicity, Difference, Identity - Panel A
Friday 14:15-15:45

Session Chair: Klaus-Jürgen Hermanik

Asian-Americans: Myth of the Model Minority

Shing Pang
University of Texas at Arlington, United States [0331] p. 818

Subversion or Subsistence? The Remains of the Empire in Nigeria

Farhana Bashar
East West University, Bangladesh [0228] p. 826

Asian Heritage within a European Nation: Examples of ambiguous Hungarian Ethno-Politics in a Globalizing World

Klaus-Jürgen Hermanik
University of Graz, Austria [0201] p. 857

58. ACSS - Session Topic: Media and Communications - Panel D
Friday 14:15-15:45

Session Chair: Emsie Arnoldi-van der Walt

The Role of Media on Political Confidence, Democracy Values and Civic Participation in Authoritarian China

Xinzhi Zhang
Hong Kong [0521] p. 866

New media and cultural sustainability through the arts in Singapore

Jodie Luu
National University of Singapore, Singapore [0420] No Paper

A postcolonial understanding of communication and management practices

Emsie Arnoldi-van der Walt
RMIT, Melbourne, Australia, Australia [0568] No Paper

FRIDAY SESSION 4 – 14:15-15:45

**63A. ACSS - Session Topic: Natural, Environmental and Health Sciences - Panel A
Friday 14:15-15:45**

Session Chair: Tara Schalk

Barriers to birth delivery among ethnic minority communities in central Vietnam

Cuong La

La Trobe University, Australia [0002] No Paper

Household Preferences of Drinking Water Service Improvements in Selangor, Malaysia: A Choice of Modeling Approach

Mohd Yacob

Akias Radam

Zaiton Samdin

University Putra Malaysia, Malaysia [0731] No Paper

Natural Resource Management in Australia: Making it More Effective

Tara Schalk

University of Canberra, Australia [0104] p. 893

**64. ACAH - Session Topic: Performing Arts Practices: Theatre, Dance, Music - Panel A
Friday 14:15-15:45**

Session Chair: Peikai Su

The Route to the West and the Way Back to the Native: The Historical Studies of Westernisation and Nativism of Taiwanese Modern Theatre

Peikai Su

Royal Holloway, University of London, UK [0445] p. 909

Where Shall We Two Meet, in East or in West: When Po-shen Lu's "The Witch Sonata-Psalm of Macbeth" Encounters William Shakespeare's "Macbeth"

Jui-sung Chen

Shin-yi Lee

National Chung Cheng University, Taiwan [0461] p. 914

**84. ACAH - Session Topic: Sexuality, Gender, Families - Panel A
Friday 14:15-15:45**

Session Chair: J. Edgar Bauer

Gender and Sexual Inequality of Adolescents in Thai Society

Jakkrite Pinyaphong

Uttaradit Rajabhat University, Thailand [0036] p. 928

Maria Beisert

Raffles Education Corp College, Singapore [0546] No Paper

FRIDAY SESSION 4 – 14:15-15:45

**85. ACAH - Session Topic: Sexuality, Gender, Families - Panel B
Friday 14:15-15:45**

Session Chair: Ramona Vijeyarasa

Women with physical disabilities and their able-bodied community: Lessons learned from Thailand
Theeraphong Bualar
Silpakorn University, Thailand [0357] p. 945

Perception of Satisfaction with Schizophrenic Patient's evolution after a Psycho-educational Family Program
Alejandra Caqueo-Urizar
José Gutiérrez-Maldonado
Marta García-Ferrer
Universidad de Tarapacá, Chile [0653] p. 974

Vietnam's MDG report card: An assessment of progress on reproductive health
Ramona Vijeyarasa
University of New South Wales, Australia [0082] p. 981

**105. ACSS - Session Topic: Research Methodologies, Quantitative and Qualitative Methods - Poster Session D
Friday 14:15-15:45**

Application of Linear Matrix Model to Adaptation Process of Bosnian Refugees in the U.S.
Hisako Matsuo
Ian Redmount
Ajlina Karamelic-Muratovic
Wai Cheah
Lisa Willoughby
Saint Louis University, United States [0405] p. 966

Meta-Analysis of the Critical Success Factors for the Students' Game-Based Learning Efficiency
Chun-Tsai Wu
Shao-Shiun Chang
National Changhua University of Education, Taiwan [0453] p. 1002

FRIDAY SESSION 5 – 16:00-17:30

**ACAH Special Poetry Reading & Workshop
Friday 16:00-17:30**

Poetic forms in Literature: 'From the Ganga to the Tay'
Bashabi Fraser
Napier University, UK - No Paper

**14. ACSS - Session Topic: Economics and Management - Panel F
Friday 16:00-17:30**

Session Chair: Kannika Leelapanyalert

Goal setting and unethical behaviour: Exploring some side effects of goal assignment among Hong Kong Chinese
Darius Chan
Vikki Law
The Chinese University of Hong Kong, Hong Kong [0554] No Paper

An exploratory research of matching and networking in the international entry process to China
Kannika Leelapanyalert
Birkbeck College, United Kingdom [0764] p. 1017

State Weakness and Corruption: A Direct Test
Liangliang Jiang
Simon Fan
Chen Lin
Lingnan University, Hong Kong [0444] p. 1039

**22. ACAH - Session Topic: Ethnicity, Difference, Identity - Panel B
Friday 16:00-17:30**

Session Chair: Paula Torreiro Pazo

East Meets West: European and North American Scholars and Experts in Early Republican Turkey
Murat Ergin
Koc University, Istanbul, Turkey [0303] No Paper

"Shakespeare" Among Many Englishes
Gabriel Fajar Sasmita Aji
Sanata Dharma University, Indonesia [0239] p. 1079

Bok Choy and Peanut Butter: Food and Generation Gap in Leslie Li's "Daughter of Heaven"
Paula Torreiro Pazo
University of A Coruña, Spain [0274] p. 1085

**63B. ACSS - Session Topic: Natural, Environmental and Health Sciences - Panel B

Civilisation, convergence, community

ACAH 2010 'East Meets West', ASIAN CONFERENCE ON ARTS AND HUMANITIES, Osaka, 18-21 June 2010

'Civilisation is in fact the longest story of all'. Fernand Braudel *The Identity of France: History and Environment*, tr. Sian Reynolds, 1988: 34

Everything that passes from hand to hand, or blood to blood, or mouth to mouth, such as coins or banknotes or syringes, becomes tainted by use. Words are no different. The meaning of *liberal, gay, discrimination, torture, Orientalism, and values*, for example, has been attenuated by uses which have narrowed their focus. On the other hand words and expressions like *political correctness, racism, Occidentalism, terrorism, and national security*, have been expanded to mean whatever their users want. 'Civilisation' hovers between being tainted, attenuated, and expanded, but ever since Samuel Huntington used it in his 1993 essay and 1996 book, the idea of a *Clash of Civilisations* has stopped many people and made them think: why?

The word 'Civilisation', and the various things that people use it to mean, is only part of the answer, as I will show. The word 'Clash' is another.

For a millennium and a half, Westerners became satisfied that their civilization was superior to all others, the antithesis of 'barbarism', and many even saw it as singular and universal, progressing on an endless upward trajectory - the 'march of civilisation'. But colonialism was hardly 'civilised', in spite of the claims made by the colonizers about their civilizing mission. Colonisation is in effect 'the submergence of one civilization by another'. (Braudel 1988: 33) So when 120 years ago, some Asian countries, most of them colonized, began to claim that their civilizations were superior to and more ancient than anything in the West, and hence deserved equal respect, they were disparaged, in terms that we still hear used today. Huntington warned that although the impact of Western civilization on all others had been overwhelming, it had been in decline since the early twentieth century, would face competing civilizations in the 21st century, and its decline could be terminal. (Huntington 1996: 302) As Asian societies gradually converge towards a community, Huntington's proposition that a Clash between them and the West is inevitable continues to resonate. Some leaders in Asian countries welcomed it as providing validation of their exasperation with the West and distaste for its values. Today, the Clash deserves re-examination as competition emerges between an East Asian Community to be composed of East Asia hemisphere countries, and an Asia Pacific Community to include the United States and possibly others.

In order to appreciate what is happening, it is important to remind ourselves that the history of Asian regionalism is much longer than many realize. I will do so with reference to Huntington's Clash in each

of three stages: civilization, convergence, community. I will end with a speculation about civility, which is not what the Clash envisaged.

Civilisation

‘Asia is one’, a Japanese cultural historian daringly declared in 1903. Okakura Kakuzō foresaw civilisational streams flowing together in a great commingling Asian flood. Since the late nineteenth century Japanese and Indian scholars had urged the West to acknowledge that the Asian cultures and ancient civilizations that imperialism had displaced deserved respect on equal terms. Swami Vivekananda, at the World’s Parliament of Religions in Chicago in 1893, asked his ‘brothers and sisters of America’ to abandon their mission to convert the ‘heathen’ and acknowledge the spiritual brilliance of Asia, as did a Ceylonese Buddhist, Anagarika Dharmapala and a Japanese Buddhist, Hirai Kinzō. (Snodgrass 2003: 183-237) Hirai and other Buddhist revivalists argued that by embodying the truth and wisdom of Western philosophy and religion, Japanese Buddhism was not only superior to all others, but the most appropriate for the modern world. Soon afterwards, D.T. Suzuki began with great success to promote Zen to the West as uniquely Japanese, the basis of Japanese culture, and the essence of Buddhism. (Suzuki 1907)

But only Asia-enthusiasts in Western countries appreciated these messages, and their responses largely reflected their Western standpoints. Theosophists and Spiritualists perpetuated the Orientalist notion, *Ex occidente lex, ex oriente lux*, merely exchanging their preference from West to East, and devising their own synthesised faiths and practices. Those who were inspired by Edwin Arnold’s *The Light of Asia* included Australian writers, clergymen, and politicians: the novelist Marcus Clarke, for example, had already in 1877 envisaged ‘Australasia’ as a vast archipelago, an ‘Asiatic Mediterranean’. He didn’t know that this was also what the Japanese had in mind.

At the Columbian Exposition that hosted the 1893 Parliament of Religions, ‘Japan’s primary object was to challenge this Western presupposition of cultural superiority and protest the lowly position assigned to the Japanese in the hierarchy of evolutionary development’. (Snodgrass 2003: 2) Following the slogan of the great educator Fukuzawa Yukichi, ‘leave Asia, enter the West’, (Fukuzawa 1875) Japan had rapidly modernized, and by 1895 like Western powers had acquired colonies, in Taiwan, Korea, and Manchuria. Less than a decade into the Meiji era, Fukuzawa had urged Japan to seek full membership of the international community. To do so, he wrote, it would have to become a nation-state of self-respecting citizens with a sense of independence. Borrowing the Ching dynasty compromise *Ti-Yong* (‘Chinese learning for the fundamental principles, Western learning for practical use’), Japan reshaped it as *Wakon, yōsei* (Japanese spirit, Western technique). By proving that it could combine Japanese tradition with the best of Western modernity, while maintaining *Nihonjinron* (Japanese uniqueness), Japan was staking its claim to be respected and taken seriously, more than China could. Japanese applied hierarchies to everything, including to civilisations. So Fukuzawa in the late nineteenth century found Europe and the United States to be highly civilized, while China, Turkey and Japan were semi-developed, and Africa and Australia were ‘still primitive lands’. (Fukuzawa 1875: 17)

When in 1905 Japan defeated the Russian fleet it demonstrated, if not the imminent eclipse of Western civilization, at least the truth of Kenneth Clark’s adage: ‘All great civilizations, in their early stages, are based on success in war’. (Clark 1969) But in 1919 the Western victors of World War I disregarded Japan’s claim for equal status, fuelling the nationalists’ fervour for Japan to lead Asia against the West.

In the 1920s-30s young Japanese supported Sun Yat-sen and Huang Hsing's revolt against the Manchus, and Chinese, Indian, Burmese and Philippine nationalists joined in the effort to reclaim Asia that became the Pacific War. In 1940 the Shōwa Emperor declared that Japan would 'enable' all nations and races to assume their 'proper place' in the world. Japan then launched its military campaign to rid the region of Western colonizers – and replace them with Japanese ones.

A Kanematsu Gōshō survey in 1942 declared that Australia had always been part of Asia, as did other Japanese publications of the period, which urged Australia to join other Asian countries in seeking independence of Western domination. But Australia, having feared Japan for half a century, and being allied to Britain, was at the forefront of countries that denied Japan the status it sought. In 1939, the year Japan declared 'Asia for the Asiatics', Prime Minister Menzies stated: 'The British countries of the world must stand or fall together'. Both were monocivilisational assertions. But few in the United States or in alliance-bound Europe saw Japan as other than an exception to their rules about which countries were civilised. Having carved up Asia between them, they expected it to remain prostrate and exploitable. Huntington was right to point out that 'Every civilisation sees itself as the centre of the world and writes its history as the central drama of human history', and also to observe, citing Spengler, Braudel and Toynbee, that such monocivilisational views were losing relevance. (Huntington 1996:54-5) But he did so six decades later in what had become a war-torn century.

Convergence

On the three occasions in the second half of the twentieth century when unity through Asian identity was again advocated, political and economic convergence of Asian societies was more explicitly sought. Again, for different reasons each time, it was met by Western resistance or indifference.

After 1945, Indians anticipated an Asian Commonwealth and Asians saw the 'beginnings of a new era in Asian history'. Prime Minister Nehru called on countries represented at an African and Asian conference in 1947 to 'build a new Asia'. At Bandung in 1955, Indians and Indonesians instigated the Non-Aligned Movement, calling again for the 'Asianisation' of Asia and predicting 'some sort of Eastern Commonwealth' that would include 'the nations of awakening Asia'. (Nag 1957) Importantly, they merged the five elements of the Hindu *Pancasila* with ideologies of other member countries to form ten principles that centred on non-interference in each others' internal affairs and opposition to threats or acts of aggression against any country.

When in 1967 Southeast Asians formed ASEAN, these principles were in its founding document, and were also enshrined in the Treaty of Amity and Cooperation (TAC) in 1976. Seeking unifying discourses as their numbers grew from five to ten, the ASEAN leaders stressed the essential difference of Asia from the West, and the superiority of their traditions and values. Malaysian Prime Minister Mahathir convened a Commission for a New Asia in 1993, and then proposed an East Asia Caucus (Group) that some called 'Asia without the Caucasians'. Together with a co-author, Tokyo Governor Ishihara Shintarō, he claimed to be the 'voice of Asia', (Mahathir and Ishihara, 1995) and asserted 'East beats West'. (Mahathir 1995) Writing in the Australian press, he claimed that it was outrageous 'that Westerners should criticize our ways simply because they are not theirs'. (Mahathir 1996)

With Japan established in economic leadership of the region by the 1980s, Ishihara advocated saying 'No' to the West, (Ishihara 1991) and his book's title was echoed by nationalist writers in China. Anwar

Ibrahim in Malaysia called the regional revival *The Asian Renaissance* in 1996, advocating Western technology and Asian religious and traditional values in a blend that resembled early Japanese practice. The ASEAN countries, having steadfastly refused to let APEC overshadow their organization, now positioned themselves as the indispensable magnet to which the Northeast Asians, Japan, China and South Korea, were drawn. By the late 1990s, when Japan's economy and politics were stagnant, and China's were resurgent, ASEAN countries were anticipating the 'Century of Asia', and Kishore Mahbubani was proud to see Chinese seeking to emulate the Singapore model. The West was declining and increasingly irrelevant, he proclaimed in *The New Asian Hemisphere* (2008), and an East Asian Community that was forming.

Throughout the period, Western countries successively opposed the NAM, the New International Information Order, and ZOPFAN, Southeast Asian countries' attempt at a nuclear weapons free zone, and scoffed at its efforts at economic integration. Without acknowledging the wedges that their own colonization drove between Southeast Asian neighbours, they disparaged ASEAN as an ineffective, consensus-driven talk shop, and resisted signing the TAC. Huntington spoke for much Western opinion in criticising the 'the west versus the rest' agenda that he saw pitting the familiarities of America and Europe against the unknowns of the rest of the world. (Grant 2006) In his book he made brief and peripheral mentions of ASEAN, expecting little of the organisation, since regions are only a basis for cooperation among states 'to the extent that geography coincides with culture'. ASEAN didn't fit into Huntington's eight civilisations, since as Joan Grant observes, it was multicivilisational, not merely multicultural, and included what he calls Sinic, Buddhist, Christian and Muslim member states. Hence it could not succeed. The fact that ASEAN was not a military alliance and could not achieve defence cooperation was further evidence of its failure.

Similar critiques of ASEAN continue. Sydney's Lowy Institute director Michael Wesley admitted in 2009 that APEC had failed to deliver, but he saw ASEAN as fundamentally compromised and imperfect. It favoured 'developmental regionalism' while rejecting Western economic advice in order to sustain regional solidarity. He described an ongoing 'duel between Pacificism and Asianism' in which Australia and the United States were on the non-Asian side. (Wesley 2009)

Community

Since the 1990s, advocacy of an Asian *community* has grown. Yet still, the responses of some in the West evoke the attitudes that had been evident for over a hundred years: disdain for Asian civilisations, distrust of Asian convergence, and dismissiveness of Asian capacity to build a regional community.

From 1996 ASEM met to consider how Asian countries could adapt Europe's experience of regionalism. Australia tried to join the process and failed, largely because of the objections of Mahathir, who in 1998 said including Australia in ASEM would be 'like admitting Arabs to the European Union'. (*Sydney Morning Herald* 10 March 1998) Singapore's Prime Minister Goh Chok Tong said Australia would not be Asian for 80 years. Surprisingly, then, Australia is to attend the 2010 ASEM in Brussels on the Asian side.

In 2007 the ASEAN secretariat studied the future of East Asian regionalism, and defined the options as bringing the United States (and maybe Russia and other dialogue partner signatories of the TAC) into the East Asia Summit (EAS), and/or bringing India into APEC, but adding no new regional institutions.

Since then, some leaders in the region have made comments whose vagueness and hyperbole should not indicate a lack of reflection about an East Asia Community (EAC). On 14 January 2008, for example, Indian PM Manmohan Singh and Chinese Premier Wen Jiabao signed a 'Vision Document for the 21st Century', envisaging 'a harmonious world of durable peace and common prosperity'. As 'the two largest developing nations...representing more than one third of humanity', they accepted 'historical responsibility to ensure ...economic and social development of the two countries and to promote peace and development in Asia and the world as a whole'. (Nihal Rodrigo, December 2008) On 22 May 2008, Prime Minister Fukuda proposed that the Pacific Ocean should become an 'Inland Sea' of peace and development (scarcely mentioning Australia, New Zealand, or India). In August 2009 the US signed the TAC, as Australia had reluctantly done in 2008, removing one obstacle to its attendance at the EAS. Defense Secretary Gates had earlier stated that there would be no regional organisation without the United States. On 15 November 2009, Prime Minister Hatoyama outlined his initiative for an EAC, with no details on membership, emphasizing friendship and respect and open regional cooperation in a 'sea of fraternity'. (*Japan Reports*, Summer 2009-10: 3) Although China would clearly prefer an EAC composed of East Asian countries only, and is not likely to give up its current regional leadership, to include India, Australia, and New Zealand would be a trade-off for not bringing in the United States. Russian membership is another counter-balancing option, suggested in Thailand. (Kavi 2010)

On 4 June 2008, Prime Minister Kevin Rudd made a radical move, proposing that the region was facing challenges that the existing structures could not handle. He proposed a new organization for the Asia Pacific region, an Asia Pacific Community (APC), to be established by 2020, with membership not clearly specified, but to include the United States. In the face of polite skepticism in East Asian capitals, he scaled it back somewhat, and held a semi-official consultation with representatives of 22 countries in Sydney in December 2009, the result of which was an agreement to talk further. But seeking to accommodate the growth of China and India within a United States-led regional order is hardly innovative for Australia: Western protection against threats from Asia is what all Australian governments have sought since 1901. But because an APC would potentially overshadow ASEAN as APEC threatened to do, and could become a forum for American/Chinese competition, and because, as well, Rudd consulted his neighbours after making his announcement, not before, the Australian plan is unlikely to prosper.

Huntington was highly critical of Australian policies under Prime Minister Keating, which he warned would make it a 'torn country'. Australia's leaders were 'in effect proposing that it defect from the West, redefine itself as an Asian country, and cultivate close ties with its neighbours'. The last part of that was true, but not the first. Huntington asserted that 'Successful economic association needs a commonality of civilisation', which Australia did not have with Asia. But the coming Clash about which he was more concerned was between what he called the 'multiculturalists and the defenders of Western civilisation and the American Creed'. Revealingly, after being so tolerant of the rise of other civilisations, Huntington asserted that 'Whether the West comes together politically and economically...depends overwhelmingly on whether the United States reaffirms its identity as a Western nation and defines its global role as the leader of Western civilisation'. (Huntington 1996: 307-311)

Huntington confirmed in later work that he feared a Hispanic takeover of the culture of the United States. Multiculturalism, in his view, rejected America's cultural heritage, and its advocates wished 'to create a country of many civilizations, which is to say a country not belonging to any civilization and

lacking a cultural core'. A multicivilisational United States would not be the United States of his upbringing but something like the United Nations, so hated by American conservatives. (Huntington 1996: 308) That prospect led him to predict conflict, and almost to welcome its perpetuation as a way of reasserting American power: 'It is human to hate. For self-affirmation and motivation people need enemies: competitors in business, rivals in achievement, opponents in politics... The resolution of one conflict and the disappearance of one enemy generate personal, social and political forces that give rise to new ones'. (Huntington 1996: 130) It is not surprising that some commentators have detected in Huntington's *Clash* a promotional strategy for American arms sales. (Muzzaffar 1994) Having little familiarity with Asia, Huntington recoiled into a 'West versus the rest' position: 'Civilisations are the biggest "we" within which we feel culturally at home as distinguished from all the other "thems" out there'.

Civility

If this is the Century of Asia, its promise is more likely to be fulfilled if an 'Asian Renaissance' can occur. If only because conflict is counter-productive, soft power and civility will be more potent unifiers of people than the contending forces of politics and economics. Regional interchange in the arts and humanities, much of it funded by Japan, has much potential for expansion. Australia too has potential, as yet unrealized, to make itself interesting, relevant, and the best informed country on the affairs of the Asian region.

Southeast Asia scholar Anthony Milner urges a dialogue of difference that does not ignore or silence other views, either inside the region or among its outside observers. He recommends a more sympathetic attitude towards 'the painstaking, culture-sensitive, norm-focussed, region building that has been going on in ASEAN'. The slow process of consensus-forming and conflict avoidance, Milner argues, involves not only formal structures but reliance on 'kinship, kinlike relations', non-interference, and 'sublimating and diffusing conflicts' as well as resolving them. (Milner 2003) This is the often-derided 'ASEAN Way', which ideally recognises diversity, identity and integrity, but requires the suspension of exceptionalism and exclusive claims to truth. (Oakeshott 1962: 304)

Whether the ASEAN Way is the way of the 21st century, and the way out of endless armed conflict, will depend upon the success of the 'dialogue of difference'. (Niall Ferguson, quoted by Ikenberry 2009) It will gain from the experience of Europeans in deliberately evolving beyond war. It will also depend upon how the United States, including Huntington's successors, respond to the fact that the 20th century has seen both 'the descent of the West' and a re-orientation of the world to cede mastery to the East.

Eastern influences in Western Modernism - multiple faces of International Style

Barbara P. Jekot

Department of Architecture, University of Pretoria, South Africa

This study does not focus on the history of buildings and urban developments, but instead on the patterns of inspiration and the implementation of specific Eastern ideas in architecture and social patterns that influence the Modernism initiated by the Western world. It deals with the theme of the intersection of influences that may emanate from fascination as well as notions of progress and the implications of international attitudes. This study culminates in the search for international architectural and social values that were contributed to by both East and West. The proposed investigation intends to illustrate the different opinions of East and West as well as openly playing with apparently divergent points of view that could lead to a more balanced and creative society. The intention is to introduce the implications and interconnections of East and West using empirical evidence drawn from international conditions.

Modernism, defined as ideas that are contrasted with earlier ideas and methods [Sinclair 1987: 930], was a rejection of the tradition of the ‘codified’ form of expression. Modernism stressed freedom of expression, experimentation, radicalism, and primitivism and a disregard of conventional expectations. Somehow the label Modernism was applied to a tired Western artistic tradition. Modernism was influenced by other (traditional?) cultures. Many artists found what seemed like an ‘uncodified’ form of expression in non-Western cultures. The ‘civilised’ sought for inspiration by tracking ‘uncivilised’ cultures that were seemingly uncluttered by the weight of tradition. Mostly African and Asian cultures were introduced as discoveries when Europe colonised the world. The world witnessed the rise of modern industrial capitalism and the emergence of organised political dominance. Powerful nations established large colonial empires at the turn of the nineteenth and the beginning of the twentieth century. The criticism of their tendency to turn a cross-section of people into faithful servants of the colonial administration was suppressed by the image of an imperial power improving the lives of the ‘natives’ in the colonies. The world divided into powerful principally Western dominant nations versus powerless, traditionally rooted and mainly non-white dominated societies.

Modernism evolved during the peak of European colonial empires – although this is seldom acknowledged. Did Modernism mark the empires’ end or their continuation by other means like globalisation? Modernism spread from Europe to America and was acclaimed as international, but the history of how it spread and how it was translated to the rest of the world is fragmented. In addition, the term ‘*international*’ has been implied rather than articulated. Does it stand for a world culture unconstrained by national ties or global technological development? Somehow the non-Western world has been ignored in the standard histories of Modern architecture. According to many mid-twentieth century statements, Modernism was credited with the salvation of the underdeveloped [Crimson 2003: 1-3].

Japan, representing the East, was strong enough to stop the relationship of unequal cultural and socioeconomic exchange. Driven by the desire to create a more favourable image in the West, Japan participated in series of exhibitions in Europe and America. The largest international exposition (the Japan-British Exhibition in 1910) that the Empire of Japan participated in was a demonstration of products that would lead to a more favourable image in the West and in return an increased transfer for the East. The Japanese were interested in convincing the public that they were equal to any Western nation, worthy of being considered a modern and civilised nation, and that by following in imperial footsteps they were influencing and improving other territories so

they added displays about Taiwan, Korea, Kwantung and the Ainu from Hokkaido. The intention was to illustrate the progression and present their highly developed civilisation. Japan succeed and obtained favourable reviews in almost all British newspapers that focussed on manufactured goods, fine arts, crafts and gardens, although negative reviews dominated Japanese newspapers. The exhibition caused a lot of pressure and generated many different expectations in the West and the East when translating the East to the West. ‘The Japan-British Exhibition’ in 1910 (figure 1) was dominated by Japan and the exhibition is widely known in the West as ‘the Japanese Exhibition’. The Japanese intangible (emotional) and tangible (physical) factors/remedies were highly appreciated by the West and left a lasting mark on this new territory (figure 2). The exhibits were partially sent to international exhibitions in other European cities (like Dresden and Turin in 1911), partially presented to institutions or moved to the Kew Gardens in Britain (like the Gateway of the Imperial Messenger) where they still can be seen. Many valuables were sent back to Japan. The idea of modernisation from the West was faced with a strong Eastern representation of its worldview and modern vision and provided evidence that the East had the capability to invent and produce without assistance from the West.

The influences and inspirations rooted in the traditional Japanese architecture powerfully represented the East in the West during the Modernist era – particularly in Frank Lloyd Wright’s architecture – have been a recurring source of discussion from the 1900s to the present. The role of traditional Japanese art and architecture in the work of Frank Lloyd Wright has been illustrated in a book by Kevin Nute [2000: 5-256]. The study of the creative process and the fruitful interaction of two great Western and Eastern cultures through a mixture of textual and drawn analyses are comprehensively referenced. The book presents the extent of Frank Lloyd Wright’s formal and philosophical debt to Japanese culture when examining channels of influences starting from Japanese prints (woodblock prints and the geometric abstraction of the natural), following by specific individuals and publications on the ‘organic’ nature of Japanese art and architecture. The aesthetic and social ideals of the East are presented. Analogies with Japanese built-forms are a confirmation of the universal manifested in the particular in aesthetic line-ideas in the composition of pictures, patterns and plans.

Frank Lloyd Wright was practising architecture in Chicago when Japanese architecture was on display at the Chicago World’s Fair in 1893. He had been collecting Japanese prints for more than a decade before his first trip to Japan [Kaufmann 1966: 292] in 1905. In 1902 Wright

designed a home for a prosperous businessman, Ward Willits, that clearly betrays the influence of Japan. He longed to visit Japan and this was made possible when Willits who journeyed with him financed the trip [Gill 1987: 135]. Wright documented his architectural legacy before his trip to Japan, completing the extraordinary Larkin Administration Building in Buffalo in 1904 proving his flair as an architect and that the established Chicago style of the commercial architecture no longer led the field [Kaufmann 1966: 292]. In 1905 after his trip to Japan, he built two homes and the Unity Temple (figure 3 and 4) that have remained notable among Wright's designs.

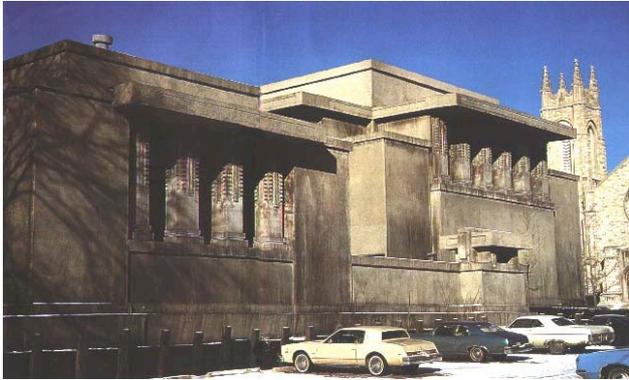

Figure 3. Unity Temple Oak Park, Chicago, Illinois, 1905

Figure 4. Interior, Unity Temple Oak Park, Chicago, Illinois, 1905

Frank Lloyd Wright was very strongly influenced by Japan, but it is also necessary to admit that he had many external influences. Between 1909 and 1911 he travelled to and appreciated the architecture of Germany, Austria, Italy and France and he was influenced by the British Arts and Craft movement. He also looked to native US cultures for inspiration. When analysing his houses built in early 1900s the Japanese influence is visible, but at least two more influences can be identified, namely the Swiss Chalet style and the Tudor style. These three styles could have clashed if it were not for Wright's contemporary, highly individual personality and the tradition they all employed of using exceptionally heavy methods of framing [Gill 1987: 133-4].

In the early 1900s most American architects looked to Europe and European architects for inspiration. Frank Lloyd Wright did so as well, but Japan and Japanese design and art were more inspiring to him, although he also visited Europe. He collected and put on exhibitions of Japanese art. His interest in the Japanese lifestyle, approach to design and talent granted him important clients in Japan (figure 5), although it remains a mystery how he gained the commission to design the Imperial Hotel in Tokyo (figure 6 and 8) while he was working in obscurity. At the time he did not get the right clients to expose and communicate his increasing architectural knowledge and creativity/innovations; he was designing buildings that no one had asked him to design and many of them were never built. An act of nature in Japan helped revive his career in the early 1920s. When things in America did not work out as he had hoped, he went to Japan. The design for the Imperial Hotel that he had prepared in America and took with him to Japan was more playful in feeling and less exotic in look than the design he developed in Japan and according to which the building was constructed. The Japanese expected to get something American and Americans visiting the hotel expected something Japanese (figure 7) and the building was neither. If it was anything, it was Mayan [Gill 1987: 256-261]. The architecture that he admired included the Minoan architecture of the island of Crete, but he considered the ancient Greek architecture 'largely a sham' because it was not sufficiently sensitive to the natural

environment, largely not responsive/sensitive to native materials, and the form had no real connection with the function (the opposite to the Modernist approach).

Wright's work on the Imperial Hotel was an attempt to not only embody merely the sense of Japanese style in the style of the hotel, but also to embody what he called the Japanese's sense of themselves. The bedrooms of the hotel were small (to American standards and based on their experience compared with the size of a ship's cabin), but because much of the furniture was built-in, they struck a snug note (that was part of Japanese tradition) [Gill 1987: 257]. The public spaces of the Imperial Hotel were commented on as overpowering and more than a trifle foreboding. Wright was warned by the Japanese that the highly porous and incapable of being waterproofed lava-stone – *oya* in Japan – was rarely made use of for building purposes. Characteristically, he brushed the warning aside and embraced the *oya* for aesthetic reasons – proving his passion for native materials.

The Imperial Hotel was a freak offspring of the genius of Frank Lloyd Wright who was strongly interested in innovation. The foundation of this building was structurally designed to float allowing it to balance like a tray on a waiter's fingertips. His innovation allowed the hotel to survive the devastating earthquake of 1923 [Gill 1987: 257], but it was dismantled in 1967. From the beginning he was aware that earthquakes were common in Japan. However, the Japanese approach was different - they historically protected themselves by erecting structures of light wood and paper that were easily rebuildable - but such an approach was impractical for his design for the hotel. The experience of '*the terror of the temblor*' (a wave move-movement – not of sea but of earth) never left him while he worked on the design for more than four years [Wright 1943: 214-216]. Wright claimed that long piles would oscillate on a rock structure and therefore the foundation should be short or shallow. The reflecting pool in the front of the main entrance was threatened with being withdrawn from the plans (because of its high cost), but Wright argued for keeping it as a ready source of water in case of fire. The water in the pool was put to a good use when the earthquake and fire in 1923 devastated Tokyo. Wright's innovations prove that he was not 'borrowing' but 'lending' and not 'taking' but 'giving'.

The drawings above (figure 7 and 8) illustrate Japanese printing and the Imperial Hotel drawn by Wright. The architect became quite taken with Japanese printmakers who in his eyes caught the essence of natural materials in a rare and beautiful fashion. He collected views of Japanese landscapes as well. His photographs taken during his first trip to Japan were published in book form (figure 9).

10 Credit: http://designmuseum.org/media/item/4949/-1/116_3Lg.jpg architect: Frank Lloyd Wright (Access: 01.03.2010)

Frank Lloyd Wright's work (figure 10) as one of the master builders of modern architecture appeared alongside architects like Walter Gropius, Le Corbusier and Mies van der Rohe in the International Style Exhibition at the Museum of Modern Art in 1932. They stressed the interdependence of form and function. Walter Gropius acknowledged that he was influenced by Frank Lloyd Wright. Frank Lloyd Wright did not return the complement. In his opinion, the work of Modern architecture was impersonal, cold and sterile. While he rushed to embrace nature, he believed that modernists turned their back on it. For him modern cities were unnatural with skyscrapers blocking out the sun and light. His distinctive nature adored organic architecture and he had great faith in democracy [Wright on line]. He hoped to reform society through architecture by designing buildings that aimed to improve the morale and productivity of people (in particular, the Johnson Wax Building built in 1936 strove to achieve this).

Figure 11. Johnson Wax Building, 1936

(Access: 08.03.2010)

When talking about architecture that:

- is never treated in isolation from the external environment,
- uses planters and pots/urns to soften the hard edges of the building,
- breaks the division between inside and outside,
- expands fenestration inviting nature inside,
- pays great attention to lighting, heating, and climate control,
- is sensitive to its surrounding and rich in emotion,
- unites space and creates an intimate space,
- captures the warmth and designs a place for keeping an open fire,
- is interested in familial rather than in individual privacy,
- creates harmony within the home,
- uses horizontal lines to form domesticity,
- has furnishings that are not to be viewed apart from one another or the home,
- takes all internal details (including the furnishings, light fittings, rugs, pots and art) as one design,
- uses native materials in their natural form for the exterior and interior,
- is built with materials that have the stamp of authenticity upon them, and
- is confident with a sense of national identity

are we talking about Frank Lloyd Wright's architecture (figure 11) or traditional Japanese architecture? Do not think in images but in ideas and judge how deep these features are rooted. Was it mastered by Wright or by traditional Japanese architecture?

The opening of Japan to the West at the end of the nineteenth century generally led to the adaptation of Western architecture in which forms were introduced following the design along European classical lines. Notable buildings which still exist today include the Tokyo Train Station (figure 12) and the National Diet Building.

After World War I the Japanese began to make their own original contribution to the International style in Modern architecture. During the pre-World War II period the pseudo-European (*Giyōfū*) architecture flourished. The style outwardly resembled Western construction, but was executed using traditional Japanese techniques. The mimicking architecture disappeared as knowledge of Western techniques became more widespread and modernists emerged. Kunio Maekwa and Junzo Sakakura joined Le Corbusier's studio in France. In the early 1930s they returned to Japan and started practising architecture. The influence of Modernism spread to Japanese architecture. This caused bilateral East West and West East amazement. The German modernist and expressionist, Bruno Taut, visited and reviewed the Katsura Imperial Villa (figure 13) – often described as the 'quintessence of Japanese taste' – in 1933. His admiration and later visits by pillars of the modernist establishment, Le Corbusier and Walter Gropius, and their fascination by Katsura's 'modernity' gave Japanese modernist architects confidence. Katsura stunned the architectural community of the West. His modular and orthogonal spaces, devoid of decoration were lauded as a 'historical' example of Modernity and showed clear parallels to essence of Modernism. A marked characteristic of Modernism is the tendency towards minimalism and social improvement [Sinclair 1987: 930]. The simplicity of Eastern architecture (figure 14) influenced the codification of a modern architectural vocabulary. The modern architects were not only changing architecture, but also questioning old authorities - they wanted to change the world and make it better. Eastern architecture and lifestyle are good motivations for social improvements in the Western world.

Traditional Japanese woven mats (figure 13), *tatami* (meaning ‘folded and piled’), are made in uniform sizes that differ slightly between different regions in Japan [Tatami online]. Rules concerning the etiquette of seating and sleeping determined the arrangement of the *tatami* in the rooms (figures 15 and 16). The mats must not be laid in a grid pattern and in any layout there is never a point where the corners of three or four mats touch. In Japan, the size of a room has been measured by the number of *tatami* mats. The measure reflects the number of beds/mats to sleep on [Osamu 1994: 58-62].

The measure based on the number of mats on the floor is illustrated in the Le Corbusier's Modulor (figure 17 and 18) – his system for scale and architectural proportions. It was a more complex system and was a continuation of the long Western tradition of Vitruvius, Leonardo da Vinci's ‘Vitruvian Man’ (figure 17) and the work of Leon Battista Alberti. The proportions of the human body were used to improve the appearance and function of architecture. Le Corbusier explicitly used the golden ratio/section in his Modulor system for the scale of architectural proportion. The Japanese system is simpler and concentrates on improving the functionality of architecture rather than the design philosophy and faith in the mathematical order of the universe.

Maekawa Kunio (a student of Le Corbusier) and Kenzo Tange produced thoroughly international functional modern works. Tange first worked for Maekawa and supported this concept in his early career (but later fell in line with Postmodernism). Both architects were notable for infusing Japanese ideas into contemporary buildings, integrating gardens and sculpture into design, implementing traditional Japanese spatial concepts, and using the modular proportions of *tatami*. They used textures to brighten the ubiquitous concrete and steel. Tange followed the Le Corbusier tradition and then turned his attention toward the further exploration of geometric shapes and cubic silhouettes. He amalgamated Western high-technology building concepts with peculiarly Japanese spatial, functional, and decorative ideas to create a modern Japanese style. He applied the cantilever principle in a pillar and beam system reminiscent of ancient imperial palaces. Japanese traditional monumental timber structures became fundamental to his designs. Tange's National Gymnasiums for the Tokyo Olympics in 1964 (figure 20) are a dramatic expression of form and movement. The contrast and blending of pillars and walls and the sweeping roofs recalls the *tomoe* (an ancient Japanese abstract whorl-shaped heraldic symbol) – which resembles a comma and is a common design element in the family of Eastern emblems in Korea (*sam-taegeuk*), Tibet (*Gankyil*) and China (*yin-yang*) (figure 19).

Japanese aesthetic principles reflect Buddhist spatial ideas too. The architectural concept of the 'metabolism' of convertibility (dominant in the 1970s) provided for changing the functions of parts of buildings appropriate to their use, and continues to be influential.

Isozaki Arata, known mostly for his pioneer design of the New Wave of the late 1970s and 1980s and originally a student and associate of Tange, had a fondness for the cubic grid and the trabeated pergola in large-scale architecture. A number of striking variations in domestic-scale buildings and elongated buildings, such as constructing semicircular vaults and extended low

barrel vaulting, brought him wide recognition; his designs influenced architects of the 1980s. They modified and reconsidered the formal geometric structural ideas of Modernism by introducing metaphysical concepts and producing fantasy effects in architectural design. In contrast to these innovators, Tadao Ando represented an experimental poetic minimalism and expressed concerns for a more humanistic and balanced approach rather than the rigidity of formulation found in structural Modernism. His buildings provided a variety of light sources and spaces opening up to the outside air. He adapted the inner courtyards of traditional Japanese architecture. These ideas were widely applied in the 1980s when buildings were commonly planned around open courtyards often with stepped and terraced spaces, pedestrian walkways, or bridges connecting building complexes.

Japanese architects incorporated Western innovations into architecture combining traditional and modern styles after World War II when the need to rebuild stimulated Japanese architecture. With the implementation of Western building techniques, materials and styles, a new steel and concrete architecture was acquired which offered a strong contrast to traditional Japanese architecture. With the rapid growth of cities, steel mostly replaced wood (which is easily flammable in the case of earthquakes and bombing raids). Japanese cities sprouted modern skyscrapers reflecting the absorption/integration and transformation of modern Western forms. Japan played an important role in the modern cantilever design because of its long familiarity with this type or structural principle associated with supporting the weight of heavy tiled temple roofs. Frank Lloyd Wright was strongly influenced by Japanese cantilevers as well as spatial arrangements and the concept of interpenetrating interior and exterior spaces, which has been long achieved in Japan by opening up walls made of sliding screens.

The international strength of Eastern and particularly the input of Japanese architects (Kenzo Tange, Tadao Ando and Shigeru Ban) who produce important structure not only in their country of origin, but also abroad were awarded medals from the France's Prix de L'académie D'architecture. Three Japanese architects (Kenzo Tange, Fumihiko Maki and Tadao Ando) were awarded the Pritzker Architecture Prize (the equivalent of a Nobel Prize in architecture) to honour their talent, vision, commitment, and consistent and significant contributions to humanity and the built environment. These architects proved that they always have something individual and in-depth to contribute to world architecture and humanity. They were not only skilled practitioners in the modern idiom, but also enriched designs worldwide with innovative spatial perceptions, unusual use of materials, subtle surface texturing and an awareness of ecological problems.

Shigeru Ban is known around the world for his innovative work with paper, particularly recycled cardboard paper tubes (figure 21 and 22), to construct buildings and bridges. He was profiled by *Time* Magazine for his innovations in the field of architecture.

Japanese architects strongly represented the East by creating outstanding international architecture, influencing others and having their own identity. Only in later accounts do Modernist pieces become bridges from the West to ‘approved/trained’ non-Western architects [Crinson 2003: 1-3]. Somehow the non-Western influence has been disregarded in the standard histories of Modern architecture and little room was left for real dialogue to take place between East and West in the mid-twentieth century.

The public appreciation of Japanese culture and the East became a fascination which many individuals admitted more or less openly. The discussion about influences and inspiration can provoke a lot of disputes. Sometimes influences and inspirations are openly stated by the individuals and movements, sometimes they are elaborated on by critics, but usually they are very complex and have a life of their own. When Frank Lloyd Wright was 26 years old when he practised architecture in Chicago and Japanese architecture was on display at the Chicago World’s Fair in 1893. He had been collecting Japanese prints for more than a decade before his first trip to Japan and he designed a home that clearly betrays the influence of Japan. He consistently rejected suggestions that Japanese architecture had any direct impact on his work. Wright maintained that he found in Japanese culture not the inspiration but the confirmation of his own organic design principles [Nute 1994: 169]. Wright denied that his love for Japanese art had influenced him. Any claim that he adapted Japanese forms were vehemently rejected as a false accusation. In contrast, Picasso openly claimed that the ‘virus’ of African art that struck him in Paris in 1907 (when he was 26 years old) stayed with him all his life although he never travelled to Africa. Only 100 years since Picasso's first encounter with African art, the exhibition in South Africa has been the strongest statement formalising the acknowledgement of the substantial influence of African art on Modernism [Martin 2006: online].

The East and Japan in particular have been described as an inspiration to Modernism proving that simplicity, human factors and a deep understanding of our natural environment should be the starting point of any design. The East has a lot to offer and communicates better and better, inspiring and adding real value to West. The Eastern interpretation and transformation of Modernist ideas illustrates a comprehensive understanding of nature combined with spiritual intensity. This spiritual intensity is not easy to investigate, explain and prove using formal, aesthetic and stylistic principles - it is more profound than that – it has a beauty springing from the deepest resonance of man and nature and the ability to translate the poetic essence of a place into form. Picking and choosing from ‘others’ may be intellectually stimulating, but the other cultures should speak for themselves and should not be understood solely through Western interpretation.

**What makes women's life sustainable?
Investigating on Abortion Issues in Cambodia**

Pascale Hancart Petitot

Amsterdam Institute for Social Science Research (AISSR)

Background

Twenty years ago, Feierman et Janzen document how the global interdependence of health determinants leads to the fact that any mortality and morbidity rates found locally is, at least partly, the result of political and economic international relations (1992 in Fassin 2001). Following this view, Fassin (Ibid.) also document how widely health becomes the subject of concern for states, of negotiation and conflict between international, national or local collectivities. He states that health is an object of public concern as well as a shared expression of recognition of health as a principle of legitimacy. Pushing further this proposition he argues that the imposition of bio legitimacy (as the power of life and not the bio power, the power over life as defined earlier by Foucault) as “become a crucial issue in the moral economies of contemporary societies” and “a generalized mode of governing.” The imposition of bio legitimacy results also in “deciding the sort of life people may or may not live” and such lead to define what he calls “bio inequalities”.

Using this theoretical framework, my aim is to explore various concerns related to maternal mortality as an example of “bio inequality” by excellence. Indeed, according to recent estimates, an absolute number of 529.000 women die each year during pregnancy, childbirth and within 40 days after birth. 99.6% of these women live in developing countries and in economic and social contexts where access to care is limited. Of all the health indicators monitored by the United Nations, Maternal mortality is also the biggest discrepancy between developed and developing countries (Main 2000). Since more than half centuries, many initiatives have been undertaken by various actors and institutions including the World Health Organization (WHO), UN organizations in charge of the health of mothers and children (UNICEF, UNFPA) and World Bank. The cause of maternal mortality and the efficient strategies to reduce it are well known since more than 30 years (Maine 2000). However in most of limited resources settings, maternal mortality is still very high.

My aim today is to look on this issue and to document *what makes women's life sustainable* in the case of Cambodia while investigating on abortion issue.

Objectives

In another term, my aim is to follow those given propositions and to explore from an anthropological perspective, what shape the maternal mortality rate in Cambodia, in focusing particularly on the maternal mortality case due to unsafe abortion.

Methodology

The study is based on an ongoing ethnographical research carried out since March 2008 in various health institutions in Phnom Penh, private and public, formal and informal, as well as in some karaoke place, massage place and garment factories. On other part of fieldwork was conducted rural province, mainly with peasants' women, nurse midwives, traditional birth attendants and social workers. Interviews related to contraceptives and abortive uses were conducted with 130 people (mainly women and 25 caregivers, 5 stakeholders). Various observation of reproductive health practices have been done in formal and informal sector of care.

Before to go in the Cambodian context, we need to give some key element related to the:

Social construction of maternal mortality as a public health problem

This issue has been documented by Campbell (2001) and it is very relevant to recall her findings in order to analyze further the situation in Cambodia. Besides the economic status of the country and configuration of the health system four ideologies have influenced maternal health policies: family planning, primary health care (PHC), neo-liberal economics and women's status. In the first half of the 20th century little attention was given to maternal health internationally. Most tropical medicine or international health efforts were oriented around war and trade and around the protective measures applied to colonizing population and its workforce. In 1958, in the report of the first 10 years of WHO maternal and child health was identified as an area of action.

By the 1970s, the family planning movement influenced those involved in maternal health. In 1974, WHO document clearly describes a maternal health strategy that prioritizes family planning as a way of improving maternal health. During the same period, the international women's health movement, which had emerged in the 1970s in the industrialized West, started global campaigns for women's rights and advocate for women's health issues to be added in the agenda donor agencies. They had also specific demands for abortion services (not for delivery services). Finally, in 1985, Rosenfield and Maine (1985) wrote a highly influential paper and put the issue of maternal mortality on the international health policy agenda.

The first international conference devoted to maternal mortality (Safe Motherhood Conference, Nairobi, Kenya, 10-13 February 1987) was sponsored by the World Bank,

WHO and UNFPA and led to the launch of the Safe Motherhood Initiative (SMI). In 1987 the international women's movement also launched a day of action focused around maternal mortality. Indeed it was not until the mid-1990s that international actors funded large-scale programmatic activity. Currently, various factors have shaped maternal mortality as political priority (particularly unacceptability of maternal death accepted as a global norm by international agencies, provision of financial and technical resources, deployment of evidence to show policymakers a problem existed) (Shiffman, 2007). It contributed to launch the "Millennium Development Goal" (MDG 5) initiative aiming at reducing maternal mortality by three quarters in 2015.

Now our main question is why do woman dye from abortion in Cambodia?

Maternal health issue

In Cambodia, the sanitary situation is not such an exception compared to other developing country. However, since the end of the Khmer Rouge regime Cambodia is the poorest country that receives each year more than the budget of the state from the UN and from various public and private donors. The governmental counterparts are supposed to use those millions dollars to strengthen the health system. However the main health indicators are still very bad. Such results are also mainly explained by various structural determinants as the lack of transparency in program's implementation, predation generally short term program, multiplicity of interlocutors and strategies. Low salary given to the staff, hierarchical relation between caregivers and remaining poverty are also eminent barriers to health access (Crochet 2008).

According to the last estimates, there are 377 000 births per year in Cambodia. Each day, five women die while giving birth and the maternal mortality rate is 472/100 000. Mortality rate for infants under 5 years is 82/1000 (UNICEF, 2008). Better management of mother and child health has been laid out as a priority by the government in the 'Health Strategic Plan 2008-2015', with specific actions to be implemented in this field. These activities are part of the Millennium Declaration signed by the Kingdom of Cambodia in September 2000, specifically Millennium Development Goal (MDG) 4 which aims to reduce child mortality, and MDG 5 which aims to reduce mother mortality, Despite many improvements noticed with the increasing number of prenatal consultations and deliveries made by qualified people over the last three years (NIPH, 2006), the main challenge is still the lack of midwives practicing in public health institutions, particularly in rural areas (Bunnack, 2009).

According to WHO (2004) maternal mortality rate related to abortions in Cambodia is 130/100 000. 26% of maternal deaths could be due to high-risks abortion practices. Considering that women death are not always declared and linked to unsafe abortion practices, this rate may be underestimated.

Until recently Cambodia was still restricting access to family planning services and contraceptive technologies (Sadana and Snowb, 1999). Since 1994, the National

Reproductive Health Program (NRHP) leads reproductive health activities in this country (MOH, 2005). The knowledge level concerning contraception is estimated as being rather high and fertility rates have considerably decreased for the last 20 years (6 in 1980, 3.3 in 2004). However, according to data provided by Cambodian Demographic and Health Survey (NIPH, 2006), contraceptive prevalence is at 27%. Since 1995, public health institutions provide contraceptive methods (condoms, oral or injectable contraceptives, contraceptive implant, intrauterine device, urgency contraceptive). Except free distribution of condoms, particularly by NGOs within HIV prevention programs, access to contraceptive methods is not free. Private clinics, local and international NGOs, caregivers of private and informal sector also provide a large part of those services. In spite of the availability of contraceptive, particularly in urban area, abortion is a common practice in Cambodia.

Legalization of abortion and its limitations

Following the International Conference on Population in Cairo in 1994 and its recommendations in term of unsafe abortion limitation¹, various international organizations and NGOs involved in the field of reproductive health launched activities aiming to provide prevention and post abortion care. The abortion law was reformed in 1997 in Cambodia. It allows abortion on request through the twelfth week of pregnancy and in certain circumstances during the second trimester. Nevertheless, liberal abortion laws, however, do not guarantee that women can obtain safe abortions. In 2007, ten years after the law promulgation, the Ministry of Health 2007, had not established medical protocols in order to implement safe abortion activities. Few services are available in the public sector to furnish this service (IPAS 2008). According to a recent study, 40% of caregivers interviewed ignore that abortion for less than 12 weeks of pregnancy is legal in Cambodia (Hemmings and Rolfe 2008). The care givers that we met were also not aware of abortion practices legalization in specified circumstances; they had no idea of the term of pregnancy, practices conditions, the health structures location where legal abortion is available.

As documented by various scholars, it is well known than in Cambodia, a promulgation of a law does not guaranty its further implementation. Indeed, funds provided by the international community, development norms, ideology and jargon, and international experts are always welcomed in Cambodia. However, it appears that they are often subjected to local interpretations in the Cambodian political frame (Mikaelian 2008).

Now I would like to take a broader perspective in order to describe also, how international politics of health impact on women daily life in Cambodia. In Cambodia, 2/3 of the public expenses in term of the health are supported by international organizations. In the field of reproductive health and family planning the US is the most important donors via the USAID Agency. Thus what has become known as the "Mexico

¹ During and after the ICPD, some interested parties attempted to interpret the term 'reproductive health' in the sense that it implies abortion as a means of family planning or, indeed, a right to abortion. These interpretations, however, do not reflect the consensus reached at the Conference (UNFPA 1995).

City Policy" and referred as "global gag rule" by NGOs have had a tremendous impact on reproductive health in Cambodia. Indeed, under this policy, United States Agency for International Development (USAID) has to stop any activities related to abortion access and to withhold USAID funds from NGOs that use non-USAID funds to engage in a wide range of activities, including providing advice, counseling, or information regarding abortion, or lobbying a foreign government to legalize or make abortion available. Locally, International Organizations providing abortion have also been condemned by Christian aid organization and force to close their programs. On 23 January 2009, President Obama lifted a ban on U.S. funding for international health groups that perform abortions, promote legalizing the procedure or provide counseling about terminating pregnancies (Obama 2009). Since, many organizations do start new activities related to safe abortion access in Cambodia.

Why do Cambodian women seek abortion?

Limited access to birth spacing information and methods

Pre-marital sex is widely socially disapproved of in Cambodia, and unmarried women are not supposed to have access to information related to sexuality and reproductive health. However, various data suggest that for various reasons that I will not detailed here, it is a commonplace for unmarried women to be involved in sexual relationships often leading them to unplanned pregnancy.

Besides, various scholars document the high unmet need for family planning, with the 25% reported in the CDHS 2005 likely to be an underestimate. However under use of contraceptives method appears to be linked with a what is called a "poor understanding of side effects" and what woman declared as a "poor tolerance" of its. Let us describe from an emic perspective how women deal with contraceptives method.

Social representations related to menstrual blood

Researching on issues related to the social organization of reproduction in Cambodia, various authors documents popular representation and practices on menstrual blood and cycle. Menstruation is described as the process that renew the blood of woman and that man do not have (Crochet, 2001). According to a popular belief in Cambodia, there are 14 days of fertility. It begins several days before menstruation and ends seven days after the end of menstruation (Sadana and Snowb, 1999, Ministry of Health, 1998). During this period, the uterus is supposed to be opened, allowing penetration as well as evacuation of blood and sperm (Chap and Escoffier, 1996). An abundant blood discharge during the menstrual period is viewed as a sign of good health and fertility.

Popular representation related to contraceptives methods

Some authors previously reported that modern contraceptives are perceived in Cambodia as methods which prevent pregnancy by altering the body temperature. It is often

thought that to conceive a child, a woman must be in good health, with a regular menstrual cycle and a cold body temperature (Fishma et al., 1998; Van de Put, 1995; Chap and Escoffier, 1996). Our data pointed out that medicinal contraceptives are often perceived by many women as being at the root of badly tolerated physical disorders (nauseas, vomiting, headaches, irregular bleedings, absence of menstruation, weight fluctuation). Moreover, according to them, medicines intake is altering the body (apparition of black spots on the skin, paleness, weight gain). Finally, fear of infertility due to a long-term use of oral contraceptives is often reported. Such signs lead women on specific “contraceptive itinerary”. They suspend or cease definitely modern contraceptive methods, or change methods, or have recourse again to traditional methods, or use condoms temporarily and/or punctually. At last, many young women fear side effects they hear about and don’t use any modern contraceptive method. In this context, occurrence of unwanted pregnancies and recourse to medical abortion, by aspiration or by the curettage method, are very common in Cambodia.

Many interviewed women stressed also that contraceptive use would be similar to a chronic disease whereas abortion would only be an acute pathologic episode and without consequences. In care institutions visited, there was no patient prescription for blood analysis in order to evaluate their tolerance to this medicine and the most adapted method. Thus, only women having enough incomes can buy better quality pills with fewer side effects. Most of women we met, often from urban or modest rural environment, bought the “OK pill” or other brand pills in specific care places, or pharmacies or in markets. Many are given depoprovera injection by itinerant caregivers that are not always trained in the biomedical system. Also, we need to stress that no investigation has been done yet on the quality of contraceptives drugs available in Cambodia. Taking in to account the existence of fake medicine widely spread in this country and in the neighborhood countries (Newton et al., 2002), the counterfeit drug trade, unregulated pharmaceutical companies, and the business interests need also not to be ignored.

Why do Cambodian women go for unsafe abortion?

Abortion is common in Cambodia and several public health studies have documented the extent of this problem (Curtis 2007, Delvaux et al. 2003, Feters and Samandari 2009, Rathavy et al. 2007). Recently, the study conducted by Feters and Samandary (2009) concludes that Cambodia’s current abortion rate and ratio could be among the highest in Southeast Asia. Although termination of pregnancy has been legal in the Kingdom of Cambodia since 1997 most induced abortions are still being performed by unskilled or at least untrained abortion providers., a number of barriers to safe termination services persist and many women continue to induce their own terminations or seek unsafe services that result in complications requiring ‘post-abortion’ care (Feters, Vonthanak et al. 2008).

Indeed, abortion cost is very high in Cambodia 20 to 30 USD in public institutions and 50 to 150 USD in private clinic. Such cost that majority of women can’t afford to pay.

For example, a 38 year old married woman who had had several abortions with several different practitioners in informal settings said the following:

“Well, I’ve gone to several places for abortion. It was at the health workers’ houses, as you know, and the hygiene isn’t the same as in the hospitals, the hygiene in those health workers’ houses is lower than in the hospitals. But if you go to the hospital, it’s expensive. You can’t afford to pay!”

A part from economical reasons, other factors related to the hierarchical care givers-patient (Guillou 2009) lead women to go to private « neo traditional » practitioners through their family, neighboring or colleagues networks. Also for many women the informal sector of care appears more appropriate to overcome taboos and preserve intimacy.

Here is the comment of Mrs. Thol, midwife since nearly 30 years who told us having provided “abortion for thousands and thousands women” She said:

“Some clients came to my place for abortion and for some, they didn’t want due to they were shy to be recognized by some people. So they call me to provide abortion at their homes especially when there’s nobody there. Some women who are pregnant with their partners, and they do not want their relatives being aware of that. For instant, many women garment workers are pregnant with their boyfriends or sometimes with married men, so they cannot keep the baby. They call me to provide abortion at their rooms, when their roommates are not there and neighbours gone to work”

Several caregivers have reported cases of women who had recourse to high-risk abortion practices in informal care system and who had to be taken in their care services due to infectious complications, bleedings, inertia or uterine perforation. Several studies describe traditional abortion method used in Cambodia by traditional birth attendants (TBA) and *kru Khmer* (abdominal massage, decoction, insertion of plants in the vagina and uterine cervix) (MOH 2006). TBA we met in Kompong Chnang province report that they use their thumbs to give sharp hits on the belly. A *Kru Khmer* practicing in Phnom Penh outskirts confides that he has developed a formula with abortive property, based on plants and minerals he anticipated to be validated by the Ministry of Health Department in charge of traditional medicines revitalization program. Many illicit abortion practices by curettage or aspiration are performed by health workers trained in biomedical settings (nurses, midwives) or by non-trained persons. We have met some of those caregivers practicing in informal care sectors and have noticed precarious locations and used material: used and corroded scissors, clamp and curette, multiple use of the same abortion kit containing a 500 ml syringe and a cannula bought in a market from 8 to 15 USD depending of the material origin.

Our investigation underlines how and to which extents abortion practices may be at risk when they are performed by trained or non-trained caregivers, practicing outside the formal health care setting. We also wonder if in some circumstances such practices may

be at risks when they are performed “informally”, particularly during night and week end by caregivers in the public sector of care. Finally, because of expensive cost of abortions in institutions allowed to provide this service, many women have recourse to informal care sector, where used material and techniques as well as the lack of trainings for practitioners seem to be at the origin of hemorrhagic risks and consequent infections.

Implementation and effects of safe abortion practices

Since 2008, various actions are launched by local authorities, international organizations and NGOs in order “save women lives” while improving safe abortion access. Those programs are launched under the Millenium Development Goal 5 initiative aiming to reduce the maternal mortality. In some place women are given coupon in order to access to free and safe delivery and post abortion care. The Ministry of Health began to establish medical protocols in order to implement safe abortion activities in the public sector. Caregivers working in the public sector are receiving training in various places and one abortive pill use called Metabon is now legal and legitimized.

Those programs mostly aim to solve the lack of technical guidance and training in safe abortion for providers, the lack of equipment to conduct safe abortions, the lack of reliable information regarding preventing unwanted pregnancies and accessing reproductive health services. However we may wonder how and to which extents such activities may have an impact on limiting the lucrative business opportunities have created a thriving market in unsafe abortion services, the unwillingness of providers to conduct abortions in government facilities, the unwillingness of clients to use government facilities for abortion services as well as the negative provider attitude towards treating the poor and adolescents. Such factors are embedded in the historical construction of the role of caregivers in Cambodia (Guillou 2009) as well as in the whole political, economical and social interrelations that despite three decade of intervention, development ideologies mostly fail to tackle in Cambodia.

Conclusion

After decades of limitation in donor’s involvement and activities implementation in the field of maternal health, it seems that recently, under the MDG 5, maternal mortality issues as been defined as a priority. This international recognition may be interpreted as an imposition of a new form of bio legitimacy. In other term, over the world, pregnant women are supposed to have gained a ‘bio-logical citizenship’ (Fassin 2009).

In asking this provocative question “*What makes women lives sustainable?*” my aim was to investigate the construction of maternal mortality issue as a form of bio legitimacy at international and at local level. Then I described from various perspective what shape maternal mortality due to unsafe abortion in Cambodia and what is currently done to reduce it. However, we may wonder about the efficiency of such activities to achieve the

proposed objectives as they rarely consider the overall context of health decision making in the Cambodian environment.

Furthermore, recalling the slogan expressed at the 1978 Alma Ata Primary Health Conference "Health for All by the Year 2000" and considering public health as a discursive practice as well as the public health rhetoric as recurrence of themes, interrogations and polemics (Fassin 2000) we may wonder about the deep signification of the MDG5 declaration. If such strategy seems actually efficient in mobilizing donors and key actors we need to continuously observe and analyze the effective deployment of what has been promise and the sustainability given to what is now defined as a priority. Lastly, in the new configuration of world order and political forces, we need also to consider how and to which extends the international recognition of maternal mortality as a priority may also be, as quote by Fassin a form of "the reappropriation of the rhetoric in service of broader and diffuse political issues" (2000:71).

To end, and in thinking of all those Cambodian women I met who put their life at risk while having an abortion because they fear to lose their partners, their job, or the family support I would like to stress a final question "Could gender equality makes women's life sustainable?" Rather than to focus on how gender inequalities shape maternal mortality, which has already been highly documented, further research are needed in this field. Indeed, maternal mortality issue seems to offer a relevant entry point to go beyond the analysis of the gender hierarchy as proposed by Butler (1990) and to foresee the conditions of its production.

Cultural Rules and Patterning in the Food Systems of *Orang Asli Temiar*: Indigenous People of Peninsular Malaysia

Sharifah Zahhura Syed Abdullah

Doctoral Candidate: School of Humanities and Social Science, Faculty of Education and Arts, University of Newcastle, New South Wales, 2308, Australia

Introduction

This paper looks at how cultural rules and patterning in the food systems of the indigenous *Temiar* people of peninsular Malaysia have changed as some *Temiar* communities experience the process of urbanization in rapidly developing Malaysia.

Indigenous people as described by Durning (1992), are the rapidly changing and geographically diverse populations known by different names in different parts of the world, for example small nationalities, remote area dwellers, tribes, aboriginal peoples, primitive tribal groups, *orang asli*, native peoples, autochthonous peoples, First Nations, or Founding Nations. These people are defined as the original inhabitants of areas that became occupied by more powerful outsiders, and whose language, culture and/or religion remain distinct from the dominant group. They often consider themselves caretakers-not-owners-of their land and resources, often maintaining ties to subsistence economies derived from hunting-gathering, fishing, nomadic or seasonal herding, shifting forest farming, or subsistence peasant cultivation (Durning, 1992).

The *Orang Asli*, are the indigenous minority peoples of Peninsular Malaysia, and number more than 150,000 people. *Orang Asli* is a Malay term which translates as 'original people' or 'first people'. They are generally classified under three main groups (Negrito, Senoi and Proto Malay) with each group comprising 6 sub-groups with ethno-linguistic differences (JHEOA, 1997, see Figure 1). They reside in scattered villages, camps and estates, in the rainforest, mountains, and coasts, as well as in some towns and cities.

The *Orang Asli*, nevertheless, are not a homogeneous group. Each sub-ethnic group has its own languages ranging from forms of Austroasiatic to Austronesian dialects almost indistinguishable from Malay; equally various cultural values and forms of social organization. Each sub-group perceives itself as different from the others (Laderman, 1987; Nicholas, 1997). The *Orang Asli* have equally varied occupations and ways of life (Nicholas, 1997) and also vary in their accommodations to the environment from foraging, through shifting agriculture, to sedentary village life (Laderman, 1987).

The *Orang Asli* are a peripheral community of Malaysia due to their impoverished condition and lack of access to resources. According to Kessler (1993), the definition of marginal or peripheral communities is 'communities that consist of small populations with somewhat fundamental technology where they usually work with simple basic tools'. Another definition of marginal communities is that 'they are basically poor, having limited access to or control over the country's material resources' (King and Parnwell, 1990). These communities also lack infrastructure and basic amenities such as piped water, electricity, sanitary latrine, adequate housing and health care services.

Figure 1: Groups and sub-ethnic groups of Indigenous People of Malaysia and the location

Groups	Sub-ethnic groups	Location
Senoi	Semai Temiar Jah Hut Mah Meri or Ma' Betisek Che Wong Semoq Beri	Perak, Pahang, Kelantan, Selangor, Terengganu
Negrito	Jahai Kintak Kensiu Lanoh Bateq (nomadic) Mendriq	Kelantan, Perak, Pahang, Kedah, Terengganu
Proto Malay	Semelai Temuan or Belandas Jakun Orang Kanaq Orang Kuala Orang Seletar	Pahang, Johor, Selangor, Negeri Sembilan

Culture is defined by Gittelsohn and Vastine (2003) as the set of rules and norms that are used to guide behavior of a group of people. Culture also has several properties: it is shared, learned, symbolic, transmitted cross-generationally ((Axelson, 1986; Bodley, 1994; Gittelsohn and Vastine, 2003), adaptive, and integrated (Bodley, 1994). Culture is not biologically inherited, and involves arbitrarily assigned, symbolic meanings (Bodley, 1994). The present generations are the product of previous generations, not only biologically but also culturally (Llobera, 1999). The primary locale for this transference is the household. Culture determined what appropriate and inappropriate foods are, and this has had an impact on the nutritional values of the community.

Processes of urbanization have transformed many developing countries into key players in the world market economy. People have migrated from the rural areas to the towns and cities for reasons such as: biased education in the rural areas, income disparities between rural and urban income, better urban facilities or the lure of the city (den Hartog, 1981). McIntosh (1996) describing the theory of assimilation, or inclusion, maintains that as individuals migrate, their national and ethnic beliefs, and attachments will subside once exposed to the forces of cultural and structural inclusion. Mennell et al. (1992) observed that food habits changed in response to changing social and ecological conditions. Adaptive food patterns were learned and passed on to successive generation through socialization (McIntosh, 1996). However, Alba's (1991) research subjects reported that while the first generation of migrants successfully passed on food traditions, their authenticity decreased with each successive generation.

The concept of a 'food system' is used widely in agriculture, food science, nutrition and medicine to explain the complex set of activities involved in providing food for sustenance and nutrients for maintaining health (Sobal et al., 1998). The *Temiar* of Peninsular Malaysia have their own unique food system and eating patterns. The term 'traditional food system' is used below to identify all food items available from local, natural resources and which is culturally acceptable. The dietary pattern of indigenous people worldwide is changing to one containing many manufactured, processed, and otherwise non-traditional food (Whiting and Mackenzie, 1998). A traditional food item as defined by Kuhnlein and Chan (2000) is one from a range of local wild animals and plants and agricultural species. The harvesting activity and preparation of these traditional foods are often important parts of community life (Kuhnlein and Chan, 2000). For indigenous people, changes in lifestyle such as the shift to permanent housing, have led to a reduction in hunting and gathering and thus, a reduction in physical activity, along with a reduction in consumption of traditional foods (Whiting and Mackenzie, 1998).

Changes in the world economy have led indigenous peoples to take advantage of resources beyond those available in the local environment but the extent of development has not been consistent for all. Many communities still rely on traditional food items, by choice or by necessity, yet the extent of processed foods is still considerable (Kuhnlein & Chan, 2000). Recent work by Kuhnlein et al. (2004) suggests that indigenous peoples are recognized as having unique cultural, social and health needs, but are often expected to adapt within larger mainstream societies. Whether they live in resettlements, or are integrated within the population of their countries, or maintain residence in large territories under their own control, they strive to maintain close cultural ties to land and nature, and to the food resources they provide.

Urbanization means that more people cannot grow or gather their own food, but will depend on cash income for food and nutrition (den Hartog, 1981). Kuhnlein and Receveur (1996) indicate that the acquisition and selection of food can be dependant on income. They also added that the indigenous peoples are undergoing transition to a wage-based economy which would lead to decreased access to land use and decreased harvesting. The concept of affordability also includes the amount of time and personal energy available to harvest and prepare traditional food items.

This paper reports on a study to investigate the cultural practice and food systems of the aboriginal people of Peninsular Malaysia. The *Orang Asli Temiar* are undergoing dietary change, whether they live in forest, resettlement, or urban areas but this phenomenon has been little studied in Malaysia. The purpose is to understand how the *Temiar* relate to their traditional food systems in modern times, to understand the process of change in their food systems, and their changing patterns of food use. The outcome of this study will be useful for the Malaysian government in planning food and nutrition interventions for *Orang Asli* communities.

Background and setting

Three different locations of *Orang Asli Temiar* in Kelantan and one location of *Orang Asli Temiar* in Selangor were selected for the distinct purpose of comparing and contrasting the populations. The four different locations in this project which represent different lifestyle experiences of the *Orang Asli Temiar* were: Pos Tohoi and Pos Simpor, Kelantan, representing the experiences of *Temiar* who live in the forest; *Rancangan Pengumpulan Semula Orang Asli* (RPSOA) in Kuala Betis,

Kelantan which is a resettlement area; and Batu 12 in Gombak, Selangor, representing the experiences of *Temiar* who live in town.

In all locations, the unit of analysis for fieldwork study was the household, since the household is the locus of so many food decisions. A household was defined as a set of individuals from a nuclear family or from an extended family. A conjugal or nuclear family consists of one couple and children while an extended family includes more than one couple and children and sometimes other nuclear families. However, regardless of the size of the household, the owner of the house was always the head of the household with his wife.

All research participants in all selected locations were between the ages of 20 years old and 60 years old. In terms of occupation, most male participants in Pos Simpoh were rubber tappers. However, in Pos Tohoi, over a third of male participants were private employees, while around two thirds made a living through odd jobs or small-scale farming and agriculture. Half the male participants in RPSOA Kuala Betis were government employees and in Batu 12, Gombak, half of the male participants were retired. All female participants in Pos Simpoh, Pos Tohoi and Batu 12, Gombak listed homemaker as their principal occupations. However, half the female participants in RPSOA Kuala Betis were government employees.

Reporting of household income was grouped into three categories, <RM500 (A\$195.00), RM501-RM1000 and >RM1000 per month. More than half of the household participants in Pos Simpoh and Pos Tohoi earned less than RM500 monthly, while the majority of household participants in RPSOA Kuala Betis and Batu 12, Gombak reported an income of between RM501 and RM1000 at the time of the survey. Only a quarter of household participants in RPSOA Kuala Betis earned more than RM1000 monthly. The results on reported household income combined with occupational category suggests that most households in the study were of lower socioeconomic status, compared to the poverty baseline in Peninsular Malaysia of RM467 per month per five people in one household.

The majority of households had access only to shared and untreated piped water. All household participants in Pos Simpoh and Pos Tohoi received untreated piped water and were sharing with others. Some households in RPSOA Kuala Betis received treated piped water, but two households here received no piped water at all. Half of the households in Batu 12, Gombak received treated piped water.

In RPSOA Kuala Betis and Batu 12, Gombak, all households were provided with mains electricity. Three-quarters of the household participants in Pos Simpoh were using solar power generation and a quarter was using a generator. There was no mains electricity in Pos Tohoi. Households used other sources of power generation for electricity and light. As mentioned before, for the locations of Pos Simpoh and Pos Tohoi, which were in the forest, it was very difficult for them to receive mains electricity. There were electricity pillars in Pos Tohoi but no electricity supply. They used to receive electricity from a big generator but it was broke down so they had to switch to other sources of light such as kerosene lamps and torches. RPSOA Kuala Betis and Batu 12, Gombak were situated in more accessible areas and there was no problem in electricity supply for *Temiar* households.

Research Design

This is a comparative case study using both qualitative and quantitative methods. Comparative research as defined by Neuman (2003: 422) explores “patterns of similarities and differences across cases and try to come to terms with their

diversity”. Thus, a mixed qualitative-quantitative research designs was chosen for this study to compare four different locations which represent different lifestyles experiences of *Orang Asli Temiar* in Peninsular Malaysia.

This combination of qualitative and quantitative approaches which also incorporates a combination of different qualitative methods is known as methodological triangulation (Flick, 2002). Triangulation was used in this study in order to gain richness and relevant information, and to get both a broad and a deep view. The survey established the socioeconomic status and demographic profile of the selected populations. Observations made by the doctoral researcher provided data on source of food items, meal preparation and food consumed in households. Interviews consisted of broadly themed questions which invited interviewees to share information about their acquisition and selection of food, meal times, how they prepare their food, food allocation and the serving order of prepared food.

This study aims to hear the voices of *Temiar*. The gathering of both quantitative and qualitative data took place between January and June 2008. Prior consent was obtained from each study participant before data collection. Although this study does not claim to be representative of all *Orang Asli Temiar* in Peninsular Malaysia, the data collected and presented is rich in depth and scope. The research procedures were fully approved by the Human Research Ethics Committee of the University of Newcastle. The approval number was H-592-0907.

Data Analysis

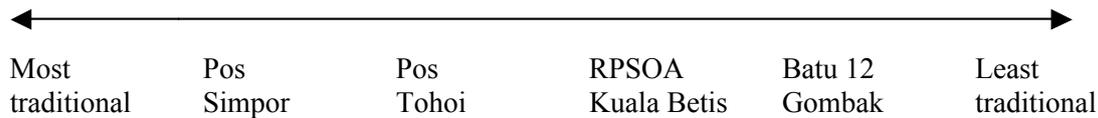

All participants agreed that data gathered in the study could be published. Interviews and focus group discussions were audio-taped and video recorded (with permission) and these tapes were then transcribed from oral language to written language. Observation notes were analysed for patterns, themes and categories. All the transcripts were coded and categorized as either a main category or sub category and then ‘thematized’ using the software package for handling qualitative data, NVivo 8. Demographic and other categorical (descriptive) information relating to each participant from the survey was also entered alongside other data records into NVivo and later used to establish categories and thematic links between selected locations. The Statistical Package for Social Science (SPSS) for Windows version 16 was used to code and analyse the data collected from surveys, in the form of descriptive statistics such as background information and socioeconomic status.

Results and Discussions

Acquisition and selection of food sources

In this study, the *Temiar* were categorized according to their locations from the most traditional *Temiar* population, Pos Simpor which can be found in the forest to the least traditional population, Batu 12, Gombak (see Diagram 1).

Diagram 1: Categorization of research locations

From the interviews, I found that the *Temiar* daily diet basically consists of the main staple: cassava for the most traditional community and rice for the least traditional community. The main staple was complemented with fish or meat and vegetables. According to Jonsson et al. (2002) staple foods products are important to create the feeling of satisfaction and must be included in a culturally complete meal.

McIntosh (1996) points out that less modern community make extensive use of the animals and plants available in their surrounding. The *Temiar* participants who live in Pos Simpör which is situated in a remote area reported that they rely mostly on food sources from the river and forest. Their diet is supplemented by hunting, gathering, fishing, and sometimes by purchasing food. Their remote location means they lack access to shops or markets and thus depend on the travelling vendor who visits the village twice a month. While the *Temiar* who live in Pos Tohoi also rely on hunting, gathering and fishing, they have greater purchasing power than *Temiar* in Pos Simpör—evidenced by a grocery shop in Pos Tohoi and a travelling vendor from Kuala Betis who comes to the village on a weekly basis. Meanwhile, *Temiar* participants who live in RPSOA Kuala Betis reported that they have greater food choice again than those *Temiar* in Pos Simpör and Pos Tohoi. Their diet is supplemented mostly by purchasing food from shops and markets in Kuala Betis or Gua Musang. The Batu 12, Gombak participants reported that their diet is made up of purchased foods rather than items obtained from hunting, gathering and fishing like the *Temiar* in Pos Simpör and Pos Tohoi. They are even more dependent on purchased foods than the *Temiar* in RPSOA Kuala Betis.

When discussing the hunting activity done by the community at Pos Simpör and Pos Tohoi, the participants reported that animals are hunted by the men who go together on expeditions with blow pipes, poison darts and shotguns. Sometimes an individual may go off on his own for the day and bring back smaller game such as rat, frog and birds. Wild pig can only be eaten by men because the pig's blood is considered harmful to the women and children. They also mentioned that the preparation, for example, cleaning and cooking of the wild pig, is done by men away from their house as there is a belief regarding the blood of the wild pig. All participants in RPSOA Kuala Betis agree that hunting, gathering and fishing are done mostly as an activity to hunt for game that is not available in shops or market, to gather green leafy vegetable such as fern shoots and to pass their leisure time. The Batu 12, Gombak participants also noted that hunting is done sometimes to catch animals that are not available in a local market. They added that the blow pipe is sometimes used to hunt animals and is also used among the young *Temiar* males as a source of entertainment where they go into the forest to test their blowing accuracy.

The *Temiar* participants in Pos Simpör and Pos Tohoi stated that they rely primarily on cassava tuber and shoots as their main dish through out the day. Other plants are an addition to the main staple, cassava. Some participants in RPSOA Kuala Betis identified rice as the most important staple food, while some participants preferred cassava.

The *Temiar* in Pos Simpoh and Pos Tohoi still rely on their own vegetable patches to supply raw foods such as spinach, beans, sweet potato and cassava shoots. They added that their vegetables are only for their private consumption and are not produced for sale. Some women in RPSOA Kuala Betis reported to have a small vegetable patch where they plant cassava, beans, eggplant and spinach for their own consumption. Most of them prefer to buy vegetables such as cabbage, mustard and other raw foods. One participant claims that the soil is not fertile enough any more for her to plant anything:

“Takdelah, tanam tak jadi sini kan, tak subur.”

“No, I can’t plant here, it is not fertile.” (Hamizun, April, 2008)

However, all participants in Batu 12, Gombak stated that there is no space for them to plant a vegetable patch though some have planted fruit trees in the reserve forest near their village. They also tried to plant cassava and hill rice but with no success due to wild pigs and birds.

When asked about gathering, all participants in all research locations reported they do some gathering of various types of fungi and green leafy vegetables such as fern shoots and herbs or medicinal roots such as ‘Kacip Fatimah’ with their daughters. Gathering of the medicinal roots is done for their own consumption or when there is a request from a potential buyer. One of the participants in Batu 12, Gombak says that she gathers medicinal roots when there is a demand from buyers:

“... macam diaorang mintak apa Kacip Fatimah, Kacip Fatimah ke apa, Tongkat Ali ke, diaorang mintak kita yang cari lah, jual.”

“... for example when they ask for ‘Kacip Fatimah’, ‘Kacip Fatimah’ or ‘Tongkat Ali’, when they ask for it, we gather and sell it to them.”

(Jaloma, May, 2008)

The accessibility and availability of numerous sources of food from shops and markets for the *Temiar* in RPSOA Kuala Betis and Batu 12, Gombak make them dependent on money to maintain this type of modern lifestyle. Coveney and Baum (1996) found that supplies of food items are affected by access to shopping facilities. The *Temiar* in RPSOA Kuala Betis and Batu 12, Gombak are more likely to shop frequently compared to the *Temiar* in Pos Simpoh and Pos Tohoi. They are no longer dependent on hunting, gathering, trapping and fishing to supply their food sources. Although some participants reported that they still hunt, gather and fish, these activities are rare and tend only to be done if they feel like eating foods that are not found in shops or markets.

When asked about purchasing food, the *Temiar* participants in RPSOA feel like purchasing is much easier for them to get food items rather than going into the forest to hunt and gather. Their life has changed to a more government dependent - sedentary lifestyle. They spent less time engaging in physical activity such as ‘slash and burn’ cultivation and hunting wild animals. The *Temiar* in Batu 12, Gombak had a lifestyle similar to the *Temiar* who live in RPSOA—even though they have more exposure to the modern world they still return to their traditional food system at times.

Meal times

For *Temiar* in all locations, a ‘real meal’ consists of starchy food like cassava root or rice, plus fish, frogs and fern shoots, for example. Cassava root is the most

sought after food among *Temiar* because of two advantages. First, cassava produces more food per acre than any other crop. Second, cassava roots do not rot if left in the ground so that there is no need to rush to get the harvest in at any specific time (Dentan, 1968).

One key informant reported that traditionally, there are no set meal times in *Temiar* community. She then added that, as time has passed, the *Temiar* are beginning to follow the Malay pattern of three meals a day; breakfast, lunch and dinner. From the interviews, I found that the *Temiar* in all research locations have a preference of food for each meal. During breakfast, the *Temiar* participants in Pos Simpoh, Pos Tohoi and some participants in RPSOA Kuala Betis prefer to eat baked or boiled cassava roots and sometimes they eat *tepung*, a type of food that was made from mixing flour, water and salt, and then fried. Participants in Pos Simpoh and Pos Tohoi said that sometimes they only have a drink for example tea before starting their day. They added that they will never begin their new day with an empty stomach. Some participants in RPSOA Kuala Betis and participants in Batu 12, Gombak however prefer to eat bread, biscuits, fried noodle or fried rice:

“Biskut ke roti masa ada atau pun dia buat mee goreng, masa ‘mood’ baik nak makan mee goreng, sedia mee goreng.”

“Biscuits or bread, if there is any or she cook fried noodle, if there is feeling of eating fried noodle, fried noodle then.” (Abus, April, 2008)

Lunch is normally served between 12 noon and 1 pm. When the participants were asked what their preferred food is during lunch, all participants in Pos Simpoh, Pos Tohoi and some participants in RPSOA Kuala Betis stated that they choose to eat cassava root, baked or boiled together with fish or other meats and vegetables such as cassava shoots. However, some participants in RPSOA Kuala Betis and all participants in Batu 12, Gombak prefer to eat rice with fish or other meats and vegetables compared to cassava. From my observations, the difference of preferences is actually based on the availability and accessibility of the cassava and rice in their location. Participants in Batu 12, Gombak mentioned that they only eat boiled or baked cassava when there are special occasion or they crave for it since they have not been eating it for a long time. They added that cassava root is not easily available around their house like when they were in the village, they have to buy it at local shop.

Dinner was generally the last meal of the day and consumed around 6 to 8pm. Participants in all location reported that dishes for dinner are usually the same as lunch. When asked with whom they usually eat, either with family members or separately, participants in all research location agreed that they eat together with other family members:

“Kita semua makan ramai-ramai... he... he... (ketawa). Makcik tak biasa masa dulu sampai sekarang makcik, kira anak makcik kena makan ramai-ramai.”

“We all eat together...he...he... (laugh). My children and I always eat together until now.” (Halimah, May, 2008)

Participants in Batu 12, Gombak added that they will invite friends or neighbours to share meals with them if they happen to be eating when the neighbour comes by. According to one participant, they must share the food even if they only

have a little because the owner of the house might catch a disease if they failed to do so:

“Adat kami orang tu cakap ‘genhak’... aa... tak boleh tu lah... kalau kita tak bagi orang. Macam-macam penyakit la berlaku, kena bagi orang tu, sama rata makan.”

“Our custom we called ‘genhak’... aa... it can’t... if we failed to give other people. A lot of disease will happen, have to give to that person, eat together.”
(Mahani, June, 2008)

When asked whether there is any serving priority during meals, participants in all selected locations agree that everyone was served equally and there is no preferential distribution among the family members. The *Temiar* do not exhibit gender preferences in the allocation of foods. However, one key informant mentioned that in the old days, the males were given priority out of respect compared to females and children. In summary, meal time in this study is a time for the participants in all locations to strengthen the family bond and to share stories of what they have done that day. Meals gather the minority ethnic group together and strengthen their feeling of identity (Lupton, 1998). Moreover, foods served act as a form of social interaction or social relationship, if they are refused this can be misunderstood as unwillingness to establish or maintain a relationship.

Food Preparation

According to Fieldhouse (1995) methods of food preparation are diverse and many; they are related to types of food available, to the state of the material culture and to the cultural needs and preferences of the society. In the most traditional *Temiar* community, Pos Simpor, the study participants relied on a wood stove. Their location in the forest prevents them from using a gas stove as the gas supply was difficult to get. Meanwhile, Pos Tohoi household participants reported using both gas and wood stoves to prepare their food. This is because they lived close to RPSOA Kuala Betis and the gas supply was more readily accessible. Sometimes they used the wood stove to supply the heat they need especially during the wet season when the weather is cool and for preparing food in the traditional way. All household participants in RPSOA Kuala Betis and Batu 12, Gombak reported the gas stove as their most common method for preparing food. However, three quarters of households in Batu 12, Gombak still used both gas and wood stoves in preparing their food. A wood stove was used to prepare their food in a traditional way by using bamboo replacing the cooking pot or pan.

When I inquired how they prepare food in a traditional way, the study participants explained that they used bamboo instead of modern cooking utensils. They added that food cooked in bamboo will have a pleasant smell. When the men decide to go hunting, they will prepare food, usually *lemang ubi* (a type of food made from cassava root), which is baked in a length of bamboo. This food will last for days until the men return to the village:

“Biasanya kalau lemang ubi ni, biasanya kalau macam dia nak pergi dalam hutan kan. Pergi memburu ka, nak gi menjala ka, dia bawak sebagai bekal la. Dia boleh makan untuk 4 hingga 5 hari”

“Usually if *lemang ubi*, usually when he wants to go into the forest. He wants to hunt, or to fish, he will bring it to eat. He can eat for 4 to 5 days. (Pegawai JHEOA, March 2008)

The study participants also reported that they cooked rice and other meals in bamboo. According to one participant, all ingredients needed were put into the bamboo before baking it in the fire:

“Mm... isi macam ikan tadi kan, isi dalam buluh, pastu taruk la rempah-rempah dia tu, terus tu bakarlah. Rempah-rempah semua macam garam, aji, bawang semua, masuk dalam buluh la. Ha... air sikit, pastu bakar.”

“Mm... put in for example fish, put it in the bamboo, then put in spices and flavourings, then bake it. All the spices and flavourings for example salt, monosodium glutamate, onion, all goes into the bamboo. Ha... a little bit of water, then bake. (Jaloma, May 2008)

Whether the *Temiar* reside in the forest or city, they have a wood stove used to prepare food traditionally. They said that food prepared using bamboo not only smells nice; it is also one way to eat a healthy meal.

Conclusion

The *Temiar* food intake in all research locations seems to be more influenced by the accessibility and availability or otherwise of markets, shops and vendors, and their purchasing power. However, the movement of *Temiar* from their traditional land to settled villages and cities gives them little opportunity to maintain traditional knowledge of available food sources and cultural rules and patterns involving their traditional food system. The new generation of *Temiar* in places like Batu 12 in Gombak, Selangor will adapt quickly to new food patterns and will likely forget the traditional food knowledge. This happens when indigenous people change from being hunter-gatherers to a sedentary lifestyle when waged employment is undertaken, food items are purchased and traditional hunting, gathering and trapping is no longer practiced. There is a danger that one day the *Temiar* will completely lose their traditional food system. This would result in decreasing culture-specific food activities, decreasing dietary diversity and decreasing cultural morale.

Allied Art Advisors and the Confiscation of Japanese War Art

Author: Vincent Louie V. Tan

Affiliation: Kyoto Institute of Technology

I. Introduction

War has always been a constant theme in the creation of art. Whether to commemorate or to record, to celebrate or to lament, to cajole or to inspire, their presence has often been felt. And Japan has a long history of depicting various wars in different forms.

During the period of the Second Sino-Japanese War up to the end of World War II, a genre of paintings called war record paintings¹ emerged in Japan. There were many war-themed artworks produced during this period. But war record paintings were highly esteemed because they were painted by some of the most prominent Japanese artists of the period under the commission of the Japanese military government. As their name states, their main purpose was to record the events of the then on-going war. Moreover, like other works that had a propaganda aspect, the paintings also aimed to increase the war morale of the Japanese people; encouraging them to work harder, be stronger and sacrifice more to ensure victory in what was perceived as a Holy War. Majority of these war record paintings were executed in the Western-style, that is, they were oil on canvass works and employed a realistic approach in depicting their subject matter. Some of the most accomplished Japanese artists of that time actively participated in their creation, including Fujita Tsuguharu, Koiso Ryohei and Miyamoto Saburo.

These Japanese war record paintings were shown to the public in widely publicized exhibitions sponsored by the military and the Asahi newspaper, one of the biggest newspapers in Japan. Most of the exhibitions were held at the Tokyo Municipal Museum (now the Tokyo Metropolitan Museum) in Ueno Park and were well attended by the public. The exhibition were also part of the anniversary celebrations of military victories like the attack on Pearl Harbor and military holidays like Army Day. Later, these exhibition of war record paintings would tour major Japanese cities such as Osaka, Nagoya, Kyoto and Fukuoka. The publicity lavished on these exhibition helped in ensuring that these would be well-attended events.

When World War II ended, more than 150 Japanese war record paintings were confiscated by the Allied Forces that occupied Japan. A formal evaluation of the paintings was proposed to justify their seizure and to determine their final disposition. However, when the confiscated were eventually shipped to the US in 1951, no ushc formal evaluation seemed to have happened.

This paper will propose plausible reasons as to why no such evaluation occurred even if the justification for the seizure and shipment of the paintings' rested on a proper evaluation of them. By using Occupation era documents, this paper will explore the activities of prominent Occupation Fine Art Advisors like Sherman Lee and Howard Hollis, prominent authorities of Oriental art in the West. It will posit that the personalities most qualified to conduct the evaluation of the confiscated paintings were much more enamored with the amount of traditional Japanese art they could examine in the course of the fulfillment of their duties as Allied personnel. Thus, they paid scant attention to the confiscated Japanese war record paintings, which were mostly in the familiar Western-style.

II. The Confiscation of Japanese War Record Paintings by the Allies Forces

When the Allied Occupation of Japan officially started in September 1946, the confiscation of Japanese war record paintings followed soon after. The confiscation was generally seen as part of the mission of the Occupation Forces to suppress militarism and ultra-nationalism among the newly-defeated Japanese. However, Hirase Reita's research on the confiscation of the paintings showed that it did not start in such an organized manner.²

The collection and confiscation of Japanese war record paintings was started informally by Major Barse Miller, an official American Combat Artist of the Office of the Chief Engineer. Major Miller sought the help of the Japanese artist, Fujita Tsuguharu, one of the most prolific contributor of war record paintings, who was an old friend of Miller's from their days as art students in Paris.³ Orders to collect the paintings finally came in from Washington on 8 November 1945. It instructed Occupation officials concerned to collect works created by Japanese combat artists. After the collection is completed, all collected artworks were to be sent to the Historical Property Section of the US War Department in Washington.⁴

By early 1946, the Supreme Commander of the the Allied Powers (SCAP) in Japan, General Douglas MacArthur was informed about the activities of the Office of the Chief Engineer with regards to the collection of Japanese war record paintings. In a conference with Chief Engineer Gen. Hugh Casey on 6 February 1946, Gen. MacArthur was shown pictures and catalogs of some of the confiscated war record paintings to give him a general idea of the nature of the paintings. Gen. MacArthur voiced concerns over the controversial nature of the paintings and questioned the Occupation's authority in requisitioning the paintings and shipping them to the US. However, he issued instructions that the collection of the paintings should continue and that an evaluation of the paintings must be made to determine their value. Moreover, shipping the paintings to the US should be put on hold until further notice.⁵ And in a memoir of Gen. Hugh Casey, he mentions that MacArthur assigned personal responsibility of the confiscated paintings to Gen. Casey.⁶

Confiscation activities continued on for a few more months. Finally, on 21 August 1946, an exhibition of 129 confiscated Japanese war record paintings was held especially for Allied personnel at the Tokyo Municipal Museum in Ueno Park. The exhibition lasted until 2 September 1946.⁷ At the end of the exhibition, the paintings were stored in the same museum, occupying 5 out of its 26 rooms.

Due to the lack of exhibition spaces suitable for long-term exhibits, the art spaces for rent at the said Tokyo Municipal Museum was a highly-desirable venue for shows by art group. The Arts and Monuments Section of the Civil Information and Education Division, the branch of the Occupation body in charge of art-related concerns, received several requests for the release of the exhibition space occupied by the confiscated paintings as early as December 1946.⁸ These requests were made by newspaper companies like the Mainichi Newspaper who frequently sponsored exhibitions by art groups like the Nikakai Art Society.⁹ The stream of requests for the release of the requisitioned exhibition spaces, combined with the looming threat of the end of the Occupation of Japan, hastened the shipment of the confiscated paintings to the US in the middle of 1951.

At present 153 Japanese war record paintings are under indefinite loan from the US Government

at the Museum of Modern Art in Tokyo.

III. The Arts & Monuments Section and Fine Arts Advisors

The shipment of the confiscated war record paintings to the US was not a simple matter. Questions regarding its artistic, cultural and historical values made the issue complicated. During the early period of the confiscation of the paintings, the Supreme Commander of the Allied Forces (SCAP), Gen. Douglas MacArthur suggested that an evaluation of the confiscated paintings be made to determine the proper thing to do with them.¹⁰ Thus, even if the confiscation was started by a combat artist from the Office of the Chief Engineer, the Occupation branch most qualified to make this evaluation was the Arts and Monuments Division (A&M) of the Civil Information and Education Section (CIE).

According to Takemae Eiji, author of "Inside GHQ," CIE was formed in September 1945 and is best known for reforming Japan's educational system. Part of its task was also the "disseminating democratic ideals and principles."¹¹ With regards to art-related matters, CIE was also tasked to "advise to parties interested in the preservation of cultural properties and national treasures in Japan."¹² Art-related matters, of course, fell on the shoulders of A&M personnel.

The Arts and Monuments Section was put together in late 1945 at the insistence of George Stout, conservator at the Fogg Museum at Harvard and Lawrence Sickman of the Nelson Museum of Art. It was to be patterned after similar arts and monuments units in the European Front.¹³ Howard Hollis, then curator of the Cleveland Museum of Art was appointed as OIC. Like its name suggests, A&M dealt with art-related concerns. Takemae mentions that A&M made it possible for artworks in private collections to be made available for public viewing and worked to "democratize and upgrade museological techniques in Japanese museums."¹⁴ A&M personnel was also tasked to inspect and inventory all Japanese works of art to assess their condition after the war in order determine what has to be done in terms of protection, preservation and restoration.¹⁵

In order to fulfill these missions, Fine Arts Advisors were hired by Occupation officials to work under A&M. They included the previously mentioned Howard Hollis. Hollis brought in Sherman Lee whom he knew as a volunteer intern at the Cleveland Museum of Art, Walter Popham, landscape architect and Charles Gallagher.¹⁶ Later members of A&M included James Plumer, an expert in ceramics from the University of Michigan and George Kates.¹⁷

Aside from mundane administrative and office matters, the duties of CIE Fine Arts Advisor included the following: 1) planning and policy-making related to the fine arts, 2) inspecting of cultural property in museums, shrines and temples, as well as in private collections, and the study of these, 3) coordinating with other Occupation sections with regards to artistic and cultural matters, 4) conferencing with visitors needing information and assistance concerning culture and the arts, 5) encouraging public interest in art from private collections, 6) improving museological techniques in Japanese museums and 8) checking the objects on sale in antique dealers' shops.¹⁸

As can be seen from the enumeration above, A&M, with its Fine Arts Advisors, was well within its mandate to conduct a formal and thorough evaluation of the artistic and cultural merits of the confiscated war record paintings. This was requested, albeit orally, by Gen. MacArthur himself during the early phase of the confiscation. The outcome of the evaluation involved two possible scenarios. If the paintings are determined to have cultural or historical value, then these would

have to be preserved and protected. If the evaluation is otherwise, then the paintings can be considered as war booty and the Occupation forces will be free to do whatever it wishes with the paintings, including destroying them altogether and dividing the paintings among other Allied countries who requested for their own share of the confiscated Japanese art.¹⁹

Perhaps, the best time to conduct this evaluation was during the exhibition of the war record paintings for Allied personnel at the Tokyo Municipal Museum on 21 August 1946, where 129 confiscated works were shown. However, this formal evaluation never occurred. Instead, informal assessments and opinions were made. Clearly, no criteria were set on how these opinions were formed.

An article about the exhibit appeared in the pages of the Asahi Newspaper on 16 September 1946. In this article, Sherman Lee expressed an opinion that he did not find any merit in the confiscated Japanese war record paintings. He opined that these would soon be forgotten by the art world. However, he did praise the Japanese-style or Nihon-ga works in the exhibition because he believes that these excel in showing Japanese traits that reminded him of ukiyo-e.²⁰ So far, no document produced by A&M or CIE mentions this view of Sherman Lee that was published in the Asahi Newspaper. Thus, this may have been a personal opinion of his and not reflective of the official stance of CIE.

Occupation Fine Arts Advisors certainly did not lack for things to do. Mentioned earlier were the duties of the Fine Arts Advisors. An investigation of Occupation-era documents will shed more light on the activities of these advisors.

Numerous reports were filed by different Fine Arts Advisors during the fulfillment of their duties. One of the most prolific in the fulfillment of his duties was Sherman Lee, judging by the number of reports he filed everyday, recording the minutia of A&M activities.

In the course of the fulfillment of their duties as Fine Arts Advisors, Sherman and his colleagues were exposed to the best of Japanese art. This was a fortunate turn of events for the advisors. And their experience on this matter no doubt benefited them in their future careers.

The inspection of art objects in Japanese shrines, temples and museums alone was a massive undertaking. In an office memo written by Walter Popham, by 17 April 1946, 55 sites were already visited all over Japan.²¹ There was no mention of what these sites were, however. Still, it is an impressive number given the fact that all 55 sites were inspected within less than a year of the occupation of Japan. By 4 December 1946, the number of sites inspected reached 113 locations, spread over 9 prefectures, A total of 676 national treasures were examined and notes were made as to the state of the objects inspected, recommendations for repairs on any damage and their protection.²²

These flurry of inspections of various Japanese art found in shrines, temples and museums no doubt kept A&M Fine Arts Advisors busy. Moreover, this was a great opportunity for anyone to get to see the best of what Japanese art has to offer in such a short span of time. The Fine Arts Advisors virtually had free access to anything they wished to see in Japan. This fact was well-acknowledged by Sherman Lee in various articles written about his time with the A&M.

By his own admission, prior to his arrival in Japan, Lee's knowledge of Japanese art was lacking. One of the reasons why he accepted the post as Fine Arts Advisor was that the opportunity to see

and examine East Asian art was too good an opportunity to let pass.²³ This opportunity can definitely be called “once-in-a-lifetime,” especially for someone who, then, could still be considered a novice in the field. The exposure afforded to the Fine Arts Advisors was intense and quick. The quality of the artworks were of the highest caliber.²⁴ Lee admits that he was not too shy about taking advantage of such an tremendous opportunity.²⁵

By 1947, the inspections seemed to have lessened. However, this did not mean that there was a decrease in the workload for the art advisors. The first four months of 1947 saw A&M Fine Arts Advisors busy with helping in the organization of an exhibition at the Hakutsuru Museum in Kobe. The exhibition was led by Fukui Rikichiro of the Kansai Kobijutsu Dokokai but the organization requested A&M for help in its set-up the exhibition.²⁶ Fukui also worked for the Allies as a field examiner and represented A&M in Kyoto Prefecture. Items put on exhibit for this event came from different private collections like the Hosomi, Muto, Fujita, Sumitomo, Nomura, Moriya and Ueno collections. Because of the concerted efforts of both parties, this exhibition at the Hakutsuru Museum became one of the first major post-war exhibition of Japanese art in Japan.²⁷

The interest of A&M in the success of the proposed exhibition at the Hakutsuru Museum was multi-faceted. First of all, selecting which artworks were to be included in the exhibition would entail inspections of private collections. This was another great opportunity to examine works of art that were then not ordinarily available for public viewing. Opening up the private collections for public exhibitions also dove-tailed neatly with Occupation aims of encouraging the democratization of art in Japan. That is, making the artworks appeal to a wider set of audience. Preparations for the exhibition started in earnest in the latter months of 1946. Inspections were conducted by A&M Fine Arts Advisors on the private collections mentioned above, from October 1946 up to February 1947.²⁸

Second, the exhibition was also an opportunity to upgrade museological standards in Japanese museums. According to Occupation documents, Howard Hollis and Sherman Lee believed that the Japanese museums got left behind on the latest display techniques. They found exhibition in Japan to be substandard and amateurish.²⁹ Moreover, they opined that the educational aspect of exhibitions was sadly being neglected. The exhibition at the Hakutsuru Museum, they believed, presented an opportunity for A&M to help in upgrading the display and educational standards of Japanese museum. It was hoped that this exhibition would set the standard for other similar exhibitions in the future.³⁰ To achieve this objective, Hollis and Lee enlisted the help of their colleagues in the museum world in the US and requested them to send literature on museology to Japan. The Fine Arts Advisors intended to show these materials to their Japanese counterparts.³¹

There was no doubt that the A&M Fine Arts Advisors were heavily involved in the preparations for the exhibition at the Hakutsuru Museum and that they did what they could to ensure its success. In some quarters, maybe their enthusiasm for the project was too much. In an intra-section memo penned by CIE Chief Lt. Col Donald R. Nugent, he castigated the Fine Arts Advisors for being too involved in the preparations for the exhibition. He mentions that for a private endeavor, A&M already extended help more than once and it was taking up the time of 2 of the most highly-qualified A&M Fine Arts Advisors. This hints that there may be some duties within A&M that were going unfulfilled because of the attention given to the exhibition at the Hakutsuru Museum. Lt. Col. Nugent thought that this kind of attention was tantamount to hand-feeding the Japanese museum workers on how to do their jobs.³² This intra-section memo

stemmed from an earlier request made by Sherman Lee asking for a reconsideration for a request to travel to Kobe from Tokyo to attend to exhibition matter that was turned down by Lt. Col. Nugent.³³ One can only speculate why the request was turned down. But the document suggests that the CIE Chief thought that the frequent travels to the Kansai Region³⁴ were becoming too excessive.

At the start of 1948, a reorganization of CIE bodies occurred. The year saw the Arts and Monuments Section combined with the Religion Section to form the Religions and Cultural Resources Section (RCR). Many of the pioneers of the old A&M were also leaving for other endeavors. Moreover, there was a reorientation of goals for the newly formed RCR.

First of these changes involved what can be considered a downgrading of the duties of a Fine Arts Advisors. Instead of taking active participation in art-related matters, their roles were reduced to that of observers. They cannot initiate but only advice on matters regarding policy and other technical matters.³⁵ This is in sharp contrast to the activity mentioned earlier, when the earlier batch of art advisors took a more active role in the fulfillment of their duties, even to the point of spoon-feeding as mentioned by CIE Chief Lt. Col. Nugent.

Second, the only duty that was retained from the old A&M list of duties was the protection and preservation of cultural properties. And even on this matter, the role was reduced to an advisory capacity.³⁶ Inspections of cultural properties located in shrines, temples, museums and private collections were also kept to a minimum, unlike the flurry of inspections conducted during the first 2 years of the Occupation of Japan. The *raison d'être* for inspections probably did not hold true anymore at this point. Moreover, there was a relinquishing of functions to Japanese counterparts that Occupation officials feel that the Japanese can do themselves.³⁷

IV. Conclusions

One can say that the Arts and Monuments Section of 1946 to 1947 was a very different beast from the Religions and Cultural Resources Section of 1948 onwards. In 1946 to 1947, the Fine Arts Advisors were too busy with going around Japan, investigating and inspecting the numerous artworks in various shrines, temples, museums and private collections. Moreover, A&M was also very active in upgrading and modernizing the museological techniques of various museums around Japan, particularly the National Museum.³⁸

From 1948, when the Arts and Monuments Section was merged with the Religion Section to form the Religions and Cultural Resources Section, the section assumed a more passive position regarding cultural matters.

The great opportunity that was afforded to the Fine Arts Advisors in the inspection of the best of what Japanese art has to offer, it is not hard to understand why scant attention was given to the evaluation of the confiscated Japanese war record paintings.

First of all, there seemed to be no clear orders for the confiscated paintings to be evaluated. Instead, only verbal orders were given³⁹ and this seemed to have been forgotten as time went by.

Second, the A&M Fine Arts Advisors seemed to be very dismissive of the artistic and cultural value of the confiscated paintings. This can be seen in various opinions expressed by the art advisors when pressed to come up with an assessment of the confiscated paintings. In the 16

September 1946 Asahi Newspaper article about the exhibition of the confiscated war record paintings for Allied personnel, Sherman Lee expressed an opinion that was dismissive. He said that he did not find any merit in the confiscated Japanese war record paintings and that these would soon be forgotten by the art world. However, he did praise the Nihonga-style works in the exhibition because he says that these excel in showing Japanese traits that reminded him of *ukiyo-e* or “pictures of the floating world”.⁴⁰ But even this was small praise for the Japanese-style works if one considers that Lee did not have a high regard for ukiyo-e works.⁴¹ The same kind of opinion can be found again in May 1950, when George Kates, of RCR, together with DJ Dousman of the Procurement Command of the Headquarters and Service Group (HQ&Svc) found the paintings to be of “indifferent artistic value,” and that their only significance lies in the fact that they have a “strong anti-American value and propaganda bias.”⁴²

This kind of evaluation eventually found its way into the 28 May 1951 memo written by Lt. Col. Nugent addressed to the Chief of Staff of the US Army wherein he requested for orders on what to do with the confiscated paintings.⁴³ Approximately two months later, arrangements were made to document, pack and move the confiscated war record paintings out of the Tokyo Municipal Museum. Shipment to the US was completed on 17 August 1951.⁴⁴

Perhaps, in the minds of the various art advisors employed by the Occupation the opinions that they expressed regarding the artistic, cultural, historical or propagandistic value of the confiscated paintings already constituted a proper evaluation of sorts? In any case, this kind of opinion seemed to seem like the status quo opinion among Allied personnel regarding the confiscated paintings. As such, no attempt was made to go beyond it.

Furthermore, there was really no pressure coming from inside the Occupation structure to resolve the issue of the disposition of the war record paintings. If there was any sustained effort to get the Occupation officials to decide on what to do with the paintings, it came from Japanese art groups and the sponsors of their exhibitions. But even here, the interest of the groups was only incidental. They were less interested in the fate of the paintings once they were able to secure the release of the 5 exhibition rooms occupied for storage of the confiscated paintings. Requests for the release of the 5 exhibition spaces began in 1946 and continued up to 1947.⁴⁵ There were no requests made for the next 3 years. However, a barrage of requests was sent to CIE from the middle of 1950, which culminated in the release of the rooms in 1951.⁴⁶

Perhaps in the greater scheme of things, the issue of the disposition of the confiscated Japanese war record paintings, was not considered an urgent matter to be resolved quickly. The fact that the paintings in question were under lock and key at the Tokyo Municipal Museum and was not easily accessible to anyone⁴⁷ probably contributed to the delay in deciding its final disposition. Only the perceived threat of the confiscated paintings again falling into the hands of the Japanese government so soon after the end of the war brought a sense of urgency to determine a final solution to the long neglected problem of their disposition. Thus, what was left unattended for the better part of the Occupation of Japan was settled in a matter of months. The swiftness in which the paintings were brought out of Japan in July 1951 was one of the means by which Occupation officials to prevent the resurgence of a belligerent Japan.

Endnotes

- 1 Throughout the years, different terms have been used to refer to this genre of paintings. These include *sensou-ga* (war painting) and *sensou sakusen-ga* (war operation painting). For the sake of uniformity, the author will use the term adopted by the Museum of Modern Art, Tokyo, the current home of the set of paintings, which is *sensou kiroku-ga* (war record painting.)

Submission Abstract Text:

Comparison between Japanese traditional house modus and Le Corbusier manifesto 'Five Points' house from 1926 at the first sight could emerge with the statement of equality in spatial substance.

However, it is not the truth.

Dualities are apparent in the state of Being of architectural Body, a dichotomy between subject and object, the meaning of each constituent material element and the continuity within the environment.

Even separated headers of analysis, these key notions are overall embracing the discussion about immateriality of anti-object of Japanese house that is opposed to the Western objectifying intentions.

The cause of the cross genre comparative analysis is concentrated around substantiating the 'grey' status, the corporeality of the perceiving object, which flows through juxtaposition from micro to macro scale - from 'particle' to the urban landscape, where becomes new theory. Thus, it was consequently questioned:

What is the real 'engineering' tool to emerge with an anti/object comparison?

There are, however, two experiments achieved as a text extension; one using already existing artefact, and the another one with the patent pattern involved.

Firstly, it is drawn an analogy between *tatami* as Japanese spatial constituting element and chair as one of the western points of programming the space.

Second experiment is achieved with the laboratory patent material particle unit called 'water brick' in constructing a Third house as direct implication of the previous Two houses and experiment contrasting conclusion.

Key words:

Continuity, Grey, Shintai, Extension, Anti-object, Embodiment

Gray House, Black House: Japanese House 5 centuries before Le Corbusier 5 points

‘The starry heavens above and the moral law within me’.
(Immanuel Kant, epitaph on Kant’s grave monument)

1. Introduction

“All ideas come from sensation or reflection. Let us then suppose the mind to be, as we say, white paper, void of all characters, without any ideas. How comes it to be ‘furnished’ Whence comes it by that vast store which the busy and boundless fancy of man has painted on it with an almost endless variety? Whence has it all the materials of reason and knowledge? To this I answer, in one word from experience.”¹

Here lies first layer of introduction key words as maintaining the first comparative dichotomy. Hence, the ‘void’ of mind on one side and characters of the world are on the other side. Reflection with experience in between of opposed existences are emerging as leading to the direct awareness of dichotomy as distinctive between phenomenal and nominal world, between the objects of our experience and things ‘in themselves’ “which are unknowable as they exist apart from the perception”². Pure mind is a void, pure ‘nothingness’; as if there is no ‘materia’, no substance to perceive, to gain the experiential images.

The first key and research critique question would be if there is ‘universal form of human “knowledge” (Immanuel Kant) thus to bridge the gap among consciousness and matter.

Is there a material ‘bridge’ in between subject and object which now remains into two separated directions whereas physiology and psychology and other phenomenal sciences are opted to new ‘building’ technology which is flourishing each day in endless wave of firstly empirical and now spontaneous ‘informational’ sciences.

However, as it is assumed that technology increased the chance of material ‘science’ is to give the answer how to create a fantasy (consciousness) with pure matter as we cannot negate it at all. Oppositely, a material being as an artefact is a singular point created by humankind in the environment and it is always to some extent a pure object, dying object.

Before conducting the same emerging, it was questioned what about those centuries before in the humanity? How many answers are already there, without any hint of present technology available, and as much more successful in bridging the void between pure mind of a human and object that it is perceived as Nature or an artifact?

Comparison is a cross genre and argumentative in between two geographically and timely into centuries divided ideas of master Le Corbusier (20th century) and domestic masters as craftsmen of 4th (Ise Shrine) century Japan.

¹ John Locke: *An Essay Concerning Human Understanding*, Penguin Books, London, 1997, pp. 109.

² Kengo Kuma: *Antiobject*, AA Publications, London, 2008, pp. 76.

However, the final key point whereas is circling the text is what is the ‘tool’ to manipulate the ‘distance’ between the environment where one human stands and the environment where one object of architecture stands.

How to develop that distance in both mental and material decision of an act as an architect and thus to establish and successfully discuss through creation what may reconcile the mind and matter; to create an experience and not just solemn ‘object’ nor solemn ‘impression’.

How to materialize the pure ‘existence’.

A the last pre comparison but last introduction issue would be that even Le Corbusier and Walter Gropius themselves (1953) had visited Katsura villa as an almost utmost act of distinct homage.

Thus, the comparison had already happened, as not more as direct it could ever happen.

2. Matter/mind correlation as comparison issue

2.1 Matter/mind correlation as comparison issue through Le Corbusier ‘5 point house’

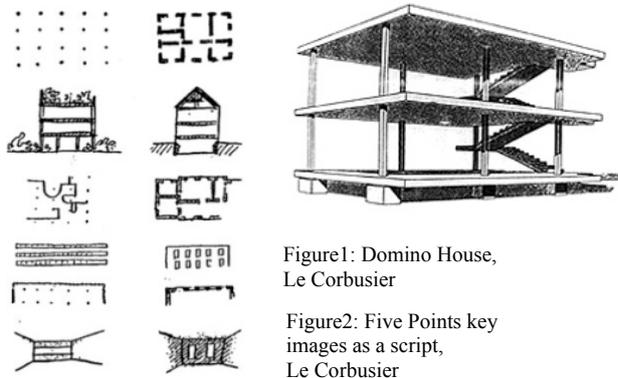

Figure1: Domino House,
Le Corbusier

Figure2: Five Points key
images as a script,
Le Corbusier

Le Corbusier genius mind development and revealing the manifesto of the ‘Five Points’ around 1926 culminated in 1927. when it was published together with his work for the Weissenhof Siedlung ‘exhibition’ as maintaining the concern through as known:

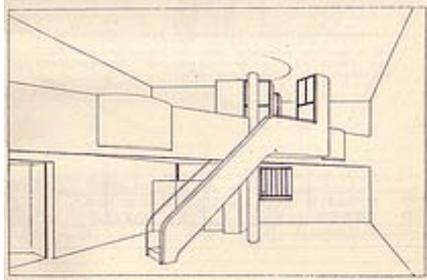

- (1) pilotis;
- (2) roof garden;
- (3) free plan;
- (4) horizontally continuous window;
- (5) free façade.

As well the architectural product was the question of aesthetics Le Corbusier was the maestro to transcend and purely integrate the status of sociological, economical as production and usage overview and technological discourse deeply into his spatial and marketing ‘spatiology’ of design. He successfully succeeded to contact the society mind through expressive media and manipulate extensively.

2.1.1 Black/White photograph as transcending media

The impact of building created was almost crucial to communicate and promulgate the mass society and to remain expressed absolutely through available technology media apparatus.

As primary objective of modern architecture as interpolation into society and ordinary human mind was determined greatly through media as black and white photograph, books, catalogues and perspective drawings..etc. However, the works of architecture were clearly detailed, well thought as a unity to be entirely as enough traced and experienced as a single photograph where the complete *oeuvre de design* may be concentrated among people. It became a recognizable manipulation as creating an object ‘people mass experience’.

Hence, it was the active mean of product involving into ordinary life of Modern architecture period.

Figure3: Interior perspective of a house with communication landscape

Photographs of the whole object of one building or interior perspectives of its apartments were as designated as pure, Euclidean forms – easily recognizable shapes. Monochrome photographs shots made from distance did

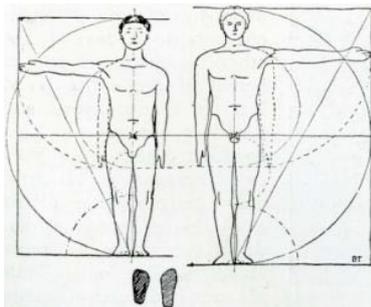

not require even texture details and shadows tracing as even the same were over painted by the side of Le Corbusier thus the photo surface may represent the impression of perfectly white walls and flat surface as untainted by shadows and protrudes of any size. Ms and professor Beatriz Colomina *Privacy and Publicity* for example as in depth study testimonies about the same expunging of all textures as a perfect media manipulation. None of them did not discuss the contextual continuity transgression as putting the building at the distance as solemn object.

First of five points noun named *pilotis* was of extraordinary status. As sculptor is distancing its work as an detached being using the pedestal or classical architect its work of architecture as constructing a podium, thus Le Corbusier proposed *pilotis* as to elevate his building off the ground. The main intention was rather to ‘isolate’ his buildings and make their pure forms more prominent and as creating the method to cut off the building out from its environment as an evident object. Here, the photograph could express its overall image because a building embedded, merged into its environment was not suited to the mass media of such character to express wished meaning of matter as extent object of Le Corbusier ideal to the mass human mind. Firstly, overall, we may conclude that matter/mind correlation was greatly directed.

The part of responsibility carries the situational state of society where among and after absolute state of mind in-depth revealing of neo-Kantianism influenced phenomenology and state of matter repeated but opposite scientific analyzing of constructivism led to the society real life need for certainty and comprehensibility. It was mirrored in the reconciled but accepted mind matter relation in Le Corbusier’s ‘Five Points’ proposal.

2.1.2 Architectural product as a matter of mind

Very strange true but possible due to the complexity of Modern society is about relation between human audience and De Stijl, Constructivism and modern architecture led by side of Le Corbusier and Mies van de Roe. Even first two architectural directions were spatial revolutionaries in formal and material definition through extensive composition theory the level of building emanation and spatial continuity was insensitive and not considerable. Thus,

created object demanded technology of moving images as developed to present very deeply the spatial conformation but as architects on contrary had created the objects which as non landscape continuous at the that time media product as 2d black/white image were not depicting wished meaning.

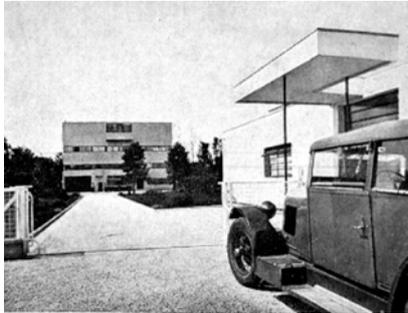

After all, Le Corbusier works as even more conservative modus 'understood' better the state of media as mean of influence to the mind as way of life and communication which leded the modern society through technological improvements.

He obviously inserted his work as theory as also successful as promulgated into ordinary state of human mind, which uses

products like 'dictated' tool in consuming society. 'Product' as key word was actually a bridging point in between mind of mass and matter of architecture. Le Corbusier recognized that fact and applied it widely.

"However, both, matter and consciousness were reduced to the status of object. Mater was reduced to 'products'..and consciousness was reduced to the objects called 'existences'³.

Le Corbusier also distinctively understood the need of classic society persona and how to appeal to the same. However, he did proposed for centuries influential building 5 points revolution but applied it in the very basic (not in negative connotation) and definitive image. Also, it is obvious his continued attachment to the concrete as material as those 5 point actually could question material definition. On contrary, he recognized the that period need for personal mediocrity escape form possessing personal products. Those 'Black' houses how I estimated their obvious contrasting objectivity were representations of possession that satisfied ones mind without further questioning about the archi/space as itself. Le Corbusier clearly declared those 'black' status house as 'machine for living in it'⁴. It is possible to discuss about *Maison Citrohan* with its famous black and white image,

positioned on hilly terrain with as famous French auto as a clear mind influencing and merging association of way of

life as space usage through mental bridge as nominal product usage. Media obviously took a legitimate victory.

2.1.3 Mind becomes matter

"The essence of space as it is conceived today is its many sidedness, the infinite potentiality for relations within it. Exhaustive description of an area from one point of reference is, accordingly, impossible; its character changes with the point from which is viewed. In order to grasp the true nature of space the observer must project himself through it."⁵

However, master Sigfried Gideon here questions directly what is the tool to connect time and space, to express materially that immanent presence. The flow and perceiving of created matter occurs even before consciousness fulfilling inside of human mind. The question is

³ Kengo Kuma: *Antiobject*, AA Publications, London, 2008, pp. 17.

⁴ Le Corbusier: *Vers Une Architecture*, 1923, trans. Frederick Etchells as *Towards a New Architecture*, John Rodker, London, 1931

⁵ Sigfried Giedion: *Space, Time, and Architecture*, Harvard University Press, Cambridge MA, 1947, pp. 356.

only how architect dissolve that substance in between that utterly unconscious and conscious image of human mind.

Le Corbusier directly minded these words into space ingeniously. The character of mind unavoidable for experiencing, the character of matter is being static, pure material. Nevertheless this seems as not connectable he devised to create material determined for human moving through space for mind flow through house. He redefined,

otion about stairs, interior and exterior

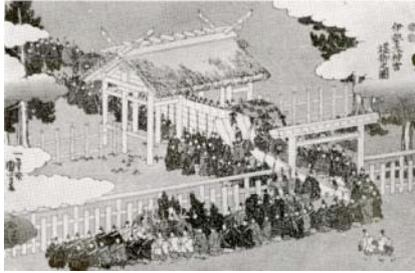

landscape ramps as constituting them as mind/matter bondage creation. What was the most striking is the position of those newly composed spatial part which remained open and allowed one person to observe and experience contextual in and out 'landscapes' as moving using their geometry. Of course, even the person on the ground could observe someone's flow through the space and thus the movement began to be constituent element of the 'house'. Its position was not peripheral but sometimes playing central compositional role in plan as being absolutely open thus including new material approach which defines the fence and stepping solution. Even its roof terrace had been directly leaded from ground as using ramps or stairs.

However, these facts had immense influence on architecture in coming decades as even today.

Le Corbusier

Additionally, one of the five points as continuous landscape window opening, which was allowed with the free plan pillar system, is almost the same act of physical to time flow definition. It was achieved in horizontal network as its part of living space as new space volume or pure meaning of usage through moving. Glass headed the main role as logical material with now headily different existence.

Figure7: Villa Savoye, Le Corbusier

Master Gideon's indirect critique of time and consequently movement and 'object' materiality were answered and applied with translating the mind hint as time into object and to transform usual definition of very object as house communications into more ephemeral creations with highly increased usage of glass as also industry issue.

In these means of new architectural five point language time as mind flow in both directions of view and being viewed was "captured" in photograph that was freely disseminated throughout the world"⁶. Overall, it is questioned was this a sort of compromise among media, object definition and basic character of mind matter inevitable coexistence and opposing as new product inside product as seemingly being solution.

It still steadily remains the inquiry about the meaning of mind and matter when they are not solemnly crossed in sociologically media and economic inventions. Thus, still exists the gap between time become an object and other housing part remained with time as pure flow. Still

remains the question of total approach to the volume of house, as how five points as new intelligent definition of design and construction did not express its greatest potentiality and unify as experience and substance transgression in total approach.

2.2 Matter/mind correlation as comparison issue through Japanese archetype 'house'

Central title says among all "...Japanese House 5 centuries before Le Corbusier 5 points". Someone could ask, which house, which century do you mean, who is an architect, how does it look like the house, do you have an image of it, does it exist today...? This is a hidden trap, clear fraud of the author. However, the question in itself summarizes very accurate answers. That 'house' had been constructed exactly five centuries before Le Corbusier established and announced 5 points manifest, in 1427. It had happened in the absolutely same moment. The only fact is that we do not know its architect, when it was first time designed and how the design looked like.

There is no preserved evidence of its existence from that century but today there is the same one that exists, at the absolutely same place, yet different.

Someone could easily be confused as thinking that those answers are not real and accurate. But they are. But, maybe they are not. However, the accuracy of those answers is not important at all.

Here is evident the hint of an idea that carries the accurate

meaning of physical, matter as timely flowing as transcending it but not negating it. Without the time the idea would be lost as its meaning. It becomes absolute mediating and merging and results in time as mind metaphor transcending matter. Even with these simple questions and answers we could emerge with a sort of clear conclusion about 'material substance' and 'thought about the substance' interrelation.

That story is being the utmost for general overview and generating utmost details of that 'grey' Japanese house. After all, we may say 5 centuries before like main title says as one of

⁶ Kengo Kuma: *Antiobject*, AA Publications, London, 2008, pp. 25.

the Ise shrine rebuilding occurred in 1433. and four other times in 15th century, or any other century before or future ones.

2.2.1 Rebuilding of a ‘matter’ as erasing the matter

Every twenty years of *Ise Shrine* carries a meaning that is more than just a mere physical remodel and as an act is not a cultural sign of preserving building as such. A sought to be preserved with ‘style’, the pure mental meaning of matter as actual structures embodying it.

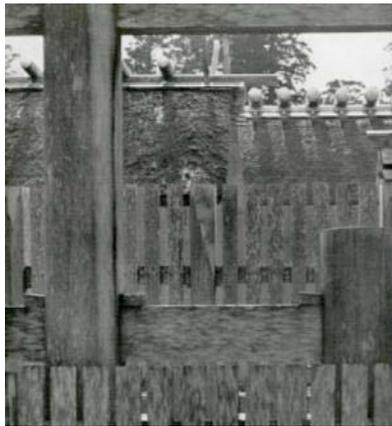

As a habit inserted in cultural heritage for a centuries into Japanese craftsman and even contemporary architecture is a wooden material as a pure meaning of style impermanence. However, it became a carrier not only of material and aesthetical literal being. With its character very sensitive to fire and physical destruction and its Natural reviving that is always happening, even now, it transfers more immaterial messages about ‘grey’ status, transitive status of Japanese house.

Hence, fire can destroy a wooden building in matter of minutes and thus everything that had physical, concrete form was doomed to decay in each sense during the time.

Only ‘style’ as mind creation was indestructible.

Figure9: Ise Shrine, shrine wooden 4
wooden fence enclosure overlapping

What was the action of making black and white photography at beginning of 20th century it was the aim to rebuild the ‘house’ temple each twenty years. It was not material, black and white or colour image, it was a mental image that even transmits more detailed scheme than pure plain, even the most sophisticated video technology of recording invented until present

times. The philosophy of hidden impermanence of all things was a solace of to a people that built only in wood. Le Corbusier mean of design was obviously insisted as apart of cultural script of society that style is inseparable from direct matter impression. Here we may even define more deeply: what Japanese craftsmen wanted to preserve “was not even the ‘style’ as such in all its details but something else, some intangible essence within the style”⁷. This is more than obvious if we just take a look over implementing the surface of wood. Its meticulous finish is without any sort of furnishing or finishing whereas its freshness and plainness as a mind awareness of eternal meaning of building ‘idea’ is rebuilt every twenty years or just simply may be easily changed in well minded construction anytime. Its characteristic fragrance as ‘grey’ status – always transformable, in between black and white, without any clear tone and ‘*valeur*’ – is always fresh in human mind.

⁷ Kenzo Tange, Noboru Kawazoe: *Ise, Prototype of Japanese Architecture*, M.I.T. Press, Cambridge MA, 1965, pp. 202.

Nevertheless, a creative process so defined emphasizes subjectivity as an essential dimension, which in turn contributes its own nature to the principle of transformability whereas aesthetic transformation of ‘wood’ as erasing its materiality becomes impermanent. As such, as through subjective activity it occupies endless number of mind images due to each human different experience

Figure10: Ise Shrine, shrine wooden beam-post constructive joint view footage being possible.

The Ise Shrine rebuilding based on permanent appearance and disappearance of materially expresses itself as a continuous *circul viciousus* of maintaining mental representation where process of rebuilding itself occupies more attention than the product itself. This way of constant stipulating among mind and matter resulted in variability of Japanese architectural expression. This variability of material as successive process initiated the mind becomes a metaphor and even materialized as a static substance. In Ise Shrine Geku, outer shrine plan we may notice the main sanctuary enclosure which exists as a material coordinate and being at both sites – built and for future displacement of the ‘house’. It is named *shin-no-mihashira* which represents solemn presence of always ‘fresh’ relic of primitive antiquity.

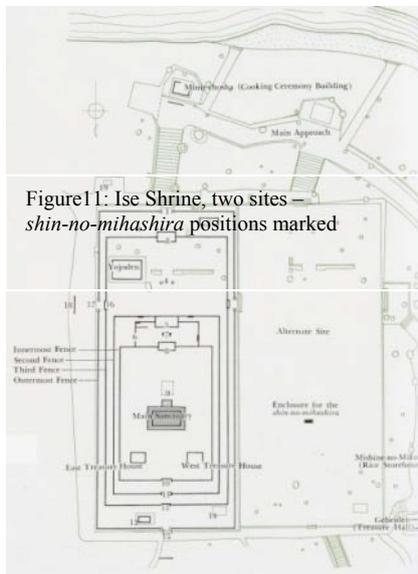

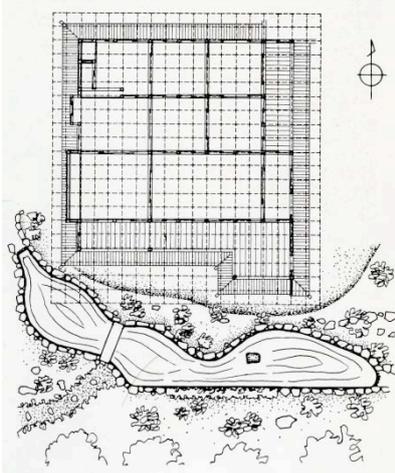

Figure11: Ise Shrine, two sites – *shin-no-mihashira* positions marked

As a direct timeless implication it represent the material fusion of immaterial and material as becoming the main sanctuary of Ise Shrine. It seems as it has always existed, as perfect representation of ‘*Amateratsu deity*’. Symbolically or unintentionally *shin-no-mihashira* is made of wood in a shape of posts – spatial postures- considered very sacred, positioned under the floor of Main Sanctuary, and in the roofed-over enclosure on the alternate site, of both Naiku (inner shrine) and Geku (outer shrine).

2.2.2 ‘Five points’ of Japanese ‘grey’ house

Someone might say after glance observation that there is a certain, almost identical point of analogy between spatial structure and definition between archetype of Le Corbusier 5 points manifesto and Japanese house structure archetype. The similarities are obvious firstly through inner open space pillar determination and façade treatment as also in ground floor surface level up from the mere ground. If the observation take a longer and more detailed in depth analysis the similar view point will become different mental understanding and thus accordingly different material meaning as secondary understanding.

It is not just about the literal and obvious spatial transformability, landscaping of façade, movement into architecture. It touches more deeply pure constructive being and existence of the body itself- out from the spatial arrangement to the pure material approach and meaning

of each constituent element quite different then in Western Le Corbusier aesthetical attachment.

Figure12, 13: Katsura Villa, ground elevation to Nature intact, free plan modulated

Pure understanding of the environment and Nature which carries earthquake as the main destructive issue, Japanese builders maintained perfect fusion of constructive system and wooden material as horizontal and vertical postures interplay. It was suitable for soft woods like cypress, which, by permitting a certain degree of swaying, allowed building to absorb some of the latitudinal shocks from the earthquake. Together with, even from Yayoi and primitive times highly developed iron material usage, it is defined the type of structural beauty “known as the “Mondrian pattern””⁸ relying on horizontal and vertical crossing ‘modulor’ cells. Subsequently, the ‘grey house’ was very dictated to withstand natural catastrophes as becoming elastic structure. This elastic structure gradually is interfered in tuning the living or sanctuary space or any other human enclosure. *Shiki* and *himorogi* or living comfort created screen were however those vertical surfaces, lines and points of pure meaning which were deriving the meaning of volume for human residing.

That constant transition is obvious in forecourts as material continuation of interior to the landscape which is specially purified and materially confined so that one may hear shaman oracles. That gave ever greater emphasis to the horizontal floor surface area through which temple archetype interferes even contemporary Japanese architecture as “a plane which predict possible event to happen inside the house” (*Kengo Kuma*).

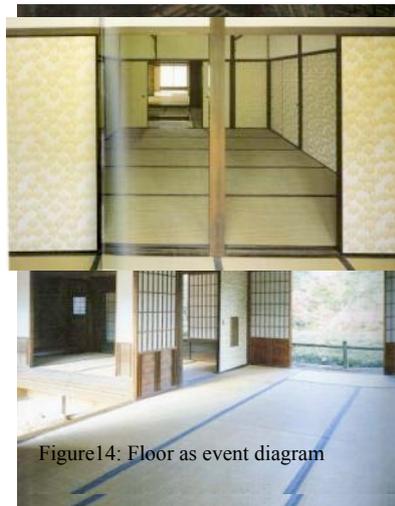

Figure14: Floor as event diagram

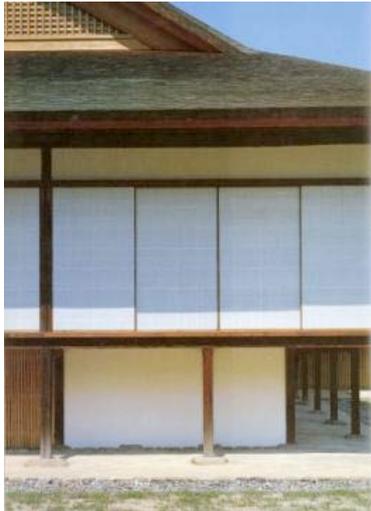

However, free façade plan emerged with its gradual transgression in material as mental aping. As connecting. wooden pillars hanging curtains were used in order to give a temporary privacy and *tatami* was positioned only as point positioned cushion only where people intended to sit. During the developing and fusion of housing types *tatami* covered the entire floor. Overall, even resembling there is very obvious and crucial difference. If you would like to make a photo of the same, there would not be the ideal perspective, ideal object enhancing as one unique image like Le Corbusier intended into his designs. Japanese ‘grey’ house has no privy, a special receptacle being brought as the need arose.

Figure15: Villa Katsura, tatami matrix continuation to Nature

Grid planning which took the distance between post centres as standard influenced the material usage as directly through creating *tatami* cushions where the same varied in the size from room to room. Here is obvious more scoping influence of free plan to even floor definition and entire space tactile, schematic and meaning scrutiny. As from micro to macro

⁸ Kenzo Tange, Noboru Kawazoe: *Ise, Prototype of Japanese Architecture*, M.I.T. Press, Cambridge MA, 1965, pp. 203.

level gradual town development and planning institutionalizing questioned *tatami* standardization. It was measured as a standard floor unit leading to the room staggering “along straight lines rather than on straight axes, a solution which brought them into closer communion with the garden.”⁹

These changes logically led to the spatial rareness of Japanese archetypal house as almost direct continuity to the surrounding landscape as through grid network, inner gardens between rooms, different function volumes arrange as touching upon outside, the use of *engawa* verandas and unfloored areas (*doma*) whereas space assumed and almost merged the function of furniture in Le Corbusier Domino house in itself. Hence, a typified approach as a metaphor could

be a tea room which as without any furniture similar to the Western connotation made possible for host and guest to imagine almost any space that may exist through simple signing the space through tea ceremony and *tokonoma* material symbols. Thus, nothing become possible to be any thing as mental representation of the world.

Figure16, 17, 18: Villa Katsura, Modulative spatial variations as establishing *tatami* and *tokonoma* as integrative partials

It is very clear how the idea of first principles of “5 points” that happened centuries behind Le Corbusier Domino manifest passed the path from pure basic problem of standardization as prefabrication to the aesthetical touching upon ephemeral mind of human and composure of Nature deity discourse as inevitable Being. With few, standard elements of floor and screen it was possible to define each programmatic possibility and need and as well to be dismantled for a very short period of time like it had never existed before.

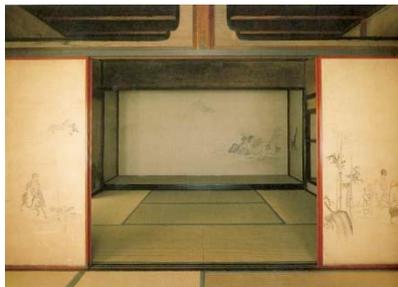

Figure19: Villa Katsura, Elevation as pure material void

What is striking within this archetype is that it is not absolutely possible to record the overall character of the even simple very complex interior/ exterior which as empty veranda volume is nothing more then pure nothingness, void as façade notion. The photo can not translate the minded photo into simple white and black plain. Professor Kuma Kengo once told a story about his childhood house where he as sitting in his room could not be seen, neither the living room with his parents being over there. The only ‘echo’ he could perceive is the presence as semi physical and through sound and smell of the other room. Those immersion of matter and mind cannot be drawn or represented through regular, purely material or perspective means of classifying bodies of architecture as ‘objects’ as master Le Corbusier did.

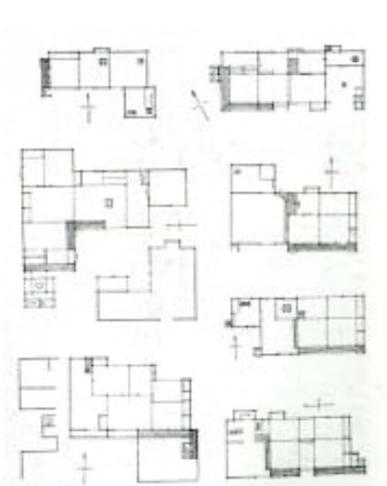

Figure20: Villa Katsura, *screen* spring motif

⁹ Kenzo Tange, Noboru Kawazoe: *Ise, Prototype of Japanese Architecture*, M.I.T. Press, Cambridge MA, 1965, pp. 205.

Overall, ‘grey’ house design is also having its own metabolism, which kept the cycle of life into Nature and society. Fusuma, shoji, tatami – each could be with screen changed, recovered and by all means such a house however old it is was able to create an air of freshness. Even in December house has a different *tokonoma* representations comparing to April as atmosphere is transitioning in the same constructive circumstances. They are not detached but supporting those changes as clearly integrated in tactile experience of one human, not only defined as constructive aspects as in Domino house. These customs might be even described as an echo of the rebuilding of the Ise Shrine.

“For Japanese, it was no the case “life is short, art eternal”. They had only to look to the Ise Shrine.- ever new, yet ever unchanging- to know that it is art, in truth, that I short and life that is eternal”¹⁰. Here, matter as decaying substance is constantly being rebuilt through eternal mind ‘matter’.

Figure21: Landscape, painted by Gyokudo

2.2.3 “Nature” as mind material

“Focusing our experiencing gaze on our own psychic life necessarily takes place as reflection, as a turning about of glance which had previously been directed elsewhere. Every experience can be subject to reflection, as can indeed every manner in which we occupy ourselves with any real or ideal objects... through reflection, instead of grasping the matter straight-out – the values, goals, and instrumentalities – we grasp the corresponding subjective experiences in which we become ‘conscious’ of them, in which (in the broadest sense) they ‘appear’. For this reason, they are called ‘phenomena’”.¹¹

Ordinarily assumed, architectural ‘house’ is an object in ordinary human enclosure. When one speaks of a beautiful work of architecture, one generally means an architect with the ability to design beautiful objects. However, this civic, public opinion as facial ‘is not’ so important as long we as architects may instruct them through usage of the design of ours and how they would explain the memory, the experience of living inside designed house. As firstly the question is concentrated around how they describe relationship between the house and its environment. Basically, a “building is considered an object – an independent material distinct from its environment.”¹²

Figure22: Ise shrine, landscape mimesis

¹⁰ Kenzo Tange, Noboru Kawazoe: *Ise, Prototype of Japanese Architecture*, M.I.T. Press, Cambridge MA, 1965, pp. 207.

¹¹ Edmund Husserl: *Ise, In ‘Phenomenology’*, his article for the Encyclopedia Britannica, revised translation of Richard E. Palmer, 1927,

¹² Kengo Kuma: *Antiobject*, AA Publications, London, 2008, pp. 5.

Japanese 'grey' status of object is more the matter of relationship with its environment. It is the crucial, the basic as primitive aspect of its Being. As becoming in need of Nature it is almost a 'grey' status as status of parasite; always in transitional state. Here we may even refer to the subject of Woody Allen's "documentary" about *Leonard Zelig* who becomes like whoever he is around depending of the necessity of the situation and his mind wish. It metaphorically testimonies how uncontrollable and vigorous is human subjectivity. When introduced in a space, each precision, even mathematical 'falls down' as 'failure'. Toyo Ito once said that if there is 100 different people there will be 100 different house appearances.

However, again the keyword becomes 'interrelationship'. Bruno Taut himself named *Katsura villa* as house of *style of relationships*. Here Taut was referring first of all to the relation between subject and the garden, or more punctually between mind through house and garden. The house becomes more like a materializing medium connecting the subject and garden as much vigorous as the human mind itself. While describing *Katsura villa* impressions in his book *Houses and people of Japan* he discusses the garden more than house itself. Here is

confirmed Kuma Kengo's impression that it is not important what is the architecture: the garden, the house or a landscape; thus everything became connected:

"A bamboo veranda for viewing the moon is in front of the waiting room for guests. From here one can see the entire garden including the pond.. the abundance of forms.. (it) leads the eye along its line to a deep growth of azaleas, and further to a bridge leading to a Buddhist hall (*Enrindo*) and hut (*Shokatei*).¹³

Here is alive testimony of an architect who was professionally confronted to the work of Le Corbusier. His lifelong intention was to emerge within a tool to bridge the gap between

Figure23: Ise shrine, *iwakuras*

consciousness and matter. He had opposed attitude to Corbu's which implanted consciousness to existences and mater to products "both linked to the statistical nexus of marketing"¹⁴.

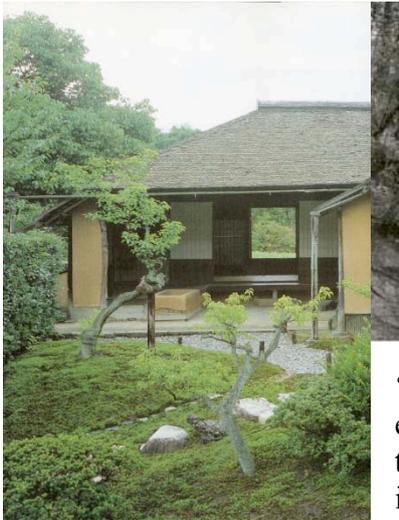

O contrary, 'grey' house is an air fusion in between the ceiling and floor plane as the only clear physical medium among mind and natural matter. Thus, the 'borrowed' scenery is mutually the wall as much as the *shoji* fence or it may be a distant part of interior space. If we look enough long maybe even that distant scenery will become interior. Our mind does not know the distance when time does not exist as we are sitting and mediating. The diversity of those experiences cannot be conveyed by a simple medium as a photograph.

Thus the individual human is having a distinct vigor, uncertainty where even objectified its body is enough ambiguous to question the opposite, created body in the connotation. Both, subject with its mind as inseparable and matter should not lose its allure as connected and intertwined.

Figure24: Ise shrine, *okutsu-iwakuras*

¹³ Kengo Kuma, *Antiobject* (Bruno Taut: *Katsura Detached Palace: in Collected writing of Taut*, Ikuseisha, Tokyo, 1946.) AA Publications, London, 2008, pp. 21.

¹⁴ Kengo Kuma: *Antiobject*, AA Publications, London, 2008, pp. 22.

If we just observe Ise Shrine complex in its artlessness and elementary primitive vigor, seldom we may find such a balance of vital and aesthetic. Its physical 4 fences of for example outer shrine are not the meaning of the distinct boundary as alienation of sacred complex. Nevertheless, even with more material (4 circles) it is a metaphor, over signage of how temple itself is limbed to the surrounding forests, waters, the stone terraces, rocks. Many subsidiary shrines are confined among trees as *iwakuras* or *okutsu-iwakuras*. The nature form is concerned as inhabited with ‘gods’- potentiality of event and being sacred that guest may experience during tea ceremony when the same ‘deity’ mark the mind space as attached to the *tokonoma*. Simply, Ise came into being through the sublimation of symbols into a basic *quintessential* form as becoming lesser materialized. While

negating the art of the material itself it became lesser distant to the state of basic human perceiving. Architecture here continued to be the extension, not mere enclosure of human body.

Even a ‘distant’ transition from the ‘outside’ to the ‘inside’ is beginning much more earlier than one may even see *villa*. Architect here manipulates very smartly with the level and scale of perception. Leadingly, object becomes not from the site view or photo recording but as gradual producing the entity of the field itself, from white to black existence.

Figure24: Villa Katsura, Garden approach stone bridge

“The path passing through the woods and leading to the tea-house is a philosophical preparation. First there is a quiet pastoral, a murmuring stream and a small waterfall – from around this point, a serious

transformation begins, with coarse stones.. The stern stones seem to command the visitor to meditate. A rough stone bridge leads to the tea house. The tea party .. once the party sits down to a meal in the larger room, sounds of the waterfall are heard once more and for the first time one sees sunlight falling on the cascading water. A turtle that had been sunning itself on a rock...Fish swim up to the surface and reveal their scales, and cicadas sings delightful songs in the shade.. The world is truly beautiful.”¹⁵

3. 'Tatami' and 'Chair' through comparison experiment questionnaire

Archetypal nominal representatives of matter inside the 5 points *Modern Domino house* and *Japanese house of tradition* may be intriguingly compared as a 'tatami' opposing to the 'chair'. In the period of Le Corbusier *oeuvre* had become that almost each architect had its own specific and distinguished

design of chair as also Mies, De Stijl architects.. etc.

Chair was an element of elaborative design as creating almost objects of pure admiration.

Tatami as had been luxurious item of nobility in *shinden-zukuri* style, and through *Kamakura and Muromachi* periods gradually became standardized element of ordinary civic houses continuous flooring as a numb tool in hands of an architect while creating a house programmatic distinction.

Analysis through same 4 key questions and 8 brief answers (classified table) has as its purpose to bring forward answers as more in detail textual comparison of the elements where more positive answer is marked with (+) and more negative with (-);

(+) means that that element posses more advantages or less failings:

Figure28: Chair LC, Le Corbusier design and *tatami mat*

Question/mark	Tatami	Chair
		
<p>a) What is the distinguished character of production?</p>	<p>T: The production is fully standardized. It is possible to create endless number of singular elements while using the same material and tools and the same working area as physically needed one. Thus, with very modest tools and working space but with specialized workers it is inevitable producing of high quality cushion mat as total one house floor occupancy. The size of <i>tatami</i> varies around (0.955m by 1.91m) as to the thickness of around 5cm to 6cm, and everything depending on area in Japan.</p>	<p>C: One type chair production is having the same character of prefabrication but only if there is one type. Up to present times there is an endless number of design ‘molds’ achieved so it cannot be said that the producing is fully standardized. Even today there are constantly emerging different design proposals as celebrating differences in each aspect, from dimensional to constructive. Of course, basic measures of human body are integrated but even sometimes the same are overviewed.</p>
<p>Mark A</p>	<p>+</p>	<p>-</p>
<p>b) What is the impact of producing character on the programmatic definition of the house?</p>	<p>T: Even being defined as standard of one dimension sum, <i>tatami</i> as through on element is defining spatial scheme in quite distinct way in a way of ground positioning and the role of each <i>tatami</i> to one human. The perfect example is tea room where each <i>tatami</i> cushion is having its role- entrance mat, guest mat, host mat, hearth mat etc. Thus, the richness of <i>tatami</i> is not in its uniformity but in general relation as (n x <i>tatami</i>) where few of them are creating</p>	<p>C: Chair as being diverse in its production system usually is defined through each trait as due to the function that it has to support in one house. Its materiality and dimensions and design are in behalf of designated program and then the area as for example dining room is created. Its design and disposition in space is quite internal and rarely achieves more the mere communication and logical relation to the rest of living areas in ‘house’.</p>

	the territory with distinct character and different meaning than one mat has; it even touches upon the landscape relationship territory.	
Mark B	+	-
c) What is the possibility of material changing as a reuse of the same design posture?	T: <i>Tatami</i> is made of rice straw to form the core with a covering of woven soft rush straw. On the long sides, they have edging (<i>heri</i>) of brocade or plain cloth, although some tatami have no edging. Hence, we may conclude that it is absolute process of changing the clothes of the old piece as within the range of natural materials. Nevertheless the fact of such distant moment of tatami establishing, it is perfect the sense of future eco architecture which as Kengo Kuma said is in rethinking/return to the material itself.	C: Chair generally is various demanding element. It may refer to the absolutely same character as tatami mat but ever great percent of means of production includes the leather and some rare and expensive materials. In last few decades even chair design went very far in system of usage and compositional structure which may be very smart and ingenious for such a small spatial element; also ever greater number of new materials as artificial ones is becoming invented and released but the price is not still reasonable.
Mark C	+	+
d) What is the number of applicable usages?	T: <i>Tatami</i> cushions could be used for sitting, kneeling, laying down, sleeping- bad, as for walking- floor, eating- table, stepping- few steps between two spaces. It is obvious that tatami does not exist as clear object. Mind freely may shape mats in a way to satisfy function. However, logically there are some reasonable limits and customs established.	C: Chair mainly is used for clear orthogonal sitting as some design differ in angle of body position and may present the status in between chair for resting or bad (laying down or sleeping- leisure).
Mark D	+	-

Table 1: Comparison table of 8 *tatami*/chair question/answer system of crucial analysis

As we may notice through tabular marks *tatami* as Japanese traditional house element parameter took 4 positive marks while chair is declared with 3 negative and 1 positive mark.

4. Experiment 2 – material experiment: Water Brick House

Place: Tokyo University, Graduate School of Engineering,
 Department of Architecture
 Professor Kengo Kuma Laboratory

Member of workshop experiment:
student: Koncarevic Milan Bojan

*Key positive words of this crucial analysis are selected and well integrated into material experiment which has been done in 2009. year at Tokyo University, professor Kengo Kuma Laboratory. However, those key words are elected as positive overviews for materializing the system for exhibition house whose function could be various but predicted as house for people without home due to catastrophes or war escalation. The implementation went from unit to system and final design conforming.

Experiment overview is very brief with key words listing and integrative key text and images enclosed.:

Key words:

Question A/answer A: measure, standardization, production;

Question B/answer B: interrelationship, unit, unit field, human unit, 'groundfloor', zoning;

Question C/answer C: eco-, super/material, composition, changeability;

Question D/answer D: potential, macro/micro, sameness, effectiveness, consciousness, limits;

Integrative key text: Water Brick is Kengo Kuma's patent unit as being invented as a new tool of architectural design and experimenting. In the year 2009. inside Kengo Kuma laboratory occurred the extensive student workshop design as using those units for minding and producing a house for refugees of all kind as temporary multifunctional shelter.

Design greatly fulfilled as a final result in a specific design and

house representation.

With using previous tabular experiment key words as leading motifs there is a pure theoretical mental construct from mind to matter transgression as using traditional and contemporary 'basics' and 'primitives' but as intelligent materiality and impressions into new mind/matter product.

Waterbrick is unit measured as five boxes connected within its half as overlapping with the caps at each end in the center. Thus, each unite may be connected axially. Box shifting also makes possible to connect each entity into volumetric secondary entity and to grow as creating a mass. This standardized unit as same measured enables through standardized method of connection interrelationship to produce a unit field as multifunctional and human needs satisfying. It may become floor, wall, roof or a floor extension as furniture. That furniture, as using the same material, detaches clear zones even not clearly separating volume as sharply as usual furniture. It becomes a status in between tatami mat and western furniture.

Figure30: Experiment2, interior, infrastructure to structure

Supermaterial, degradable, with highest character and satisfying human health standards. Overall, with such a system of composition and material achievement it is possible to reuse,

change or even upgrade the solemn definition of the patent unit basically and so influencing entire 'house'. Similar to tatami cushions it is present high level of potential and effectiveness through sameness in each sense, but within its reasonable limits of mental to spatial image and creation.

Each unit as being pure and through axial connection of material unit it connects also the void of each. As craftsmen mind or impress in his mind it is actually the whole structure the pure void connected or not connected. That void represent the metabolism infrastructure within the unit puzzle system and may possess the role of transferring the water supplies with ending screws linked to the water fixtures. It may even be housing the lightning fixtures inside the void or filling with any possible material as controlling the aesthetical judgment of transparency level.

Figure31: Experiment2, interior, structure to event to infrastructure

Accordingly, it may be said that the new quality emerged. The construction, the material and potential materialization plug ins, infrastructure - lightning, electricity, drainage, insulation, sunlight controlling, spatial diversity.. etc, everything is defined and put into relationship with invention of only one element. Here the mind/matter surpassing is within the greatest achievement. There is no hidden point of the space that mind cannot integrate into spatial

experience or directly control. Everything is put into inter correlation- for flow to static element that usually determine the 'house'.

As with direct interplay and constant questioning mind became a relevant part of a matter existence

5. Conclusion

Actual status in society is a leading point for architectural creation and that each design as being anti object has to be in continuity within the society and not with mere mind matter paper connotation? Even here, professor Kengo Kuma said, that he always seeks for Nature, even in Tokyo hectic Being: *sky, city Nature*, he said.

This makes another truth possible. Truth of eternal beauty, as Bruno Taut named his first experience of Ise Shrine.

The only question is whether ever it is going to be possible to create non failure super object that will entirely transcend the gap between mind and matter, between conscious image of space and drawing of ordinary human user to the architectural, real image and drawing of an architect. The critical question is: is it possible to create a pure meaning ?

Ise shrine carpenter *re-existence* probably is very close to that final essence. However, hence it should be mentioned that in Book X, Plato tells of Socrates' metaphor of the three beds: one bed exists as an idea made by God (the Platonic ideal); one is made by the carpenter, in imitation of God's idea; one is made by the artist in imitation of the carpenter's.

So the artist's bed is twice removed from the truth. The copiers only touch on a small part of things as they really are, where a bed may appear differently from various points of view, looked at obliquely or directly, or differently again in a mirror.

Though the better artist they are, the more faithfully their works of art will resemble the reality of the carpenter making a bed, nonetheless the 'imitators' will still not attain the truth (of God's creation).(The form taken by the deity at the Ise Shrine is a mirror in sanctuary housing whereas becomes the dwelling of the deity.)

Environment Kuznets curve for GHG emissions: A panel cointegration analysis

Abstract

In this paper, we attempt to use recently developed panel unit root and panel cointegration tests as well as the fully-modified OLS approach to examine the long-run relationships among carbon dioxide (CO₂) emissions, energy use and GDP for 22 OECD countries (Annex I Parties) over the 1971-2000 period. Furthermore, in order to investigate how robust these results are for other direct greenhouse gases (GHGs), we have estimated the Environmental Kuznets Curve (EKC) hypothesis by using the total greenhouse gas (TGHG), methane (CH₄) and nitrous oxide (N₂O). The empirical results support the view that the long-run elasticity of CO₂ emissions to energy consumption is most statistically significant. In addition, energy use still plays an important role in explaining the GHG emissions for OECD countries. In terms of the EKC hypothesis, the results showed that a quadratic relationship was found to exist in the long run. Thus, other countries could learn from the developed countries in this regard and try to smooth the EKC curve at relatively less cost.

1. Introduction

In recent years, increased attention has been directed towards carbon dioxide emissions, as industrialized countries have had to find ways of reducing energy use in order to meet Kyoto targets. In contrast with the developed countries, the demand for energy in developing countries has risen sharply alongside the increases in economic growth. Thus, it has become critically important for policy-makers to strike an appropriate balance between the environmental problems, economic growth and energy demand.

According to Grossman and Krueger (1995), air pollution and income exhibit a quadratic relationship in the long run, a phenomenon that is commonly referred to as the Environmental Kuznets Curve (EKC). Over the last few decades, there have been many studies that have examined the EKC hypothesis and arrived at mixed results. If the EKC hypothesis is found to hold true, it would imply that there will be an automatic improvement in the environmental pollution situation as a result of doing nothing. On the other hand, it is difficult to achieve the Kyoto targets when air pollution and income do not exhibit an inverted U-shaped relationship with each other.

The purpose of the present study is to examine the long-run relationships among environmental indicators, energy use and GDP for 22 OECD countries over the 1971-2000 period. Our paper has therefore three objectives. First, the analysis in this paper is a first attempt to estimate EKC within the panel frameworks by using different type of global greenhouse gases (GHGs) as environmental indicator, namely, the total greenhouse gas (TGHG), methane (CH₄) and nitrous oxide (N₂O). Within the literature on EKC theory, a comparatively large body of research has focused on local air (SO₂, SPM, CO, etc.), global air (CO₂) and water quality. It is worth investigating these results by using other direct GHGs which can also cause the global warming. Second, in order to avoid the problem of missing variables, in the present study we consider the Ang (2007) model which includes a variable for energy use. Final, we model the relationships among environmental indicators, energy consumption and GDP within a panel framework that considers both the country effects and small sample bias. In recent years, the problem of spurious correlation in the variables has been highlighted in many macroeconomic studies. In this paper we provide panel unit root and cointegration tests to examine this issue. We also use fully-modified OLS (FMOLS) to estimate the long run EKC pattern for 22 OECD countries. Moreover, the present study compares the panel and individual FMOLS results. An increasing number of recent publications and empirical studies have criticized for EKC hypothesis within panel approach. Perman and Stern (2003) find that even there is a quadratic relationship in the panel result, but the common EKC cointegrating vector for all individual countries is also rejected. The results show that the EKC is may a problematic concept. Thus, in this paper we try to estimate the panel and individual FMOLS results and investigate them.

The remainder of this paper is divided into five sections. Section 2 presents an overview of the previous literature on energy demand models. Section 3 provides information regarding the data set. Section 4 introduces the panel approach in this paper. In Section 5 we discuss the empirical results, and Section 6 concludes.

2. Literature survey

The EKC phenomenon was introduced by the World Bank (1992) and by Grossman and Krueger (1995) as an inverse U-shaped relationship between environmental pressure and income. Grossman and Krueger (1995) showed that the low-income countries could learn from the history portrayed by this curve and try to avoid making the same mistakes. Moreover, the quadratic relationship between pollution emissions and income suggested that the environmental quality would improve as a result of doing nothing.

In addition, many authors used different measures to estimate air pollution. Huang et al. (2008) estimated the EKC by using different measures of air pollution, namely, the key greenhouse gases. The results showed that the 38 industrialized countries were unable to conform to the Kyoto Protocol and the EKC was not supported. Akbostanci et al. (2009) tested the EKC hypothesis for 58 provinces in Turkey by using two air pollution measures, namely PM₁₀ and SO₂. The panel results revealed an N-shaped relationship for the two forms of pollution. Esmaili and Abdollahzaden (2009) estimated the EKC model for 38 oil producing countries over the 1990-2000 period, using oil exploitation as an environmental indicator. They observed that the panel results supported the EKC phenomenon.

For the different types of method, Halkos and Tsionas (2001) applied the switching regime model and the Bayesian Markov chain Monte Carlo method to point out that environmental pressure exhibited a monotonically increasing relationship with income and the EKC hypothesis was not supported. Inmaculada and Aurelia (2004) applied the pooled mean group estimator which allowed for more flexible assumptions in the panel procedure to test the EKC for 22 OECD countries over the 1975-1998 period. The results revealed the existence of an N-shaped EKC. Lise (2006) employed decomposition analysis to test the EKC for Turkey for 1980-2003, and found that the estimates had the expected signs, but that CO₂ emissions and income exhibited a monotonically increasing relationship. Luzzati and Orsini (2009) examined the relationship between environmental pressure and GDP over 1971-2004 for 113 countries, as a single unit. Their panel results showed that the relationship was monotonically increasing and did not follow the EKC pattern.

In term of additional explanatory variables, Heerink et al. (2001) took the Gini index into account to examine the EKC pattern and appeared to find a negative relationship between pollution emissions and income inequality. Cole (2004) included trade in his model and estimated the EKC pattern by using ten different forms of air and water pollution emissions. The results indicated that an inverted U-shaped relationship existed between environmental pressure and income, except in the cases of volatile organic compounds and carbon monoxide. Moreover, environmental pressure and trade openness were found to exhibit a positive relationship and this could have been due to the efficiency of resource use. Tamazian (2009) investigated the relationships among environmental pressure, economic development and financial development using a panel procedure. He found that increases in income and financial development were associated with decreases in environmental pressure. In addition, there are a number of publications that have focused on long data series and different sources of CO₂ emissions. Kristrom and Lundgren (2005) used the long data series in Sweden to examine the EKC and the importance of nuclear power for CO₂ emissions projections. Their results were consistent with the EKC in Sweden and they forecast lower CO₂ emissions projections by keeping nuclear power at its current level. Galeotti et al. (2006) used different sources of CO₂ emissions and alternative

functional forms to check the EKC phenomenon for OECD, non-OECD and non-OPEC countries. They showed that the EKC does not depend upon the source of the data and revealed an inverted U-shaped curve for OECD countries by using alternative functional forms.

Recently, some researchers have been a shift in attention away from a focus on the important role of energy consumption. Ang (2007) estimated the relationships among pollution emissions, energy consumption and income for France over the 1960-2000 period using cointegration as well as a vector error correction model. The results showed that energy consumption positively influenced pollution emissions and the EKC phenomenon. Apergis and Payne (2009) examined the panel relationships among CO₂ emissions, energy consumption and income for Central America over the 1971-2004 period, using Ang (2007)'s model. They noted that CO₂ emissions and income exhibited an inverted U-shaped curve. Halicioglu (2009) summarized the results concerning pollution emissions, energy consumption, income and foreign trade for Turkey over the 1960-2005 period by using the autoregressive distributed lag model. He concluded that pollution emissions increased initially, and then declined until reaching the turning point. Moreover, income was found to be the most important variable in explaining the CO₂ emissions for Turkey. Jalil and Mahmud (2009) examined the relationships among carbon emissions, energy consumption, income and foreign trade for China over 1975-2005, using an autoregressive distributed lag model. Their findings indicated that there existed a quadratic relationship between income and carbon emissions. However, trade was found to be statistically insignificant in the model.

However, the EKC phenomenon also garnered criticism on several counts. Harbaugh et al. (2002) and Stern and Common (2001) raised the sensitive to sample used within the panel data. Stern and Common (2001) test parameters for OECD, Non-OECD and World countries using Hausman test. They found that the null hypothesis is rejected for Non-OECD and World countries. Thus, it indicated that the fixed effects model can be consistently estimated and the EKC results are sensitive to sample used. Harbaugh et al. (2002) estimated the relationship between pollution (SO₂, smoke and total suspended particulates) and income, using different sample sizes (adding countries, year and new control variables) within panel fixed effects approach. They find that EKC are highly sensitive to change sample size and little empirical support EKC pattern.

Moreover, Perman and Stern (2003) carry out the sensitivity analysis of panel and individual results. Perman and Stern (2003) use panel cointegration test to examine the SO₂ emissions and GDP pattern for 74 countries over 1960-1990. His results suggested that even there is a cointegrating relationship in the panel result, but the common EKC cointegrating vector for all individual countries is rejected. The results show that the EKC is may a problematic concept.

In studying the EKC, a number of studies have used data on CO₂ emissions which were collected from the International Energy Agency as a proxy for environmental pressure. However, comparatively little research has focused on other GHGs. Thus, in this paper we attempt to estimate the EKC by using different measures of air pollution, namely, TGHG, CH₄ and N₂O. Furthermore, researchers have recently become increasingly interested in the linkages among pollution, energy consumption and income. In this study, we take energy consumption into account and find that it has a significant and positive effect on environmental pressure.

Many different methods have been used in the literature. Recently, the panel approach has been applied to estimate the EKC model. Some researchers have

indicated that there may be more value in using panel frameworks. Thus, in this paper we employ the newly-developed panel unit root tests, panel cointegration and FMOLS.

---Insert Table 1 about here---

3. Data

The model used for the EKC is derived within the standard conventional theory and is expressed as:

$$C_{it} = f(E_{it}, Y_{it}, Y_{it}^2) \quad (1)$$

where CO₂ emissions per capita (C_{it}) is a function of energy use per capita (E_{it}), real gross domestic income per capita (Y_{it}) and the square of real gross domestic income per capita (Y_{it}^2). In order to investigate the relationships among pollution, energy consumption and income, the log equation is expressed as follows:

$$\ln C_{it} = \alpha_{0i} + \delta_i t + \beta_{1i} \ln E_{it} + \beta_{2i} \ln Y_{it} + \beta_{3i} \ln Y_{it}^2 + \varepsilon_{it} \quad (2)$$

Eq. (2) is estimated using the panel approach that takes into consideration both country i and year t , while α_{0i} , $\delta_i t$ and ε_{it} are fixed effects, deterministic trends and error terms. According to the conventional EKC hypothesis, positive signs of β_{2i} and negative signs of β_{3i} should be expected. The results reveal that there is an inverted U-shape between CO₂ emissions and income. Furthermore, more energy use may create more pollution simultaneously and the signs of β_{1i} should be positive.

The annual data in the sample are obtained for 22 countries (Australia, Austria, Canada, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Japan, the Netherlands, New Zealand, Norway, Portugal, Spain, Sweden, Turkey, the United Kingdom and United States). For the first step we consider four variables over the 1971-2000 period, namely, CO₂ emissions per capita (measured in metric tons), energy use per capita (measured in kg of oil equivalent per capita), real gross domestic income per capita (measured at 2000 prices) and the square of real gross domestic income per capita (measured at 2000 prices). The variables for CO₂ emissions, energy consumption and income were supplied by the World Bank Development Indicators, CD-ROM. In the second step, there are six measures of GHGs that were regulated by the Kyoto Protocol. However, some of them (PFCs, HFCs and SF₆) are close to zero and not available in our work. Thus, we collected other GHGs from the United Nations Framework Convention on Climate Change (UNFCCC), namely, the TGHG (measured in metric tons), CH₄ (measured in metric tons) and N₂O (measured in metric tons). The samples are limited to the 1990-2003 period because UNFCCC data are not available for later years.

4. Methodology

The analysis of the data is carried out by means of a panel approach, so as to avoid the small sample bias and to take individual heterogeneity into account. Moreover, the spurious correlation problem in the variables has attracted considerable research attention in recent years. In order to address this problem, unit root tests, cointegration and FMOLS are used.

In considering the possibility that spurious regressions may exist, two kinds of panel unit root tests are utilized in this paper. One of the unit root tests was developed by Im et al. (IPS) (2003). The main advantage of the IPS panel unit root test tried to relax the Levin et al. (2002) alternative hypothesis which required that all series must be stationary. Thus, the IPS test only requires that some of the series be stationary. In addition, the IPS test converges to a normal distribution with mean and variance by using the Monte Carlo approach. The other panel unit root test was proposed by Breitung (2000). Breitung (2000) improved the Dickey and Fuller (1979) unit root test to encompass a panel approach and considered the possibility that heteroskedasticity might exist in the sample. The major advantage of Breitung's (2000) panel unit root test is that it modifies the OLS bias. When the OLS bias is captured, the t statistic obtained from the test is applicable and asymptotically normal.

The next step is to examine the existence of a long-run relationship among the variables. Pedroni (2000, 2004) developed the individual heterogeneous and fixed-effect cointegrated panels, and proposed seven statistics in order to test the null of no cointegration. In addition, the Pedroni (2000, 2004) cointegration test required only one of those series to be cointegrated in the alternative hypothesis. The seven statistics of Pedroni (2000, 2004) comprise the heterogeneous cointegration test given by the Within dimension (i.e., the Panel PP, Panel ADF, Panel ν and Panel rho statistics) and the Between dimension (i.e., the Group PP, Group ADF and Group rho statistics). Pedroni (2000, 2004) also argued that in a finite sample the power of the Group ADF statistic was the highest, as were the Panel ν and Panel rho statistics.

Having found a cointegration relationship among these variables, we then estimate the long-run elasticities using the FMOLS technique due to Pedroni (2001). It must be noted that the OLS yields biased estimates if the number of regressors is integrated of order one. Pedroni (2001) developed a semi-parametric, fixed-effect and heterogeneous short-run dynamics panel FMOLS model with which to capture the endogenous OLS bias.

5. Empirical results

In order to test the long-run relationship and avoid spurious regression among CO₂ emissions, energy use, income and the square of income, the IPS and Breitung panel unit root tests were applied and the results are presented in Table 2. The results shown in Table 2 indicate that the null hypotheses of the IPS and Breitung unit root tests are rejected by all variables with first differences. In other words, all variables are integrated of order one.

---Insert Table 2 about here---

After finding all variables with a unit root, Table 3 presents the heterogeneous cointegration relationships among CO₂ emissions and the explanatory variables. It can be seen in Table 3 that all the statistics are statistically significant at the 5 per cent level, except for Panel ν . Furthermore, the Group ADF statistic which was developed by Pedroni (2004) was found to be the most powerful statistic in the finite sample. Thus, the null hypothesis is rejected and there exists a long-run relationship among all the variables.

---Insert Table 3 about here---

Having established the long-run cointegration relationship in the CO₂ emissions model, in the next part of the analysis we used FMOLS to examine the elasticity of CO₂ emissions to energy use and income. The results regarding the panel and individual FMOLS statistics are given in Table 4, from which it can be seen that all

variables are statistically significant at the 5 per cent level for the panel FMOLS results over 1971-2000. The long run elasticity of CO₂ emissions to energy use was 0.88 which indicated that a 1% decrease in energy use would lead to a 0.88% decrease in CO₂ emissions. Thus it is likely an efficient way to reduce CO₂ emissions by technological progress of energy use.

---Insert Table 4 about here---

The long-run income elasticity of CO₂ emissions was found to be 5.67-0.69 *Y*. In addition, a negative and statistically significant square of income indicated that no evidence of a monotonically increasing relationship between CO₂ emissions and income was found. In other words, the empirical results supported the existence of the EKC for OECD countries over the 1971-2000 period. Moreover, the results in Table 4 also indicated that the turning point for the OECD countries was estimated to be 8.22 (in logarithms), resembling the results of Ang (2007) for France but below the range estimated by Apergis and Payne (2009) for Central America.

In terms of individual countries, energy use was found to be statistically significant at the 1 per cent level except in the cases of France and Iceland. It is worth noting that both France and Iceland are carbon free countries with high share of nuclear and hydro power. Thus, energy consumption still plays an important role in OECD countries in terms of explaining CO₂ emissions. Turning to the long-run relationships between CO₂ emissions and income for OECD countries, there were eight countries that exhibited an inverted U-shaped pattern, seven countries that revealed a U-shaped process, and others that exhibited no relationship.

---Insert Table 5 about here---

With respect to the relationships among CO₂ emissions, energy consumption and income, in this study we also examined the EKC hypothesis by using different measures of air pollution. These findings are in accord with the results based on the CO₂ emissions. The FMOLS results in Table 5 revealed a statistically insignificant relationship between energy use and CH₄. A reasonable explanation is CH₄ which mainly stemming from agriculture and gas extraction. Thus, it is not related to energy use. However, the results still indicated that energy use appears to be an important variable in the EKC hypothesis. As regards the relationship between air pollution and income, the results revealed the existence of a quadratic relationship in the long run. Furthermore, the turning point of the EKC was derived by using different measures of air pollution similar to CO₂ emissions.

6. Conclusion

In the paper, we have attempted to examine the relationships among environmental indicators, energy consumption and GDP for 22 OECD countries over the 1971-2000 period using a panel framework. The major purpose of the present study has not only been to investigate the important role of energy use in OECD countries, but also to examine the EKC hypothesis by using different measures of air pollution. First, we estimated the long-run elasticity of CO₂ emissions to energy consumption and found them to be most statistically significant at the 1 per cent level. The results are remarkably consistent with Apergis and Payne (2009) for Central America.

In spite of the large literature that tests the relationship between GHG and income by using CO₂ emissions, there are few studies that focus on other GHG. In the next stage of our research, we estimated the EKC hypothesis over the 1990-2003 period by using different measures of air pollution, namely, TGHG, CH₄ and N₂O. The empirical evidence showed that a quadratic relationship was found to exist in the long

run. In other words, the empirical results supported the existence of the EKC for the OECD countries.

The above findings raise two implications for policy-makers in OECD countries. The first implication is that energy use still plays an important role in explaining the GHG emissions for OECD countries. Therefore, the government in OECD countries could develop some new technological progress to persistently reduce energy use and meet the targets laid down by the Kyoto Protocol. In addition, the empirical results support the view that the historical data for the OECD countries exhibit an inverted U-shaped pattern between GHG and income. Thus, the second implication is that other countries could learn from the developed countries in this regard and try to smooth the EKC curve at relatively less cost.

However, unlike the results of Ang (2007), we found all the variables to be statistically insignificant for France and it indicated that EKC phenomenon was not exist. The inconsistent results may be due to highly sensitive to sample sizes. Moreover, in comparison with Apergis and Payne (2009), our panel results are similar to Apergis and Payne (2009). But this paper also found that most of individual countries do not support the EKC pattern. Thus, although all of panel results revealed the quadratic relationships between pollution and income, the EKC is may a problematic concept.

The Simultaneous Evolution of Growth and Inflation

Chih-Chuan Yeh*

Department of Finance, Overseas Chinese University, Taiwan

and

Shu-Hui, Wu

Department of International Economics, National Chung Cheng University, Taiwan

Abstract

We estimate the causal interrelationships between inflation and economic growth within a simultaneous equations framework and obtain identification using a novel heteroskedasticity based method. This implies that conventional empirical studies that analyze the causal relationships between inflation and growth separately suffer from endogeneity bias. After removal of the simultaneous bias, we find that inflation and growth are significant inter-related. Using cross sectional data for 140 countries over the 1970-2008 period, we find a two-way causal relationship between the growth and inflation as predicted by recent theories. Main results indicate that the inflation is harmful to growth whereas the effect from growth to inflation is benefits. Moreover, we split our cross-national dataset into high income, low income and developing countries. These results conclude that the inflation negative impact on growth in lower-income is greater than in developing and upper income countries. On the other way, we exploit the difference effect of growth on inflation in different income level countries. Higher economic growth no longer benefits improvement of inflation in upper- and low-income countries. In contrast, faster economic growth induces higher inflation in low-income sample countries.

1. Introduction

Empirical methods for detecting inflation and output growth have been the subject of intensive research in econometrics. The issue may be of crucial importance in testing empirical relevance of competing monetary models, in advancing our understanding of effect on economic activity from inflation. Although the inflation-growth linkage is part of the liberal consensus in modern economics, there are still some detractors. Theoretical models in the money and growth literature analyze the impact of inflation on growth focusing on the effects of inflation on the stabilization and output. Not everyone shares the same degree of confidence in the consensus conclusions. For the most part, any possible role of the inflation in the growth process was ignored. Johnson (1967) and Okun (1971) argue that although desirable, achieving and maintaining steady inflation proves problematic because of political factors or policy differences. Based on the specific assumptions of the previous empirical models, one can arrive at a positive, negative, or zero effect of inflation on growth. Using simultaneous regression analysis, this paper reexamines empirically the relationship between aggregate inflation and output growth, especially the issue whether a threshold inflation rates or threshold income exists.

The linkages, if any, between inflation and economic growth received considerable attention over past forty years. They are described in the surveys by Barro (1991), De Gregorio (1992), Fischer (1993), Barro (1995, 1996), Barro and Sala-i-Martin (1995), Bruno and Easterly (1996, 1998), Ghosh and Phillips (1998) and presented as a rationale for the endogenous growth model in Gillman and Kejak (2005). They conclude that inflation and growth relationships have indicated significantly negative effects over time. Similarly, view of Singh and Kalirajan (2003), Gylfason and Herbertsson (2001), and Guerrero (2006) discover that inflation retards output growth. Wilson (2006) provided strong evidence for the predictions that

increased inflation uncertainty raises inflation rates and lowers economic growth.

On the contrary, there are also arguments for the negative effect of inflation on growth. Especially in Latin America, historical and comparative studies did not provide clear empirical conclusions about the negative relationship between inflation and growth (Paul et al., 1997). Arguing with the pioneering work of Tobin (1965), for which he assumed money as substitute to capital, is motivated by the optimistic conjecture that the positive effect between inflation and output, and often referred to as the Tobin effect. Higher accumulated capital stock would lead to a higher economic output. A few of the earliest cross-country studies of inflation and growth, Baer (1967) and Taylor (1979, 1983) reconfirm a positive relationship between inflation and growth. These recognize many efforts to identify a mechanical relationship between the level of inflation and economic growth, or to determine whether faster inflation results in higher growth. In addition, several researchers suggest that there was no conclusive empirical evidence for either a positive or a negative association between inflation and output growth. Brock (1974) and Sidrauski (1967) established the matter less relationship between these two variables, advocating that money is super-neutral in an optimal control framework considering real money balances in the utility function. Arai et al. (2002) found no evidence supporting the view that inflation is in general harmful to GDP growth for using annual data cover 115 countries during the period 1960-1995.

Recent works gradually attracted from robustness check. Reverse causation is, however, a potentially serious problem. This problem complicated attempts to resolve an econometric specific about the relationships between growth and inflation; we are considering two endogenous variables. In empirical multicountry studies, insufficient effort has been directed at identifying the pattern of causation. For example, Paul et al. (1997) conducted a multicountry empirical examination of the patterns between

inflation and growth in a sample of 70 countries under Granger (1969, 1980) inference. Their data set included the industrialized economies and developing economies. Among the conclusions were that the relationship between inflation and growth was non-uniform across countries, a vast majority of countries which show either uniform or bi-directional causality over the sample period 1960-1989. Similar arguments can be found in Feliz and Welch (1997), Andrés et al. (1996), Arai et al. (2004) and supported by compelling empirical evidence from Apergis (2004). The observed relationships appear convincingly to be causal, from inflation to growth, and not an artifact of simultaneity or reverse causality. The potentially problem is difficult to identify exogenous instruments for inflation that could be plausibly excluded from the growth regression.

As mentioned above, Ghosh and Phillips (1998) reported above later suggest no reason for skepticism about the existence of a robust negative inflation growth relationship. Their empirical procedure to check that the negative relation between inflation and growth does not disappear once an effort is made to remove simultaneity bias using instrument variables¹. Gillman et al. (2004) also try to eliminate potential endogeneity bias; their model is re-estimated by the use of other instrumental variables. They find a negative significant inflation-growth effect. In that study, the current and lagged values of the money supply as instruments for inflation. As always, the validity of potential instruments is an issue. For instruments to be valid, they must be exogenous to the error term and significantly correlated with the variable they purport to represent. Unfortunately, as mentioned in Bound et al. (1993), the weak instruments can lead to large inconsistencies in parameter estimates even if the instruments are only weakly correlated with the error in the structural equation. In

¹ Typically, the instruments are initial values of the regressors and perhaps some contemporaneous indicators not included as regressors such as the exchange regime, legal central bank independence and central bank governor turnover.

other words, since variables that affect growth (inflation) without also affecting inflation (growth) is difficult to find.

In this paper, we investigate whether growth and inflation are simultaneously determined and if so whether or not they are subject to the same conditioning information sets. After extending Gillman et al. (2004)-type model and applying the extension to interpret the estimation of the inflation-growth effect in a novel approach advocated by Lewbel. Lewbel (2006) demonstrates that identification can be obtained by observing a vector of exogenous variables that are uncorrelated with the covariance of heteroskedastic errors, which is shown to be a common feature of models with endogenous variables. This produces a simple way to resolve the simultaneity and reverse causality issues by employing a heteroskedasticity based identification method. One particular advantage of this method is that we do not require instrumental variables, which are not always available in many cases, to obtain identification. In addition, the associated estimators often take the standard form of generalized method of moments (GMM).

This paper proceeds as follows. Section 2 lays out the simultaneous bias and introduces the regression framework. Section 3 describes data sources and basic statistics. Section 4 reports the main results of the simultaneous equation model. Section 5 provides a summary and a brief discussion of the new findings.

2. The Simultaneous Equations Model

2.1 The Simultaneity Bias Problem

For illustrative purpose, we abstract from other control variables and focus mainly on the following simple simultaneous equations for describing the

inter-relationship between economic growth (g) and inflation (π),²

$$g_i = \beta_1 \pi_i + \varepsilon_{1i} \quad (1)$$

$$\pi_i = \beta_2 g_i + \varepsilon_{2i} \quad (2)$$

where $i = 1, 2, \dots, n$, $\varepsilon_{1i} \sim (0, \sigma_1^2)$ and $\varepsilon_{2i} \sim (0, \sigma_2^2)$ are the (uncorrelated) structural shocks to the “growth” and “inflation” regressions, i.e., equations (1) and (2), respectively. Clearly, the simultaneous system consisting of Eq. (1) and Eq. (2) allows joint determination of economic growth and inflation. Existing studies mostly concentrate on the estimate of β_1 , which measures the effect of inflation rates on economic growth. Contrastingly, in addition to β_1 , we are equally interested in estimating β_2 , which assesses the impact of changes in economic growth on inflation.

It is well known that if both β_1 and β_2 is different from zero, equations (1) and (2) cannot be consistently estimated by standard econometric methodologies without further information or restriction. To see this, suppose that we estimate equation (1) by ordinary least squares (OLS) without taking into account the problem of simultaneous equations. Specifically, the OLS estimator is given by

$$\hat{\beta}_1 = (\pi' \pi)^{-1} \pi' g$$

Where $\pi = (\pi_1, \pi_2, \dots, \pi_n)'$ and $g = (g_1, g_2, \dots, g_n)'$. The estimated coefficient $\hat{\beta}_1$ will be biased since the shock term ε_{1i} is correlated with the (endogenous)

regressor π_1 as $Cov(\varepsilon_{1i}, \pi_i) = \frac{\beta_2 \sigma_1^2}{1 - \beta_1 \beta_2} \neq 0$. To see this, by taking expectation of

the estimator $E(\hat{\beta}_1) = \beta_1 + (1 - \beta_1 \beta_2) \frac{\beta_2 \sigma_1^2}{\beta_2 \sigma_1^2 + \sigma_2^2}$. We can immediately find that the

² Without loss of generality, we omit constant terms for simplicity

estimate is biased away from its true value β_1 due to simultaneity bias (i.e., if $\beta_2 \neq 0$ and $\sigma_1^2 > 0$). Similarly, the estimator $\hat{\beta}_2$ is also biased. In this paper, we will follow Lewbel (2006) to appeal to a novel methodology to obtain identification and estimation of the structural parameters in the simultaneous equations system.

2.2 Modeling Strategy

To examine the interactions between inflation and growth jointly, we consider the following simultaneous equation model:

$$g_{it} = \alpha_1 \pi_{it} + x'_{it} \beta_1 + \varepsilon_{1it} \quad (3)$$

$$\pi_{it} = \alpha_2 g_{it} + x'_{it} \beta_2 + \varepsilon_{2it} \quad (4)$$

Where g_{it} and π_{it} denote real per capita GDP growth and the inflation coefficient for country i in year t , respectively. Clearly, the system of equations allows inflation to affect growth and, in turn, growth to influence inflation. In addition, we also allow growth and inflation to depend on a vector of other control variables x_{it} . The parameters of particular interest are the coefficients of the endogenous variables, i.e., α_1 and α_2 as they measure the causal effect of inflation on growth and the causal impact of growth on inflation, respectively.

2.3 Identification and Estimation

Given equations (3) and (4), the natural next step is to identify and estimate the structural parameters α_1 , α_2 , β_1 and β_2 . Conventionally, identification of the structural parameters can be obtained by exclusion restrictions, such as that some elements of β_1 or β_2 are zero, or equivalently by assuming the availability of instrumental variables. However, since variables that affect growth (inflation)

without also affecting inflation (growth) are difficult to find, if not impossible, we follow Lewbel (2006) to rely on heteroskedasticity in the errors to achieve identification of the structural parameters.³

In particular, Lewbel (2006) shows that the structural parameters in equations (3) and (4) can be identified if

$$E(x_{it}\varepsilon_{1it}) = 0 \quad (5)$$

$$E(x_{it}\varepsilon_{2it}) = 0 \quad (6)$$

$$Cov(z_{it}, \varepsilon_{1it}\varepsilon_{2it}) = 0 \quad (7)$$

and $Cov(z_{it}, \varepsilon_{jit}^2) \neq 0$ for both $j=1$ and $j=2$ where the observed z_{it} may be,

though need not be a subset of x_{it} . Let π_{it} be the vector of elements of

g_{it} , π_{it} , x_{it} and z_{it} . In addition, let θ represent the set of

parameters $\{\alpha_1, \alpha_2, \beta_1, \beta_2, \mu\}$ where $\mu = E(z_{it})$. Now, define

$$Q_1(\theta, \pi_{it}) = x_{it}(g_{it} - \alpha_1\pi_{it} - x'_{it}\beta_1) \quad (8)$$

$$Q_2(\theta, \pi_{it}) = x_{it}(\pi_{it} - \alpha_2g_{it} - x'_{it}\beta_2) \quad (9)$$

$$Q_3(\theta, \pi_{it}) = z_{it} - \mu \quad (10)$$

$$Q_4(\theta, \pi_{it}) = (z_{it} - \mu)(g_{it} - \alpha_1\pi_{it} - x'_{it}\beta_1)(\pi_{it} - \alpha_2g_{it} - x'_{it}\beta_2) \quad (11)$$

and stack the above four vectors into one long vector $Q(\theta, \pi_{it})$. It is

straightforward to show that

$$E[Q(\theta, \pi_{it})] = 0 \quad (12)$$

³ Another interesting approach relies on heteroskedasticity in errors to obtain identification of endogenous regressors can be found in Rigobon (2003). Recent applications of Rigobon's identification method can be found in Rigobon and Sack (2003, 2004, 2005), Lee, Ricci and Rigobon (2004) and Kearns and Rigobon (2005).

However, because the population moments $E[Q(\theta, \pi_{it})]$ are unobservable, we are unable to solve for θ in the equation directly. Instead, it is natural to proceed by defining the corresponding sample moments

$$Q_n(\theta) = \frac{1}{n} \sum_{i=1}^n Q(\theta, \pi_{it}) \quad (13)$$

and estimate θ by GMM of Hansen (1982).

GMM estimation mimics the population moment conditions by minimizing a quadratic form of the sample counterpart (11). The GMM estimator is:

$$\hat{\theta} = \arg \min_{\theta} Q_n(\theta)' \Omega_n^{-1} Q_n(\theta) \quad (14)$$

where Ω_n is a positive definite weighting matrix. Hansen (1982) shows that, under some mild conditions, the resulting GMM estimator can be obtained by setting the weighting matrix $\Omega_n(\theta) = V_n^{-1}$, where $V_n^{-1} = n \times \text{Var}[Q_n(\theta)]$. Please see Hansen (1982) for more details.

3. Data sources

The cross-country dataset used in this paper is taken from the “International Financial Statistics (2009), IMF” consisting of 140 observations observed from 1970 to 2008. The list of countries can be found in the Appendix 1. The endogenous variables, *growth* and *inflation*, are the growth rate of per capita real GDP and the CPI index. Control variables are included to ensure that our coefficient estimates for the two endogenous regressors are not capturing the effects of factors that affect both growth and inflation. Following a monetary model of endogenous growth model provided by Gillman et al. (2004) to construct conditioning information sets. The control variables are as follows: the natural logarithm of the share of government expenditure in GDP (*gov*), the share of gross capital formation in GDP

(*inv*), the share of money and quasi money in GDP (*m2*), which is a measure of financial development, the share of trade in GDP (*openness*), the ratio of US output to country *i* output (*pcgdp_us*) and the percent change in population (*pop*). These are variables that have been found by previous studies to have an impact on growth and inflation. Table 1 presents summary statistics and correlation matrix of these variables.

Furthermore, we split our cross-national dataset into high income, low income and developing countries to provide robustness check from growth (inflation) on inflation (growth). For analytical purposes, the World Bank's main criterion for classifying economies is gross national income per capita (GNI). According to its GNI per capita, every individual economy is classified as low income, high income and middle income. Classification by income does not necessarily reflect development status. In addition, low income and middle-income economies are sometimes referred to as developing economies. Following World Bank's criterion, we re-estimate the simultaneous equations using high income, low income and developing countries of our data sets, along with the controlling variables.

4. Empirical Results

Firstly, we start our analysis by estimating single-equation OLS regressions as carried out in equations (1) and (2). In original papers, each equation is of course estimated independently. Clearly, two coefficient estimates of the endogenous regressors are statistically different from zero. (Columns (1) and (2) in Table 2) As mentioned in section 3.1, we view these results as a possibly biased. Testing cross-equation restrictions, we will estimate them simultaneously.

We present main results in columns (3) and (4) of Table 2. After elimination of the endogeneity bias, all coefficient estimates for the endogenous regressors are

statistically significant. We find that the impact of inflation on growth is negative at conventional levels. For this sample, our standard growth results do confirm the main hypothesis of monetary model of endogenous growth. The estimates imply that a one-point increase in inflation coefficient leads to a 0.5050 percentage point decrease in per capita real GDP growth, depending on the conditioning information set. Regarding the effect of growth on inflation, we find a negative and statistically significant effect. That is, higher economic growth benefits improvement of inflation in our sample countries. The results in Columns 4 indicate that a one percentage point increase in per capita real GDP growth leads to a 0.4427 point decrease in inflation coefficient.

The results reported in Table 3 are with data observations dropped from the sample if the country's income level belongs to high or low. It is in this context, it also will be interesting to know the inflation-growth nexus in developing countries. Once again, we test cross-equation restrictions simultaneously and present three sets of results: low income group, high income group and developing countries estimates. Overall, the coefficients from Table 3 strongly support that there is a significantly negative and causal inter-relationship between inflation and economic growth. For low income countries sample, the estimate of β_1 is -0.6044 in our standard growth equation. This estimated parameter is negative, statistically significant (at 1% level) and economically large. In addition, applied to other two accession countries sample, high income group and developing countries a simultaneous system is estimated for each that indicate inter-relationship negative from inflation to growth. (Columns (3) and (5) in Table 3) Moreover, the impact from inflation harmful to growth in low income countries is larger than in high-income countries. (See in Fisher, 1993; Barro, 1995; Barro and Sala-i-Martin, 1995; Bruno, 1995; Judson and Orphanides, 1996; Sarel, 1996) In sum, the finding confirms one of the main theoretical implications to

the effect that economic growth depends negatively on inflation rate as predicted in Phillips (1958) and Fisher (1993) and Ghosh and Phillips (1998). More recent studies provide several arguments advanced to support this viewpoint. For instance, increase in inflation rates have the potential to raise the cost of investment project, in turn affect growth. High inflation rate generates inefficient allocation in resources, thus, negative output effects.

Another interesting and important issue that we would like to address in this study is how the economic growth causally affects the level of inflation rates. Other researchers have advanced the argument that economic growth may cause the level of inflation rates to rise through the effects of expansion of some sectors of the economy. (see Lewis, 1964; Vogel, 1974) In our inflation regression, for low-income countries sample, the inflation effect of growth measured by the parameter β_2 is estimated to be 0.3804. (Columns 2 in Table 3) This coefficient is positive and significant at the conventional 5% level. Consequently, it indicates that faster economic growth induces higher inflation. This finding also bears out the other important theoretical prediction by Ungar and Zilberfarb (1993) as to the impact of economic performance on inflation is significantly positive.

In order to check the previous discussion that the hypothesis of no output-inflation trade-off. We re-estimate the simultaneous system consisting of equation (3) and (4) using high-income countries of our sample, along with the controlling variables. As can be seen, in the case of the inflation equation, the coefficient loses its statistical significance. This result confirms Lucas (1973) which use data for 18 countries (fifteen of them jointly belonging to the high income or developed countries), also provided support to the no output-inflation relationship. The hypothesis is however, rejected for developing countries in our simultaneous estimate. The coefficient of growth in Columns (6) of Table 3 is still negative and

statistically significant. This finding is also consistent with the recent study in Odedokun (1991). Thus, after removal of the endogeneity bias for investigating with sub-sample that include low- and high- income countries, provide a reason for how non-uniform relations between inflation and growth.

We also examine the independent effects of the control variables on growth and inflation after the contemporaneous effect of the endogenous regressor has been accounted for. What are the driving forces of economic growth? According to the estimates in Columns 3 of Table 2, higher investment shares are associated with higher growth. Moreover, a larger government is associated with slower growth. The determinants of inflation can be found in Columns 4 of Table 2. The coefficient estimate for investment is positive and statistically significant in the inflation equation, indicating that higher investment is associated with a more inflation. The estimates of “openness” and “pop” are negative and statistically significant in the inflation equation, indicating that trade surplus and human capital play a role in reducing inflation rates. We also find that the effect of “the ratio of US output to country *i* (*pcgdp_us*)” on inflation is negative and statistically significant. However, we do not find evidence that relative income induces growth.

5. Conclusions

Is growth negatively affected by inflation? Is inflation influenced by economic growth? The answers to these questions are of interest to policy makers who care about both growth and which benefits from growth. Enormous theoretical efforts have been devoted to these questions over the past few decades, with some focus on the potential effects of inflation on growth while others stress the potential impact of growth on inflation. More recent theoretical papers point out that policies and structural changes that affect one of the two outcomes are likely to impact the other

as well, implying that growth and inflation are jointly determined. Thus, conventional empirical studies on the causal links between inflation and growth are plagued by endogeneity and reverse causality.

Our research sets out to resolve the endogeneity and reverse causality issues applying Lewbel (2006). In contrast to previous studies, the main advantage of Lewbel's method is that no instrumental variables are needed to identify the structural parameters. We consider a linear simultaneous equation model, in this procedure, identification of structural parameters only requires that the errors be heteroskedastic and that a subset of the exogenous control variables be uncorrelated with the error covariance. Using a broad cross-country data set taken from IFS, we find that inflation does cause economic growth and vice versa. The results show that inflation and growth are strongly negatively inter-related in our full sample countries. This finding is supportive of the empirical implications of Ghosh and Phillips (1998), Valdovinos (2003), Apergis (2004) and Gillman et al. (2004).

After removal of the endogeneity bias, we also find a positive impact on inflation from economic growth in low-income countries sample. This result is consistent with the demand theory argument in Stockman (1981). His argument provided that anticipated inflation reduces the demand for real balances, implying that the demand for capital and output growth decreases. Certain studies support a negative association between them. (Zhang, 2000; Dorrance, 1964; Lewis, 1964)

The main results that emerge from our exercise are that the relationship which exists between inflation and growth is non-uniform with cross-country. This implies that conventional analysis, which looks at each outcome independently, fails in twofold strands. First, it ignores the evidence that policies designed to improve one outcome will probably also influence the other; and the other, to the extent that an independent model is under identified; it can't even be entirely certain what it is

estimating. Therefore, future research should try to expand the simultaneous equations model to allow for more endogenous variables.

The challenge of South Africa to reduce its high unemployment

The challenge of South Africa to reduce its high unemployment

1. Introduction

The unemployment rate in South Africa has been in excess of 20% for many years. What is wrong with current policies? What is the probability of millions of South African inhabitants to rise out of poverty?

Table 1: South African Unemployment

UNEMPLOYMENT (BROAD AND NARROW)

	2001		2002		2003		2004		2005		2006		2007		2008		2009

Definition	Narrow (official) - Number of people who were without work in the week preceding the interview, have taken active steps to look for work and were available for work. Broad (unofficial) - Number of people who were without work in the week preceding the interview and were available for work
Data source	Statistics South Africa, Labour Force Survey and Quarterly Labour Force Survey

Sufficient jobs are not being created after the political change in 1994 when the black ANC government took over from the white minority NP government. The new government employed two new policies after 1994 with a strong focus on job creation. In the Growth, Employment and Redistribution strategy (Gear) and the Accelerated and Shared Growth Initiative for South Africa (ASGISA) the assumption is made that higher economic growth will ultimately create new job opportunities. This assumption is flawed because the unemployment rate stays uncomfortably high. President Zuma said in the State of the Nation Address in February 2009 that 500000 jobs will be created for the year, but the country lost about 900000 job opportunities in 2009.

Possible solutions must be sought. The previous Minister of Treasury was frustrated that, in spite of pouring money into education, the system was not delivering results. According to (Green, 2008) the Minister stated that: *“the reality is that we have an education system that is highly deficient and we have a highly unequal society with a large number of comparatively unskilled people needing work”*. Regardless of billions of rand being allocated to education, it continues to be a whirlpool of low standards and weak outcomes.

Economically successful countries embrace certain economic pillars in the application of their policies to reduce unemployment. The previous Minister of Treasury commented according to (Green, 2008) that: *“SA could not afford to go the way of the soaring East Asian economies which pay slave wages and compete successfully internationally on the strength of that”*. Regardless of his viewpoint, the South African scenario should be compared to the fast growing economies of East Asia to find common ground for new measures to accelerate growth in South Africa.

Studies were done by the World Bank in 2007 and the Harvard group of economists in 2008 to find solutions. In the mean time, the informal sector provides a safety net for the formally unemployed workers at subsistence income levels which is not a long term solution. The new labour laws implemented after 1994 protect the rights of workers but makes the market place rigid. The ability of workers to rise out of poverty is being constrained by the policies designed to create a better labour dispensation.

This essay firstly states the problem of weak sustainable economic growth and high unemployment in South Africa. Secondly, the inability of the South African dispensation to create new jobs will be analyzed relative to theory. Thirdly, reference is made to various government policies to see if it supports real growth or if political agendas cast a shadow on theoretical principles. Fourthly, the South African labour scenario is analyzed according to studies done by various international organizations as well as a few similar emerging countries in East Asia to find common ground to improve employment creation. In conclusion, recommendations are made to improve growth in South Africa.

2. What can South Africa learn from theory?

The well known Neoclassical growth theory describes a steady-state equilibrium where the economy reaches a long-run level of output. According to (Dornbush, 1998) an increase in the savings rate, firstly raises the long-term level of capital and output per head. Secondly, an increase in the population growth rate reduces the steady-state rate of growth of aggregate output. Thirdly, an increase in technology causes the steady-state to move to a higher per capita output.

The Neoclassical growth theory dominated economic thought for a long time but did not explain the details of the technological progress. According to (Dornbush, 1998) the endogenous growth theory developed to explain the theoretical and empirical problems associated with the Neoclassical theory by modifying the production function. This theory explains the role of human capital as well as research and development to increase

long-run growth. These foundational economic elements should be incorporated in macro economic policies to create sustained economic growth.

3. What policies influence employment and growth in South Africa?

Various policies were implemented after 1994 by the new ANC government. Firstly, it is important to analyze these policies to see if it supports real growth and secondly to analyze the broader intentions of government, namely to implement a political agenda.

3.1 Reconstruction and Development Policy

The first policy which must be referred to is the transformation policy of 1994. The goal of this policy is to build a democratic, non-racial and non-sexist future (RDP, 1994). The vision is a fundamental transformation of South Africa by means of:

- the development of strong and stable democratic institutions
- to ensure representation and participation of all
- to ensure that the country become fully democratic, non-racial and non-sexist
- to create sustainable growth and development

This policy has two goals, namely reconstruction and development on the one hand and growth on the other hand. It is stated clearly that government supports macro economic policies which promote RDP principles. This transformation incorporates every level of government, every department and every public institution. This policy is not a new set of projects, but a comprehensive redesign and reconstruction of all government activities. It also facilitates labour market reform and establishes collective bargaining rights for all.

3.2 Growth Employment and Redistribution Strategy

The second policy is the GEAR policy of 1996 (Department of National Treasury, 1996). Soon after taking power in 1994, government realized that the country needed new initiatives to create sustainable growth of greater than 3%. Objectives of government to reduce poverty, to redistribute income and to provide social services were not fulfilled. Government launched this strategy about rebuilding and restructuring the economy to reach the goals of the RDP. The RDP role in this economic strategy is reflected as follows: *“to successfully confront the challenges of meeting basic needs, developing human resources, increasing participation in democratic institutions of society and implementing the RDP in all its facets”* (Department of National Treasury, 1996).

The GEAR strategy identified structural weaknesses in the economy and focused on policy measures to address these imbalances. A reprioritization of the budget towards social spending was the first element focused on growth. All the other elements focused on poverty and inequality, for example acceleration of the fiscal reform process, consolidation of trade and industrial reforms and public sector restructuring.

3.3 Accelerated and Shared Growth Initiative for South Africa

The third economic policy came into being in 2006 to reduce unemployment to below 15% and to halve poverty by 2014 according to (ASGISA, 2006). The government was

not happy with the realized growth rate of the GEAR policy. Two important aspects had to be addressed, namely the relatively strong rand because of positive capital flows from abroad and the social grant programme that did not reduce poverty enough. The government identified binding constraints that hampered sustained growth, namely

- a volatile currency
- efficiency and capacity of the national logistics system
- shortage of suitably skilled labour
- entry barriers and limited investment opportunities
- a regulatory environment that hampers the establishment of small businesses
- deficiencies in state organizations, as well as capacity and leadership

Analyzing these constraints, it is clear that sustainable high growth is hampered because of structural problems in the economy. The last constraint is however a perfect example of an imperfection created by the RDP policy.

3.4 Labour Policies

Since the 1994 election of a democratic government in SA, a continuous debate exists in the economy regarding unemployment and the redistribution of wealth. During this period from 1994 to 2006 when the government tabled new policies with various degrees of economic elements (minimal with RDP to a relative big percentage in GEAR and ASGISA), numerous new labour laws were also tabled. In an economic environment where industries are exposed to competition from international markets, the nature of industrial relations determines whether an industry is productive which eventually determines economic survival or not. These labour laws over protect the employee, which allows a situation to develop where employers reluctantly employ new workers.

South Africa's re-emergence into the global market place coincided with a watershed in industrial relations. Like many highly protected economies South African employers and unions have lived in a bargaining environment where cooperation was an unpopular option in a largely conflict driven system. The additional burden of a political system that forced a racial division of labour has left a legacy of distrust which demanded a new dispensation regarding labour relationships. It is into this volatile world that the Government has introduced the following acts (Mellet, 2006):

- Labour Relations Act (66 of 1995)
- Basic Conditions of Employment Act (75 of 1997)
- Employment Equity Act (55 of 1998)
- Skills Development Act (97 of 1998)
- Broad-Based Black Economic Empowerment (53 of 2003)

The philosophy behind the Labour Relations Act is to create a spirit of industrial democracy and to encourage production and labour peace by means of joint decision making. The main features of this act are the recognition of collective bargaining as the most acceptable means of resolving disputes of mutual interest. It also recognizes that strikes and lockouts are an intrinsic part of the process of collective bargaining. It simplifies the dispute resolving procedures by replacing the Industrial Court with the Commission for Conciliation, Mediation and Arbitration to process disputes. Lastly, the

most radical innovation of the Act is the introduction of the workplace forum. Elected employees have the right to consult with management and to reach joint agreement over matters defined in the Act.

The philosophy behind the Basic Conditions Act is to improve the basic working conditions of workers. Various aspects are covered, like 40 hours working week, overtime work, meal intervals, rest periods, work on Sundays, night work, annual leave, sick leave, maternity leave, termination of employment, prohibition of employment of children and written particulars of employment deductions from employee's remuneration.

The purpose of the Employment Equity Act is to achieve equity in the workplace. Equity is achieved by promoting equal opportunity and fair treatment in employment through the elimination of unfair discrimination. Affirmative action measures are implemented to redress the disadvantages in employment experienced by designated groups to ensure their equitable representation in all occupational categories and levels in the workplace. This act requires employers to take positive action regarding the accommodation of people from designated groups, ensuring that black people enjoy representation and are equitably represented in the workplace.

The intention of the Skills Act is to provide the means to manage skills development on a national basis. Every employer who is registered with SARS for PAYE or has an annual payroll in excess of R250 000 has to pay a skills levy of 1% since April 2001. The Skills Act and the Employment Act work in tandem. The aim is to expand the knowledge and competencies of the labour force resulting in improvements in employability and productivity.

The philosophy behind the BEE legislative framework is the promotion of black economic empowerment (Broad-Based Black Economic Empowerment Act, 53/2003). South Africa's economy performs below its potential according to the ANC because of the low level of income earned and generated by the majority of its people. It therefore promotes equality of all people and increases the participation of black people in all spheres of the economy and equal access to government services. It also promotes the role of black women, namely to own and manage existing and new enterprises and to increase their access in economic activities.

BEE began as a defensive policy to address problems of the previous political dispensation. It however escalated to the core ideology of the ANC which enriches the black political elite. An attitude developed in the ANC that the previous disadvantaged people can use the state to improve their circumstances, rather than to use the state and its assets to serve the needs of the people. Therefore the saying amongst the black population developed: "*the system owes me*". The role of the state became distributive, rather than developmental. This ideology became disastrous for the South African economy, relative to the ideology in East Asia, namely the cultivation of virtue and the development of moral perfection.

4. What do international research groups tell us?

4.1 Harvard International Panel

The Department of National Treasury, as representative of the government, engaged with an international team of experts to do research about the slow growth of the South African scenario. This group of experts, known as the Harvard international panel, visited South Africa various times in 2006 and 2007 (Department of National Treasury, 2008). The panel stated firstly that South Africa has a structural unemployment problem and that the binding constraints, as referred to in the ASGISA strategy, must be eliminated by government. Secondly, they recommended that the export sector, mainly because of declining trends in the mining-, agriculture- and manufacturing sectors, must be developed. Thirdly, they stated that growth in South Africa is driven by three sectors only, namely construction, transport and communication as well as the financial, real estate and business services.

4.2 World Bank

The Department of National Treasury, as representative of the government, also engaged with the World Bank in a Country Partnership Strategy (CPS) in 2007. The focus of this research is the reduction of poverty and inequality in Southern Africa (World Bank, 2007). According to this research, sound economic macroeconomic policies and sound fiscal discipline contributed to an average three percent annual growth during the first decade after 1994. (Van Aardt, 2009) argues that a positive relationship exists between formal-sector employment and household income per capita growth in South Africa. The problem however is that the low growth rate did not improve the social conditions of the majority of the population. The poverty levels did not reduce significantly, whilst the burden of the HIV disease remains high.

4.3 Other structural constraints

According to (Banerjee et al, 2007) the increase in unemployment is due to structural changes in the economy and not to temporary negative shocks. These researchers found that the supply of labour increased after the fall of apartheid. These new entrants into the labor market tended to be relatively unskilled. Secondly, they found a low level of labor market participation and employment in rural areas. If employment rates are compared by age group and region between South Africa and Latin America and the Caribbean, it is observed that the differences are large mainly in the rural areas of South Africa.

5. What is the success story of East Asia?

In the following table the unemployment rate of a few East Asian countries are compared. It is clear if these countries are compared to South Africa (refer table in introduction) that the general level of unemployment are within the international norm of 5% whilst the South African level is about five times more than the international norm. It is a clear indication that these countries' macro economic policies are effective, whilst something is seriously wrong regarding the application of polices in South Africa.

Table 2: East Asian Unemployment Rate

	2000	2001	2002	2003	2004	2005	2006	2007	2008
China	3.1	3.6	4.0	4.3	4.2	4.2	4.1	4.0	4.2

Source: International Labor Organization

In the following tables various indicators of a spectrum of emerging countries are compared according to a business economics consultancy (Global-production, 2008) which specializes in emerging markets research, based in Switzerland. If this information for East Asia is compared to the rest of the world, it is clear that East Asian countries are the leaders regarding various economic indicators. For every indicator, an Asian country ranks the best although it may be a different country. China compares poorly regarding industrial capacity and skill base. China however, ranks highly with regards to labour cost. The low labour cost in China is therefore a crucial factor in their phenomenal growth performance. If these various indicators are compared to other emerging countries, it is without a doubt clear why East Asian countries are the pivot of growth in the world.

South Africa is for all the indicators in the wrong half of the spectrum and compares very poor to East Asian countries. South Africa rank 0.231 out of a possible 1.0 regarding industrial capability; whilst the ranking for skill base is 0.246 out of a possible 1.0. The ranking for labour cost in South Africa is 74.6 and very high relative to East Asian countries. Various other emerging countries also compare better than South Africa regarding these indicators. It can be concluded that the application and policy mix of South Africa is badly structured and managed.

Table 3: Industrial Capability

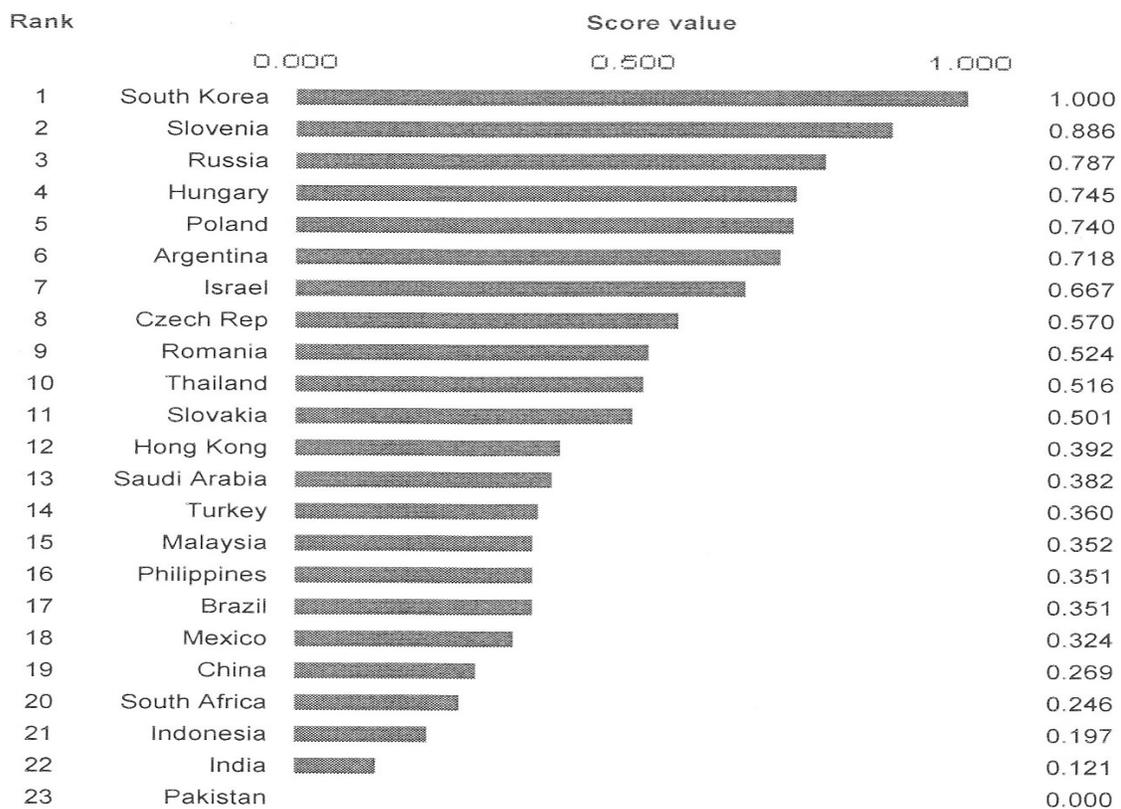

Metric is based using the following indicators; skill base, research and development capacity, infrastructure and government. It is calculated as the arithmetic mean of indicator values converted to score values from 0.0 to 1.0.

Source: Global-production

Table 4: Skill Base

The following table is about the availability of skilled manpower in the labour force. Metric is based on the Harbinson-Meyers Index values for enrolment in secondary and tertiary education. The index values are converted to score values ranging from 0.0 to 1.0.

Source: Global-production

Table 5: Labour Cost

The following table is about an index of hourly wage cost. The wage index is based on labour cost data for 14 widespread professions in major agglomerations. The index values are weighted by the share of each occupation in overall employment. Labour cost is defined to include holiday and vacation pay as well as taxes and social security contributions by the employer.

6. Adjustments needed in South Africa

Various binding constraints exist in South Africa that hampers sustained growth and the reduction of unemployment. Various policy adjustments are needed to rectify this major problem. Firstly, recommendations of the various institutions and groups of researchers, as referred to in section four, will be addressed and secondly, lessons learned from East Asia will be addressed. These recommendations will summarize the required policy changes needed to improve growth and the creation of job opportunities in South Africa.

6.1 Harvard International Panel

The Harvard economist group refers to a non-tradable sector which employs relatively few unskilled people and a tradable sector like mining, agriculture and manufacturing that

employs greater numbers of unskilled people (Green, 2009). The problem in SA is that the people are mainly unskilled and that there is a big supply of unskilled labour whilst there is a small supply of skilled labour. The panel made five policy recommendations (Department of National Treasury, 2008) to improve the growth and unemployment problem in South Africa:

- Macroeconomic policy: to reduce constraints of growth, fiscal policy must be counter-cyclical and must make a bigger contribution to national savings, existing restrictions on capital outflows must be eliminated, the current inflation targeting regime must be maintained and the level as well as the stability of the exchange rate must be addressed
- Trade and competition policy: a radical simplification of the tariff system with low or no tariffs on inputs, a review of the SACU arrangements, SA to lead African economic integration without unrealistic custom union agreements and changing to a pro-active approach regarding competition policy
- Labour market policies: to implement a wage subsidy for 18 year olds, the relaxation of SETA (skills education training authorities) regulations and the implementation of a high-skilled immigration approach of government
- Industrial policy: a shift in focus of the Industrial Development Corporation (IDC) from asset management to the financing of new activities, that the existing Customised Sector Programmes be substituted with an approach of self organization of the different actors, to create a special central budget for structural transformation, to change the Motor Industry Development Programme (MIDP) policy with a supplier based promotion scheme and lastly, that beneficiation should not be used as the basis for selective intervention and industrial promotion
- Public administration and Black Economic Empowerment: recommendations regarding public administration are two fold, namely a certification system for government entities which provides economic services and municipalities with poor capacity to use central bodies to procure municipal services. Regarding BEE three recommendations are stated, namely a review of the current BEE scorecard system to include elements to facilitate employment creation, learnerships and training, the development of a system to collect information regarding BEE and a mechanism to evaluate the progress of this policy. The panel also stated in a separate paper that the negative impact of crime discourage growth of small and emerging businesses in poorer areas.

6.2 World Bank

The Country Partnership Strategy (CPS) developed between the World Bank and the Department of National Treasury focused on the eradication of poverty and the reduction of inequality in the Southern African region. This joint strategy proposed a theme consisting of two pillars (World Bank, 2007) to reduce the poverty and inequality problems:

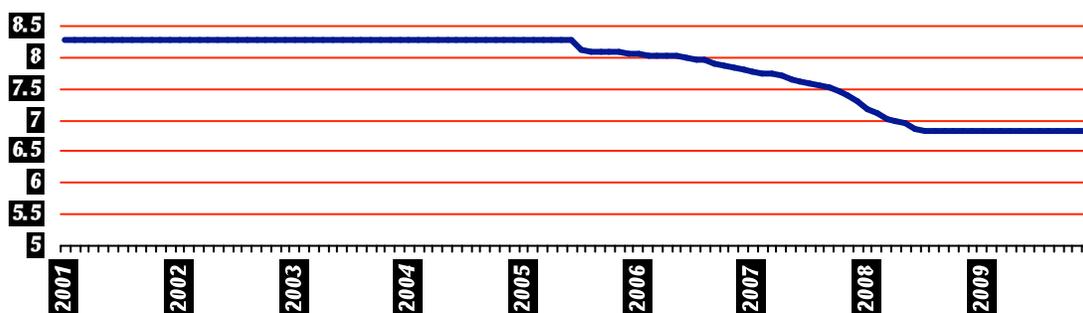

- the first pillar of the CPS is about measures to improve urban and rural development. This pillar support key areas of ASGISA, for example urban and municipal development, land reform and agriculture, privates sector development, environment and infrastructure.
- the second pillar of the CPS is about measures to improve regional integration. This pillar proposes activities to support Africa, for example facilitation of South African companies' investments in Africa, building of regional communities in cooperation with the SADC countries and the sharing of knowledge to support Africa.

6.3 East Asia success stories

Lessons to be learned from East Asia, with specific reference to China, are numerous. Firstly, the government of China made a decision to break with the communist ideology and to apply capitalistic principles which proved to be a use success. Secondly, the sheer size of China growing from a very low base, created vast opportunities. Against the background of these foundational issues and regardless of a fairly weak ranking in industrial capability and skill base (refer section 5), the following specific factors are driving high growth in China:

- the liberation of trade policies
- very cheap labour cost in comparison to other countries
- the monetary authority manage the Yuan not to appreciate

Graph 1: Yuan versus USA \$

Source: Peoples Bank of China

It is very clear in the graph above that the Yuan is not allowed to appreciate in the last decade regardless of the phenomenal growth in exports and the creation of the biggest national reserves in the world in excess of \$2 trillion. The monetary authority only allowed a few minor adjustments during 2006 – 2008. The low labour cost and the authorities that does not allow the currency to appreciate in relation to the USA \$ has been the major cause of the phenomenal growth in their exports, massive current account surpluses and the highest national reserves in the world.

During the World Economic Forum in Davos beginning of 2010, political leaders, central bankers and international investors, for example George Soros, all attacked the monetary and trade policies of China. According to (Hui, 2010), the international officials questioned the Chinese policies to keep the Yang weak against the USA \$. The general consensus was that a weak Chinese currency does not create fair trade in the world. It also creates imbalances in international trade which harms the recovery of other countries in the world after the international crises of 2008.

6.4 Other recommendations

The Harvard group of economists and the World Bank made certain recommendations in recent years to address the lack of growth in South Africa. Despite these

recommendations, theoretical principles must also be employed in policies. Examples are to increase saving, to control the population growth, to employ technology in manufacturing, to improve productivity, to improve skills and to allocate more capital to research and development. Many of these examples do not feature in the South African economy.

The saving rate in South Africa is stable at a relative low 15% of GDP (SARB, 2009), but the contribution from government fluctuates a lot and the contribution of consumers has been negative since 2006. The population growth does not stabilize and the South African authorities opened the northern borders beginning of 2009 allowing people of northern African countries to pour into South Africa. This change of policy caused the unemployed pool to escalate in South Africa. South Africa is an exporting country of mainly minerals according to absolute advantage principles. Comparative advantage and competitive advantage principles of international trade theory should be encouraged rather than to stick to the old theoretical principle of absolute advantage.

The investment in human capital is another case in point. According to the 2010 national budget (Department of National Treasury, 2010), R165 billion or 18% is budgeted for education (the biggest item in the budget) for the fiscal year 2010/11. The government pours billions of rands into the coffers of education, but the standard of education does not improve. The government began a few years ago to pay out social grants to children of poor families. In the 2010 national budget (Department of National Treasury, 2010), R89 billion rand is allocated to this portfolio and the grant was extended from 16 years to 18 years. These grants send the wrong signal to communities, because more children are borne simply for these families to qualify for grants. It also casts a shadow over the development of any entrepreneurial skills and creativity to find a job because government looks after the people. A wage subsidy for youthful workers that target the unemployed group that is in transition between school and work, should be the only grant to the youth. This grant was implemented in the 2010/11 national budget, according to advice of the Harvard group of economists.

BEE policies should be scrapped. This philosophy of government discourages new investment, it causes the acceleration of the skills flight of white people to other countries and only benefit very few black people. Regardless of the economic failure, a BEE Council was inaugurated on the 4th of February 2010. The president stated in his speech (Zuma, 2010): “.....*the story of black economic empowerment in the last 15 years has been a story dominated by a few individuals benefiting a lot. The vast majority of those who are truly marginalised: women, rural poor, workers, the unemployed, and the youth have often stood at the sidelines.*”

Lastly, government should allow the rand to depreciate to support exports which are not competitively priced in the international community because of high labour costs. The ruling policy of government until the beginning of 2010 was not to intervene in the financial markets. This policy creates volatility because the rand is expressed to the USA \$ and the South African economy is influenced by the policies and activities of the USA. In the national budget speech of 2010 (Department of National Treasury, 2010) the

minister employed a new policy, namely that government will not allow the rand to appreciate further.

7. Conclusion

The political dispensation before 1994 was characterized by sanctions, global isolation, strikes, violence in the townships against the apartheid system, lack of foreign capital, a low growth rate, high inflation and capitalism. February 2010 was the commemoration of the speech of the previous president, (Mr) F W de Klerk, twenty years ago to release (Mr) Nelson Mandela and to legitimize the ANC political party. This historical speech paved the way to the first democratic elections in 1994.

In 2010, twenty years after this historical speech, the picture is vastly different. The South African economy is now characterized by violence in the townships against poor service delivery by municipalities, strikes organized by politically inclined labour unions to improve workers benefits, volatile foreign capital, volatile growth rate, high unemployment, numerous structural problems in the macro economic environment, a sick educational system absorbing the biggest percentage of national budget funds, bad management and corruption in all three levels of government and a socialistic ideology in government.

These problems are summarized by a leading academic in South Africa and the brother of the previous ANC president who resigned from the ANC. Dr Eloff, vice chancellor of North West University, stated during the Afrikaans language deliberation in January 2010 that white Afrikaans people are bullied by a transformation ideology which is not written in the South African constitution. He stated according to (Malan, 2010) that tension exists between the constitution and transformation.

According to (Mbeki, 2009) the solution to the crisis caused by the ANC government: *“can only come from the emergence of a leadership with meaningful policies for building a more inclusive society in South Africa. BEE, which benefit the black elite and the social welfare programmes which benefit the poor, do not lead to such inclusiveness; if anything, they entrench the inequalities inherited from the past and exacerbate new inequalities amongst the black population”*. To achieve the real growth rate goal of 6% as stated in the ASGISA policy and to reduce the high unemployment in South Africa, various crucial policy changes must occur.

Theoretical principles must be employed in policies, the various structural problems must be addressed by government and principles of Asian success stories must be incorporated in the South African economy. Certain policies for example ASGISA have good foundations, but the main problem in South Africa is two-fold. Firstly, sustained high growth of 6% will not be achieved as long as economic principles are overshadowed by the political agenda of transformation in South Africa. Secondly, fundamental changes are needed in the South African economy and need urgent attention, but the lack of management at all levels in government, handicap such changes. As long as there is no strong political opposition in parliament to control and stop wrong activities of the ruling political party, sustainable growth will remain a dream.

Commodore David Porter's Constantinople and Its Environs: An Official and Personal Testimony by an Apologist for the East

Cansu Özge Özmen

Namık Kemal University

I. Business and Pleasure

In 1831, David Porter was sent to Constantinople with his first duty to oversee the resolution of the Treaty of Commerce and Navigation. The ratifications were exchanged on October 3, 1831 during which Porter was present. On Letter IV, published in *Constantinople and Its Environs*, dated August 3, 1831 he gave a detailed description of the events that took place at Reis Effendi's (Foreign Minister) house. Due to the protocol and Porter's inferior rank, he could not have a formal audience with the Sultan.¹ He remarks that the events were not characterized by "oriental splendour" and that the readers have been long "gulled by travelers."²

The minister and the Efendi had a good deal of conversation about the United States, and particularly about our Indian population, of which he asked many very pertinent questions as to the nature of their government, their relations with the United States, their progress in civilization, their number, the interest the government had in treating with them, making them presents, establishing schools, and promoting their civilization. After the minister had answered all his questions, he asked him this truly Turkish question: "Could not the United States do all this better, and in much shorter time, by sending an armed force?" The minister informed him that our system of policy toward them was one of benevolence: that as we had taken from them their country, and as their race became almost extinct, we looked on them as entitled to our charity, and felt ourselves bound to do them all the good in our power. He thought this "all very kind, but not very politic."³

The exchange of the ratifications took place almost two months after Porter's arrival at Constantinople. Diplomacy in inter-personal or political relations had not been his strongest suit thus far. However, during his residency, there were only complaints about him on the American side, rather than on the Ottoman side. His overall manner in his portrayals is not radically different from his *Journal of a cruise made to the Pacific Ocean*, in that, his lengthy physical descriptions of women, their figure, and attire what those connote about their moral norms; the boastful undertones that accompany these depictions, overtones of nationalism and essentialism are extant in both. However, what makes his biographer Long call him "the first imperialist," those impulses of annexation, invasion, interference in domestic affairs of distant lands are actions and discourses of the past for Porter. In fact, David Long recounts a correspondence between the American consul at Salonika and Porter that took place in 1836. The consul informs porter that Ottoman officials were willing to sell Cyprus to the United States. "The Commodore advised the Consul to forget that the offer had been made, then fired off to Washington Consul's letter along with his own advice that

³Ibid., p. 52.

America had already enough land and should avoid the evils of colony grabbing.”⁴ He delimits his spirit for entrepreneurism to what directly concerns him: commerce. “It is astonishing how indifferent our countrymen are to the rich commerce of this great and wonderful empire, as well as that of Black Sea...Is this owing to our indifference, or our ignorance?” This barbed comment; as well his frivolous passion to convince Paulding of the pleasantries of the Empire and the Turks coaxed towards his countrymen -if we disregard his bitterness towards those who court-martialed him and turned their backs on him- seems to have been motivated by relatively personal reasons. He was struggling to overturn the image of his career as a failure which was clearly ingrained in his mind as well as in his contemporaries’.

Throughout his letters from Constantinople he writes consistently with this anti-imperialist notion that he expressed with regard to Cyprus. The geographical distance of Cyprus compared to Nukahiva could be one of the reasons yet one suspects that it is not the only one. However, this anecdote is not reason enough to discard any prospective imperialistic notions Porter might still have enjoyed. In 1835, Paulding had the letters published under the long and self-explanatory title, *Constantinople and Its Environs in a Series of Letters, Exhibiting the Actual State of the Manners, Customs, and Habits of the Turks, Armenians, Jews, and Greeks as Modified by the Policy of Sultan Mahmoud by an American, Long Resident at Constantinople*. In the first volume, it is evident that Porter did not pen the letters with the intent of publication, at least not an immediate one; although he recurrently expressed insecurity with regards to his literary style and urged Paulding to throw the letters into the fire lest he finds them unworthy of storing.⁵ In the second volume, he is already conscious of a prospective readership and accordingly didactic. Moreover, the second volume is relatively repetitive (or rather singulative); including more or less the same descriptions of the places he visited more than once. His preface introduces Porter’s narrative as fresh and original on the grounds that he had the privilege that other travelers or residents did not enjoy and he “has not only had the advantage of a residence of several years in Constantinople and its environs, but, in addition to this, occupied a station which gave him opportunities of social intercourse and minute observation rarely presented to Christian travellers in Turkey.”⁶ The access he had to social intercourse and the extent to which he made use of it will be explored later in this chapter. He emphasizes what Porter also does throughout the two volumes that the recordings are based on the author’s observations rather than his preconceptions based on previous reading of accounts on similar regions that are becoming obsolete “like the black-letter books of the middle ages.”⁷ The invalidation of former accounts according to the preface hinges on a large scale upon the reforms of Sultan Mahmoud II, who receives numerous embellished compliments from Porter as well. The preface while referring to the Sultan’s reformation policies, also sets the discursive tone which is oscillating yet almost always prevalent throughout the narratives. His tone is distinguishable from Porter’s in that he does not draw a distinction between the adaptiveness of the governmental body epitomized by the Sultan and the subjects of the Empire who are reduced to their ethnic background: “Since that time [Battle of Navarino] Sultan Mahmoud has proceeded in his reforms as rapidly as Turkish indolence, Turkish pride, and Turkish superstition will permit.”⁸

⁴ David F. Long, *Nothing Too Daring: A Biography of Commodore David Porter, 1780-1843*, (Annapolis, Maryland: United States Naval Institute), 1970, p. 294.

⁵ David Porter, *Constantinople and Its Environs*, Vol. I, (New York: Harper & Brothers, 1835), p. 33.

⁶ *Ibid.*, p. 3.

⁷ *Ibid.*, p. 6.

⁸ *Ibid.*, p. 5.

As is clear from the portrayal of the natives of the Marquesas Islands he has a paternalistic approach rather than an outright aggressive one, regardless of the result being one and the same. Therefore, the representation of the Turk, the Armenian, the Jew, or the Greek without sufficient reference to the political conditions of these peoples, the information being accessible to him, does not eliminate the possibility of a political agenda. In any case, he is not forthright about any intentions, moreover, Porter repeatedly praises the ability of the Turk to be adequate in ruling his country.

These praises also extend to his observations of the agricultural habits in Turkey the lack of which might have signified an insinuation that an external assistance or an involvement is necessary. "Of the latter [onions] may be seen whole and very extensive fields, laid out with great care and neatness, and well irrigated. The people of this country understand this process extremely well, and wherever there is a stream of water, they are sure to turn it to good account."⁹

Here, like in the preface to his *Journal*, he talks of himself in the third person and narrates the events that succeeded the exchange of the ratifications. As Porter repeatedly acknowledges and passionately desires to convince the addressee of his letters, James Kirke Paulding¹⁰, the Ottomans were not as ignorant about the New World as they were assumed to be. The anecdote reveals that Reis Effendi is relatively informed about the domestic affairs of the United States with his "pertinent questions" of the general state of Native Americans. Then he proceeds to concretize his binary opposition of the civilized American treatment of its native population and the cruel and aggressive Ottoman suggestion of military force. The ignorance of the Ottomans that he refutes so fervently does not factor into his portrayals of the people when it comes to awareness of their own history.

Here the mass of the people are honest, to a degree unknown elsewhere, and virtuous too. The Mexicans are a nation of thieves and prostitutes. Murder and robbery here are the rarest occurrences, and there is no country where a person may travel without arms in such perfect safety as in this. In Mexico, no man's life is safe if he has not good arms, and a good will to depend it. They murder there for the love of blood.¹¹

Porter's vindictiveness and embitterment with his experience as commander-in-chief of the Mexican Navy were also infused into his comparative depictions of provincial Turkish cities and towns. His son, Admiral David Dixon Porter wrote in the biography of his father that he wrote in 1875, asserts that "nothing would have gratified" his father "more than to have lived to see Mexico humbled to the dust by the Americans,"¹² and that liked the Turks instinctively albeit gradually and he "esteemed them for their honesty, for they would not lie like Europeans, nor steal like Mexicans."¹³ As it is also clear from his son's remark, Porter's lifelong Anglophobia singles him out among other travel writers of the 19th century. This was naturally an inevitable result of his occupational background. Just as he delimits his depictions to physical traits of people and scenery, he congruently remains on the surface of circumstantial consequences. Aside from his blindly nationalistic sentiments and racist notions, his utter lack of curiosity for his surroundings contributes to his ineffectual delineations.

⁹David Porter, *Constantinople and Its Environs*, Vol. I, (New York: Harper & Brothers, 1835), p. 206.

¹⁰Paulding collaborated with Washington Irving in *Salmagundi*, which was a 19th century periodical. In 1838, he became the Secretary of Navy. He is the recipient of all the letters that Porter wrote from Constantinople.

¹¹David Porter, *Constantinople and Its Environs*, Vol. I, (New York: Harper & Brothers, 1835), p. 224.

¹³*Ibid.*, p. 405.

Finnie observes that although Syria, Palestine, and Egypt were within his jurisdiction for almost twelve years he made no attempts at visiting them.¹⁴

II. Knowledge Management and Taxonomy

Justin D. Edwards asserts “the popularity of nineteenth-century travel writing arose partially out of a Victorian compulsion to classify, taxonomize, and control the natural world.”¹⁵ Porter’s desire for categorization is not limited to flora and fauna; rather it expands itself to people, women in particular. His concerns with gender, ethnicity, and class are rarely extant independent of each other. Physical characteristics denote specific ethnic, economical backgrounds. In addition to denoting the same parameters, colors and ornaments of attires also designate the nature of the occasion and the class the subject belongs to. The members of an ethnic group that constitute the majority in the country in question or the ruling class are almost always more favorable to Porter’s gaze. In his depictions, he singles out the signifiers of his ethnic parameters and never disregards their possible connotations within the local realm. With almost primordial instincts he actualized a heteropathic narrator who dissects and deciphers the paraphernalia that the object of attention carries on herself. It is similar to what Mieke Bal calls the “the nonreciprocal gaze”¹⁶ when analyzing Marcel Proust. In a similar vein, the women being gazed upon, as a result of “modesty,” can neither reciprocate his gaze directed towards them nor can they objectify him with the same analytical manner. They are mere images one describes and speculates on with no context available to them and the on-looker.

What struck me most, was their brilliant black eyes, their beautifully arched eyebrows, and their long and glossy black hair almost reaching the ground. The delicate fairness of their skins, is owing to their confinement to their homes: of their figures I could not judge. Some of them have thrown off their clumsy yellow boots, and substituted the silk open work stockings and slippers: handsomer ankles, and smaller and more beautiful feet, I have never seen. When a man buys a wife, if rich, he undoubtedly chooses a handsome one. The Turks are a noble race of men, and the women being generally of Circassian origin, it is not surprising that the daughters of the Turks should be beautiful.¹⁷

His focalization on the surface traits, rather than the practices or their reasons for emergence is striking. His gaze is all-encompassing against the odds of the attire that covered most the women’s bodies. His voyeurism is almost of an interwoven nature of the comprehensive feminine and the penetrating male. After a detailed description of the accessories, their colors and make of fabric, he proceeds to the only exposed part that is readily available to his gaze: the feet, where his wandering gaze concludes its short journey that began with the silk stockings and slippers. All throughout the two volumes, he designates his traverses on the female body and its depiction to a minimal, superficial level. Even on rare occasions, where he actually verbally communicates with a woman, he suffices the description to physical traits. Yet after the breakfast scene, he claims to have discovered a new window into the lives of the Turks, which could only have been attained through his unique experience of distant observation. Meyda Yeğenoğlu aptly describes the frustration of the Western gaze encountered by the veil as “Frustrated with the invisibility and inaccessibility of this mysterious, fantasmatic figure, disappointed with the veiled figure’s refusal to be gazed at, Western

¹⁷ David Porter, *Constantinople and Its Environs*, Vol. I, (New York: Harper & Brothers, 1835), p. 29-30.

gaze subjects this enigmatic, in Copjec's terms, 'sartorial matter,' to a relentless investigation."¹⁸ What the gaze is able to penetrate after meticulous struggle, in Porter's case the feet of the women having breakfast; the gaze exhausts with description and almost compensates for the parts that are not accessible to his investigative and descriptive urges. He overcomes this deficiency by informed or uninformed speculation about the general manners and state of women in the Empire. He abandons the most specific of all descriptions and switches to generalizations about their breeding and beauty. The drastic change in his descriptive style can be explained by an escapist attitude towards anxiety that is created by the invisibility of the object of attention. What he cannot access visually, he completes speculatively.

Another intriguing moment occurs when some Turkish ladies, out of curiosity for the customs of Americans and specifically of *Elçi Bey* (Minister) pay a visit to Porter in his house. Although, usually skeptical and tactful about socializing with the locals, he derives tremendous pleasure from the willingness of the Turkish women's expression of interest in him. He narrates the event as such: "Some of them were very beautiful, particularly the youngest, about seventeen years old...profiting by my character of doctor, (for I practice physic in my neighbourhood), when they asked me to feel their pulses, I desired them to take off their veils, that I might examine their faces, and tongues, which they readily did, and gave me a good opportunity of examining their features, and three of them were certainly very handsome."¹⁹ While his physical pleasure almost transcends and expands on his former merely visual one, he reinvigorates his own stereotypical vision of Turkish women as "indolent" and "voluptuous."²⁰ As will be exemplified later, this is a rare privilege he endows the Turkish women with. His conservatism regarding the manners of American women does not apply to Turkish women just like it had not applied to the young women of Marquesas Islands who threw themselves at the feet American sailors, including Porter himself. What is more striking than his impertinent assertiveness is the presumed "readiness" of the women to expose themselves to the foreign gaze and even touch of Porter. Once diluted through the filter of his selectiveness, his notational deliberations of women become a tautological specter. Moreover, true to norm, the narrative of women is not dialogic in nature. Their presence is proved by imagery in a rather perverse form; but it is completely silenced, it is merely a sensual presence.

I am not the apologist of Turkish prejudices, but it cannot be denied, that the barbarous invasion and excesses of the mad crusaders; the persecutions and final expulsion of the Mahometans from Spain; the uniform language of all Christian writers, as well as the uniform conduct of Christian states towards the Ottomites, have all combined to furnish no slight justification of their feelings towards the nations of Europe.²¹

The cumulative historicization of the Muslim-Christian relations which Porter considers to be repetitive and tautological, lies at the heart of his criticism. But what he is personally more sensitive about is the aggressive countenance of Europe that randomly enacts its barbarism and madness with towards her opponents and what Porter had experienced firsthand. Moreover, he draws a discursive boundary between the "uniform language of all Christian writers" which he insinuates to entail political ambitions under the cloak of religion and his account. His political and religious neutrality factors in his discourse as an additional source of originality that compensates for the lack of erudition. As an American -to borrow a term from Ali Behdad-, he suffers from "belatedness," which

²¹David Porter, *Constantinople and Its Environs*, Vol. II, (New York: Harper & Brothers, 1835), p. 317-318.

is much more advanced than the European one temporally. However, there is a flip side to his assertion. The historicized excuse he provides for deeply embedded prejudices which he refrains from owning up to, does not warrant a space for tolerance on the Muslim side that could surmount the historically imbued animosities between the two creeds. The Muslim world is not exempt from the sense of superiority and discourses of exceptionalism that he assigns to Europe. Then again, when his ambivalence about the Muslims merges with his high admiration for Mahmoud II, he asserts: “Turkish prejudice has heretofore opposed a barrier to research, but the time has arrived, when an enlightened Sultan has removed all obstruction to investigation. The Christian in Constantinople, is now nearly as secure from insult, as in any part of Christendom, and may pursue his inquiries without apprehension of injury, or fear of interruption from any one.”²² The responsibility for this aura of tolerance and liberal investigation is assigned to Mahmoud II. Yet, it is not clear to which level it has been disseminated, if the periphery has complied with center’s enlightenment. The freedom with which he satirically feigns to compare religious tolerance in the United States and in the Ottoman Empire displays the tacit allusion to the former’s evident superiority in this regard. Perchance, superiority does not even define the relative condition of the United States in terms of tolerance as it becomes clear in the following passage in which he inadvertently reverses his reflection on the issue.

In fact, there is more toleration in religion in Turkey, than any where else; more even than in the United States, for however Christians may differ among themselves in their creeds, forms of worship, and ceremonies, the Turk looks upon them all as dogs of the same litter, and their barking and growling not worth his notice, provided they keep out of the way of his pipe, and do not upset his coffee.²³

After this explication of the rationale behind Turkish tolerance, rather than superior, the state of American tolerance becomes the genuine counterpart of the imposed Turkish one. Even the imposition of the enlightened Sultan is deemed obsolete by the deeply embedded yet passive and demeaning manner of the Turks towards Christians. By satirizing the concepts of tolerance and equality, he reveals a very idealistic view of the United States, her institutions and people. Although at times, critical of the “niggardly habit of the Franks,”²⁴ and Americans in the Ottoman Empire, he puts forward a refined, purified view of American past and present. Even the relative intolerance in the United States can be explicated by the lack of sense of superiority and contempt for other denominations. He reformulates equality as a precursor to intolerance. The denominational distinctions do not have significant denotations as long as they do not meddle with Turkish indolence. These irreconcilable oppositions merge in this cleansed platform and contrive the nation that is the epitome of tolerance.

Christopher Mulvey gives a fitting diagnosis to this phenomenon of self-criticism via contempt and resentment towards one’s compatriots: “The hostility of the traveller to his own kind was to some extent an expression of a curiously displaced sense of territoriality that overtook men outside of their own country...The traveller saw into things...He might criticize, or praise; others might not.”²⁵ The braggadocio of Porter also stems from his struggle to position himself within the realm of the genre as well as gaining a respectful reputation sustained through appreciation by and a sound communication with the local government. What Porter is ultimately aiming at is a “critical shift

²² Ibid., p. 99.

²⁵ Christopher Mulvey, *Anglo-American Landscapes: A Study of Nineteenth-Century Anglo-American Travel Literature*, (Cambridge: Cambridge University Press), p. 24.

from fantasy to rationality, from exoticism to systematic knowledge.”²⁶ Yet his discourse is caught in between the transition neither completely becoming one, nor remaining to be the other. He is not the savant with authority nor is he the sentimental traveler that transforms anything that appeals to the eye to phantasmagoria that is not extant in reality. A more straightforward example is a passage from the first volume where he elucidates not the superiority of the end result –the governmental regime, social mobility, equality in the United States now- but of the core values that the end result is so firmly grounded in.

...you see how extremes meet in governments as well as in every thing else. In our Republic, certainly the freest country in the world, distinctions of birth weigh as nothing, and any man may aspire to honours and office. It is the same thing in Turkey, one of the purest despotisms on the face of the earth. The cause, however, of this apparent similarity is as different as day and night. In the United States, this general eligibility to office, is owing to the universal equality recognized in the laws and the constitution: in Turkey, there is the same equality in the eye of the Sultan, who is placed at such an immeasurable distance above the rest of mankind, that they appear to him like the pigmies of the same size and dimension...Here is a cloud of philosophy for you.²⁷

He postulates an idyllic image of the United States, the nation, according to Porter, “where even the slave is not required to distinguish himself from the freeman by any act of degradation.”²⁸ In his frame of comparison, slavery does not exist. American equality is blind, non-discriminatory and it is not a consequence, rather the essence of the American system of thought. Correspondingly the ground on which Ottoman equality is framed also lies at the core of the Sultan’s status and character: a grandiose sense of self, and a habitual derisive nature towards his subjects. Nonetheless, Porter digresses from the mainstream discursive enunciation that considered amelioration in Oriental society infeasible. However, his assertions still do not rule out a congenital inferiority on the part of the common folk since his praises pertain to the reforms enacted by the Sultan. The mainstream preference would side with the people and explicate their inferior state as the result of a brutal oppression stemming from the government.

Sultan Mahmoud has...attempted and is in the daily process of achieving the noble yet difficult task of adapting this government and those institutions in some degree to the progress of intelligence in the rest of the civilized world, and if he succeeds, as I earnestly hope he may, will merit to be ranked with Peter the Great, King Alfred, and the most illustrious benefactors and reformers of every age and country.²⁹

Mahmoud II who according to Porter carries “a slight air of dandyism about him,”³⁰ the thirtieth Sultan of the Ottoman Empire, pioneered numerous reforms which aimed at democratizing the laws, abolished the Janissary corps in 1826 and began to organize a modernized Ottoman army, Nizam-I Cedid (New Order,) recognizing that the former institutions of the Empire no longer proved satisfactory for self-sustenance. Stanford J. Shaw, and Ezel Kural Shaw enumerate the hindrances to the concretization of the reformations as the size and the heterogeneity of the Empire; the reformer’s dependence on Western nations and the latter’s exploitation of this dependence; the system’s inability to accommodate the desire for rapid change; the struggles for independence of the

minorities supported by Russia and Western Europe, and the “sporadic terrorism” that forced digression from the issues at hand, and the intervention of the European powers in the Ottoman domestic affairs.³¹ Unfortunately, his romantic notion of Mahmoud II prevents Porter from scrutinizing these hindrances. The Sultan’s special interest in Porter’s occupational background (as he was in the process of rebuilding his navy) and their several informal exchanges was a great source of pride for him. The Sultan’s sudden death in 1839, and the indifference to the American minister of his young son Abdulmecid I, who was sixteen when he succeeded his father, disappointed Porter. As recourse to a comprehensive report as a result of exploration however, Porter provides the reader with something more valuable, and appealing as well as original, which leads to an introspective protest against European powers. He carries his pleasant intercourse with the Sultan to a higher level by drawing on a reason for solidarity between the United States and the Ottoman Empire simultaneously redirecting the attention to the American condition.

Here is a monarch, whom those of Europe are pleased to call a barbarian, bending the energies of a great genius, to reforming his government, and ameliorating as far as circumstances will permit, the condition of his people, while the universal spectacle of civilized Europe is that of Christian monarchs, using every effort of their power and policy, to stem that mighty torrent which rising in the forests of the new world, is now rolling from kingdom to kingdom, and from one quarter of the globe to another, apparently as certain in its consequences, as it is inevitable in its course. And let it be remembered that almost all obstacles to the immediate success of this glorious plan, exist in the prejudices of the subjects of Mahmoud, not of his own.³²

Noteworthy of attention, reflections of Porter on the reforms pioneered by Mahmoud II, his partiality towards the Ottoman Empire against the European powers which he openly declares to be the result of nationalistic sentiments, reveals the main determining factor behind his ideological approach to the Ottoman Empire. The European monarchs who are inept at self-reflexivity and label the ruler of the Empire as “barbarian” are the same ones who are trying to stop the unstoppable, and prevent the inevitable. These holistic sentiments of animosity directed towards the European powers are the result of his nationalistic feelings’ overshadowing his desire for a cultural history that the “torrent” and the “monarchs” could share. He prefers to draw a similarity and commonality with the Ottoman Empire (via the person of the Sultan) against the common enemy. Yet, at this junction, he suggests the reason behind the obstacle against the immediate enactment of the reforms in the Empire: her subjects. By concentrating all of the virtues and the motivation behind an ideological and sentimental alliance between two countries on one individual, –the present ruler of the Empire- he also designates it in time and renders it temporary.

Abstract

Online social networks have become extremely popular. Social networks are platforms for interaction, communication and collaboration between friends. In Facebook, users interact and share contents with friends who have common interests and similar experiences to build up their own social interaction. Storytelling is a method of communication that often applied to record and express personal experiences. This paper focuses on using drawing to share personal experiences to facilitate the creation of narratives. In this work, an application is designed and developed by the researcher and put in practical use in Facebook. Through the process of making a story chain to carry on the game, online users can create the content of a story by drawing, collaborate with friends to create a narrative, and share commonly similar life experiences. These collaboratively made narratives shall become the record of common memories shared between friends. As a tool for online social network participants, this collaborative drawing application enables users to create retrospective storytelling and to collaborate with friends without the time and space limitations. It is expected that through the interaction of making story chain to create common memories, this work can facilitate the emotional communication between friends in online social networks to further enhance and strengthen their friendship.

Keywords

Online social networks, social interaction, storytelling, drawing, Facebook

1. Introduction

Internet has become one of the most important communication channels nowadays. Internet shortens the distance between people, makes those who are unfamiliar turn out to be close as a family and further builds trustworthy relationships among them. Online social networks (OSN) are platforms for interaction, communication and collaboration between friends. In Facebook, users interact and share contents with friends who have common interests and similar experiences to build up their own social interaction. Based on the success of several

online social networks such as Twitter, Facebook and Mixi, it strengthens how important Internet is to the interpersonal communication. Moreover, Facebook currently almost takes the place of email as the primary contact channel among young people. Internet enables users to contribute contents whenever and wherever at their convenience without time and geographical limits. In the past, people used internet primarily to browse and search for contents. Nowadays, Internet has become a communication medium. It enables people to create the contents they want, to cooperate with others and establish social networks. Internet has turned from the platform for searching information into the platform for sharing, cooperating to execute the plan based on common interests and then bringing up new ideas to solve the most imperious problems.

Communication is the process of people transmitting and passing messages. Traditionally, communication design emphasized composing words, sketching, taking photographs, and applying audio and multimedia. Owing to the vigorous development of online social networks, communication design is not just the design of image and characteristics anymore. What needs to be noticed and stressed on is the interactions and cooperation among people. Storytelling is a method of communication that often applied to record and express personal experiences. By the form of storytelling, people share and communicate their real experiences with others, make the receivers to generate resonance and response to conveyer in order to create interactions. However, reality is an important factor for human understands. Creating contents that bring us reality is important for learning and knowledge sharing among people. [8] Thus, storytelling is a good way of communication.

Members of online social networks are usually those who share common interests and similar experiences. For examples, they could be classmates, partners, colleagues... and etc. They possess the same or similar memories and life experiences and record them by storytelling. Storytelling enables people to preserve, share and reflect on life experiences. However, creating personal narratives requires story-writing, media editing, and media composition skills. It is difficult for novices to write and tell their stories to others because of lack of those professional skills and techniques. This work presents an application and design for supporting storytelling using drawing and digital photos to provide people with opportunities to share personal life experiences.

This paper focuses on using drawing to share personal experiences to facilitate the creation of narratives. We implemented a prototype system called *Paiiiint* and put in practical use in Facebook. Through the process of making a story chain to carry on the game, online users can create the content of a story by drawing, collaborate with friends to create a narrative, and share commonly similar life experiences. It is easier to create stories with drawing and photos

for novices. Collaborating with friends to create a narrative makes contents of stories more copious and increases more interactivities between friends. These collaboratively made narratives shall become the record of common memories shared between friends. As a tool for online social network participants, this collaborative drawing application enables users to create retrospective storytelling and to collaborate with friends without the time and space limitations. It is expected that through the interaction of making story chain to create common memories, this work can facilitate the emotional communication between friends in online social networks to further enhance and strengthen their friendship.

2.1. Use of Digital Storytelling

Storytelling performs a critical function in society serving as a “dialog between people, cultures, and times” [11]. People can express and share personal life experiences by storytelling. Some researchers have uncovered the power of digital storytelling in educational and social domains. The Center for Digital Storytelling (CDS) [3] is an organization dedicated to assisting people in using digital media to tell meaningful stories from their lives. Davis [5] discovered that the construction of personal narratives in the digital medium could be used as a tool for personal development. As the students recalled life-changing experiences, students developed a clearer sense of self. Ellis and Bruckman [7] used storytelling through digital media in the Palaver Tree project to support history education.

Owing to the lack of proper tools and professional skills, it is not easy for general users to create their own stories. To solve these problems, some researchers developed applications to make storytelling easier for novices. Landry and Guzdial [10] designed iTell to provide retrospective storytelling support. iTell presents the users with four steps to complete: Brainstorm, Organize, Writing, and Add Personal Media. It intended to help novice storytellers engage in the composition process like experts. Storytellr [9] is designed as a flickr third-party application, which leverages the storage and tagging systems of flickr while providing support for creating retrospective stories.

Désilets和Paquet [6] applied Wiki as the platform to probe into how school kids cooperated online to tell stories. Stories on this platform could be presented with pictures and texts. In this study, school kids were divided in groups. They could cooperate with others not only on Wiki platform but also through oral conversations between groups. Alissa [1] design an online collaborative storytelling environment for children aged 8 - 10. Using StoryBuilder, children can create multimedia comic-style stories. They can then save stories to their online personal

space, submit them for publication in the ongoing story, or email them to friends as a story chain. Tomohiro *et al.* [8] proposed a notion of collaborative story building for adding reality to contents. They implemented a prototype system called POC Communicator for creating realistic contents collaboratively. There were three parts of POC Communicator, message editor, story editor, and browser editor. Users connected pictures into a series of stories by adding annotations to pictures. It helped children who were weak at creating stories to enhance the variety and substance of the contents by taking advantages of pictures and source materials.

In these studies, we found that failures of many online comic platforms resulted from the lack of reusing picture materials. Reusing source materials and pictures could certainly reduce the time for creation, make creation easier and enhance the visual richness. Pen and paper stories created by children in this age group are often lengthy and do not often contain stimulating or different ideas. The story segments created using digital storytelling, while often short, contained a large variation in representations of time, space and narrative logic. Children, especially those who did not get used to the brainstorming process could be effectively stimulated their creativity by creating series comic [2, 4, 12].

2.2. Communication by Using Drawing and Images

Communicating with others by drawing, users are less limited by language differences and able to further impress the receivers. Toshiyuki [15] conducted a research on children from different countries, living in different places and speaking different languages participate in pictogram communications. In this study, it was found that children from different cultural backgrounds have different perceptions and understandings of the same pictogram. PicNet is an online pictogram communication system. Although there is already an existing inner-built pictogram database in PicNet, children can also establish their own database. They can communicate with other children by searching and rearranging the order of the pictograms. It was hoped that the cultural gaps could be bridged through the pictogram communication.

Yumiko [13] applied three methods, syntactic description, artistic drawing and storytelling to carry out pictogram communication. Children from different countries used the given images in the system database, screened out and rearranged the order, and sent out messages to other children in order to implement cross-cultural communications. It was found that different mother tongues influence on how children construct messages. But children would understand the cultural differences and then make adjustments to accomplish cross-cultural communications.

TwelvePixels [14] was a pixel-based drawing application for mobile phones. By resizing and rearranging the pixels, users could draw pictures on their mobile phones and then share with friends. Moreover, users could also reuse and edit other people's works and then create a new picture. TwelvePixels helped enhance the creativity and facilitate the application of communication and sharing contents of mobile phones. Besides, there were more and more emerging concerns and interests in mobile phone's role in creative communications. Communications through mobile phones were not just delivering sounds, voices and texts. Drawing has gradually become a new communication style.

Though previous studies, we found that it is more efficient for users in online social network to communicate with each other visually. Using appropriate visual imagination could make the delivered messages clearer, easy to remember and understand. We develop an application called *Paiiiint* for providing people with opportunities to record and share their life experiences. In section 3, we describe the design and characteristics of *Paiiiint*.

3. *Paiiiint*

3.1. Overview

Paiiiint is a system that helps people to make storytelling easier and to interact with friends by storytelling collaboratively. Based on Web 2.0 concept, *Paiiiint* is established as an online platform. Therefore, it represents the spirit of 'online social interaction', 'collaboration' and 'sharing contents'. (Figure. 1) It is connected with Facebook so every Facebook member can manipulate *Paiiiint* at anytime anywhere while users have access to Internet.

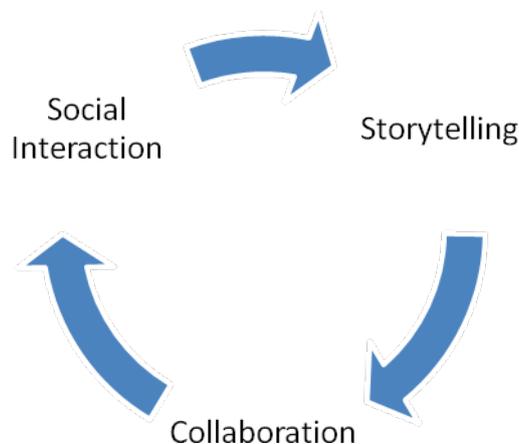

Figure. 1. The spirit of *Paiiiint*.

Paiiint applies the form of story chain to create stories. Users can create the content by using drawing and digital photo. After finish their creations, they can share with friends via online social networks. Other users can base on the shared pictures to continue creating, making it developed into a series of comic story. People who have similar life experiences can cooperate to create thus they make the contents of stories more authentic and complete. Through collaborating and sharing contents with others, there are more social interactions and communications between friends in online social networks to establish emotional communications. (Figure. 2)

Figure. 2. Social interaction of Paiiint.

3.2. User Interface

Paiiint system includes four parts: *paint*, *my room*, *board* and *info*. (Figure. 3.) The *paint* part is a drawing board. Users can choose the kind, size and colors of brush and then paint a picture by using basic drawing tools. The upload function let users upload digital photos on drawing board. They also can shift and resize the photos. After finishing drawing, the user can save the work on server and share it with friends. User also can send drawings to others who they want to continue the stories.

In *my room* part, users' creations of stories are displayed in private. All of stories are showed on *board* part. Everyone can view all public stories. If users want to know the condition about their stories, they can click the *info* part.

Figure. 3. User interface. (a) paint (b) my room (c) board (d) info

4. Research Plan & Expected Contributions

We are interested in the attitudes and media preferences of Piiiint users. We will put Piiiint in practical use in Facebook and then employ a combination of surveys and interviews to collect data about preferences, expectations and experiences of users. It is expected that through the interaction of making story chain to create common memories, this work can facilitate the emotional communication between friends in online social networks to further enhance and strengthen their friendship.

POLITICS, MEDIA AND YOUTH: POLITICAL EFFICACY THROUGH NEW MEDIA

Qurrat-ul-Ann Malik
International Islamic University

Abstract

The youth of today, will be the leaders of tomorrow, it is important to instill in them the ideals of democracy and participation. In this regard, new media has the potential to play a significant role, thus, the aim of this research was to find out the contribution of new media in enhancing political efficacy amongst the youth. Political efficacy was measured in term of political knowledge as well as interest and participation in the political processes. Further, the research looked at socio-economic factors and gender as predictors of media use.

The study was quantitative in nature, involving a survey from the urban university level students of the twin cities, Rawalpindi and Islamabad. The survey instrument was validated through a pilot study and comprised of closed ended questions. Using non-probability convenient sampling techniques, 400 questionnaires were distribute out of which 308 were found to be valid and complete and were thus included in the final analysis.

Results indicated that new media was being used extensively but not exclusively, further, although educated youth who used new media more had greater political knowledge yet they participated less often in the political processes. However, the influence of socio-economic factors was undermined as results indicated that it was not playing a very significant role. On the other hand gender came out as a strong predictor of new media use as was a radical difference in how males and females were using new media for the purpose of political efficacy.

INTRODUCTION

The aim of the research was to find out the role that new media is playing in creating political efficacy amongst the youth in Pakistan. Political efficacy is the belief on the part of an individual that he can play an important and integral role in the political processes. Campbell et al. (1954) presented the idea of political efficacy as a feeling that individual political actions can have an impact on the overall political processes. In this regard the individual citizen becomes an important entity who has a strong faith in his position and significance in the political processes. Later studies showed that the original idea of political efficacy actually comprised of two separate elements internal efficacy and external efficacy. Internal efficacy relates to the individuals belief that he can make a difference while external efficacy relates to the system responsiveness to the citizens needs (Craig et al, 1990; Craig, 1993). The present research looked at the various factors which influence internal efficacy like knowledge, discussion and participation.

Orgeret, (2004) defines democracy as the process of self-ruling within given geo-political boundaries and where there is widespread agreement on the identity of 'the nation' or 'the people'. Freedom and democracy are one of the most important rights of the individual; they are the stepping stone towards an ideal state. However, the concept of a true democracy does not merely focus on rights but on responsibilities as well (Bachen et al., 2008). It is the duty of the citizens of a

democracy to protect it which can only be done if they have sufficient knowledge and awareness. It is not only the duty of the state to protect and look after the interests of its citizens; they too have to protect the system. Simple acts like voting seem to be insignificant but they are the lifeline of democracy. Of late, there has been a shift in the attitudes of the public all over the world, for e.g. there has been a relative decline in voter turn outs (Wass, 2005; Hooghe, 2004; Dunsmore & Lagos, 2008) which if taken in extremes would render the whole notion of a democracy meaningless.

According to Gimple (2003, p.15) adolescence is one of the few periods during the life cycle when there are nearly universal opportunities to collect and absorb political facts and information. However, the messages that they take in vary in quantity and quality across the different media. Scholars have realized the potential of all these mediums, and increasingly, research is focusing on the influence of all these different forms of media on the processes of political socialization at large and political efficacy in particular (Hoffman & Thomson, 2009; Dunsmore & Lagos, 2008; Kim & Johnson, 2006). Although conventional media has retained its place amongst the younger generations, yet, new media has emerged as a powerful force as new media particularly the internet provides a unique opportunity to the users as unlike conventional media; they are interactive and have room for feedback. (Sun, & Rubin, 2008; Kim & Kim, 2007; Jackson & Lilleker, 2007; Albarran et al., 2007 and Bachen et al., 2008). In spite of the fact, that new media has had a very short history in Pakistan yet it has witnessed massive growth. In particular, the use of internet is increasing day by day, according to Shafique and Mahmood (2008) although internet penetration in Pakistan is relatively low yet its numbers are growing. They deem the numbers of internet users would have crossed 12 million (7.2 percent of the population) by the end of 2006. All this indicates that new media particularly the internet is gradually emerging as a dominant force which would be shaping our futures.

BACKGROUND

Role of Youth in Pakistan's Political History.

The youth in Pakistan have traditionally been politically very active. The freedom struggle that lasted from 1857-1947 mainly relied on the energy and efforts of the younger generation who made innumerable sacrifices for the cause of independence. Even though, at that time, there were very few means of communication and those too were under the control of the British government, yet, the youth of the sub-continent managed to put up a very dynamic freedom struggle.

After independence, the youth of the newly created Pakistan did not sink into oblivion; it was the movement led by students that toppled the very powerful regime of Field Marshall Ayub Khan. Later, Zulfiqar Ali Bhutto's rise to power was also due in part to his popularity amongst the youth of that era. When, General Zia-ul-Haq imposed his dictatorship on the country, it was the students who put up a fight and bore all kinds of atrocities for their beliefs. However, in the last twenty years, youth and particularly students have turned away from politics, there is certain disillusionment with the whole process and the emphasis has been on getting an education, finding a job, improving ones own life and not on bringing a positive change in society as a whole. Student politics has gradually come to be associated with violence and gang war amongst other things and is not seen as a stepping stone towards creating effective citizens of a democracy.

LITERATURE REVIEW

New Media, Youth and the Uses and Gratifications Approach

The Theory of media dependency is based on the uses and gratification approach. It states that the more dependent an individual is on the media to fulfill his needs, the more important the media will be for that individual. Thus, individuals do not depend on all media equally (Loveless, 2008; Kim & Kim, 2007; Albarran et. all, 2007; Sun, Rubin & Haridakis, 2008). Research by Jackson and Lilleker (2007) has shown that media users play an active role in selecting their media and are thus goal oriented in their media use thus new media is being used increasingly to receive information as well as aiding in voter choice. According to the researchers, new media is increasing being used to fulfill the needs of information, sensation seeking, and withdrawal because audiences have a clear perception of their needs and will abandon a medium if it does not gratify them (Albarran et. all, 2007; Kim & Kim, 2007; Kim & Johnson, 2006). Kim & Kim (2007) in their research revealed that adolescents' political media uses are based on four distinct motivations—guidance, surveillance, social utility, and entertainment. They concluded that internet use with the motivations of guidance or social utility is the strongest predictor of adolescents' political engagement. Further, Sun, Rubin & Haridakis (2008) argue that the gratification opportunities that e-mail affords them like fast speed, convenience makes it the preferred communication tool.

A recent trend is trend is that younger audiences are increasingly leaving older media like terrestrial radio and television for their new media counterparts like satellite radio, MP3, streaming internet video etc (Albarran et. all, 2007). Considerable research has shown that there are strong links between adoption of new technologies and age with the result that younger people are more likely to exhibit Internet dependency than older participants. (Sun, Rubin & Haridakis, 2008: Albarran et. al, 2007). Further, younger audiences are very much aware of their needs and motivations, thus it is not easy to gratify them (Albarran et. al, 2007).

Research has shown that Internet use has become the dominant way for political engagement, as compared to uses of their traditional media such as newspaper, TV, and radio (Kim & Kim , 2007; Kim & Johnson, 2006; Van Aelst & Walgrave, 2002; Kenski & Stroud, 2006) which has been dubbed as a “shift in media power” (Kim & Johnson, 2006). This is so because political action is made easier, faster and more universal by the developing technologies because ICTs lower the costs and obstacles of organizing collective action. (Van Aelst & Walgrave, 2002). Research by Tian (2006) indicated that internet was being extensively used to gain political information but was not playing a significant role in political deliberation and participation. According to Pasek et al. (2008) the use of internet as well as other news sources is very important to gain knowledge about political issues. Sun, Rubin & Haridakis (2008) also found that there was a clear demarcation between the preferences of men and women as regards to new media use.

Youth and Political Efficacy

According to Gimpel (2003) an informed, knowledgeable citizenry is very important for democracy. He defines political knowledge as the capacity of citizens to recall facts about what government is and does. He further says that citizens who possess the least political knowledge are those who are least likely to participate in a wide variety of political activities and thus they do not

inform their representatives of their needs. People who know more about politics are much more willing to engage in political discussions.

Hoffman & Thomson (2009) quoted Zimmerman, (1989, p. 554) in defining political efficacy as “the belief that one has the skills to influence the political system”. Further, they used a broad criterion for calculating civic participation, in which they included participation in student government or debate club, involvement in any kind of youth organizations like sports leagues or boy scouts, volunteering for places of worship, school, youth programs or civic group.

Research has shown that there is a strong relationship between ones belief that he can influence political processes with actual participation (Almond & Verba, 1963; Campbell et al, 1954; Verba et al, 1995). Hively & Eveland, (2009) found that frequency of discussion is related to both factual as well as structural knowledge but elaboration occurs only as a result of structural knowledge.

According to Kim & Kim (2007), political socialization of adolescents includes the processes of acquiring basic knowledge about political procedures and issues, learning how to articulate thoughts and opinions about political issues, gaining basic skills to share the political thoughts and opinions with others, and developing motivations to participate in political activities as responsible citizens. Wass (2005) is of the opinion that low voter turnout amongst the young is not a passing phenomenon but a generational feature partly due to a “demobilizatory socializing process” which he says is common to the younger age bracket. Further, he observed that politics had played a very small role during the formative years of the current younger generation but they still had a positive attitude towards political participation. Thus he says that low voter turnout is probably not due to a lack of political socialization. Dunsmore & Lagos (2008) observed that for democracy to flourish in future, it is imperative that the youth’s passion should be channeled appropriately.

The literature thus suggests the following hypothesis in the Pakistani context

- H₁:** New media is the more commonly used medium amongst the educated youth.
- H₂:** Educated youth who use new media more show greater political efficacy.
- H₃:** Socio-economic status influences new media use for the purpose of political efficacy.
- H₄:** Gender influences new media use for the purpose of political efficacy.

METHOD

The study was quantitative in nature and involved a survey from the educated youth in an urban center as they are the only ones to have access to new media in Pakistan. The sample was drawn from amongst the graduate and post graduate students from each of the four largest universities of the twin cities including International Islamic University (IIUI), Fatima Jinnah Women University (F.J.W.U), National University of Sciences and Technology (NUST), and FAST National University (FAST). These universities had been selected because their student population is quite large and the students come from different strata of society from all over Pakistan. A sample size of 400 was decided upon as there was relative homogeneity in the sample.

The sampling method that was used was the non-probability convenient sampling method. Graduate level students from each of the four universities approached the students and asked them to fill out

the questionnaires. Four hundred questionnaires were distributed out of which 313 were returned, however, only 308 were found to be complete and valid.

Initially, a pretest of the questionnaire was administered to a sample of 30 students from IIUI to explore the validity and reliability of the questionnaire. Analysis of the pretest results resulted in minor changes to the questionnaire. The pretest data was not used in the final analyses. The questionnaire that was finally administered to the sample comprised of 44 questions along with relevant demographic information. Reliability test revealed that the instrument had a Cronbach's Alpha of 0.767.

RESULTS

The number of questionnaires that were distributed was 400; however, only 313 were returned which meant that the response rate was 78%. However, only 308 were included in the final analysis as the remaining five were either incomplete or the responses were unclear. The data that was thus compiled revealed that 51 % of the respondents were male while 49 % were female.

The respondents ranged in age from 18 to 25 years old ($M = 22$, $SD = 1.797$). Respondents' annual family income ranged from less than Rs. 10,000 to Rs. 50,000 or more ($M = 50k+$, $SD = 1.034$). Almost 40% of the respondents belonged to households with a monthly income of Rupees fifty thousand and above (50K+), 26% were in the 25-49K category, 25% were in the 15-24K category while only 10 % belonged to household where the monthly income was rupees ten thousand or less. This anomaly can be explained by the fact that the level of literacy in Pakistan is very low and only the middle and upper income groups can afford to provide their children with education.

The instrument contained a test of the respondent's knowledge of Pakistani politics. There were 17 questions of varying difficulties; some of them were about issues that have been discussed regularly in the media while others pertained to the structure of governance in the country.. The results were pretty impressive, only 2.6% had a score of below 25%. 34% of the respondents scored between 25%-50% (below average), 50% scored between 50%-75% (above average), while 13% scored above 75% (good). The average score of all the respondents was 62%. The questions were posed as statements which were either correct or incorrect.

H₁: New media is the more commonly used medium amongst the educated youth.

H₁ hypothesized that new media is the more commonly used medium by the educated youth of the twin cities. To determine this, the respondents were asked for how long they had been using internet which gives access to most of the forms of new media. The results showed that 56% had been using the internet for over four years while another 26% stated that they had been using the internet for a period of 1-4 years. Pearson's Correlations test was run to test whether a relationship existed between the lengths of time since the respondents started using the internet and the time spent on using the internet. The results ($r = 0.508$, $p > 0.01$) show that there is a positive and significant relationship which shows that the respondents who had been using the internet for a longer period tended to use it for a longer period of time (Table 1).

Table 1: Relationship of weekly use and the length of use of internet

Length of use of the internet	
Duration of internet use in a week	0.508**

Furthermore, 57% reported that they had been using the internet for more than two hours each week, which, was the maximum duration mentioned in the questionnaire while another 17% said that they used it for a period of 1-2 hours. To gain a perspective of these figures the usage patterns of most of the conventional media have to be analyzed. As mentioned earlier, 62% of the respondents had reported that they read the newspaper for less than thirty minutes in a week, while 59% reported that they watched television for less than one hour each day. When we compare these with the former figures, it is evident that new media is being used extensively but not exclusively by the educated youth of the twin cities. Thus, H₁ stands proven that new media is the more commonly used medium by the educated youth of the twin cities.

H₂: Educated youth who use new media more show greater political efficacy.

H₂ hypothesized that educated youth who use new media more show greater political efficacy. In this regard, efficacy was measured in terms of knowledge, discussion and participation in the political processes as a first step towards gauging the confidence level of the youth. To find out the level of political knowledge of the respondents, the instrument had included a set of 17 questions pertaining to the political scenario of Pakistan. In this regard, 63% of the respondents scored over 50% which is a fairly high score and one can safely say that the educated youth of the twin cities are well informed about Pakistan's politics.

Further, an independent sample t-test revealed that there was a significant difference in the level of political knowledge of frequent (M=2.75, SD=0.581) and non-frequent (M=2.54, SD=0.635) users of internet; $t(128.4) = 2.63, p=0.01$. Results showed that a greater number of the respondents who used the internet frequently had greater political knowledge which goes on to show that using internet in particular does lead to an increase in the level of political knowledge. To gauge the discussion frequency, participation in political process through joining of political bodies and voting similar independent sample t-tests were conducted. Results showed that frequency of new media use only resulted in fewer political discussions with friends $t(306)=3.307, p=0.001$ and family $t(306)=4.34, p=0.00$. All this leads to the conclusion that H₂ is not proven as educated youth who use new media more are not showing greater political efficacy.

H₃: Socio-economic status influences new media use for the purpose of political efficacy.

H₃ hypothesized that socio-economic factors play a strong role in how new media is used for the purpose of political efficacy. Independent sample t-test revealed that the only significant influence of income was in regards to the length of time since the respondents started using the internet $t(306)=2.966, p=0.003$. As new media in general and internet in particular is a new phenomenon in Pakistan thus, it is not surprising that those who belong to higher income brackets have been using the internet for a longer period of time.

Data also revealed that there was no significant difference in the level of political knowledge of those respondents who belong to the higher income group and those who belong to the lower

income group. Similarly there were no drastic differences in the pattern of discussion, joining of political bodies etc. of higher income group respondents and lower income group respondents. The only difference that was observed was in regards to whether they had voted in the last election $t(198.2) = 2.04, p=0.042$. In this regard the results indicated that a greater number of respondents belonging to the lower income group ($M=1.63, SD= 0.047$) had voted in the last election as compared to those belonging to the higher income group ($M= 1.74, SD= 0.031$).

However, efficacy entails various aspects and merely the act of voting can be explained by other factors. Thus, it can be concluded that the present data shows that income level is not acting as a strong influence on new media use for the purpose of political efficacy. Thus, H_3 is not proven.

H₄: Gender influences new media use for the purpose of political efficacy.

H_4 hypothesized that Gender influences new media use for the purpose of political efficacy. To test this, the pattern of new media use was first analyzed. Data revealed that males ($M= 2.09, SD= 1.01$) and females ($M= 1.55, SD= 0.848$) differed in regards to the time spent on political news stories $t(301.412) = 5.104, p=0.00$. Data revealed that a greater number of female users of new media tended to disregard political news stories as compared to males. Further, females ($M=1.91, SD= 0.996$) tended to focus less on national politics while using new media $t(295.4)= 3.39, p= 0.001$ as compared to males ($M=2.35, SD= 1.272$). Results showed that a greater number of females declared that they had no interest in any kind of politics as compared to males. Another area where there was a significant difference between the attitudes of males ($M=2.28, SD= 1.27$) and females ($M=1.79, SD=0.966$) was in regards to online newspapers. Results revealed that males tended to read online newspapers more often than females $t(292.12) = 3.33, p = 0.00$. All this shows that the pattern of new media use varies greatly across genders.

As regards to efficacy, results $t(306)= 3.31, p=0.01$ indicated that there was a stark difference in the level of political knowledge across genders. As males ($M=2.8, SD= 0.633$) were more politically aware than females ($M=2.58, SD=0.547$). Further, Results also showed $t(274.1)= -2.86, p= 0.004$ that males ($M=1.83, SD=0.378$) had attended parliament sessions more often than females ($M=1.93, SD=0.25$). A greater number of males ($M=1.65, SD=0.38$) as compared to females ($M=1.75, SD=0.35$) voted in the last election $t(305.3)= -1.95, p= 0.052$. However, the only difference lay in the fact that females ($M=2.96, SD= 0.097$) discussed political issues with their family more often $t(306)= -2.06, p= 0.04$ as compared to males ($M=2.68, SD=0.093$) which can be explained by the sociological factors which restrict females to a family and home life.

Thus, we can safely say that H_4 stands proven that gender influences new media use for the purpose of political awareness.

DISCUSSION AND CONCLUSION

All over the world new media is increasingly being used for generating activism as it has the potential of reaching a large number of people without the interference of a great many gatekeepers. The aim of the research had been to determine the role of new media in generating political efficacy amongst the educated youth. New media is a relatively new phenomenon in Pakistan and is more accessible in urban areas as compared to rural areas. Another significant factor relates to its usage by a significant number of youth who have quickly adopted the new information technology.

New media can play a very strong role in encouraging interest and participation in politics and is thus being used widely across the world (Eagles and Davidson, 2001; Kim and Johnson, 2006; Kim and Kim 2007; Bachen et al. 2008). However, unfortunately in Pakistan this is not the case. Although the youth who used new media had greater political knowledge but they showed no inclination to participate more actively in the nations affairs. Efficacy is the confidence of individuals but prior research has shown that this confidence comes with knowledge and participation (Almond & Verba, 1963; Campbell et al, 1954; Verba et al, 1995). Data revealed that although the youth had considerable knowledge regarding politics yet they did not discuss it with their family or peers and nor did they participate by joining student level political bodies or voting. This can be due in part to the apathy and distrust in politics as well as a more recent trend where the youth are cocooned in their own rooms away from social life.

The third hypothesis related to how socio-economic factors influence new media use for the purpose of political awareness. It was revealed that in the selected sample, income level did not have any particular influence on the use of new media for the purpose of political efficacy. This on the surface seems to negate the notion of the knowledge gap hypothesis but demographic information indicates that majority of the population who reach the universities belongs to affluent households which is true all over the world but with the economic and sociological circumstances of Pakistan becomes doubly so.

The last hypothesis related to the influence of gender on how new media is used for political efficacy. Results showed that gender played a very strong role and there was a radical difference in how males and females were using new media in this regard. This is in accordance with the research by Nash and Hoffman (2009) who asserted that a knowledge gap exists between genders because of which men have been able to maintain their superiority. Furthermore, although men and women have achieved political equilibrium, yet the ever-present knowledge gap in this area demonstrates that inequity still exists. This was proven by the present research that males and female had different attitudes as regards to politics. It has been traditionally assumed that males have a greater interest in politics, or it is the men's domain so to say and women have generally stayed away or considered it to be very dull. The concept of equality and emancipation has not become as common in Pakistan as in the Western countries. Here gender roles are pre-defined and both sexes follow them. Thus, females do not express any political knowledge or interest and nor do they actively participate in politics which has negative consequences for the whole country.

In conclusion, one can say that new media has a great deal of potential in terms of creating political efficacy amongst the youth which can be explored further and effective measures can be taken to fully utilize its potential. The research showed that the youth have a great deal of interest in political issues but they do not have the opportunities to participate fully in the democratic process. New media can be used as a platform for the youth to play a more active role in the process. However, the problem areas that emerged related to the knowledge gap between genders which needs to be rectified to fully develop the potential of this media.

The main limitation of the research related to the inaccessibility of new media to a majority of the country's large population. Thus, the results can only be applied to limited and fortunate elite. Secondly, a longitudinal study of the changes that are taking place in the attitudes of the youth would have been more apt but due to time and financial constraints, the present research was limited to a single survey.

I. Ecological Crisis as a Manifestation of Spiritual Crisis: A Critique of Anthropocentric and Mechanistic Worldviews

A. Early Pioneers of Ecological Vision: Aldo Leopold and Rachael Carson

Despairing at the shallowness of the American conservation movement of the 1940s and deploring the miserable fact that man's relation to land was still "strictly economic, entailing privileges but not obligations" (Leopold, *A Sand County Almanac*, 238), Aldo Leopold, by his revolutionary idea of "land ethic," proposed, on the bases of "ecological conscience" and "biocentric equality," to extend his ethical concern from human beings to all beings in the natural community: "The land ethic simply enlarges the boundaries of the community to include soils, waters, plants, and animals, or collectively: the land" (239). For Leopold, human beings, as plain member and citizen of this natural community, are nothing but "fellow-voyagers with other creatures in the odyssey of evolution." In our efforts to preserve bio-diversity, we are required to adhere to this axiom--"a thing is right when it tends to preserve the integrity, stability, and beauty of the *biotic community*. It is wrong when it tends otherwise" (Leopold, 262). The spirit of "land ethic," however, due to the tunnel vision and egoism of the then prevalent "reform environmentalism" working within the framework of traditional political red-tape, has never been paid much attention.

In 1962, with her publication of *Silent Spring*, Rachael Carson cried foul over the use of insecticides and a potent poison known as DDT. She vehemently offered her admonitions that improper use of DDT and pesticides would certainly entail a severe harm in the food chain of an entire ecosystem and, eventually, a miserable "silent spring," with birds and insects no longer chirping and hopping. Such chemicals were then widely known as "pesticides," a term in which Carson discerned a covert "anthropocentrism." A creature was a "pest" only when viewed exclusively from the human perspective. In the biotic community it had its legitimate role as an indispensable part of the web of life. Therefore, to subvert the implicit

anthropocentric flavor, Carson preferred to call the varieties of insecticides and DDT not as pesticides but as “biocides”—killers of life. Carson intended her book to shock Americans and the world into ecological awareness and action. But, very few people, if any, listened to her.

B. Ecological / Spiritual Crisis: Anthropocentric and Mechanistic Worldviews

With the coming of the 21st century, human beings find themselves caught and trapped in an unprecedented environmental crisis. The overall biosphere is polluted and deteriorating, greatly threatening the sustainable livelihood of every creature on Earth. “The Earth is burning,” a household slogan heard globally, is scything deep into the conscience of people. Multi-dimensional facets of environmental problems keep bombarding our Mother Earth and have become the nightmarish albatross hanging around global governments’ necks. Ozone depletion, carbon dioxide buildup, chlorofluorocarbon emissions, water and air pollution, soil depletion, deforestation, toxic wastes, land degradation, loss of biodiversity, greenhouse effect, and climatic changes are some of the recurrent elements which have made the environmental problems a veritable crisis. Our Mother Earth is apparently suffering.

In his “The Historical Roots of Our Ecological Crisis,” the historian Lynn White traces the present ecological crisis back to the anthropocentrism worldview inherent in the very foundation of Christianity, the “Genesis” of the *Holy Bible*. White explicates in an ecological sense the important role played by religion in shaping a people’s worldview. He states that “[w]hat people do about their ecology depends on what they think about themselves in relation to things around them. Human ecology is deeply conditioned by beliefs about our nature and destiny—that is, by religion” (9). White firmly believes that the present crisis is a result of the western anthropocentric religious orientations that direct science and technology’s power over nature. He regards Christianity as “the most anthropocentric religion the world has seen” (9). Christianity, as the most influential religion in western history, has been exerting a negative impact on western people’s conception and attitude toward nature. In Genesis (1: 26-30), God creates the earth, all the creatures, and, eventually, man. Man, as the center of all creations, names all the other beings and then is endowed with the right to dominate and rule over them. Christianity grants humans the right to dominate nature, with the other creatures degraded to the status of serving man’s purpose. Gary Steiner, likewise, observes that “[a] central fault of Christianity is that ‘it has most unnaturally separated man from the animal world’ and ‘regards animals positively as things’” (188). Influenced by this man-centered worldview, animals and the entire

natural world are degraded to such miserable status as merely soulless and valueless “things” to be exploited to serve human needs.

Since the Age of Enlightenment, humankind has been witnessing unprecedented development in the field of science. “Anthropocentric worldview,” during the Scientific Revolution of the seventeenth century, had been developed and aggravated into a “mechanistic worldview. The ideas of “domination” and “exploitation,” under the guise of social progress, have been rampant in western culture in various forms: the humans over the non-humans, men over women, the powerful over the powerless, the rich over the poor, and the colonizing West over the colonized non-West. Overwhelmed by the desire to make “more progress,” people have been convinced of the Cartesian notion of “mechanical nature”—nature, in its physical form, has no soul, feels no pain, existing only to serve human beings. Nature had gradually become a dead body waiting to be dissected and studied. Endowed with rationalistic soul, humankind is capable of and legitimate in exploiting natural resources for their own needs. Our scientific progress has been built at the expense of nature, a dead nature. This further causes the deterioration of nature in an alarming pace. Even though people worldwide have been dreaming of everlasting harmony among man, society, and nature, the stark reality is the separation of man and nature, the alienation and even hostility among human races, the devastation of the entire “biotic community,” and the global ecological crisis.

In fact, during the past decades, there have been politicians, conservationists, and environmentalists calling for and staging a variety of environmental conservation movements. However, according to Mary Mellor, these are merely “shallow” movements, focusing shortsightedly on “a human-oriented concern with immediate environmental issues, such as pollution or resource depletion, which aims to reconstruct the relationship between human society and nature in a way that would ensure *human survival*” (emphasis mine, 83). These shallow environmental movements still have something of anthropocentrism, ending up, more often than not, to be of little effects or merely cheap talk. Although these environmentalists strive to solve environmental problems, they keep in their minds only the interests and sustainability of human species, ignoring the ecological wisdom that the survival of human species depends entirely on the flourish and diversity of flora and fauna. Rather than the crown of creation, human beings are so vulnerable that they would totally perish if a mere 40% of flora and fauna should become extinct. Without the existence and interference of humankind, the other creatures, in contrast, will readjust themselves and continue to live on and flourish well. In a nutshell, environmental

conservation movements often deal only with superficial symptoms of environmental ills, therefore continuing the anthropocentric dichotomy of man / nature relationship and the eventual reification of nature. To really cure the global environmental ills at the root, we, first of all, have to cultivate and elevate our spiritual dimensions in order that ecological vision may grow.

With a view to re-energizing the environmental movements, Al Gore, the former Vice president of the U.S., in his *Earth in the Balance*, wrote that “[n]othing less than the current logic of world civilization runs counter to the well-being of our Mother Earth” (269). This dominant and exploitative logic or worldview results in not only the massive achievements of the industrial world but the ecological crisis itself. In his searching for the root cause, Gore says that “the more deeply I search for the roots of the global environmental crisis, the more I am convinced that it is an outer manifestation of an inner crisis that is, for lack of a better word, spiritual” (12). For Gore, the dominant worldview espousing unrestraint human interference and exploitation is extremely detrimental to the planetary well-being. Human activities are mostly responsible for the acceleration and severity of present environmental disasters which render the earth out of balance. The global environmental crisis, according to Gore, is tantamount to the global spiritual crisis which takes its roots from the Western worldview in which we anthropocentrically and dualistically conceive ourselves as superior beings apart from nature and, even, from some human races. Drawing its nourishments primarily from such major Eastern religions as Buddhism and Taoism, deep ecology aims at solving present ecological crisis by delving into the deeply rooted cause—“the impoverishment of spiritual dimensions.” The subversive ideas of deep ecology challenge our deep-seated anthropocentric and mechanistic assumptions about the non-human natural world, the human world, and the relationship between the two.

C. A Paradigm Shift toward Biocentric Worldview: Deep Ecology and Its Limitation

To cut the Gordian knot of a looming ecological catastrophe, a paradigm shift from the fragmentary worldviews of anthropocentrism and mechanism to a holistic worldview of biocentrism is urgently needed. The survival of human beings ultimately depends on the survival of a diversity of flora and fauna. A biocentric outlook on life can never be achieved by material means. This has been noted and emphasized by Arne Naess, the founder of the school of Deep Ecology, in “The Shallow and the Deep, Long-Range Ecology Movements: A Summary.” Naess

enunciates “deep” ecology as he made a distinction between shallow and deep ecology. He grounds his “Eight Points of the Platform”¹ in “the relational, total-field image,” “biospherical egalitarianism in principle” and “principles of diversity and symbiosis” (151-2), with each and every being, not only human beings, as an integral member of the whole biotic community. This is clearly expressed the first three points of the Platform. Therefore, humans, except for vital needs, have no rights to decrease the diversity of the biospherical inhabitants through unnecessary exploitation; each being owns “the equal right to live and blossom” (152). Humans must live and “let live,” that is, giving each and every member in the earth household a chance to live and blossom.

In sharp contrast to shallow ecology, deep ecology strives for a long-term awakening of consciousness. It hopes to reach a more comprehensive change in the human mindset. The transformation of human consciousness, that is, “self-realization,” is entwined with “bio-centric equality” in bringing about the overcoming of an egoistic and anthropocentric understanding of self-interest and developing sympathy with other living beings. B. P. Taylor gives us a clear definition and description of the tenets of deep ecology. He holds that

the two ultimate norms of deep ecology . . . are the promotion of “self-realization” and “biocentric equality” and that Self-realization is to be achieved by widening our understanding of self to include the natural world—apparently a twofold process of overcoming a narrow egoistic understanding of self-interest, and simultaneously developing a sympathy with other living things. (qtd. in Brulle, 205)

For Naess, the realization of the individual self requires an understanding of self in its ever-widening circles of identification and sympathy with other beings, whether it is beautiful or ugly, big or small, sentient or not sentient. Naess emphasizes “self.” The “self” is not to be confused with the narrow ego. Through “self-realization,” the first norm which goes beyond the self defined as a narrow and isolated ego, an individual

¹ Naess’ eight points are that (1) the well-being and flourishing of human and non-human life on Earth have value in themselves. These values are independent of the usefulness of the non-human world for human purposes. (2) richness and diversity of life forms contribute to the realization of these values and are also values in themselves. (3) humans have no right to reduce this richness and diversity except to satisfy vital needs. (4) The flourishing of human life and cultures is compatible with a substantially smaller human population. The flourishing of non-human life requires a smaller human population. (5) present human interference with the non-human world is excessive, and the situation is rapidly worsening. (6) policies must therefore be changed. These policies affect basic economic, technological, and ideological structures. The resulting state of affairs will be deeply different from the present. (7) the ideological change will be mainly that of appreciating life quality rather than adhering to an increasingly higher standard of living. There will be a profound awareness of the difference between bigness and greatness. (8) those who subscribe to the foregoing points have an obligation directly or indirectly to try to implement the necessary changes.

self increases the meaning of life and the joy he or she experiences in living. In order that “self-realization” be truly realized as a process toward “Self-realization,” “[w]e must stop seeing ourselves as competing egos and learn to identify with other species and even inanimate objects in the non-human world” (Loy, 51). Reciprocally, we naturally come to grip the essence of “biocentric equality,” simultaneously learning that “all things in the biosphere have the right to reach their own individual forms of unfolding and self-realization within the larger Self-realization” (Loy, 51). By connecting “self-realization” and “biocentric equality,” deep ecology seems to imply that the transformation and inner growth of an individual person’s consciousness is conducive to the formation of ecological consciousness and vision which will be of great importance for the improvement of the present environmental crisis.

Here deep ecology seems to focus merely on effecting change in the consciousness of the individual self rather than the collective consciousness. Against this, Robert Brulle offers his critique, pointing out that deep ecology exerts little, if any, impact on political and social dimensions (206). Moreover, Brulle also criticizes that deep ecology merely emphasizes the relationship between the individual self and nature, thus ignoring human beings as a whole and their relationship with nature. Because of their reluctance to extend their solicitude to human species as a whole, deep ecologists, according to B. P. Taylor, vacillate “between overt hostility toward the human community in general and a vague appeal to the extension of the human community to the broader natural world” (qtd. in Brulle, 206).

To mend these failures of deep ecology, an inability to extend its influence on the individual person to human beings as a whole and its vague connection between the human community and the natural world, we have very good reasons to turn to Eastern religions, especially Buddhism, for an effective cure. Eastern religions, in contrast with the Western Christianity, are often regarded as promoting a sense of harmony between human beings and nature. Even though Lynn White, the pioneer of this contrast study, in his “The Historical Roots of Our Ecological Crisis, does not comment at great length about the Eastern religious traditions, he clearly understands Eastern religions as the opposite of the anthropocentric Christianity of the West when he states that “[t]he beatniks and hippies, who are the basic revolutionaries of our time, show a sound instinct in their affinity for Zen Buddhism and Hinduism, which conceive of the man-nature relationship as very nearly the mirror image of the Christian view” (12-3). Likewise, Roderick Nash echoes this by saying that “[a]ncient Eastern cultures were the sources of respect for and religious veneration of the natural world” (Nash 2001, 192) and “[i]n the Far East the man-nature relationship was

marked by respect, bordering on love, absent in the West” (Nash 2001, 20).

II. The Way of Bodhisattvas and Its Ecological Implication

To save our Mother Earth from a total catastrophe, we need to start with the consciousness-transformation of each and every individual person. Although deep ecology, by its “Self-realization,” does emphasize the widening and integration of small individual self into the bio-diversified natural world, it never explores deep into the ways by which the small individual self can adopt to realize its own “Self-realization,” that is, the purification and elevation of consciousness. It is here that Buddhism can offer its contribution. Unlike the emphasis of deep ecology on “the physicality” of a bio-diversified wholeness of natural world, Buddhism delves deep into the core of the purification and elevation of “the consciousness.”

Mahayana Buddhism teaches the way of bodhisattvas through the cultivation of “non-self” (*anatman*) and the *six parimitas* or the six perfections. These elements of Buddhist teachings are interrelated to each other. And this part of the paper will be devoted to the discussion of the ideal of Mahayana bodhisattva and its relation to ecological salvation.

A. Buddhist Notion of “Non-Self,” “Impermanence,” and “Suffering”

According to Brian Brown, the doctrines of Buddhism, however, have been unveiling “a conceptual framework rooted in the central intuition of an ecological perspective where nothing exists in autonomous isolation, but where everything is defined as the composite derivative and collaborate synthesis of other elements” (Brown, 126). This insight into the ecological dimension of Buddhism is closely related to such Buddhist wisdom as “impermanence” and “dependent co-origination,” all interrelated with the realization of “non-self.” Brown’s affirmative view of an ecological Buddhism is very much the echo of “the Jewel Net of Indra” of the Hua-yen School. By this holographic metaphor, Hua-yen conveys its ecological worldview, in which the world, like the mutually interpenetrating reflections of jewels on the huge net, is an organic and interconnected wholeness, while each jewel, firmly established on the node, still retains its irreplaceable individuality and uniqueness.

Central to the Buddha’s teaching is the doctrine of “non-self,” or emptiness (*sunyata*) of selfhood. By “non-self,” the Buddha does not mean that there is the notion of an “I” that can be denied and annihilated. In fact, we still need a stable “I” or ego to

function well in society. For Buddhism, “non-self” is only a meditational and therapeutic device. As the true nature of phenomena, “non-self” does not diminish the value of anything, but is the very mode by which the essential nature of beings as mutually interdependent, co-originating whole becomes manifest. It is the instruction on how to get rid of the deep ego-clinging attitude. The Buddha’s primary concern is to point out the way to liberation— liberation from the existential pains caused by one’s deep-rooted attachment to a delusory self, the self that is perpetual, unchanging, unitary and autonomous. Ego-clinging to the delusory self is the source of all passion-desires and their resultant frustrations and sufferings (*dukkha*). Generally speaking, Buddhist philosophy, especially that of Mahayana Buddhism, holds that there is no boundary between the self, the human community, and the other beings, whether they are sentient or non-sentient, in this earth household. This idea of totality and non-obstruction can be explicated by Thich Nhat Hanh. In his *Essential Writing*, the Dharma Master accurately observes thus: “If the Earth were your body, you would be able to feel many areas where she is suffering” (69). Rather than a collection of self-existing objects in objectified space and time, the world, for Buddhism, comprises of phenomena that are interdependent and interpenetrating with each other. Just like the jewel firmly established on one of the many nodes of the Indra’s Net, “you will see yourself as multitudes, penetrating everywhere, interbeing with everyone and everything” (Thich Nhat Hanh 2001, 129).

The world, according to Buddhism, is in fact a dynamic unity: a living organism that is constantly in flux and undergoing change. However, because of our ignorance to see things the way they truly are, we often create the idea of the person “I” in our minds—a separate, enduring ego or self. There is “I” and there is all the rest, “the other” for us to manipulate. This Gordian Knot of ego-clinging obsession always cocoons us in a narrow and constricted way of being, resulting in human hubris and bringing about “suffering” (*dukkha*) for us and all the beings on Earth. If we can make every effort possible to diligently cultivate morality (*sila*), mindfulness (*dhyana*), and wisdom (*prajna*) to cure our ego-clinging attitude, the three poisons that pollute our consciousness—greed, anger, and ignorance—can simultaneously be cured. From this love and compassionate concern for all beings will be generated.

The emphasis on love and compassion as essential parts of wisdom has found its strongest expression in the ideal of the bodhisattva. This ideal is consistent with the cultivation of “non-self.” A bodhisattva, by the practice of meditation, probes deep into the true nature of existence—emptiness of selfhood, of any independent self-subsistence in all phenomena. Because there is no separate individual self, the

idea of one individual entering *nirvana* and getting forever away from *samsara* alone does not make any sense at all. According to Seager, “Mahayana Buddhists rejected the contrast between *samsara* and *nirvana*, seeing the two as interpenetrating rather than as distinct modes of being. They expressed this unified view of reality in terms of *nonduality*. There was neither *nirvana* nor *samsara*, this world or another; all such distinctions rested on concepts, ideas, and discriminations considered illusory” (24). Having eliminated themselves of all kinds of self-centered distinctions and preoccupations in all their guises, bodhisattvas vow to help others find the Buddhist path without concern for their own personal benefits, always toiling for the benefit of all sentient beings. Bodhisattvas are thought to reincarnate through numerous lifetimes, always foregoing nirvana with a view to teaching wisdom, compassion, and liberation for all sentient beings.

B. Opening the Door of Action: Bodhisattvas Cultivating the Six Paramitas

The six paramitas—“*dana paramita*,” “*silā paramita*,” “*kṣanti paramita*,” “*virya paramita*,” “*dhyāna paramita*,” and “*prajñā paramita*”—are concerned with the efforts to eliminate the egocentric mentality. In his *Opening the Heart of the Cosmos: Insights on the Lotus Sutra*, Dharma Master Thich Nhat Hanh refers to the six paramitas as the means by which the bodhisattvas cultivate themselves to “enter the dimensions of action,” the doors of action. The six paramitas, occupying a prominent place in the Mahayana scriptures as a Buddhist’s way of life leading to Buddhahood, are called the doors of action because this practice is the basis of the bodhisattva path. Mahayana Buddhism develops “non-self” into the archetype of bodhisattva, whose lack of self-preoccupation allows him or her to be wholly devoted to the salvation and well-being of all beings. Every one of us, by practicing the six paramitas, is already on the path of selfless devotion of a bodhisattva. Every person can be a bodhisattva to help bring peace, joy, and stability to the world.

“*Paramita*,” a Sanskrit term, is usually translated into English as “perfection,” literally meaning “crossing to the other shore.” It implies crossing over from the sea of suffering to the shore of liberation. The six paramitas, as a whole, are very concrete ways for us to cross over to the shore of freedom from craving, anger, envy, and delusion. Bodhisattvas develop these qualities and bring them into realization for the well-being of all living beings.

“*Dana paramita*” is the enlightened qualities of generosity and giving which is completely free from attachment and expectation. The true essence of this paramita is

our pure motivation of genuine concern for others—the truly generous motivation of the awakened heart of compassion, wisdom, and love.

“*Sila paramita*” is the enlightened qualities of virtuous, ethical behaviors and mindfulness by strictly following the precepts. Among the various Buddhist precepts, the most important ones are the “five precepts”—“refrain from killing,” “refrain from stealing,” “refrain from sensual misbehavior,” “refrain from false speech,” and “refrain from substance that induce intoxication or sloth.” We should abstain from killing not only human beings but all the living beings. This is a fundamental ecological insight of Buddhism. This clear precept against killing all living beings is observed and tightly followed by the Buddhist monks and nuns. It demonstrates the Buddhist’s commitment to *ahimsa*—“protecting all beings from harm or injury.” This accounts for one of the most prominent practice observed by Buddhists—“vegetarianism.” The second precept “against stealing” not only prohibits people from occupying the things that are not given but is extended ecologically to a precept prohibiting people from poaching wildlife and forest. The Buddhists’ affinity to nature can be attested to by the hermitages located in the remote forest. This Buddhist forest culture has its resonance in the spiritual and aesthetic experiences and cultivation of Buddhist monks and nuns. Besides its emphasis on integrity, stability, and beauty, environmental ethics nowadays are beginning to appreciate the quality of “change” or the Buddhist notion of “impermanence” inherent in the manifested phenomena in nature. Callicott, in his *Earth’s Insights*, holds that “the factor of change” has added a fourth dimension to nature and that the inherent Buddhist notion of impermanence should be valued: “In its stress on process and the affirmation of change (after having extinguished one’s initial longing for permanence), Buddhism, moreover, has something of value to teach contemporary environmentalists, who are just beginning to come to terms with the necessity of adding a fourth dimension—evolutionary, climatic, successional, seasonal, and stochastic change—to a working definition of the integrity, stability, and beauty of natural environments” (63). The Buddhists’ notion of impermanence results in their insight of seeing in the caprice of nature a reflection of the human drama of life and death: “Nature is random, contingent, blind, disastrous, wasteful, clumsy, ugly, full of suffering . . . Nature is also orderly, prolific, efficient, fit, exuberant, diverse, renewing in the midst of death” (qtd. in de Silva, 125). Every thing in nature partakes impermanence, suffering, and the cycle of life and death. The affinity of nature to humans is demonstrated in these diverse yet interrelated notions in Buddhism. Therefore, the Buddha, as shown in many of his early instructions in *Samyutta Nikaya* or *Kindred Sayings*, “attached great importance to arama ropa (construction of parks and groves), vana ropa (reforestation),

the building of dams and wells for preserving water. He also requested the kings to take the lead in building parks, planting shade trees and keeping up a healthy environment for the people” (de Silva, 125-6). In the Buddhists Jataka stories, which depict the stories of selfless and charitable deeds done in the past lives of the Buddha, we see many descriptions of a harmonious biotic community shared by the monks, trees, and various kinds of animals. The last three precepts primarily concern the cultivation of a purified heart, preventing violent acts from occurring. Following these precepts is not meant to be a burden or a restriction of our freedom. We follow these precepts so we can enjoy greater freedom and happiness in our lives, because through our adhering to the precepts we no longer create suffering for ourselves and others.

“Kshanti paramita” cultivates the enlightened quality of patience, tolerance, forbearance, and acceptance—the strength of mind and heart. This enables us to face the difficulties of life without losing our composure and inner tranquility. In practicing this perfection of patience, we never abandon others—we help them cross over the sea of suffering while maintaining our inner peace and equanimity under all circumstances. In this way, we have a correct and deepened understanding of impermanence and inter-relatedness of all beings. With this strength of all-embracing patience and inclusiveness, we maintain our efforts and enthusiasm on our bodhisattva path. Therefore, our practice of “*Kshanti paramita*” assists us in developing the next two paramitas of “*Virya paramita*”—the perfection of diligence, energy, and steadfastness, and “*Dhyana paramita*”—the perfection of meditation and concentration, also the practice of stopping and calming and looking deeply. By practicing Buddhist meditation, we simultaneously develop a gentle attitude towards the non-human world. Buddhist practices of meditation help us to generate a transformation of consciousness to include a more expansive nature. Kenneth Kraft, in “The Greening of Buddhist Practice,” makes the following observation:

Meditation can serve as a vehicle for advancing several ends prized by environmentalists: it is supposed to reduce egoism, deepen appreciation of one’s surroundings, foster empathy with other beings, clarify intention . . . and ultimately lead to a profound sense of oneness with the entire universe” (485).

Deepening our sense of connectedness with our surroundings—the “sense of place”—is a kind of enlightenment, of “ecological awakening,” which, when achieved within the Buddhist framework of interconnectedness and interdependence, would help us to create a healthy human-nature orientation.

The sixth paramita—“*Prajna paramita*”—points to the consummate perfection of supreme wisdom, understanding, and insight, an insight into our nature of emptiness.

We come to understand our interconnected with our Mother Earth. “What we call a self is made only of nonself elements.

When we look at a flower, for example, we may think that it is different from “nonflower” things. But when we look more deeply, we see that everything in the cosmos is in that flower. Without all of the nonflower elements—sunshine, clouds, earth, minerals, heat, rivers, and consciousness—a flower cannot be. This is why the Buddha teaches that the self does not exist. We have to discard all distinctions between self and non-self” (Thich Nhat Hanh 2000, 87).

Prajna paramita is the foundation and the key to the realization of all the paramitas. With this kind of insight, we can practice selfless giving, mindfulness, inclusiveness, diligence, and meditation perfectly. Without *prajna paramita*, the perfection of the other five paramitas is impossible. This supreme wisdom transforms the other five paramitas into their transcendental state. All great bodhisattvas manifest the essence of the six paramitas in various ways, and each of these six paramitas exists in interdependence with the others. In the *Lotus Sutra*, Bodhisattvas Never-Despising exemplify the perfection of patience and inclusiveness. Bodhisattva Manjusri is an example of supreme wisdom. Earth-Store Bodhisattva’s vow—not to rest until all living beings are delivered from suffering—embodies the perfection diligence.

The six paramitas are an essential practice of the bodhisattva path. In order to manifest ourselves in the dimension of action and serve most effectively as the arms and hands of the Buddhas and bodhisattva in the world, we practice to cultivate and perfect these six qualities within ourselves. The moment we see the presence of all the paramitas in each paramita we will begin to fully realize and truly live the practice (Thich Nhat Hanh 2003, 176).

This living universe is permeated with “ever-circulating energy of bodhisattvas” that enlivens all beings and things. Jeremy W. Hayward, in his discussion about the inter-relationships among meditative visualization, the Buddhist “non-self,” and cosmic energy, depicts Bodhisattva Manjusri as the permeating universal energy. Manjusri, embodying ultimate wisdom, does not have a material body. Manjusri is “benevolent and powerful energy-awareness running throughout the whole universe. The energy Manjusri embodies is the energy-awareness of intellect, insight, and intuition all joined, or heart and mind joined” (180). During the transformative practice of meditative visualization, the practitioners, in mindfulness and inner tranquility, often feel very like “tuning in” to this universal energy. At the moment of “letting go” of our cocooned selfhood, we simultaneously awaken our energy within, immersing ourselves into this powerful energy of compassion and loving-kindness.

In the final chapter of the *Lotus Sutra*, we encounter the Bodhisattva Samantabhadra, which means “the Bodhisattva Universal Worthy.” This chapter describes this Bodhisattva’s vow, that at any time and place where there is even one person reciting or practicing the *Lotus Sutra*, he will manifest himself to offer his support. This is only a description of Samantabhadra’s role to protect and preserve the sutra. For the full dimension of this Bodhisattva, we will have to turn to the *Hua-yen Sutra*, in which the great actions of Samantabhadra are explicated as the ten great vows: “paying respect to the Buddha,” “praising the Tathagatas,” “making offerings to all Buddhas and living beings,” “repenting and beginning anew,” “rejoicing at others’ realization of the Dharma,” “requesting the Buddhas to turn the wheel of the Dharma,” “asking the Buddha to remain forever with us,” “following the Buddha to deepen our practice,” “focusing our attention on living beings in order to help them,” and “transferring all the merits of our practice to the realization of enlightenment.” When we pay respect to and recite the various names of the Buddha, we are not doing this to gain the favor from the Buddha. Instead, we show in this humble attitude your firm determination to walk in the direction of goodness, acknowledging and revealing the Buddha nature inherent within us. We know that we have the capacity to care for people and all living beings in your selfless offerings to others. We nourish the good seeds inside and learn that, through good deeds in our previous lives, we have built up a store of merits, of “positive energy.” We gather up and transfer this great store of spiritual energy to the whole universe to be in tune with the transmitting and ever-circulating energy of Samantabhadra. This all-embracing energy of good will is so expansive and powerful that a collective transformation and liberation of all living beings can be positively achieved.

III. Conclusion

Dualistic mode of thinking has cut us off from our original connection to the Earth. We have been suffering a lot from a global ecological crisis. A profound revolution of human consciousness is required if we are to mend our broken bond with Mother Earth. We human beings need to have a new worldview that is both relational and holistic and can effect a collective transformation. It is here that Buddhism, with its “six paramitas” cultivated by bodhisattvas, can offer its precious gift to the well-being of the world. By and large, deep ecology and Mahayana Buddhism all emphasize the notion of the larger “Self-realization,” which aims to bring about transformation of human consciousness. However, deep ecology seems to be emphasizing too much on the physical side of the well-being of biosphere and lacking in specific guidelines on how to result in collective transformation of human consciousness. Buddhism, by

contrast, by its precepts and down-to-earth practice of the way of bodhisattva, is more proficient and systematic in the fields of consciousness transformation and spiritual elevation. This difference of modes of thinking attests to the deep-seated epistemological difference between the West and the East. To solve the Gordian knot of a total ecological catastrophe, we need joined efforts condensed by diversified perspectives.

Deputy Minister, Environmental Protection Administration, Executive Yuan, ROC

Abstract

A prominent Taiwanese writer, Chang Hsiao-feng, recently mobilized a number of public figures in her campaign against the proposed construction of a biotech park near wetlands in a military base. She kneeled and bowed in an attempt to move the President of Taiwan to keep the area safe from construction and development. The controversy soon became the focus of the public's attention. The biotech park is planned by the Academia Sinica, Taiwan's most prestigious academic institution, to be set up in the 202 Arsenal in Taipei's Nangang District. Although only 9.6 hectares of the 185-hectare domain will be developed, Chang wrote an open letter to the media calling on the government to "turn the last green field in Taipei into our second lung." "In an era without tigers, environmental disasters are the new tigers," she says. The choice was "a crossroads between an invitation to sunshine, air and water and a refusal of sunshine, air and water," according to Chang. However, the government of Taiwan responded that the administration will continue with the project in the hope that equal attention would be paid to nature conservation in the capital and to biotechnology development. This paper investigates a controversy that has arisen out of the conflict between traditional values of the East and the modern concept of development from the West.

1. Introduction

Environmental issues have raised the concern of the public in Taiwan in recent years. The devastating damage caused by Typhoon Morakot which resulted in the death of some 700 people in 2009 is an example. The conflict between conservation and development is therefore common in the country. A recent controversy over a biotechnology park proposed to be built in a sensitive wetland of the 202 Arsenal in

Taipei City, the capital, is a case in point on the difference of values between the East and the West.

With a total area of 185 hectares, the 202 Arsenal is a military base located in the Nangang District of Taipei City. It was decided to allow the Academia Sinica, Taiwan's most prestigious academic institution, to plan a national biotechnology park on 25.31 hectares of the 202 Arsenal. The military base includes hills, grasslands and several wetlands. It is also home to countless wildlife including eagles, egrets, snails, squirrels and Formosan Blue Magpie (*Urocissa Caerulea Gould*). The project was planned to commence on June 1, 2010 with the demolition of some buildings. However, a prominent local writer, Chang Hsiao-feng, brought public attention to the issue after sending an open letter to the media on May 5, calling on the government to "turn the last green field in Taipei into our second lung." She kneeled and bowed in an attempt to persuade President Ma Ying-jeou to keep the area safe from construction and development. "I'm willing to kneel all the way from my home to the Executive Yuan," Chang said, adding that she would rather see the Presidential Office Building razed to the ground than see the wetlands near the arsenal destroyed. Thus, Chang called on the Academia Sinica to withdraw from the project of biotech park and beseeched the president to turn the arsenal into Taipei's version of New York's Central Park. She said the wetlands should be maintained because not doing so would lead to a worsening of air quality in the capital. The controversy soon became the focus of public concern.

Not only did the radical move of Chang gain national coverage in the media, but it shocked President Ma and Premier Wu Den-yih of the Executive Yuan (Cabinet). They soon invited Chang to visit the 202 Arsenal for an onsite inspection and to discuss what would be the best way forward. The government explained to her that the construction of a biotechnology zone would not affect wetlands. According to the President, only 9.6 hectares of the 185-hectare domain would be developed, and that the wetlands in the area would not be included in the parts to be developed into a biotechnology park. In addition, the President also asked the Cabinet to form a taskforce to supervise the project. The members of this new group would come from outside the government and would have as their main task to safeguard the wetlands.

In despite of the government's call for compromise, Chang further mobilized a number of public figures in her campaign against the construction of the biotech park. Her campaign, dubbed "Dream 202 S.O.S.," so far rallied more than 60 prominent Taiwanese from all walks of life and political backgrounds. Echoing the campaign,

the Green Party's convener Pan Han-sheng indicated that no environmental impact assessment has been performed for the proposed biotech park project. In this regard, the governmental announcement of a commencement date for initiating the construction project is therefore illegal.

As of late May of 2010, the 202 Arsenal controversy is still continuing. The government is seeking a possible solution to balance conservation and development. It seems that the building of this biotech area close to wetlands on the military base will go ahead despite the protests by some prominent figures in arts and humanities.

2. Traditional Eastern Values on the Environment

Chang Hsiao-feng did not forsake her opposition to the project after a government-sponsored visit to the military base. Interestingly, the controversy over the preservation of wetlands and the 202 Arsenal reflects a much ancient Chinese philosophy on the environment. For instance, Chang insists that the 202 Arsenal should be protected as a whole without any recession. She indicates in her open letter, "the most pure, perfect and beautiful thing, such as 202 Arsenal, should be worshiped heaven." This concept directly corresponds to the ancient ritual that "a beautiful circular jade (i.e., *bi* 璧 in Chinese) should worship heaven." She quotes a poem of Shin Chi-Gi (1140-1207) of Sung Dynasty and further extends her meaning that the natural environment should be forever owned and enjoyed by the public. Therefore, people should not be greedy and should use the land wisely.

In her open letter, Chang cited her concepts from the Eight Diagrams (i.e., *Ba-quar* 八卦 in Chinese), which is eight combinations of three whole or broken lines formerly used in divination. With respect to the natural characteristics, the Eight Diagrams practice its philosophy via eight elements including heaven, land, thunder, wind, water, fire, mountain and wetland (天、地、雷、風、水、火、山、澤). For example, the abundant resources of land like the heartwarming support of mothers. The elevation of the mountains beyond one's reach and therefore makes them to be the home of celestial being. Water represents the softest but most powerful energy. And, the wetlands sustain numerous wildlife and deserve to be the place for everybody to heal and give strength to body and soul. According to Chang, however, the sensitive areas such as mountains, waters and wetlands are seriously damaged,

polluted or destroyed in a significant portion of mainland China and Taiwan. Countless innocent birds and fishes lost their lives in the process of human development. Even that, “we still need to love this land because it is the home of our soul.” Chang warns that “we would have nowhere to go if we destroyed the environment.”

Chang disagrees with the response from the Academia Sinica that the institution will open the biotech park to the public to enjoy the natural beauty of wetlands inside. She highlights her point that the Earth should maintain its natural face in its original state. If environmental quality is improved, it will be beneficial to man. Her humble request is only for a breath of fresh air. “Crowds are not a principle of nature,” she says, “to remain some open space for generations to come will be a real merit and virtue.” From the view point of this prominent writer, all businesses and enterprises (i.e., *Yeh* 業 in Chinese) are closely related to “sin.” Therefore, she would like to see all institutions and enterprises withdraw their development proposals for the 202 Arsenal. “Only unworthy descendants will sell out their ancestors’ property,” says Chang. So she suggests that the government transform the 202 Arsenal into an urban park and name it “Dong-Li Park” (i.e., East Fen Park 東籬公園 in Chinese) after the ancient poets Tao Yuan-Min (陶淵明) and Ma Chi-Yuan (馬致遠).

In addition to the traditional values on the natural environment, the 70-year-old writer got down on her knees publicly to beg President Ma to save the wetlands and the 202 Arsenal also reveals a special tradition and expectation of the rulers. It is very common for the people to appeal to the emperor for help in the ancient days. However, this perception is still rooted in the minds of many people of a modern and democratic society in Taiwan. In short, the tradition has a generation-to-generation long-term effects on people’s attitude and concept.

3. Modern Western Concept of Development

Construction, science, technology, and industrial development can be regarded as the modern concepts of development from the West. A country’s economic growth often represents its modernization. By conducting scientific research and utilizing new technologies, modern societies are keen to seek a “balance” between

development and conservation.

For the controversy over 202 Arsenal, the Premier said that if Taiwan has to protect all the wetlands in the country, economic development and the creation of jobs would be impossible. Therefore, the top government officials expressed their hope to reach a solution which could satisfy both sides. The arsenal project could only go ahead after an environmental impact assessment is carried out. A possible solution could be for the Academia Sinica to keep the 9.6 hectares already scheduled for development, but to preserve the remainder of the 25 hectares it obtained from the military. As a result, the future biotech park could hold the more than 15 hectares of land for safekeeping as a nature reserve.

For a long time, we were educated that we should strive to be masters of the Earth. Many of us believe that “man can overcome nature.” People are smart to use “available technologies” to meet their demands and needs. However, man has limited knowledge about the function and operation of nature. Scientific research and modern technologies also have their own limitation. Even environmental impact assessment is often a controversy in its process, in its documentation and in the complicated interrelationship in the ecosystem. This is particularly true in Taiwan and many other countries. Therefore, there is still much room for improvement in the concept of nature conservation, scientific research and technologies as well as economic development.

In addition, politics is everywhere when major development projects are being discussed. Critics of the project have accused the administration of colluding with powerful business leaders, including Hon Hai Precision Industry Chairman Terry Gou, to develop one of the last remaining green spaces in the capital. The ruling party KMT Legislator Tsai Cheng-yuan wants the land of 202 Arsenal returned to farmers. Tsai insists that the 202 Arsenal was built upon farmland which was forcibly acquired by the government after the KMT moved to Taiwan in 1950. However, the writer Chang was suspicious of Tsai’s motive, suspecting that the lawmaker is after votes.

One of the themes of the controversy was the rationale behind building a biotech park in the 202 Arsenal. “Is biotechnology a golden egg?” Chang asked. She argued that the Academia Sinica needs to do more fundamental research on physics and chemistry rather than finding ways of making money. A professor of National Yang Ming University, Wu Jung-tsan, also questioned the need for such a large terrain to do

research and manufacture new drugs based on biotechnology. Smaller areas in Taipei are perfectly suitable to house biotech operations, so there is no need to lay claim to the wetlands. He cited Japan as an example because it succeeded in using resources from universities and existing research bodies to supplement businesses, saving on the need to build new factories. Thus, the Academia Sinica should not be in the business of destroying wetlands but should negotiate with local governments elsewhere in Taiwan for relocation. In other words, economic development is not the number one nor is it the only business that a nation should care about. Which development model and concepts can fit the nation and its natural environment deserve the priority for public discussion.

4. Rethinking the Relationship Between Man and Nature

The controversy of the 202 Arsenal indeed reflects much public concern over the degradation of Taiwan's environment and its frequent disasters due to inappropriate land uses in sensitive areas. The good news is that the Environmental Protection Administration of Taiwan recently enacted the "Environmental Education Act." Civil servants will receive a mandatory minimum of four hours of environmental education a year. The president of the nation, employees of government agencies, dependent organizations and state-run enterprises, and elementary school teachers and students will all be subject to the new law. Nevertheless, the relationship between man and nature should be further reviewed and environmental ethics should also be strengthened in the future.

As mentioned in Gorge Marsh's book entitled *Man and Nature*, man often plays a negative role to damage nature. The conservation movement initiated by the writer has encouraged the rethinking of the national land use policy as well as the relationship between man and nature in Taiwan. By examining frequent mudslides after typhoons and the recent fatal landslide along Highway 3, for example, she compared the recent natural disasters in the country to a tiger. "In an era without tigers, environmental disasters are the new tigers," she said. On one hand, this implied that the over development in many parts of Taiwan island has threatened and erased the existence of many wildlife including tigers. On the other hand, the choice on the preservation of 202 Arsenal was "a crossroads between an invitation to sunshine, air and water and a refusal of sunshine, air and water." According to Chang, it is not only the conflict between the environment and economy, but also the

choice of goodness and exclusion of evil. The decision is also a selection between “respecting life” and “trampling life”. To allow Taipei citizens to live closer to nature, the Academia Sinica should look elsewhere to erect a building. Chang called for the preservation of the military base in a way that would avoid turning it into a cement castle. Chang’s movement clearly indicates her pursuit of a protection of “perfect” natural beauty in 202 Arsenal without compromise.

The controversy over the 202 Arsenal also involved a key issue on wetlands. The function and benefits of wetlands have been neglected for a long time. For most people in Taiwan and elsewhere, a wetland means a useless area, a breeding ground for flies and mosquitoes, and should be claimed for other high-value uses. The definition of wetland is also limited to include ponds, mangroves, swamps and muddy flats. Based on the Ramsar Convention of United Nations, wetlands serve as one of the most productive ecosystems on Earth. The productivity of wetlands can be 2.5 to 4 times that of rice paddies. In addition, the resulting economic value from wetlands can reach more than 1.5 billion US dollars. As an old map of the 202 Arsenal shows, the wetland areas included the grassland today and were much wider than the existing ponds. Many of the prominent figures who protest against the biotech park focus only on the protection of existing wetlands and therefore neglect the interrelationship among the wetlands, grasslands, trees, and hills. These formed a “low-elevation mountain ecosystem” which is usually located on the periphery of metropolitan areas and provides people with easy access for environmental education and enjoyment of nature. While most high mountains are protected by national parks or forests, the protection of these low-elevation mountain ecosystems has been neglected in the domestic planning and administrative mechanisms. This implies that a “whole-spectrum” view to protect all natural ecosystems is needed.

5. Need for Dialogue Among Stakeholders

The controversy over the environmental work in the 202 Arsenal indicates that all stakeholders involved have their own stand and viewpoints. Compromise to balance the development of biotech park and the conservation of a natural open space is still difficult to reach. According to Chang, it is terrible to plan a biotech laboratory in an ecological park. She believes there is a clear conflict between these two parks.

Full information disclosure is a must to explain to the public and to resolve conflicts

among different stakeholders. Since the 202 Arsenal is a military base, much information about the site and the biotech proposal are not available or accessible to the public. There is suspicion that the whole incident, which began with a single report in a local newspaper and TV station with photos taken inside the tightly guarded military property, was manipulated by the military because it did not want to release the facility. Moreover, the veracity of data concerning the wetlands in question is dubious. The photo of the wetlands published by the media was actually not taken at the designated site of the biotech park, but of a remote corner of the arsenal complex. In addition, it is amateurish to say "the biotech park can be built anywhere, not necessarily in Nankang." The development of the biotech industry requires multidimensional clustering, which is probably why the site was chosen for the park. It lies just to the west of the Academia Sinica, which has a strong biotechnology research base. Furthermore, some have suggested that the entire 202 Arsenal be relocated to make way for a nature park there. This suggestion will possibly lead to endless conflicts because nobody wants to see an arsenal built in their backyards. As for people of the other side, Chang and others on her side were deemed as "a minority of environmentalists" who have lost control of their emotions when they said they would "oppose the project to the end even if it passes an environmental impact assessment."

The whole story reflects the difference in value between the East and the West. It also demonstrates that there is a necessity to have more dialogue on sustainability issues for stakeholders who may be affected. It is good that the Cabinet was requested to form a taskforce to supervise the biotech park project. Since the members of this group would come from outside the government, it is believed that they can have more opportunities to change views and perform better to safeguard the wetlands and the whole environment. However, a transparent decision-making process and full information disclosure are also essential to facilitate a rational dialogue.

6. Conclusion

Looking at the environmental movement initiated by the prominent writer Chang Hsiao-feng regarding the 202 Arsenal in Taipei, Taiwan, this paper discusses the controversy over the traditional values of the East and the modern concept of development from the West. People of the modern age are taught to strive to be the

masters of the Earth. However, the numerous incidents of environmental disasters imply that man cannot go against, let alone overcome nature. The attitude and concept of respecting nature, which is firmly rooted in Chinese literature and the traditional philosophy of the East, deserve more attention as issues of sustainability are being dealt with. By examining the difference in value between the East and the West, a transparent decision-making process as well as greater dialogue and full information disclosure for the stakeholders involved are essential to narrow the various gaps when controversy arises.

Tokyo Fever in Taiwan: The De-contextualized Interpretation of Tokyo

Ya-Ling Yang

Assistant Professor, Department of Cultural Business Development
National Kaohsiung University of Applied Sciences, Taiwan

Chih-Peng Chang

Master, Graduate Institute of Building and Planning,
National Taiwan University

In 2005, “Dialogue”, an architectural magazine in Taiwan, invited a Japanese architect—Norihiko Dan (團紀彦)—to edit a book “Architecture and Urbanism of Tokyo”; a Taiwan business magazine “Global View” published a book “New Tokyo Aesthetic Economy” in 2007; and a famous Taiwanese visual artist, Dung Lung Wu, also has published two best sellers “Design Tokyo” and “Design Tokyo 2.0” since 2006. This Tokyo fever in Taiwan publication was a response to the “Cultural and Creative Industries Project” promoted by Taiwan Government since 2002, with a goal of promoting “Creative Taiwan.” Tokyo, thus, became a model of “Creative City” in this fever. This paper aims to examine how Taiwan praised some cases of urban renewal in Tokyo such as “Roppongi Hills” and “Middletown”, which ignored the diversity discourse of long-term Tokyo Studies, and resulted in this de-contextualized Interpretation of Tokyo.

Key words: Tokyo Studies, cultural and creative industries, aesthetic economy

Preface

Big cities worldwide are becoming increasingly similar due to globalization, especially when it comes to stressful competitions. As a result, related problems, such as the hollowed-out conventional industries, came out; most governments consider enhancing and marketing tourism as the panacea. Therefore, in order to attract more tourists, how to build city image and draft successful strategies both culturally and politically coherent with other policies are becoming crucial for the governments. “Cultural and Creative Industries Project,” is the solution Taiwan government came out with, which has been promoting since 2002. The main purpose is to turn “made in Taiwan” to “Creative Taiwan.” Hopefully, with the promotion of Cultural and Creative Industries, Taiwan could one day caught up countries with fully and maturely development. In order to draw better policies of such industry, Tokyo has become the best model.

This paper aims to discuss the emerging problems of how Taiwan took lightly of the experience of urban planning, architecture and designing industry/fashion in Tokyo. It must be noted that “Tokyo Studies”, in Japan, has been the studies researched by many experts who observed Tokyo from different professions for many years, but Taiwan cultural policy seldom shown interest in these diversified and cumulative discussions.

Definition by Who?

In response to the Cultural and Creative Industries Project and fever aroused, several universities in Taiwan established related departments, including departments of Visual Communication Design or Business Strategy of Culture and Creation. In addition to this, books written in Mandarin related to the architecture, the designed products and the beauty of Tokyo have peaked simultaneously, such as 《東京建築酷斯拉－李清志的城市漫遊地圖》、《設計東京》、《東京視覺設計in－80個設計關鍵詞》、《東京摩登》、《東京制作》、《創意東京》、《東京美術館享物－20家美術館的買物之旅》、《共感東京：借把創意的鑰匙》。

The most eye-catching one is 《新·東京美學經濟：探索一座未來城市和七位大師的設計力－New Design In Tokyo》. It was published in 2007 by Common Wealth Publisher, established in 1981 and regarded itself as the professional news, finance, and management magazine. According to a survey done by Asian Business Readership Survey (ABRS) in 2006, Common Wealth Magazine is what CEOs in Taiwan; this is why and how the term “common

wealth viewpoint” emerges.

For example, in the issue “Learning from Global Dubai,” published in June 2006, editors claimed that there were unlimited dreams and possibilities of urban development in Dubai, where large-scale construction has been undergoing. However, their attitude shifts in the issue in December, 2009; the topic was “The Collapse of Sand Castle—Dubai’s Boasting.” On the cover of this issue the subtitle says without further explanation, “The collapse of the fantasized Dubai reveals the greatest crisis in the 21st century—government’s sudden bankruptcy. Who’s next? Iceland, Japan, Greece or Soviet Union Ukraine?” Even though the editors did apologize for the controversy aroused, this issue neither explained nor apologized for their overestimating about Dubai years ago.

Regardless of the fact that the book 《新・東京美學經濟：探索一座未來城市和七位大師的設計力— New Design In Tokyo》 was edited, interviewed, and written by these experienced editors of Common Wealth, the viewpoint toward Tokyo is the same as they held toward Dubai. Considering Tokyo as an “emerging city of creativity” in Asia, these editors said in the book, “Tokyo, being the most familiar city for Taiwanese, has been transferring gradually from a city with old landscape to the one with endless creativities.” The book also praised highly about the recently developed large scale urban renewal project such as Roppongi Hills and Tokyo Midtown.

We may say that, due to these foregoing development plans in central district, the landscape of Tokyo in the 21st century has changed substantially. The project of Roppongi Hill, for example, located in district of Minato and developed by Mori Building, costs more than ¥2800 billion (without land cost), and occupies 11.6 hectare, is one of the biggest urban renewal projects in Japan. In order to make it a micro-city / “cultural central district,” Mori Building puts Mori Art Museum, Mori Arts Center Gallery, Academy Hills, Toho Cinemas Roppongi Hills into this project. It took more than a decade to finish this project and, at the same time, renewed the old residential area. This has aroused some fever in Taiwan. On the one hand, the urban renewal problem is also what most cities in Taiwan are facing now, especially Taipei. On the other, Tokyo has been Taiwanese’s favorite city for a long time. Consequently, the media rushed into reporting this project.

Another example was the Tokyo Midtown Project, which was developed by Mitsui Fudosan Group Ltd. Located in the former site of Japan Ministry of Defense, it was inaugurated in March,

2007. The museum “21_21 DESIGN SIGHT” inside the Tokyo Midtown was famous for its designer—Tadao Ando.

The Common Wealth Magazine defined these projects as the model of “aesthetic economy,” but is it the same to Japanese scholars? Since 1995, with the rocketing development of IT industry and the bubbled economy followed, gigantic amounts of population moved from downtown to suburbs; after 2000, the changing lifestyle, the shifting landscape, and countless renewal projects, has aroused debates about urban essence.

Hiroki Azuma (東浩紀) and Akihiro Kitada (北田暁大) wrote together the book 《東京から考える：格差・郊外・ナショナリズム》(2007). In the book, authors analyzed several problems in nowadays Japan society, especially urban renewal development projects in recent years. They also discussed the disappearing street feature, such as subculture concentered by the young ones; for example, the renewal projects in Shimokitazawa (下北沢) and Akihabara (秋葉原). Shunya Yoshimi (吉見俊哉), who has been studying urbanization caused by developed capitalism, took Shinjuku (新宿), Shiibuya (渋谷) and Harajuku (原宿) as examples of his arguments. Due to continuous developing projects and constructions of commercial facility, these streets with rich subculture are vanishing. The youngsters, therefore, became the specimen of Consumerism.

As the committee member of Tokyo bid for the 2016 Summer Olympics, Tadao Ando advocated the idea “New Tokyo Study”. The Tokyo Government, on the other hand, established the policy of “創生創造性的文化之都” in 2006, and set up the Tokyo Council for the Art (東京芸術文化評議会), which was intended to integrate comprehensively and to review the culture-related policies in order to gain the opportunity to hold Olympics. However, after Japan failed to have this chance, would these principles continue?

The De-contextualized Interpretation and propaganda of culture

Since policy of “Culture Creation Industries” came out, many scholars argued that it simplified the culture elements; they are closely connected with the history and the people. The Taiwanese movie industry, for example, has been occupied by American, Japanese and Korean ones. Hence, our values have been dominated by media (Ni Zai-Shen, 2005); once the subjectivity disappeared, it would be hard to reconstruct. Lin Hwai-min, the renowned dancing artist in Taiwan, said, “First of all, when any Western art trends or information is acquired, it is

already outdated, regardless of the fact that it is from the Internet. Secondly, we would never know the whole picture. “ (Lin Hwai-min, 2005:61).

It seems to be the same situation in Japan. Japanese scholar, Kazuko Goto (後藤和子) (2007) had also criticized Japanese Government’s following blindly the concept of “Creative City,” which was originally brought up by American and European scholars. Each case of creative city has its own problems and situations; this is what the governing should always keep in mind. If drafting policies only for attracting tourists quickly, it would not only fail to “revive district culture resources,” but also diminish people’s creativities. Most urban renewal cases emphasize too much on over-capitalization of downtowns. On the contrary, the emphasis should be how to build up a perfect surrounding for the creative class to “incubate.” Only when a city with provide multiple elements and resources would the creation industry booming.

Japanese anthropologists, Hata Nobuyuki (端信行) and Nakamaki Hirochika(中牧弘允), are the authors of 《都市空間を創造する－越境時代の文化都市論》. They declared that the 21st century is no longer a “country era” but a “city era.” It is crucial for every city to contain and conclude the multiplicity created by dwellers of all. It is even more important to transfer the diversity into the foundation of art and culture, and to further enhance it into the attraction of a charming city.

As an island county, Taiwan, like Japan, is in desperate needs to connect and communicate with other cultures, in order to develop our own ones. Instead of applying models abroad, it would be more helpful to learn from successful as well as failed examples. This paper aims not to criticize this Tokyo Fever, but to reveal the real situations through various studies of Japanese scholars. Hopefully, instead of admiring developed countries blindly, Taiwanese government would make sustainably and down-to-earth culture-related policies, which would efficiently solve dilemmas of each district and enhance the depth of related industries.

With this paper, I wish to learn more from experts and scholars around the world.

Chih-Huan Hsu

Master of Department of Multimedia and Entertainment Science,
Southern Taiwan University

ABSTRACT

Collaborations between the movie and game industries have resulted in popular games based on movies such as *Star Wars*, *The Matrix*, and *Avatar*. Thus, both movie and game industries can benefit from movie-based games by way of marketing tactics. Nonetheless, many game magazines and designers report that players have been disappointed with movie-based games. Accordingly, this study explored the quality of game features that affect player satisfaction with movie-based games. The Kano model of player satisfaction was used to categorize nine game features, thirty elements of nine game features according to their varied impact on satisfaction. The results indicate that features related to Sensory Pleasure, Emotional Pleasure, Cognitive Pleasure, and visual / audio feedback are both satisfiers and dissatisfiers (one-dimensional); loyalty to original movie tends to be a dissatisfier only (must-be requirements); and Innovation and creative game-play are satisfiers (attractive requirements). However, a segment-specific analysis demonstrates that the effects of game features on player groups may differ, especially between players with varying degree of involvement with the movie.

Keywords: Movie-Based Games, Kano Model, Quality Assessment

1. INTRODUCTION

Collaboration between the cinema industry and video game industry has increased in recent years. The Hollywood industry is aware that video games are gradually drawing away the most important part of their customer base, which is the sixteen- to thirty-three-year-old age

group. However, video-game companies hope that their games provide virtual experiences comparable to those provided by movies. Hetherington (2005) defined movie-based games as ones “which are faithful to the original film contents and further allow players to interact with the virtual reality constructed in games. Game players will encounter counterparts of roles and environments which offer them opportunities to recall of moments in films.” Kerr (2006) also notes that video games enable players to assume personas that are prohibited by society; players can also display pleasure through “intertextuality” and by actualizing role-playing desires. Many movie-based videogames, such as *Harry Potter*, *the Matrix: Path of Neo*, and *Lord of the Rings: Return of the King*, incorporate actual film footage, voice, music, and set designs to elicit compelling game plays. Games thus enable players to assume the personas of Harry Potter² or Hermione Granger² and battle wicked forces in a magic war or to assume the persona of Neo, the heroic character in *The Matrix*, to rescue the future world.

However, movie-based games are often commercially unsuccessful. O’Luanaigh claims in his game history that a movie-based game is rarely as compelling as the underlying blockbuster movie itself; tedious movie games are inevitably considered fiascos by players. Although game makers can quickly profit from such video games, they may be deterred from rolling out a game series due to frequent product failures.

This study therefore analyzed the qualities of successful movie-based games. The objective was to identify which game designs are appealing or frustrating, what advantages and disadvantages are encountered by game designers when producing movie-based video games, and what sorts of content should be developed. The distinguishing characteristics of those who play movie-based games are described, and future research in movie-based game design is expected to be proposed.

2. DEFINING PLAYER SATISFACTION WITH MOVIE-BASED GAMES

Until now, movie-based games have not been studied intensively. That is, the literature provides little analysis of player satisfaction; nonetheless, scholarly research (Bordwell, 2008; Giannetti, 2005; Kawin, 1996; Nelmes, 2006; Turner, 1997; Norman, 2005; Turner, 1997; Lee *et al.*, 2006) on consumers of other entertainment media can elucidate the characteristics of those who play movie-based games. This research explores three dimensions: the first is Media Pleasure, which includes the following five features:

1. Pleasure of Game Genres: Game players tend to expect procedures and rituals similar to those experienced when watching movies. (Kawin, 1996; Nelmes, 2006).

2. Pleasure of Game Roles: The cast in a movie enralls the audience with their charismatic countenances and attracts players to assume their roles in movie-based games. Favored

characteristics of character roles, such as miraculous powers, personalities, weapons, may also be represented in games. Players can play different roles to explore narratives from varying perspectives. (O’Luanaigh, 2006; Tanguay and Boylen, 2002).

3. Sensory Pleasure: The pleasure of “substantiality” is derived from sense-stimuli. For example: the scenes in a game provide a visual spectacle and music, tone, and rhythm produce emotions such as joy, solemnity, nervousness, and fear [Bordwell,2008; Giannetti,2005 [Norman,2005].

4. Emotional Pleasure: Emotional pleasure originates from the empathy of game players with roles and the situation. To describe emotional pleasure, Rolling [2003, 2004] refers to Coleridge notion of “the willing suspense of disbelief.” The game playing process draws players to vicariously participate in the plot and to escape the reality.

5. Cognitive Pleasure: Cognitive pleasure is derived from the aspiration of audiences to obtain knowledge related to roles and complex plots. Norman (2005) claims that game players can perceive metaphors and analogies in game settings, according to the “voyeur” concept developed by Boorstin, game players acquire meanings that are more profound than just the superficial story (Boorstin, 1990).

The second satisfaction dimension is Movie Adaptation, which includes the following three features.

1. Loyalty to the Original Movie: Game designs should be consistent with the original movies to appeal to movie fans. Therefore, some quintessential elements in movies favored by the audiences should be faithfully provided in games. Common examples include miraculous powers, weapons, thematic music in movies, or atmospheres of wit, humor, thrill, and dread. Sticking to the original background settings can enhance the immersion of players and convince them that they are entering an imaginary world of movies (Freeman, 2004).

2. Innovation: Audiences expect exotic plots rather than formulaic rituals. Game players also look forward to innovation beyond those gaming rituals. Inventive game designs cause players to immerse themselves in the game play. On the other hand, game designers must also create detailed theatrical plots to lure movie-fan players. Nevertheless, extra plots in games should follow cause-and-effect rules in movies to arouse player interests and curiosity. Some clues should be provided to acquaint the players with integrated stories that incorporate movie narratives [O’Luanaigh, 2006].

3. Game Mode: By designing games to meet individual needs, both movie-fan players and non-movie-fan players can fully enjoy themselves [Tanguay and Boylen,2002]. Bates (2006) proposed that game designs should help unfamiliar players understand the story underlying the game, but should not perturb movie-fan players. Possible solutions are to introduce the

movie to non-movie-fan players or to provide “skip” buttons for movie-fan players to ignore.. Conversely, those who are familiar with the plot of the underlying movie should not stand a better chance of winning the games than players who are not. For example, in shooting games, numbers of opponents, gun turrets and traps in certain movie scenes should not be identical in the game design. Players who are aware of the challenges are unlikely to be motivated to explore.

The third satisfaction dimension is interactivity, as illustrated below:

Interactivity :Rollings (2003) defines game interaction as experiences of players in terms of watching, listening, and interacting with the game designs, graphs, sound effects and user interface. The bountiful playfulness and intriguing challenges provided by game should continuously attract the attention of players. Besides, game players often forget their existence in the real world owing to profound immersion in the game. In addition to the immersion elicited from the plot, game players may incorporate their hands and eyes into game effects through abundant responses, playfulness, superb user interfaces in process of interaction. Bates (2006) argued that game designs should encompass conspicuous visual and audio feedbacks, so that game players know when their behaviors are proper. Besides deeply understanding the plot, players must interact with the content. As a result, game designers should determine what factors are satisfying and what makes interaction in games pleasant in order to produce movie-based games that provide a vivid game-play experience. Besides, Bates (2006) argued that games should have clear rules with conspicuous short-term, mid-term and long-term missions so that players know what to do next. Additionally, Crawford (1997) and Rollings (2003) noted the importance of a good sense of balance in the game mechanism. The game balance affects the fairness that players perceive in terms of equal chances at the onset of game plays, preventing cheating behaviors by opponents, more challenges and probable winning. Unlike the delight of watching movies, Freeman argued that another feature of the movie games lies in the non-linear and multiple story-telling narratives. Most movie games can change the sequence of events and bring about unique experiences; different ways of addressing challenges result in distinguishable processes and results (Freeman, 2004). According to Crawford, the story underlying a game can encourage players, and maintain certain degrees of freedom to indulge in exploration from assorted perspectives. Game players are unlikely to immerse themselves in the game if they do not find it challenging (Crawford, 1997).

In summary, nine features of movie-based games should be measured to assess player satisfaction. These are *pleasure of game genres*, *pleasure of game roles*, *sensory pleasure*, *emotional pleasure*, and *cognitive pleasure*, *loyalty to the original movie*, *innovation*, *game mode*, and *interactivity*. Section 5.2 further elaborates these features through analysis of a series of intensive discussions with players in various game discussion boards

Moreover, nine features should be analyzed to differentiate the player involvement in games and movies. (Rollings,2003; Hallford, 2001). For example, some players are concerned about whether the game design is inventive, whereas other players prefer that the game be consistent with the original movie and have a consistent storyline. Therefore, Section 4 compares the different degrees of player involvement identified in this study.

3. RESEARCH METHODOLOGY

With the increasing game productions in consumption markets, the literature on movie game design and user satisfaction is gradually expanding. For instance, Choi and Kim (2004) used the concepts of customer loyalty, flow, personal interaction, and social interaction to explain why people continue playing online games, and to identify their most attractive design features. Hsu *et al.*, (2005) also identified design features of action games that appeal to game buyers, and used neural network software to evaluate the relative importance of these design features. Additionally, Kim *et al.*, (2009) analyzed attractive characteristics of download type mobile games in terms of Intention, Perception and Technology. Although many aspects of games have been analyzed, this study is the first to examine design elements in movie-based games and user satisfaction. Particularly, the literature indicates that player satisfaction is one-dimensional: when a specific game quality gets increases, player satisfaction increases, and vice versa.

However, fulfilling player expectations rarely requires high player satisfaction (Metzger *et al.*, 1996). Thus, this research applied Kano two-dimensional quality model (Kano *et al.*, 1884) to investigate how varying game qualities affect player satisfaction. By using Kano model, we classify different types of requirements with players' preferences in games.

3.1 Kano Model for Investigating Player Satisfaction

If player satisfaction is plotted on a vertical axis with performance for a specific game quality on the horizontal axis, different player requirements obtain different results. Figure 1 shows five requirements that affect player satisfaction in different ways. For instance, a Must-be requirement (M) causes dissatisfaction if it is not fulfilled, whereas fulfillment has no positive effect on player satisfaction. Conversely, the Attractive requirement (A) dramatically affects satisfaction if it is fulfilled, while non-fulfillment does not cause dissatisfaction. One-dimensional requirement (O) impacts both satisfaction and dissatisfaction. Player satisfaction is proportional to fulfillment: the higher the fulfillment, the higher the player satisfaction, and vice versa. Further, Indifferent requirement (I) is irrelevant to player satisfaction. A Reverse requirement (R) causes satisfaction if it is not fulfilled and causes dissatisfaction if it is fulfilled.

The advantages of using Kano model are as follows:

1. Game designers can use the model before designing a game to ensure that its qualities are consistent with player demands.

2. If a game feature is not possible due to financial and technical limits, the model considers game features that are most appealing to consumers.
3. Different players have different preferences regarding game qualities. A survey of different groups of players revealed that the game design qualities that provide a high satisfaction vary
4. This model explored appealing elements in games, which differentiates this market from those with similar products and boosts competitiveness.
5. Discovering and fulfilling Attractive requirements encourages creative game designs, which increases competitiveness

3.2 Questionnaire Design Using Kano Model

A special questionnaire design (Kano *et al.*, 1984) was needed to analyze these requirement types (Must-be, One-dimensional, Attractive, Indifferent and Reverse requirement). For each quality element, the respondent was required to answer a positive and a negative question. Table 1 illustrates both questions for a specific game feature. Game features were categorized by combining two answers in the Kano-model evaluation table. For example, if a player answers “It must be that way” to the question “If roles’ performances in the game are correspondent with those in the movie, how do you feel?” (positive form of the question) and answers “I dislike it that way” to the question “If roles’ performances in the game are not correspondent with those in the movie, how do you feel?” (negative form of the question); combining the positive and negative answers obtains the M requirement, which indicates that the game feature is a Must-be requirement from the player perspective. The table of results was constructed to provide an overview of the requirement categories for individual game features. The frequency of each answer was then determined and interpreted (Matzler *et al.*, 1996).

Further, to condense the results of a Kano survey, Berger *et al.* (1993) suggests CS coefficients (Customer Satisfaction coefficients) as measures of the increased satisfaction (CS+) or decreased dissatisfaction (CS-) obtained by providing a specific product feature. The CS⁻ coefficient is calculated by dividing the sum of categorizations as Must-be or One-dimensional by a normalizing factor. The CS⁺ coefficient, which indicates the variable for increased satisfaction, is calculated summing the Attractive and One-dimensional categorizations in the numerator:

$$\text{formula of calculating } CS^+ = \frac{(A + O)}{(A + O + M + I)} \dots\dots\dots [1]$$

$$\text{formula of calculating } CS^- = \frac{(O + M)}{(A + O + M + I)} \dots\dots\dots [2]$$

where M represents the number of categorizations as Must-be requirement, O the number of categorizations as One-dimensional requirement, A the number of categorizations as Attractive requirement, and I the number of categorizations as Indifferent.

The CS^+ ranges from 0 to 1; values closer to 1 indicate greater influences on player satisfaction. Conversely, CS^- ranges from 0 to -1, the negative CS^- approaches -1, the impact on player dissatisfaction is especially strong when the analyzed feature is not fulfilled. Based on CS^- coefficients, it is possible to position game features with player perception in a CS^+ - CS^- grid (Berger *et al.*, 1993; Fig. 2). For example, a one-dimensional requirement that causes both satisfaction and dissatisfaction is positioned in the top right quadrant ($CS^- > 0.5$, $CS^+ > 0.5$).

4. HYPOTHESIS

The above discussion of the Kano model did not provide hypotheses of movie-based games. However, before hypothesizing, game players must first be classified. Most literature reviews of video game classify players as hardcore or casual. Hardcore players tend to spend substantial time playing games and are willing to spend much more money on software and hardware equipment compared to casual gamers. They believe that playing games is not purely for relaxation, but also to enjoy a sense of achievement in winning. Therefore, they are likely to endure frustrations from failures in game play and tend to prefer highly challenging and profoundly complex video games. Unlike hardcore players, casual players play games solely for recreation and consider game playing a pastime. They tend to quit if the game does not consistently provide excitement. Casual players also tend to prefer games that are easily learned and uncomplicated (Novak 2005, Rollings 2003, Kerr 2006).

Nevertheless, Novak 2005 argued that categorizing players as hardcore or casual players is overly simplistic. Novak considered this classification too dogmatic and suggested including population statistics variables for a more detailed realization of players. Moreover, Rollings 2004 hypothesized that including fluctuating players to these two group founded on market structure. He proposed that fluctuating players are more likely to be influenced by other media such as novels, television and movies and that the motivations of such players to play a game are determined by the popularity of the game.

Conversely, to classify movie-based games, Tanguay and Boylen 2002 defined "fan players" as those who are obsessed with the movies and acquaint themselves with the contents.

This study sorted players according to their media involvement: players who are highly/moderately/ less immersed in games and players who are highly/moderately/ less immersed in movies.

This study proposed the following hypotheses:

H1: The proposed movie-based video game qualities can be (a) categorized as "One-dimensional," "Attractive," or "Must-be requirement," and (b) positioned in the bottom left quadrant of the CS^+ - CS^- grid.

H2: The features of players with varying immersion in games can be categorized as (a) different requirement types, and (b) the same requirement type in the Kano model.

H3: he features of players with varying immersion in movies can be categorized as (a) different requirement types, and (b) the same requirement type in the Kano model.

5. MEASURES

5.1 Player classifications

Two sets of questions were provided to to determine what players expect in a game.

Movie involvement. Using a 7-point Likert scale, participants were asked to respond to questions about their frequency of watching movies in a month, their familiarity with contents of a movie, and their emotional involvement (Green & Brock, 2000) in a movie. According to their answers, respondents were classified as having high/moderate/ low movie involvement

Game involvement. This scale measured involvement in game playing such as frequency of playing games in a week, motivation for playing games, and emotional involvement with games and characters. (Calleja, 2007). Answers were also categorized as high/moderate/low game involvement.

5.2 Game features

To further elaborate the nine game features in each of the three dimensions (Media Pleasure, Movie Adaptation, and Interactivity). Each feature was categorized into several game elements. For each element, the respondent was required to answer positively or negatively. For illustration purposes, only the positive questions are discussed here.

For the dimension of Media Pleasure in movie-based games, the feature of Game Genres was characterized as one element. Likewise, three, two, four and three elements were used to characterize Pleasure of Game Roles, Sensory Pleasure, Emotional Pleasure, and Cognitive Pleasure, respectively. Table 3 illustrates the thirteen positive questions used to measure the Media Pleasure dimension.

Table 4 shows nine other questions used to investigate the quality dimension of Movie Adaptation: three questions regarding Loyalty to the Original, three questions regarding Innovation and two questions regarding Game Mode.

Finally, eight further elements were derived to characterize Interactivity; Table 5 lists the questions.

Table 1 shows the positive and negative questions provided in accordance with the Kano model. Consequently, the final questionnaire included sixty questions.

6. RERULTS

6.1. Study population

The main survey was conducted online over a two-week period in Taiwan. After excluding

incomplete or repetitive responses, 300 of the 360 responses were deemed valid (48 from females, 252 from males). All had experience playing movie-based game plays and age range was from 18-23(13% under 18, 50% between 18 to 23, 29% between 24 to 30 and 8% over 30); most subjects were college educated (20% high school or senior high school, 63% college and 16% graduate school or higher).

Regarding movie involvement, 18% subjects were categorized as players with low involvement in movies (non-movie-fan players), 29% as movie-fan players, and 53% participants as moderate involvement in movies.

The assessment of game involvement revealed 53% players with moderate immersion, 26% players with low immersion, and 20% players with high immersion.

6.2 Confirmatory Factor Analysis

Table 6 shows the results of confirmatory factor analysis, which indicated that positive/negative questions toward Media Pleasure, Movie Adaptation, and Interactivity dimensions successfully converged into a single factor. Cronbach Alphas coefficient (as shown in the right column of Table 6) was high enough to proceed with further analysis. The overall Cronbach Alpha coefficient was 0.89, which indicated the high reliability of the questionnaire.

6.3. Results in Categorization of Game Quality Requirements

Hypotheses H1a was that specific categorizations would occur more frequently than the average. Table 7-9 presents the resulting frequencies of categorizations for different requirements in the dimensions of Media Pleasure, Adaptation and Interactivity, separately. The left-hand section of the tables contains frequencies of categorizations as Must-be (M), One-dimensional (O), Attractive (A), Indifferent (I), Reverse (R) and Questionable (Q). . The right-hand section of the tables indicate the CS coefficients, and the column “H1a accepted” indicates whether the hypothesis was accepted in each requirement. The results in Table 7-9 indicate that of the thirty requirements, eleven were categorized as Indifference requirements, which did not support H1a. Besides, six requirements were categorized as Attractive, ten were categorized as One-dimensional, and three were categorized as Must-be requirement, which supported H1a.

6.4. Player Segments

Hypotheses H2a, H3a were that player quality requirements would significantly differ. To prove H2, a chi-square test investigated the dependency of categorizations among player segments with high/moderate/low movie involvement. The results in Table 10 indicate that five game elements were categorized into different requirement types according to player segments. Thus, H2a was partly supported. Most observed categorization differences were in

terms of Media Pleasure (dimension 1): for example, the game elements “The plot in the game corresponds with that in the movie,” “Roles’ body languages in the game can appeal to me,” and “Roles’ voices and tone can draw me” were Must-be requirements demanded by players with high movie involvement. However, players with low/moderate movie involvement did not strictly require these features. Therefore, the features were considered indifferent requirements. Similarly, to verify H3, a chi-square test of players’ movie involvement (high/moderate/low) was performed. The results in Table 11 indicate that player needs differed in four quality elements, which supported H3a. For example, the game element “Interactive feedbacks is provided through visual & sound effects” was considered a Must-be requirement for players with low involvement in games; however, players with moderate/high game involvement considered that question a One-dimension requirement. Therefore, players with moderate/high game involvement expected bountiful and diverse interactive feedbacks to delight them and increase their satisfaction.

7. DISCUSSION

Knowledge of desirable game qualities enables game designers to develop successful movie-based games. According to Berger et al. (1993), fulfilling the Must-be requirements is most important and deserves the full attention of designers. The one-dimensional requirement is the second priority of players and game quality and Attractive requirement is the third priority. Nevertheless, Indifferent requirement is the least important quality. Besides, meeting the Must-be requirement is essential for meeting player expectations, but this requirement should not be overemphasized. This study characterized “*Loyalty to the Original movie*,” and “The opening plot is appealing” as Must-be requirements. Game designers should guarantee the basic fulfillment of these requirements but should avoid over-fulfillment. Additionally, qualities of *sensory pleasure*, *emotional pleasure*, *cognitive pleasure*, and “Interactive feedbacks offered through visual & sound effects” are often One-dimensional requirements. However, CS+ coefficient (demonstrated in Table 7-9) for *sensory pleasure* (“The game can fully provide visual scenes” and “The sound effects breed dramatic atmosphere”) is higher than for other features, which suggests that sensory pleasures should be considered a competitive feature in game designs. Further, “*Innovation*,” “creative plays”, “Extra games or goals” are considered Attractive requirements, which indicates that players enjoy exploring creative games with rich content. Once these requirements are fulfilled, player satisfaction increases dramatically. Arguably, however, competitors can copy these attractive features, in which case players would become accustomed to the features, and the features would become must-be requirements. Therefore, game designers should introduce innovative game features that are not easily imitated by competitors. Game companies may also benefit from player perceptions that the game is a market leader.

In practice, a segmentation approach is useful for identifying different categorization patterns. Table 10 indicated that players with movie involvement (movie-fan players) are more concerned about game qualities compared to those with moderate/low degree of movie immersion. For example, movie-fans players prefer a corresponding cinematic formulas (plots, actions, performance, voices) in Media Pleasure aspects of the game. An appealing beginning in the game is also needed to satisfy Movie-fan players and to minimize unpleasant feelings in players with moderate movie involvement. In Movie Adaptation dimension, Movie-fan players tend to expect bonuses, such as additional cuts not included in movies. Videogame designers who wish to cater to movie-fan players should note the considerable impact of these quality elements on satisfaction and dissatisfaction.

In players with varying game involvement, interactivity substantially differs. Players with moderate/high game involvement tend to emphasize visual and audio feedbacks more than those with low game involvement do. Players with low game involvement also demand user-friendly and easy-learning interfaces. To illustrate, Table 11 indicates that players with high game involvement demand basic movie information in games and are attracted by typical game genres. The essential features of a game depend on its objective. If the goal is to promote movie watching on an official website, the game design should target casual players with low game involvement.

8. CONCLUSION

This study investigated satisfaction with playing movie-adapted games. In this study, *pleasure of game genres, pleasure of game roles, sensory pleasure, emotional pleasure, and cognitive pleasure, loyalty to the original movie, innovation, game mode, and interactivity* were derived as relevant antecedents of game-play satisfaction. The Kano model was adopted as the theoretical framework for measuring player satisfaction. Hypotheses were also developed according to the different categories of game attributes revealed by the Kano model. An empirical survey to test the study hypotheses indicated that *Sensory pleasure, Emotional pleasure, Cognitive pleasure*, and “Interactive feedbacks “ are often One-dimensional requirements; , *Loyalty to the Original movie* is Must-be requirement; *Innovation*, “creative play”, and “Extra games or goals” are Attractive requirements. Additionally, player analysis indicated that categorization patterns differ between player segments.

This study is apparently the first analysis of the context of movie-adapted games. Although this exploratory study provides important data for game designers, further research and case studies are needed to examine diverse game types and to explore how to incorporate specific cinematic elements into movie-based games.

FIGURES AND TABLES

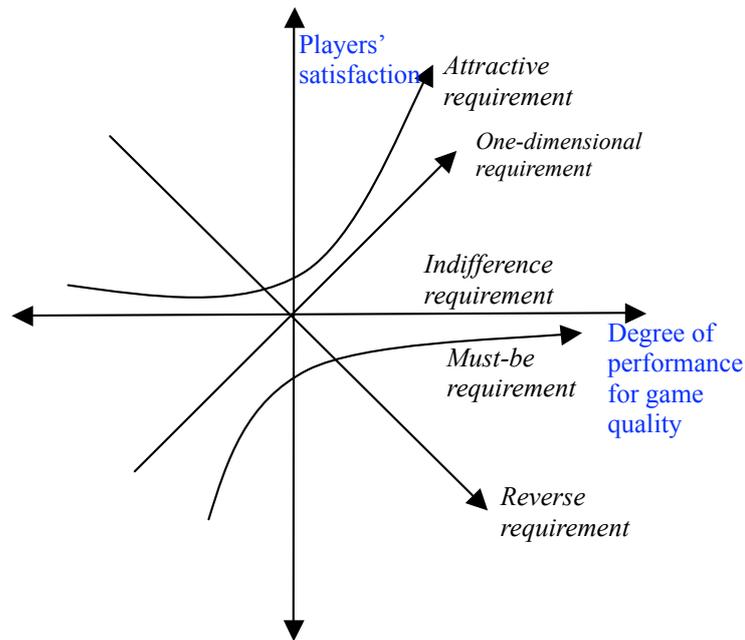

Fig.1 The Kano's Model of players' satisfaction

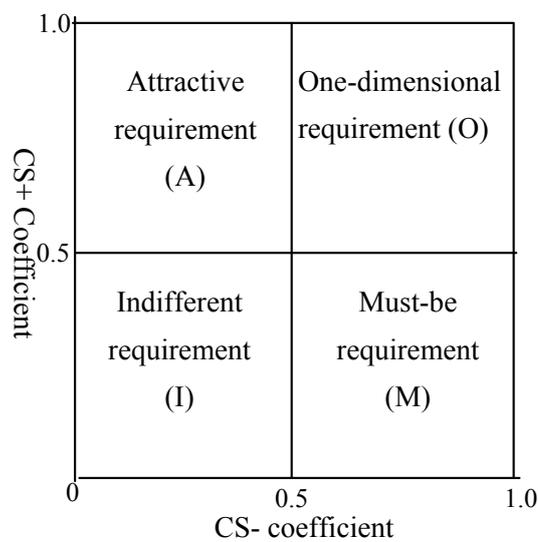

Fig. 2. CS⁺ - CS⁻ grid

Table 1. Example of Positive and Negative Questions

If roles' performances in the game are correspondent with those in the movie, how do you feel?	I like it that way
	It must be that way
	I am neutral
	I can live with it that way
	I dislike it that way
And how do you feel if roles' performances in the game are not correspondent with those in the movie?	I like it that way
	It must be that way
	I am neutral
	I can live with it that way
	I dislike it that way

Table 2. Categorization Table by Using Kano Model (Berger et al., 1993; Matzler et al., 1996)

Game feature	Negative question				
	I like it that way	It must be that way	I am neutral	I can live with it that way	I dislike it that way
Positive I like it that way	Q	A	A	A	Q

Table 3. Questionnaire for assessing the quality dimension of Media Pleasure

Game feature	Questions	No.
Pleasure of game genres	The plot in the game corresponds with that in the movie	1-1
Pleasure of game roles	The personalities and appearances of characters in the game are interesting.	1-2
	The body language of characters in the game are appealing.	1-3
	Character voices and tone are attractive to me.	1-4
Sensory pleasure	The game provides visual scenes by way of unique camera work such as fighting motion	1-5
	The sound effects create a dramatic atmosphere.	1-6
Emotional pleasure	The opening plot is appealing	1-7
	The dramatic tension gradually increases.	1-8
	A full-length finale is given at the ultimate phase.	1-9
Cognitive pleasure	Plot development arouses my interest in what would occur to characters later on.	1-10
	The cause-effect connection between events in the plot is very clear.	1-11
	The plot offers adequate clues for a thorough understanding.	1-12
	The plot is revealed through complex story-telling devices (such as back flash and foreshadowing).	1-13

Table 4. Questionnaire for assessing the quality dimension of Movie Adaptation

<i>Game feature</i>	<i>Questions</i>	<i>No.</i>
Loyalty to original movie	The game follows the original spirit of the movie.	2-1
	New designs in the game such as roles, weapons and properties conform to those in the movie.	2-2
	Visual designs in the game correspond with those in the movie.	2-3
Innovation	Music and sound effects in the game are consistent with those in the movie.	2-4
	More detailed cinematic plots are provided in the game.	2-5
	More Movie background information is displayed compared to that in the movie such as film cuts.	2-6
	Role personalities are more diverse than those in the movie.	2-7
Game designs	The game offers players basic information needed to understand the plot of the movie.	2-8
	Some movie information is provided for mystery solving in the game.	2-9

Table 5. Questionnaire for assessing the quality dimension of Interactivity

<i>Game feature</i>	<i>Questions</i>	<i>No.</i>
Interactivity	Role performances in the movie correspond with those in the game	3-1
	Challenges in the game are similar to those in the movie.	3-2
	The player can determine the plot.	3-3
	Interactive feedbacks are offered through visual & sound effects.	3-4
	The controlling interface is easy to learn.	3-5
	Creative plays are added to the game.	3-6
	Additional games, goals and challenges are provided in addition to the main plot.	3-7
	Challenges are consistently presented throughout the game	3-8

Abstract

In response to culture, technology and environmental protection issues of the 21st century, the architecture of Taiwan has been developed along various axes. From cultural point of view, the development of the cultural industries and the adaptive reuse of old buildings, which has been popular in other countries, becomes two fashions after the support from the Council for Cultural Affairs is secured. The development of five creative and cultural parks located in Taipei, Taichung, Chiayi, Tainan and Hualien is the best indicator of the former trend. The adaptive reuse of old buildings as the cultural facilities is a remarkable witness of the latter trend. Consequently, many architects have involved in amount of interesting projects such as the National Museum of Taiwan Literature, Taipei Museum of Contemporary Art, Anping Tree House and Pine Garden in Hualien. All of them are the result of this adaptive reuse trend. In addition to the environmental sustainability issue, cultural sustainability is now another important issue in Taiwan. This paper will discuss how the cultural heritage conservation movement in Taiwan has developed into the consciousness in the cultural sustainability in 21st Taiwan architecture.

Introduction

Due to the consciousness of the environmental problems, 21st century will be an epoch of resources conservation. Sustainability is now a widely-used term to describe the latest trend in architecture. In order to keep up with the concept of sustainability, Taiwanese government started to promote the idea of green architecture from 1996 and the award prizes for best green architecture in Taiwan began from 2003. However, sustainability in architecture should not be approached merely from the point of energy-saving. Sustainability should be understood from a much wider scope. In terms of the concept in the 1987 Brundtland Report, sustainability is “development that meets the needs of the present without compromising the ability of future generations to meet their own needs.”¹ Sustainability in architecture involves various notions, namely environmental, social, cultural and economic. This paper will focus on the issue of cultural sustainability and discuss the important role that cultural heritage conservation movement has played.

Adaptive Reuse of old buildings for Cultural Uses in Taiwan

In the later half of the 1990s, the adaptive reuse, which emerged as a new trend in the 1980s in the West, also developed in Taiwan. In the later half of the 1990s, the sustainable management and spatial experience of the cultural heritage have become a new topic of people's attention ; the development of the adaptive reuse also has some distinctive change; the reconstructions of spaces have become more positive. The trend to reuse and rejuvenate the architectural heritage becomes irresistible because they are warmly welcomed by the culture-oriented tourists.

In Taiwan, after realization of the importance of the adaptive reuse of cultural heritage, the Council for Cultural Affairs (CCA) started to promote the idea as a strong policy from the beginning of the 21st century. A number of abandoned or outmoded buildings in various cities was adapted and reused as cultural facilities. Consequently, many architects have involved in an interesting project named Taiwan Railway Art Network.

Case I : Taiwan Railway Art Network

Railways in Taiwan began in 1837 when Liu Ming-Chuan, the first Qing Dynasty Governor of Taiwan, built the first railway in Taiwan. The railways have made great contributions to the economic development and mass transportation of Taiwan in the past. However, due to changes in the social structure, rapid economic development, and advances in mass transportation, along with the high speed railway system which has already operated since 2007, the century-old Taiwan Railway system suddenly became a slow train and many warehouses around the train stations lost their function and became abandoned. Considering that the Taiwan Railway system was once the pivotal force in Taiwan, it should have opportunities to modify its duties and extend its life by transforming itself into a new vehicle for culture and art. Beginning In 1999, a plan named "The Art Network of Railway" was proposed by Council of Cultural Affairs (CCA). In July 2000, CCA choose either warehouses or unused facilities at Hsinchu, Taichung, Chiayi, Fangliao and Taitung Stations as the sites for the network. Empty warehouses behind these train stations were renovated as alternative exhibition and performance art spaces.

Taichung Stock 20 is the first project executed in the Railway Art Network supported by CCA.² With post-modern design approach, it was adaptively reused as the place for art creation and exhibition. The horizontal louver is applied so as to increase the dynamic horizontality. No.20 Stock is used for the administration, main exhibition hall, creative shop and café. Other warehouses are used for workshops, the experimental theater and studios for the artists in residence. It becomes a model for other sites of the Art Network. (Figure 1)

Figure 1: The Taichung Stock 20

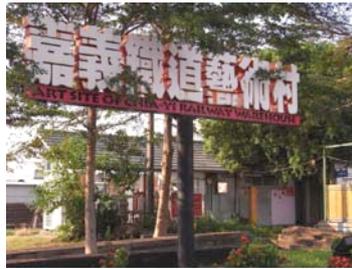

Figure 2: Art Site of Chiayi Railway Warehouse

Figure 3: Children Playing Music in Taitung Railway Art Village

Art Site of Chiayi Railway Warehouse is located in the warehouses behind Chiayi station. These warehouses played an important role in the past because Chiayi Station was the meeting point of three railway systems in Taiwan, namely Taiwan Railways, Taiwan Sugar Railways and Mountain Ali Railways. Following Stock 20 in Taichung, these warehouses were adaptively reused as the avant-garde art spaces. Six among nine warehouses formed a small-scale art village. (Figure 2)

Art Site of Railway Warehouse Hsinchu City, commonly called Hsinchu Railway Art Village, is the result of the adaptive reuse of Taiwan Railway Administration's No.3, No.4, and No.5 warehouses built in 1941. Under the Railway Art Network, Art Site of Hsinchu Railway Warehouse, linking with the Glass Museum and the Wind City Wish Hall, as well as the Hsinchu Image Museum, creates the most unique urban belt space for cultural and artistic uses through Hsinchu City.

Fangliao is the southernmost stop on Taiwan's North-South Line Railway. However, its main function of passengers and cargo transportation faded when South Link Line Railway was opened in 1991. More than fifty dormitories originally built for South Link Line workers were vacant and abandoned. Local culture and history atelier and groups started to rent with low payment from the Taiwan Railways Administration and renovated them as studios for artists. In December 2002, Fangliao was incorporated into the Art Network of Railway Warehouse. No.3 warehouse is reused as the exhibition hall and dormitories are used as the studios for the artists.

Among the Railway Art Network in Taiwan, Taitung Railway Art Village is the richest of its kind because of the largest collection of railway heritages. Among these railway heritages, the most important ones including the main station, the garage, the turntable for trains, the water tower, fuel tanks, the platform, the switchboard and warehouses. All of these facilities are now transformed into spaces for art and cultural activities. (Figure 3)

Between 2000 and now, Taiwan Railway Art Network has provided people in five areas with amounts of art exhibitions and performances. Not only abandoned spaces are reused, but also the surrounding built environments are re-vitalized. Railway and industrial Cultural heritages, through adaptive reuse, become urban attractions for both local inhabitants and tourists.

Case II : New Cultural Facilities in Tainan Confucius Temple Cultural District

In addition to the Taiwan Railway Art Network, several cultural facilities, adaptively reusing from historical buildings in Tainan Confucius Temple Cultural District³, are good examples to witness this trend. Among them, former Tainan Climate Station (1898) becomes Taiwan Weather Museum. Former Tainan Public Hall (1911) is reused as a Wu Garden Art Center. Former Tainan Prefecture Hall (1916) is reused as the National Museum of Taiwan Literature. Former Tainan Martial Arts Hall (1930) is now the auditorium and the cultural heritage resources classroom of the Jhongyi Elementary School.

Tainan Climate Station is the oldest climate station in Taiwan and one of the oldest in Asia. However, the station has to be relocated to a new place due to the outdated equipments and the condition that the over-crowded urban location is not longer suitable for a climate station. Supported by the Central Weather Bureau and the Ministry of Communication, the station has been restored and transformed into a unique Taiwan Weather Museum. It received the 2009 National Cultural Heritage Preservation Award, the highest honor in Taiwan's preservation circle. Wu Garden Art Center was adaptive reused from former Tainan Public Hall built in 1911 and the garden of Wu family constructed in Qing dynasty. In addition to the restoration of several historical buildings on the site, some illegal additions were demolished to create an open space for neighboring residents. The project's consideration of the urban life of the community has won the annual landscape award in 2008. (Figure 4)

National Museum of Taiwan Literature, opened in October 2003, is a typical example that the spatial design of Taiwan has faced a new trend of adaptive reuse of old buildings. The meaning for reusing old building is not only for the new opened governmental organizations, but also representing a significant milestone of the 21st century adaptive reuse in Taiwan. The museum is housed in the old Tainan Prefecture Hall, built between 1913 and 1916 to the design by famous Japanese architect Moriyama Matsunosuke. The building was designed in the Mansard style with two-slop Mansard roof originally. It was bombed during the World War II and was serious damaged. The building had experienced several renovations after 1945. It was repaired and used when Commander Headquarter of Air Force was moved to Tainan from Shanghai in 1949 followed by the Tainan City Government in 1969. After Tainan City Government moved to its new building, this building was originated in a series of

projects laid out by the CCA.

Figure 4: Exterior of Tainan Climate Station

Fig.5: Front View of the National Museum of Taiwan Literature.

Figure 6: Auditorium and Cultural Heritage Resources Classroom of Jhongyi Elementary School.

After five years' renovation, the National Museum of Taiwan Literature together with the National Center for Research and Preservation of Cultural Properties was opened in 2003. The conservation concept for the Museum and National Center are different from the traditional frozen approach. Instead, it proposes a more positive and revitalized strategy towards the conservation of heritage, to transform the entire space. This new approach consists of plans not only restoring the destroyed Mansard roof, but also constructing new addition at the back side. New and old architecture has formed a dynamic dialogue. The building has become a new urban landmark by the essence of the adaptive reuse of historic buildings. (Figure 5)

Jhongyi Elementary School, located next to the Tainan Confucius Temple, is one of the elementary schools founded in the 1940s in Tainan. Its current campus is the former outer garden of Tainan Shinto Shrine built by the Japanese. Because the decrease of the population and worse condition of the old buildings, the city government had once planned to close the school and to demolish all buildings. However, the decision was challenged by the cultural and educational realms and the plan was modified. The school was preserved. Deteriorated buildings were reconstructed and historic buildings were renovated and reused. The most interesting building in the school is the former Tainan Martial Arts Hall built by the Japanese in the 1930s.

Though constructed in reinforced concrete, the architecture of Tainan Martial Arts Hall was designed in traditional Japanese style. It was used as a place for the Japanese to practice Judo or “the Gentle Way” and Kendo, or “the Japanese Fencing”. As an important building within the Confucius Temple Cultural District, the Tainan Martial Arts Hall was undertaken a throughout restoration and re-opened as the multi-functional auditorium for the school. One of the classrooms on the ground floor is reused as the Cultural Heritage Resources Classroom. Information on various cultural heritages within the Confucius Temple Cultural District is

exhibited. Not only the students of the Jhongyi Elementary School, but also the students of all schools in the city can visit the place and have their orientation on the cultural heritage of the district. (Figure 6)

After several years' environmental improvement and cultural heritage conservation, the Confucius Temple Cultural District is now a famous urban attraction in Tainan city. Green trees, red roof tiles, old walls and winding alleys form the basic impression of the district. It is a must see place for the tourists as well as a leisure ground for the local people. People can find a small cafe and enjoy nice foods in the old streets and alleys across or around the Confucius Temple.

Creative and Cultural Parks in Taiwan

Cultural and Creative Industries, emerging in the U.K. at the end of the 20th century, has been developed significantly in the entire world. Influenced by this new trend, Taiwanese government officially designated cultural and creative industries in 2002 as part of the "Challenge 2008 National Development Plan". The project has included 13 industry categories.⁴ In most countries, the term "cultural industries" or "creative industries" is used respectively. However, two terms are combined to become "cultural and creative industries" (*wenhua chuangyi chanye*) in Taiwan.

In order to promote Taiwan's cultural & creative industries, five so-called Creative and Culture Parks were initiated in 2003. All of these parks, located in Taipei, Hualien, Taichung, Chiayi and Tainan, are based on the old wine breweries originally owned by the Taiwan Tobacco and Liquor Corporation (former Taiwan Tobacco and Liquor Monopoly Bureau). The first stage preliminary planning projects such as warehouses and infrastructure survey, district industries survey, district cultural industry resource survey took place between 2003 and 2007. Physical planning includes building renovation and landscape improvement begun from 2004. Although final renovation and restoration of buildings in all parks have not yet completed, parks located in Huashan, Taichung, Hualien and Chiayi have already been partially opened to the public.

In order to make every park a different character, these five parks are positioned by the government in the second stage (2008-2011) as follow: Huashan, the park of "cultural creative industry, cross-field art and life aesthetics"; Hualien, "experimental zone combining art industry and tourism"; Taichung, "Taiwan architecture, design and art center"; Chiayi, the

center of “innovative traditional arts” and Tainan, the center of “creative life media”. It is hoped that the cultural and creative industries will become Taiwan’s pilot industries in the future, given the country's wealth in creative and cultural related production. Creative and culture parks will increase Taiwan's national competitiveness and take its cultural and creative industries to a higher level, just as Taiwan’s science parks created throughout the country from the 1970s. Since most buildings in these parks are either warehouses or plants of various breweries, the strategy of adaptive reuse will applied to their renovation plan. For the present, each park has planned for construction, renovation, environment upgrading, private enterprise involvement and appropriate art performances. All planned projects are scheduled to complete by 2011.

Hunshan Cultural and Creative Industry Center , also called Huashan 1914 Creative Park, is located at the site of former Taipei Brewery established in 1914. It was originally a private-own winery. It was renamed Taipei Brewery of Taiwan Monopoly Bureau of the Japanese Colonial Government in 1922 when the brewery was bought by the government as part of its effort to implement the monopoly in selling alcohol. The Monopoly Bureau also expanded its control to include rice wine, herb wine, foreign wine, fruit wine, plum wine, and officinal alcohol, etc. After the WW II, the Nationalist Government in Taiwan took over the Brewery and a new Taiwan Tobacco and Liquor Monopoly Bureau Wine Company was founded in 1947. During its development, several different names were used for the brewery and Taiwan Tobacco and Liquor Monopoly Bureau has privatization as Taiwan Tobacco and Liquor Corporation (TTL) since 1980s.

Because of the pollution caused by the wine production, the brewery was forced to relocate to suburban in 1987 to comply with the Taipei city's planning and environment protection policies. In June 1997, people from art and cultural circles started to appeal for the reuse of this deserted brewery as a multi-purpose art spaces. The Cultural Affairs Department of Taiwan Provincial Government accepted the proposition and took the initiative to negotiate with Taiwan Tobacco & Liquor Corporation (TTL) In June 1998, Taiwan Tobacco & Liquor Corporation (TTL) commissioned the Cultural Affairs Department of Taiwan Provincial Government to manage and plan the renovation of part of the buildings of the brewery. The site became cultural and arts groups as well as non-profit organizations’ new frontier. Huashan Art District was thus inaugurated.

Since its inauguration, the Huashan Art District has been treated by artists as an ideal venue for visual, performance, design and cross-disciplinary arts. It has gained a reputation among artists to express their imagination and creativity. In August of 2001 the site was turned over to the Council for Cultural Affairs (CCA). In 2004, following the policy of promoting cultural

industries under the "Challenge 2008 National Development Plan", the CCA officially transformed Huashan Art District into Huashan Cultural and Creative Industry Center. The center began its role of setting up a base for developing, displaying and stimulating cultural industries, which will include facilities for performances, exhibitions, workshops and cultural industries as well as entertainment and retail areas. Under the new management plan, various types of brewery buildings will be adaptive reused for new functions and new facilities will also be constructed. The objective of the park to establish a forum for exchanges between individual artists and the creative industries will be realized gradually.⁵

Taichung Creative and Cultural Park, known for most people as Taiwan Architecture, Design and Art Center, is located at the former site of Taichung Brewery acquired by the Taiwan Tobacco and Wine Monopoly Bureau in 1922. When the brewery was relocated to suburban in 1998, the CCA started to negotiate with the Taiwan Tobacco and Liquor Corporation (TTL) and acquired the site for the cultural and art activities. In recent years, the park also becomes the base of the Headquarters Administration for Cultural Heritage under the Council for Cultural Affairs (CCA). In other words, the park is directly managed by the public sector. Consequently, Taichung Creative and Cultural Park receive more financial support from the government and becomes the most well-preserved brewery in five creative and cultural parks. Although several buildings are still under restoration, various activities have been held in recently years, especially design and architecture exhibitions as well as forums. (Figure 7-8)

Hualien Creative and Cultural Park, located on the site of the former Hualien Brewery, is another creative parks sponsored by the CCA. In the beginning, the site was occupied by a private brewery named Daozhu owned by Yilan Chengtuo Company. In 1922, after the Japanese Colonial Government in Taiwan promulgated the new law of monopoly, the brewery was taken over by the Governor's office and renamed Hualien Harbor Branch of Monopoly Bureau of the Taiwan Governor's Office. After the WWII, the brewery was transferred to Tobacco and Wine Monopoly Bureau of Taiwan Provincial Government and the name was finalized as Hualien Brewery of Taiwan Tobacco and Wine Monopoly Bureau. There are many historic facilities in the brewery, including wooden buildings constructed in the 1920s and reinforced concrete buildings constructed in the 1940. The old brewery had been left vacant when the Taiwan Tobacco and Liquor Corporation relocated the winemaking operations to the Meilun Industrial Zone in 1988. The brewery became deteriorated for several years until the site was approved by the Ministry of Civil Affairs to become a historic park in 2001. In 2002, the CCA chose it as one of the five creative parks. It is hoped that by reusing the industrial heritage, the cultural and art activities will be promoted and enhanced.

Under the management plan, the Hualien Creative and Culture Park was operated by L'orangerie International Art Consultant Co and Eastern-Coast Foundation in 2007 and 2009 respectively. The park not only provides artists in Hualien area a space to display their art works, but it also offers the general public a place to appreciate the beauty of historical buildings. The former administration building is now functioned as the Hualien Brewery Life Cultural Hall where a variety of winery-related products are displayed to stimulate visitors' memories. The hall also features an exhibition of brewery's old photographs that, together with detailed information on Council for Cultural Affairs' plan to develop this creative and cultural park, offer an opportunity for people to understand the breweries' history. The renovation of four historic buildings began in 2006 is nearly completed. In addition to the Hualien Brewery Life Cultural Hall, there are the Red Dew Gallery (originally a warehouse), and the Molasses Gallery (also a warehouse). Planning is also underway for the Millet Wine Theater, to be located in the brewery's old canteen.

Figure 7: Buildings in Taichung Creative and Cultural Park

Figure 8: Exhibition in Taichung Creative and Cultural Park

Figure 9: The Hualien Creative and Culture Park

When the Executive Yuan of Taiwan put forward its Challenge 2008 National Development Plan in 2002, the CCA's Cultural and Creative Industries Development Plan was included with the aim to develop five old breweries in Taiwan belonging to the Taiwan Tobacco and Liquor Corporation (TTL) into creative and cultural parks. The core value of the plan is not limited to the creative and cultural parks *per se*. The heart of the plan is enhanced to preserve the Taiwan's valuable industrial heritage which was ignored in the past. Creative and cultural parks in Taiwan not only create a new setting allowing artistic works and the creative industries to develop through the effective utilization of park resources but also preserve a cultural setting in which people life and Taiwan's economic are mirrored.

Conclusion This paper discusses three categories of architecture in Taiwan: firstly buildings of the The Art Network of Railway; secondly cultural facilities in Tainan Confucius Temple Cultural District; thirdly buildings of the creative and cultural parks in Taiwan. All of them can be attributed to the successful of cultural heritage adaptive reuse in Taiwan. In Taiwan,

Cultural Properties Preservation Act" was put into force in 1982 which was followed by the enactment of the "Cultural Property Execution Guidelines" in 1984. The act and the guidelines became the only legislative basis for the preservation work in Taiwan. Since then, hundreds of historical buildings have been listed as the "Cultural Property" and conservation of these buildings started to be undertaken. Although adaptive reuse has been popular in other countries, it did not become a fashion after the support from the Council for Cultural Affairs was secured at the end of the 20th century and the beginning of the 21st century. Examples discussed in this paper are best indicators of this trend. If we can understand the authentic meaning of the adaptive reuse, we may propose to say that the future of the cultural sustainability in architecture in Taiwan will heavily rely on how historical buildings could be used continuously as new facilities. This is because that the cultural heritage conservation in a historic building undertakes adaptive reuse still retain its main characters as historical evidence while achieve a new life. Such main characters are similar to what is called "integrity" which is at the heart of adaptive reuse and architectural integrity is always treated as "those qualities in a building and its site that give its meaning and value." If culture is an integrated part of the whole concept of sustainability in architecture, adaptive reuse of historical buildings, either industrial or cultural heritage will construct the cultural sustainability in Taiwan's architecture and link the historic continuity between past, present and future..

¹ The Brundtland Commission, formally the World Commission on Environment and Development (WCED), known by the name of its Chair Gro Harlem Brundtland, was convened by the United Nations in 1983. The commission was created to address growing concern "about the accelerating deterioration of the human environment and natural resources and the consequences of that deterioration for economic and social development." The Report of the Brundtland Commission, *Our Common Future*, was published by Oxford University

Press in 1987.

² Although it is generally called Stock 20, it contains 7 railway warehouses. (No.20 – No.26)

³ Acknowledging the suggestion of the scholars at the National Cheng Kung University, the Tainan City Government launched the policy of “Rejuvenate Tainan with Culture” in the late 1990s. Several cultural districts were designated and the Confucius Temple Cultural District is the most successful one. The street furniture, sidewalk pavements and street signs of the district were re-designed. Several historical buildings were adaptively reused. Nowadays, Confucius Temple Cultural District in Tainan is a model for similar projects in other cities in Taiwan.

⁴ These industries include visual arts, music and performing arts, cultural facilities, handicrafts, movies, broadcasting and television, publishing, advertising, design, fashion design, creative products for daily use, digital entertainment and architectural design.

⁵ In the beginning, The CCA originally put the Huashan Culture Park Planning and Consulting Committee (HCPPCC) and the Park Project Management Center (PPMC) in charge of moving the project forward, and planned to eventually turn responsibility for park management over to a foundation with expertise in this area. The CCA also established the Operations and Management Committee to provide advice and oversight on park-management-related issues. Today, Huashan creative and cultural park has already taken the lead in completing the OT (Operate and Transfer project) for the Film Art Museum, as well as the ORT (Operation, Rehabilitation Project and Transfer) project for recycling idle space for creative culture industries. In 2007, the Taiwan Cultural and Creativity Development Co. won the bid to undertake the Huashan project where various related activities have been held since then. In addition, BOT (Build, Operation and Transfer) were claimed for booth recruitment in 2009.

Abstract

India and Japan share a special relationship as fellow democracies seeking greater economic engagement in Asia. The major traded commodities changed from cotton-related products in the early 1900s to heavy machinery in the 1970s. During the same period heavy industrial products were the major export commodities from Japan besides metal and metal products like iron and steel and steel plates. The 1980s marked the beginning of a new phase in Indo-Japan relations with the establishment of the *Maruti-Suzuki* plant. There was a minor set back in relation in 1999 when India went through its nuclear test. In August 2000, however, Japanese Prime Minister Yoshiro Mori made a visit to India that helped propel ties forward. The relations have further been strengthened with the visit of Japanese Prime Minister Yukio Hatoyama in 2009. This paper attempts to analyze imports and exports of commodities and products to and fro these countries to see the effect of bilateral relations on trade, after India initiated trade reforms in 1991. Data under HSN systems will be gathered from UNCOMTRADE database and grouped under heads as Agricultural commodities, products from food industry, earth crest, manufactured products, electronics and others. The time series shall be analysed using dummy variables for trade reforms and tie ups. Potential products shall be explored using market share - growth matrix. Series will detrended to see how variables responsible for trade between two countries adjust themselves in short run.

Indo Japan Trade Potentials in the Context of Bilateral Relations

J K SACHDEVA¹

1. Introduction

Historically Indo Japan relations are centuries old. Japan had special relation with India, when Buddhism was introduced to Japan via the Korean Peninsula. During Meiji era (1868-1912), bilateral relations developed with Japanese purchases of cotton directly from India, (Roy, 2008). India's friendship with Japan after the war helped a great deal when Japan returned to the international arena. Since 1952, Japan and India maintained diplomatic relations and enjoyed cordial relations based on trade, economic and technical cooperation. After the WW II, the focus of Japan's economic relations with India switched from the pre-war import of cotton to the import of iron ore. Relations developed steadily as Japan's imports of ore and exports of manufactured products increased. Following Japanese Prime Minister Nobusuke Kishi's visit to India in 1957, yen loans to India began in 1958, as the first loan aid extended by Japan. In 1958 Japan participated in the Consortium Meeting of India's creditor countries hosted by the World Bank and embarked on the full-scale assistance to India that has continued to the present. Since fiscal 1986 Japan has been India's largest aid donor. Japan and India have traditionally enjoyed cordial and friendly relations and the feelings of Indian people towards Japan have been good, (Banga, 2004). Early 1990s set a new trend between two nations. India initiated its economic reform process in 1991 opening its economy and Japan initiated new economic initiatives during late 1990s after it passed through depression. This paper attempts to analyze imports and exports of commodities to and fro these countries to see the effect of bilateral relations on trade, after India initiated trade reforms in 1991. Section II discusses the background of India's economic reform process and its effect, section III explores Japan's position during 1980 and how new initiatives were taken to improve trade policies, section IV discusses what happened after 1991 between Indo Japan trade relations, Section V analyses the trade data to explore potentials and section VI concludes.

2. India's Economic Reform Process

The financial and others problems faced by Indian economy in 1991, triggered reforms. The fall of communist governments in the former Soviet Union and Eastern Europe, development experiences of South Asian countries during the last two decades, Chinese economic reforms towards liberalization and out-ward orientation as well as lesson of India's experimentation with a closed economy and state directed policy regime during the first four decades of planning, further necessitated economic reforms in India, (Sankar and Kalirajan 2001). Srinivasan (1996) observed that extent of poverty had gone down since independence, and reduction in poverty arising from a more rapid debt-led growth without structural reforms, meant its future sustainability was doubtful. In contrast to the targets for income growth of 5.5% - 7.5% per year in the various five-year plans since the second, except the fifth, national income grew only at an average rate of less than 4% per year in the forty years period (1950-51 to 1990-91). Self-sufficiency, at very modest levels of consumption, was achieved in a number of commodities including, notably, food grains. The share

¹ **Dr J K Sachdeva, Professor Head Projects, Pillai's Institute of Management Studies and Research, Panvel, New Mumbai (India), Hon Editor- Journal of Global Economy, ISSN 0975-3931 Email: sachdevajk@hotmail.com**

of gross domestic capital formation in GDP almost doubled from 14.7% in 1950-51 to 23.6% in 1990-91. However there was no commensurate increase in the rate of growth of GDP because of capital-intensive character of the investment. Until the 1991 reform measures, government control over production, investment, technology and location choice, prices and foreign trade had become so extensive that there was no possibility of exercising the discretion vested in the layers of bureaucracy by the system of controls in a rational manner, (Bhagwati, 1992). India's share of foreign trade (exports plus imports) fell from its level above 2% at the independence to about 0.5% in 1990. The share of foreign trade (exports plus imports) in GDP at market prices was virtually unchanged, increasing from 12% in 1950-51 to 14% in 1990-91, (Sachdeva, 2009). India's foreign trade regime till the reforms initiated in 1991 was primarily dictated by two important considerations, a quest for import substituting industrialization and concern for dwindling foreign exchange resources, (Srinivasan, 1996).

Structural adjustment programs were initiated to initiate the process of liberalization, privatisation and globalization. Economic reforms and WTO agreements paved the way for competition within India as well as in the world. Indian exports got a boost. India's exports increased from 17.8 billion USD in 1991 to 168.7 billion USD in 2008 growing at the compounded rate of growth at 13.73% while imports have increased from 19 billion USD in 1991 to 287.7 billion USD growing at the compounded rate of growth of 16.14% in 2008. During initial stages of reforms, improvement of exports was due to rupee devaluation, (Sachdeva, 2009), later exports rose due to export-import policies of Government of India.

3. Japan after 1991

Japan's "miracle" growth of the 1960s and its successful transformation often became a matter of discussion in the discourse of the developing economies. During 1946-60 and 1960-75, Japan grew at annual rates of 9.4 and 8.3 per cent, (Bose, 2006). The tremendous growth was due to a number of factors, which included improvement in productivity in each individual sector of the economy and the shift of labour from low productivity to high productivity sectors through rapid technology borrowing to strengthen its manufacturing base and by pursuing an export-led growth strategy based on light manufactures, (Burkett and Hart-Landsberg 2000; Iyotani 1995 in Uma, 2006). Exports expanded rapidly in both heavy and chemical industries and light-industrial products such as textiles, toys and simple electrical appliances. These goods accounted for 65 per cent of all Japanese exports in 1955 and by 1965 they continued to account for 52.8 per cent. This export success was at the expense of other capitalist countries which responded with import restrictions [Brenner 1998 in Uma, 2006]. External pressures and internal rising wages made difficult for Japan's light manufactured exports to remain internationally competitive and it slowed down the growth in the mid- 1960s. The Japanese government adopted the strategy of moving light manufacturing plants to the East Asian countries, mainly South Korea, Taiwan and the ASEAN countries. Production of cotton textiles was moved in the mid-1960s followed shortly by synthetic textiles (Steven 1983 in Uma, 2006). This resulted in a decline in the share of labour-intensive exports to 43.5 per cent in 1973 [Krause and Sekiguchi 1976 in Uma 2006]. Despite rising wages and external trade frictions, this dual strategy of heavy industrialisation and exports of light manufactured goods brought about an impressive growth rate of 8 per cent per annum, with manufacturing growth at 11 per cent. The high investment and high export strategy helped in establishing the manufacturing base in the economy, and this sector contributed almost 40 per cent of income in 1970, (Uma, 2006).

The period from 1974 to 1985 was that of stable growth, when the economy grew at 3.7 per cent. The combined impact of the yen's revaluation and a sharp rise in oil prices was felt severely by simple electronics and the heavy and chemical industries. The heavy chemical industries

processed large amounts of imported oil and other material into exports, and it affected their profitability and competitiveness. To overcome the crisis, firms tried to scale down production and reduce labour costs by reducing overtime and dismissing temporary and part-time workers.

During the period of recession, 1985-1992, the new high value added consumer goods from Japan in the world market continued to create problems for the developed capitalist world, most of whom were facing recession, unemployment and trade deficits due to rising costs of oil imports. Trade tensions between the US and Japan escalated, as more than 40 per cent of all Japanese machinery exports between 1983 and 1985 were sold in north America, and this included 60 per cent of Japanese motor vehicle exports [Steven 1990 in Uma, 2006]. This export success of Japan was creating problems especially for the US, as their trade deficits were growing and deindustrialisation was taking place. All these factors culminated in the Plaza Accord in 1985 to bring about more balanced trade. Towards such efforts exchange rate adjustments were made, which led to appreciation of the yen in 1985, (Uma, 2006).

The Japanese growth slumped to 1.6 per cent during 1990-2001 and 1.5 per cent during 2001-05. The decline which began with the bursting of the asset bubble in 1990 and slump in stock markets and real estate markets brought with it massive downward adjustments in investment and consumption demand and increased joblessness across the economy. Deflation became a chronic problem. Between 1998 and 2005, there was a near continuous fall in overall price levels in the economy, (Bose, 2006).

Financial system reform, “the Japanese Big Bang,” commenced in November 1996 under the three principles of “free, fair and global”. As a first step, the Foreign Exchange Law was changed to totally liberalise cross-border transactions in April 1998. The Financial System Reform Law along with revisions to the Banking Law, the Securities and Exchange Law, and the Insurance Business Law were enforced in December 1998. With exports playing a crucial role in restoring demand in the economy, trade dependency in Japan grew. It is this rise in export, with accretions to demand originating from within Asia, particularly China, that Japan could turn to its advantage to engineer an export-led economic recovery, (Bose, 2006).

4. Indo Japan Bilateral Relations after 1991

4.1 Changing Scenario in Asia

If Asia is to increase its economic and political weight in world affairs, India’s involvement would have to be an integral part of the Asia-wide cooperation. It is in this context that closer cooperation among Japan, ASEAN, South Korea, India and China would provide considerable win-win opportunities and will have far-ranging implications for the world, (Asher and Sen, 2005)

Two regional aspects have strategically transformed Asia and contributed largely to the economic integration of the continent. Firstly, liberalisation and globalisation have indeed transformed East Asia into one de facto community to a huge extent. East Asians now realise that they have a common destiny with a region that is fast becoming interdependent and borderless. Secondly, East Asians have become more aware of a better and greater redistribution of wealth, development, social and health benefits within the region. Otherwise, richer regions would never be exempt from social problems which could originate from poorer and lesser-developed areas in East Asia. East Asian regionalism has in fact increased due to (i) Intra-regional trade (ii) the current account surpluses East Asian nations and (iii) an enormous pool of foreign reserves, but this transformation has been more profound for the 13 East Asian countries (under the

‘ASEAN+3’ framework). It can be expected that India would increasingly join this accelerated ‘regional movement’ and gets more intertwined with the trade and development process, (Eric, 2005).

4.2 Indo Japan Bilateral Progress

India and Japan share a special relationship as fellow democracies seeking greater economic engagement in Asia. In the late 19th and early 20th centuries, Indian companies based in Japan exported cotton crepe, cotton yarn, knitwear, silk pieces, buttons, celluloid bangles, bags, fans, toys, purses, matting, umbrellas, willow hampers, matches, wood products, brassware, celluloid-ware, glassware, lacquerware, perfumes, soap, paper, camphor, brushes, lanterns etc. from Japan and imported raw cotton, rubber, ivory, Arabic gum, sheep skins, tapioca, pepper, shellac gum, etc, (Rajmohan et al, 2008).

There was a change in the major export and import items from the early 1900s. The major traded Commodities changed from cotton-related products in the early 1900s to heavy machinery in the 1970s. In 1970-72 iron ore became the major item that Japan imported from India and other imports include hemp fabrics, textile products, and precious and semi-precious stones. During the same period heavy industrial products were the major export commodities from Japan besides metal and metal products like iron and steel and steel plates, (Rajmohan et al, 2008).

During the Cold War era, if India was guilty of dismissing Japan as a camp follower of the US, the Japanese in turn perceived India as a chaotic, dysfunctional, desperately poor country and not as a potential partner. With the end of the Cold War, India began its “Look East” policy in the early 1990s that dovetailed with the opening up and liberalization of its economy, (Rajmohan et al, 2008).

The 1980s marked the beginning of a new phase in Indo-Japan relations with the establishment of joint venture – the *Maruti-Suzuki* plant to manufacture cars in India. The visit of Prime Minister Yasuhiro Nakasone to India in 1984 – the first visit by a Japanese PM in 23 years – followed by the visits of Prime Minister Rajiv Gandhi to Japan in 1985, 1987 and 1988 established a high-level political dialogue. The Science and Technology Agreement signed during Rajiv Gandhi’s visit in November 1985 increased the frequency of exchanges in this area, (Rajmohan et al, 2008).

During the early 1990s when India undertook major economic reforms by liberalizing the country’s economy, and adopted an open-door policy, bilateral trade¹ and Japanese investment in India began to increase, as India began to be seen favourably as a long-term prospect in Japanese business planning. However, of the total Japanese global trade, India had a minuscule share and ranks 20th among Japan’s trade partners, well below the US, China, European Union, and East and Southeast Asian countries.

The Indian nuclear tests of 1998 marked a low point in bilateral relations²; Japan suspended all political exchanges and even economic assistance was frozen for nearly three years. In August 2000, however, Japanese Prime Minister Yoshiro Mori made a five-day visit to India that helped propel ties forward, (Rajmohan et al, 2008). However, to quite a few analysts Japan’s “strong bilateral, strategic, and global partnership” with India was redefined with the visit of then Prime

¹ Used as Dummy 1 in cause and effect relationship

² Used as dummy 2 for analysis

Minister Koizumi in April 2005¹. The changing politico-economic-security-energy- nuclear needs and ambitions of both India and Japan slowly persuaded each other, to enter into “probably the most important bilateral relationship”, (Pinto, 2006b)

Warmness of relations increased with the high-profile visits of Japan’s three self-defence force (SDF) chiefs (maritime, army, and air) to India in January and April 2006. These unique and significant visits all together sent a firm signal to Asian countries and the US that Tokyo and New Delhi had finally squared the proverbial circle in their security relations. Japan now recognises India not only as an emergent economic and political power in the region with its own areas of interest and concern, but intends to join forces in promoting “strategic interests”. This was a significant development and a turning point in Indo-Japanese relations at the diplomatic, political and military levels, (Pinto, 2006a)

According to Pinto (2006), when Prime Minister Manmohan Singh’s visited Japan during December 13-15, 2006, it was roses and roses all the way. Launching of a joint task force to develop an economic partnership agreement (EPA)/comprehensive economic partnership agreement (CEPA) between India and Japan and the seven memorandums of understanding (MoUs) signed between the two governments marked a new phase. The EPA and CEPA were an outcome of the recommendations submitted by the “Report of the India-Japan Joint Study Group (IJJSG)” in June 2006. The IJJSG made a series of recommendations to further develop and diversify the economic engagement between India and Japan, with the objective of bringing about comprehensive expansion of bilateral economic and commercial relations. The specific areas marked for such cooperation were trade in goods and services, and investment flows. The other area of economic cooperation is the establishment of the “India-Japan Special Economic Partnership Initiative” (SEPI) that promote Japanese investment to India and “help develop India’s infrastructure and manufacturing capacity,”², (Pinto, 2006b).

If one accepts the maxim that foreign policy is conducted in line with national interests and objectives, and then Japan is clearly furthering its strategic objectives by strengthening its domestic economy through foreign trade and investment relationships with India. Japan, as do other countries, sees India as a source of labour force, low manufacturing costs, and a large and rising middle class – currently estimated at “300-million-strong and which is not only gaining from the country’s rapidly expanding economy, but is also driving the consumption boom. India provides a ready market for its consumer durable goods, has stable democratic institutions, and is governed by rule of law, (Pinto, 2006b; Banga, 2004).

5. Indo Japan Merchandise Trade

Indo Japan merchandise trade has been analysed by getting the data for commodities from UN Comtrade database under Harmonised System of Nomenclature for the period 1992 to 2008. Only individual commodities with trade value above 5 million USD for the year 2008 were considered for analysis.

5.1 Indo Japan’s share of basket to each other

India exports only 1.99% of its total exports to Japan while Japan exports 1.01% of its total exports to India. India imports 2.47% of its total import from Japan while Japan imports 0.69% of total imports, as observed during the year 2008³, table 1

¹ Used as dummy 3 for analysis

² ‘Joint Statement: Towards India-Japan Strategic and Global Partnership’,

³ All calculations in USD

Table 1 Share of Trade in Total Trade in percentage

India's basket to Japan in 2008	1.99
Japan's Basket to India in 2008	1.01
India's import share from Japan	2.47
Japan's import share from India	0.69

Effects of bilateral relations on India's export to Japan have been calculated as following model¹.

$$\text{IndianExp} = 1.99 D_1 - 0.171 D_2 + 1.41 D_3$$

$$(7.9095^*) \quad (-0.5656) \quad (4.814^*)$$

$$N = 17 \quad R^2 = 0.97, \text{ Adj } R^2 = 0.95, \quad F = 101.04$$

Bilateral relations during 1992 and 2006 gave good impetus to India's export to Japan. It is further observed that 1998 Pokharan tests in India affected India's export to Japan, but that was not statistically significant.

Effects of bilateral relations on Japan's export to India have been shown by following model.

$$\text{JapanExp} = 2.31 D_1 + 0.34 D_2 + 3.69 D_3$$

$$(4.8273^*) \quad (0.64) \quad (6.28^*)$$

$$N = 17 \quad R^2 = 0.97, \text{ Adj } R^2 = 0.94, \quad F = 80.014$$

Bilateral relations during 1992 and 2006 have given good boost to Japan's export to India. It is further observed that 1998 break of bilateral relation never affected negatively on Japan's export to India, but that was not statistically significant.

5.2 Trade Intensity

Economists have suggested two important models i) total trade intensity, and ii) export intensity index to see the impact of bilateral relation on total trade and export.

i) **Total Trade Intensity** is interpreted as a relative measure of two ratios. The numerator represents the share of bilateral trade between country i and j as a percentage of total trade of country i. The second ratio in the denominator represents the total trade of country j with the world excluding country i as a share of total world trade excluding country i. This forms the denominator of the total trade intensity index.

The bilateral trade intensity index for total trade is as follows:

$$T_{ij} = [(X_{ij} + M_{ij}) / (X_i + M_i)] / \{ [X_{wj} + M_{wj}] - (X_{ij} + M_{ij}) \} / \{ [X_w + M_w] - (X_i + M_i) \}$$

where: T_{ij} = Total trade intensity index of country i with country j; X_{ij} = Exports of country i to j; M_{ij} = Imports of country i from j; X_i = Total exports of country i; M_i = Total imports of country i; X_{wj} = Total world exports to country j; M_{wj} = Total world imports from country j; and X_w = Total world exports; M_w = Total world imports.

Asher and Sen (2005) argue that if the numerator exceeds the denominator, i.e., if the value of $T_{ij} > 1$, it implies that the bilateral trade intensity for country i with country j is greater than in comparison to country i's trade with the rest of the world (ROW). Table 2 shows that India's bilateral trade intensity with Japan never crossed the value of 1 during the period 1992 to 2008. It is seen that trade intensity remained in the range of 0.95 to 0.92 during the period 1992-98,

¹ In multiple regression constant has been forced as zero, D1 starts from 1993, D2 starts from 1998 while D3 starts from 2005.

thereafter it started retarding and never improved and by the year 2008, it reached 0.49. This clearly shows the bilateral relations never improved after 1998 despite all political efforts.

Table 2 India's bilateral Trade Intensity towards Japan

India's bilateral trade intensity	
Year	Intensity
1992	0.95
1993	0.91
1994	0.97
1995	0.92
1996	0.84
1997	0.79
1998	0.92
1999	0.78
2000	0.65
2001	0.60
2002	0.64
2003	0.56
2004	0.51
2005	0.49
2006	0.51
2007	0.53
2008	0.49

Table 3 India's Export Intensity towards Japan

Year	India's Export Intensity	Japan's Export Intensity
1992	1.29	0.70
1993	1.27	0.70
1994	1.24	0.81
1995	1.10	0.83
1996	0.95	0.83
1997	0.92	0.72
1998	1.01	0.84
1999	0.88	0.69
2000	0.76	0.65
2001	0.66	0.60
2002	0.71	0.52
2003	0.59	0.54
2004	0.51	0.51
2005	0.51	0.45
2006	0.49	0.47
2007	0.51	0.55
2008	0.42	0.51

ii) Bilateral **Export Intensity Index** among country i and country j may be stated as follows:

$$X_{ija} = [X_{ij}/X_i]/[(M_j - M_{ji})/(M_w - M_i)]$$

where: in addition to the notations in the bilateral trade intensity index, M_j = Total imports of country j and M_{ji} = Imports of country j from country i. A value of this index above unity implies that country i's relative share of exports to country j exceeds country j's share of imports from the ROW. This implies an overrepresentation of country j in country i's export market. From country i's point of view, the value of greater than one indicates that country i has relatively more intense preference for exporting to country j as compared to country j's imports from the ROW.

India's export intensity remained above 1 during 1992 to 1995 which means India preferred to trade more intensely with Japan than trading with the rest of the world. However after 1996, it started falling, except the year 1998 when it was approximately 1 again, (table 3). The trade intensity analysis clearly shows that relations started deteriorating much before nuclear test in India. Similarly Japan's export intensity was always less than 1 and it was 0.51 during the period 2008. By comparing the export intensity of both countries, it is observed both the countries preferred to trade with Rest of world than each other and the effect of bilateral talks is yet to be seen.

5.3 India's Potential Commodities for Japan

According to International Product Life Cycle concept, new products are developed first in developed countries and later produced in developing countries. First developing countries produce and sell agricultural products and later medium and small machinery. This appears to be true in case of India's export to Japan. India exports Fish-shrimps, animal/vegetable fats oils, iron ore, petroleum products, cotton yarn, diamond jewellery, Ferro chromium etc. Based on Compounded growth rate, present market share and growth of market share strategic position of the commodities have been mentioned in column 5 of table 4. Indian small and medium machinery has high potential in Japan as it has low market share but high growth rate. Market share is also rising at the compounded growth rate of 15.30% which is statistically significant at 1% level. India is losing its traditional business of shrimps. Once upon a time India used to hold a good position in Japanese market, but shrimps market is losing its glitter at the rate of 5.21% due to high competition. Apparels have very low market share and low growth rate. India is losing business of iron ore, may be due to domestic demand and uncompetitive prices. Ferro Chromium market needs to be observed as it is losing business, may be due to price competitiveness.

5.4 Japan's Potential Commodities for India

Japan has high growth, high rising market share in flat rolled iron, earth moving machines, transfer machines, and forging machinery. Many of the products have high market share, high growth rate but market share is falling. Falling market share with rising growth means firms face tough competition due to entries from other countries. Such products are organic chemicals, plastic articles, rubber articles, hot rolled iron, alloy steel, tubes/seamless iron, tools and dies, parts of combustion engines, telephony apparatus, and medical apparatus as mentioned in table 5. Japan's position is not good in case of service with low growth and falling market share. Though transfer machinery export has high potential but appears to be highly volatile.

Table 4 India' Market Share in Japan

HSN	Commodity	CGR	Market Share during 2008	CGR of Market Share during 1992-2008	Instability in Market Share ¹	Strategic status
30613	Shrimps Prawns Frozen	- 5.21*	11.20	-1.42	27.18	Losing
15	Animal/Veg Oil/Fats	10.34*	3.77	5.87*	41.66	Potential

VI Conclusions

After passing through the long period of closed economy with import substitution policy, India opened up its economy with a strategy to look east. After passing through a recessionary phase in early 1990s, Japan initiated financial system reforms with fair, free and global strategy in 1996. The bilateral relation initiatives commenced during 1980s had a break when India carried out nuclear test. Relations improved with visits of various Prime Minister to each other's countries. All efforts have been made to improve trade relationships between two countries, however data analysis reveals that India's trade intensity with Japan was high till 1996 but started declining thereafter. Trade intensity with Japan is half of what it is with world. It has further been observed that export and import were affected much before 1998, it is not worth saying that trade declined due to tests. Japan's export intensity to India is higher than India's, however it is very less than it is with world. India exports shrimps, ores from earth crest and light machinery to Japan while the counter part exports heavy machinery to India. Both India and Japan face tough competition as their market share is falling. India's high potential commodities are oil and petroleum products

¹ Instability = standard deviation of Log of export for the year t

(except crude) organic chemicals cotton yarn, pig iron, and small and medium machinery. Japan's potential commodities are flat and rolled iron, earth moving machines, motor vehicle parts, but Japan faces tough competition from other importers in India.

‘War on terror’, Pakistan and US bilateral aid

Murad Ali, Massey University, NZ.

Before the events of 9/11, Pakistan was a pariah state for the United States of America (USA) due to its nuclear programme and lack of democracy. However, in the post-9/11 political landscape Pakistan became the front line US ally after joining US led ‘war against terrorism’ or ‘war on terror’ (WOT) to dismantle al Qaeda and its Taliban supporters in Afghanistan. Now that this war has prolonged and has been the cause of much internal instability in Pakistan, there is a strong perception in the country that it is fighting a proxy war for the US and hence has brought unparalleled havoc upon its own people. This research endeavours to review the unprecedented devastation and sufferings brought by this war for Pakistan and what it has received in return from the US. The study is enriched by extensive fieldwork in the North West Frontier Province (NWFP) and Federally Administered Tribal Areas (FATA) bordering Afghanistan and interviews with a wide range of stakeholders comprising of policymakers, academics, think tanks, researchers and primary beneficiaries of the projects undertaken by United States Agency for International Development (USAID) in Pakistan. Data garnered during the fieldwork indicates that in terms of both human and economic losses, the catastrophe is incalculable as the war has claimed more than 23,000 lives and Pakistan has incurred a loss of US \$ 34 billion due to ‘WOT’. Though the US has been allocating considerable bilateral aid to Pakistan since 9/11, yet the issue is whether it is doing enough good to Pakistan than what it has suffered. This study discusses the damage the war has inflicted on Pakistan and the role the US can play in allaying the hardships faced by Pakistan. Focusing on various interventions in different sectors in Pakistan, this paper argues that the injuries of victims of ‘WOT’ can be healed by offering them something they really need. The study concludes that at this critical juncture of the country’s history, the US should give its all out support to Pakistan and should not repeat mistakes of the past by leaving its close ally in the lurch as it did after the end of the Cold War.

Introduction

This paper examines US bilateral aid policies towards Pakistan in the post-9/11 landscape; particularly it focuses on the pros and cons the US-Pakistan alliance has brought to Pakistan after the later joined US-led ‘war against terrorism’. The paper is broadly divided into two parts. The first section of the paper discusses US-Pakistan relationship in the context of US official aid flows to Pakistan during and after the Cold War period. The second part highlights US foreign aid trends towards Pakistan in the post-9/11 scenario. This section of the paper examines losses Pakistan has suffered due to its alliance with the US in its ‘WOT’ vis-à-vis what it has received from the US in the form of foreign aid.

USAID data shown in Appendix 2 indicates that the US has been allocating substantial aid to Pakistan at different points in time. What have been the key reasons for this inconsistent US bilateral aid to Pakistan? To what extent do the poverty level and needs of Pakistan inspire US aid policies and what have been the political, security and geo-strategic orientations convincing US foreign assistance flows to this only Muslim state having nuclear capabilities? In the next section, US bilateral aid, particularly economic assistance is assessed vis-à-vis economic needs of Pakistan.

US bilateral aid and Pakistan’s economic standing: recipient’s needs versus donor’s interests

To appraise foreign aid policies of bilateral donors, one of the often-used models is to compare the developmental needs of recipient countries vis-à-vis the amount of aid allocated to them by different donors. By juxtaposing the poverty status and needs of the countries receiving aid and development assistance bilateral donors allocate to them, it is highlighted to which extent different donors address the needs of the recipients and who prioritise their own interests in the allocation of official aid. During the Cold War years, McKinlay (1978) and McKinlay and Little (1977; 1978a; 1978b; 1979) examined foreign aid allocation criteria of the US, UK, France and Germany from the perspectives of their foreign policy goals. By assessing two models, one dealing with the donors' interests and the other concerning with the recipients' needs, the authors assert that power-politics and strategic and security interests were at the forefront in the bilateral aid policies of these donors.

US bilateral aid flows to Pakistan are discussed in the framework of this model. Appendix 1, based on World Bank (2007) data shows economic stature of Pakistan from 1960-2006 over an average of five years period based on indices such as Gross Domestic Product (GDP, in US\$ billions), GDP growth, Gross National Income (GNI) per capita, life expectancy and total population. Appendix 2 shows US economic, military and per capita aid to Pakistan from 1947 to 2006 in constant 2006 US\$. It is evident from World Bank data shown in Appendix 1 that there are differences in the levels of poverty at different time periods. Keeping in view the developmental needs and poverty level, US aid (particularly economic assistance) to Pakistan should have remained in line with the economic needs of Pakistan if based on the recipient's needs. However, this is not the case as US aid to Pakistan has always remained inconsistent and unsystematic (Appendix 2). It seems difficult to justify that US has been allocating substantial aid to Pakistan due to its poverty and developmental needs. Comparing the World Bank and USAID data, there is no logical relationship among the indicators in Appendix 1 showing economic status of Pakistan and US aid allocated to it shown in Appendix 2. At some points, the US has been quite generous towards Pakistan but at some points there is no or meagre economic assistance. Coming back to the point mentioned earlier, there is no consistent and coherent relationship between the development indicators and US aid on the basis of which US assistance to Pakistan can be explained.

US-Pakistan aid relations till the Afghan war

Pakistan, along with some other strategically important states has been considered to be "pivotal state(s)" (Chase, Hill, & Kennedy, 1996, p. 33); countries whose fate determines the survival and success of the surrounding region and ultimately the stability of the international system. Seen in this context, during most of its history Pakistan has remained an important strategic ally of the US and has been instrumental in safeguarding US interests in the region at different times, thus affecting US official aid policies during these intervals. As indicated by USAID data, overall US official aid flows to Pakistan have remained tortuous and inconsistent due to changes in the US geo-strategic orientations towards Pakistan.

Since the preliminary years of Pakistan's creation in 1947 and the onset of Cold War between the Union of Soviet Socialist Republic (USSR) and the US, policy-makers in the US were aware that it could play an extremely important role to stop the spread of communism. After some speculation, the Mutual Defence Assistance Agreement was signed between the two countries in May 1954 (Spain, 1954; Stephens, 1967). In 1954, the US established the Southeast Asia Treaty Organization (SEATO), comprising of Pakistan and several countries of the region to garrison the swell of communism. While US economic assistance had already begun, after these developments, US also started giving sufficient military aid to Pakistan. According to Huacuja (2005, p. 69) "from 1955 to 1965, Pakistan received more than \$700

million in military aid". As mentioned, along with military assistance the US gave Pakistan substantial economic aid. Alavi and Khusro (1970) have noted that nearly four-fifth of all the foreign aid Pakistan received during the years 1951-1960 came from the US. All this indicates that the US and Pakistan were enjoying warm relations hence the later was receiving sufficient US official aid in different forms.

However, later developments in the region affected US-Pakistan relations. The US-India arms deal and Pak-India wars of 1965 and 1971 disappointed Pakistan. Pakistan felt that the US did not help its close ally and let them down in both 1965 and 1971 wars with its powerful opponent India (Khalilzad, 1979-1980; Wriggins, 1984). Pakistan was deeply frustrated over US arms embargo after the war and in response closed US bases on its soil resulting in low level of bilateral relations affecting US aid flows. After the military coup of General Zia in 1977, US economic aid shrank further. However, the severest issue affecting the once friendly relations and hence US assistance to Pakistan during this period was Pakistan's pursuit for nuclear technology. Jones (2002) has given a detailed account of how US secretary of state Henry Kissinger first visited Pakistan to persuade Islamabad to cancel its nuclear technology programme and then Paris to stop it from supplying the required material for which it had already struck a deal with Pakistan. Under US influence, France cancelled the deal in 1978 which was "a huge blow to Pakistan which, once again, complained that the West was singling it out" (Jones, 2002, p. 198). Not satisfied with all this, the Carter administration imposed Symington Amendment in April 1979 on Pakistan thus cutting off all economic and military aid. But the USSR invasion later in 1979 overshadowed all these factors.

The Soviet invasion of Afghanistan and its implications on US aid to Pakistan

The year 1979 brought dramatic changes in US foreign aid policies. The Islamic revolution in Iran deprived the US of one of its trusted allies- the pro-US Shah of Iran. The Soviet invasion of Afghanistan and revolution in Iran greatly enhanced Pakistan's geo-strategic weight. In the words of Thornton (1982, p. 969)

"overnight, literally, the situation changed dramatically with the Soviet invasion of Afghanistan in December 1979. President Carter and others saw...Pakistan, now a front-line state...an indispensable element of any strategy that sought to punish the Soviets for their action".

Wriggins (1984) substantiates the fact that the Soviet invasion of Afghanistan dramatically transformed Pakistan's geopolitical significance for the US. It is quite paradoxical to recall that due to factors like the trampling of democracy and human rights abuses by the military regime of General Zia and the country's pursuit for nuclear arms, Pakistan was a pariah state before 1979. However, due to the geo-strategic developments in the region particularly after the invasion of Afghanistan, the US needed Pakistan's support to stop the Soviet forces in Afghanistan. Now Pakistan was viewed a front line state ally against communism. In December 1979, within a few months of their imposition, Washington lifted all sanctions against Pakistan and offered it generous aid. By 1981, US and Pakistan were discussing a US \$3.2 billion aid package (Jones, 2002). Paul (1992) has pointed out that by 1985, Pakistan became the fourth largest recipient of U.S. bilateral military assistance, behind Israel, Egypt and Turkey. "With the approval of the \$ 4.02 billion military and economic aid package in 1987, Pakistan emerged as the second largest recipient of American aid, after Israel" (Paul, 1992, p. 1084). Due to its enhanced geo-strategic attraction in the Cold War scenario, the US

was no longer concerned with Pakistan's nuclear programme, lack of democracy and human rights violations.

The Soviet invasion of Afghanistan in 1979 and Pakistan's subsequent alliance with the West, particularly the US, brought immense problems for Pakistan and had profound impacts on Pakistani society till date. It is beyond the scope of this paper to enumerate those, however, US-Pakistan relations and aid flows are briefly discussed in the context of this event. During this period Pakistan absorbed the burden of more than three million Afghan refugees, majority of whom still living in various Pakistani cities. But one of the most significant developments was the mushroom of '*madrassas*' (religious seminaries) that continued to supply fresh recruits during the Afghan war and then to the Taliban regime. The growth of these '*madrassas*' multiplied exponentially during the Afghan war with ample funding from Arab states as well as the US. In the early years of the country's history, Pakistan had a few hundred such institutes while in the recent years the total number reached more than eight thousand (Nasr, 2000). Stern (2000) puts the total number of these '*madrassas*' to be approximately 40,000 to 50,000. The author claims that the US and Saudi Arabia channelled \$3.5 billion to these '*madrassas*' during the Afghan war. Majority of the '*jihadi*' groups were the outfits of these different '*madrassas*'.

It is now an open secret that '*jihadis*' or '*mujahideen*' (holy warriors), including Osama Ben Laden, were brought from all over the world by the US Central Intelligence Agency (CIA) and trained in collaboration with Pakistan premier intelligence agency the Inter-Services Intelligence (ISI) with enormous funding from the US, Saudi Arabia and other Gulf States. The total number of these '*mujahideen*' is estimated to be about 200,000-500,000 (Brown, 2006; Usher, 2007). By the mid-1980s when the Cold War was at its height, the CIA office in Islamabad was second in size and staff after its main headquarters in Langley, Virginia (Woodward, 1987). Stephens and Ottaway (2002) assert that during the period 1984-94, USAID is estimated to have sanctioned a grant of US \$ 51 million to the University of Nebraska for preparing special books in Dari and Pashto languages exhorting and glorifying '*jihad*' (holy war). The report by the International Crisis Group (2002) points out that 13 million copies of these books and pamphlets were distributed in Pakistani '*madrassas*' and Afghan refugee camps to indoctrinate and inculcate the values and virtues of '*jihad*' in youth. Peshawar, the capital city of the NWFP worked as a sanctuary for all '*mujahideen*' and was used as a base camp for launching attacks inside Afghanistan against the Soviets. It is the same city that is the prime target of militants these days in the so-called 'WOT'.

US foreign aid to Pakistan during the post-Cold War period

After the withdrawal of Soviet forces from Afghanistan, the attitude of the US changed towards its Cold War ally. With the collapse of the USSR when Pakistan's assistance was no more required, discriminatory and country-specific Pressler Amendment was forced on Pakistan and severe sanctions were imposed on it because of its nuclear programme (Kux, 2001; Paul, 1992). All the channels of US aid to Pakistan were shut in a short time. "What had once been one of the largest U.S. Agency for International Development (USAID) offices in the world, employing more than 1,000 staff around the country, shrank to almost nothing virtually overnight" (Cohen & Chollet, 2007, p. 10). The US-Pakistan bilateral aid relations went to the level of indifference and covert hostility in the post-cold war period. The 1998 nuclear tests and the 1999 military coup further deteriorated bilateral relations and consequently US aid flows touched the lowest level. It can be observed (Appendix 2) that US economic aid lowered from above \$ 500 million a year to less than \$ 100 million a year in the

post-Cold War years in the 1990s. The fate of the military assistance was not different as it became almost zero during these years.

With the imposition of the Pressler Amendment and accompanying sanctions Pakistan was faced with a serious economic crisis. This situation led to macro-economic instability as the country was unable to repay its debts on time. According to Ministry of Finance, Govt. of Pakistan (2003) besides foreign assistance, overall investment fell from 20 percent of GDP in 1992-93 to an all time low of 14 percent in 2000-01, public investment in this period nearly halved and private investment fell by one-fourth and these factors contributed to slowdown in industrial growth and increase in unemployment. Due to these changed policies of the former close ally like the US, the decade of the 1990s was a like ‘lost decade’ for Pakistan.

Alienated allies reunite: Pakistan joins ‘WOT’, US lifts sanctions and restarts bilateral aid

The post-9/11 period characterised by renewed and greater US geo-strategic and security goals in the region is reminiscent of the Cold War years after the Soviet invasion of Afghanistan. As in the late 1970s when Pakistan was ruled by a military dictator, once again in the year 2001 the military ruler was in office in the country. Due to issues such Pakistan detonation of nuclear device and lack of democracy, the country was under two layers of US sanctions- nuclear-related and democracy-related. In the scenario that developed after the attacks on World Trade Centre and Pentagon on 11 September 2001 and Washington’s subsequent ‘war against terrorism’ once again brought Pakistan in the lime light of US foreign aid policies. In its so-called ‘WOT’, the US declared that either the nations of the world are with them or against them (Cohen & Chollet, 2007). Pakistan’s military leadership ruling the country under President Musharraf took a u-turn on its old Afghan policy and joined the US-led ‘WOT’ beginning with the code name of ‘Operation Enduring Freedom’ attack on Afghanistan.

In the post-9/11 era of US global ‘WOT’, US foreign aid policies once again underwent some dramatic changes, particularly in the context of US bilateral aid flows to Pakistan. Looking at USAID data in Appendix 2 showing US bilateral aid to Pakistan and Table I for the post-9/11 years, US aid to Pakistan has increased substantially in the post-9/11 period. Before the year 2001, US economic assistance to Pakistan was less than US\$ 100 million and military aid was almost nil for several years. However, the ‘9/11’ changed all the things upside down and in no time Pakistan journeyed from a pariah state to the US front line ally with the start of substantial civilian and military assistance as is evident from USAID data. This period seems to be the replica of the Cold War episode. Like the year 1979 when US aid to Pakistan was at the lowest level due to factors earlier mentioned, it was identical case before the events of ‘9/11’ when Pakistan was under two layers of US sanctions but in the post-9/11 international political landscape, everything was reversed in terms of US aid policies towards Pakistan.

Pakistan’s losses in ‘WOT’

As discussed earlier, at the international political and diplomatic landscape, at least when viewed in the context of US-Pakistan relations and more so from the perspectives of US official aid to Pakistan, the war once again proved the significance of Pakistan’s geo-strategic status for the US. The alliance has certainly brought several advantages to Pakistan particularly in the form of US assistance but at the same time the prolonged war has disastrous spill over effects and consequences for Pakistan. After the fall of the Taliban regime in late 2001, some Taliban and al Qaeda leadership fled Afghanistan and took shelter in the FATA region of Pakistan bordering Afghanistan. The tribal areas or FATA started appearing in international media and got global attention in ‘WOT’. With the passage of time US policy-makers and media men started calling FATA ‘safe havens’ of Taliban and al Qaeda fugitives and it was perceived that terrorists can only be defeated if Pakistan mobilise its troops in the region to flush out Taliban and al Qaeda operatives.

It was due to Pakistan’s alliance with the US and also under pressure from the Bush administration that for the first time in the country’s history, more than 100,000 army personnel were deployed along the 2,700 kilometre long Pak-Afghan border to eradicate al Qaeda and Taliban-linked militancy. Meanwhile, the war in neighbouring Afghanistan had its impact of radicalisation on the ethnic Pashtuns residing in the border areas of Pakistan. With the passage of time the influence of Taliban and their radical ideologies, fuelled by the presence of US and NATO troops in Afghanistan, spread from the tribal areas to other settled districts in the NWFP. In the tribal belt alone, hundreds of pro-government tribal elders have been killed by Taliban since 2005 (Rashid, 2008). Since 2002, military forces have launched four major military operations against Taliban and al Qaeda operatives in the tribal areas. The fourth and largest military operation Rah-e-Nijat (Freedom Path or Path to Salvation) was launched in October this year. The operation is still underway and so far the offensive has been successful as the security forces claim to have killed over 700 insurgents and cleared most areas from Taliban. Presently, the army has deployed 117,000 troops on the mountainous Pak-Afghan border and established more than 821 check posts on the Pakistani

side of the border. On the other side of the border, the ISAF coalition troops have only 25,870 personnel in the east and 22,330 troops in the south of Afghanistan, with only 120 check posts manned by them.

With the prolonged conflict and insurgency on both sides of the un-demarcated and porous border, situation in FATA grew increasingly worse. Perceiving Pakistan an ally of the US and their adversary in US-led ‘WOT’, the militants have wasted no opportunity of unleashing havoc upon the personnel of law enforcement agencies and damaging and destroying government infrastructure, property and buildings including schools, hospitals, bridges, roads, grid stations, electricity towers and dispensaries along-with damage to private assets such as homes, shops, factories and farms etc. According to the comprehensive report prepared by Planning and Development Department of FATA Secretariat (2009), the conflict has caused huge cost to FATA totalling an enormous amount of US\$ 2.146 billion (see table II for details). It is unprecedented loss and the impact is severe when seen in the context of already poor state of economy in FATA.

As stated earlier, the conflict and its costs are not confined to FATA only but the spill over effects of ‘WOT’ have deeply affected other parts of the country as well. The picturesque Swat valley and the rest of Malakand division in the NWFP is another prime example of Taliban-linked militancy and insurgency due to Pakistan’s alliance with the US in its so-called ‘war against terrorism’. The paradise-like valley was converted into hell by Taliban militants. The inhabitants of this beautiful valley suffered badly from the hands of militants and then during the military operations as hundreds of houses were either blown up by militants or destroyed by bombardment and indiscriminate shelling carried out by security forces. Like FATA, infrastructure such as bridges, roads, health facilities and hundreds of schools were destroyed and damaged by the militants’ attacks and military’s actions. Crops and orchards owned by local farmers were also destroyed resulting in huge economic losses and unemployment. Being a famous tourist spot, tourism and business sectors equally suffered due to militancy and subsequent military operation. After launching military operation against Taliban in March 2009, about 3 million people from Buner, Swat and Dir Lower districts fled their homes and became internally displaced persons (IDPs) in their own homeland, thus leading to the biggest human crisis and mass exodus in the history of the country. According to post-conflict surveys conducted by the government, the Swat valley and other districts in Malakand division suffered about Rs. 86 billion losses due to militants’ insurgency and the subsequent military operation.

Table II. Losses caused by ‘WOT’ in FATA

Sector	Tentative cost (in million)
--------	-----------------------------

	(Pak Rs.)	(US \$)
-Infrastructure losses	8,270	103
- Human Losses	4,405	55
- Economic costs	9,505	119
- Social costs	88,725	1,109
- Environmental costs	15,000	188
-Security and IDPs costs	45,766	572
Grand total	171,671	2,146

Source: FATA Secretariat (2009)

In terms of human losses, the catastrophe is unprecedented. Looking at table III showing the number of human losses, it is beyond doubt that the war has affected Pakistan more than any other country in the world and indeed it has been the worst victim of terrorism. There is hardly any major city in the country that has not been targeted by militants. Suicide attacks have been carried out not only on security installations and offices of the law enforcement agencies but also public places have not been spared. Soft targets like educational institutions including public sector universities in the capital city have also borne the brunt of militants. The NWFP and particularly the capital city of Peshawar, surrounded by tribal agencies has been targeted more than any other place. The people of this city and the whole of the NWFP have suffered more in ‘WOT’ than any others. The inhabitants of this city have witnessed frequent bomb blasts for the last few years and more so during the recent months resulting in huge human losses. The historic city has witnessed 55 bomb blasts and suicide and rocket attacks since May 2009, several of which ripped through crowded commercial places within just eight days, killing hundreds of innocent city-dwellers including men and women, urban and rural and children and youth. Every family of the city has its own tragic tale that tells of the loss of its near and dear ones. Spending several months during the fieldwork recently, it was felt that residents of the town were mentally prepared for worst in their lives anytime and anywhere. While staying there, it was observed that at times a bang, even the slamming of a door or unusual walking of a bearded person was enough to turn the face of an ordinary person pale.

Table III. Annual fatalities of ‘WOT’ in Pakistan

Year	Civilians	Security Forces	Terrorists/militants	Total
2003	140	24	25	189
2004	435	184	244	863
2005	430	81	137	648
2006	608	325	538	1,471

2007	1,523	597	1,479	3,599
2008	2,155	654	3,906	6,715
2009*	2,004	896	7,223	10,123
Total	7,325	2,761	13,582	23,608

*Data till mid-November 2009.

Sources: South Asia Terrorism Portal (SATP) and various Annual Security Reports of Pakistan Institute for Peace Studies (PIPS).

Alongside the common people, security forces have equally suffered huge losses in the conflict. Keeping in view fatalities suffered by the coalition forces in Afghanistan under the banner of International Security Assistance Force (ISAF), Pakistan has suffered a lot more. Total casualties of ISAF in Afghanistan have been about 1,451 since the beginning of Operation Enduring Freedom in October 2001. Security forces in Pakistan have suffered twice the number of these casualties. While so far the US has lost about less than 900 soldiers in the war, the wounds received by Pakistan army and paramilitary forces are more in number and severe in impact because high ranking military officials such as lieutenant general and brigadiers have been killed by insurgents/militants. More than 50 officials of the ISI have been killed and about 100 injured in attacks and despite all these every now and then the US tells Pakistan to ‘do more’. Casualty rates of coalition troops in Afghanistan are far less than Pakistani casualties. During interviews with officials and security analysts, the author was told that it was not only the tribal area that was becoming a safe haven for the militants but east and south of Afghanistan was also ruled by the Taliban and the coalition forces needed to improve the situation on their side also.

US drone Attacks on tribal areas: breach of Pakistan’s sovereignty or counterterrorism strategy?

Another aspect of US-Pakistan alliance that has been frequently and regularly criticised in Pakistan and which the opposition parties have been using as a rallying point against the US, is the issue of US drone attacks on the FATA. As mentioned earlier, despite mobilisation and deployment of more than 100,000 troops in the FATA, Washington is not satisfied with the performance of Islamabad and constantly goads it to ‘do more’ in the fight against al Qaeda and Taliban in the region. The deployment of such a large number of troops should be enough proof that Islamabad is doing what it could to destroy Taliban’s sanctuary in the FATA. Even sceptics like Grare (2007) have at times affirmed that Pakistan’s co-operation against terrorism is real and sincere. However, due to trust deficit the shaky state of affairs has sometimes put the alliance to litmus test as both allies complain to each other of the lack of cooperation. The US’s main apprehension and complaint is that cross border infiltration emanating from the tribal belt has been the cause of tremendous concern as Taliban ambush US and ISAF forces and military installations in Afghanistan from there. While Pakistan perceives US policy of using unmanned air vehicle (UAV) or drones to hit targets inside Pakistani territory a violation of its sovereignty. At the same time these attacks have resulted in colossal collateral damage. US drone attacks also contribute to the Pakistani public’s negative perceptions of the US and fuel anti-Americanism.

Pakistani leadership has repeatedly argued that such counter-terrorism strategies contribute to turn public opinion against the US and undermine the role the government can play to defeat

these elements in 'WOT'. There is wide condemnation and severe criticism of such US attacks across broad range of stakeholders including but are not limited to former intelligence officers, scholars, journalist, columnists, policy makers and politicians of almost all political parties. Several analysts argue that the bombings are less effective and could only harden the resolve of terrorists and create more embarrassment for government at the domestic front. According to figures compiled by Pakistani authorities and media reports, between 2006 and 2009 the US drones carried out the more than 60 cross-border predator attacks inside Pakistan thus violating Pakistan's sovereignty a number of times. Out of these attacks, less than 20 were able to strike the actual targets including some wanted al Qaeda men, besides killing more than 700 innocent tribal people. The success percentage of the US predator strikes thus comes to not more than six percent. Two missile strikes carried out in 2006 killed 98 civilians while three attacks during 2007 slain 66 innocent Pakistanis, yet none of these strikes were on target to assassinate high profile al Qaeda or Taliban figures thus leading to increased resentment against the US.

Conclusion: the way ahead

As the preceding discussion exhibits Pakistan has suffered and is continuously suffering a lot in 'war on terror'. In terms of human losses, to varying degrees the people of Pakistan in all major cities have their shares of the pain and calamity in the form of bomb blasts and suicide attacks. Daily life and commercial activities are badly disrupted due to poor law and order situation caused by militants' strikes. In economic and financial terms, Pakistan has suffered a loss of more than US\$34 billion and according to USAID data quoted earlier it has received less than US\$ 5 billion in aid since joining US-led 'war against terror'. However, it is also interesting to break apart and analyse the much-publicised US \$10 billion question of aid given to its South Asian ally. To understand the real worth of US assistance to Pakistan, it is imperative to reveal that the figure of US\$10 billion in reality includes Coalition Support Funds (CSF) ranging up to US\$5 billion during the years 2002-07. The CSF is a Department of Defence programme to reimburse allies (in this case Pakistan) for logistic, military and other expenses incurred in backing up US military manoeuvres in 'WOT'. According to Islamabad-based officials, Pakistan's CSF claims are validated by relevant officials in US embassy in Islamabad and the US Central Command. Pakistani officials revealed during interviews that in reality, it is Pakistan's own amount spent on US operations by Pakistan which is later reimbursed. To lump this amount of \$5 billion as part of US aid package is neither factual nor intellectually honest. Though these aid statistics are available in reliable reports of the Congressional Research Service (CRS) yet some scholars and writers regularly quote US\$ 10 billion either to mislead public opinion or for the reasons best known to them. What can be inferred from this discussion is that Pakistan has suffered a lot more in 'war on terror' than what it has received from the US in the form of foreign aid.

Due to myriad of crises including economic, security and law and order problems as a consequence of 'war on terror' and increased militant insurgency, Pakistan has called for a US\$ 30 billion aid package to overcome these challenges. On the eve of donors meeting in Tokyo last year, President Asif Ali Zardari asked for a major aid drive like the Marshall Plan to help the country in fight against militancy and achieve financial stability and poverty alleviation. The country has requested this amount to shore up socio-economic development of the masses and win their hearts and minds. During interaction with several primary beneficiaries of USAID projects in the FATA, the local population was grateful to the people of the US and to the goodwill gesture of USAID for its development interventions. It merits a mention to recall the emotions of a youth, who while referring to some USAID projects remarked that even if your enemy does some good to you it should be appreciated. In

economic assistance, Pakistan sees an opportunity and a means to defeat al Qaeda and Taliban extremists by offering the local population something they really need-education, health, economic opportunities and employment. The report 'Afghanistan and Pakistan on the brink: Framing US policy options' (2009), prepared by ex-government officials and academics also suggested that Pakistan needed a billion dollar multi-years aid package to help in surmounting domestic economic and institutional challenges.

If seen from the perspectives of the cost of war in Afghanistan, US aid to Pakistan seems negligible. The war already costs US \$ 3.6 billion a month and the additional surge in troops would multiply the financial cost of the conflict which is estimated to be US\$30 billion a year more. On June 16, 2009, the US Senate's Foreign Relations Committee passed the Enhanced Partnership with Pakistan Act, known as Kerry-Lugar Bill (KLB) and on October 15, President Obama signed the bill into law. The bipartisan bill tripling non-military aid to the country authorises the provision of US\$ 1.5 billion aid to Pakistan annually for five years (2009-2013). In this backdrop, during her official visit to Pakistan in October 2009, US Secretary of State Hillary Clinton told media men in Islamabad that she was there to 'turn a new page' in US-Pakistan relations. She told reporters that terrorism remained a very high priority but the US also recognised that it was imperative to broaden their engagement with Pakistan and help the country in terms of economic challenges- to help in creating jobs, building infrastructure, education, healthcare and energy shortfall. Though excessive conditionalities associated with the bill have marred the overall positive approach and goodwill gesture yet it is to be seen how this long-term aid commitment is going to address the real issues with which the country is faced.

Keeping in view all these scenarios in mind, it can be assumed that the US has a chance to remove the past misconceptions. To do this, it is necessary to involve and respect the country's popular leadership and support democracy. Similarly the US should have clear developmental objectives formulated with the collaboration of Pakistani institutions and should make it sure to reach the efforts of these interventions to the downtrodden and needy. Due to past events described earlier, Pakistani masses are quite suspicious of the US' intentions in the region. The tortuous history of US bilateral to Pakistan has also contributed to the common Pakistanis' perception of the United States as an unreliable ally. It is therefore reasonable to let the people of Pakistan ensure that the US and USAID are there to help in minimising and resolving their problems. The history of US bilateral aid seems to have remained incoherent, inconsistent and unjust, which at times Pakistani leadership has manoeuvred to turn public opinion against the US. In order to win the head and heart of common Pakistanis and to alter their allegiance from militant ideologies, they should be offered things they need-education, health and economic opportunities. According to 1998 census, FATA lags far behind the rest of the country in terms of development indicators. Literacy rate in the FATA is 17.42 per cent, compared to 43.92 per cent at the country level and a mere 3 per cent of females aged 10 years and above are literate in the tribal belt compared 32.02 per cent at the national level. Health care indicators are equally below par, with astounding figures of only one doctor for every 7,670 persons in FATA in comparison to 1,226 persons for every doctor across the country. Prospects of good future and respectable life can be significant motivation and reward to contain extremism. However, during interviews with this author, most government officials and academicians informed that US bilateral aid has neither played a significant role in bringing socio-economic uplift in Pakistan nor has it won good-will of the majority of Pakistanis. Therefore, it is essential that the US need to target their aid to areas to address the actual Pakistani needs.

Introduction

With the trend of globalization, borderless trading has been prevailing all over the world. To break down trade barriers formed from protectionist policies after World War II, the General Agreement on Tariffs and Trade (GATT) was established in 1947 to devote efforts to promoting trade liberalization amongst its member countries. By going through seven rounds of negotiations, GATT had effectively lowered tariff rates among its member countries. Nevertheless, in order to offer a better competitive environment for its member countries as well as reinforce the cooperation and exchange among its member countries, the World Trade Organization (WTO) officially replaced GATT, becoming the supreme power to regulate world trade. The tenet of the WTO is to replace past trade practices which were more in a unitary form, so that worldwide trade can become as borderless as possible and we may make headway towards global economic liberalization. WTO's major tasks include: trade in goods, trade in services, intellectual property rights and dispute settlement, whereas their principles are: 1. non-discrimination; 2. reciprocity; 3. transparency; and 4. impartiality. In addition, it requires members to open up their markets through negotiations and reciprocal favored treatments (World Trade Organization, 1995).

In addition to conventional trade products, such as manufacturing and agricultural products, the WTO also included 14 education-related items in the service industry in its international trade category and completed the General Agreement on Trade in Services (GATS) in 1994 in an attempt to establish a multilateral structure with both

transparency and liberalization. Given that education is classified as a service industry which can involve international trade, the education market has turned out to be an important link in international trade. GATS requires its member countries to open up their local education markets to other WTO participating countries; in addition to enhancing education-related industries and product attributes, the international agreement has also triggered a new wave of competition in the international education market. Under the intense competition in the international education market, globalization of higher education, in particular, has been spotlighted, causing the traditional definition and positioning of higher education to be gradually replaced by the concept of market trade (Kerr, 1990). With globalization and the knowledge economy, the knowledge output from higher education is considered a critical factor in promoting national development. Hence, many countries use globalization of higher education to strengthen their national competitive edge (Ender, 2004).

In response to the ongoing globalization processes in higher education, internationalization has become a crucial policy for universities. Since Taiwan is a member of the WTO, universities not only face formidable challenges but also reaching out for new opportunities. This study analyzes the impact of WTO entry upon higher education institutes in Taiwan. Applying a SWOT analysis, this study assesses their international reorientation processes and explores their responding strategies.

I. The impact and challenges of WTO on higher education in Taiwan

Even though Taiwan was one of GATT's founding members, it withdrew in 1950; it entered GATT again in 1965 as an observer. Following the withdrawal from the United Nations in 1971, Taiwan even lost its status as an observer in GATT. In 1990, it sought to rejoin GATT under the identity of "separate customs territory of Taiwan, Penghu, Kinmen and Matsu". In 1992, as agreed upon by GATT, Taiwan was represented at GATT meetings as an observer. After the WTO's establishment in 1995, Taiwan put forth its formal application on December 1st of the same year for accession into the WTO. Taiwan officially entered the WTO on January 1st, 2002, becoming the WTO's 144th member country. Based on the accession negotiations, Taiwan agreed to open up the following four business sectors in its education service industry:

- (1) Allow foreigners to set up senior high schools, vocational high schools, junior colleges and universities in Taiwan
- (2) Allow foreign schools to provide distance education in Taiwan
- (3) Allow foreigners to set up short-term cram schools in Taiwan

(4) Allow foreigners to set up foreign studies brokerage firms in Taiwan

Due to the increased competitive pressure resulting from the market opening to these four business sectors in the education service industry, Taiwan's higher education was significantly impacted over the years after its entry into the WTO. This study explores the impact, in three dimensions: student recruitment, pedagogy, as well as school management and administration:

1. Impact on student recruitment

After Taiwan's entry into the WTO, Taiwan's higher education was impacted according to the following three aspects:

- (1) Allow foreign universities to set up their branches in Taiwan: Many academics are afraid that it will affect our local higher education market. A highly prestigious foreign university can be of great appeal to Taiwan's students, so they worry about being unable to recruit sufficient numbers of students, in which private universities will bear the brunt of the impact. As a result of decreasing birth rates, year by year, the total number of senior high school graduates has continued to decline. However, the number of universities in Taiwan has, on the contrary, kept increasing. Hence, the competition for student recruitment is becoming critical. As a result, many new private universities without big names will run into ever greater difficulty in recruiting enough students. In the short run, it may endanger this area of Taiwan's higher education and, in the long run, it could seriously impede overall development of local universities.

Furthermore, allowing foreigners to set up short-term cram schools in Taiwan has also threatened the local cram-school industry. Many in the cram-school circle worry that local foreign language cram schools will encounter powerful competition from foreign trade. Moreover, after Taiwan's entry into the WTO, the long existing local foreign studies brokerage industry has been transformed into the foreign studies service industry. In addition to the foreign studies brokerage business, the businesses also include student recruitment, school admission/consulting services and other related services. However, student tuition and miscellaneous expenses are not allowed to be collected in Taiwan, while courses and lecturing are also prohibited in Taiwan. Thus, the impact is relatively less in this aspect.

- (2) After entry into the WTO, Taiwan's universities have directly competed with their counterparts in China: By having close cultural ties, no language barriers and a certain academic level in China's key universities,

compounded by inexpensive tuition, key issues regarding student recruitment from China's universities, such as recognition of China's education degrees and permission for China's students to study in Taiwan have turned out to be the focus of our government's policies. Despite the fact that the government has yet to recognize China's education degrees, the number of Taiwan's students studying in China continues to increase. Currently, 187 universities in China have recruited students from Taiwan, and 6,755 Taiwanese students are studying in China, with 1,570 students in PhD programs and 1,861 students in master's programs, while undergraduate students number 3,324. Once Taiwan recognizes China's education degrees, the number of Taiwanese students going to study in China will definitely increase rapidly. If this is the case, local academics worry that the impact will be far beyond the influence of foreign universities.

- (3) The number of foreign students is insufficient: After Taiwan's entry into the WTO, its higher education has been heading for diversification and internationalization. Hence, internationalization of higher education has become an important policy in recent years. The number of foreign students and their quality constitute important indicators for Taiwan's promotion of the internationalization of higher education. However, the ratio of foreign students among Taiwanese college students is too low. Currently, Taiwan has about 1.3 million college students, but foreign students make up less than one percent. Furthermore, instead of studying for a degree, those foreign students mostly come to Taiwan to learn Mandarin. Thus, after opening up the market to meet WTO compliance, the insufficient number of foreign students makes it difficult for Taiwan's universities to fully realize their internationalization goal.

2. Impact on pedagogy

According to GATS, the trade in services of higher education refers to the following four types: (1) cross-border supply (e.g. distance education, online education); (2) consumption abroad (e.g. conventional foreign studies); (3) commercial presence (e.g. offshore school programs and double degree); (4) temporary movement of natural persons (e.g. teachers and researchers being offered to foreign schools). Currently, consumption abroad is still the mainstay in Taiwan, i.e., studying abroad.

After Taiwan's entry into the WTO, the following concerns about our local higher education have arisen:

- (1) Allow foreign schools to provide distance teaching in Taiwan: With zero space and time difference, distance teaching, particularly from foreign prestigious schools, may attract hordes of students. Rather than studying abroad, students may choose to take on distance education in Taiwan. It is especially so for those who are employed because this kind of learning is free from space and time limitation and can therefore better meet their demand for learning. However, academics worry that it will affect local student recruitment and the number of students studying abroad. To compound matters, the quality of distance teaching is not easy to control.
- (2) Imbalanced qualitative and quantitative development of higher education: Due to the surging number of Taiwan's universities in recent years, an imbalance between quality and quantity has surfaced. While the low quality of higher education makes it harder to compete with foreign universities after the market opened up to satisfy WTO compliance, improving the quality of Taiwan's higher education has become the first and foremost challenge and mission to compete with foreign universities in the market.
- (3) Lack of internationalization in education: After its entry into the WTO, Taiwan's lack of internationalization in higher education in terms of curriculum and teaching arrangements has been highlighted. Under such circumstances, curriculums and teaching models must be changed in order to make improvements (Haigh, 2002); foreign language proficiency is a critical factor in internationalizing teaching and study contents. However, currently, many college students in Taiwan are not proficient in English, which leads to their lack of an international vision and global participation. In addition, due to insufficient English courses, it has become harder for schools in Taiwan to recruit enough foreign students, which further hinders the internationalization of Taiwan's higher education.

3. Impact on management and administration

After Taiwan's accession to the WTO, its higher education has been requested to provide an aura of internationalization. As a result, schools' operating philosophies and education systems will be changed due to frequent international exchange; the management and administration of higher education will also be challenged due to the market opening up and international exchange. The following are major concerns of Taiwan's universities:

- (1) Excess quantity of Taiwan's universities and their lack of unique selling points (USP): Compared with foreign universities, Taiwan's universities are small in scale, which leads to their weakness in terms of competition.

Compounding the high level of homogeneity of many universities, which makes for no USP in most universities, they are either unattractive to local students or can not recruit enough foreign students. Whichever the case, it becomes difficult for them to compete and survive in the open market. Moreover, there is also no well-rounded mechanism to take care of foreign students and provide proper management. All of these show deficiencies in internationalization in regard to the aspect of management and administration of higher education.

- (2) Lack of international exchange: The exchanges between Taiwan's universities and foreign universities is only limited to a few teachers and students. In a way, it is due to the limited budget; on the other hand, insufficient administrative support from those universities is also a major factor in causing the lack of exchange. Without a good policy to support international exchange, Taiwan's universities appear very weak in terms of international exchange, which makes it hard for them to compete or cooperate with foreign universities.

II. Response and strategy regarding higher education after Taiwan's entry into the WTO

1. Impact on student recruitment

- (1) Competition from foreign schools: Taiwan applies its criteria for private school to the schools to be set up by foreigner. According to the "Private School Act", land acquisition is required for school establishment. Also, as stipulated in the "Private School Act" and "Specific Service Industry Commitment Statement of Separate Customs Territory of Taiwan, Penghu, Kinmen and Matsu", principals, presidents and responsible persons of private schools shall be Taiwanese, in which foreign directors are limited to no more than 1/3 of the total directors. Due to the strict restrictions, so far, no foreign school has been approved by the Ministry of Education, Taiwan. In other words, Taiwan applies a restrictive policy in regard to its commitment to the WTO education service industry. Prior to lifting the restriction, there will be no significant impact on this sector even though Taiwan is a member of the WTO. On the other hand, opening up the education service market will apply pressure on the local trade, but it will not be unfavorable to Taiwan's overall education; instead, it will attract external investment and help to introduce pluralistic education to Taiwan and, in the end, it will broaden Taiwanese students' international horizons. The progress may help Taiwan to improve its education internationalization

and reinforce the international competition of its schools. As mentioned in the Trade Policy Review Mechanism (TPRM) released in June 2006: in order to balance its diversified culture, Taiwan has contemplated relaxing the regulation of school establishment by foreigners in the “Private School Act”, e.g. to allow foreigners to take up 2/5 of directors instead of original 1/3 and allow the chairperson of the board of directors to be a foreigner. However, such a move has yet to be finalized (Taiwan WTO Center, 2006).

(2) Competition with China’s universities: In its attempt to elevate Taiwan’s international competitiveness, Taiwan’s government has plans regarding Chinese students’ studying in Taiwan and recognition of China’s education degrees. First of all, in conjunction with revisions of the “Act Governing Relations between People across the Straits”, “University Act” and “Junior College Act”, Taiwan has enacted regulations related to Chinese students studying in Taiwan and recognition of China’s education degrees, followed by employing “Three Restraints” and “Six NOs” as the principles to plan ensuing supplementary measures:

- a. Restraint in recognition of tertiary schools: Only prestigious and high quality universities in China are recognized.
- b. Restraint in terms of quantity in the recruitment of China’s students: Based on 0.5%-1% of students (about 1,000–2,000 students) to be recruited as the underlying principle.
- c. Restraint of recognition of China’s medical education.
- d. No additional preference scores to be given to China’s students.
- e. No influence on the number of local students to be recruited.
- f. No budget for scholarships for China’s students.
- g. No part-time work being allowed for China’s students during their study period in Taiwan
- h. No further stay in Taiwan for employment being allowed for China’s students after their suspension of studying in Taiwan or graduation.
- i. No eligibility for China’s students to take public employment examinations in Taiwan

In fact, rather than solving Taiwan’s student recruitment problem, the opening-up policy aims to recruit excellent Chinese students. The Chinese students planning to study in Taiwan have to go through document review and oral or written examination before being approved to come to Taiwan for their studies. In so doing, Taiwan’s universities are in a position to take the initiative in controlling student quality. In addition, only those students who graduated from universities recognized by the Taiwan government are

eligible to apply for admission to PhD or master’s program in Taiwan, so the student quality can also be well controlled (Ministry of Education, 2009).

- (3) Solve the problem of insufficient foreign students: The Ministry of Education enacted the “Guidelines Governing Foreign Student Subsidy Plan to Encourage Universities to Recruit More Foreign Students” in 2004. With it, some supplementary measures, such as offering foreign student scholarships and establishment of Chinese Language centers, have been undertaken. As a result, the number of international students has increased to 33,948 from 21,678 over the years, while the number of those studying for a degree has increased from 2,853 in 2005 to 7,764 in 2009, representing a growth of 1.7 times (please refer to Table 1).

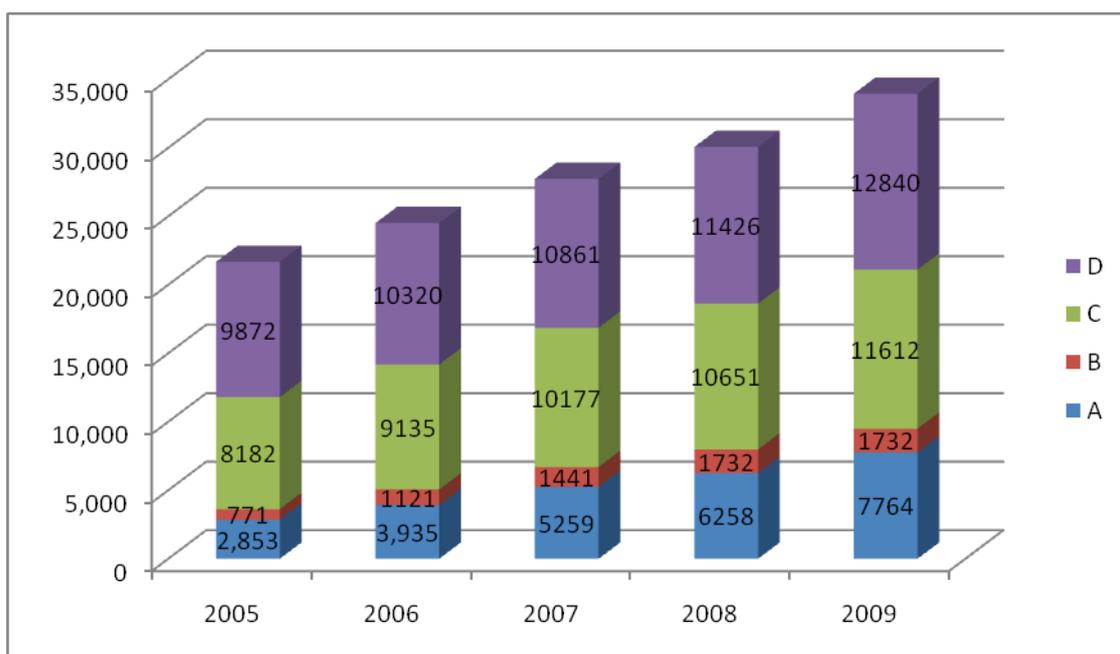

Table 1: Numbers of international students recruited by Taiwan’s universities over the years (Source: Ministry of Education, 2010)

A: Foreign degree students B: Exchange students

C: Chinese language learners D: Overseas Students

2. Impact on pedagogy

- (1) Impact of opening up foreign school’s distance teaching: The countermeasure taken by Taiwan’s Ministry of Education to reduce the impact is to limit the credits given from distance teaching. Taiwan’s Ministry of Education does not recognize all the degrees conferred by distance education. According to “Guidelines Governing Authentication of Foreign Academic Degrees” and “Regulations of Distance Education for Schools beyond College”, the credits earned from distance education shall

not exceed 1/3 of the total number of graduation credits. Hence, the population of students studying abroad is not significantly impacted. As shown in Table 2, the number of Taiwanese students studying abroad has grown steadily in recent years.

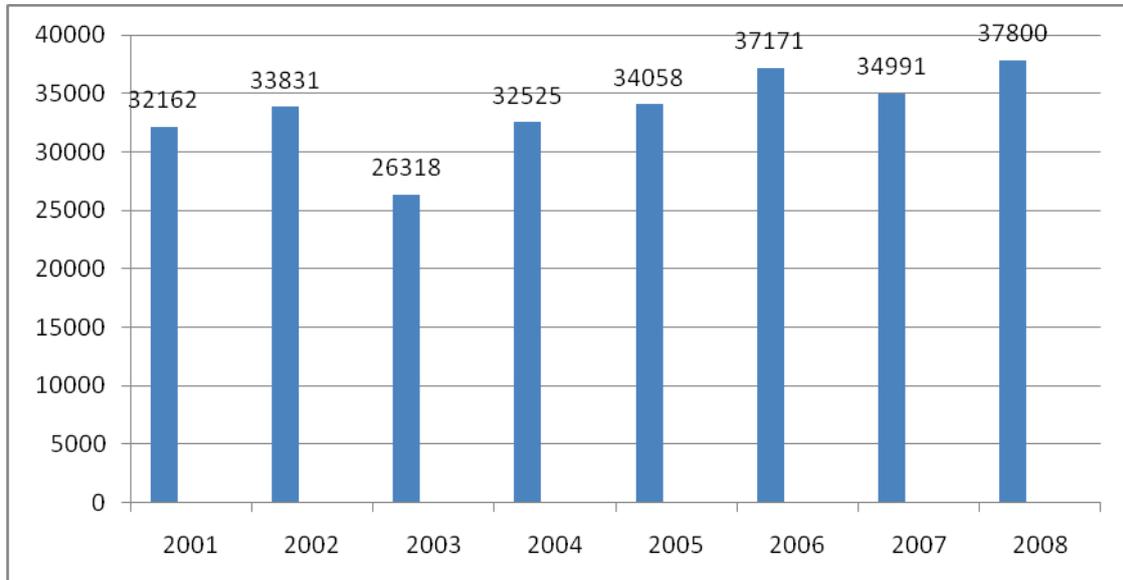

Table 2: Statistics of the numbers of students going abroad with student visa (Source: Ministry of Education, 2009)

On the other hand, opening up foreign distance teaching can help improve the curricular quality of Taiwan’s distance teaching and expedite educational development. Thus, Taiwan’s Ministry of Education decreed “Regulations of University’s Authentication of Foreign Academic Degrees” and “Enforcement Regulations of University Distance Teaching” in 2006, to relax recognition of academic degrees earned by distance education, in which the original limitation of no more than 1/3 of total graduation credits was relaxed to no more than 1/2 (Ministry of Education, 2006), after Taiwan’s accession to the WTO, in order to compete with distance teaching in other countries.

- (2) Problem of university’s low teaching quality: In order to have universities in Taiwan upgrade their teaching quality, the Ministry of Education has continued to advance various plans, e.g. the “University Academic Excellence Pursuit and Development Plan” introduced in 2001, the “Integration Plan to Promote Research-type Universities” in 2002, the “Plan to Elevate University’s International Competitiveness” in 2002, the “Incentive Plan to Encourage Prominent Teaching in Universities” in 2006 and the “Plan to Develop International Top-notch Universities and Research Centers” in 2007, etc.

(3) In order to improve university's deficiency in teaching in terms of internationalization, as well as to elevate the internationalization level of university teaching, the Ministry of Education has encouraged schools to provide English lecturing curriculums or other foreign language courses in order to assist foreign students to pursue academic studies in Taiwan. As shown in Table 3 and 4, courses lectured in English and other foreign language courses have continued to increase in recent years.

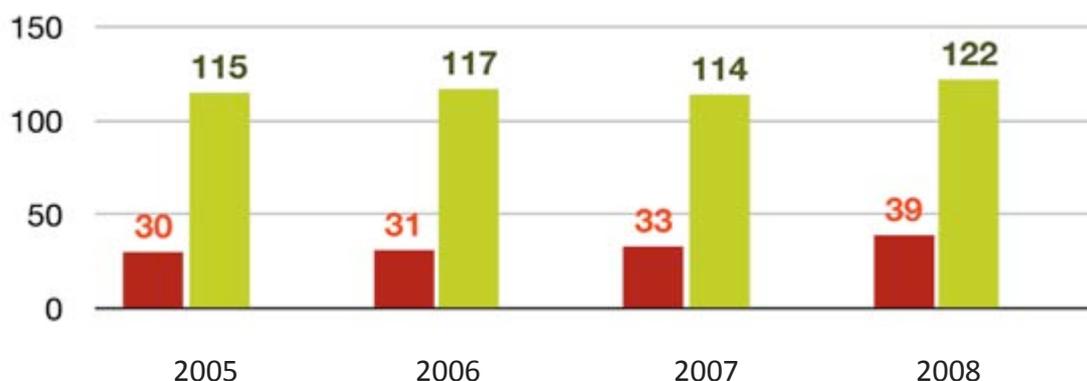

Table 3: Status of courses lectured in English provided by universities (Source: Ministry of Education, 2010)

A: Universities which offer courses in English

B: Number of courses that are taught in English

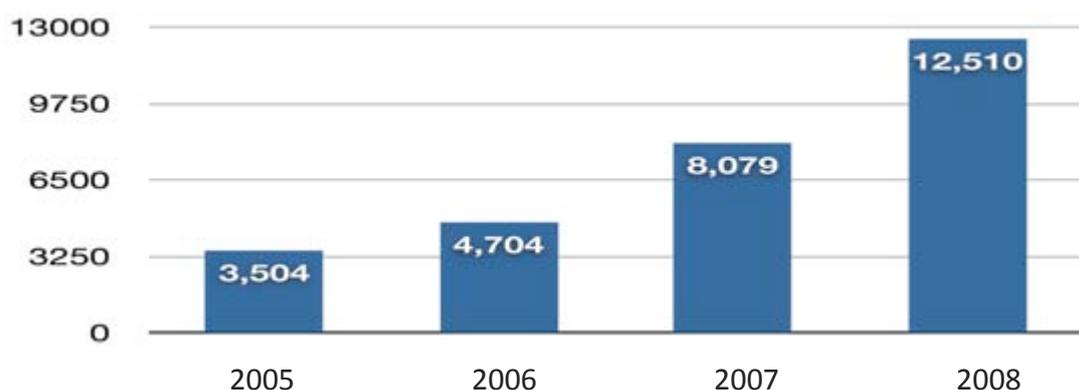

Table 4: Numbers of foreign language courses provided by universities (Source: Ministry of Education, 2010)

3. Impact on management and administration

(1) To counter the ensuing pressure from competition following the market opening up to comply with WTO demands, many countries encourage their universities to build distinctive functions and classify their universities accordingly, e.g. China's merger of key universities, Singapore's cooperation with foreign universities, USA's university interscholastic research center set up by the University of California, etc. To meet the trend

and needs, Taiwan’s Ministry of Education decreed the “Integration Plan to Promote Research-type Universities” in 2002 to encourage universities to integrate their resources and talents. With the plan, universities may form their own teams in certain specific academic fields and use mergers, transformation, cooperation and alliances to integrate resources and improve their quality. In the end, the number of Taiwan’s universities will increase and their quality will be enhanced to a level sufficient to compete with foreign universities.

Regarding foreign student management and care, after Taiwan’s entry into the WTO, many universities have set up an office of international affairs; on one hand, it is meant to promote exchanges with foreign universities and academic research institutes, while on the other hand, it aims to assist foreign students in handling academic and living affairs in Taiwan.

- (2) International exchange: After Taiwan’s entry into the WTO, its Ministry of Education decreed the “Plan to Elevate University’s International Competitiveness” in 2002. With this plan, Taiwan’s universities have devoted efforts to reinforcing their international exchange with foreign schools, in order to upgrade their level of internationalization. At the same time, the Ministry of Education has also offered many scholarships and grants to encourage teachers and students to engage in foreign exchanges. Significant progress has been made both in terms of teacher or student exchange and in publication in international journals, as shown in Table 5.

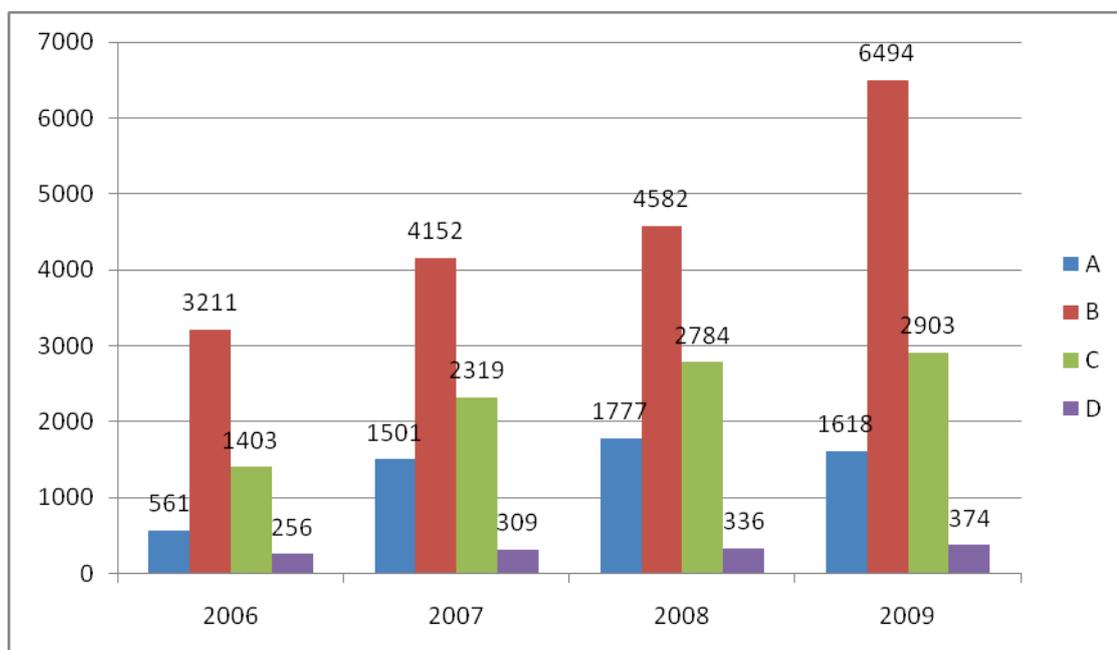

Table 5: International exchange between Taiwan’s universities and foreign schools in recent years (Source: Ministry of Education, 2010).

III. SWOT analysis of Taiwan's higher education

By viewing the impacts and responses brought about by Taiwan's accession to the WTO in regard to student recruitment, teaching and management as well as administration, we may understand that, over the years following Taiwan's entry into the WTO, Taiwan has made every effort in progressing towards the internationalization of its higher education in the fields of student recruitment, teaching and management, as well as administration. Given the fact that university internationalization is a trend founded on the necessity to compete in the global market, the Ministry of Education and the universities have endeavored to upgrade their internationalization. The following is the SWOT analysis given according to school establishment by foreigners in Taiwan, foreign student recruitment, distance teaching and universities' international exchanges:

	S (Strengths)	W (Weaknesses)	O (Opportunities)	T (Threats)
School establishment by foreigners in Taiwan	- excellent technical infrastructure - regulatory protection for domestic universities	- internationally unknown - competition is limited by strict regulation of foreign universities	- competitive pressure to promote excellence - mutual learning	- declining student numbers - relations with China
Foreign student recruitment	- scholarships - strong Chinese language curricula - good Chinese teacher education	- lack of specialization of universities - low international recognition - only few degree students	- rising number of global international students	- universities in other countries in Asia more recognized - relations with China
Distance teaching	- excellent technological infrastructure - international education while	- credit limitations - language abilities	- increased importance of distance education	- declining number of student enrollment in traditional university

	enjoying Taiwan's low cost of living			programs
Universities' international exchanges	- strong financial support by the MoE	- lack of foreign language abilities	- global trends in the creation of international academic linkages	- unbalanced growth between quality-quantity / national/private universities

Table 6: SWOT analysis of Taiwan's higher education after its accession to the WTO

IV. Conclusion

The last decades have been characterized by intensifying globalization processes. While the main purpose of Taiwan's WTO membership was to enjoy economic benefits through increased trade, its entry also affected other domestic policy areas, such as higher education policy. As this study reveals, WTO membership has had major implications for Taiwan's higher education system. Since WTO membership has required adjustment of protectionist policies, neo-liberalist ideas have influenced Taiwan's education system. However, unlike other countries in the region, Taiwan was a late-starter in terms of initiating the transformation processes in the higher education sector, partly explaining why it lags behind in its development compared with other countries.

The SWOT analysis provides us with a deeper understanding of the higher education system in Taiwan, and allows us to derive 5 policy recommendations in order to overcome domestic impediments.

1. Re-evaluating regulation settings: Theoretically, Taiwan's academic institutions are now exposed to global competition from international actors. However, up to now not even a single foreign university has set up a branch on the island, leaving fears of a foreign "invasion" unfounded. The government's protective regulations have prevented the entrance of education institutions from abroad, but have thus also slowed down domestic development processes in the higher education sector. The government needs to ensure an equally fair environment for both domestic and foreign higher education institutions. In order to attract foreign higher education institutions to set up branches in Taiwan, the government needs to reevaluate its regulation settings. In the past, strict regulations prevented foreign institutions from

entering the highly competitive Taiwanese education market. However, in the long-run, international academic institutions will benefit the development of the domestic higher education system.

Internationalization and rapidly declining birth rates have especially increased the pressure for private universities, and have put them at the forefront of the development. As a result, private universities have to act in an extremely competitive environment.

2. Strengthening human resource development: While Taiwan's educational institutions do not need to fear any competition in terms of their "hardware", such as technical equipment or building infrastructure, there is reason to be concerned about the "software". The rapid development in Taiwan's education sector has created a huge vacuum in terms of qualified and competent personnel. In order to bridge this widening gap, the government will need to put more emphasis on human resource development.

3. Upgrading profile and international recognition: Taiwan has achieved notable results in attracting more foreign students. However, the majority of foreign students come to Taiwan in order to improve their Chinese language proficiency. Since numbers of foreign students have risen across all universities, the increase can be attributed to national policies rather than individual institution's efforts. However, up to now, international degree students only account for less than 1 percent of the total enrolled students, and there is plenty of untapped potential. Most universities need to upgrade their facilities and administrative systems, as well as adjusting their curricula to attract more foreign students.

As Knight (1999a) and Altbach (2002) argue, internationalization is one option to respond to globalization and to withstand pressure from this competitive environment. Domestic universities have failed to attract foreign students in other subjects, since most of the universities lack a clear profile and international reputation. In order to compete with prestigious international institutions, small-sized domestic universities will need to find their own specific niche, where they can build up their expertise and earn an international reputation. Thus, domestic universities need to foster their internationalization and extend their recruitment of international students (other than Chinese language learners). In 2001, about 1.64 million students received their education in other countries; in 2002 the number increased to about 1.9 million, and in 2004 to about 2.7 million (OECD, 2006). International students have thus become a

major economic factor (Haigh, 2002). However, they also have an important function as link creators to their home country. Not only will international students share their impressions and experiences in the host country with their friends and family, but since they have gained a deep understanding of the host country, it is likely that they will engage the country throughout their professional career. Furthermore, international students form a large pool, where domestic companies may find talented employees. Taiwan's universities have room to improve the infrastructure for foreign students, in terms of administering foreign students, adjusting their curricula and improving the English language proficiency of their administrative staff.

4. Improving foreign language abilities: Besides international student recruitment, universities need to expand their exchanges and cooperation with foreign academic institutions. Up to now academic cooperation has been limited. A major obstacle stems from limited foreign language abilities among teachers, administrators and students. Languages are windows to the world.

5. Recognition of Chinese diplomas: The recognition of foreign academic degrees has gained major importance under globalization. Here, relations with China play a major role for Taiwan, since recognizing Chinese diplomas interferes with sovereignty concerns. It is also believed that the recognition of mainland China's diplomas will trigger numbers of Taiwanese students to leave for study on the mainland. Thus, progress will only be possible when cross-strait relations relax further.

INTRODUCTION

Many studies of Thai dialectology have been carried out over the past three decades. In previous studies, however, maps were drawn manually on papers, the locations of data collection as well as the drawing of isoglosses and dialect boundaries were roughly marked. The maps created in that way consequently have small degree of positional accuracy and lack reliability.

Thanks to technological inventions from the West, the advancement of geographical tools and technologies in the last few decades, especially through Geographic Information System (GIS) and Remote Sensing (RS), have been developed to enhance the ways to observe, collect, measure, and analyze spatial data as well as to display and produce maps more efficiently. The derived map information is now widespread in a digital form and is sharable among the digital world.

In 2002 the Word Geography of Thailand project was launched under the sponsorship of the Ministry of Culture with its aim to collect, record, and set up a database of Thai dialect vocabularies through the study of lexical items. The project pioneered in applying GIS to develop the geographical database of lexical items in Thai dialects. A part of the work results was displayed as a set of 170 lexical variation maps. These dialect maps shaded polygons on the basis of subdistrict boundaries to illustrate the dialect distribution. These maps also showed the interesting distribution of lexical items all over the country i.e. the boundaries between the four main dialects as well as the existence of subdialect and local dialect areas.

Although the project has achieved great benefit from the geographical database, shading maps on the basis of polygons is, however, aggregated to political boundaries and unavoidably uniform. It is, to some degree, unrealistic as it cannot truly reflect the distribution in reality. The extended work is demonstrated in this paper. Its key aim is to present an alternative look by which GIS and geographic features are incorporated to improve the pattern of dialect distribution to be more realistic. Geographic features - population settlement, topography, and transportation - are included for investigation and analysis.

STUDY AREA

Location of the study area covers the whole Thailand. Geographically this country, lying in the heart of the Southeast Asian mainland, covers an area of about 514,000 sq. km. or roughly the size of France. Thailand borders Myanmar and Laos to the north, Cambodia and the Gulf of Thailand to the east, Myanmar and the Indian Ocean to the west, and Malaysia to the south. In this country, more than 60 ethnolinguistic groups with their diversity of languages were reported (Suwilai and others, 2004). Despite the language diversity, Thai, classified by linguists as belonging to Chinese-Thai branch of the Sino-Tibetan family, is the official national language spoken in every part of the country. This language, differentiated by the areas of the country where dialects are spoken, can be divided into four main dialects comprising Northern

Thai, Northeastern Thai, Central Thai, and Southern Thai. Spatial variation of these four main dialects is the main focus of this study.

BACKGROUND TO PRIMARY DATA SOURCE: THE WORD GEOGRAPHY MAPS OF THAILAND

The primary data source of this study was from the geographical database of the Word Geography of Thailand project, namely the Word Geography maps of Thailand. Data covers the whole of Thailand at sub-district level, so-called “tambon” in Thai, except the Bangkok Metropolis. A questionnaire with 170 questions - each representing a semantic unit - was constructed. The questionnaire was sent in 2003 to all of the 7,226 tambons via the Ministry of Culture network in the first round and by post in the second round. The data used in this study came from 6,379 tambons or 88% of the study locations. The respondents were a director or a teacher of a tambon school. Data collection was completed within 1 year (Sirivilai and Kalaya, 2008).

Linking lexical data and administrative boundary maps was designated and performed under a GIS environment using a relational database management system (RDBMS) as shown in Figure 1. From the figure, each word map contains a set of lexical items. For ease of use, visual interpretation, and model simplification, it is assumed that each tambon has a uniformed lexical usage. Thus, a lexical item chosen for each semantic unit is used to be a representative of that whole tambon (in the form of polygon). Words that contain minimal phonological discrepancies e.g. /maak^T mii^T/ and /mak^T mii^T/¹ are analyzed as a single lexical item. A geographical database, as a result, contains 170 lexical variation maps - one map per one semantic unit. As the four main dialects - Northern Thai, Northeastern Thai, Central Thai, and Southern Thai - were the main focus, the lexical items that accumulate in one region, displaying membership of the same variety, were assigned in different shades of the same colour i.e. magenta shades for Northern Thai, blue shades for Northeastern Thai, yellow shades for Central Thai, and green shades for Southern Thai. An example of word maps is shown in Figure 2. The whole dataset of 170 lexical variation maps can be currently visited through the website Word Geography Maps of Thailand (<http://www.arts.chula.ac.th/~ling/geoling/WGT/>).

¹ In this study tones are marked as T and excluded in the lexical analysis since tonal variation in Thai is highly complex and has to be studied separately (Tingsabadh, 2001)

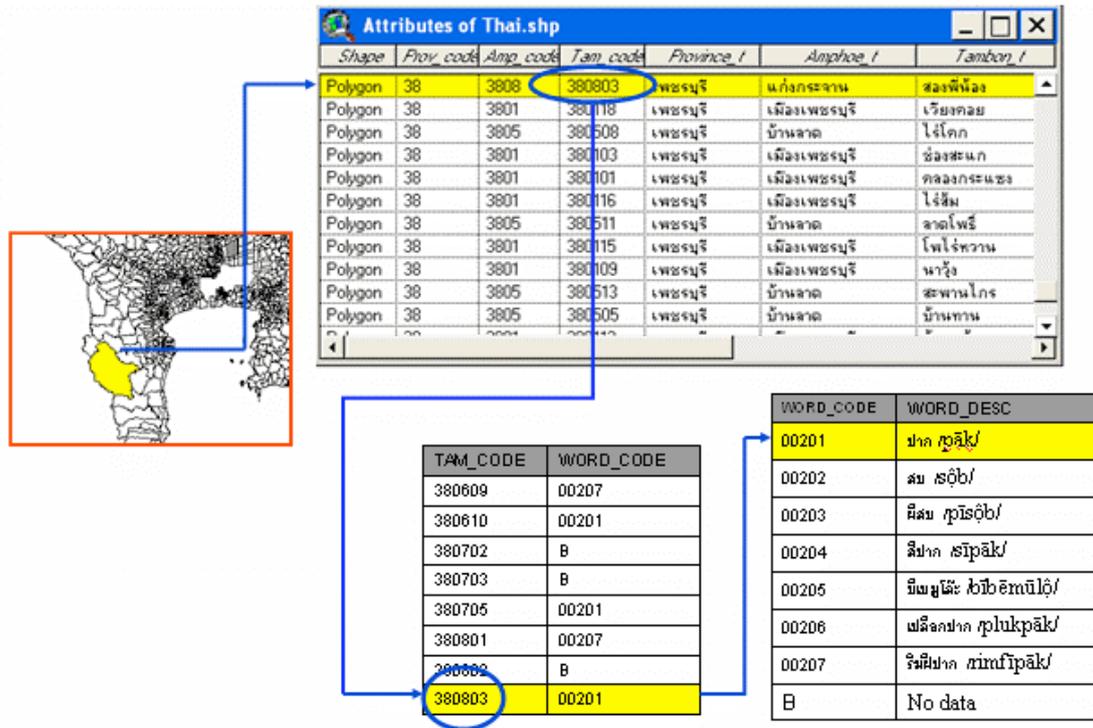

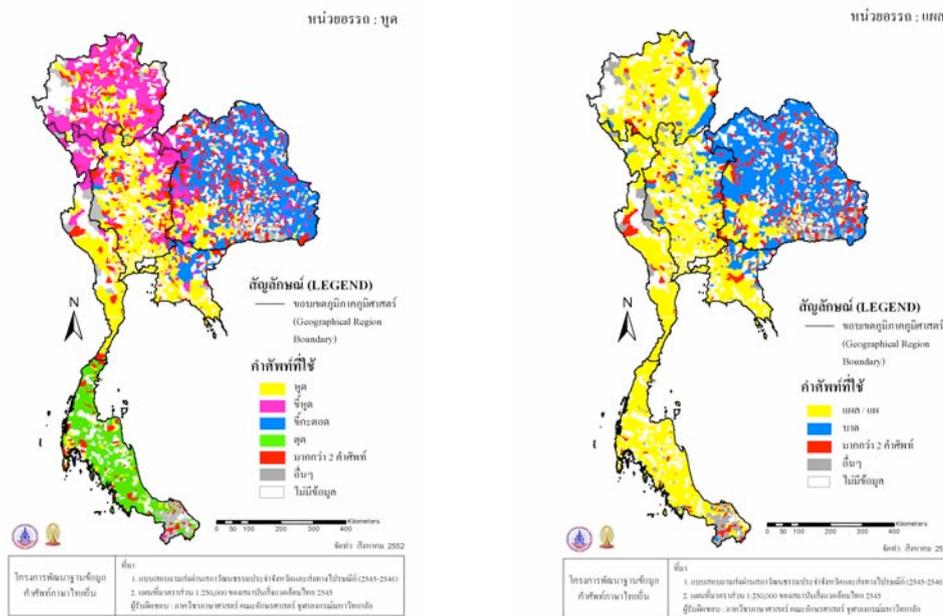

Figure 1: An example of linkage product – the administrative map and the lexical data. Here is a record of tambon “Song Phi Nong” being highlighted in reference to the lexical item /paak^T/ “mouth”.

(a) Semantic unit “wart”

(b) Semantic unit “wound”

Figure 2: Word maps of the semantic units (a) “wart” and (b) “wound”.

GEOGRAPHIC FEATURES AND THEIR ROLES FOR THE ANALYSIS

Geographic features play key roles in this analysis. Three types of demographic and geographic features were included in this study. All are available in digital format. They are population settlement, topography, and river transportation.

According to the fact that language is closely bound up with humans, population settlement, then, acts to locate and shape the pattern and distribution of where dialects are spoken. Population settlement in this study was derived from the 2005 Landscan population distribution model. The model was produced under the Oak Ridge National Laboratory (ORNL) project, by the United States Department of Energy's (USDOE) Oak Ridge National Laboratory (ORNL). The model, analysed by the technologies of GIS and RS, contains the available census counts (usually at sub-province level) for each country and four main physical datasets, namely land cover, road, slope, and night time light obtained from the satellite imageries in order to be used as key indicators to produce a population distribution map. Nowadays Landscan is considered as having the most up-to-date and finest global population data with the spatial resolution of approximate 1 km. Landscan data covers the entire global area and can be applied to various applications that require geographically referenced population bases. For more information about the Landscan data, visit website <http://www.ornl.gov/sci/landscan/>.

The remaining types of geographic features – topography and river transportation, acted to influence and shape the earliest patterns of settlement and migration and to initiate the dialect differences in each region. The effect of topography e.g. mountain ranges and mountainous areas has long been investigated and assessed in many dialect studies to account for its role on the separation between major dialects and/or subdialects e.g. the work of (Garr, 1985; Luo et al., 2009). Topography was available in the study in the raster form of digital elevation model (DEM). It was obtained free of charge from the USGS (the U.S. Geological Survey), namely the SRTM (the NASA Shuttle Radar Topographic Mission) digital elevation data. The SRTM Data, originally produced by NASA, covers all countries of the world at the approximate spatial resolution of 1 km. For more information about the SRTM data, visit the CGIAR-CSI website <http://srtm.csi.cgiar.org/>. Apart from the topographic data, transportation through the study of waterways (e.g. rivers and streams) plays a role in locating the origin and cluster and spread of population settlements in the early days (Luo et al., 2000; 2006; 2009). River data is available in the vector format, obtained from the Department of Transportation, Thailand.

METHODOLOGY

Analysis of the study was divided into two parts. The first part involved the way to shape the dialect pattern while the second part mainly examined the effect of geographic features on the separation of major Thai dialects in each region.

In the first part, all word maps were first re-structured and geo-coded in GIS-based raster grid cells (of about 1 km x 1 km) to be corresponded with that of a topographic map. Next step is to define the extent of population settlement. Using the population data from Landsat, population density was then chosen to demarcate the settlement area. Setting criteria was carried out with the simple requirement that the number of population density has to be accurate enough to map the extent of most urban and rural settlements in the study area. It should be noted that up to now definition, terminology and criteria for classification of populations in urban/rural settlement areas are not in common. Setting the criteria varies extensively in different countries e.g. United Kingdom using the population of $\geq 10,000$ persons/sq km to locate the settlement area (UNSTAT, 2010). In case of Thailand, municipal areas are used as an index (UNSTAT, 2010). The agglomeration of $\geq 10,000$ inhabitants with the population density of $\geq 3,000$ inhabitants/sq km is used to define a town while the agglomeration of $\geq 50,000$ with the population density of $\geq 3,000$ inhabitants/sq km is used to define a city. Among dissimilarities in terminology, this study followed the definition of Organisation for Economic Cooperation and Development (OECD, 1994) in that a “rural area” is determined roughly by having a population density < 150 persons/sq km. By using this number as a reference, this study further visually observes and examines the pattern of settlement, and then adjusts the level of population density to the appropriate number. Figure 3 shows a series of settlement areas as a result of the adjustment of different levels of population density. Finally, the population density of ≥ 50 persons/sq km was then chosen to demarcate the settlement area. The next step is then to use the previously delineated settlement area to extract the dialect patterns from the word maps. The shape and location of where dialects are spoken in the study area are the ones plotted last.

In the second part, the effect of geographic features – topography and waterways - were superimposed on the new word maps previously produced. Examination was carried out on the basis of visual observation. Results and discussion are given in the next section.

RESULTS AND DISCUSSION

Results of the analysis were 170 word maps, each representing one semantic unit and shaped with population settlement. Figure 4 demonstrates a part of a word map ‘before’ and ‘after’ shaping with population densities in comparison. From the figure it is obvious that shapes and patterns of the ‘before’ and ‘after’ word maps are dramatically different. The word map in Figure 4(a) is shaded uniformly. From an overall look, the map helps depict the lexical variation all over the entire subdistrict area. The resultant map, after being shaped with population density of ≥ 50 persons/Sq km, in Figure 4(b) shows some improvement over Figure 4(a) in displaying the true locations of where people use dialects. The spatial variation and concentration of lexical items was also revealed. Furthermore, draping the word map in Figure 4(b) with topographic features as shown in Figure 4(c), can help linguists to better understand the relationship between dialect phenomena and its physical environment in the study area. Figure 5 also shows the overall picture of a resultant word map, here with the exemplified semantic unit “to belch”, with the magnified geographic regions of the country; the North, the Northeast, the Central, and the

South. The different look of the word map suggests another way, by incorporation of geographic features, to improve the presentation of lexical variation in the real world. In addition, the map results can help linguists have more confidence in interpreting the results, drawing isoglosses, and/or language boundaries.

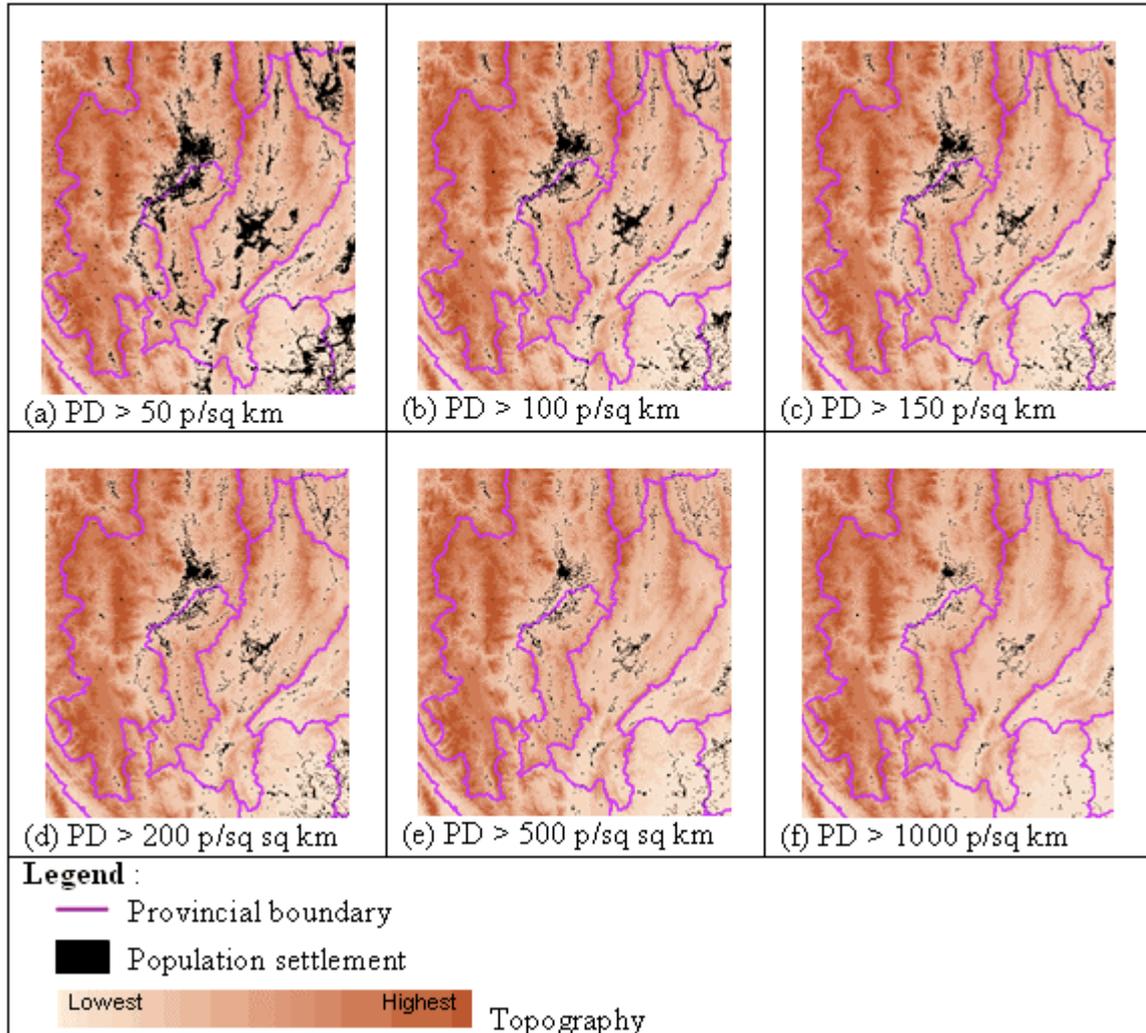

Figure 3: Population settlement with different levels of population density (PD) from (a) population density greater than 50 persons/sq km to (f) population density greater than 1,000 persons/sq km, here draping with topographic features.

Despite the beneficial use of this technique, what one should be aware of is that different criteria for demarcating population settlement can result in different shapes and patterns of word map presentation. In Figure 4(b), for instance, once the specified population settlement was shaped, it completely omitted the grey color which can be obviously seen in the original map in Figure 4(a). This means that the grey area is where population density is less than 50 persons/sq km. That is, if the study wants to cover this grey area, the level of population density needs to be adjusted.

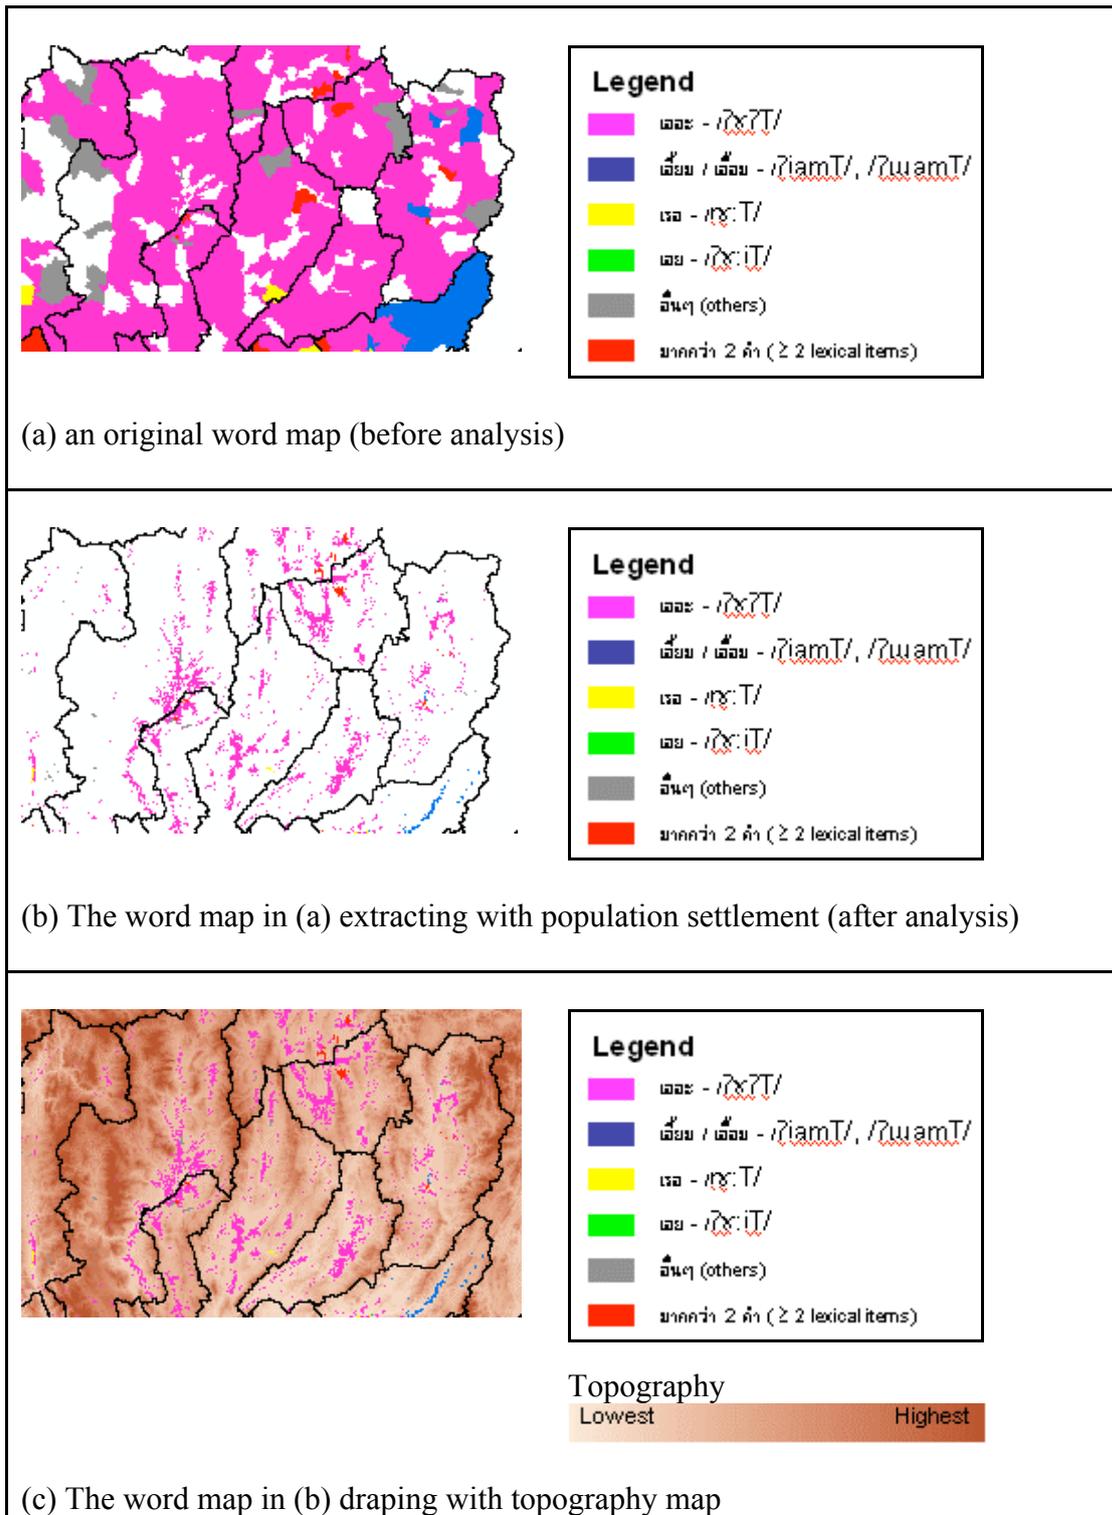

Figure 4: A part of word map of a semantic unit “to belch” showing the (a) ‘before’ and (b) ‘after’ shaping with population density of ≥ 50 persons/sq km, and (c) that of (a) draping with topography.

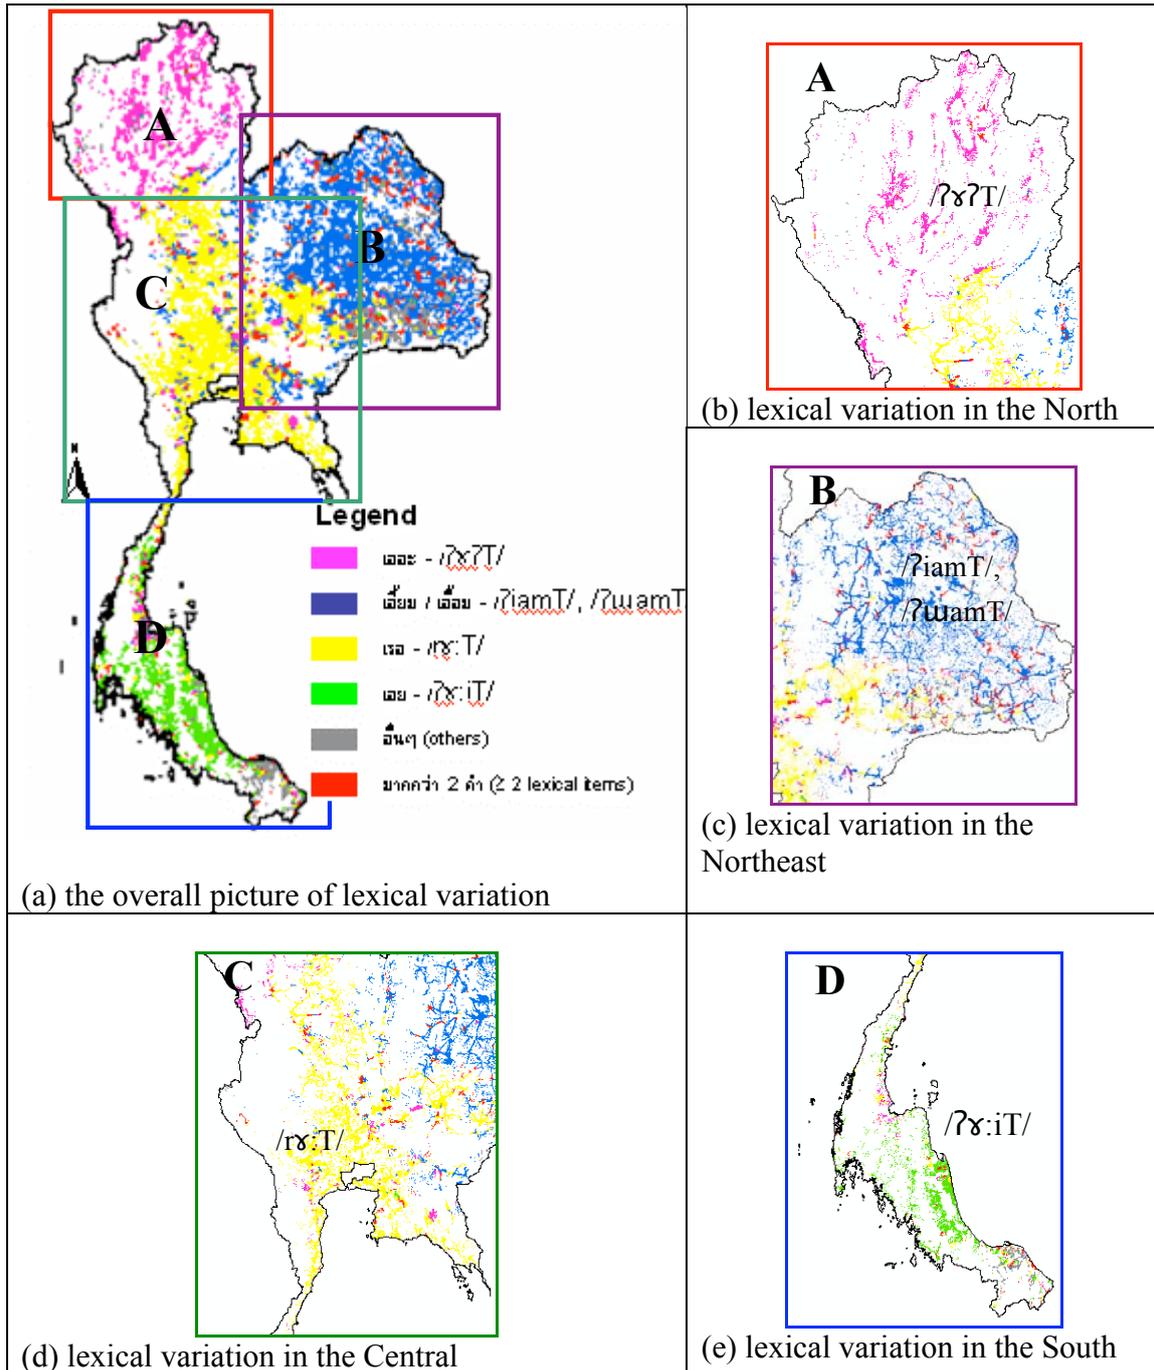

Figure 5: A word map of the semantic unit “to belch” with the magnified area in (a) the North, (b) the Northeast, (c) the Central and (d) the South.

Next, the effect of topography and waterways was investigated through visual observation. In this study area, three noticeable points can be concluded. Firstly, topography plays a key role for the separation between Northern-Central Thai and Northeastern-Central Thai, but not in the Southern-Central Thai. In spite of their

dissimilarities in lexical distribution² as example maps in Figure 6, overall the Northern-Central Thai and the Northeastern-Central Thai boundaries are quite clear and stable. These phenomena can be explained through the investigation of topography. Figure 7 shows the characteristics of the topography of Thailand which can be mainly divided into four natural regions; (1) the North, (2) the Central Plain, (3) the Northeast, and (4) the South. The North is a region dominated by mountains, natural forests, ridges, narrow and fertile valleys. The Central Plain, so-called Chao Phraya River Basin, is a flourishing fertile valley. This region is the richest rice-producing area of the country, irrigated by the Chao Phraya River. Bangkok, the capital of Thailand is located in this region. The Northeast, so-called “Isan” in Thai, is characterized by the Korat Plateau, a rolling surface and undulating hills, watered by the Shee and Mun River. The South is characterized by a long narrow peninsula comprising a hilly to mountainous region. Due to the topographic differences the mountainous region of the North and the Korat plateau of the Northeast can be visibly distinguished from the flat area of the central region as shown in the Figure as a blue dash line. This finding thus confirms the effect of topography on the separation of three major dialects - Central Thai, Northern Thai and Northeastern Thai. In case of Southern-Central Thai in which the topographic characteristics are lacking, other factors, especially historical and cultural contexts e.g. the boundaries between old administrative areas and cultural differences, should be further investigated.

Secondly, waterways, especially through rivers and water basins, present favorable physical environments for settlement which leads to the cluster of one dialect spreading over a large area, especially one clear cluster in the central region and another cluster in the northeastern region in Figure 6 as well as the cluster of subdialects along the waterways in the northern region and the cluster of Southern Thai around the lake, so-called “Songkhla Lake” basin³, in the southern region as shown in Figure 8.

Finally, through the overlay of a topographic map the separation between subdialects/local dialects can be seen and explained through the effect of topography and waterways in the northern region as shown in Figure 8 (left). However, the effect on the separation between main dialects and local dialects in the southern region (see Figure 8 (right)) cannot explain to the overlay of a topographic map. Suggestions to include other factors such as main roads and railways to the analysis is required for future investigation. In addition, it should be noted that, overall, the areas where subdialects and local dialects are located are not clearly seen in this study as these areas have population densities of < 50 inhabitants/sq km. It is thus recommended that

² One significant finding of the previous project, the Word geography of Thailand, is that each semantic unit has its own independent pattern of lexical variation. Some maps show the clustered pattern – the homogeneity of lexical items over a large area, whereas some show the dispersion pattern - a mixture of lexical items covering an entire area. Also some word maps appear as four clear clusters, some appear as three or two clusters, while at least one map appears as a single cluster due to lack of variation.

³ Songkhla Lake is the largest natural lake of Thailand, covering an area of about 1,000 sq km.

for a future study in which subdialects and local dialects are the main focus, adjusting the level of population density is needed.

CONCLUSION AND FUTURE RESEARCH DIRECTION

This study shows how GIS analysis and incorporation of the demographic and geographic features – population settlement, topography, and river transportation – can help improve the pattern of dialect distribution to be more realistic. Results show that shaping dialect maps with population settlement helps explore the dialect patterns and their locations more accurately. Results also reveal the obvious effect of

topography on the separation of major Thai dialects, especially between Northern-Central Thai, between Northeastern-Central Thai, as well as between subdialects in some regions. It also shows the clustering pattern of dialect on the effect of transportation through waterways. The results thus suggest that the analysis gives a geographical perspective which helps detect the spatial pattern of dialect distribution. It also bridges the fundamental understanding between the fields of linguistics and geography in order to explain the impact of the physical environments on human settlement and activities. Further analysis is required, especially the reclassification of population settlements which appear mostly in the border regions of the country inhabited by many ethnic minority groups. Another research direction is to include roads and railways to investigate their impact on dialect change we see today.

Put Yourself in Their Shoes:
Representations of terrorism in post 9/11 literature

“How much can we hope to understand those who have suffered deeper anguish, greater deprivation, and more crushing disappointments than we ourselves have known? Even if the world’s rich and powerful were to put themselves in the shoes of the rest, how much would they really understand the wretched millions suffering around them? So it is when Orhan the novelist peers into the dark corners of his poet friend’s difficult and painful life: How much can he really see?”¹ Orhan Pamuk

One has a strange sensation of déjà vu when reading through Edward Said’s 1981 book *Covering Islam*, written in the immediate aftermath of the Iranian Revolution and in the early years of the Soviet war in Afghanistan, a time when certain Arab countries suddenly caught the attention of a world rather stunned by their taking over prime time media with news of bloodshed, religious fundamentalism, anti-Americanism and a dramatic hostage situation. Now, almost thirty years later, the global public eye is more than ever bombarded with news “covering” Islam and particularly Islamism, which have become the topics of the day after the attacks of September 11 and the initiation of the War on Terror. Sadly, however, the issue of Islam being covered by Western media, pundits and intellectuals remains as thorny as Said perceived it in 1981 and the play upon words in the title of his book implies a question that is still worth asking nowadays: just how much is the West covering up, when it covers Islam in the media and in intellectual debates?

Colonialist mentality, over simplification and crude generalization, lack of necessary knowledge (particularly language related but also cultural and historical), “patent inaccuracy”, politicization, self-interested and “cultural and even racial hatred, deep yet paradoxically free-floating hostility”² are some of the factors Said identifies as plaguing the representation of Islam by Westerners, be they journalists or self-proclaimed experts on the subject. Taking the Iranian Revolution and the American Embassy hostage crisis as case studies of problematic media coverage, he pleads for more (self-) awareness on the side of the authors with regard to “the close affiliation between language and political reality”³. One would think that after the “Politically Correct” revolution of the eighties, the public sphere has become a lot more self-reflexive and less prone towards dangerous generalizations and Manichean traps. Still, some of Said’s remarks could very well describe the contemporary state of things: “...instead of trying to find out more about the country, the reporter takes hold of what is nearest at hand, usually a cliché or some bit of journalistic wisdom that readers at home are unlikely to challenge.”⁴ Although good literature is known to complicate concepts rather than to take on ready-made ideas, after 9/11, writers seemed all too eager to pick up the clichés circulating in public debates and include them in a rather unsophisticated form in their work.

Competing with the media, many novelists rushed to satisfy the public's thirst for information and knowledge with regard to Islamist terrorism in the aftermath of September 11, taking on the role of public intellectuals. Confronted with what has been called, almost to exhaustion, a "return of the real", many fiction writers declared themselves afflicted with a bad case of the writer's block that forced them to ponder their role as artists and the purpose of fiction in what seemed to be a dramatically changed world order, while at the same time they felt an enormous pressure to prove themselves and fiction in general as still relevant in a time of crisis. Not surprisingly, their first responses to the event have come in the form of journalistic pieces, articles and opinion essays and the public's eagerness to take for granted their authority seems to point to the fact that the role of the artist became fused with that of a public intellectual, which makes the reception of their fiction pieces even more problematic. Don DeLillo and Martin Amis were among the first intellectual figures to publish, later extensively quoted, opinion pieces in the days following the attack on World Trade Center, presenting it as a moment of rupture in the history of the US.

The unexpected offshoot of this merging of roles (of artist and public intellectual) seems to entail a radical change in the position of the author vis a vis "the establishment". The counter-cultural figure of the novelist that empathizes with the idealistic anti-hero in his sometimes violent struggle against state repression, which has become so prominent during the sixties, is no longer the voice that provides the counter-narrative to the propagandistic main-stream media, quite the contrary; nowadays authors seem to want access to the main stream and to desire being perceived as authoritative media figures. Martin Amis for instance, in his essays on September 11 and the War on Terror⁵, describes the few days he spend shadowing Tony Blair, following his busy schedule, which included a visit to the British army base in Iraq, and exudes pride at sharing a drink and chatting with the prime minister, even asking him for an autograph for his daughters, and empathizing with his policies up to a certain extent. At the same time, he is a self-declared Islamismophobe⁶ and his many essays and two pieces of short fiction on the subject emphasize what he sees as the utter irrationality of this new type of religious fundamentalism, which he depicts as a new cult of death similar to Nazi ideology or Stalinism and warns of the danger of a politically correct, liberal approach to this topic.

However tempting it may be to trace the origin of the novelists' claims to public intellectual authority in the aftermath of September 11, critics have been referring to such a tendency among writers, which closely precedes the event and is linked with a return of the omniscient narrator in the post-post-modern literature of the late nineties, that seems to have continued in the new millennium. According to Paul Dawson, this new type of omniscience differs from the one espoused by eighteenth and nineteenth century authors with regard to the authority assumed by the narrator: "Contemporary omniscient narrators can no longer claim the luxury of being spokespersons of authority, asserting accepted truths on behalf of a general consciousness. The contemporary omniscient narrator can best be described as a form of public intellectual: a thinker and writer who is able to speak to a general audience on a range of public issues from a base of

⁵ Martin Amis, *The Second Plane: September 11, 2001-2007* (Vintage, 2009).

⁶ *Ibid.* p. x

specific disciplinary expertise.”⁷ Exponents of this new species of omniscience are, among others, Don DeLillo, Martin Amis and John Updike and they make use of it in their portrayal of Arab terrorists in a problematic fashion.⁸

A fascination with acts of terrorism, or organized politically motivated forms of violence have been a constant source of inspiration for Don DeLillo, one of the authors famous for dealing with controversial historical moments and figures in a complex manner. DeLillo’s 2007 novel *Falling Man* includes two chapters written from the perspective of Hammad, a character inspired by one of the real life 9/11 terrorists and it also features another character of German origin, which might have been part of the Baader-Meinhof terrorist group of the sixties. This allows the other characters to speculate on the difference between how a liberal intellectual perceives the radical terrorists of the sixties as different from the contemporary fundamentalist suicide bomber: “Maybe he was a terrorist, but he was one of ours, she thought, and the thought chilled her, shamed her – one of ours, which meant godless, Western, white.”⁹ This thought expressed by one of DeLillo’s characters epitomizes the shift in the representation of terrorism in post 9/11 novels in comparison to the representation of their Western radical counterparts of the sixties. The threatening, violent character used to come from the same culture as the author and they both shared a critical outlook on the same society, although the means they used to express their rebellion were very different. The religious, ideological, cultural and racial otherness of the Muslim terrorist character, as portrayed by a Western author, complicates the act of representation and raises questions with regard to its legitimacy.

The earliest fictional depiction of a real life 9/11 terrorist that this paper deals with appears in the short story *Varieties of Religious Experience*¹⁰, published in 2002 by John Updike, which includes a very brief fictional episode from Mohammed Atta’s life in Florida, in which the character and his companion follow the order to “blend in” with the Americans. Updike describes him as “a stocky young Muslim—called, like millions of his co-religionists around the world, Mohamed” and places him “in a dim, unholy place, a one-story roadside strip joint on Florida’s east coast”, “ordering a fifth Scotch on the rocks”. Updike seems more interested in describing American life as seen through the eyes of a fundamentalist (and the result is not surprisingly a grotesque depiction of Western decadence) than in developing a complex, believable character. In 2006, with his novel *Terrorist*, the author develops his grim depiction of middle class suburban America as seen through the eyes of a fictional teenage jihadist “hopeful” called Ahmad Molloy, who shares the same disgust with the oversexualized environment that he is forced to inhabit with Updike’s fictional Atta: “*Devils*, Ahmad thinks. *These devils seek to take away my God*. All day long, at Central High School, girls sway and sneer and expose their soft bodies and alluring hair. Their bare bellies, adorned with shining navel studs and low-down purple tattoos, ask, *What else is there to see?*”¹¹ Updike’s 2006 endeavor of entering the mind of a terrorist is more modest in

its scope and at the same time more successful than his earlier attempt because his character is fictional and has a hyphenated identity, he is American-Egyptian. The teenage potential terrorist is a self-proclaimed outsider who seeks to preserve his purity through religion, while living in what he deems an impure, corrupted society. Unlike Amis and DeLillo, Updike creates a character that is not meant to be a “realistic” depiction of an actual terrorist, but rather to function as a literary tool in a manner similar to Dostoevsky’s Prince Myshkin in *The Idiot*; a character idealistic to the extreme, which is used for the unmasking of the godless, morally decaying state of the American middle class. Francis Blessington defines the classical terrorist novel as concentrating “on the dilemma of a character who is trapped among often negative alternatives. The character needs to make a choice.”¹² The hero of an archetypal terrorist story (which the author traces back to the 19th century, to Henry James’ *The Princess Casamassima*) is a fatherless, naïve, idealistic young man “crushed between two opposite and corrupt political forces”¹³, who is searching for a father figure and Updike’s Ahmad fits perfectly into this classical paradigm, with his hyphenated identity and moral dilemmas.

Published in the same year as Updike’s *Terrorist*, Martin Amis’ *The Last Days of Muhammad Atta* is an account of Atta’s interior life as he goes through the last preparations before the attack. This, I would like to argue, is the most problematic representation of a terrorist because Amis takes his character completely out of context, presenting him as a killing machine on his way to put into practice what he has been programmed to do, and focuses on very intimate bodily reactions like Atta’s bowel movements (“Now even the need to shit felt right and good as his destination surged towards him”¹⁴, is one of Atta’s last thoughts) and sexual frustration (which incidentally are the only elements that make this character human) and less on his psychology, or the reasons behind the choices that led him towards this last day. The character’s interior monologue is seeped in self-hatred and expressed in a voice more similar to that of the author than that of the real life terrorist.¹⁵ Dawson relates this propensity of the new type of omniscient narration, in which characters have a voice disturbingly similar to that of the author, with the fact that the author acts as a public intellectual figure and that the omniscient narrative voice claims its authority from an interrelation with the author’s extrafictional voice that is familiar to the public from “the extraliterary publications of the historical author”.¹⁶ A patchwork of omniscient narrative voice, docudrama and essay, Amis’ narrative strategy is extremely undecided and confusing for the reader. The story seems a pointless, absurdist exercise in imagining what it felt like to be in Atta’s skin in the last hours of his life. “No physical, documentary, or analytical evidence provides a convincing explanation of why [Muhammad] Atta and [Abdulaziz al] Omari drove to Portland, Maine, from Boston on the morning of September 10, only to return to Logan on Flight 5930 on the morning of September 11”¹⁷ is a quote from the *The 9/11 Commission Report* that Amis uses as a motto for his short story and could suggest that the author’s endeavor was that of filling the gaps in the narrative of the event that non-fiction cannot provide.

¹⁷ *Ibid.* p. 95

“In the terrorist novel we find no absolute answers, but neither do we drift into absurdist existentialism or postmodernist claims of unknowability. The characters waver and decide, we see their fates, the authors present their cases, and we judge their validity. What we want most from the terrorist novel is to know and experience why someone chooses terror. We want to be inside the mind of the terrorist.”¹⁸ Amis does a terrible job at presenting Atta’s case in his short story, if that is even his intention, and, unlike Updike, he departs completely from the classical terrorist story line, creating an undecided concoction of the essay form with the fictional recreation of real life events, spoon-feeding the reader with clichés and leaving little room for interpretation. Grouped together with Amis’ essays and articles written from 2001 to 2007 in *The Second Plane*, the short story becomes less disturbing than it appears when read as an independent piece of fiction. The six-year interval allowed Martin Amis to develop and refine his initial response to the attacks.

Nonetheless, his more elaborate and memorable ideas on the subject become evident in his many articles rather than in the two short works of fiction, which may confirm Amis’ fears, expressed in the immediate aftermath of 9/11, with regard to the irrelevance of fiction in the face of such a monumental and painful event.¹⁹ The most elaborate and complex of these essays/articles is *September 11: Terror and Boredom*, which first appeared in 2006 and is as opinionated as Amis’ earlier takes on September 11, but it allows even his most controversial statements to brew and expand. Mostly a personal essay on the age of global terrorism and its consequences, *Terror and Boredom* also makes reference to one of Amis’ abandoned pieces of fiction, written from the perspective of a “diminutive terrorist”²⁰ called Ayed and entitled *The Unknown Known* (based on Donald Rumsfel’s famous and often ironized discourse on the Iraq war). In this particular essay Amis offers a rare outlook into the inner world of the author and his struggle with a topic, laying bare the process of fiction writing and, in this case, the possible reasons for its failure. What makes this perspective different, and perhaps more legitimate politically speaking than his short story having Mohamed Atta as a character, is that fact that the author lays bare his tools, political views, biases and sources:

“There is almost an entire literary genre given over to sensibilities such as Sayyid Qutb's. It is the genre of the unreliable narrator - or, more exactly, the transparent narrator, with his helpless giveaways. Typically, a patina of haughty fastidiousness strives confidently but in vain to conceal an underworld of incurable murk. In *The Unknown Known* I added to this genre, and with enthusiasm. I had Ayed stand for hours in a thicket of nettles and poison ivy, beneath an elevated walkway, so that he could rail against the airiness of the summer frocks worn by American women and the shameless brevity of their underpants. I had him go out in all weathers for evening strolls, strolls gruellingly prolonged until, with the help of a buttress or a drainpipe, he comes across a woman 'quite openly' undressing for bed.”

¹⁸ Blessington, p. 116.

¹⁹ Amis quoted in **Mishra**, Pankaj. “The End of Innocence”. *The Guardian*, May 19, 2007

²⁰ Amis, p. 63

Since Mohamed Atta, or any of the 9/11 terrorist didn't leave any written accounts behind, Sayyid Qutb, who is often referred to as the father of today's Islamist terrorism, seems to have been a great source of fascination, but also of inspiration and a point of reference for both Updike and Amis, his memoirs offering a unique insight into the mind of an Islamist. It is particularly the excerpt in which Qutb writes about his life as an exile and student in the US, in the late fifties, his diatribes against the lack of morals of the society in which he is a guest and the open sexuality of Western women that have been incorporated by the writers in their work and adapted to suit the perspectives of their terrorist characters, be they fictional or based on real life ones:

"The American girl is well acquainted with her body's seductive capacity. She knows it lies in the face, and in expressive eyes, and thirsty lips. She knows seductiveness lies in the round breasts, the full buttocks, and in the shapely thighs, sleek legs — and she shows all this and does not hide it."²¹

Being the most recent and allowing a certain emotional distance from the event to grow, Don DeLillo's take on the 9/11 terrorist character is, I would venture to declare, the most complex fictional representation of the three discussed so far. The character, despite being confusingly called Hammad, seems to be based less on Mohamed Atta and more on Ziad Jarrah, the hijacker of the United 93 flight, who has been painted a more human face by the media on account of his westernized Lebanese background and his relationship with a German-Turkish woman. The sexual frustration cliché is employed by DeLillo too, but his character is also allowed to have doubts regarding his mission, and, most of all, he is endowed with motivation for his violent act, that is what the author called "the intensity of a plot"²², the immense power of the bond between men plotting together. The two chapters dedicated to Hammad's daily life in Hamburg as part of the by now famous Hamburg Cell and later in Florida during the flight training period preceding the attacks are in many ways similar to the episodes narrated by Amis or Updike. Using the old trick of defamiliarization, DeLillo too cannot resist describing banal daily life in the US through the estranging perspective of a fundamentalist, but the outlook of his terrorist is less bitter and angry than that of Amis' Atta. On the other hand, the novelty of DeLillo's work springs from the democratic narrative structure of his novel, which puts the perspective of the terrorist on equal footing with that of characters that are survivors of the attack on World Trade Center.

Comparing terrorist novels written after 9/11 by authors coming from Muslim backgrounds with those by Western authors, a very significant formal difference becomes evident. The non-Western authors, who one would think have more authority in "putting themselves in the shoes" of a jihadist, choose a less authoritative auctorial strategy and a more complex point of view that does not offer the reader direct access to the mind of the terrorist character, framing the story in such a way as to create a multifarious context for the act of violence and allowing the reader to

²¹ Qutb quoted in: Robert Siegel, "Sayyid Qutb's America: Al Qaeda Inspiration Denounces US Greed, Sexuality", *NPR* online, May 6, 2003, <http://www.npr.org/templates/story/story.php?storyId=1253796>

²² Mark Binelli, "Intensity of A Plot: Mark Binelli interviews Don DeLillo", *Guernica*, July, 2007, http://www.guernicamag.com/interviews/373/intensity_of_a_plot/

empathize however minimally with the character's dilemmas.²³ American and British authors on the other-hand (Amis and DeLillo in particular, while Updike only to a certain extent) opt for an omniscient narrative voice, which is paradoxically very restrictive context-wise; that is they use an extremely decontextualizing third person narrative. While digging deep into the thoughts of their terrorists in an instant of time, they give no background for the violent choices they make in these limited episodes of their lives that the reader has access to through the mediation of the omniscient narrator. I would like to call this type of narrative strategy, decontextualizing omniscience.

The problematic part of Amis' and DeLillo's depictions of the real life terrorists' fictional inner lives is the fact that they have chosen intimate episodes and they take their characters completely out of their personal, familiar and religious background. The question underlying the endeavor of both authors seems to be how these characters could be so infused in Western daily life, have lunch at Pizza Hut and shop at Walmart, and then continue with the attacks so coolly. The realism of the third person omniscient narrative authors opt for reveals their desire for authority, but also the uncertainty with which they step on the ground of representing real life terrorists through fiction and the conflict arising between auctorial voice and the fictional voice of the character. Unlike the first person narrative, the omniscient narration never allows complete identification with the voice of the character; the narrator has unlimited access to the mind of the character (which entails a position of power), but the access is never direct, the identification is never complete and the character is represented as "other". The only attempt at a first person narrative from the perspective of a fundamentalist terrorist was Amis' abandoned piece *The Unknown Known*, which may have failed precisely for this reason, proving that the issue of identification with the subject is at the core of the problem of these works. Commenting on Qutb's memoirs, Amis notices that, as a reader, he cannot grasp or understand the real man's character from his writing and all he is left with is the fundamentalist rhetoric meant to cover "an underworld of incurable murk". This "incurable murk" and "the unknown known" the title makes reference to "is of course God"²⁴ and the religious motivation of the terrorist character, which is absent from all representations and it might be inaccessible to the "godless" Western author, who in the end manages to do nothing more than hold a distorted mirror to Sayyid Qutb's thoughts.

Hal Foster has appropriated Walter Benjamin's Marxist idea of "the author as producer"²⁵ (who argued that the politically engaged author need not only align himself ideologically with the proletariat, but must also reconsider his means of production, his technique that is; he must support revolutionary content with an appropriately new form) and has adapted it to the equally politicized age of multiculturalism: "Today there is a related paradigm in advanced art on the left: the artist as ethnographer... But the subject of association has changed: it is now the cultural

²³ See Blessington's discussion of *The Attack* (2005), a terrorist novel written by the Algerian author Yasmina Khadra, Orhan Pamuk's *Snow* for formal complexity, and the Palestinian film *Paradise Now* for a contextualized outlook on suicide bombers.

²⁵ Walter Benjamin, "The Author as Producer", *New Left Review* I/62, July-August, 1970, <http://newleftreview.org/?page=article&view=135>

and/or ethnic other in whose name the artist often struggles.”²⁶ The danger for the artist as ethnographer remains nonetheless the same as in the case of the bourgeois author embracing the cause of the proletariat, namely of that of “ideological patronage”²⁷, or the fallacy of “othering in identification”: “identification with the worker confirms rather than closes the gap between the two, through a reductive, idealistic, or otherwise misbegotten representation”.²⁸ The authors dealt with in this paper also partially embrace the role of “artist as ethnographer” in their attempt of putting themselves in the shoes of “the cultural and/or ethnic other”, but with an even thornier twist: while Foster’s problematization of the role of the artist implies a bona fide identification with the cause of “the other”, that is most probably not the case of the Western artist representing “the terrorist other” in the aftermath of a painful real life event that has had traumatic effects on his culture, with repercussions that have not sedimented yet.

Like Benjamin who called for a formal alignment with the political claims of the engaged author, Foster too adheres to this idea with regard to the work of “the artist as ethnographer”, calling for more self-reflexivity on his part, that is for a type of “work that attempts to frame the framer as he or she frames the other.”²⁹ Looking at Amis’ *The Last Days of Muhammad Atta* from this prism, it seems that it is its formal conservatism and particularly, as mentioned earlier, its highly problematic use of omniscience and the third person narrative that accounts for its literary failure. It is in the non-fiction framework of the essay that Amis manages to achieve what he cannot do through fiction: self reflexivity and more transparency. The essay form allows him to frame himself, which is exactly what is missing from his omniscient piece of fiction and consequently his non-fiction account of a self-declared failure to create a literary piece is more rich and complex than the short story on a similar subject that he didn’t abandon and actually published. The two chapters written from the perspective of Hammad the terrorist in DeLillo’s *Falling Man* suffer from the same lack of self-reflexivity and formal conservatism, but they compensate for this fault up to a certain degree by being part of a novel constructed through a multiplicity of voices, some of which manage to complicate the intradiegetic discourse on terrorism.

Updike on the other hand, simply writes a good old school terrorist novel which fits the framework perfectly according to Blessington and deals with the universal theme of youthful idealism confronted with a faulted society. The fact that this is an age old conflict is both the best quality and the greatest drawback of this novel, since it reenacts the coming of age narrative typical of the Western novelistic tradition, in an altogether new political and historical context, but, by focusing on the universal, it says little about what is particular to this age. Updike’s terrorist has more in common with the Western fictional Holden Caulfield than with the real life suicide bombers. After travelling the same thorny path as Amis and DeLillo with his short story from 2002, *Varieties of Religious Experience*, in which he includes a short account written from the perspective of Mohamed Atta among the perspectives of several New Yorkers witnessing the attack on the tower and its collapse, Updike chooses a more modest and politically safe path with

²⁹ Foster, p. 200

his 2006 *Terrorist*. The motto of this paper, a quote from Orhan Pamuk's novel *Snow* (which also deals with fundamentalism and manages what none of the Western works discussed here manages: it combines a universal outlook on the subject with one deeply rooted in a local and historical background), taken from Updike's own review of this work, indirectly shows that the author has struggled with the issue of representing the other and in *Terrorist* he has chosen to avoid confronting the other by doing away with his otherness altogether and making him a contemporary version of a literary typology.

He says, she says: the dynamic rumour process on the internet forum

Yin Bai¹ Zeyi He²

1. Introduction

With the internet becoming a significant information source, more and more people have started to seek or spread information online. Of course, the information published online is unable to provide the same level of credibility as traditional communication forms. However, anyone can freely publish information online; indeed, they can provide changes, which suggests that Internet communications speed up information diffusion and enlarge the scope for people getting involved in communication. However, considering the lack of monitoring systems, online information is easily accessed and modified in many ways. Interestingly, some non-verifiable online information, even rumour, has not only spread widely, but also seems to be accepted as truth by some online users (Marett and Joshi 2009).

In the traditional media environment, studies on the dynamics of rumour have achieved many meaningful results. In fact, both diffusers and audiences in mouth-ear communication are certain and their communication is specific designed for each other in some extent. Therefore, in the traditional media environment, the reliability of spreading information is related to the trustworthiness of diffusers judged by audiences. In this way, absurdity might be believed if expressed by someone trustworthy.

However, these results might not apply to online media because of following reasons: first, there is no certain definition of both diffusers and audiences online as sections of user populations as both use self-chosen IDs to describe themselves; second, online diffusers and audiences are normally impersonal. The diffusers who post the information online normally do not predict audiences who will read their information, which means no emotional interaction between them. This means that there is no leeway given to online posters, because no one will easily believe posts from strangers. On the Internet whether information inspires enough trust for people to begin spreading it correlates to the credibility of information rather than personality of diffusers. Based on this, online rumour cannot be a “pure lie” as no particular audience could be theoretically affected. Also, due to there being no emotional connection between online diffusers and audiences, there is a lack of motivation to spread information. Thus, diffusion of rumour in the online environment requires matching audiences’ knowledge due to confuse them to distinguish between fact and fiction.

Rumour is theoretically defined as “an unverified account or explanation of events, circulating from person to person and pertaining to an object, event, or issue of public concern” (Peterson and Gist 1951). In this identify, two features have emphasized: speed of transmission and the number of people involved. When rumour circulates on the Internet, both the speed of transmission and the number of people involved are greatly affected. In this paper, “online rumour” will be explored based these features, being distinct to offline ones. To observe how online rumour is created, accepted and spread, we ask three questions:

¹ Central South University, China;

² University of York, United Kingdom

- ◆ What kind of content constitutes “credible information” for online audience?
- ◆ In the online communication environment, what is the motivation to disseminate information to public?
- ◆ What kind of online information attracts people to make follow up posts?

These questions concentrate on the dynamics of online rumour as they describe the spread information and the motivations of those who spread it.

2. related literature

Rumour is normally fostered by collective sense of uncertainty or threat (DiFonzo and Bordia 2007; DiFonzo and Bordia 2007), that allow it to shape a series explanations for a particular event, and might further influence public action (Peterson and Gist 1951).

In studies of rumour, scholars have divided the concept into “wish” and “dread”: two types according to the orientation of specific rumour information (Walker 1996; Bordia and Difonzo 2004). “Wish” focused rumours give positive information to audiences, whereas “dread” based rumours are inclined to spread negative concepts and information. For instance, in rumours of charity donation, a “wish” might be that a popular celebrity has donated £1 million, which might lead to a new donation vogue. On the other hand, a “dread” rumour might be that fundraisers working for big charity defalcate. Although we have to be aware that both possibilities might be rumour, a “wish” could encourage donations and give people who need help more hope. Likewise, rumours that defame the reputation of charities could damage donor motivation and enhance the problems of those they serve.

Moreover, studies of rumour in traditional communication forms claim that they spread more dreads than wishes. In Walker’s study (Walker 1996), he classified all 200 rumors currently moving amongst college students and then defined 113 dread rumours and 54 wish rumours (the rest could not be identified). Dread rumours are easier to create and transmit, because “loss control”³ can be achieved from dread rumour but not from wish rumour (Walker 1996).

On the other hand, rumour has been investigated to explore the dissemination process. French sociologist Edgar Morin first suggested that the creation and diffusion of rumour could be predicted. He deemed that the rumour process, like a disease, goes through a series of transformations, including “incubation, propagation, metastasis, opposition, resorption and residua” (Morin, 1971, cited in (Kimmel 2004):100). Further studies developed the idea of a rumour process, dividing it into three parts: stage-birth, adventure and death (Fine and Rosnow 1978; DiFonzo, Bordia et al. 1994; Kimmel 2004), “Stage-birth” provides a ‘fertile breeding ground’ (Kimmel 2004) for rumours to grow. This situation can be considered as a product of the heavy demand for information and related emotional resonance in our multimedia 24-hour news cycle. The production of rumour particularly depends on a high level of fear and anxiety, which could persuade people involved in information transmission to embellish ‘facts’ in order to alter

³ Loss Control: reducing and eliminating the occurrence of undesired events through enforcement of established procedures, seeking solution and continuous evaluation.

the psychological affect of reading original information. The length of the adventure and death stages is influenced by public interest in the specific rumour and the anxiety it causes.

There are obvious differences between rumour studies online and offline, for instance, the latter can be mixed up on the other information expressed by mass media. These mass media rumours can, along with other information, attract trust or be endowed credibility by strong media entities (Kimmel, 2004: P 109). However, online communications, especially online forums, do not rely on the credibility of the mass media, nor has increased reputation by companying other fact news. Moreover, online platforms might be capable of changing attitudes and behaviours in rumour dissemination through anonymous posting policies.

Meanwhile, in online communities, many researchers have concentrated on textual conversation (Kollock and Smith 1999). Observing textual conversation, (Wellman and Gulia 1999) claimed that information transition in online communities and its diffusion behaviours have been affected by anxiety feelings and peer-group support. More interestingly, (Burnett 2000) argued that in their earliest stages, users of online forums just surf online to skim-read web pages without real purpose. This behaviour is similar to constantly switching television channels to look for interesting content, although TV audiences probably do not have certain definition of “interesting content” (Marchionini 1995)106). Participants join online forums to customize their content, taking part in such congenial “information neighborhood” environments. In this comfortable state, they look through any interesting information by opening links.

At present, there are few scholars discussing the role of rumour in online forums. (Marett and Joshi 2009) has studied the motivations behind disseminating rumour and placing other information on online forum by sample surveys using an open chat room. He gained 471 valid responses from 651 questionnaires, in which only 280 respondents had posted information. This study claimed that disseminating rumour has different motivations for actual posters and ‘lurkers’⁴. However, this result might be limited by the fact that its data was collected from respondents’ subjective interpretations, which could be nothing more than personal inclinations.

3. Discussion

3.1 Analyses of credit given to online rumour

The value of online rumour is often a subjective judgment made by audiences, in other words, how much audiences think they can believe what they read. As discussed above, the credibility of online information generally cannot be accurately estimated by audiences as a result of anonymous communication and the impersonal nature of the Internet. Therefore, online audiences can only estimate reliability judging by a personal assessment of information quality and their own background knowledge. Thus, it seems that only online information that matches audience expectations would be considered trustworthy.

To further explore this possibility, we carried out a questionnaire survey on three regions and received 300 responses. We chose two respondents who had personally started rumours: first is

⁴ Lurker normally represents people who only read online and never post anything, whose activities did not leave trail like lurker.

“Nongfu Spring”, one of famous mineral water in China, includes white arsenic and second is “collapsing buildings” in Shanghai. After these rumours spread, relevant organizations made clarification announcements and we asked interviewees whether they would put their trust in official statements to reverse such rumours. In this survey, 93 percent believed the official statement regarding the first rumour; but only 23.6 percent for the second.

A majority of our respondents claimed they believe these official statements because it is ‘impossible’ that arsenic would get past quality control so this official statement confirmed their existing knowledge of the beverage in question. However, responses show that it was too difficult to understand the official statement in the second case because it included too many architecture terms. Additionally, this explanation did not match public expectations with some respondents questioning the reasons given. Official statements in the second case failed to find recognition in common audiences, thus making them question the rumour as given.

This survey suggests that rumours do not gain wide dissemination if they do not match audiences’ prior knowledge and expectations. Furthermore, if some factors matching them could be added in, trustworthiness of this rumour could be dramatically increased.

3.2 Analysis of expressed motivation under communicated environment

Impersonalization of Internet communications dispels structural intensive relationships, which compel people to express opinion. Therefore, it is possible that some people would be willing to express opinions in the real world, but be entirely silent on the Internet. The way people talk about the weather at the beginning of a conversation, provides us with a good example. In the real world, people normally do this as they feel stressed if there is silence during a meeting, whereas, this kind of problem never exists on the Internet.

To explore the motivation to communicate under non-stressful conditions, our project specifically designed a set of experiments under the controlling condition. In order to explore this, we undertook experiments with the students of this university in January, 2010. The participants of these experiments were 302 university students. First, we organized a meeting of all 302 students, we then asked them to complete a survey aimed at collecting feedback on their lecturers. They were encouraged to submit this questionnaire within one week by posting it into a mailbox located at the central entrance of the teaching hall. To eliminate any pressure they might have been feeling, students had been informed that the questionnaires were anonymous and that there would be no personal consequences relating to participation in the survey. As experimental results, we had 90 completed forms after one week, which have been labeled ‘result A’.

Three days later, we did the second experiment: we handed out the same questionnaire to a set of students without notice when they were attending a casual meeting and they are required them to be filled in before the students left. The valid tables we collect back are 221 in total. This experimental result is marked ‘B’. These experimental results are shown in the figure 1.

Figure1: Experimental results comparing the affect of differential pressure scenarios

Experimental result	Stress state	The number of respondents	Review state	
			Good Teacher Rating (%)	Bad Teacher Rating (%)
A	Almost non-stressful	90	61.2	1.84
B	Absolute stressful	221	62.4	0.96

The experimental data above indicates that the number of people who express became increase as corresponding stress arises, meanwhile, the results of ‘good rate’ are similar but the ‘non-good rate’ is deceased as half. In this case, we have the conclusion as follows:

- 1、 Under the non-stressful conditions, people tend to keep their opinion to themselves;
- 2、 Under less stress inducing conditions, people seem more likely to express negative opinions and assessments of their situation.

As we know, our willingness to express opinions is based on external conditions they are interacting with and that their responses are likely to be based on their interpretation of the other’s disposition. The interpretation of these tendencies is complex, but in the very first instance both sides can make two basic judgments: (1) whether the actions of both sides are reasonable to maintain interaction; (2) the relationship between both parties’ actions and individual interests. If one party considers an action to be unreasonable or just unnecessary we choose not to perform this action. Furthermore, if one party still considers the action in question to be desirable they are likely to choose the most personally beneficial course of action. According to theory of value (Perry 2007), in terms of the interest of equal value, it is considered that the interest of loss is far bigger than that of gain, that is to say, your pain for loss of \$100 is far bigger than the happiness of being rewarded with \$100. Satisfaction comes from the interest received while dissatisfaction from the loss of interest. So, naturally, the expression of dissatisfaction always takes precedence over that of satisfaction. This analysis also has been approved by other studies to describe that dread rumour is more popular and easier to spread out than wish rumour.

Now we can get back to Internet rumours. As the source of such rumours is usually unknown, they do not necessarily begin conversations, therefore, the spread of each rumour needs a more powerful drive of interest, and this is often provided by audience dissatisfaction triggered by the rumours. In fact, as long as we have a close review of the most widely disseminated rumours within the last year, such as “High school students beaten to death by a local government authority”, “the inside story of Super Girl”, “Fake photo of the extinct south China tiger” etc. all of them provided a trigger for a release of public anger about unfair social events, such as unjust legal executions, corruption and adultery.

3.3 Concerns over social profit triggers for the dissemination of online rumours

Thus far we have explored individual motivation to spread rumours but online versions are often generated by a group of unrelated people who take it upon themselves to spread an original message. In this case, we have to ask what condition give rise to the motivation to be involved in

such process.

M. He (2007) has provided statistic results on categories of popular online topics in 2007. In his study, Chinese internet forum has their own focal sights: Firstly, the concern on ethic and moral problems and citizenship education (19%) surveillance of society and media (19%); secondly, the concern of poverty (14%); thirdly, the maintenance of civil right (12%). Meanwhile, the condemning of violence (including social violence and family violence) and promoting a society with high ethical standards is portion of the most important online topic. Furthermore, pornography and patriotism are also the hot topic there on his research. In the respect that all these topics are associated with the great social concerns, they play a recurring role in Internet discussion.

However, such online events are not the equivalent of online rumour, although their generating mechanisms can be consistent (fevered discussed and extensive forwarding). Therefore, the statistics above inspires how we design rumour research. It is evident that the information of significant social issues and conflicts are spread widely on the internet. As discussed, the following posts in online forum represent possibility of diffusing rumour. Our project thus designed to investigate a number of following posters as the statistical sampling for analysis. The designed analyzing logic is as follows:

Firstly, we selected the most popular portals for analysis, because their user demographics are closer to a comprehensive cross section of web users instead of limiting our enquiries to the specific interest groups that might use less mainstream websites. According to this standard, we selected 'Tencent' website forum to be object of our studies. After making this decision, we randomly selected from all the information linked on the 'tencent' front page in one day. Finally, we analyzed all following posts over 24 hours. The reason for choosing 24 hours as a experimental period was to avoid incorrect results overly influenced by posting time and the lifestyle differences of web users.

Following the method above, 370 posts were selected and classified as politics, military, economics, education, culture, sports, entertainment, and so on. Moreover, the number of following posts per hour were calculated and sequenced. In the appendix, we indicate the first ten percent to represent the general view of following posters.

The table on the appendix shows the view of following post in one of popular Chinese website, from which we can have a general idea on the topics and discussion phenomena of online forum in China. It is particularly worth noting that a large proportion of following posters focus their attention on politics, military, and economic topics. Additionally, cultural topics especially related to national cultural identity or traditional culture confidence, also seems to give rise to heated discussion. In contrast, entertainment and posts are subjects so far less discussion. It is suggested that state and civil issues more likely to attract population's interests. Also, these topics generally evoke intense sentiments in some extent.

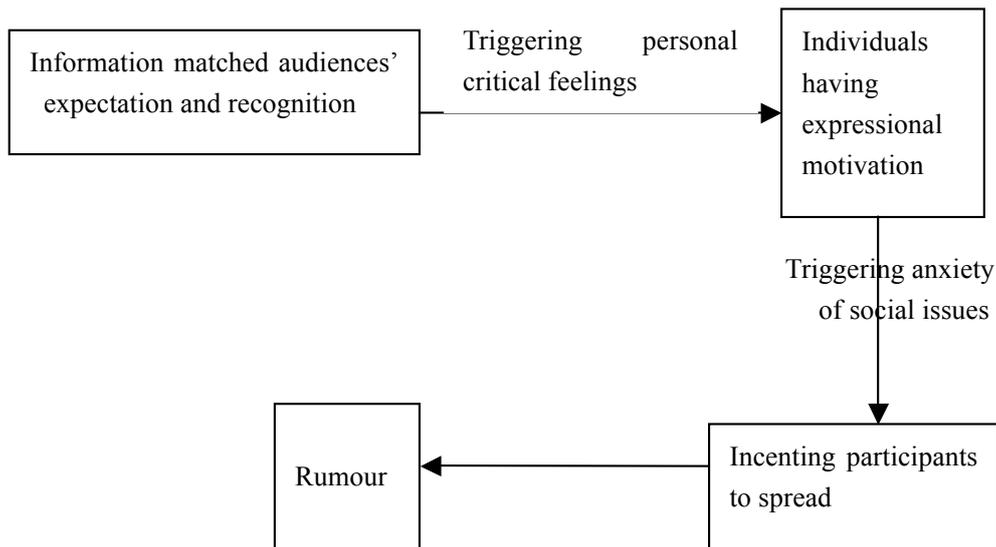

Meanwhile, unlike the entertainment and gossip that seem to dominate interest in traditional media,

the online audiences seem to be more events focused, especially events related to politics. The participation of online information spread might require more personal involvement as we discussed above, which are easily raised by public issues rather than entertainment. In another word, stars' gossip only make fun but political motion could change life. Thus, personal profit could cause rumour spread regarding this analysis.

4. Conclusion

Accordingly, we can illustrate the process of online rumour dissemination as follows:

Figure 2: workflow of online rumour process in internet forum

This figure shows how we generate online rumour and how they relate to the intent behind rumormongering and the validity of information. The spread of information relies on its content matching audience expectations as well as inspiring broad interest. It is inevitable that information could be changed during transmission process. The 'pure reality' of information could thus add more factors to a comprehensive diffusion but this exceeds the focus of this paper and will be explored as part of a future research agenda.

Abstract

The application of information and communication technology today affects almost everyone in daily life. Information transmission system allows people to transmit the real time images, voices and even environmental atmospheres. The living lab experiment in this study is to observe how people use the existed information transmission service on computers to do the long-distance collaboration. By observing the participants' behaviors and analyzing the transmitted data, this study is to understand the physical problems by operating the computers and mental situation during long-distance communication.

This is a qualitative research. The research method includes experimental observation and interviews. The participants are 5 groups of college students. Each group has 2 participants and they are separated into 2 rooms in living labs. The participants are required to live in the living labs for 7 days and work on 1 task, which the participants must cooperate to finish by computers and the Internet. The data are collected from the result of the tasks, transmitted texts and files, and the interviews transcripts. All the data are analyzed by data mining. This finding could provide designers and engineers a user-centered consideration for building the future communication or collaboration platforms.

Introduction

Due to the development of information communication technology, people could communicate with others all around the world easier and faster. The application of communication technology today affects almost everyone in daily life, which brings new working styles and provides more opportunities to have oversea cooperation.

CSCW (computer supported collaborative works) is an integration of people

teamwork and computer based platform (Paul, 1991). This computing platform breaks the limitation of time and distance, which helps people at different areas working together. This concept is also been developed on the computer aid education.

No longer working together is only happened while people are staying at the same place. Ancillary technology products allow two groups to cooperate on one assignment, even when these two groups are located in two ends of the earth. However, the phenomena has been doubted with the negative cooperation experience and working efficiency. Thus, this research is based on the user center concept to find out the undiscovered problems and needs for long distance cooperation by living lab experiment.

Living lab experiment offers an opportunity to see how everything works in real life. The idea of using living lab experiment is a fulfillment of open innovation concept, which allows more variables to exist at the same time. By observing the participants' activities, more undiscovered factors are found.

This research includes experimental observation and depth-interview. The experiment is focusing on observing the time that participant would use or need MSN or other media and how they use it for team cooperation, understanding the content to understand the differences between MSN and other Media for team cooperation, and the user expectation before and after using MSN or other media. By observing those points, the data from participants are collected. Data mining would be used for analyzing the collected data to fetch out the undiscovered keys. These factors might benefit for future design or investment.

Living Lab Experiment Design

This research intends to create working together atmospheres, and let group members finish practical mission through video, audio and other interactive behavior. Participants are college students and they are divided into groups. Each group contains two members, a male and a female. Group members are separated to live in the living labs, which are two rooms in student dormitory for one week. During the period of living in the labs, the participants are also asking to finish a task before deadline.

The topic of the task is "mobile". The participants has to find out 30 keywords that related to the word "mobile" and make a presentation file to introduce the word "mobile" or other nouns that related to "mobile". This task is designed to ensure that participants have the same goal to work on and have interaction. The task result is also a standard to do the valuation and comparison among different groups.

The equipments setting in living labs are including participant's daily supply, the Internet connection and webcams. Computer will be placed on the cabinet with

pedestal nearby table to avoid the video taking the whole room. The Internet setting will allow MSN to connect two rooms. This experiment is not to emphasize on constraining the behavior of exist communication behavior, but to study the participant's need and the weakness of exist communication when the participant use other communication tools.

There are three interviews with each group. The first interview is held before participants live in to the living lab. The interview content will include the user experience with using 3C products, communication habits and the expectation of Hyper-window. The second interview is held on the third day during the experiment, which is to realize the participant's experience and the way of doing cooperation.

The last interview is held two days after the experiment. Each Participant will be required to fill up a sample questionnaire and have a depth interview after finishing the experiment. Thus, the depth interview is to understand the user's experience and user's suggestions. This information would be compare to the user's daily behavior, which is investigated before the participant living into experiment field. The comparison will show up the relation between user behavior and user experience of using MSN or other media.

The collected data from the participant's discussion are MSN text record, 30 keywords and power-point file. There are audio files, which were recorded from the interview. These audio files are also translated into text files.

Data Analysis & Result

Data-mining method is used for analyzing the data. By comparing the texts from the conversation contents, MSN records, and tasks results; there are some similar situations and differences among groups showing up.

The similar situation among different groups

- Transmit file by MSN
- Send Links to the other person
- Leave off line messages to the other person.
- Confused about the task at the first beginning
- Using search engine during the discussion

The difference among different groups

- It is easy/hard to find the other person to have a discussion.
- The task is kind of difficult/easy.
- Having voice discussion by MSN is convenience/ not necessary.
- The imagination of using Hyper-window to complete the work.

Conclusion

Living lab experiment would bring out huge amount of data. To clarify specific situation and integrate the data into information is an essential process in this experiment.

The finding from the experiment is that all the groups mentioned a common problem. The first, Person at one side could not know what the other side person is working on. In the reason, they have to send their current working file to the others to check that they are both working on the same direction. Second, search engine is an essential serve in this experiment. Participants might use text or conversation to transmit their thoughts. However, their ideas were basically from the search engine. This experiment also points out the participants characteristics that would directly affect the experiment are sexual, personal attitude, study department and mother language.

The finding of these factors for long distance cooperation from users is expected to provide a user-centered consideration for building the future communication or collaboration platforms.

A Journey to the West: Hong Kong Film Auteur Wong Kar-wai's Response to Globalization?

Author: Xiaorui (Sherry) Xu

Film Studies, School of Humanities, University of Southampton, United Kingdom

Introduction

Owing to the provocative cinematic imagination evident in his films, Wong Kar-wai has come to be regarded as the 'most artistically adventurous director'¹ in contemporary Hong Kong cinema. Wong's audiences are afforded the opportunity of witnessing a visually structured portrayal of melancholy love romance intertwined with an obsessive pursuit of lost time and memory highlighted by an embedded sense of nostalgia. Frequently absent from his artistic conception are concerns with linear narrative structure, as time and space are often ruptured and distorted; this is meant to resonate with the impermanence of human love, relation and the loss of memory. The multi-layered visual expressivity of his films has propelled Wong to be regarded as Hong Kong's unique 'auteur of time'². Ever since his directorial debut *As Tears Go By* (1988) brought him a nomination for Best Director at the highly prestigious Hong Kong Film Awards in 1989, he has maintained his position at the forefront of Hong Kong's auteur cinema with works such as *Days of Being Wild* (1990), *Ashes of Time* (1994), *Chungking Express* (1994), *Fallen Angels* (1995), *Happy Together* (1997), *In the Mood for Love* (2000) and *2046* (2004). Most of these films have not only won numerous domestic and international film awards for Wong, they have also resulted in him becoming the subject of an extraordinarily high number of academic studies in both East and West. Most of these have focused on the visual richness, complexity, thematic portrayal and postmodern appeal of Wong's cinema. For example, in discussing the subjects of Wong's thematic portrayals, film scholar Vivian P.Y. Lee has noted that 'from the early films to the latest, the perennial themes of frustrated love, time, memory, and nostalgia have sustained a haunting presence in Wong [Kar-wai]'s cinematic imagination.'³

In 2007, Wong made his Hollywood independent debut *My Blueberry Nights*, featuring A-list stars Jude Law, Natalie Portman and Rachel Weisz. This foray into Western filmmaking poses some very interesting questions, such as to whether Wong's transfer from the East to the West was simply an "overnight event" or the result of a more protracted "journey". Also, did Wong consciously adapt his distinctly idiosyncratic filmmaking style, through the "recycling" of his earlier Hong Kong films, in the making of *My Blueberry Nights*, or did he depart from his established repertoire in an attempt to specifically target the American film market? My intention in this paper is to attempt to

answer these questions through an analysis of some of Wong's work leading up to *My Blueberry Nights* and an analysis of the film itself.

A Journey to the West

Inspired by the short novel *On Seeing the 100% Perfect Girl One Beautiful April Morning*, by Japanese writer Haruki Murakami⁴, Wong's 1994 feature *Chungking Express*, is a light-hearted mirthful romantic drama and remains his most speedily completed, lowest budget feature to date.⁵ Interestingly, despite its lack of obvious 'seriousness and gratifying deliberation'⁶, epitomized by Wong's *wu xia* genre *Ashes of Time*, *Chungking Express* is the first film that brought him any degree of international recognition⁷. That recognition clearly benefited from the patronage of Quentin Tarantino and the access afforded to the latter's company Rolling Thunder's distribution channels⁸ that ensured the film's success irrespective of the director's talent. *Chungking Express* established Wong's reputation as a Hong Kong art-house auteur on the international stage, increasing his exposure at European film festivals (for example the Locarno International Film Festival in Switzerland and Stockholm Film Festival⁹), and marked the first step towards *My Blueberry Nights*.

As the 1997 postcolonial hand over approached, many Hong Kong filmmakers made films that captured a sense of nostalgia, a sense of anxious uncertainty manifesting itself in fin-de-siècle sentiment. Wong responded to the 1997 hand over quite differently by escaping its reality¹⁰ through relocating his entire filmmaking machinery to Argentina for the production of *Happy Together*, a film that distinctively addresses the themes, rare in Hong Kong cinema at the time, of homosexuality and exile¹¹. *Happy Together* pays homage to the novel *An Affair in Buenos Aires* written by Argentinean author Manuel Puig. In fact, Wong's enthusiasm for making *Happy Together* was drawn from his passion for Latin-American literature and prior to the production of the film Wong had made a preparatory reconnaissance trip to Buenos Aires that lasted several months.

⁴ Stephen Teo, *Wong Kar-wai* (London: British Film Institute Press, 2005), p. 50.

⁵ The film was completed in only two months with a budget of HK\$15 million, see Stephen Teo, *Wong Kar-wai* (London: British Film Institute Press, 2005), pp. 48-49.

⁶ Peter Brunette, *Wong Kar-wai* (Illinois: University of Illinois Press, 2005), p. 46.

⁷ *Ibid.*, p. 45.

⁸ Rolling Thunder bought the international distribution rights of *Chungking Express*. The film was released in the USA and most of the European countries such as the UK, France, Germany, Italy, Spain, Sweden and Netherland and generated substantial box office revenues and positive critical reviews.

¹¹ Marc Siegel, 'The Intimate Spaces of Wong Kar-wai', in Esther C. M. Yau (ed.) *At Full Speed: Hong Kong Cinema in a Borderless World* (Minnesota: University of Minnesota Press, 2001), p. 277.

The production of *Happy Together* was truly transnational.¹² Dealing with the unrequited love of a gay couple, *Happy Together* was seen as having taken Wong to the zenith of his cinematic art,¹³ and won him the award of Best Director at the 1997 Cannes Film Festival and Most Popular Foreign Film from the 1998 Arizona International Film Festival.¹⁴ The film also had successful theatrical runs in both the US and Europe. These awards and successful theatrical releases further established Wong's reputation in Europe and the US. As a 'carefully planned relationship picture'¹⁵, *Happy Together* was to 'set the pattern for Wong's bigger and more elaborate productions in subsequent years'¹⁶.

In 2000, Wong made the sensual nostalgic drama *In the Mood for Love*. Featuring A-list Hong Kong stars Maggie Cheung and Tony Leung Chiu-wai, an authentic historical recreation of period-1960s Hong Kong, exuberant visual expressivity, cross-border location shootings (Hong Kong, Bangkok and Cambodia) and the prominent use of music to convey the mood of nostalgia that is prevalent in Wong's oeuvre, *In the Mood for Love* was rewarded with seven international awards¹⁷. Following *Happy Together*, *In the Mood for Love* achieved an even wider range of distribution and consolidated his auteur status internationally.

How far Wong's international authority had advanced can be demonstrated by the fact that the 2004 Cannes Film Festival delayed its opening and altered the scheduling of other films' premieres to accommodate the arrival of Wong's 2004 pan-Asian feature *2046*.¹⁸ *2046* highlighted Wong's business managing potential as evidenced from his successful financing of the film from multinational sources.¹⁹ This increasingly international production strategy continued in 2005 with the portmanteau *Eros* project, co-directed by Steven Soderbergh and Michelangelo Antonioni. Wong's contribution to this anthology film, the episode *Eros*, conformed to Wong's established filmic style of relying more on visual emphasis and less on plot development, and starred Mainland-turned-Hollywood actress Gong Li (*Miami Vice*) and the Taiwanese actor Chang Chen (*Crouching Tiger, Hidden Dragon*). Critical reception of the project as a whole tended to favor Wong's contribution over those by Soderbergh and Antonioni.²⁰ The favorable

¹² From the film's production perspective, the film shows an international characterization in that Wong's own production company Jet Tone (established in 1993), together with its 1997 established subsidiary Block 2 pictures, allied with Argentinean film production companies Cinecolor S.A. and Rental Film, who supplied the film with local actors, a laboratory for the film's editing and post-production and camera equipment. For the film's distribution, companies from Japan (Prenom H.) and South Korea (Sewoo Film) packaged the film financially and handled the film's international sales.

critical reception afforded to his films and the geographical expansion of his theatre of operation against a backdrop of increasing globalization throughout the film industry as a whole, appear to have combined towards the inevitable and in 2007 Wong finally completed his westward “journey” with his arrival on the Hollywood scene with the release of *My Blueberry Nights*.

Arriving on the Platform of Hollywood: *My Blueberry Nights*

Whilst *My Blueberry Nights* is by no means a simple remake, or an English version, of *Chungking Express*, the parallels between the two films are clear. Wong skillfully attempted to adapt the plot, themes and characters into something that might appeal to the tastes of, and be immediately recognizable by, American audiences. *Chungking Express* told two independent stories that both center on the romantic encounters experienced by the central characters. In each story, at least one character experiences lost love and subsequently struggles to “find themselves” again. Similarly, *My Blueberry Nights* is divided into three independent episodes and the development of the story in each episode is motivated by the character Elizabeth (Nora Jones) who “loses herself” when faced with her boyfriend’s infidelity and decides to go on a road trip in order to cure her wounded heart and search for the meaning of her own existence. In *My Blueberry Nights*, Elizabeth takes a bus trip across America from east to west, leaving New York, temporarily staying in Memphis, Tennessee before moving on to Nevada and Las Vegas. Following the classic format of the road movie, Elizabeth’s journey is designed to be instantly recognizable to American audiences.

Elizabeth closely resembles Faye (Faye Wong) in *Chungking Express* in that they both need to embark on a journey in order to search for the meaning of their existences. For Faye, the relocation is to be achieved by emigration, and relocating from Hong Kong to California, as the claustrophobic geography of Hong Kong limits the opportunities for her. The resemblance of Faye and Elizabeth extend to their destinies, in that at the end of both films they come back to the place from where they originally departed, ready to embrace a new relationship. The choice of actresses to play the characters Faye and Elizabeth is also significant; both Faye Wong and Nora Jones were established pop singers, but had little acting experience prior to their casting by Wong.

In *Chungking Express*, “Express” refers to the fast food stall Midnight Express where Faye works and meets policeman number 633 (Tony Leung Chiu-wai) with whom she falls in love. The focus on “food” often plays a prominent role in Wong’s cinematic world. Food outlets are places where people meet; it is over food that people reflect, and it marks a recurring subject that represents the influence it has on people’s daily lives. For instance, in the first story of *Chungking Express*, we witness the character He Qiwu (Takeshi Kaneshiro) constantly buying cans of pineapples that have a sell-by date of May 1st, which corresponds to He’s birthday and also marks the one-month anniversary of the breakup with his girlfriend. Throughout *In the Mood for Love*, we regularly experience slow motion shots of the protagonist Su Lizhen (Maggie Cheung) carrying her portable food container to a nearby noodle stall to buy her noodles. In *My Blueberry Nights* Wong

adopts American food culture to achieve an instant recognition on the part of American audiences. The “*Blueberry*” part of film’s title refers to the blueberry pies that Elizabeth eats whenever she visits the New York café owned by British expatriate Jeremy (Jude Law). Wong’s choice of “blueberry pie” for the film is unlikely to have been a purely random selection but a rather more careful choice. The blueberry is an indigenous North American fruit species. For centuries, Native American tribes revered blueberries and believed them to contain spirits.²¹ Pies are also central to American culinary traditions. Jeremy’s cafe resembles the Midnight Express in *Chungking Express*, with the cafe serving as ‘a still center, a spatial point de repères’²² where the characters can meet, leave and come back to. The blueberry pies in Jeremy’s cafe hold the promise that ‘at the end of night, there is always a whole blueberry pie left, untouched, no one wants it’, signifying intensely frustrated emotion from Jeremy who possesses them and sympathetic affection from Elizabeth who is seemingly alone in wanting them. These emotions sustain a haunting presence in the film. Apart from the perennial themes of love, memory and the search for culture and identity, Wong’s trademark obsession with time and space is also evident in *My Blueberry Nights*, for example, in a recurring montage that indicates both time and space as: Day 57, 1,120 miles since New York; Day 185, 3,906 miles since New York; we often see shots containing a neon clock in the background glaring out the time; there are several first-person monologues referring to “that night” or “at the end of that night”; and so on.

In terms of *Blueberry Night*’s production, Wong employed Hong Kong cinematographer Pung Leung Kwan with whom he had collaborated previously on *2046*. But Wong also engaged the services of prolific Hollywood cinematographer Darius Khondji (*The Beach* [2000]) to lend the film a contemporary mainstream Hollywood appearance. Neon glossy, with blue and red color contrasts, that are reminiscent of Warholesque Pop art, *My Blueberry Nights* successfully creates a “bubblegum” cultural vision that mirrors *Chungking Express* but without the disorientating cinematography and brash use of hallucinatory imagery of the earlier film. However, Wong’s trademark eroticism is still very much in evidence in *Blueberry*. Whilst there is some obvious continuity of the sexual iconography of Wong’s previous work, viz. the lingering stiletto close-ups, there is also an apparent east-west adaptation in that the high necked, split skirt cheongsam worn by Maggie Cheung in *In the Mood for Love*, is replaced by the low-cut, bra revealing fashions of the female protagonists of *My Blueberry Nights*. We witness Sue Lynne (Rachel Weisz)’s entrance, with the camera lingering on her sultry frame, dramatically emphasized by a low-cut clinging black dress and her slow motion sashay towards camera; we view close-ups of young Leslie (Natalie Portman)’s heavily made-up, mascara laden eyes, and flirtatious body movements in a revealing blue chiffon dress. It can be argued that for *Blueberry Nights* Wong rendered his portrayal of sexuality far more explicit and more in keeping with American conventions.

In as much as Wong’s films are usually inspired by literary works, the story of *Blueberry Nights* was inspired by three books: One of the books was written by the French writer

²¹ <http://www.blueberry.org/blueberries.htm>,
Accessed 25 March 2010.

²² Peter Brunette, *Wong Kar-wai* (Illinois: University of Illinois Press, 2005), p. 48.

Sophie Calle entitled *Exquisite Pain*, another was a guide book to quitting addictions, with the third book being a collection of short stories written by the acclaimed contemporary American crime writer Lawrence Sanders²³. However, the construction of *Blueberry*'s narrative appears far more linear than any of Wong's earlier films. As previously discussed, the character Elizabeth becomes a central focus of the three distinct episodes' development offering some measure of continuity. The storyline is also constructed in a more linear fashion. The experience of watching Wong's earlier films *Ashes of Time*, *Chungking Express* or *2046*, of feeling trapped in a labyrinthine world, is rarely in evidence in *My Blueberry Nights*. Whether this aspect is a stage in the development of his filmic style in general on the part of Wong or a deliberate adaptation to please American audiences is hard to decide but the effect is the same, it makes the film more accessible for mainstream audiences.

Music is critical in shaping Wong's cinematic language and it still eloquently controls the filmic impulses of *Blueberry* in the same manner it does in any of Wong's films. From the film's opening sequence, introduced by soft Jazz mood music accompanying Nora Jones's voice, through the intermittently melancholy harmonica melody composed by Japanese musician Chikara Tsuzuki, the music of the largely New York-based contemporary free-jazz singer Cat Power, to that of the influential 1960s American soul singer Otis Redding, the music defines the lingering emotions of *Blueberry* and 'creates colors'²⁴ for the postmodern urban space that *Blueberry* portrays. The film ends in Jeremy's cafe, the source of all the stories within the film, and the place where Jeremy and Elizabeth first meet. The scene is shot as an overhead view of the pair from a vertically located camera, accompanied by the same music that introduces the film's opening sequence; we see Jeremy and Elizabeth face to face on a tableau sharing a tender kiss. It is at this point that we realize the film has finally come full circle when we hear Elizabeth's voice-over: "it took me nearly a year to get here, it wasn't so hard to cross that street after all, it all depends on who is waiting for you on the other side."

The Critical Reception of My Blueberry Nights

My Blueberry Nights premiered at the 2007 Cannes Film Festival where it received lukewarm to negative reviews.²⁵ After a considered revision by Wong that cut the film in length, altered its rhythm and reduced some voiceovers, the film was eventually released worldwide.²⁶ From the beginning of his filmmaking career, Wong's success has been based not only in the idiosyncratic artistry of his films, but also in his showmanship. Wong has always been very adept at manipulating the media to create prerelease publicity for his projects. For *My Blueberry Nights*, Wong's showmanship was fully exploited: the film was heralded as a Chinese film auteur's first English-language film centering on America presented with an idiosyncratic art house film technique within a package featuring Hollywood A-list stars. This claim was somewhat selective- it ignored

²³ Tony Rayns, 'The American Way', in *Sight and Sound*, vol. xviii, issue 3, March 2008, pp. 32-34.

²⁶ Ibid.

the previous forays of other Chinese directors within the American industry, ranging from John Woo's blockbusters in the 1990s, Peter Chan Ho-sun's *The Love Letter* (1999), or Ang Lee's films, to name only three prominent examples. The re-cut version of *Blueberry* had its opening night in New York and Los Angeles and received a considerable level of critical attention from the American media with most of the attention focused on Wong's capability in capturing a verisimilitude of the geographical landscape of America and accurately depicting Americana, particularly since the film marks Wong's US debut. Anthony O. Scott from *The New York Times* argued that Wong's attempt in presenting America in *Blueberry* was 'wildly unrealistic, even though much of it was shot on location in the real-deal U.S.A. The smoky Tennessee juke joint and the cute little Manhattan bakery-cafe look like theme restaurants catering to the tourist trade, and even the highways snaking through the mountains and deserts have the inauthentic glow of rental-car advertisements. Mr. Wong...make[s] America look so pretty that you may have trouble recognizing it'²⁷. The journalist Meghan Keane agreed by suggesting that 'sadly, Mr. Wong's interpretation of American lives and landscapes has an alien quality to it. He fetishizes the American countryside... the image of beautiful women in oversize sunglasses leaning against convertibles is not an accurate depiction of Americana - but it doesn't make for a bad visual'²⁸. Evidently, these reviews suggest that Wong's attempt to adapt his style to American themes and spaces was regarded by many as a "misrepresentation". At the same time, Wong's idiosyncratic visual expressivity and romanticized portrayal of emotions were well received. This is evident in quotes such as these: 'In his first English-language film, the Hong Kong avant-pop auteur Wong Kar-Wai shoots American dive bars in gorgeous hot reds, and ... teases out moments of terrific acting...*My Blueberry Nights* hints that buried in Wong's spicy odd noodlings may be an even better conventional filmmaker'²⁹, or 'Wong romanticizes urban New York with the same woozy color and retro glamour as his yesteryear Hong Kong of "*In The Mood for Love*"... "*My Blueberry Nights*" captures the overwhelming and uncontrollable emotional assault of loving and living through captured moments and sensuous images. That lush romanticism makes you wish Wong's New York existed outside of this big screen dream'³⁰.

Wong's usage of the stars in the film also drew great appreciation from critics. Mick LaSalle commented: '...Wong subjects [Rachel] Weisz to the vicious scrutiny of an extended, emotional monologue in one unbroken close-up. It's the best acting she has ever done. And as for [Natalie] Portman, this is the movie that crystallizes an impression that she is turning into one of our most impish, fun-to-watch actresses. There's a range

²⁷ Anthony O. Scott, 'On the Road, With Melancholia and a Hanking for Pie and Ice Cream', in *The New York Times*, April 4 2008, <http://movies.nytimes.com/2008/04/04/movies/04blue.html>, Accessed 26 March 2010.

²⁸ Meghan Keane, 'On the Road, With a Translator', in *The Sun*, April 4 2008, <http://www.nysun.com/arts/on-the-road-with-a-translator/74160/>, Accessed 26 March 2010.

²⁹ Time Warner, 'My Blueberry Nights', in *Entertainment Weekly*, April 4 2008, <http://www.ew.com/ew/article/0,,20187701,00.html>, Accessed 26 March 2010.

³⁰ Sean Axmaker, 'My Blueberry Nights is both sweet and sour', in *Seattle Post-Intelligencer*, April 17 2008, http://www.seattlepi.com/movies/359476_blueberry18q.html, Accessed 26 March 2010.

here that Hollywood has barely started exploring.³¹ Meghan Keane noted: ‘...Mr. Wong has chosen two of Hollywood’s most luscious actresses, Rachel Weisz and Natalie Portman...They both captivate, but it is Ms. Weisz who grabs hold of the screen and sucks the air out of the room every time she enters as the lovelorn divorcée Sue...Ms. Portman may be miscast as a gambling miscreant, and her bleached pixie cut a misguided style choice, but she still manages a captivating charisma that makes her scenes worth watching.’³² The spontaneity that critics noted in the performances in *Blueberry* might well be attributable to Wong’s directing style that he employs at the shooting stage, where he encourages his actors to be proactive in suggesting improvisations to the script.

Conclusion

From the above discussions, it is evident that Wong’s move from Hong Kong to international cinema marks a protracted “journey”. This involved an initial response to the postcolonial uncertainty surrounding the ending of Hong Kong’s western colonial status and an exploitation of the opportunities afforded by an increasing globalization within the film industry. The latter afforded Wong the opportunity to gradually export his unique Hong Kong art house style onto the global stage, eventually culminating in its repackaging as an ultimately westernized product. At the time of writing this paper, Wong is reportedly working on several projects, which include the long-awaited Hollywood classic remake *The Lady from Shanghai*, possibly casting Nichole Kidman in the leading role, and an action feature *The Grand Master* embracing some of the biggest stars in Asia such as Ziyi Zhang (*Crouching Tiger, Hidden Dragon*), Brigitte Lin (*Chungking Express*) and popular Korean TV actress Hye-kyo Song (*Autumn in My Heart*)³³. Whichever direction he takes, the next stop on Wong’s filmmaking “journey” will be eagerly anticipated.

With regard to *My Blueberry Nights*, I have suggested that by carefully comparing it to Wong’s earlier films, it can be reclaimed against its critics as an original and creative symbiosis of the unique Eastern aesthetic and Western cultural subject matter and sensibility. Wong not only refashions his own earlier oeuvre, but also re-interprets American landscapes and the ideological substance of Americana. Whether his vision found acceptance and sufficient economic success or not, one could argue that Wong’s film provides us with a glimpse of a different America from an outsider’s perspective. While *My Blueberry Nights* may have alienated some of Wong’s existing aficionados and disappointed the critics, I contend that the film displays a different aspect to Wong’s directorial skill and one that I personally greatly appreciated.

EFL Learners' and Teachers' Beliefs and Strategy Use of Translation

Meng Feng Hsieh

National Changhua University of Education

Abstract

Present study investigates EFL learners' and instructors' beliefs on the use of translation. Participants are junior and senior high school students to investigate whether there is an age threshold in using translation on language learning. A comparison between students and teachers is made to gain an insight into the strategy use of translation. By picturing out the overall belief and use of translation, this study reexamines the role of translation in language classrooms.

Introduction

Translation is one of the cognitive strategies (Oxford, 1990) that have been used to facilitate language learning by both language learners and instructors. It's one of the L1-based strategies which involve the knowledge of both native and target languages. Language transfer thus could occur at all levels during the language learning process (Tarone, 1977). The levels of relying on native language are found to differ among learners of proficiency levels (Rahimi, Riazi, & Saif, 2004; Tonzar, Lotto, & Job, 2009; Vandergrift, 2003). Studies have analyzed the elements of translation strategies in order to raise language learners' conscious awareness of translation (Liao, 2007). Though translation is proved to be an effective and efficient strategy in language learning (Atkinson, 1987; Cohen & Brooks-Carson, 2001 ; Ellis, 1985), the lately developed teaching methods, such as Communicative Language Teaching (CLT) and Direct Method argue for the possible interference of language transfer between L1 and L2 and discourage the use of native language and translation during the process of language learning. Attacks on grammar-translation by the "reform movement" at the end of the 19th century (Howatt & Widdowson, 2002) arise the issue on whether the use of translation is appropriate in second language pedagogy (Cook, 2007). Present study aims to find out the use of translation by both teachers and students in EFL: settings across age levels. Unlike previous studies focusing on the relationship between proficiency levels and the use of translation, this study attempts to explore whether age is one of the factors that affect the strategy use of translation.

Literature Review

Definition

Translation in this study is defined as an intelligent activity, involving finding equivalent terms in the target language (Sager, 1994) and making and implementing

decisions, active reading, comprehension and production (Darwish, 2003) which are related with language skills. The relationship among the four skills in language learning, namely listening, speaking, reading and writing and the use of translation is one of the focuses for the present study.

The Use of Translation in Language Learning

Previous studies have proved the effectiveness of using translation in language learning. Lotto & Groot (1998) looked at the efficacy of two different learning methods, the picture learning and translation, in the acquisition of words by adult language learners. In terms of retrieval time at test, translation led to better performance than picture learning. The effects of learning method indicated that presentation of L1-L2 word pairs during learning provided a better opportunity for acquiring L2 words than did the presentation of picture-L2 pair (Lotto & Groot, 1998). Thomas & Wang (1996) also provided evidence on translation to be a more effective vocabulary acquisition method than the rote rehearsal. Pianta and Bentivogli (2000) stated that translation could be used in various interesting ways to speed up and automate the linguistic annotation of texts. They found that if the texts in one language had been annotated and the others had not, annotations could be transferred from one language to the other. In sum, translating L1 words into L2 words is proved to be faster and more effective in language learning.

However, other studies have demonstrated the negative correlation between translation and language learning. Barcroft (2009) indicated that although many learners seemed to employ L2-L1 translation and repetition as their most frequently used strategies, these strategies were found to produce lower amounts of vocabulary learning than other strategies, such as mnemonic technique and L2-picture association. Some lately developed teaching methods, such as the Communicative Language Teaching (CLT), state that L1-based strategies may be less compatible with the general philosophy of CLT which prefers not invoking L1. Differ from what is typical in Grammar Translation method, the tenets of CLT are held based on the belief that under certain amount of comprehensible input language could be naturally acquired without the help of L1. Traditionally, language teachers are mostly concerned with the accuracy of the final oral/written products. Much emphasis is placed upon the “model translation” provided by the teacher, and students are asked to follow the exact form. Translation is considered as a strategy that stands in the way for learners to naturally acquire a language. Present study attempts to find out how EFL learners and teachers in Taiwan perceive using translation in language learning and how translation is adopted as one learning strategy in language classrooms.

The Beliefs of Using Translation in Language Learning

It is usually considered that the language transfer would decline with proficiency. Kobayashi & Rinnet (1992) reported that 88% of the higher proficiency Japanese participants preferred direct composition to translation. Students stated that they preferred direct writing because they wanted to be able to think in English directly. The same findings are shared under the Chinese context. Chinese-speaking high achievers in Wen & Johnson's (1997) study stated that using Chinese would be harmful for their English learning while the low achiever considered the use of translation would not hinder their progress. Furthermore, Kern (1994) found that even though foreign language teachers and students realized the inevitability of mental translation in L2 reading, both viewed translation as an undesirable "crutch."

On the other hand, translation has been considered as one learning strategy which leads to effective learning and teaching. Prince (1996) stated that the students considered translation as one effective tool in learning new vocabulary with the new word being linked to its native language equivalent. Based on the positive correlations between varied strategy use and vocabulary proficiency (Ahmed, 1989) and between varied strategy use and intentional vocabulary learning (Barcroft, 2009), it's assumed that students with high levels of vocabulary proficiency are better equipped with a varied repertoire of vocabulary learning strategies and translation is one of the effective strategies. Research questions are addressed as follows:

1. What are students' beliefs about using translation in learning English? Are the beliefs different among age levels?
2. What learning strategies do students report using translation in leaning English? Are the reported strategies employing translation different among age levels?
3. What are the teachers' beliefs about using translation in instructing English?
4. What teaching strategies employing translation do teachers report using in instructing English?
5. Do teachers' beliefs differ from their students'?

Method

Participants

Stratified sampling is used to select participants from six different age levels: the 7th (n=65), 8th (n=90), and 9th graders (n=153) in junior high schools, and the 10th (n=190), 11th (n=161) and 12th graders (n=235) in senior high schools. Both students and their English teachers (5 junior high school teachers and 8 teachers in senior high) are included in this survey. Both parties completed two questionnaires: the Inventory for Beliefs about Translation and the Inventory for Translation as a Learning Strategy.

Instruments

The instruments in present study are two questionnaires. Both questionnaires are translated from English to Chinese and have established satisfactory reliability and validity (Liao, 2002). Factor analysis and canonical correlation analysis among beliefs and strategy factors are used to suggest that learners' beliefs about how translation can function in their English learning influenced their use of translation strategies (Liao, 2006).

Results and Discussion

1. What are students' beliefs about using translation in learning English? Are the beliefs different among age levels?

Significant differences were shown on the following statements of beliefs about using translation in learning English.

4. Translation helps me speak English.

Significant differences are found between 7th and 11th graders and between 7th and 12th graders. While all age levels in the junior high agree on the use of translation to help improve English speaking ability, the senior high school students tend to disagree. The possible reason would be the shift of learning goals. Oral activities such as tongue twisters and English songs are included in junior high English textbooks but have been degraded to be a minor focus in senior high. Speaking is not tested for the entrance exam and such backwash has an impact on the textbook design and instructional priority.

	Sum of Squares	df	Mean Square	F	Sig.
Between Groups	12.224	5	2.445	4.043	.001
Within Groups	536.979	888	.605		
Total	549.204	893			

6. Translation helps me understand English grammar rules.

All age levels in junior high agree that using translation would help the understanding of English grammar rules while the senior high school levels hold the opposite opinion. Possible reasons would be that the grammar rules taught in junior high levels are of lower complexity and are much easier to comprehend. Direct instruction in Chinese leads to the effective grammar learning. One wake up call would be that since senior high students consider Chinese would be not that useful for the learning of grammar rules, it is assumed that they are crammed with grammatical terms without fully understanding. Under the EFL context, translation should play a role of an efficient access for comprehending complex language structure instead of

cramming students with translated grammatical terms.

	Sum of Squares	df	Mean Square	F	Sig.

Within Groups	511.055	888	.576		
Total	520.811	893			

8. Translation does not help me make progress in learning English.

Significant difference is found between the 9th graders who believe translation is beneficial for English learning and the 11th graders who disagree. The 9th graders are those who are going to take the senior high school entrance exam in the coming May and they consider translation to be a more efficient tool for English learning under the time pressure. The 11th graders are at their second year in senior high equipped with certain level of learning capacity. They are not satisfied with the use of translation in English classes which they doubt its usefulness on their language learning and are huger for more exposure of the target language.

Within Groups	585.132	888	.659		
Total	592.972	893			

11. The more difficult the English assignments are, the more I depend on Chinese translation.

A tendency of depending more on Chinese translation increases with the age levels. It is assumed that the English assignments for the junior high school levels are still at the fundamental ability unlike those assigned for the senior high. Furthermore, the nation-wide exams take the lead of instructions at school. For the entrance exam of senior high schools, the exam focuses on the basic achievement of language ability, while it's the competence test for the entrance of universities. The backwash has impact on the English assignment in which the senior high school teachers tend to raise the level of difficulty on the assigned tasks.

	Sum of Squares	df	Mean Square	F	Sig.
Between Groups	29.781	5	5.956	9.232	.000
Within Groups	572.887	888	.645		
Total	602.668	893			

15. The use of Chinese translation may interfere my ability to learn English well.

The tendency reveals that the younger the students are the stronger belief they have on the interference of using Chinese to learn English. Communicative Language

Teaching is widely adopted in English classrooms in Taiwan, especially at the elementary levels whose main focus would be the development of listening and speaking abilities. Beginners are expected to learn L2 naturally under the exposure of the target language. While the focus shifts to the vocabulary learning and grammatical explanations, both teachers and students tend to rely more on the use of translation under the time pressure.

	Sum of Squares	df	Mean Square	F	Sig.
Between Groups	18.429	5	3.686	6.817	.000
Within Groups	480.105	888	.541		
Total	498.534	893			

16. Chinese translation diminishes the amount of English input I receive.

The tendency echoes with that of the previous statement. The younger the students are, the stronger belief they have on the use of Chinese which is believed to diminish the amount of received English input. The use of whole language which increases the exposure opportunity of the target language seems to be preferred by junior high school students. Post Hoc confirms such findings. Significant differences are found between junior and senior high school levels.

	Sum of Squares	df	Mean Square	F	Sig.
Between Groups	39.239	5	7.848	12.064	.000
Within Groups	577.669	888	.651		
Total	616.908	893			

19. I will produce Chinese-style English if I translate from Chinese to English.

Though all age levels disagree that they would produce Chinglish during the translation process, the tendency shows that the younger the students are the more confident they are on such statement. Senior high school students are practicing the English writing for the college entrance exam and unlike the younger students they are expected to produce sentences in a more complex structure such as the embedded clauses. They believe that as the complexity increases, the possibility of being interfered by the L1 increases as well under the assumption that English writing is mainly translating ideas from Chinese to English.

	Sum of Squares	df	Mean Square	F	Sig.
Between Groups	14.035	5	2.807	4.656	.000
Within Groups	535.369	888	.603		
Total	549.405	893			

20. My English teacher often uses translation in class.

Comparing with the senior high school students, junior high school students have stronger belief that their English teachers use Chinese a lot in class. As the previous discussion states, younger students are hunger for much larger portion of L2 exposure in class and from their statement, their English teachers fail to satisfy such needs.

	Sum of Squares	df	Mean Square	F	Sig.
Between Groups	10.308	5	2.062	4.500	.000
Within Groups	406.869	888	.458		
Total	417.177	893			

21. I prefer my English teachers to use English to teach me.

Surprisingly, all age levels disagree with this statement. The tendency shows that the older the students are the stronger disagreement they would show on the use of English in class. One possible reason for junior high school students to disagree on the use of English in class would be the distrust of their English teachers' oral proficiency. Students would complain their teachers' nonnative like pronunciation and ask for more authentic inputs except the assigned textbook.

	Sum of Squares	df	Mean Square	F	Sig.
Between Groups	16.850	5	3.370	5.197	.000
Within Groups	575.790	888	.648		
Total	592.640	893			

24. When using English, it is best to keep my Chinese out of my mind.

The tendency shows that younger students consider that L1 does interfere the L2 learning and as age grows, the dependency on L1 grows as well. Post Hoc showed the significant differences between junior and senior high school students.

	Sum of Squares	df	Mean Square	F	Sig.
Between Groups	51.392	5	10.278	14.854	.000
Within Groups	614.470	888	.692		
Total	665.861	893			

25. I believe one needs to be immersed in an English-speaking culture for some time before he/she is able to think in English.

Interestingly, only the 12th graders agree with this statement. The tendency reveals that the older the students are the stronger belief they have on the importance of immersion in the L2 environment.

	Sum of Squares	df	Mean Square	F	Sig.
Between Groups	15.986	5	3.197	5.022	.000
Within Groups	565.340	888	.637		

	Sum of Squares	df	Mean Square	F	Sig.
Between Groups	15.986	5	3.197	5.022	.000
Within Groups	565.340	888	.637		
Total	581.326	893			

2. What learning strategies do students report using translation in leaning English? Are the reported strategies different among age levels?

Significant differences are found among the following statements.

4. To write in English, I first brainstorm the topic in Chinese.

The tendency shows that at the senior high school levels, the older the students are, the less Chinese they would use to think about the topic and the written content during the English writing. It's assumed that with higher language proficiency, students are more capable to think in the target language.

Strategy 4	Sum of Squares	df	Mean Square	F	Sig.
Between Groups	10.724	5	2.145	4.985	.000
Within Groups	382.105	888	.430		
Total	392.829	893			

5. When I write in English, I first think in Chinese and then translate my ideas into English.

The tendency shows that during the junior high school levels, the older the students are, the more likely they would think in Chinese and then translation ideas into English during writing, while it's the opposite situation at the senior high school levels. It's assumed that there is a threshold of English proficiency between junior and senior high school levels. The 7th graders just graduated from the elementary school whose instructional priority is on the development of listening and speaking abilities. As the complexity increases with grades, students tend to rely more on their L1. Such reliance reaches the top at the first year of senior high school and gradually decreases as the students develop their English capacity.

Strategy 5	Sum of Squares	df	Mean Square	F	Sig.
Between Groups	8.154	5	1.631	3.360	.005
Within Groups	431.006	888	.485		
Total	439.160	893			

6. I write Chinese outlines for my English compositions.

The finding echoes with the previous statement. Students tend to rely more on Chinese as they grow older at the junior high school levels but such reliance

decreased with ages at the senior high school levels. Post Hoc reveals the significant difference between the 9th and 12th graders.

Strategy 6	Sum of Squares	df	Mean Square	F	Sig.
Between Groups	8.674	5	1.735	2.671	.021
Within Groups	576.655	888	.649		
Total	585.329	893			

8. I read the Chinese translation scripts before I listen to instructional English tapes or CDs.

Post Hoc shows a significant difference between the 9th and 12th graders. It's assumed that as the English proficiency has reached a certain level or threshold, students would be able to rely less on their L1

Strategy 8	Sum of Squares	df	Mean Square	F	Sig.
Between Groups	12.224	5	2.445	3.752	.002
Within Groups	578.627	888	.652		
Total	590.851	893			

15. I use Chinese translation of grammatical terms such as parts of speech, tenses, and agreements to help me clarify the roles of the grammatical parts of English sentences. Post Hoc shows significant differences between the 9th and 12th graders and between 10th and 12th graders. The 12th graders are now summarizing the grammatical rules they have learned in past six years and therefore, they consider themselves to be familiar with the grammatical terms in Chinese already. As for the 9th graders in junior high and the first graders in senior high, both rely more on L1 when learning L2 grammar. It is assumed that there is a cutoff point on the English proficiency level between junior and senior high school levels.

Strategy 15	Sum of Squares	df	Mean Square	F	Sig.
Between Groups	9.249	5	1.850	3.199	.007
Within Groups	513.513	888	.578		
Total	522.762	893			

19. I use an electronic translation machine to help myself learn English.

Levels at the junior high school all disagree with such statement while it's the senior high school students who rely more on the electronic translation machines when learning English. The possible reasons would be due to the L2 complexity and the shift of instructional focus between age levels.

Strategy 19	Sum of Squares	df	Mean Square	F	Sig.
Between Groups	31.200	5	6.240	10.439	.000

Within Groups	530.800	888	.598		
Total	562.000	893			

24. I take notes in Chinese in my English class.

Among the six age levels, only the 10th graders in senior high state that they take notes in Chinese in English classes. Possible reason would be the huge gap of test complexity between junior and senior high schools. Both the lexical density and the grammatical complexity increase as students enter senior high school. As these 10th graders state, it takes them quite a time to get used to the heavy learning load.

Strategy 24	Sum of Squares	df	Mean Square	F	Sig.
Between Groups	15.810	5	3.162	5.498	.000
Within Groups	510.682	888	.575		
Total	526.492	893			

3. What are the teachers' beliefs about using translation in instructing English?

Both junior and senior high school teachers believe that translation help students understand the textbook content, write English compositions, comprehend conversations and speak in English, and memorize new vocabulary. But disagreement is shown on the statement of using translation to comprehend grammatical points. Junior high school teachers state that the use of translation fails to help students comprehend grammatical points and retrieve what they have learned after class. They also believe that students can do their homework without the help of translation no matter how difficult the assigned homework would be. These junior high school teachers believe students at this level can actually learn English without Chinese translation. Though both senior and junior high school teachers believe that translation would help students understand the instruction effectively, they think students would prefer them to use English in class and they consider themselves use more English during instruction as well. They don't think students would produce Chinglish if they are exposed to Chinese translation and such exposure would not lessen the opportunity for students to listen and read English. Both of them emphasize the importance of L1 and disagree that students should totally get Chinese out of the way when learning English. As for the senior high school teachers, they don't think their students would feel stressed or frustrated if students are asked to think in English and they don't think students need to be immersed in a whole English-speaking environment to be able to think like a native speaker.

4. What teaching strategies employing translation do teachers report using in instructing English?

After teaching reading, the junior high school teachers would ask students to use the Chinese translation to check whether they have understood the reading or not while it's not the case for the senior high school teachers. Also when teaching writing, junior high school teachers would ask students to think what they would like to write in Chinese before putting the ideas down in English. When introducing English movies or TV programs to students, they would use the Chinese subtitle to check students' comprehension. As for vocabulary learning, neither would use translation to help students memorize new words. However, for the grammar instruction, only the senior high school teachers would use Chinese to help students comprehend grammatical rules. Under the category of using dictionaries, junior high school teachers would ask students use the Chinese-English and electronic dictionaries while the senior high school teachers would ask students to use the English-Chinese dictionaries instead. If students have trouble understanding English expressions, only the junior high school teachers would ask students to translate English into Chinese and ask them to write down the Chinese translations on textbooks. Both believe they have tried to use translation to let students understand the differences between Chinese and English and would let students practice taking notes in English.

5. Do teachers' beliefs differ from their students'?

Both senior and junior high school teachers have stronger belief on the assistance of translation on students' English learning than the selected students. Teachers believe that translation won't get in the way of students' learning while the students hold the opposite opinion. That explains the gap between both parties: the students are eager for more exposure of English during class but the teachers fail to do so. Possible reasons would be the lack of confidence of self oral proficiency and the time pressure for the coming entrance exams. As for the strategy use, significant difference is found between senior high school teachers and students on the use of Chinese translation on English writing. Students would construct their ideas in Chinese first while the teachers choose not to teach writing in that way. Teachers would like their students to think like a native speaker in all learning activities, particularly writing and speaking, while the students consider themselves to have not developed such language distinct and would feel safe by using translation first. Certain level of English proficiency is required to depend less on the assistance of L1. Under such disagreement, it's obvious to expect a gap between senior high school teachers and students on the use of dictionaries. Teachers would like students to depend less on the electronic dictionary while the senior high school students state that they use it a lot. It would be arbitrary to judge the effectiveness on the use of online or electronic dictionaries. But since the majority of students own such access, teachers may need to reevaluate their

consideration of making the best use of such language learning tools. As for the supplementary exposure of English, students would like to use the Chinese subtitle to check their comprehension while the senior high school teachers would prefer not to provide one. The provision of visual clues, such as English and Chinese subtitles, shall depend on students' proficiency levels and the instructional focus. For EFL senior high school students, movie clips are considered to be one authentic input of the target language and without doubt the difficulty and complexity level should take into careful consideration. The Chinese and English subtitles could be provided step by step in order to get the language input transferred effectively.

Limitations

Future studies may add the class observation for the discourse analysis to verify whether the stated leaning and instructional strategies are actually adopted. Interviews could be adopted with both parties which help to clarify their stated beliefs. Correlational studies could be conducted to evaluate the relationship between the effectiveness of translation and the development of language skills.

Abstract

Research in the area of Health Literacy has long ignored in this country. Measurement available in other countries such as those in U.S.A and Europe may not be appropriate for use in Taiwan due to different language system, and many other cultural and political contextual factors. Purpose of this research was to develop a Health Literacy Measurement specific for Taiwan and to test its initial reliability and validity. Five expert clinic physicians; healthcare administrators and scholars identified 125 common used health related Chinese phrases from major medical knowledge sources that easy accessible to the public.. Five-point Likert scale is adapted to measure the targeted population's understanding on these phrases. Such measurement is then validated with levels of respondents' health knowledge levels. Samples under study were purposefully taken from four groups of people in the northern Pingtung, OPD patients, university students, community residents, and casual visitors to the central park. A set of health knowledge index with 10 questions is used to screen those false responses. A sample size of 686 valid cases out of 776 was then included to construct this scale. An independent t-test was used to examine each individual phrase. The phrases with the highest significance are then identified and retained to compose this scale. At last, the Taiwan Health Literacy Scale (THLS) with 66 health-related phrases is established with nine divisions. Cronbach's alpha of each division is at a satisfactory level of 89% and above. Factors significantly differentiate the levels of health literacy are education, female gender, age, family members of stroke victims, experience with patient care, and healthcare professionals in the initial application in this study.

Keywords: Health Literacy; Health Knowledge; Validity; Reliability

Introduction

Research background

Effective communication between healthcare services providers and receivers is a core to quality of a healthcare service. Such effectiveness could be reached by jointly effort of both healthcare professionals and healthcare consumers. Recent healthcare professional training has noticed the need and accordingly included relevant training in incubation education or on the job program of using plain terms or words while communicating with patients or consumers. Service providers may perform a better job when deliver medical advices or health education messages to patients as long as they have good knowledge on the patient's level of knowledge or literacy on health related services(Weiss, 2001). Although a service provider could use as plain as possible words to communicate their patients, yet the communication could be more effective if the service provider would include the patient's health literacy in his/her message encoding stage. Consequently, a quality care could be expected, and error-free medical dispute could be proportionally lowered. Many western countries have developed certain measurements for various purposes. A physician may use this information of health Literacy level to perform healthcare service deliveries and to give home care advices. Public health department of a government can also used this as a reliable tool to assess and deliver appropriate health related information. Taiwan has launched her National Health Insurance Policy in 1995 with great success in caring her nationals' health, of which is one of the best systems in the world. In the meantime, Taiwan has also devoted numerous resources in health education. Unfortunately, Taiwan has no Chinese-specific scale available for use to assess her national's health literacy. This research aims to develop a health literacy scale that specific for Chinese in Taiwan.

Literacy, health literacy, and functional literacy

Discussions on Health literacy (HL) related issues could be traced back to the studies on literacy, and some 3,500 articles had addressed this particular topic as of the year of 2002 (DeWalt, Berkman, Sheridan, Lohr & Pignone, 2004). In 1930s and 1940s, literacy is generally defined as a composite capability of 'reading', 'writing', 'listening', and 'speaking' of mandating particular language while communicating with others. Some scholars further argued that literacy is not static but dynamic, and should accompany with an abstract thinking capability (e.g. Cervero, 1985; Imel, 1985; Levine, 1986; Imel & Grieve, 1985; Fingeret, 1992). Past research has also generally indicated that the level of literacy of a person could be affected by many different factors such as years of education (Campbell, Kirsch, & Kolstad, 1992), social education (Hunter & Harman, 1979) among others. In 1991, the National

Literacy Act of United States broadens the concept of literacy by including the computational capability as part of literacy, and further add a purpose of such literacy as to solve a problem and accordingly to develop a person's potential and to fulfill a personal objective (Levine, 1986; Campbell et al., 1992). This means a person's literacy is not only representing the capabilities of reading, writing, listening, and speaking but also data collecting and information interpreting, and adopt the information in solving a problem and achieving personal goals (Hunter & Harman, 1979). Today, many works have adopted the concept of literacy in relating with an object's self efficacy, motivation, choice, and many other attitudinal and behavioral constructs (DeWalt et al., 2004). Functional literacy that used by the United Nations Educational, Scientific, and Cultural Organization of (UNESCO) could be viewed analogically the same as health literacy. Both functional literacy and health literacy are illustrating a set of capability that is used by the person to solve the problem and to achieve or fulfill personal goals. Apparently, the health literacy is the specifically more concern on a person's health status.

Health literacy scales

WRAT is well known for its high reliability and validity while identifying an individual's understanding on general English in terms of pronunciation and spelling. This scale has been proven having good criteria related validity with years of education. The major drawback for WRAT was that the terms used in the scale are not health-specific (Wilkinson, 1993). A WRAT test may take around 10 minutes.

Similar to WRAT, REALM is a scale based on the understanding of English pronunciation and spelling, but further on health-specific terms. Items used in this scale were drawn from health-education material, including public health and primary care. This scale has been proven having good reliability and criteria related validity with years of education as well, and is good to be used to identify those individuals with low health literacy. Unfortunately, this scale is not able to measure to what extent an individual understands the meanings of the terms in the scale (Wilkinson, 1993). Although a Chinese version has been translated in 2007 (Lin, Chen, Kwo, & Hwang, 2007), it is doubtful that the scale could be used in a proper way since Chinese and English are two languages with totally different structure.

TOFHLA focus on the health literacy of adult. This scale uses a method of Cloze by enquiring into a respondent to fill out proper words in a five- to seven- words phrases. Besides, testing of an individual's computation capability is also included. This makes TOFHLA distinctive that can identify the respondent's reading, comprehension, and calculating capability in one test. A drawback for this scale is the required time, of which may need around 30 minutes to complete.

As noted earlier in this paper, REALM has been translated into Chinese in Taiwan. The Chinese version REALM has at least three shortcomings. First and could be the major drawback, REALM is developed with health-education materials that are popular in USA, which is highly context-specific. Healthcare professional generally agreed that types of healthcare need may be widely varied from one nation to another. American nationals may share similar experiences of living and education under a roughly similar environment. Second, English and Chinese are two totally different language system with huge differences in words composition, expression (grammar), and phonetic. This difference could be exacerbated when terms or words were given and been accepted by others with additional meaning or metaphor that originated from a shared living experiences.

Main purpose of this research is to develop a scale that truly reflects the health literacy status of an adult who had interacted with the health and healthcare environment of Taiwan, and that identifies an adult's capability in communicating with healthcare professionals and gaining sufficient health and healthcare information in Taiwan. This scale could be further verified with acceptable reliability and validity, and could be used to identify specifically the health literacy level of an adult in Taiwan.

Research Design and Sampling

Research design

Based on the definition of health literacy of World Health Organization, this research collects data with a focus on the materials that have been widely used in health-related issues in Taiwan. A health literacy panel is created. Main source of the panel is derived from the Bureau of Health Promotion (<http://www.bhp.doh.gov.tw>), rtment with the most comprehensive and widest range of collection of health related information in Taiwan. Five dimensions of health related terms are considered as major contributors to a useful health literacy scale. First dimension includes popular and simThe first rms about human organs, physiology, and biochemistry that frequently appear in essential health education programs. Second dimension involves top ten death The second in Taiwan. Thirds dimension regards general diseaseA Third are popular in Taiwan. Fourth dimension focus on the causes and prevention of major illnesses, and the firth dimension covers the major health issues that currently prevail in Taiwan.

Each member of the research team first chooses 100 terms from the literacy panel. All terms are then consolidated as one list. Five healthcare clinicians and experts are the invited to examine the list. These ethenrts are physicians from the family medicine, the obstetrics & gynecology, neurology, and a surgeon of

gynaecology, medicine & rehabilitation, and a vice director of medical center who is an expert of public medical center. Terms that concurrently appear in every individual list are kept, and 50 additional terms are then added as suggested by the expert group. After two rounds of Delphi technique and discussion, 125 items reached a common agreement. In the last stage, 5 items were replaced based on an initial reliability test. In the meantime, we develop a health knowledge scale to screen those unreliable responses. The health knowledge scale contains 10 questions that are popular in clinical offices. This scale is used to assure the truth of a respondent's reaction to the self-response scale. Additionally, the health knowledge scale may provide additional evidence to the validity of the health literacy scale by examining the mutual relationship of health knowledge and health literacy.

A pilot test is then conducted with random selected adults from several public areas of Pingtung City. After some statistical verification processes such as item analysis, t-test, and item-to-total analysis, 66 items out of 125 items were kept in 9 different categories. Internal consistency, shown as Cronbach's α , for each category is high at from 0.851 (Superficial characteristics) to 0.931 (Critical care medicine), and overall reliability is 0.976.

Ethics of research

Personal data of respondents were all treated with strictly confidential manner. All researchers have signed an affidavit to confirm their strict follow the rules of ethic. Interviewers shall obtain an informed consent of each respondent before the survey. Respondents were advised the purpose of the research as well as the promises of not releasing any of personal data before they started to fill the questionnaire.

Samples

Samples are taken from Pingtung County. Common characteristics all groups are respondents shall be 18 years old and over, residents of Pingtung County, having average communication capability, and are mentally healthy. To maximize the variance, this research purposefully selects varied groups that are apparently different in healthcare knowledge. The research successfully obtained 776 samples, in which 90 of them were deleted because of some missing data and 686 valid samples remain for further analysis, as shown in table 1. These groups are 1. Residents of Chian- Jin Li of Pingtung City, where most residents are aged farmers. 88 samples in total and 12.83% of entire sample 2. Visitors to and sport activities participants in the Pingtung Park. This group has 186 samples, 27.11% of correspondents. 3. Patients and their escorts to a local hospital. This group has 205 samples with 29.88% of entire sample. 4. Collegiate students from two universities

and one technological college. This group is the largest one with 207 samples or 30.17% of the entire sample. Testing is conducted between January 20th and April 31st of 2007.

Data Analyses and Results

Sample description

Age, gender, education

Among all 687 respondents, 329 (or 48.0%) are male, 364(53.0%) female with age ranges from 18 to 88 with average age of 41.8 for male, and 35.8 for female. Educational degree in this survey covers full range from illiteracy to doctor degree. 17(or 2.5%) are illiterate, 16(2.4%) have some literacy, 51(7.5%) have elementary education, 48(7.0%) completed junior high and 112(16.4%) senior high schools education, collegiate at 348 (51.1%) as the major group, and masters and doctorate degrees are 11(1.6%). Male and female are not significant different in education, as shown in table 2.

Sample representation

Samples included in developing this scale are taken from hospital patients and their relatives, sports or leisure population in the park, senior citizens in community, and college students. These four groups are believed roughly representing vast proportion of Taiwan population in terms of living style and levels of health knowledge.

Consistent to the national distribution, gender of respondents in this research has no significant difference in education, male has higher rate of chronic disease than that of female, and a female more that a male that takes care of ill family member.

Source of health knowledge

Gender has not significant difference in the source of heal knowledge. Major sources are news report of TV channels (85.1%), newspapers (66.7%), hospitals or clinics (33.5%), and the website of National Healthcare Bureau (7.6%). It appears that respondents with lower education incline to obtain healthcare information from TV or relatives, whereas respondents with higher education (i.e. collegiate or higher) receive healthcare information from published materials (books, booklets) or websites.

Health hazardous behavior

Several hazardous behaviors are found among respondents, of which 38.4% of male and 5.9% of female smoke cigarette, and 16.1% of male and 2.5% of female habitually drink alcoholic products. Gender has significant difference in these

hazardous behaviors, as shown in table 2.

Score distribution of health knowledge and health literacy

Females have better score than their male counterparts in the tests of health knowledge and health literacy score. In the health knowledge test, female reply with more correct answers in 8 out of 10 questions of the test. In the 125 items of the initial THLS, female has better score in 92 items, and male is better in only 2 out of 125 items, the terms of Nicotine and Impotence. The rest items are not significantly different.

Taiwan Health Literacy Scale

Factors on score of health literacy

To reveal the determinants of health literacy and health knowledge, this research take average score of health literacy (125 items) and health knowledge as dependent variables to examine the relationship with several independent variables. Independent variables include demographic variables, experiences of caring cancer patient and / or paralysis patient, experiences of having family members that are cancer patient and / or paralysis patient, and whether the correspondent or any family members work as healthcare professional. The result of logistic regression shows educational level, correspondent is a healthcare professional, having experience in caring paralysis patient, and female gender are significant determinants of health literacy and health knowledge, shown as in table 3.

Item analyses

The consensus 125 items are then categorized into 9 factors of pharmaceutical, top ten death causes, general diseases, organs, physiological, physical examination, medical treatment, disease symptoms, and superficial characteristics of disease. This research further simplifies the scale by reducing 125 items to 66 items as other popular scales did. The nine categories remain. Methods used in this analysis are factor analysis, descriptive, and critical ratio. The critical ratio method is found to have a better discriminate capability than the others (Chiou, 2005).

A grade is given to each individual term on the basis of scores the respondents answered. 'Simple' is given to the terms that receive the first quartile of all scores, 'Rather simple' for those in second highest quartile, 'Rather difficult' for those in the third quartile, and 'Difficult' for the quartile that receive lowest score. We use this grading to check the relationship with health knowledge, and found a need to amend the distribution of these health terms and the content of the scale items. Several items

are then deleted base on the criteria of item-to-total analysis and a consensus of terms that having similar discriminate capability, and several terms are added (e.g. Jaundice , carbon monoxide poisoning, Alzheimer's disease, Cancer, Brain death, Computerized tomography scan [CT scan], and Paranoia, etc.). We then add several terms to reflect the current medical advancement, terms of this kind such as Magnetic resonance inspection (MRI), Hospice care, and others to reach a 66-item scale. Every item in each category is characterized with good discriminate capability. A further test shows that score for pharmaceutical terms are significant lower than those in other categories. Rest of the categories shows no significant differences between each other. The scale is termed as Taiwan Health Literacy Scale for Adults or in an abbreviated form as THLS.

Age, Education, and THLS

In general, an individual receives health education in his / her school educational program, and the government-support health promotion campaigns are always executed through school education system. This means an individual's knowledge on health and healthcare will be accumulated along with his / her education. Therefore, any scale aims to assess the health literacy level should substantially reflect the respondents' educational experience. This research first categorizes respondents into six different levels of education from illiterate to doctorate, and then conducts a correlation with score levels of THLS. The result shows a strong relationship between THLS score and educational levels, as shown in figure 1.

Different age group appears to have significant different in THLS score as well, shown in figure 2. The age group of 20-29 years old is a block that has typically completed collegiate education, and is hence having higher score in THLS. THLS score is then decreasing along with older ages.

Reliability

Internal consistency test appears to have a good result. Pharmaceutical terms receive lowest score among the nine categories of health literacy scale with corrected item-total correlation (I-T) at 0.828, whereas others are 0.87 or above. Overall Cronbach's α is high at 0.98, as shown in table 5. Cronbach's α of medical treatment is 0.87, terms of medicine is 0.89, and the rest constructs are all over 0.90, $p < 0.001$, overall Cronbach's α is high at 0.97.

During the scale development process, the respondents fill the scale with a 5-point Likert scale. "1" represents the respondent has never heard this term, "2" represents the respondent has ever heard about but do not understand the meaning of the term, "3" represents the respondent has ever heard about and somehow understand

the meaning of the term, “4” represents the respondent has heard about and fully understand the meaning of the term, “5” represents the respondent has sufficient knowledge about the meaning so as the application (equivalent level of a healthcare services professional). In order to prevent blind responses or disguise that may misguide the interpretation, we attach a general health knowledge testing with 10 simple questions to the health literacy questionnaire. Four terms of the literacy scale were included in the knowledge testing, Systemic lupus erythematosus (SLE), Degenerative arthritis, Steroid, and Urate (Uric Acid). Answers to these four questions and terms will be used to compare, we will then delete those samples with inconsistent answers.

Validating the THLS

Unlike REALM that measures the subject’s health literacy level by phonetic method, the current scale assess the subject’s understanding on the meaning (and the associated medical treatment) of the terms in question. The current scale embraces the differences of two language system, and further explores the subject’s true understanding on the meaning of a healthcare term. Initial validation that was conducted with hospital patients, the correlation between scores of health knowledge (10 questions) and health literacy scale (66 terms) appears to have an acceptable value at 0.69.

To further validate the validity of this scale, we took several demographic factors that have been proofed having strong relationship with an individual’s health knowledge and health literacy level to test the correlation with the scale.

Education. The higher education level an individual has, the better of the health literacy will be. This may stem from an individual will accumulate health knowledge and increase health literacy level along with regular education, as those found in Al-Tayyib et al.(2002) when developing REALM.

Gender. In general, female is superior to male in terms of health literacy and health knowledge, particular for those types of knowledge associated with medical treatments. Consistent to Al-Tayyib et al. (2002), this research has found female received significantly better score in 46 out of 66 terms (another 18 terms are not significant at $P < 0.05$). This means female is more concern the health issues than male.

Hazardous behaviors. People that has none of any hazardous behaviors of smoking, alcohol abuse, or betel nut chewing appears to have higher score in THLS. Since few of female has these bad behaviors, we are not sure whether the gender will mediate the effect or not. It is also reasonable to assume that people with bad habits may be because they were not well educated, and that responsible for a low THLS

score. In other words, it is not the hazardous behaviors that result in a low THLS score, but the factors had brought them to these behaviors. Causal effects may not exist in the relationship between hazardous behavior and low THLS score.

Factors with family. Subjects whose family members work as healthcare professionals, or ill with serious diseases or chronic diseases have higher scores in THLS. Since seeking and receiving information on particular disease and or healthcare services is part of his / her life for this group, no wonder that these people have better chance in correctly answering THLS questions. This has also further validated the THLS.

Personal experience with healthcare. THLS scores are also high for the group of people who have experienced in taking care of patients or family members. These people more frequently expose themselves than the others to the healthcare services environment, thus will have better chance in accessing healthcare knowledge.

Healthcare professionals. Healthcare service providers, such as physicians, surgeons, dentists, nurses, medicine technologists, and many others have better THLS than those of non-health care professionals. This fact has also validated the THLS, since health care professionals not only accumulate health and healthcare knowledge throughout their incubating education but also need to attend continuous education as part of their job requirement. Again, better healthcare knowledge will have better scores in THLS.

Age. Consistent again to the Al-Tayyib et al (2002), this research gain a similar results that shows the age factor is not a determinant of THLS score. In this research, we found a reverse double U shape relationship between age and THLS score. The peak appears at the age of 20-29 as the first and highest point, the first downturn is found at age 30-39; the second peak emerges at the age of 50-59, and downturns again after that point. Official education may play significant role with age factor in differentiating the THLS score.

Application of THLS

Levels of THLS scores are found having relationships with some personal factors such as education, gender, and hazardous during the research. This means THLS could be a reliable tool in assessing an individual's need of health education and in evaluating the appropriateness of a health-promotion program. For example, Average scores for groups of illiterate, some literate, and having junior high school education are 1.66, 1.70, 1.81 respectively, and 2.27 for those having senior high school, and 3.07 for those have bachelor degrees. According to the distribution of average scores, score of 3.0 could be viewed as having an average capability in receiving health related information and accordingly utilizing such information and

transferring into health knowledge. An individual who is assessed with a score lower than 3.00 in THLS may have some difficulty in receiving and understanding health related information. Those individuals that are assessed with scores lower than 1.70 would be a risky group that exposed to a highly risky environment because of less or least capable in accessing and comprehending sufficient health related information.

Discussion

Despite that Taiwan is one of the advanced countries in medical service, and is well-known in providing quality healthcare services with a relatively low price for her nationals, she has no reliable health literacy assessment instrument that specific for local Chinese people in Taiwan. Lacking such an instrument may be harmful to the interaction relationship between healthcare service provider and receiver, and consequently, prevent a further quality advancing and expose to a risk of misuse of healthcare resources. Since this is a pioneer research that aims to develop a reliable health literacy scale for local use, it is essential to start from the very beginning by collecting raw material. This research is undertaken by including clinical physicians from the industry and healthcare management scholars from academic throughout the entire process of collecting, screening, discussing, and categorizing, testing, and validating. The initial result has shown that the scale is valid for use in certain contexts of clinical offices and general public. We discuss the possible application, limitation, and future research direction in this section.

On the coverage and scope of a term of health literacy

WHO defines the health literacy as represents the cognitive and social skills which determine the motivation and ability of individuals to gain access to, understand and use information in ways which promote and maintain good health (WHO, 1998). According to such a definition, health literacy means more than being able to read pamphlets and make appointments with healthcare service providers. Individual with sufficient health literacy shall be able to access and effectively use health information. Although health literacy is mostly dependent upon more general levels of literacy, a poor literacy can affect people's health directly by limiting their personal, social and cultural development, as well as hindering the development of health literacy. It is no wonder a high relationship between education and health literacy is generally found in past studies.

Health literacy, as what were defined by the National Library of Medicine, World Health Organization (1998), Nutbeam (2000), and *Healthy People 2010*, includes an individual's capability in reading, writing, listening, expressing, and information searching. Moreover, such a capability is a form of integrative that will

enhance the individual's perception toward personal needs of health, access and acquire health resources, by which maintain and promote personal health. Although this research has just completed the wording (i.e. reading and comprehension) in the current stage, the scale has been proofed as a reliable tool in assessing a respondent's health literacy level.

Possible factors lead to a better THLS score

We have found that levels of health literacy score are different in terms of education, gender, age, hazardous behaviors, personal and family member disease experiences, experiences of patient care, and personal occupation. A logistic regression shows that higher education, female gender, non-smoker, healthcare professionals, and family member experience with paralysis tends to have better health literacy scores and better health knowledge. Known that the female has longer average life expectancy than that of the male, it will be interesting to explore whether the difference of health literacy (and so as the level of health-care) result in a difference of life expectancy beyond the biological difference (Al-Tayyib et al., 2002).

Conclusion

After a long hauling, an initial version of Health Literacy Scale for Taiwan Adults has now been developed with acceptable reliability and validity in several initial contexts with different groups. We wish this THLS may provide contributions in several directions. First, we wish the THLS could be included in the national education program as a guide in editing materials for health education. Second, further experiential research should be undertaken to further validate this scale, and third, to expand the usage of this scale. The fourth and the most important one, we hope this scale could be tried and modified with samples taken from more Chinese speaking population beyond Taiwan, for example, Hong Kong, China, Macau, and even Singapore. To our best knowledge, health literacy scale remains absent in these areas. Although some dialectic differences may exist, Chinese people in these areas generally share similar Chinese culture. These regions may take THLS as a base to add, edit, amend, delete, or simplify to produce distinctive but related health literacy scales, by which these regions are able to have an inter-region cooperation for a health promotion program.

66 項健康詞彙的自我評估

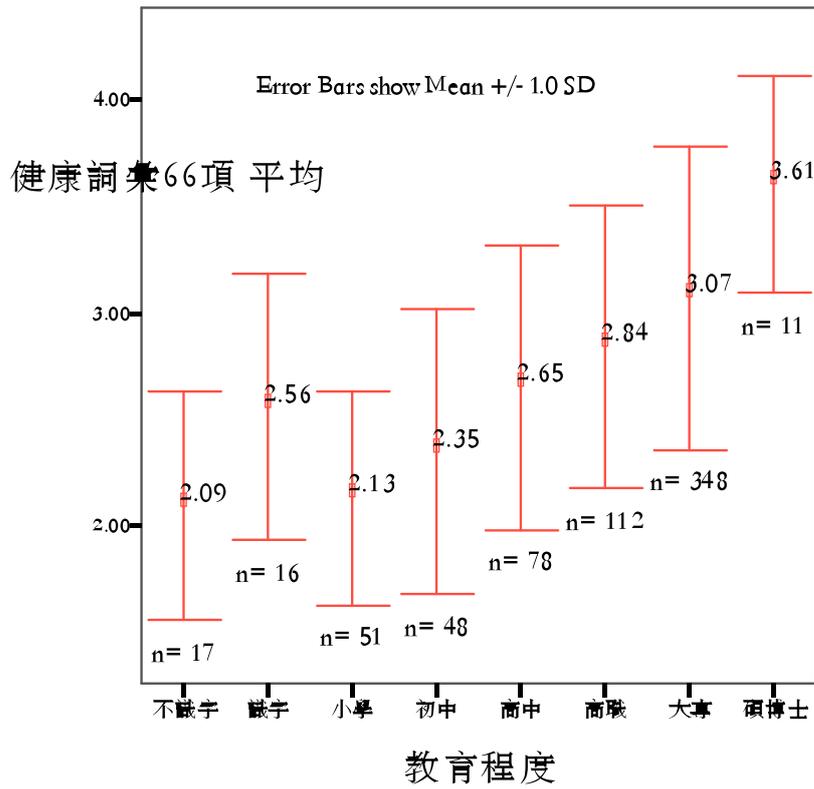

Figure 1. Education versus THLS

Table 4 A sample form of THLS in Chinese

表四、台灣健康知能詞彙量表 第一版 蘇哲能、潘豐泉、陳榮基 2007, 06

以下是一些健康與醫療詞彙，依你的認知請於各詞彙後面打評分，由1-5代表如下：
1:沒聽過 2:聽過但不知其代表意義 3:聽過略知其代表意義 4: 醫療用詞的字面與涵義稍了解 5:完全了解疾病機制及醫療處理程序。(有專門科護理師級以上的認知)

健康詞彙 I	評分 (1-5)	健康詞彙 II	評分 (1-5)	健康詞彙 III	評分 (1-5)	健康詞彙 VI	評分 (1-5)
止痛藥		骨質疏鬆症		更年期		核磁共振檢查	
尼古丁		高血壓		胎盤		高纖食品	
抗生素		肺結核		冠狀動脈		血管攝影檢查	
利尿劑		痔瘡		骨盆腔		超音波檢查	
制酸劑		痛風		荷爾蒙		腦死	
非類固醇消炎藥		腎衰竭		循環系統		心絞痛	
維骨力		愛滋病		鈉離子		失語症	
類固醇		腦中風		膽固醇		尿失禁	
B型肝炎		胃潰瘍		攝護腺		咳血	
一氧化碳中毒		癌症		大腸鏡檢查		眩暈	
巴金森氏症		疝氣		子宮頸抹片		脂肪肝	
肝硬化		甲狀腺		化學治療		強迫行為	
糖尿病		收縮壓		安寧緩和醫療		蛋白尿	
阿茲海默症		血小板		流感疫苗		黃疸	
紅斑性狼瘡		自體免疫		電腦斷層檢查		過敏	
慢性阻塞性肺炎		胰島素		胃鏡檢查			
退化性關節炎		尿酸		心律調節器			

範例：阿斯匹林(Aspirin)

1：沒聽過; 2：我曾經在聽過或見過但不知其代表意義; 3：略知此種為止痛藥
4：知道他是一種止痛解熱藥及副作用; 5：很了解此藥的作用與臨床上的運用。

甲 簡易健康知識試題 選擇題：請將你認為正確的數字填入空白中

- 1.長期服用會造成免疫力下降等多項後遺症的藥物是 1.膽固醇 2.類固醇 3.制酸劑 4.鎮定劑。
- 2.紅斑性狼瘡是那一種系統出問題 1.血管 2.免疫 3.呼吸 4.腸胃系統
- 3.維骨力對下面那一種有幫忙 1.骨質疏鬆症 2.退化性關節炎 3.壓迫性骨折 4.肌無力症。
- 4.痛風是因為血中的何種物質太高引起 1.尿酸 2.葡萄糖 3.脂肪 4.鈣。

乙 簡易健康認知量表:請針對下列問題，填入你的認同程度。

極 · 非
不中 · 常
認認 認認
同同立同同
1 2 3 4 5

- 1.有B型肝炎的人比較容易罹患肝癌
- 2.治療高血壓時，若血壓已正常就該停止服用治療高血壓藥。
- 3.大部份高血壓，高血糖及高血脂病人初期症狀都不明顯。
- 4.抗生素是用來殺細菌的，時常服用可以增加免疫力避免感染。
- 5.腦中風是自然現象無法防治的。
- 6.口齒不清，吞嚥困難可能是中風的症狀。

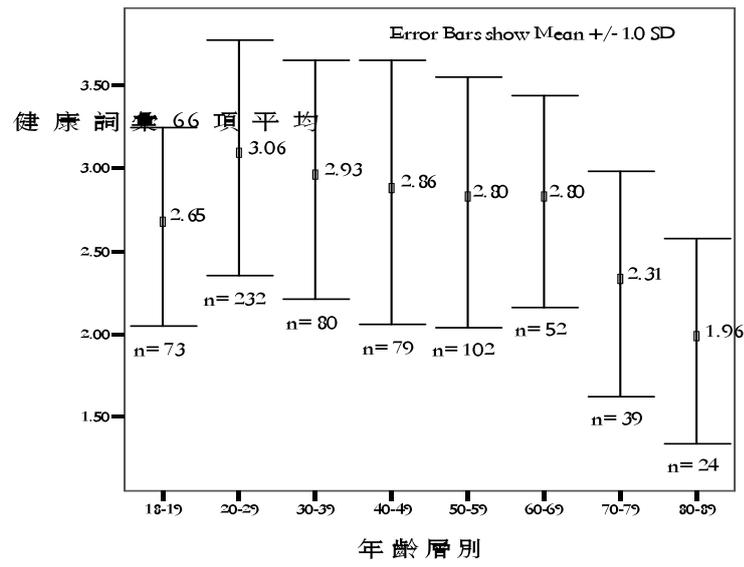

Figure 2. Age vs. scores of THLS

Table 5 Reliability of scales of 9 categories of THLS

	Mean	s.d.	Item to total	Alpha when deleted
Pharmaceutical 8	2.70	0.77	0.828	0.976
Serious diseases 10	3.03	0.75	0.900	0.974
General diseases 10	2.86	0.77	0.921	0.973
Organs 7	2.87	0.91	0.908	0.973
Physical terms 7	2.81	0.88	0.920	0.973
Examination 7	2.84	0.85	0.905	0.973
Medical treatment 5	2.77	0.89	0.900	0.974
Health symptoms 7	2.92	0.78	0.910	0.973
Clinical signs 5	2.76	0.81	0.879	0.974

Table 6. Scores of THLS vs. education

Education	n	THLS average scores					Lower limit of THLS	
		Bottom 25%	Middle	Top 75%	Average	s.d.	Avg - sd.	Est. limit
Illiterate	30	1.66	2.28	2.67	2.24	0.58	1.66	1.7
elementary	51	1.70	2.21	2.55	2.13	0.50	1.63	1.7
Junior H.	48	1.81	2.45	2.87	2.35	0.67	1.68	1.7
Senior H.	190	2.27	2.81	3.11	2.76	0.67	2.09	2.0
College	351	2.61	3.00	3.56	3.07	0.71	2.36	2.5
M & D.	11	3.20	3.52	3.86	3.61	0.51	3.10	3.0
S. total	681	2.33	2.82	3.35	2.84	0.75	2.09	

Notice: This research suggests that 3.0 in THLS as the average score to have acceptable quality of communication with healthcare professionals, whereas THLS score lower than 1.7 would be viewed as seriously poor in health literacy, and 2.0 as moderate, and 2.5 as slightly poor in health literacy.

Beyond Typography – Inspired by the past, stimulated by the future
Jesvin Puayhwa Yeo
Nanyang Technological University

1. Introduction

Language is unique in different countries and so is in Singapore. English is widely spoken in Singapore but over the years, Singaporeans have developed their own brand of English fondly referred to as 'Singlish'. With the multi-racial background, Singlish is evolved from many years of mixing languages of Chinese, Malay, Indian and European. In Singapore, there are many debates on whether or not to do away with Singlish. The author felt that Singlish is evolved from many years of mixing languages; it truly shows Singapore's development as a multicultural nation. Doing away with Singlish is like erasing a huge chunk of Singapore's history. With a belief that Singlish is a culture in Singapore, an infusion of east and west, this project aims to re-present Singlish in an interesting way to reconnect with fellow Singaporeans.

The concept of this research project is based on my latest research – Beyond Typography. It explores experimental typographic design through Singlish pangrams. It showcases the uniqueness of the Singlish sentence in the form of pangram – pangram is a sentence using the 26 letters of the alphabet at least once. The important part of this project is not to promote Singlish but hopes to influence or change how students and fellow Singaporeans look at our own cultures, especially our cultural heritage, in this globalization era. It also hopes to inspired students to do contemporary design with a touch of their eastern personality.

The students participating in this research are third year BFA undergraduates, major in Visual Communication at School of Art, Design and Media in Nanyang Technological University. This paper reports on the design and implementation of the typography course content through the Visual Identity Discovery Approach. The course was conducted once a week for duration of 14 weeks. There was three parts of the study, firstly, students were told to create a Singlish pangram, and secondly, each of them was expected to design typefaces through exploration of combination and elimination methods. Lastly, students formed into groups to design three-dimensional installations to illustrate the message of their chosen pangram. The final designs of the installation were exhibited in Singapore Design Festival 2009 to reconnect with fellow Singaporeans.

2. Brief Overview of Singlish

Singapore is a small and relatively modern amalgam of Chinese, Malay, Indian and European immigrants, the culture of Singapore expresses the diversity of the population as the various ethnic groups continue to celebrate their own cultures while they intermingle with one another. In order to communication with the one another, our minister mentor, Lee Kuan Yew, then Prime Minister of Singapore, had made English the official working language of Singapore. Over the years, Singaporeans have developed Singapore English. Singapore English is one of the varieties of English in the world today and Singlish is one of the sub-varieties of Singapore English. Although this term is widely used, especially by the media, it has seldom been defined. According to Platt (1975), it is developed from the transference of

features from the languages of several ethnic groups. Largely, the Singaporean, being multiracial and multilingual, contributed to the development of Singlish. The vocabulary of Singlish consists of words originating from English, Bahasa Melayu, Hokkien, Teochew, Cantonese, Tamil, Bengali, Punjabi and to a lesser extent various other European, Indic and Sinitic languages, while Singlish syntax resembles southern varieties of Chinese.

3. The Approach

Visual Identity Discovery Approach (VIDA) is an approach that I have developed since 2007 for my teaching. The VIDA basically consists of three stages, namely, Exploration, Implementation and Finalization. Exploration stage is mainly using Problem-Based Learning¹ steps to identify problems, generate solutions, as well as exploring the notion of Singaporeanness. In this stage, students are encouraged to have fun and experiment. During Implementation stage, further research and identification will be the main focus on student development. They would be exercising their critical thinking skills and build confidence in making design decisions. Lastly, in Finalization stage, the emphasize will be on the design process, design sense, aesthetic and craftsmanship. This experiment is designed so that students will meet learning objectives while covering graphic design content. Through immersion into such a problem, students experience the following:

- Learn to research and collect information
- Hone their critical thinking processes
- Develop their collaborative skills
- Advance their skills in the problem solving process
- Improve their communication skills
- Familiarize themselves with the design process

The VIDA process is illustrated in figure 1.

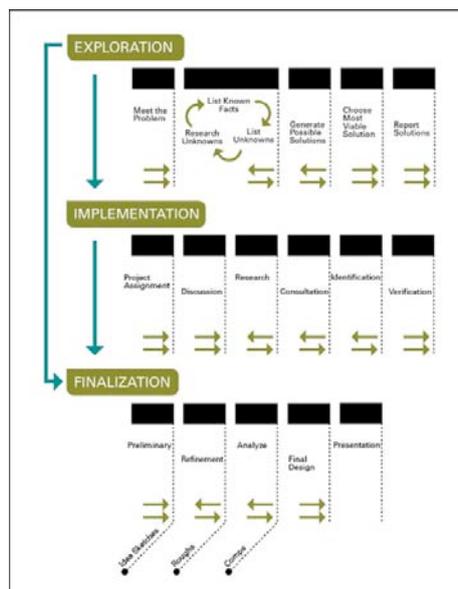

Figure 1: Visual Identity Discovery Approach

¹ Problem-based Learning is an instructional methodology that uses a carefully designed, open-ended problem to prompt students into a 'real world' investigation.

4. Procedures and Methods

The participants in this study were students majoring in visual communication in School of Art, Design and Media at Nanyang Technological University. These students were a mix of Singaporean, Indonesian and Korean. There were a total of 40 students and they were divided into 2 classes. The studio class was once a week for duration of 14 weeks. The study was divided into three parts; on part one, they were asked to create a Singlish pangram individually. On part two, they had to generate new typefaces through exploration of combination and elimination of existing typeface, and on parts three; they worked in group of three and four to design a three-dimensional installations to illustrate the message of their chosen pangram.

4.1 Exploration

In order to give them a quick start and a better understanding of Singlish, a series of activities was implemented to strategically help students to comprehend. In week 1 to 4, students were introduced to Problem-Based Learning (PBL). Students were expected to explore/research the usage, grammar and vocabulary of English, Chinese, Malay, and dialects through PBL steps. The objective was to explore and identify each of the different languages used in Singapore that form Singlish. Sentence, idiom and lingo were collected, examined and identified in class. The exposure and familiarization with various types of languages help students understood differences among them and eventually identified keywords for Singlish pangram development. A good pangram usually contained as few letters as possible, between 80-120 letters. Students were asked to create a pangram not more than 120 letters and to make it more challenging; they were given an alphabet to start their pangram. At end of week 4, forty Singlish pangram were generated from A to Z. Following is a few examples of the Singlish pangram:

- For hours blue taxis drive up Clarke Quay's jammed roads like maze, so where to go now?
- Jack Neo is a zai Singapore film maker who directs good quality movies such as xiao hai bu ben.
- Kena hit on by a stupid ah qua while waiting for taxi just now, and everyone look at me, can die siaz.
- My father kena fined by the very gan-chiong summon uncle at the Queensway HDB carpark exit.
- Queuing for the MRT is very sianz when kiasu people block the exit just to board first.
- The fried kway teow by the quiet zichar uncle is very expensive but damn tok gong to jia.
- We like to talk cock sing song, go to school play a fool, come along play mahjong, very 'xian' queue for zouk by then we all puked.
- Xianz lor, my big cousin has just kena pig flu and has to quarantines for twelve days.

4.2 Implementation

From week 5 to week 8, students were expected to design two fonts through the exploration of elimination and combination of existing typefaces. For elimination effect, they were asked to deconstruct a font into the minimum number of visual clues and yet still able to convey language information. For combination effect, they were asked to combine elements of the serif and sans serif typefaces to produce a hybrid font that exhibits both the serif and sans serif's characteristics. To begin with the assignment, students had to discuss the directions, feels and meaning of their Singapore pangram in class. Next, they researched into the pool of typefaces to identify a few suitable one for exploration. The objective of these assignments was to ensure students paid extra attention to the anatomy of typefaces, familiarized with the characteristics and differences of each typeface, as well as to understand the fundamental of a good typeface. Lastly, students had to use the deconstructed and hybrid fonts to form the Singlish pangram they had created, in order to evaluate the effect of the new font.

Figure 2: Deconstructed fonts by students

Figure 3: Hybrid fonts by students

4.3 Finalization

From week 9 onward, students came together and formed groups of three and four. Each group was asked to design an installation using their best Singlish pangram either in elimination or combination effects. Students were asked to focus on the expressive letterforms, as well as the sensual, spatial and sculptural experiences. The aim was to design an installation that was both informational and meaningful. In the design process, they started off with the preliminary ideas of the installation; the pangram message they were conveying, how the installation would be experienced, as well as how to keep the viewer's interest. Then, they refined it through mock-ups to understand the scale and how it was visually connected and interacted with its environment. In the end, they had to run viewers tests in school to verify clarity and experience. The installation is successful if it entertains and maintains the interest of reviewers.

Figure 6: Development and test run by Iffah, Heng Shaoning, Lin Junyao and Kiyoko

5. Singapore Design Festival 2009

To investigate the aim of this study, re-presenting Singlish in an interesting way to reconnect with fellow Singaporeans, the final designs of the installation were exhibited in Singapore Design Festival 2009. The objective was to collect feedback on how the viewers perceived the Singlish pangrams and the installations. A questionnaire survey was used and 102 Singaporeans were interviewed. Overall, the result was positive as 92% of the viewers liked the exhibition and would recommend it to their family members, friends and colleagues. The generations aged 40 and above, were glad that some of the Singapore pangram used the lingo from their younger days. They mentioned that it has not been used since the 70s and it really warm their heart by reconnecting with the familiar words. As for the younger generations, they did not know most of the Singlish words used but stated that they had learned a lot about Singlish after viewing the exhibition. They also mentioned that it increased their curiosity to find out more about Singlish. 84% of the viewers would surprise to learn that Singaporean actually used different Singlish in different generations. On the whole, 100% of the viewers enjoyed the international art form with strong Asian message, and stated that they would like to see more of such exhibition in the future.

Figure 7: Final installation art pieces in Singapore Design Festival 2010

Figure 8: Final installation art pieces in Singapore Design Festival 2010

6. Conclusion

The journey of re-presenting Singlish in an interesting way to reconnect with fellow Singaporeans completed fruitfully, in term of new knowledge gained in the area of Singlish, unconventional typography design and interactive design experience. Through the Visual Identity Discovery Approach, students had gained a better understanding of the different lingo and idiom of Singlish, and how it was used in our multicultural society. Students had also learned the alternative way to create fonts, as well as applied and integrated it into installation art pieces.

The installation arts produced by the students were of high quality art forms, and it exhibited a strong Singapore culture that could relate to every Singaporean. There is installation on day-to-day activity of taking Mass Rapid Transit (MRT), where you meet all the 'Kiasu' Singaporean that block the doorway and trying to rush in before you alight. There is also one on the army field trip showcasing how underwear gets muddy during the national service where every man in Singapore needs to go through. Last but not least, is the installation that represents the recent breakout of N1H1 in Singapore, so close to heart especially to those people whose loved one is infected. Overall, students had gone beyond the expectation of just creating a Singlish pangram, they brought their personal experience as a Singaporean into the project.

The VIDA approach has enable students to research and analyze information, and as a tool to generate ideas. Through the project, students had learned to understand that the existence of Singlish hold particular meaning to Singapore society, and it is also an identity/culture that we should not be ashamed off. The important part of this project is not to promote Singlish but hopes to influence or change how students and fellow Singaporeans look at our own cultures, especially our cultural heritage in this globalization era. It also hopes to inspired students to do contemporary design with a touch of their eastern personality.

Impact of Modernization/Westernization on Traditional Dress- Pattern

**Dr. John. S. Gaikwad,
Reader, Department of Anthropology,
University of Pune, (M.S), India.**

**Mohammad Hadi Mansour Lakooraj
Research Student,
Department of Anthropology,
University of Pune, (M.S), India.**

Modernization of clothing pattern

Introduction-

According to Jayaswa R (1992:9) "The term changes, in the world means, a revolutionary transition from closed and rigid structures of traditional societies, to differentiated and relatively open structures of developed nations, the change associated with modernization affects the society and culture. Both, social structure and the way of life are basically transformed as the transition proceeds from the underdevelopment (traditional) to the developed (modernized) conditions."

Ferraro.G (1977) from the cultural anthropological point of view, social and cultural changes are caused by both internal and external factors. Internal mechanisms lead to innovation and discovery and external mechanisms lead to the derivation and dissemination. Hence, cultural dissemination (expansion), cultural derivation, innovation and discovery are four internal and external factors of changes which are fundamental on the expanding of the modernization. From the cultural anthropological point of view, modern nations are recognizable by high level technology, industrialization, urbanism, formal educational system, Bureaucratic government, powerful economy, exact time calculating, high movement of population, aptness, rapid changes and planning for future. These features in modernization phenomenon are known as modernization factors.

According to Michael M.Ames (1969), modernization refers to a set of related processes and changes involving such things as mechanization, industrialization, and urbanization, act. And the impact of these forces on social, political and religious life.

Tim Wood (2001) observed that " Modernization as a process also affects the way a society thinks, its attitudes, beliefs, food, dress habits, and cultural patterns at the level of individuals, and as the individuals can be seen as units of the society.

According to Rogers (1962) social change is a process in which significant alteration occur in the structure and function of the particular social system". Hence, it is a continuous process without beginning and end.

Giddens, (1989:56) defines cloth and says; "cloth is symbol of culture and identity of the people, because culture means life style of an identified society and its customs and traditions along with the production of goods."

Moshirpoor (1967) in a research entitled as 'History of change in clothing pattern in Iran from the beginning up to Islam', stated that "Primarily human beings were using leaves and skins of the animals as their cloths and also for protection from cold and heat. Gradually, human beings inculcated appetite for beauty and art. Environmental elements were also effective in the sphere of clothing. Occupation, war, and social changes have been some other effective factors responsible for changing the style of clothing. People should be aware about the changes in the clothing pattern as it reflects the social and culture change.

Ghorbani. R (2006) in his research about Cultural changes among the settled Ashayer (nomads) of Talesh' asserts that the main factor of change in traditional clothing pattern is the urbanization.

Matin.P (2004: 61) in a research about the clothing, states that "the people have a maximum tendency to prefer western style and fashion. This preference has brought changes in clothing pattern." He observers that the new generation feels that the traditions and beliefs are not suitable in the modern age.

Mehdi Salah (2004) observes that during his regime, Reza Shah advocated for ban on compulsion of Hejab/veil for women.

Broad Objective-

To understand and analyze the process of modernization of clothing pattern in the city of Kelardasht in Iran.

Research of Methodology-

-Area and location of study / Universe of sample-

This research was undertaken in the city of Kelardasht, a city in Mazandaran province. It is about 180 km away from Tehran- the capital city of Iran. Kelardasht is in the west of Mazandaran Province. Kelardasht is considered as one of the most important tourist places in Iran (Salahinejad, A, 1997:16).

The city of Kelardasht has been selected for the present study because-

- i. This city of Kelardasht is a historical place of traditional and historical significance / importance
- ii. The pace of modernization is relatively rapid in the city of Kelardasht.

Sampling-

Proportionate sampling method was used for selection of respondents from different parts of the city of Kelardasht. Census list was used in the process of

sampling. 379 households from 7 different areas in the city of Kelardasht were selected for the study.

Techniques applied-

Quantitative information was collected with the help of structured schedule.

Qualitative information was collected with the help of

- i. Participant observations, supplemented by photographs;
- ii. Informal, open-ended and in-depth interviews;

Data analysis-

The huge mass of logically arranged data was then subjected to:

- i. intelligible and systematic organization;
- ii. In-depth content analysis;

Analysis and Discussion of Data-

Traditional clothing pattern in Kelardasht

During the olden days, most of the people in the city of Kelardasht used to wear clothes with traditional pattern. In olden days, the clothes were made from wool extracted from the fur of sheep or goat.

Everyday garment- Present day scenario-

In the olden days, the people used to wear traditional clothes. However, now there is a change in the trend with the availability of the modern clothes.

Table No.1-Everyday garment

Everyday garment	Frequency	Valid Percent
.Traditional clothes	35	9.3
Garment with Modern fashion	132	35.2
Both traditional &modern	76	20.3
No special preference	132	35.2
Total	375	100.0
No reply	4	
Total	379	

From the above table, it is observed that-

35.2% of the respondents stated that they preferred to wear garments with modern and stylist fashion.

35.2% of the respondents indicated that preference for traditional or modern clothing pattern was not of much importance for them.

20.3% of the respondents stated that they favoured using both traditional and modern pattern of clothing.

Only 9.3% of the respondents indicated that they favoured wearing traditional clothes.

Some informants stated that-“In the course of development, and advancement of technology, various alternatives to the traditional clothing pattern became available and these alternatives were also affordable to the people. Through these alternatives, the younger generation is interested in modern, fashionable clothing pattern with variety, comfort, and beauty.

The elders believe that the adaptation of modern clothing pattern is an indication that the members of the younger generation are not interested in the traditional beliefs and values of the society. The members of the olden generation believe that the modern clothing pattern does not fulfill the basic objective of clothing. An informant stated that" acceptance of modern clothing pattern by the members of the younger generation clearly indicates the erosion of religion beliefs among them."

Source of inspiration for trendy fashions-

In the olden days, the people of Kelardasht were wearing simple clothes which covered the body completely and properly. Apart from covering the body, the clothes were warm and protected the people from extreme cold conditions in the city of Kelardasht. Some informants indicated that "in the olden days, fashion was not important. Hence, clothes / garments were not fashionable. The clothes were basically designed for warmth and protection from cold climate."

Table No.2 -Source of inspiration for trendy fashions-

Source of inspiration for trendy fashions	Frequency	Valid Percent
Family members	93	25.2
Friends & colleagues and relatives	40	10.8
Actors programmers in TV	19	5.1
Actors in Satellite TV programmers or actors in films	105	28.5
Shop windows	18	4.9

Magazines	93	25.2
Total	369	100.0
No reply	10	
Total	379	

From the above table, it is observed that-

28.5% of the respondents stated that their source of inspiration for fashion was from the actors in satellite TV programmers or actors in films.

25.2% of the respondents indicated that they got the inspiration for fashion from different magazines. The different media gives attractive information about fashionable / stylist modern clothes / garments.

25.2% of the respondents stated that they had the inspiration for fashion from within the family.

10.8% of the respondents indicated that their colleagues, relatives and friends were a source of inspiration for picking up a fashion.

It was stated that wherever people meet their colleagues, relatives and friends, there is a lengthy discussion about fashion / stylist of clothes / garments they have.

5.1% of the respondents stated that the actors in various programmes on National TV inspired them for any particular fashion.

4.9% of the respondents indicated that the show-windows were a source of inspiration for taking up a fashion.

Many of the informants indicated that "now-a-days, the members of the younger generation take inspiration from different media such as National T.V, dish T.V, internet, and different magazines for picking up popular fashion."

Some informants stated that- "they choose their clothes according to the new fashions which they see in various magazines, satellite T.V and in shops."

Some informants indicated that -"their favorite channels are 'fashion'. They usually spend several hours with friends for looking this channel every day. They feel that now they can easily select any fashion from internet, dish T.V and magazine."

The different media gives attractive information about fashionable / stylist modern clothes / garments. It was stated that wherever people meet their colleagues, relatives and friends, there is a lengthy discussion about fashionable / stylist modern garments / clothes.

Priorities while choosing clothes-

An attempt has made to understand the factors considered while choosing clothes.

Table No.3

Priorities while choosing clothes	Frequency	Valid Percent
Fashion / style	25	6.8
Comfort	104	28.5
Price	61	16.7
Imported	10	2.7
Color / color combination	27	7.4
Unique features	18	4.9
Durability	78	21.4
. Beauty	42	11.5
Total	365	100.0
No reply	14	
Total	379	

From the above table, it is observed that-

28.5% of the respondents stated that comfort was the preferred criteria while choosing clothes.

21.4% of the respondents indicated that they considered durability as an important factor while choosing clothes.

16.7% of the respondents stated that the cost was taken into consideration while choosing clothes. It was indicated that the respondents preferred clothes which they thought had a reasonable cost.

11.5% of the respondents indicated that while choosing clothes, they considered the overall appearance of the clothes and the potential addition to their beauty on adorning the clothes.

7.4% of the respondents stated that the colour and effect of overall colour combination was primarily considered while choosing clothes.

6.8% of the respondents indicated that fashion and style were considered to be important while choosing clothes.

4.9% of the respondents stated that they were interested in buying clothes which had unique features.

2.7% of the respondents indicated that while purchasing clothes, they preferred imported clothes.

Adaptation of modern fashion / style / design -

In the olden days, most of the people in Kelardasht city used to wear very simple clothes. Fashion / style as such were almost non-existent during the olden days. All the people were engaged in traditional form of occupation (agriculture and animal husbandry), were using the traditional pattern of clothes. With the changing scenario and with availability of options and alternatives, adaptation of fashion has become more common.

Table No.4- Adaptation of modern fashion / style / design -

Adaptation of modern fashion / style / design	Frequency	Valid Percent
Yes	189	51.1
.No	181	48.9
Total	370	100.0
No reply	9	
Total	379	

From the above table, it is observed that-

51.1% of the respondents stated that they prefer to have clothing pattern with modern fashion and style.

Reason for adaptation of fashion / style / design

- Liking / preference for modern clothing pattern
- Good appearance;
- Wide range of variety;
- Good quality clothes;
- Satisfaction of following others;
- Modern clothes are considered to reflect high status / position in the society.
- Attracted by advertisement in different media.
- Influenced by colleagues, friends and relatives.

48.9% of the respondents indicated that they prefer simple clothing pattern without modern fashion and style.

.Reasons for simple clothing pattern without modern fashion /style / design-

- Modern / fashionable / stylist – clothes are considered to be expensive. Hence, not affordable.
- Modern / fashionable / stylist clothes are considered to be un-suitable for personality.
- Adaptation of fashion / style- is not considered to be a good deed.
- Adaptation of fashion / style is considered to be against traditional religious beliefs.
- Adaptation of fashion / style is considered to contribute to the loss and erosion of traditions and religion.

Using traditional clothes-

It is observed that- even in the realm of modernization, there are some people who do prefer traditional clothing pattern even today.

Table No.5- Using traditional clothes-

Using traditional clothes	Frequency	Valid Percent
Yes	101	27.4
No	267	72.6
Total	368	100.0
No reply	11	
Total	379	

From the above table, it is observed that-

72.6% of the respondents stated that they did not prefer traditional clothing pattern.

It is obvious that this group represents the younger generation.

Reasons for not using traditional clothing pattern-

- Liking / preference for modern clothing pattern.
- No liking for traditional clothes.
- Traditional clothes- not easily available in the city.
- Members of the younger generation are not ready to take up the responsibility of the production of traditional clothes.

- Religious / traditional beliefs are considered to be less important.
- Traditional clothes are considered to be relatively expensive.

Some informants stated that they believe in following the popular phrase -"In Rome do as the Romans do."

27.4% of the respondents indicated that they preferred traditional clothing pattern.

It is obvious that this group represents the older generation.

Reasons for using traditional clothing pattern-

- Liking / preference for traditional clothing pattern.
- Traditional clothing pattern is considered to be comfortable.
- Traditional clothes are considered best for women, as the traditional clothes have the potential of covering the body in the best possible manner.
- Traditional clothes reflect their customs, values, traditions, history and culture.
- Traditional clothes are in accordance with traditional / religious beliefs.
- Following religious / traditional beliefs is considered to be more important.

The norms for women for covering the body with reference to different places-

I- Inside the Offices and Institutions

II- In Public places in the city and at home

I- Inside the Offices and Institutions-

Offices and Institutions have been established in the recent past in the city of Kelardasht. Now, there are many Office and Institutions in the city. The number of women working in these Offices and Institutions is considerable.

The normative traditional and desirable dress code for women while attending Offices and Institutions and associated behaviour -

- While attending offices and Institutions, the women are expected to completely cover their body i.e- *Ba- Hejab* (complete covering).
- In addition to the Hejab (basic covering), the women are expected to further cover their body by using a Chador (black in colour) or Manto (Multi

colored). Some women use both Chador and Manto. The Manto is on the inner- side and the Chador on the outer-side.

iii. Apart from covering the body, the women attending Offices and Institutions are expected to completely cover their head (hair) with a scarf.

iv. According to Islam, the women are forbidden to use any kind of 'make up' while they attend Offices and Institutions and also while moving in public places.

v. It is observed that-after coming out of the premises of Offices and Institutions, after office hours, a few women may-

(a) Change the outside covering. They take off the Chador and keep it in the bag. Even after removing the outside Chador, there is a Manto on the inner-side. This group is represented by a few women.

(b) Adorn 'make up' on their face.

II- In Public places, in the city and at home-

As far as clothing pattern in public places in the city and that at home is concerned, following evolutionary trends are usually observed -

A- Exclusive use of traditional dress pattern-

This group is represented by a few members from the older generation. The representatives from this group are very firm upon their religious and traditional beliefs. Hence, this group prefers to use the traditional clothing pattern while at home or while in public places in the city. The traditional clothing pattern comprises '*jomeh*' (shirt), '*Tange tamoon*' (pants), '*Lechak*' (traditional scarf, made from local material and by local women) and '*Kalosh*' (shoes, made from local leather). As the traditional dress is loose in its fitting, a Chador / Manto is not required. However, a Chador is generally used while travelling to other cities. This small group never resorts to using modern / western clothing pattern inside the house or while in public places in the city. This small group never resorts to any 'make up' while at home and in public places in the city.

B- Beginning of changes –

It was indicated that in the past, the mothers and daughters were expected to completely cover their body. Apart from covering their body, they covered their heads with scarfs, in front of male individuals in the family. According to traditional

customs the mother is expected to cover her head in front of the children, and the girls are expected to cover their heads in front of their brothers and father. However, now the entire scenario has changed. Today the mother and daughters in the families have adapted to a completely changed dressing pattern while at home. Their dressing pattern while at home is modern and westernized. Using jean pants / trousers and tops / t-shirts / shirts- is very common. Now-a-days, while at home, the mothers and daughters do not feel it necessary to use scarfs to cover their heads in front of their children and brothers / fathers respectively.

C- Use of Chador for covering basic clothes-

This group is represented by women –who by virtue of their respect and regard for the traditional and religious beliefs, do not use modern / western clothes while in Public places in the city. However, a few of them do use modern / western clothing pattern while at home. Moreover, they promptly cover their modern / western clothes by using a chador. Chador covers the Hejab (basic clothes / covering). As per Islamic norms, the Government advocates the use of chador as a covering over the Hejab (basic clothes) because it is considered to be the best for covering the body. This small group resorts to use of 'make up' within the house.

D- Adaptation of Manto in the recent past-

This group is represented by women who resort to use modern / western clothes while they are at home. Moreover, the women in this group promptly cover their modern / western clothes by using a Manto. In addition to covering their modern / western clothes by a Manto, they also cover their heads by using a scarf. A few women in this group cover their modern / western clothes by using a manto (from inner-side) as well as a Chador (from outer-side). At this point, it is pertinent to note that the Manto (multi-colored) has been adapted in the clothing pattern of women, in the recent past just 20-25 years ago.

E- Exclusive use of modern / western clothing pattern-

This group is represented by women from predominant younger generation who are exclusively using modern / western dress pattern such as-jean pants / trousers / skirts / short and t-shirts / shirts. They use the modern / western clothing pattern while they are at home as well as when they go to public places in the city. Tops are used

only while they are at home. Tops can be used in public places along with a Manto. The members of this group do not use a Chador for covering their basic clothes. However, they attempt to indicate that they are covering their basic clothes by using a modified Manto. This modified Manto has a different pattern and design which suits the modern / western clothing pattern. Moreover, the modified Manto is approximately half the length of the Manto that adheres to the traditional / religious norms prevalent. The members of this group also indicate that they want to cover their heads by using imported scarfs. However, it is observed that while attempting to show that they want to cover their heads, they do not completely / properly cover their heads as per the traditional / religion norms prevalent. The scarf on their heads is tied in such a manner that their hair are exposed. It is observed that while going to public places in the city they adorn themselves with heavy 'make up'. They also use fashionable sunglasses when they go to public places in the city. In the light of Islamic rules and traditions, use of exclusive modern / western dress pattern is viewed as- violation of the religious / traditional beliefs and norms. Hence, use of exclusive modern / western dress pattern is considered to be '*Bi Hejab*'-(incomplete covering) in the light of Islamic rules. This is considered to be undesirable because it is against the religious norms. The Government and the religious leaders object the exclusive use of modern / western dress pattern by the women from pre-dominant younger generation, Notifications / warnings are given for restraining girls and younger women from resorting to exclusive use of modern / western dress pattern. A few women take these notifications / warnings seriously and attempt to change their dress pattern that adheres to the religious traditions and norms. However, majority of the women from the predominant younger generation do not take these notifications / warnings seriously.

Some reasons for adapting modern / western dress pattern-

1. Universalisation of modern education
2. Education of girls / women
3. Use of technological Advancements by the society-(Use of computer and internet).
4. Accelerated growth of urbanization
5. Changes in occupation structure

6. Inclusion of women in work-force
7. Expansion of usage of print media
8. Expansion of usage of electronic media (Use of TV / Dish TV).
9. Traditional / Religious restrictions got diluted from their attachment to everyday life style
10. Acceptance of modern / westernization in everyday life style.

Adaptation of Modern / western dress pattern by men-

- in the public places, in the city, at home, and in the Offices / Institutions

The men use modern / western dress pattern in the public places in the city, at home and offices / Institutions. Men comfortably use sports wear, jean pants, suits, and other stylist / fashionable garments. Moreover, some religious Offices do not allow their employees to use modern / western dress pattern while in the Office.

Dress- pattern related restrictions on men and women –

As far as the dress pattern related restrictions are concerned, men do not have many restrictions as compared to the restrictions upon women. It is observed that there is more sensitively regarding the dress pattern of women as compared to the dress pattern of men.

Conclusion-

During the olden days-

in the olden days, the traditional clothes were made from wool extracted from the fur of sheep or goat.

Everyday garments-Present Day Scenario-

From Table no 1- it is observed that 35.2% of the respondents stated that they preferred to wear garments with modern and stylist fashion.

35.2% of the respondents indicated that preference for traditional or modern clothing pattern was not of much importance for them.

20.3% of the respondents stated that they favoured using both traditional and modern pattern of clothing.

In the course of development, and advancement of technology, various alternatives to the traditional clothing pattern became available and these alternatives were also affordable to the people. Through these alternatives, the younger generation is interested in modern, fashionable clothing pattern with variety, comfort, and beauty. With a few exceptions / special events such as traditional or religious festivals or marriages, the members of the younger generation do not favour the traditional clothing pattern in general. The elders believe that the adaptation of modern clothing pattern is an indication that the members of the younger generation are not interested in the traditional beliefs and values of the society. The members of the older generation believe that the modern clothing pattern does not fulfill the basic objective of clothing.

Source of inspiration for trendy fashions-

From Table no 2- it is observed that

28.5% of the respondents stated that their source of inspiration for fashion was from the actors in satellite TV programmers or actors in films.

25.2% of the respondents indicated that they got the inspiration for fashion from different magazines. The different media gives attractive information about fashionable / stylist modern clothes / garments.

25.2% of the respondents stated that they had the inspiration for fashion from within the family.

The different media gives attractive information about fashionable / stylist modern clothes / garments.

It was stated that wherever people meet their colleagues, relatives and friends, there is a lengthy discussion about fashion / stylist of clothes / garments they have.

Priorities while choosing clothes-

From Table no 3- it is observed that

28.5% of the respondents stated that comfort was the preferred criteria while choosing clothes.

21.4% of the respondents indicated that they considered durability as an important factor while choosing clothes.

16.7% of the respondents stated that the cost was taken into consideration while choosing clothes. It was indicated that the respondents preferred clothes which they thought had a reasonable cost.

11.5% of the respondents indicated that while choosing clothes, they considered the overall appearance of the clothes and the potential addition to their beauty on adorning the clothes.

Adaptation of modern fashion / style / design –

From table no 4 it is observed that -

With the changing scenario and with availability of options and alternatives, adaptation of fashion has become more common.

51.1% of the respondents stated that they prefer to have clothing pattern with modern fashion and style.

- Reason for adaptation of fashion / style / design

Major reasons include- Attraction, preference and resulting appearance.

48.9% of the respondents indicated that they prefer simple clothing pattern without modern fashion and style. The major reason for preferring simple clothing and opposing modern / fashionable / stylist clothes is the ideology that adaptation of fashion / style is considered to be against traditional religious beliefs, leading to the loss and erosion of traditional and religion.

Using traditional clothes-

From Table no 5- it is observed that- even in the realm of modernization, there are some people who do prefer traditional clothing pattern even today.

72.6% of the respondents stated that they did not prefer traditional clothing pattern.

It is obvious that this group represents the younger generation, which has a liking and a preference for modern clothing pattern.

Some informants stated that-they believe in following the popular phrase -"In Rome do as the Romans do."

27.4% of the respondents indicated that they preferred traditional clothing pattern.

It is obvious that this group represents the older generation, which opines that -

Traditional clothes are best for women, as the traditional clothes have the potential of covering the body in the best possible manner and traditional clothes are in accordance with important traditional / religious beliefs.

The norms for women for covering the body with reference to different places-

I- Inside the Offices and Institutions-

The normative traditional and desirable dress code for women while attending Offices and Institutions and associated behaviour -

- i. While attending offices and Institutions, the women are expected to completely cover their body i.e- *Ba- Hejab* (complete covering).
- ii. In addition to the Hejab (basic covering), the women are expected to further cover their body by using a Chador (black in colour) or Manto (Multi colored). Some women use both Chador and Manto. The Manto is on the inner- side and the Chador on the outer-side.
- iii. Apart from covering the body, the women attending Offices and Institutions are expected to completely cover their head (hair) with a scarf.
- iv. According to Islam, the women are forbidden to use any kind of 'make up' while they attend Offices and Institutions and also while moving in public places.

II- In Public places, in the city and at home-

As far as clothing pattern in public places in the city and that at home is concerned, following evolutionary trends are usually observed -

A- Exclusive use of traditional dress pattern-

This group from older generation prefers to use the traditional clothing pattern while at home or while in public places in the city. This small group never resorts to using modern / western clothing pattern inside the home or while in public places in the city.

B- Beginning of changes –

According to traditional customs the mother is expected to cover her head in front of the children, and the girls are expected to cover their heads in front of their brothers and father. However, now the entire scenario has changed. Today the mother and daughters in the families have adapted to a completely changed dressing pattern while at home. Their dressing pattern while at home is modern and westernized. Now-a-days, while at home, the mothers and daughters do not feel it necessary to use scarfs to cover their heads in front of their children and brothers / fathers respectively.

C- Use of Chador for covering basic clothes-

This group is represented by women –who by virtue of their respect and regard for the traditional and religious beliefs, do not use modern / western clothes while in Public places in the city. However, a few of them do use modern / western clothing pattern while at home. Moreover, they promptly cover their modern / western clothes by using a chador. Chador covers the Hejab (basic clothes / covering).

D- Adaptation of Manto in the recent past-

This group is represented by women who resort to use modern / western clothes while they are at home. Moreover, the women in this group promptly cover their modern / western clothes by using a Manto. In addition to covering their modern / western clothes by a Manto, they also cover their heads by using a scarf. A few women in this group cover their modern / western clothes by using a manto (from inner-side) as well as a Chador (from outer-side). At this point, it is pertinent to note that the Manto (multi-colored) has been adapted in the clothing pattern of women, in the recent past just 20-25 years ago.

E- Exclusive use of modern / western clothing pattern-

This group is represented by women from predominant younger generation who are exclusively using modern / western dress pattern such as-jean pants / trousers / skirts / short and t-shirts / shirts. They use the modern / western clothing pattern while they are at home as well as when they go to public places in the city. Tops are used only while they are at home. Tops can be used in public places along with a Manto. The members of this group do not use a Chador for covering their basic clothes. However, they attempt to indicate that they are covering their basic clothes by using a modified Manto, having a different pattern and design which suits the modern / western clothing pattern. The members of this group also indicate that they want to cover their heads by using imported scarfs. However, they do not completely / properly cover their heads as per the traditional / religious norms prevalent. Use of exclusive modern / western dress pattern is viewed as- violation of the religious / traditional beliefs and norms. Hence, use of exclusive modern / western dress pattern is considered to be '*Bi Hejab*'-(incomplete covering) in the light of Islamic rules. Notifications / warnings are given for restraining girls and younger women from resorting to exclusive use of modern / western dress pattern. However, majority of the

women from the predominant younger generation do not take these notifications / warnings seriously.

Some reasons for adapting modern / western dress pattern-

Major reasons include education, urbanization and adaptation of technological advancements.

Adaptation of modern / western dress pattern by men-

-in the offices / Institutes / public places in the city and at home -

The men use modern / western dress pattern offices Institutes in the public places in the city and at home. Men comfortably use sports wear, jean pants, suits, and other stylist / fashionable garments. Moreover, some religious Offices do not allow their employees to use modern / western dress pattern while in the Office.

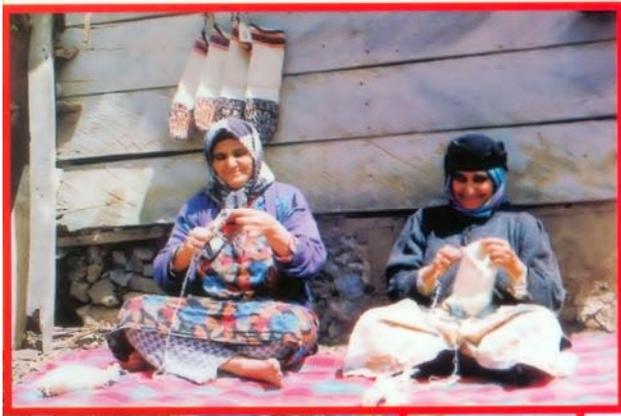

Dress- pattern related restrictions on men and women –

As far as the dress pattern related restrictions are concerned, men do not have many restrictions as compared to the restrictions upon women. It is observed that there is more sensitively regarding the dress pattern of women as compared to the dress pattern of men.

Effects of Cultural Changes on Jewelry in the Age of Globalization

Alia A. Al-Fadda, Assistant Professor, College of Arts & Design, Princess Norah University, Saudi Arabia

Introduction:

The world is witnessing today in various fields many developments and changes which are unprecedented in earlier times. The most important of them is the emergence of the phenomenon of globalization which is considered to be one of the most widespread phenomena of our time. It has powerful influence on the lives of people through the creation of a number of political, economic, cultural and intellectual challenges.

Culture was impacted by different changes and challenges in the age of globalization. Globalization calls for a culture without borders. It is assisted by the technological development, particularly in the area information and communications which helped in transforming culture into a commodity that is exchanged between nations and people of the world.

People took different positions in confronting globalization. One group embraced the open global culture, whereas a second took a more conservative approach towards facing the culture of the other. They were fearful of losing their own culture, which represents their national identity. The third group adopted a balanced approach that felt that globalization will not scrap cultural diversity but will increase the interaction and exchange between different cultures while preserving their identities and local cultures. By enlarging the circle of interactions with other people, the local culture will be enriched by different expertise.

This intellectual diversity in dealing with globalization was reflected on arts in this current era. Art is a mirror of the society that describes culture and way of thinking. Jewelry is one of arts that was impacted by the culture of its designers who were influenced by globalization in terms of design, fabrication and marketing.

The objective of this research paper is to shed some light on cultural changes in the era of globalization and its challenges and its impact on metal jewelry.

We shall take up in this research the following subjects:

- First: the concept of globalization and its inception.
- Second: The culture in the era of globalization.
- Third: The impact of globalization on metal jewelry.
- Fourth: Conclusion and recommendations.

1. The concept of globalization and its inception

Globalization cannot be limited to one definition. It is a broad concept and a large phenomenon of a holistic effect; therefore many intellectuals define only a part or one aspect of it.

In the opinion of the pioneers of globalization and its supporters, it aims to find common ground between peoples and the development of dialogue and the promotion of peace and tolerance, based on common interests and the need for joint humanitarian effort. Globalization in this sense is not the result of our contemporary world, the idea of "global" arose in the period of Greek philosophers. It then crystallized and developed with the booming era of nationalities in Europe where ideas of "Pierre Dubois" (1250-1323), as well as Kant in the eighteenth century. The liberal thought also witnessed the many thesis for universality from the first ideas of Mielles (1858-1917) until Parsons (1902-1979) where the importance of the role of innovation in creating one humanity [1].

The term "globalization" was first used by Marshall McLuhan, professor of sociology at the University of Toronto, when he coined the concept of global village in the late sixties. He focused in his book (War and Peace in the Global Village) on the role of the broad developments in the communications media in converting the world into a global village [2].

Globalization is a nested web which includes economic, cultural, political, and social views, and each one defines globalization from its point of view. We will present here some of these definitions.

The definition of globalization from the economic point of view:

The emergence of new trends and indicators and global economic institutions that were not present in the past, affected the definition of globalization. Wolfgang Reinicke defined globalization as "the phenomenon of complementarity in the structural and strategic aspects of companies where their systems reach beyond national borders to achieve international competitiveness." [3]

Globalization was also known as the expansion in communications and information systems, the growth of financial markets that do not recognize borders, the increasing role of multinational companies and the emergence of regional economic blocs [4].

The definition of globalization in terms of the political dimension:

Some defined globalization as "greater coherence and cohesion between the constituent parts of the planet, where a political decision in one country can affect the lives of millions of people in distant places." [5]

The definition of globalization in terms of the cultural dimension:

Multiple definitions of globalization emerged from the cultural dimension, "where the rise of culture as a global commodity marketed like any other commercial commodity. It was followed by the emergence of awareness, recognition, concepts, beliefs, symbols and media of a global nature." [6]

The definition of globalization based on the social dimension:

The emergence of global civil society and the issues of common humanity gave rise to social globalization. It treats social problems such as migration, population growth, drugs, violence and other issues that cannot be addressed by one state alone. Some defined it as "a process of evolution often as a positive force working to unite the various communities and achieve integration in the global village." [7]

Through these definitions, we can say that globalization is a general phenomenon which is mainly impacted by economy and then politics, culture, sociology and behavior. Its membership is for the whole world across national borders.

The start of globalization:

Globalization appeared approximately after the Second World War during the last century. Many changes had appeared across the economic, political and social fields that led to the emergence of a new phenomenon not known previously, which was named later as globalization. We will address these changes and their role in the emergence of this phenomenon.

First: Political Changes:

Among the many events that transformed the world is the fall of the socialist system in the Soviet Union, which have been for decades an important pole and had a powerful influence on the global system. This resulted in the end of the Cold War and the resort of many socialist countries to the open liberal system. Their policies have changed internally and externally and became more flexible to accommodate both their national agenda and international politics. Then, a wave of democratization started at the global level in political terms which contributed in one way or another in the increasing interdependence between nations and peoples of the world.

Second: Economic Changes:

The global economic thought saw many changes that contributed to the marked differences in economic policies. Technical development at the end of 1960's made national markets too small to accommodate all the production output as well as the entry of new countries in economic competition, such as countries in Western Europe and Japan. This gave rise to giant multinational companies that targeted the whole world market, and thus moved the supply and demand and economic competition from local to global. Globalized goods became more similar and homogeneous in accordance with global standards.

Third: The Technical and Scientific Revolution:

Eight thousand years ago, the agricultural civilization was the first wave of civilizations, which was followed by the industrial civilization at the beginning of the twentieth century where factories played a major role. A third wave emerged in the mid-twentieth century which is the information civilization, where the discovery of space took place. In addition, the use of electronics resulted in fast and easy communications and interaction among the world which led to new forms of social life. The progress in this revolution is achieved by knowledge and its technological applications as a new production force and resulted in the growth of the forces of the human creativity. The aim of the revolution of modern technologies is to adapt the machine to perform the functions of mind which multiplies the human intellectual capacity.

Consequently, the technological revolution moved to unite the world in one context and to the elimination of the traditional geographical differentiations and political boundaries. Communication and Information technology such as satellite television and radio stations in addition to the Internet became one of the most important tools for cultural change, particularly in the area where globalization promotes interdependence among peoples.

Fourth: The trend towards the Global Civil Society:

Awareness of people about the environmental and public health has increased and therefore everyone is responsible for it. We live in one planet and environmental abuses such as the wasting of natural, human, water sources, the disposal of nuclear waste and nuclear testing are all capable of creating a real catastrophe. This catastrophe is not limited to one country but may spread across geographical boundaries.

Human phenomena are no longer limited to certain people over others, but had become global such as the spread of famine and vulnerability of the ozone layer and the spread of new viruses. This has led to the understanding among people that we live together in one planet and its well being is the responsibility of all. Thus, many international organizations were formed. "The United Nations stressed in 1998 on the importance of the protection of International natural resources and the foundations of life since we all live on one boat." [8]

2. Culture in the Age of Globalization

The Conference of Cultural Policies in Europe which was held in Helsinki in 1972, defined culture as "all of the spiritual and material manifestations in the community coming from the creative capacity of humans or is based on these capabilities; it can be summarized as the way of life in society, with all embedded things in this expression such as behavior, knowledge and values." [9]

Knowledge is strongly linked with culture, and we can identify two types of knowledge: one that can be coded, written and transferred to others such as that acquired through a given trade, while the other is tacit and is often not declared and can be obtained by slow and difficult to transfer such excellence in the field of competitiveness among civilizations [10].

Knowledge has become in modern times the most important factor in determining the standard of living more than working the land or wealth or the machine. Many economies of developed countries rely on knowledge as the most valuable asset. Each society has its culture that distinguishes it from other societies, and constitutes a pattern of behavior. The culture is also defined as "a unique phenomena and symbols that are specific to a society, including lifestyles, production methods and different values, beliefs and opinions." [11]

We can say that culture is the medium in which all the characteristics of civilized society and all its parts are formed, according to the its highest goal. The culture is the cluster that includes homogeneous customs, integrated traditions and similar emotions all which gives the civilization its own character.

3. The impact of globalization culture on metal jewelry

Globalization has crystallized a new form and concept of politics, economics, and social life, which was reflected on the local and global culture as the core of social activity. We can clearly note that the cultural production in this era and the monopoly of symbols and values are the highlights of the current world order in the production and distribution of culture. In addition to materialistic development, the nation that wants to be a representative of the universal culture must also be the source of general human values. It considers the human as an example and model for the humanity as a whole, where individual freedom is a fundamental value in forming the civil society in the modern era.

Metal jewelry has been affected by the new global culture, like all the arts and other sciences. This type of jewelry has also realized that this new world culture has opened for it new fields of research, development and innovation.

We can classify changes in the metal jewelry under the shadow of globalization into three categories. These categories are distinguished according to the inclinations of communities and people resulting from internal conviction about globalization and its new culture [12]. There were various attitudes towards globalization and its culture, where cultural attitudes differed in responding to it as the beginning of a new phase in human history. This in turn affected metal jewelry in terms of its design and production.

I: The merger and structural adjustment with the requirements and necessities of the global market

Some called for the complete merger and structural adjustment with the requirements of the global market. After the end of World War II in 1945, an optimistic spirit had grown with a bright future and promising days. The growing economic conditions strengthen this spirit, which in turn was reflected on fashion with the emergence of new fads led by international designers. For example, Dior created the "new look" in fashion; he was later to be followed by other fashion designers who turned to bold, futuristic patterns and bright colors [13].

As for metal jewelry, it was not quickly affected by new fads as in the field of fashion, especially if we talk about precious jewelry. However, many factors impacted the trading and manufacturing of metal jewelry. They came about as a result of the improvement in the standard of living of individuals in many parts of the world, and especially after World War II and the recovery of the global markets. Other factors include the commercial and industrial developments and growth of tourism, where individuals were able to travel to non familiar places.

The pioneering companies in this field had noticed the dramatic changes taking place in the culture of the people because of the previous reasons. People no longer accept the specific designs that are confined in one place. As a result, jewelry houses sought to diversify their production to touch a broader spectrum of individuals and opened branches in different parts of the world. These houses also sought the elimination of the traditional effects of geographical and political boundaries and started to produce different designs of jewelry satisfying several tastes under the brand of the parent company.

Cartier is an example of one of the major international jewelry manufacturing houses, which had been clearly affected by the globalization culture. François Cartier, the

master jeweler, established the Cartier jewelry store in 1874, which was a period of economic recovery in Paris. Cartier focused on the production of pieces of precious and special jewelry and the store's reputation spread among the upper-class society. The cousin of Napoleon the third, Princess Mathilde' made a special recommendation to the store, and this helped the store proliferation and expansion. In 1902, Cartier stores opened in London and New York. Cartier is renowned for producing high-end pieces for the royals such as the royal crowns for each of the kings of Britain, Egypt, Morocco, Spain, Portugal, and Romania, and because of that, the company was named the empire of jewelry.

Brooch. Platinum and diamond by Cartier in 1953.for Queen Elizabeth II [13].

Crown of white gold and diamond by Cartier, 1913 [14]

In the current era, Cartier sought to merge its aesthetic classical design with the spirit of modernism. In addition, Cartier produced of a series of pieces of a specific artistic subject such as, "the series of subject creation", "the reproduction of high-quality jewelry's art" and others. Furthermore, they produced fashionable jewelry pieces with lower cost materials that retained the classic Cartier design and prestige targeting a wider customer segment. Thus, the company stores spread across most parts of the

world and were able to achieve the globalization of its brand while preserving the spirit of Cartier as one of the finest jewelry houses in the world.

Bracelet of multi gems and diamond by Cartier which has an oriental influence in the delicate flower and branch design, 1925 [14]

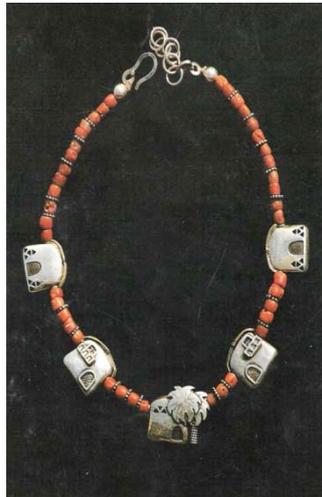

Production of modern innovative designs from Cartier fit the spirit of the modern era, and made of white gold and diamonds and precious stones

A Fashion Piece by Cartier "love bangle", an eighteen-carat gold, designed as a series of screw-heads; the clasps is a screw device which need the accompanying screwdriver to open [14]

II: Adherence to cultural identity by developing and deepening its cognitive and production aspects

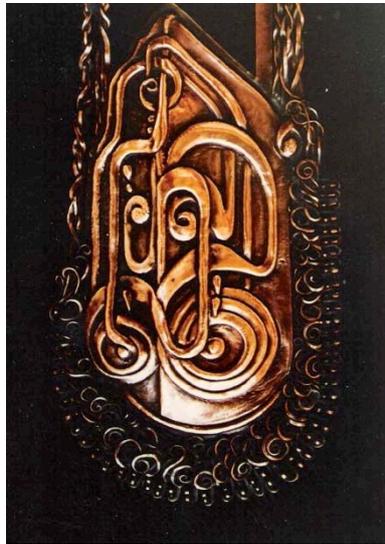

Some jewelry designers strived to adhere to their cultural identity and national interests at the economic, political, social and cultural levels by working to develop and deepen its cognitive and production aspects. Those who adopted this trend believe that globalization will not negate cultural diversity, but will work to increase interaction between different cultures. The direct impact of globalization has influenced the culture by giving it a broad concept called global culture. It is the culture where its core is human but takes into consideration that there are variations in cultures and relativity in concepts. Therefore, it seeks to build bridges of communication and understanding with other cultures and do not seek to be a substitute for or to abolish it. Many jewelry designers and implementers believed in this global culture by designing and producing pieces of jewelry which bear the local or regional character and trying to globalize those pieces in order to spread the culture of their country. They used the communications means that have spread and facilitated the juxtaposition and merging of cultural symbols. They feel that countries should utilize the tools of cultural development. The intermarriage between different cultures can make a given culture a highly attractive commodity easily accepted by others.

Sterling silver necklace and stone Ruby inspired local houses of Egyptian countryside, and was produced in 2000

Pendant necklace from silver by the researcher that merged between heritage and contemporary, 2008 [15]

Yellow gold necklace bearing formation and decorations inspired by modernized Arabic calligraphy to fit the spirit of the modern era, 2002

Many jewelry designers believe that globalization calls for crossing borders, which led them to be more aware of the importance of clinging to their cultural boundaries. There is nostalgia for the past and the heritage where these cultures wish to escape to the past and assert their authority against the authority of modernity. Some designers worked to copy the symbols and the meanings of heritage and formulating them in a modern shape that is consistent with the present. Other designers produced jewelry pieces that give direct impression through the use of direct symbols that form original heritage.

Yellow gold and cloth necklace inspired by the original Saudi heritage inherent in the traditional necklace. It was produced in 2006.

III: Non-recognition of the substantive presence of globalization and the boycotting of all its aspects

Some people denied the substantive presence of globalization or global cultural by being content with just condemning and ignoring it and boycotting the whole era in general. The thought of these groups was reflected on their behavior and adaptation to this era. They have their own identity that distinguish them from others. Those groups believe in their thoughts, fight intrusive thoughts, and call for the necessity of the preservation of originality and not mixing it with different cultures. This is what we observe on a range of communities such as Indian communities who have settled in parts of Northern and Eastern United States. Many of them still live in isolation from society and continue to cling to their own lifestyle. They still live within tribes, live in special tents, wear feathers, hunt buffalo and speak their own language [16].

Their jewelry still show simple techniques and original designs which are not affected by modern designs such as the use of Western symbols, or modern materials. Their jewelry is distinguished by originality in the selection of raw materials available in their area such as pure silver and stones. In addition, their jewelry is characterized by expressive designs that are inspired by the beauty of their environment with all its elements, values and symbols which are expressed in their jewelry pieces.

A set of ornaments of the people of the Indian Zuni tribe in North America that have original symbols and simple techniques

4. Conclusion and recommendations

This paper discussed globalization as new phenomenon which imposed its presence and dominated many political, economic and social aspects. It changed many concepts that led to the birth of a new culture which is called the culture of globalization. There are different attitudes towards globalization ranging from welcoming it, rejecting it or adapting it. This was reflected on jewelry in terms of its design and production.

We believe that jewelry designers should work towards building a humane world, by becoming aware and having deeper recognition of the indigenous national cultures. Each nation must renew its culture and make it more effective in the light of globalization, by developing within the culture values of freedom and openness, dialogue and justice. In addition, the culture should live its time in terms of its own history and that of others through dialogue, to generate a humanitarian civilization with common values and goals. Thus, globalization gets its true meaning, and the global cultural values become unified.

It is important to establish a new conceptual and psychological framework to examine the emerging human interdependence, and to identify factors that can lead us to common sense of humanity and reality. This is obtained through the continuation to hold more conferences that aim to preserve national cultures, cultural diversity and interaction between cultures, without the tyranny of one over the other.

The Art of Using Appliqué and Patch Work in Decorating the Traditional Costume of Saudi Arabia

By
Dr. laila Saleh Al-Bassam
Princess Norah Bint Abdulrahman University

Introduction

The method of patch and applied work of fabric pieces is well known in various civilization throughout ages that it becomes a traditional craft which exceeds social and cultural differences . it united peoples together and created art and craft importance that seized on minds, reflected skills and environment needs, experiments of ancestors and heritage development .

This method is known since ancient times when man knows the fabrics as a quick solution for problems of garments such as tearing, cutting, consuming or other uses . it becomes when ages pass an art of traditional ornaments many countries and acquires an aesthetic in which innovation of both the artist and maker is seen at the same time .

Thoria Nasr mentions (2000, 94-95) the first known trial of textiles and garments ornaments in history with the simplest and cheapest way. It exists all over the world but it is used in every country according to its traditions. Pipa Abrahams (1995) expresses that this craft depends on traditions and techniques of many cultures and civilizations. It uses drawings and ornaments of different tribes and peoples all over the world. It is similar in all ancient civilizations which forms part of human united heritage that makes it popular until today.

Mararet Nichds (1999) says that patch work reflects time, people, way of life, ideas, feelings, beliefs a hopes and dreams. It is a kind of writing history by women concerned with this craft and it is so for us until now although the main purpose of patch is to realize a certain work but it is also a means to express the self and social reaction.

This art appears clearly in ancient Arab hand crafts and Islamic arts as an important ornamental art as Arabs adore decoration and as well as beauty but it attains other useful aims to overcome some difficulties :narrow area of fabric, to enlarge the needed width, to secure comfort and protect against tearing in some parts of garments.

Because of the specialty of this art and its ornamental importance in Saudi traditional garments, the researcher finds it is important to study the technical aspect of this heritage, to present its several forms, to define clothes in which it is used in various regions and to document this type of ornamental arts before its disappearance and to try revive it as a traditional craft and art of distinguish form as well as to benefit from it in modern uses and to include it in small industries and crafts that realize the national concern of the heritage and culture and to supply touristic markets with traditional products having ornaments and techniques that deserve to be studied.

Aims:

- to assist in documenting a decorative art that is used much in Saudi garment heritage.
- to define methods used in patch and applied work.
- to indicate ornamental forms used in this art.
- to count types of fabrics used in it.
- to explain its function and aesthetic aspects.
- to use this art in modern applications to benefit modern uses.

Importance of the study:

It is important to study traditional ornamental arts so as to preserve the heritage and use it positively in modern applications at present thanks to its great history, unusual and excellent techniques that can be used in future creations and innovations which make our arts special and precious that should be spread in everywhere under globalization.

Questions of the study :

- how much is the art of patch and applied work in garments is spread out in Saudi Arabia?
- What are the techniques used in this art, its forms, decorations and materials used in it?
- How can this art be used at present?

Methodology :

Historical, descriptive, analytical and applied methodology. This research is confined to study a sample of women's traditional garments decorated by using patch and applied work and which is collected from various regions in Saudi Arabia . The study depends on observation, recording the data and photography.

Terminology :

1. patch work

it means assembly of small pieces of fabric in a harmonically way to make a big piece. It is possible to use chips or shreds of cloth that can't be use in any other purpose (Jean Eaton, 1993 : 190). It consists of sewing these small chips of fabric together so as to make a big piece.

It is folklore art that reflects simplicity of poor people and their concern of family life (Nichols, 1999 : 7).

It depends also on assembly of several fabric or textiles or both, putting them on the background in balanced and harmonious way and sewing them with visible and invisible stitches to fill in the space of the background without appearing any part of them (Kefaya Sulieman and others, 2000 : 50).

The purpose of this study is to make patch work of cloths of different colors in harmonious way and to sewing them to attain decorated big pieces and sometimes to realize different useful purpose.

2. Applied work :

It is to add small pieces of cloth to big cloth of different color and sometimes different material by the means of sewing with different stitches so as to produce ornamental elemental element (Tark Saeed, 1987 : 89).

The general name applique is derived form foreign languages such as appliquer in French and applied work in English where it means addition by fixing the concerned units manually or automatically (Wilcox Turner, 1992, 8). It is known in Iran by the name of Kalapdon or Racht ⁽¹⁾ and in Egypt by tent work. If the ornaments are very tiny with various colors, they are called mosaic (Tarek Saeed 1987, 89 & Thuria Nasr 2000, 14). It is known also by a method of putting simple form of one layer of cloth on another cloth or embroidery by putting some cloths or leathers on the fabric.

It aims in this research to add small pieces of fabric to wide area of another fabric of different color and sometimes of different material for the purpose of decoration and useful function by fixing them with many methods.

Background :

This art is clearly known in ancient cultures especially Applied fabric where it appears in Garments, clothes, blankets and pillows during Pharoanic ages (Tarek Saeed, 1987, 90). Pharoanic artist was skilful in applying white wool fabric and cotton to garments of raw linen garments (Kefaya Sulomon and others, 2001, 67).

Applied stripes and bands were used on Greek, Roman and Byzantine garments with geometric forms and plant ornaments of different color such as ennabi Red, Kuhly, white, green or violet (Laila Al-Bassam and Mona Sdky, 2003, 34, 41).

Fabric was applied in the form of narrow stripe around the neck opening during Coptic ages in Egypt. It was also applied in the form of extended stripes from the front to the back through shoulders as well as squared or circular bands on shoulders and at the tail of the garment (Thanaa Belal, 1982, 11).

The art of combining material has reached a high innovative degree with Arab artist who uses patch and applied work creatively with materials of different textures, types and colors to produce wonderful formations.

He uses gilded materials to produce distinguished pieces as well as more than one patch work of different materials (Kefaya sulomon, 2001, 18). The method of ornament by using embroidered bands was known in Islamic age where garments were fabricated in embroidery houses. Embroidered bands were applied with the name of the fabricator, date of fabrication, prayers and Phrases indicating the history of the garments were written on these bands which were of silk and applied to garments of different textiles. There are much proofs that ornamented bands from old garments were cut and applied to new ones (Soaad Maher, 1977, 50).

1. Racht is a small city on Caspian sea which was important center for embroidered textiles in 18th century. The method of Racht consists of added pieces surrounded by embossed embroidered by delicate card on stitches (Tarke Saeed 1987, 91).

He uses gilded materials to produce distinguished pieces as well as more than one patch work of different materials (Kefaya sulomon, 2001, 18). The method of ornament by using embroidered bands was known in Islamic age where garments were fabricated in embroidery houses. Embroidered bands were applied with the name of the fabricator, date of fabrication, prayers and Phrases indicating the history of the garments were written on these bands which were of silk and applied to garments of different textiles. There are much proofs that ornamented bands from old garments were cut and applied to new ones (Soaad Maher, 1977, 50).

Public textiles that are weaved on narrow looms were separated at chest and back by patching two lengths or tow width. Some embroidered units were patched at the Joining points of these patches of simple of widths so as to cover the patch colors which are different from the original garment and the non-harmony of warp and weft direction all over the garment (Saad El-Kadem, 1978, 32).

The method of patch work played an important role in decorating tents in Islamic ages during Abbasid to Fatimid, Ayuppid and Mamluki until present as an art of folklore used in tents cloths that are built during feasts, occasions and events that need to gathering of people whether in pleasure or sadness. Cairo has a special market in old El-Khiamia district that has Islamic character with fabricators inherited this art from their earlier ancestors (Tarek Saeed, 1987, 88).

The art of patch and applied work was spread into other peoples since medieval ages in Europe, Maori tribes in New Zealand, red Indians in North America, Tibet, China, Japan and west Africa. Patch work was used in making counterpane and covers during 18th century in Britain and north America due to scarcity of old garments and cloths for making these tribes. The process of patching work was development after the crisis of old garments and cloths that there are now fairs for them and are preserved in museums. This art is still a famous traditional art.*

Results and discussion :

1. Analytical and historical study of some Saudi garments :

The researcher tries to define traditional fashion that uses patch and applied work in its ornament by studying, testing and recording information about the material sample with illustrations and photos.

The garments of this study are defined as follows :

1. garment pieces :

- Mahareed garment (nufaihy), Selim tribe / Hejaz: this garment is marked with excellent ornaments of various styles combining embroidery with patch and applied work. It has two sleeves of pendants called Mahareed which become lighter in color and different from the original garment color that is made of cotton. These pendants are of light yellow and sometimes blue. They fixed by manual surface sewing (English). The tail of the sleeve is extended by applied red fabric with bands and triangles of beige by the method of patch work. There is at the tail of this garment a quadrangle with width of half meter called wall as it surrounds the tail and is decorated by applied work of geometric

* annual counterpane fair held in American embassy , Riyadh.

ornaments consisting of patch triangles and beige horizontal lines above vertical quadrangles of various colors such as red, green and yellow, all these patch and applied works are sewn accurately by straight, bent or blanket stitches and sometimes they are left without fixing or bending (figure 1-5).

- Dok garment, Harb tribe, Hejaz : it is made of thick black cotton known as Dok and is similar to the Mahareed garment in general form and ornament styles. The sleeves are made of patch work of blue and green triangles while the tail consists of black quadrangle of 25 centimeter approximately and is decorated with vertical quadrangles of cloth engraved by blue and white tiny squares. The applied work is sewn by stitches that alternate with an area that is equal to the width of the quadrangle on the basic ground of the garment head covers accompanying these garments of Bani Salim and Harb tribes and are decorated with applied work are as follows :
- Qarqosh : it is like a rectangular funnel taking the shape of the head with length that reaches to the center of the back. It is decorated with rectangular reddish silk of applied work with certain shapes of red cotton in its center. It has sometimes over it other small quadrangular of green cotton surrounded with lead beads and shell buttons embroidered by the same method of the sleeves.

Qarqosh is wore directly on the head (figure 7, 8).

- mask : it is rectangular of black cotton with tail surrounded with band of red cotton by the method of applied work. Its two corners are decorated with red quadrangular over which there are sometimes small green ones and around them lead beads of triangular and rows of shell batons across the red and green quadrangular.
- Head hobble or agal or Ouqal : it is decorated with applied work with the same method of the garment. It is the last layer of head covers.
- Mangal garment – Jahadela tribe, Hejaz : it consists of blouse and skirt. Applied work is necessary in its ornament. It is made of brown red cotton with black cotton. the blouse is often added with big triangular on the upper part of the chest and rectangular stripe around the tail of the sleeves and the tail of the blouse at the front and the back that is taller than the front and has loose stripes (figure 9).

The skirt is triangular and has complete lining tied with stripe at the waist. It is decorated with stripes by applied work with different spaces between them and different distributions from one skirt to another. The last stripe ends the tail of the skirt by bending it outside the skirt. All pieces of the applied fabric are surrounded by leads and sometimes are embroidered at some places of the garment. The width of the stripe are between 1.5-5 centimeters (figure 10).

There is one complete garment that is one piece with the same general form as the Mangal garment. This garment is called El-Mahthal due to its tail tied to it from back and it may be without tail. The head covers accompanying of Jahadela garments decorated with applied work are as follows :

El-Masfaa :-

It's rectangular cover of light black cotton of three meters length. It is decorated with applied work of small red rectangular around one of its ends in alternate with

similar rectangular on the ground is and surrounded with embroidered by lead beads. One of its width is decorated with two triangular of applied work and lead beads on the apparent corners when wearing and fringes of red silk threads. Its ends are decorated with rows of red fabric of applied stripes defined by lead beads.

- Mubaqqar garment – El-Teaf tribe (Thaqif and Hatheel), Heja :-

This garment is marked all over by patch work of stripes of black and blue cotton alternately with width of five centimeters and sometimes more than that according to its place on the garment. The tail of the garment ends with a wide black rectangular surrounding the garment. It is decorated with squares resulting from crossed lines embroidered by branch red stitches at Thaqif and Hatheel (figure 11).

The garments of Muharram valley have different tail where its front part is separated its back part and from its both sides. The tail is decorated with thin stripes of applied work and sometimes penetrates from the red fabric with two tones with the black chest in its place (figure 12, 13).

- Masdah garment, El-Teaf tribes (Thaqif, Hazeel and Harb), Hejaz :

It is a rectangular large garment sewn by the method of patch used in Mubaqqar garment with tall sleeves and wide waist. It is decorated at the lower part sometimes by the method of tie in the shape of small white circles that is the original color of the cloth before dying with aniline. These decorations are called Marsh*. The sample includes masdah garment with tie ornament of another garment and added by lining stitch (figure 14).

Sawn garment, Bani Malek, Hejaz :

It is a narrow tall garment of black cotton embroidered with many various manual stitches mostly in color. The chest and sleeves are marked also by white beds embroidery and patch work on the back that extended to the sleeves. To the upper chest. This patch is always red, plain or engraved surrounded by shadow stitches or beads. It is used also patch work of red fabric to cover the squared resulting from crossed embroidered lines at the sides of the garments and other places. The ends of applied work are under the embroidery (figure 15).

Its head is covered with rectangular mask of black cotton of two meters length and 60 centimeters width. It is decorated at the sides with squares of red, yellow and green applied fabric and beads embroidery above them (figure 16:19).

- garment of Balhareth tribe, Hejar :

It is similar to Bani Malek garment with difference of embroidery threads colors with mostly yellow, white and quiet onion. It is marked by three triangular of applied work at the tail.

It has also patch fabric among embroidered squares at both sides (figure 20). Head covers accompanying this dress and decorated with applied work are as follows :

- Qarqosh

It is head cover of black cotton decorated with applied work of reddish silk (onion) and embroidered around and above it with leads (figure 21).

* Marsh is the tool used in spraying perfumes

- Mask

It is a quadrangular of black cotton with two meters length and 50 centimeters width. It is decorated with applied fabric and lead beads by the same method of Qarqos (figure 22).

- Raised garment, Bani Saad, Hejaz :

This dress of black cotton with heavy embroidery at the lower part of the back and sides. The applied work is used on the sleeves only in the shape of red rectangular that extended to many places such as upper shoulder and center arms.

These applied fabrics are under the lead beads embroidery that covers most of the sleeves in the shape of triangular, quadrangular and lines under which the black ground and the red applied fabric appear in a nice form (figure 23, 24). Head covers wore with this dress that decorated with applied work are as follows :

- Qarqush :

It is in the form of rectangular funnel with head form. Its ordinary length reaches to back center. It is decorated with red applied work in its center and heavy embroidery of lead beads with the same method of sleeves.

- El-Masfaa :

It is a cotton rectangular of black color with 50centimeters width and three meters length. It is decorated by applied work of red small rectangular around one side of its both lengths alternately with the same rectangular of the background surrounded and embroidered by lead beads. It is adorns also at the lower end by quarter circle of applied fabric and beads at the apparent both corners and fringes of red silk threads (figure 25).

- El-Ridaya :

It is a black cotton rectangular of centimeters width and around one meter length. It is tied above and around the head with stripe on both sides. Its decorations consist of many applied fabric on the sap of rectangular of red colors and lead beads embroidered with geometric ornaments.

- El-Rashaida garment, Hejaz :

This garment of this tribe that moves between Egypt and Saudi across the red sea is decorated by patch work of ennabi red or several colors in the shape of triangular and rectangular on the black ground (figure 26).

- Thob Metafat, Fragmented cut garment, center region (Najd) and Eastern region (Hasaa) :

It is a big upper garment on the shape of square by which women of Najd are famous for. It is black cotton or natural silk as well a patch rectangular of light green, orange and foshia silk brought from china that called chin. This patch consists of longitudinal and horizontal lines in accurate geometrical method and certain arrangement. It is called also taftized because patch silk pieces are called Taft a while mubaddah or cut indicates the cutting of the fabric. When silk is used as a basis for this garment a certain known color of Taft a is selected for this purpose (figure 27 a).

The other two colors are used in ornament and a wide band of golden and silver metal threads are sometimes added on the garment chest. The cotton garment is of

two types : one is embroidered heavily on sleeves besides the Taft a (figure 27 b) and is decorated with embroidery; and other is used in daily life and it is without embroidery. It has at the chest and back regions a big patch of cotton fabric in yellow and red for protection. It is exchanged when necessary at it is known of this kind of dress in eastern region (figure 28, 29).

- Mtafat dress, middle and eastern regions (Najd), (hasaa) :-

it is the garment or the basic dress decorated with three patches of natural silk known as Taft with the same colors of the thob metafat of light green, orange and foshia.

These patches are sewn on the upper arm and shoulder only and that is why it is called armed or Taftized. It uses various cloth plain or engraved. When Taft with one of its colors is used it suffice to use the other two colors for decorating as a patch work as well as embroidery on the chest and sleeves with silver beads around the ends of them (figure 30,31,32).

- Muhouthal garment, North Badia tribes :

It is a woman garment in the northern region. It's made of silk or black cotton and is marked by its length that is equal to twice of the woman tall (nearly three meters) where it is raised and tied with belt around the waist. It is marked also with triangular sleeved and decoration at tail by the method of applied work of three or four blue rectangular surrounded by branch stitches of red, green and yellow threads and these rectangular are called Hatusy (figure 33).

2. various uses of patch and applied work:-

- Armpit patch (Tekhrasa) / all parts :-

This patch is widely used in most basic garments. It is a small triangular or square that is added always to the armpit where it is sewn with sleeve from the front and back as well as the side piece so as to give the sleeve a curved form that helps the freedom of movement and protection of tearing to overcome the straight lines of traditional dresses (figure 34, a b). The Tekhrasa in the upper dress under which it is worn the armed dress in middle, eastern and Northern regions and which is marked by its large volume and triangular shape that preserves the length of the dress with the tall of the body when raising the sleeves above the head so as to appear the sleeves of the armed dress from underneath. This is the known method of wearing the upper dress above the armed dress. The armpit patch may add an aesthetic value to the function value, as it is chosen with different color from the garment's and sometimes it has embroidery as well as some ornamental stitches at other times (figure 35, 36).

- The tail bent (horseshoe) / all regions :

The tail of the traditional garment is added sometimes by band for protection and exchangeability when it is damaged a well as to make girls dress much talled. It is of different color plain or decorated so as to be another dress under the garment (figure 12, 13).

- Serwal Hagal or Trousers leg, all regions :

This part is sewn to the trousers that are decorated or embroidered with many methods. It is fixed in the middle of the leg so as to be able to move it to another trousers when necessary (figure 37). It is made of black Gogh cut on the shape of

patched triangular (Zigzag) when decorating the tail of trousers in Najd and called Gogh.

3. functions and useful purposes :

The art of patch and applied work is very benefit and has great aesthetic importance.

- In applied work, it protects or extends the tail by adding apiece of cloth that is exchanged when damaged. It appears as if it is an other dress under the garment. It is known sometimes by Hethwa and is added to the upper back, shoulders or chest for protection and strengthen this part (figure 15).
- It aids also in extending the life time of the garment and renew it by moving the decorated parts and adding them to a new cloth such as moving the lower embroidered part from one trousers to another (figure 32) or cutting embroidered parts and fixing them at the same places of a new dress. applied work is used as a hidden or small pocket on the chest (figure 30, 31).
- In patch work, it enlarges the width of the cloth as cloths at that time were narrow.
- It overcome the straight lines used in traditional garments by adding patch (Tekhrasa) on the shape of triangle or quadrangle connecting front and back with sleeve and side to give easiness and facilitate motion as well as protection against tearing in different types of garments (figure 34 a, b). however, it is marked by large space on the upper part of the dress used in middle region according to the way of wearing where sleeves are raised over the head in crossed way (figure 35). The patch helps to control the length of the garment with the tail of the body.
- It gives wideness to some parts such as sleeves (figure 1, 6).
- Aesthetics of combination by patch and applied work :-

This art produces aesthetics and creativity that reaches sometimes to a high degree of excellence as it achieves the following :

- coloring the garment since colored decorated cloth is scarce and raising its value;
- giving optical deception and color suggestions as well as depth of shadow by using more than one layer above each other with various colors (figure 4, 5);
- combining more than one cloth with another material of another color and various threads, buttons, beads and shells; and
- ornamented forms used in patch and applied work are as follow :
 - rectangular or squared large areas;
 - longitudinal or horizontal stripes or both; small areas (mosaic);
 - various forms or geometrical areas such as patched triangles, broken lines (Zigzag) and straight lines; and
 - crossed lines that produce spaces under which the basic ground of the garment appears.

Methods of fixing applied fabric: -

- El-Lafq

Straight and bent lafq is used greatly in fixing applied work with very accurate stitches. The most astonishing is the narrow and thin stripes of the Bani Saleem garments with only one centimeter width before applying it. It appears on the shape of parallel thin threads of nearly 2-3 millimeters only. This stitch is used in Bani Saleem, Harb, Gahdela, Hazeel and Bani Saad tribes.

- Blanket stitch :

It is used in some pieces and sometimes with thread full of beads where each stitch has a bead in the middle as in Bani Saleem tribe.

- Crow leg stitch (separated and connected) :

These stitches are used for fixing applied fabric in Bani Saleem, Bani sufian and Bani El-Hareth tribes.

- Thin bands of applied fabric :

These thin bands sre used in Bani Saleem dresses to fix applied pieces with various geometric shapes and left free without sewing its ends on the ground of the basic cloth, that means the tails are not bent. These various layers of fabric acts as a mirage and shadow or different dimensions that enhance the beauty of this art and make it special.

- Lining stitch :

It's used in the form of thin lining to fix the applied fabric in a limited way.

- Gathers stitch :

It's used in Bani Malek tribe to fix color fabric pieces inside the broidered parts that it seems a complementary part of broidery.

- conclusion :-

Traditional fashion becomes clear where it uses the art of patch and applied work to beautify the garments and make every dress different according to its tribe and region. It's known also that this art was used in many region all over Saudi where it appears in Hejaz tribes (western region).

However, it isn't used in garments of its cities people. In Najd (Middle region) and in Ahsaa (eastern region) there was patch work only with similar method relying on various colors and armpit patch (Tekhrasa) in all garments. This art was limited in these two regions comparing to Hejaz because of the abandonment of various colored textiles and relying on embroidery in ornament especially in Northern region. It's not used at all in southern region excluding fur known as Mazar that decorates the applied leather (figure 39) but the armpit appeared some how in El-Batta region with color different from the basic fabric color as it was in other regions (figure 40). This patch work basic in traditional garments generally because of its technical importance in overcoming the straight lines of these garments and achieve the necessary curves of the natural movement of the body.

- Recommendation

- to encourage the study of Saudi Heritage and traditional crafts and techniques to produce dresses having their own Saudi character.
- To issue specialized magazine or journal for traditional heritage and arts to make people and students aware of scientific and art culture.
- To give private place in the national museum of traditional garments from all over the Saudi.
- To participate actively in International fairs for heritage with shows of the modernist Saudi products.
- To encourage the use of traditional heritage in producing modern products of Saudi character as well as the active participation in heritage International Exhibitions.

Characteristics of Good Language Teachers: TESOL Teachers' Divergent Reflective Thinking

Lilian Ya-Hui Chang
Department of Foreign Language Instruction
Wenzao Ursuline College of Languages
90029@mail.wtuc.edu.tw

Abstract

Current literature reflects disparate characteristics of good language teachers: Harmer (2008) suggests that good language teachers should have sufficient knowledge of the language; studies from Grundy et.al. (2005) and Mullock (2003) both suggest the importance of teachers' ability to understand students' needs, while Brown (1994) discusses the importance of the desire to upgrade teaching skills. With divergent views concerning characteristics that can improve one's language teaching skills and enhancing teaching/learning effectiveness, it seems prudent for language teachers to reflect on important characteristics good language teacher should possess to benefit their students' language learning to create a more successful language learning experience.

A taxonomy of the characteristics of good language teachers drawn from the literature was developed by the researcher for analysis purposes. Chinese college TESOL teachers were asked to rank the characteristics in the taxonomy and then compared for points of agreement or divergence. Findings show that even with a limit of five categories for characteristics of good language teachers presented in the taxonomy, colleagues within the same department at a College of Foreign Languages in southern Taiwan created substantially different hierarchies. It was also revealed that the characteristics the teachers believed were important when they themselves were language learners appear to be quite different from those characteristics they currently rank as important.

This research may have important implications for how TESOL teachers engage with language learners in a discourse on their own beliefs concerning those characteristics each believe are important for good language teachers to possess. Through a stimulating dialogue a growing understanding of teachers' expectations and learners' expectations might emerge which could result in more effective learning.

Introduction

Anecdotal evidence during my own teaching experience at a college of foreign languages highlighted the idea that Chinese students studying English as a second language believe their teachers are an essential part of their language learning experience. They believe the success of their language education can be determined by which teachers in the department they have the good (or bad) fortune to have as instructors. If students believe their teachers are charged with such an influential role in language classrooms, I next wondered: What makes a language teacher good? Current literature has listed several characteristics good language teachers should possess sufficient knowledge of the language or the ability to understand the needs of students. There is no doubt that teachers assume several key roles in the language classroom: as educators transmitting knowledge, as facilitators assisting students with their learning, and as motivators inspiring students to achieve their language goals, to name a few. As any one teacher is unlikely to possess the full range of characteristics suggested in the literature, it seems prudent for language teachers to reflect on important characteristics good language teacher should possess to benefit their students' language learning to create a more successful language learning experience.

Two research questions were designed to explore beliefs college TESOL teachers have about the characteristics of good language teachers:

1. How do college TESOL teachers rank the characteristics of good language teachers?
2. What points of agreement or divergence emerge from the rankings by college TESOL teachers of the characteristics of good language teachers?

Literature Review

Defining good language teachers is a complex matter. Relevant discussions found in the literature coalesced around two types of sources: the views of authors offered in their own theoretical discussions, and the data of researchers obtained from empirical studies conducted with language teachers and/or language learners in various language learning contexts. Authors generally offered a comprehensive theoretical overview of the characteristics of good language teachers in accordance with language teaching theories. Harmer (2008, p.23) mentions that a good language teacher should have sufficient knowledge of the language and interesting things to say

in class. They also should be passionate and enthusiastic in their teaching and be able to effectively explain the use of the language, e.g. grammar, pronunciation, vocabulary to students. Brown (1994, p.428) believes good language teachers should have received “competent preparation leading to a degree in TESL” and be imbued with a “feeling of excitement about one’s work.” Brown also talks about the importance of the ability to understand and adapt to different cultures and the desire to upgrade teaching skills. Both Kral (1988) and Shulman (1987) emphasize the importance of teachers reflecting on their own teaching. In particular, Shulman considers it essential for teachers to look “back at the teaching and learning that has occurred” for it is through the processes of re-thinking, analyzing, and reconstructing teaching steps that a “professional learns from experience” (p.19).

Data derived from empirical research with language teachers and language learners revealed humanistic aspects of the teacher’s role toward students. Mainland Chinese students identified being patient as well as humorous among the top three expectations they have of a good teacher in addition to the teacher possessing deep knowledge (Cortazzi & Jin, 1996, p.187). Postgraduate TESOL students opined that the essential characteristics of a good TESOL teacher includes knowing and understanding the strengths and weaknesses, and needs of students, and treating students with courtesy and respect, while also keeping up-to-date in knowledge and skills (Mullock, 2003, p.10). A few studies have explored the views of both language students and teachers at the same time. Both high school English students and teachers in Israel considered it important for language teachers to effectively transmit teaching content in an easily understandable way, and to treat students fairly and equitably. However, their first priority was for English language teachers to have “an adequate command of the subject matter, i.e. his or her mastery of the four basic linguistics skills – reading, writing, speaking, and understanding” (Brosh, 1996, p.129). Undergraduate students and English teachers at a university in Yeman both agreed that the ability of a teacher to plan and deliver an effective lesson, as well as fluency and good communication skills in the foreign language are essential characteristics of a good EFL teacher (Kadha, 2009).

Finally, Borg (2006, p. 24) asked language teachers to identify distinctive features of good language teachers which distinguish them from teachers of other subjects: having more communication in the classroom; exhibiting creativity, flexibility, and enthusiasm; and employing more diverse teaching methodology were believed to be characteristics unique to good language teachers.

The characteristics of good language teachers mentioned above were selected from an abundance of traits offered in the literature discussed. While it seems necessary to confine within limits the number of characteristics under discussion, the characteristics presented form a representative sample of the disparity of opinions on the topic. Even from this restricted selection there is an absence of consistent, clear criteria of the most important characteristics of good language teachers. Due to the complexity of the issue this may not be surprising, yet in spite of the fact that “very different people make good teachers for very different reasons” (Prodromou, 1991, p.3) it seems valid to attempt some sort of a classification of the various characteristics of good language teachers. Synthesizing the characteristics mentioned in the literature discussed above, the following taxonomy is offered for analytical purposes:

- A. Having a Good Command of the L2 (e.g. fluent in the foreign language with good communication skills)
- B. Possess Sound Teaching Skills (e.g. employs diverse teaching methodology)
- C. Teacher Empathy toward Students (e.g. knows and understands students’ needs, and strengths and weaknesses)
- D. Personal Qualities (e.g. is patient and humorous)
- E. Reflection and Improvement (e.g. reflects on their own teaching and keeps up-to-date in knowledge and skills)

This section has reviewed relevant literature on the characteristics of good language teachers. Based on the literature, five categories of the characteristics good language teachers should possess were derived for this study. This taxonomy is not meant to be a comprehensive overview of all the important characteristics of good language teachers, rather, they are simply the most salient characteristics chosen by this researcher based on the discussions in the literature. Other researchers might offer a different interpretation as to what constitutes the most salient characteristics of good language teachers, and thus propose a different taxonomy.

Research Methods

The taxonomy mentioned in the previous section was designed as an analytical tool for the purposes of this research project. Participants in this study ranked the importance of each category and commented on these categories. The intention of this taxonomy was to be succinct to facilitate research participants making comparisons. This study was not meant to broadly obtain the research participants’ insights into

their reported perceptions of good language teachers (by example, see Borg, 1996), rather the intention was to explore agreement and divergence among TESOL teachers when forming a hierarchy of the categories of the characteristics of good language teachers within the taxonomy.

This research was conducted at a college of foreign languages in southern Taiwan. This sample pool was a convenience sample since the researcher had little difficulty accessing teachers that were teaching English to native-Chinese students at this site. Two Chinese TESOL teachers participated in semi-structured interviews in which they ranked and commented on the importance of the characteristics of good language teachers offered in the taxonomy. One teacher, Sabrina (a pseudonym), was teaching English to freshmen language learners at the time of this research; the other teacher, Irene (a pseudonym), was teaching English to sophomore language learners.

The interview started with a list of probe questions: Have you ever had a good language teacher? What qualities made that teacher good? What about a language teacher that you considered not good, what qualities were lacking in such a teacher?) Probe questions were followed by unanticipated questions in reply to interviewees' responses (Bryman, 2004). Probe questions were intended to allow interviewees to explore their own characteristics of language teachers based on personal experience. It was hoped that through sharing their personal experiences, the interviewees would become more relaxed, more willing to share their opinions. Then participants were presented with the taxonomy with 1-2 specific characteristics for each category as examples. They were then asked to rank the categories according to their importance and explain the reasons for their choices. They were also asked to comment on each category (e.g. raise some questions, or add to the examples of the category). The 30-minute interviews were conducted in Mandarin Chinese – the native language of the interviewees.

All the semi-structured interviews were transcribed in Mandarin Chinese first, and then translated into English. The data in the translated English transcripts were then coded and analyzed. At the end, these two sets of data from the two teacher-participants were collated in order to discover points of agreement or divergence.

Research Findings

Sabrina's Interview

From the five categories forming the taxonomy, Sabrina ranked the ability to reflect on teaching and to improve as the most important characteristic a good language teacher should possess. This was followed by possessing sound teaching. The least important characteristic a good language teacher should possess was having a good command of the L2. Sabrina expounded on the importance of teachers reflecting on their teaching and updating their teaching knowledge:

Yes, it's very important [to update your teaching styles].
It's boring if we teach the students in the same way all the time. The world is changing, and we have to change, too. You don't have to make big changes, but you do need to adjust your lesson plans and teaching style to suit the environment.

(Interview, June 18, 2009)

Sabrina criticized teachers who are hired for their ability to speak the language but do not have a sound pedagogical foundation. She explained that one's language ability is not necessarily an indicator of teaching competence:

I've seen someone who speaks a language very well, but he can't teach. Even though you speak a language well, it does not mean that your lecture makes students learn something.

(Interview, June 18, 2009)

Sabrina expressed that sufficient knowledge of the L2 is adequate for college-level language teaching. "As long as they can understand what the teacher is saying" then learning can take place because "students are already somewhat proficient in English before they study in college." She finds other characteristics in other categories more important than this one.

Another interesting issue that surfaced from this interview was how the characteristics she perceived as 'good' when she was a student differ from her current perspectives now as a language teacher. In the interview, she talked about two good English teachers she had when she was a language student, one was good due to her sound teaching skills of English pronunciation and the other was good due to his patience with students:

At that time, the teacher taught us the correct pronunciation, and I think she was good at teaching KK phonics. In this way, I learned KK phonics well. Because of that, my good pronunciation helped me a lot when I went abroad. The second one is my ESL teacher in high school when I studied in the U.S. He was a teacher with great patience.

(Interview, June 18, 2009)

Both sound teaching skills and personal qualities were not ranked by Sabrina as the most important characteristics she now holds. This indicates that the characteristics of good language teachers can be a dynamic concept that changes over time. How a student views a good language teacher could be very different from the characteristics language teachers believe are important. This could lead to a significant gap that fosters mismatched expectations between a language teacher and her students. A language learner might expect the teacher to exhibit sound teachings kills and possess favorable personal qualities (e.g. patience), while the teacher may believe reflecting on her own teaching and keeping up-to-date are more desirable characteristics to cultivate. Such a mismatch could create tension in the classrooms as the teacher strives to fulfill her own expectations which students may not appreciate.

Irene's Interview

Contrary to Sabrina's ranking, Irene selected having a good command of the L2 as the most important characteristic for a good language teacher to possess, followed by sound teaching skills and empathy toward students. Irene stated that a good command of English for a TESOL teacher was a key prerequisite for a good language teacher to have:

From a professional viewpoint, I believe a good language teacher should at least have a good command of the L2. In other words, if you are teaching a language to others, you should at least know the language well enough yourself.

(Interview, June 25, 2009)

Irene's opinion echoes Brosh (1996) whose research participants also mentioned the

teacher's command of the target language (speaking, reading, writing, and understanding) was vital. The least important category in Irene's opinion was a teacher's personal qualities. However, her opinion on the importance of this category was split. On the one hand, she feels being humorous or active in the classroom is an innate quality that "is hard to ask people to change" in order to have the necessary characteristics of a good language teacher. On the other hand, she found the quality of having patience indeed important for language teachers. Hence, while ranking a teacher's personal qualities the least important, she did single out the quality of having patience as an exception.

Reflecting Sabrina's view, Irene declared that her conception of the characteristics a good language teacher should possess is now different from when she was a student. When referring to her own past language learning experience, Irene mentioned that as a student she focused more on the pragmatic qualities of good teachers. Irene wanted good language teachers to possess sound teaching skills that enabled students to do well on comprehensive exams.

At that time, we considered a good teacher was
someone who could help us get a very high score in the
entrance exams.

(Interview, June 25, 2009)

To sum up, this section has presented interview data from Sabrina and Irene, who ranked the characteristics of good language teachers based on items in the taxonomy offered to them during the interview. The next section will discuss how these two teachers' points of views on the taxonomy of good language teachers agree or disagree.

Discussion

Points of Agreement

These two teachers both suggest that it is very hard to define good language teachers, and it should be evaluated from different points of view. For instance,

Sabrina: Whether someone is a good teacher should be
defined from various aspects.

(Interview, June 18, 2009)

Irene: It is really hard to define. It is hard to define a good language teacher.

(Interview, June 25, 2009)

This mirrors many researchers (e.g. Grundy et.al. ,2005; Mullock, 2003) in that there should not be a clear-cut answer when it comes to good language teachers since it involves many aspects and various language teachers are good for various reasons (Prodromou, 1991). Perhaps one reason that it is hard to define characteristics of a good language teacher is due to the fact that these characteristics may vary due to different age groups of learners. This is in connection with an unexpected theme that emerged from the interview data. In the interviews, both teachers seemed to indicate that their ranking of the characteristics of good language teachers may vary depending upon the age of the language learners. Irene said:

If we are talking about teaching English to children, it would be a different situation. My choices of what would be important would not be the same.

(Interview, June 25, 2009)

It is certainly possible that even students within the same age group have different needs and expectations of good language teachers. Defining good language teachers broadly within an entire cultural group (as Cortazzi & Jin, 1996, have done with Chinese students), or defining a certain age group of learners, rather than treating each individual class group uniquely could miss the specifics of a particular class group's identity. After all, each individual class group exerts their own ideas into the language learning mix (Dörnyei & Murphey, 2003). The ideas of any single class group may converge into different perspectives or expectations of the characteristics good language teachers should possess.

Points of Divergence

Even with a succinct taxonomy based on salient characteristics chosen from discussions in the literature, both Sabrina and Irene still seem to have very different rankings on the importance of these categories. Sabrina believes that language

teachers' ability to reflect on their teaching and improve their teaching skills is the important category while a teacher's good command of the L2 is viewed as the least important category. This is in a direct contrast to Irene who believes a teacher's good command of the L2 is the most important characteristic good language teacher should possess. These points of divergence signal how each teacher has his or her own teaching beliefs. What one teacher finds important could be very different and even contradictory to another even if both teachers are considered effective language teachers, as Prodromou (1991, p.2) declares: "there are many different and contradictory qualities that contribute to effective teaching."

Because teachers hold diverse beliefs which may result in different teaching styles, it seems incumbent on teachers to explain to their language learners their own beliefs, personal teaching style, and other relevant issues, for example, how one's teaching beliefs may affect classroom grading criteria, the teaching process, and the choice of classroom activities. This research is not meant to suggest teachers change their beliefs or styles in order to fit into the formula of a good language teacher since there very well may not be a "formula for good teaching" (Prodromou, 1991, p.3). Instead, this research is meant to raise a language teacher's awareness of the diversity of expectations as to what may constitute characteristics of good language teachers; and also to encourage language teacher to initiate communication with their students to discuss these issues. With a greater understanding through communication of the beliefs both teacher and student hold, students may be more likely to support what the teacher does in the classroom, and the teacher may experience less resistance from students. Thereby creating a more effective language teaching and learning experience. Brosh (1996, p.126) signals the importance of a harmonious classroom atmosphere:

As teaching is a two-way process, the quality of the teacher-student interaction is significant in determining whether or not the teacher has the support of his or her students.

Conclusion

This study explored TESOL teachers' own reflective thinking on the important characteristics of good language teachers. Two Chinese TESOL teachers at a College of Foreign Languages in Taiwan participated in this study through semi-structured interviews. In the interviews, the research participants were presented with taxonomy

of important characteristics of good language teachers and were asked to rank their importance accordingly. Two important findings surfaced from the interviews:

1. Teachers' rankings on the important characteristics of good language teachers can be very different. In this study, these two teachers seemed to have divergent ideas about what they believe are the most important characteristics of good language teachers. Sabrina believes a teacher's ability to reflect on teaching and improve teaching skills is the most important characteristic while Irene interprets having a good command of the L2 as the most important characteristic. This characteristic, having a good command of the L2, is actually something Sabrina finds the least important. This demonstrates that teacher beliefs of what makes a good language teacher varies, hence their approach to teaching in the classroom would likely be different from each other as well. Such differences could result in students feeling confused or even finding it difficult to adjust to a teacher's approach in the classroom. This research may have important implications for how teachers engage with students in a discourse on their beliefs and approaches to teaching: what characteristics they believe are important for good language teachers to possess, why they are important, how those characteristics may affect expectations of students, etc. Through a stimulating dialogue a growing understanding of teachers' expectations and learners' expectations might emerge which could result in more effective learning. As Penner (1992, p.16) describes, "the key to effective teaching lies in the growth and improvement of classroom communication."
2. Interview data also revealed that views of the most important characteristics of good language teachers fluctuate over time and according to circumstances. Characteristics teachers currently perceive as important for good language teachers to possess are different from what was believed when they were students. In addition, these two teachers seemed to imply that their perspectives of good language teachers could vary for different groups of learners according to age. All these findings suggest that language teachers should not be defined as a general, global phenomenon that applies to all contexts. The concept of what makes a language teacher good is individualistic and complex. As Borg (2006, p.29) concludes in his study, research of distinctive language teachers would be most "productive" and "practical" when it is conducted in "specific language teaching contexts," since the "language teacher is not a monolithic phenomenon amenable to globally meaningful definition" (p.26). This study suggests that sometimes there could even be diversity of perspectives within the same teaching contexts among college-age learners of a similar ethnic background (e.g. Chinese students).

Hence, the concept of good language teachers might be worth investigating based on each class group's perspective to better disclose and recognize each group's individuality.

ABSTRACT

Technical training of employees has become one of the major activities in modern industries in India. Rapid growth in technology and competition has given continuous learning a strategic importance. This study was conducted by administering a questionnaire in reputed automobile manufacturing companies in Chennai (formerly Madras), which is a prominent manufacturing city of India. A total of 305 responses were collected from production supervisors who were in an important position to observe the effects of training. The survey data regarding the perception of the employee about the effect of training on the organization was analyzed. The study has resulted in identifying five factors that contribute to the organization. The study throws light into the various effects of technical training, which will be beneficial for the industries spending considerable time and money in offering technical training programmes in industry.

1. INTRODUCTION

In a rapidly changing society, employee training and development is not only an activity that is desirable, but also an activity that an organization must commit resources to, if it is to maintain a valuable and knowledgeable work force. Every Organization needs to have well-trained and experienced people to perform their duties. As the job becomes more complex the importance of employee development also increases.

The review paper by Mital et al (1999) shows that there is a dire need to train workers in manufacturing organizations and thereby improve the overall effectiveness and efficiency of such organizations. Michalski and Cousins (2000) have summarized that the training evaluation practitioners have long sought to isolate benefits of training in terms of organizational effectiveness and business results. A study by Swierczek and Dhakal (2004) on the implementation of learning strategies in developing countries in manufacturing industries showed that there is improvement in performance after conducting training programmes.

Gordon and Sohal (2001) conducted a study and identified the manufacturing practices which distinguished the “most successful” plants from the “least successful” plants. Based on responses from a large number of Canadian and Australian manufacturing plants they concluded that the greater emphasis on training at the “most successful” plants indicated a desire to upgrade the skills of individual workers to achieve company objectives. They also observed that the managers at these “most successful” plants actually implemented practices which indicated a desire to maximise their employees' potential.

Costea (2005) concluded that the organizational performance is linked with the way human resources are managed, which in turn is directly related to the challenges identified. According to the analysis, it could be derived that training and development, employee relations, and efficiency and flexibility are going to be the primary challenges in the next three years at least among Southern EU countries.

Overall, training leads to acquiring new skills and/or improvements in existing skills (Carnevale and Goldstein, 1990). Bunning (1997) has reported that small groups of four to eight supervisors completed a six-month training programme during which they completed a process improvement project within their work area. The work reported the outcomes which showed high satisfaction with the training, very high attainment of National Vocational Qualifications and the contribution of at least £1.5 million to the business.

Long-term investment in training and staff development (TSD) was felt essential to produce the highly skilled and flexible employees who will be needed by the Australian manufacturing enterprises which were facing enormous pressures in terms of international competition and turbulent external environments (Kane et al 1994).

2. SUPERVISOR

Supervisors are in an important position to influence individual and collective tacit knowledge sharing in teams, and thus overall organizational performance. Often supervisors are also called line managers in literature. Supervisors are required to “productively manage the business and continuously be looking for opportunities for quality improvement” (Bunning 1996). Previously seen as a “super technician”, the supervisor now began to be required to do fewer and fewer technical tasks. Rather, he was required to become increasingly involved in more broad-based areas, such as production planning, resolving customer complaints, process improvement, cost-cutting measures and manpower development, among other areas (Bunning, 1997).

3. EFFECT ON THE ORGANIZATION

Bassi et al (1996) maintained that firms are transforming themselves into learning organizations that can operate in high performance work systems. After studying the success factors for advanced manufacturing systems, Mize (1987) indicated that between 25 percent and 40 per cent of the total cost of a project would be spent on education and training. Hyland et al (1998), in their study of Australian companies, observed that the companies, particularly in the manufacturing sector, have undergone downsizing, restructuring and reorganization in the previous ten years. Firms needed to ensure that their remaining employees are multi-skilled and able to adapt and respond to ongoing changes. Their study demonstrated the benefits not only to individuals, but to the organization, of adopting an active learning process.

Removing improvement barriers: Many manufacturing firms experience resistance whenever a new technology is introduced. Continuing education and training help to ease the resistance to AMT adoption (Beatty and Gordon 1988).

Cultural improvement: The full benefits of training will only be realized if there is an appropriate organizational culture (Hyland et al 1998).

Profitability: Profitability as the outcome of training has been established in the empirical research work by Delery and Doty (1996). Garavan et al (1995) stress that since the prime objective of any organization is to sustain long-term profitability through high levels of productivity and competitiveness, the training and development of human resources must receive due recognition and status as a critical strategic activity.

New technology: Worker re-training needs are most understood in industries where technology has changed dramatically, like the aerospace industry (Deutsch 1987). Continual and rapid improvement requires education and training (Hayes and Jaikumar 1988). With AMT, employee skills move from being behavioural and experienced based to attitudinal, cognitive, and social (Adler 1988).

Competitiveness of the organization: Gowen and Tallon (2003) determined that as the rate of environmental change increases, so does the need for the training and re-training of the workforce. Best practice firms treat training and human resource development as a strategic need, not as a discretionary budget item whose funding may be reduced in off years.

Continuous improvement: Continuous improvement is an effort that impacts on the whole enterprise and not just on production. Nevertheless, most activities under this title have focused on production and sometimes involve considerable training. Often, this training is part of the general training for teams. Training for continuous improvement is specific, where it provides insight in the workings of specific processes. It is generic, where it provides workers with tools for the analysis of problems, instills different attitudes towards the organization, and helps people to deal with, and even support, continuous change (Dankbaar 1999).

Productivity: Plants which allocate greater resources for the training of the workforce have been shown to have increased productivity (Garvin 1984, Womack et al 1990, Sakakibara et al 1993, and Flynn et al 1994). According to Beasley and Zuercher (1991), training programmes lead to productivity improvement. The impact areas of training are production process efficiency, material expenses, inventory levels, materials and work-in-process. Productivity as the outcome of training has been established in the empirical research works by Kidder and Rouiller (1997), Bishop (1994), Huselid (1995), Russell et al (1985), Barrett and O'Connell (2001), Ichniowski et al (1997), Bartel (1994) and Aragon et al (2003). The single most important source of Japanese productivity growth remains as the emphasis on learning and training (Grayson and O'Dell 1988). Training, incentives, organizational commitment and customer orientation have a direct causal impact on employee productivity (Paul and Anantharaman 2003). The fact that training enhances employee productivity is consistent with prior studies (Bartel 1994, Huselid 1995, Black and Lynch 1996).

Change management: The realities of workplace restructuring are being felt in many companies. Common results of such restructuring are role changes. This can lead to personnel being required to move from roles where they have developed substantial expertise into new roles where they are basically novices (Dreyfus 1982). Workplace restructuring implies people changing roles, leading to the deskilling of people who must learn their way back to competence

(Houldsworth et al 1997). These changes necessitate intense learning events for the personnel involved as they grow back to competence and beyond. Those managers who understand this change as a learning event seek to provide professional development and training programmes for those who have been displaced (Swieringa and Wierdsma 1992). Chang (1989) noted that an organization can never realize change by simply hiring engineers and technicians with new technical expertise from outside. A long-term educational and training program should be designed and implemented to train the employees so that reallocation of the human resource for jobs requiring advanced technical expertise can be made possible. The research by Smith and Hayton (1999) made three key observations that relate to the development of employer training in Australian enterprises at that time. First, workplace change emerged as a key driver for employer training in both the survey and the case studies. Any improvement involves change, and training plays an important part in preparing employees for the change process. Several authors argue that the process used to prepare employees for change can be as crucial as the change itself (Ferrini-Mundy et al 1990, Cocheu 1992, Sutton 1992).

Business Needs: The research by Smith et al (2003), built on the model of employer training, investigated in depth the relationship between employer training and organizational change in Australian enterprises.

Innovation: Returns on investment in training may be found in many forms (Dawe 2003). These may include higher levels of value-added activities as a result of greater levels of employee skills, reduced overhead costs to the firm (efficiency of resources or fewer workers compensation claims) and greater ability to innovate in terms of adopting new technology and introducing better work processes. Training may also provide benefits without direct financial benefits, for example, providing a safer workplace, increasing flexibility amongst employees who can perform a range of tasks, increasing staff morale and confidence, or achieving quality assurance rating.

The effect of training on the organization was studied by literature survey and interview of people from the manufacturing industry. Table 1 gives the 37 items describing the effect of training on the organization. These items were used to make the questionnaire.

4 FACTOR ANALYSIS

The survey data were first tested for sampling adequacy using Kaiser-Meyer-Olkin (KMO) statistics. Sampling adequacy predicts if data are likely to factor well, based on correlation and partial correlation. Bartlett's test of sphericity was conducted to check whether the correlation matrix is an identity matrix, which indicates that the variables are unrelated. The significance level gives the result of the test. Reliability analysis was conducted on the factors and the alpha values are shown in the respective tables.

Factor analysis was performed on the responses with the objective of reducing many variables that belong together to a manageable number and having overlapping measurement characteristics. The questionnaire contained 37 questions on the effect of technical training on the organization. Reliability analysis was conducted on the factors and the alpha values were calculated. The factor analysis resulted in 5 factors on the effect on the organization.

Table 1 Effect of training on the organization

Sl. No.	Effect of training on the organization
1	Extent to which training aided in creating quality culture
2	Extent to which training aided in creating people development culture
3	Extent to which training resulted in innovative ideas
4	Extent to which training resulted in innovative products (or new products)
5	Increase in productivity as a result of training
6	Extent to which the training was helpful to meet the challenges arising due to the globalization of economy
7	Extent to which the training resulted in technical conflict reduction
8	Extent to which training reduced inventory
9	Increase in operating results
10	Increase in profitability
11	Reduction in various costs
12	Extent to which the training was helpful in maintaining a stable workforce
13	Extent to which the training was helpful in the introduction of new technology
14	Improvement in the turnover
15	Extent to which training reduced wastage
16	Extent to which training resulted in actions to support the employee needs
17	Extent to which the training was helpful in responding to external changes
18	Extent to which training supported the business needs
19	Extent to which the training was helpful to becoming a reliable and preferred supplier
20	Increase in the number of suggestions given
21	Extent to which training resulted in team building
22	Extent to which the training was helpful to understand the current societal trends that may impact the organization
23	Focus of the training on the benefits of activities
24	Extent to which training resulted in new initiatives
25	Improvement in the dissemination (spreading) of knowledge
26	Extent to which the training was helpful in change management
27	Extent to which the training was helpful in continuous improvement
28	Extent to which the training was helpful in responding to internal changes
29	Extent to which the training was helpful to solve business problems
30	Improvement in business performance as a result of training
31	Improvement in the implementation of best practices
32	Extent to which training served as a major feature of business strategy
33	Extent to which training resulted in achieving the company objectives
34	Improvement in the competitiveness of the organization
35	Extent to which the training was helpful in the creation of flexible workforce
36	Reduction of overhead costs
37	Extent to which the training was helpful in removing improvement barriers in the industry

Effect on the organization: The survey data regarding the perception of the employee about the effect of training on the organization were first tested for sampling adequacy using Kaiser-Meyer-Olkin (KMO) statistics (Table 2). The result value 0.953 indicated the suitability of the data for factor analysis. Bartlett's test of sphericity was conducted and the significance value of 0.000 indicated that there are probably significant relationships among the variables. Reliability analysis was conducted on the factors and the alpha values are shown in Table 6.

Table 2 Test for sampling adequacy and relationship significance: variables of effect on the organization

Kaiser-Meyer-Olkin Measure of Sampling Adequacy.		0.953
Bartlett's Test of Sphericity	Approx. Chi-Square	5237.452
	df	406.000
	Sig.	0.000

Communalities in Table 3 show the amount of variance in a variable that is accounted for the factor or factors taken together. The communality is a useful index for assessing how much variance in a particular variable is accounted for by the factor solution. Large communalities indicate that the large amount of the variance in a variable has been extracted by the factors.

Table 4 indicates that there are 5 possible factors and their eigenvalues are given. Factor 1 is accounting for most variance (45.87%).

The Rotated Component Matrix table (Table 5) reports the factor loadings for each variable on the components or factors after rotation. Each number represents the partial correlation between the item and the rotated factor. These correlations help to formulate an interpretation of the factors or components. This is done by looking for a common thread among the variables that have large loadings for a particular factor. Table 5 shows the reliability of the factors of effect on the organization. The factors were named business improvement, cultural improvement, continuous improvement cost reduction, and initiative and knowledge dissemination.

Initiative and knowledge dissemination	0.64

5. CONCLUSIONS

This work studied the effects of technical training in the automobile manufacturing companies in Chennai, India. The study identified five organizational benefits of technical training in automobile manufacturing companies. The benefits are business improvement, cultural improvement, continuous improvement, cost reduction and initiative and knowledge dissemination. This is probably the first attempt to investigate the effects of technical training in automobile industries in India in detail. This study will help the automobile manufacturing companies, which invest heavily in giving technical training to the employees, to understand the effects of technical training in organizational improvement. Continuing training is a pre-condition and a consequence of continuous improvement. This work has identified the major factors of the effects of technical training that benefit the automobile manufacturing companies. This work will be useful for these companies in their efforts to improve their organization.

Abstract

Aging society is a global issue. To provide adequate assistance, support and service to the elderly, their needs must be identified. However, much of the needs remain hidden because elderly persons do not, or are unaware or unable to articulate their needs. Particularly in the Chinese culture, elderly people tend to express content but not complaint. Nevertheless, *hidden needs* may be observed by younger people who live with the elderly. Therefore, the research aims to uncover hidden needs of the elderly from the information provided by younger people. We conducted a survey of various social networking sites that contains contents related the elderly and aging and identified Blogs, Facebook and Discussion Forum as platforms of data collection. On Facebook, we collect specific data by holding activities or tests. On Discussion Forum, we collect data by posting discussion topics to promote feedbacks. We do not actively recruit participants, instead rely on social networks of our friends. The result of a quantitative content analysis shows hidden needs are potential in issues of conversation in family, assistance by technology and trend of traveling.

1. Introduction

Aging society is a global issue. To provide adequate assistance, support and service to the elderly, their needs must be identified. In our previous studies, using questionnaire surveys and cultural probes (Gaver, Dunne & Pacenti, 1999), to understand the elderly's needs of smart technologies in the domestic environment, we found smart technologies for home safety and security, energy conservation and usage monitoring, as well as health care and maintenance, are desirable (Chien, 2008). However, each of these categories, e.g. home safety, contains a wide variety of technologies that have to be tailored for different levels of needs. When inquiring the elderly on the detail of their needs, we found that the elderly have difficulty elaborating their needs in details or, in some cases, simply express no further needs are necessary.

We believe much of the needs remain hidden because elderly persons do not, or are unaware or unable to articulate their needs. Particularly in the Chinese culture, elderly people tend to express content but not complaint. Nevertheless, hidden needs may be observed by younger people who live with the elderly. Therefore, the research aims to uncover hidden needs of the elderly from the information provided by younger people.

Given that younger people adopt new media and understand new technologies easily (Livingston & Bovill, 1999) as well as with the advances of information and communication technology, we identify web-based social networking environments as the targeted place to collect information.

These environments are supported by social computing technologies and serve as intermediaries for social relations (Schuler, 1994). Social computing refers to using information systems as platforms for social interaction, data collection and manipulation (Musser, Wedman, & Laffey, 2003). Social computing technologies enable the formation of “the wisdom of crowds” (Surowiecki, 2004).

Blogs and Wikipedia are the most visible of the social computing initiatives, as well as social networks, such as Facebook, and discussion forums (Parameswaran & Whinston, 2007). Blog is a grassroots way that provides bloggers to document their lives, opinions, and emotions (Nardi, Schiano, Gumbrecht, & Swartz, 2004). Occasionally, their family could be parts of protagonist. Discussion forums are common in text-based and non-face-to-face communications (Guzdial & Turns, 2000). Users come together for specific purposes. For example: some people need to live with their parents after married so the discussion forums have discussions about how to get along with the elderly. Facebook allows people to share and make their individual world more open and connected. By 2009 Facebook was reported to have more than 5 million registered members in Taiwan.

2. Hidden Needs

The concept of hidden needs has been discussed in many areas of study, for examples, marketing, psychology and medicine. People, in fields of business and economics, often want to know more about the markets and customers’ unmet needs (Titus, 2000). Successful and innovative companies produce products that not only meet the customers’ expressed needs but also amaze them by anticipating and fulfilling their unarticulated needs (Kärkkäinen, Piippo, Puumalainen, & Tuominen, 2001).

Freer (1987) mentioned that hidden needs of the elderly from the patient because of asymptomatic disease. These are symptoms that are unreported or undetected. The elderly person may not think the problem legitimate or remediable, or may think it is only to be expected with old age. Problems may remain hidden because of communication difficulties due to factors such as hearing or memory loss.

Hidden needs happened when people are inarticulate to the requirements rest on a subconscious level (Goffin & Lemke, 2004). Thrash, Elliot, and Schultheiss (2007) stated that the implicit needs are nonverbal. Unconsciously or unspoken at the end of an awareness dimension may happen in specific situation like meeting or at non-intimates people or surroundings (Cusinato & L’Abate, 2008). On one hand, hidden needs are hidden because people do not show them off or speak them out. On the other hand, hidden needs exist because people are unaware of or unable to articulate them.

People always complain their problems to their friends and family, so do the elderly. Old people often chat and nag with their friends and family, even gossip or complain. It is the naggings and gossips, which may contain indications of the elderly’s needs.

3. Methodology

The study is qualitative research to exploring issues and understanding phenomena based on Grounded Theory (Goulding, 1998). The finding comes out by collecting data and analysis repeatedly. Coding refers to progress of analysis data through fractured, conceptualized, and integrated (Strauss & Corbin, 1998). We use NUDIST Vivo (QSR International Pty Ltd) as

coding tool through open coding, axial coding and select coding. After conducted a survey of various social networking sites that contains contents related the elderly and aging, we identified Blogs, Facebook and Discussion Forum as platforms of data collection. We gathered the data from various platforms of social computing, and coding the data for analysis.

Data Collection and Sampling

In this study, we examined two Blog communities: Wretch (<http://www.wretch.cc/>) and Yam Blog (<http://blog.yam.com/>). Both communities are operated by Taiwan companies and taken together they occupy over three quarters of the Blog market share in Taiwan. For Discussion Forums, we selected Baby Home (<http://www.babyhome.com.tw/>), which is designed for young parents. In the discussion forums, users discuss issues related to their babies, as well as the elderly they live with or encounter. Lastly, we created a Facebook fan page (in Traditional Chinese) called “Having an elderly at home is like having a treasure” (<http://www.facebook.com/pages/jia-you-yi-lao-ru-you-yi-bao/165365468098>). We posted news related to the elderly everyday, and occasionally, held activities to invoke discussions and gather feedbacks from fans.

The study followed seven months of activities in these social computing platforms, between September 30, 2009, and April 6, 2010. The sample was drawn by searching keywords about the elderly, parents or grandparents in the blog articles and forum discussions. Blog articles and forum discussions existed before September 30, 2009, are considered as well. Our valid data consists of 144 articles from blogs, 560 discussions from discussion forums, and 33 feedbacks from Facebook.

Data Analysis

Our Facebook fan page has 68 fans of ages between 13 and 60 (Figure 1). Over one half of them are female.

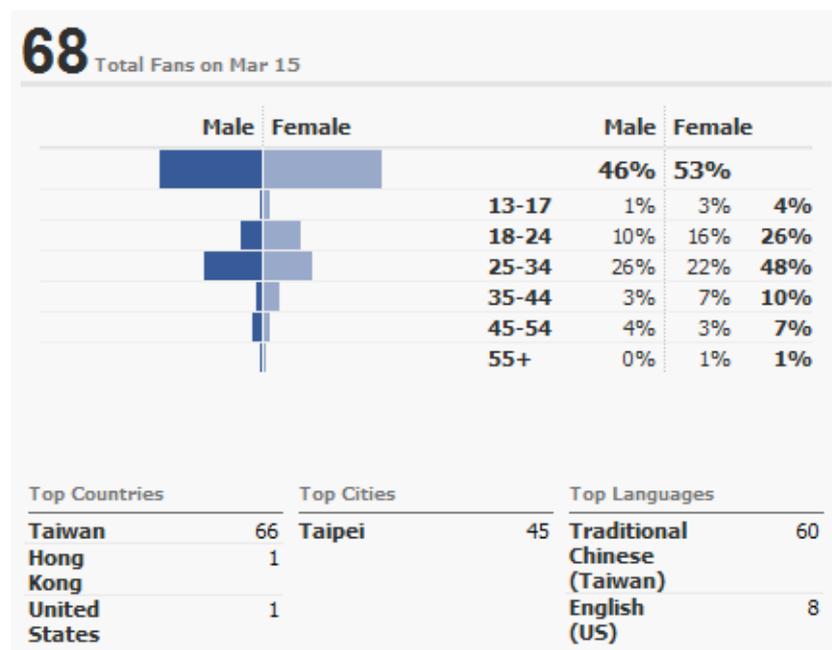

Figure 1: The statistic of fans.

We designed a quiz to explore people’s attitude towards being old and the old people. The quiz is “What things defeat you most easily?” The quiz was taken 2,224 times. The result showed that

over 50% of the participants was afraid of being homeless when they are old. The second most concern is “being sick”, while other concerns are “not having personal hobby” and “no money” in the old ages.

The first step of our analysis was open coding. We coded the free node through microscopic approach (Strauss & Corbin, 1998). We got free nodes from 139 Blog articles, 100 forum discussions and 55 Facebook discussions. In total, we generated 29 free nodes with issues such as parents, grandparents, life style, habits and traveling. The users on the Facebook shared their experiences about their parents and life most, and less about their grandparents. Bloggers often wrote about their parents or grandparents when specific emotions were evoked, for instance, angry and remembrance.

We organized free nodes into tree nodes. From our previous study and the literature (Chien, 2008; Nimrod, 2009), we identified 8 aspects of needs: Health, Social issues, Finances, Study, Recreation, Travel, Work, and Housing.

- Health (health caring): needs of health caring and services
- Social issues (society caring): needs of respect and caring from people and social services
- Finances (safety of economic): needs of economic stability and supports
- Study (education): needs of learning and continuing education
- Recreation (leisure activity and spending): needs of leisure activities and shopping
- Travel (transportation): needs of touring, transportation and information services
- Work (manpower): needs of working and volunteering
- Housing: needs of aging-in-place and technology in sustainable development

According to these aspects, we categorized free nodes into tree nodes in the hierarchy shown in Figure 2. However, there are free nodes that cannot be classified into the 8-aspects of needs hierarchy (Figure 3).

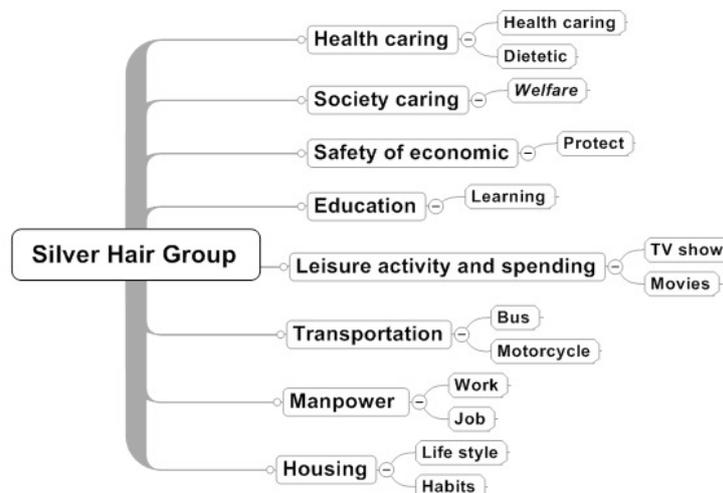

Figure 2: Tree nodes classified in 8 aspects of needs

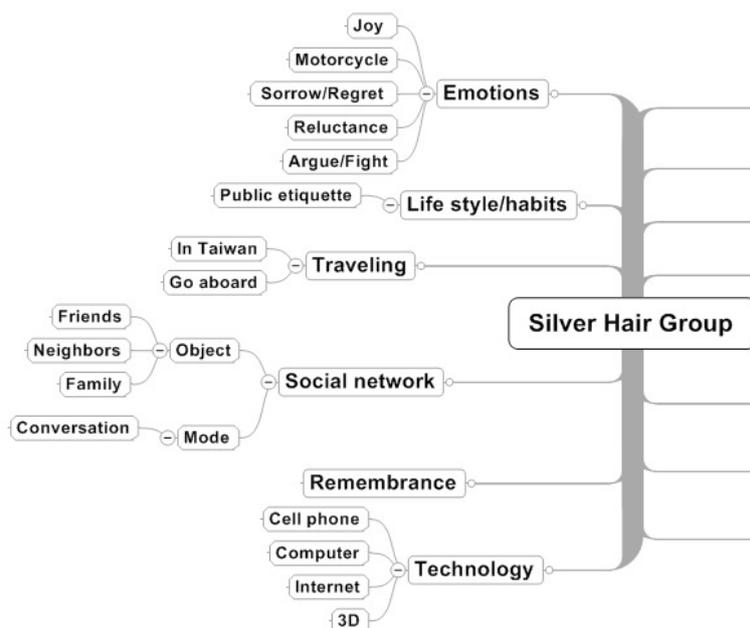

Figure 3: Free nodes that cannot be classified into the 8-aspects of needs

Results

Human relationships could be the changes of concepts and lack of interactions. The applications of technology is getting extensive that may become the chances of assisting the elderly and their family. Due to their children and grandchildren being proficient at using technological products, the acceptance of technology by the elderly may increase.

In axial coding, we focus on analyzing nodes which were not grouped into 8 issues for disclosing the hidden issues. We have identified three issues: conversation in family, assistance by technology and trend of traveling.

Conversation in family

The issues of conversation may be caused by differences in languages and life styles. In Taiwan, many elderly people speak Taiwanese (a local dialect) instead of Mandarin Chinese. However, children are often taught in Mandarin Chinese in school and have more conversations with their friends than their grandparents. Some bloggers mentioned they often have conversations in different languages with their grandparents, both of them had to guess what each other was talking. The interactions between parent-in-law and daughter-in-law are big problems. The elderly sometimes are too stubborn to listen to the suggestions from others. People cannot stand most is the elderly take advantage by relying on their seniority. The elderly sometimes would think they are senior citizens that they are deserved to have a seat, cut in the line or break the rules.

Assistance by technology

Many assistive products for the elderly have been research and designed in recent years. The trend of design is focus on cell phone, caring and medical. Users on the internet have discussed and point out how they feel after their parents used the cell phone. Some users mention the needs of the elderly and compiled a list. Nowadays, the cell phones designed for the elderly do match some features on that list, for example, the size of buttons and screen, SOS button and loud ring tone.

Trend of traveling in last two years

The senior citizens often traveling with the community they live. We found there a trend of traveling. Those senior travelers not only travel in Taiwan but go overbroad (Tseng & Chen, 2007). The elderly not just save money for their children or grandchildren, but also spend their time to enjoy traveling. The place that the elderly consider most are the place is easy for transportation and less walking. The elderly people often consider the traveling destinations from their own experiences or recommendations from their family and friends. They do not trust the information on the internet.

4. Discussions

The trend of traveling has been changing recently. Internet users get travel related information, costs and travel companions through social networking sites. Since the elderly cannot get or do not trust the information on the internet, can only rely on the information from their friends or family. In addition to friends and family, the elderly may take recommendations from community center or the senior center. From our data, we found that there are people would like to travel with the elderly but there exist no communication channels to pair them up. Product design for the elderly is a hot topic. We found many researches about product design through observing, interviewing and experimental simulation. Customers post questions on the internet before buying, as well as sharing their experiences after using a product. The opinions from users are more detailed due to the usage time are long.

Collecting data from blogs, discussion forums and Facebook may not collect in many details, but can get many issues comes out from users. And we can find general phenomena easily. How to get more details from the internet through the social computing could be the future work. Users on the net often comment in short sentences, or even just press the “Like” button. But what kind of materials those cause the users would respond these feedbacks? People may share their own experience but won’t go in depth if no one keeps asking.

Media and Communications

Abstract

Living in dormitory has always been an important part of life for students who study far from their hometown. For them, it is the first time to deal with all things in daily life on their own. Sometimes the gap between the expectation and the reality of interpersonal relationship has been generated, and sometimes students live by themselves; these reasons will make them feel lonely easily, especially at night.

Some social work researches have shown that the relationships between relatives and friends, but the relationship between strangers who live nearby is seldom discussed. The goal to this research is to measure the loneliness of the person who lives alone and how the device improves the communication with his/her neighbors. The device is placed in rooms on the same floor of the dormitory, and the users who live nearby don't know each other. The device called CONNEC+ABLE is connected to each room. It shows the information whether you sit on the chair or not. If you need someone to accompany with you, you can push the button to change your light. You can also change others' lights to express that you care about them. The purpose is to explore the behavior and the relationship or interaction between users.

Keywords: relationship between strangers, CONNEC+ABLE, interaction

1. Introduction

1.1 Feeling explore

Lack of particular interpersonal relationship, or has a gap between the reality and the expect of interpersonal relationship, and makes people has an unhappy subjective emotion, feeling, experience and reaction, we called it "Loneliness"(Fong-Wei Tsai 2006). The purpose of our device is to discover, decrease, even eliminate the feeling of being lonely or other unpleasant experiences when living alone in the dormitory.

1.2 CONNEC+ABLE

We combine "connect" and "table" to be a name of our device.

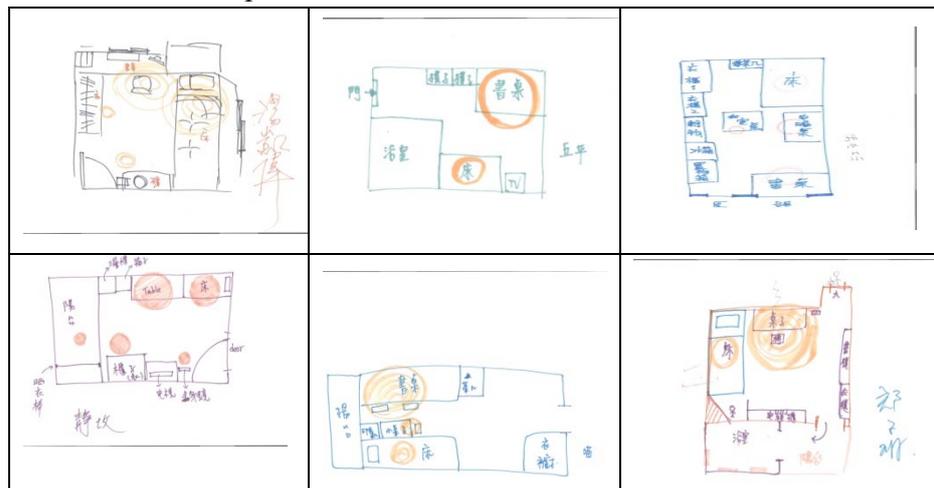

1.2.1 CONNECT

This device is used to connect the users who are strangers but live near to each other and allows the user turns on the device without intention. The reason we chose strangers as the interactive object is comparing to interact with family members or friends. Users won't has too much expectation on strangers, so the loneliness generated by the gap between reality and expectation on the interactive object will

be avoided, and if user get the concern from someone he/she is unfamiliar with, it will makes him/her feel even more touched. The reason we chose the strangers living nearby is allowing the user feel that he/she and the interactive objects are at the same group, and makes the user have the sense of belonging. To increase the interaction between users, we also want to add a function which allow user shows his/her emotion, so if other people find his/her emotion is not very well, they can show their concern to him/her. We want to know if this can decrease the user's expectation and the dependence to our device, and furthermore, eliminate his/her feeling of being lonely.

1.2.2 TABLE

We did a simple experiment for six students (3 males and 3 females).The subjects draw the interior layout plan where they live. And point out the location they stay. The time is longer, the circle is bigger. The results shows that the bed side and the table side are two places they stay longest. The bed side is mostly use for sleep, so we choose the table side that students spend their time in front of the table the most to put the device.

2. Literature review

2.1 Emotions

Loneliness is a complex set of feelings encompassing reactions to the absence of intimate and social needs. John (1999) reviewed the developmental, social, personality, clinical, and counseling psychology

literatures on loneliness with an emphasis on recent empirical findings. As a complex set of feelings and cognitions reflects the distressing and negative emotional experience emanating from the individual's perceived deficiencies in intimate and social relationships (Ernst & Cacioppo, 1999; Perlman, 1988; Rotenberg, 1999). A particularly high risk of loneliness was found during the transition to college when emerging adults are faced with the stress of living away from their family and of lacking their previous social support system. Wiseman, Maysless, and Sharabany examined the association between perceived quality of early parental bonding and loneliness of first-year university students in relation to two central personality-related conceptualizations, attachment and Blatt's primary personality predispositions. The result shows parental care and secure attachment were negatively associated with loneliness, whereas ambivalent and avoidant attachment and self-criticism were positively correlated with loneliness.

2.2 Social network: connectible

As a social network example, connectible is a concept that provides the user to exchange the gift that decorated from himself / herself. There are three kinds of connectibles, and each means different function.

- **Button connectible** : Pushing the button causes its partner to slowly light up, and then fade out.
- **Knob connectible** : The lights on a knob connectible reflect how far its partner's knob is turned. The bottom LED is used as feedback, like the button connectible.
- **Pic connectible** : It consists of a full color OLED display, with four buttons hidden under each corner. A user can press these buttons by pushing on the corner of the display. A user can send pre-set animation messages to their friend's partner connectibles using the top two buttons: the left button sends a series of flashing "Hi!" graphics, which last about five seconds. The right button sends a series of animated hearts, which also lasts about five seconds. Users can send each other picture using the Visual application. The pictures appear on the partner connectible and remain there until changed by the sender.

This research suggests the idea about why to use tangible social network than PC-based social network. It says that gift exchange is important for the user to give the service meaningful. It is a natural behavior and feels good. So the touchable devices are better than virtual

things.

The other idea in this research is that the physically of the system generated an enthusiastic response among the subjects. Tangible interfaces are often criticized for their cost: physical things cannot be easily copied and distributed, they can become worn over time, they are hard to replace. In this case, it is precisely these properties that engendered the users' positive response.

2.3 The relationship between Social Anxiety Tendency,Rumination,Loneliness

This research investigates the relationship between social anxiety tendency, rumination, loneliness and the time of using Internet for college students. It points out that people who have social anxiety tendency are actually eager to interact with other people, but they concern too much about how they perform in front of people and worried to be criticized by others, so they become unconfident about themselves, and avoid contacting with others, then generate the feeling of loneliness.

The results of the study are as follows: 1. There are significant differences in self-blame rumination among those college students of different states. 2. There are significant differences in rumination between college students with high and low social anxiety tendency. 3. There are significant correlation in social anxiety tendency, rumination and loneliness. 4. The social anxiety tendency and rumination can effectively predict loneliness. 5. The social anxiety tendency and loneliness can effectively predict the time of using Internet. 6. The loneliness has mediation effects between social anxiety tendency and the time of using Internet.

3. Materials and Methods

CONNEX+ABLE Design

There are three buttons on the CONNEX+ABLE, one of them represents user himself/herself, and other buttons represent other users. There is a switch hidden in the cushion putting on the chair, so when the user sits down, the switch will trigger the button of CONNEX+ABLE on that represents user's location. The button in others rooms' will also trigger to light up. So it can show the message that the user is in the room and the location is in the table side.

There are two colors of light in the button. The yellow one means the user is in a stable feeling, and the red light means the user feels something

different. The red light situation represents the user is in mental needed, and just like sending the message “Can somebody help or hear me?”. As for the connecting of each room, we use arduino to connect the hardware and send messages from the software. The subjects don’t need to put on their PC or laptop. Just regards it as a decorations or toys to communicate with each other. Last, there won’t be too many electric wires and we can use the software to record the time (when they change their feeling).

4. Scenario

Kent, a freshman in National Cheng Kung University, has his first middle exam this week. He returned home from library around six o’clock in the afternoon. He took a bath, checked his mail, and set in front of table to study. After a long concentration on his study, he raised his head and looked out the window. It was 23:05; the moon went behind a cloud, “It’s really a hard and lonely night.....” he thought. Kent pushed the button on the left of CONNECT+ABLE to turn the yellow light into red. The red light of CONNEC+ABLE showed he is lonely now. Kent took a look on the CONNEN+ABLE which is on the corner of his table, it includes three buttons, each of the button representing one of Kent’s neighbor in the dormitory. One of the buttons are dark, means his neighbor was not sitting on the chairs; one of them showed in yellow, means one of Kent’s neighbor sitting in front of their own table; one of the button represents himself is red(because he feels lonely);after a while, Kent saw one of the light also turned red. It means there is someone also has different feeling. Kent pushed the button with red light, the button’s color turned back to yellow, and Kent thought his neighbor has received his concern. After five minutes, his button also turned yellow. Kent felt he had been concerned because some of his neighbor pushed the button to erase his red light back to yellow.

In the midnight, Kent kept working hard on his study and had more energy to deal with tough subjects.

5. Methodology overview

5.1 System Architecture

5.1.1 Device - The CONNEC+ABLE

There are two parts of the CONNEC+ABLE, the chair cushion and the building. The building is the central operating system. We place remote wireless control system in it.

Due to the limit of the pin numbers(only 15 pins) in Arduino, we reduce our subjects for three as a group. Even the number of users had been reduced, but it can still achieve the purpose of observing the interaction relationship between more than two people.

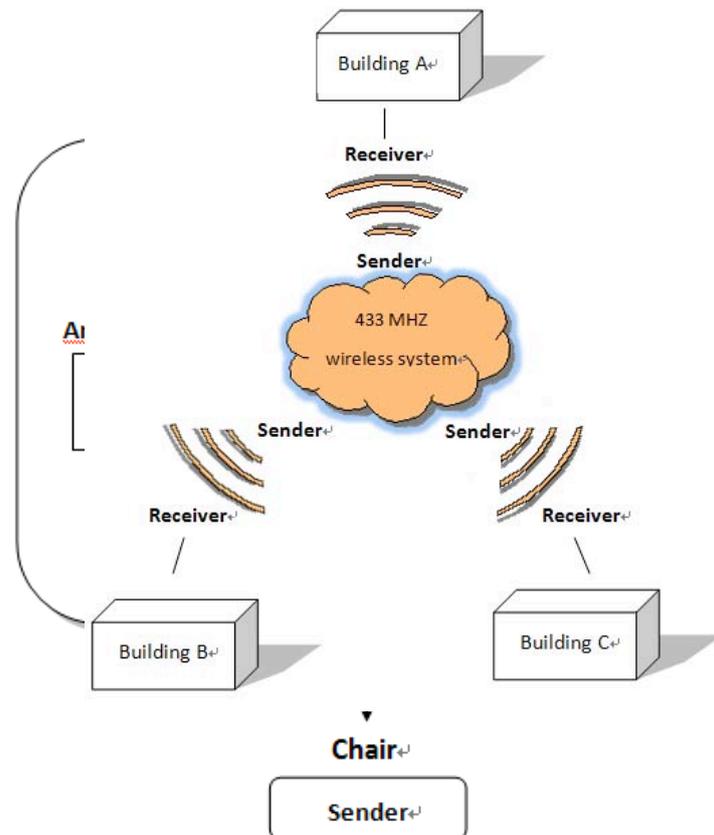

➤ Chair cushion:

We place a mini micro switch into a chair cushion, when user sit down the switch will be triggered and the sender will send the message of the user is on his/her seat or not.

➤ Building:

The outer covering is a cuboid made by acrylic, the size is 15cm * 9cm * 9cm, and there are four windows in the side of the building face to user. Three of them represent three users each. The windows are designed as buttons, placed LEDs inside, so it can show each users' state of in the table side or having some different emotions or not.

Followed are pictures shows how the CONNEC+ABLE works.

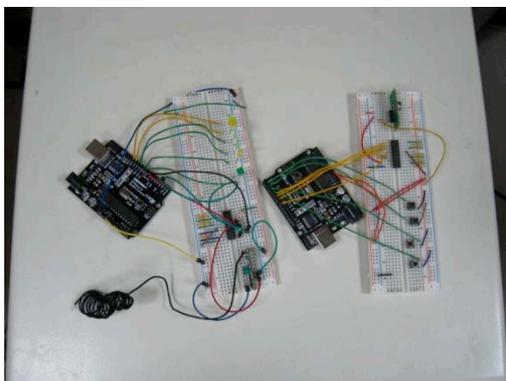

When making the building, the first problem we met was the connecting way from the sender to the receiver. If we use wires to do that, it will be a lot of mess. This kind of methods also makes

users feel inconvenient. So we use the wireless sender and receiver, but there is also a problem of unstable when the distance between sender and receiver is too far, to solve this problem, except to make the antenna of receiver longer, we also limit the distance between users' rooms not to be too far.

Further more, there is a problem when more than one sender sending message, they will interrupt each other. So we tried two methods to solve this problem, the first one is staggered the sending time. The second one is sending message only when signal changed. After testing, we use the first method to solve this problem.

We successfully wrote a code for receiver to receive the message from the sender and burned it into the IC of the Arduino. The unstable message from sender sometimes occurred. We use a filter to make our message more clear and stable. As to the problem of sending message simultaneously will make the message interrupted, we try to use the relay and the transistor to solve this problem.

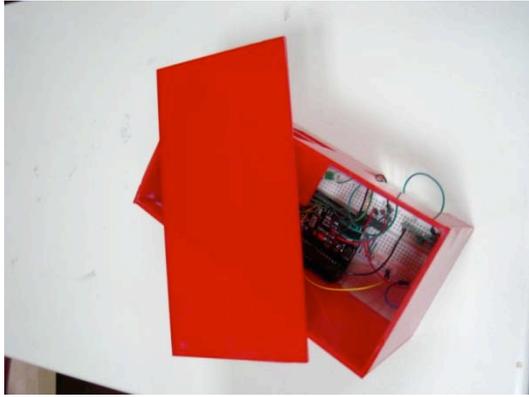

The transistor can control the low voltage (the output from the arduino pin). If there is voltage, the tunnel of the 5V to ground will be connected. It will trigger the relay and let the current pass through the RF module. Finally, the output pin message could control the 5 voltage power whether it will pass through the sender or not.

The receiver and the sender

The technical part

The building and the arduino

The building and the arduino (detail)

5.1.2 User

There are some rules to find our subjects.

1. Live alone
2. There are neighbors live nearby but not know each other
3. Students

For these limitations, we can clear our assumptions. Living alone makes the subjects won't bother from roommates and not that easily to find a way to deal with the emotions changes. The neighbors' chosen is also an important part for this research. We try to make sure any subject doesn't know each other. Therefore, it conforms the relationship between each other is stranger to stranger. And we limited the professional to students. It is because the time spend on the dormitory is more stable. The emotions will influence by the school days easily and probably have more motivations to access to each other. The most important part is that they have more time to do our experiments in detail.

6 Discussion

We hope to use this experiment and the device supplied to find out the relationship between strangers who live nearby in the dormitory. Following are some expectations and comparisons we found.

6.1 Expectations

We hope the relationships between the subjects can be built. And we will observe the interaction between each other. We hope this experiment not only erase some unpleasant emotions but also gather the users to feel that they are team members. Let the distance between each other be shorter. The awareness system also can be built to investigate whether this relationship is

reliable or not, and how to improve or maintain.

6.2 Comparison

Compare our device with other communication methods.

	Our device	MSN	Blog
Knowing the interactive objects or not	×	✓	Both
Sharing User's detail information	×	✓	✓
Show user's state immediately	✓	✓	×
Interactive immediately	✓	✓	×
Communicate immediately	×	✓	×
User's expectation /dependence degree of the device	Middle	High	Middle

7 Conclusion

From the very beginning, we focus on the students that live alone in the dormitory. There is a lot of lacking in their daily life. First we find out that students usually eat their meal alone. They feel lonely when they have the meal. So we try to solve this problem. After we did the short interview for the students, we found out that the emotion changing is filled in the daily life. They sometimes don't try to find the answer but just let it happened. If it is positive emotions, they enjoy it. The unpleasant emotions occurred will make them have bad mood or influence the study even friendship. So we design a device and a temptation to observe this problem. And try to use it in real life as a living lab experiment. There are a lot of interesting behaviors between subjects waiting for us to find out. We can use these results to do our next step work. We expect it.

Abstract

Without the existence of rich knowledge bases, virtual communities are of limited value. Therefore, the significance of member-generated knowledge cannot be over-emphasized. As participation in virtual community becomes popular, it is important to know how to encourage individuals to contribute actively and assist other members share their expertise. Through the lens of social capital and identity, we explored the factors that facilitate knowledge contribution in a virtual community. In this paper, our goal is to gain insight into ways of creating an environment that facilitated contribution of knowledge. Our findings suggested that cohesiveness, reciprocity, and self-presentation are important in establishing a virtual environment within which voluntary contributions could be promoted effectively. This study has important implications for academic researchers and practitioners who seek to understand why community members share their knowledge with strangers in virtual communities.

Key words: Virtual communities, Identity, Knowledge, social capital

1. Introduction

More and more individuals participate in virtual communities for seeking knowledge to resolve problems (Hsu et al. 2007). Virtual communities are centered upon the interactions of participants to provide specific domain knowledge that enables the participants to perform common functions and to learn from, and collectively build upon that knowledge. Without rich knowledge, virtual communities are of limited value and the significance of member-generated knowledge cannot be over-emphasized (Chiu et al. 2006). However, previous research argues that giving away knowledge eventually causes the possessors to lose their unique value relative to what others know (Thibaut and Kelly 1959), and benefits all others expect contributor (Thorn and Connolly 1987). Davenport and Prusak (1998) argue that giving knowledge is often unnatural because people think their knowledge is valuable and important. It is then important to explain why individuals supply their valuable knowledge to other community members without guarantee of returns. In this paper, our goal is to examine the roles of social capital and identity in facilitating knowledge contribution. Based on a theoretical framework of social capital theory and identity theory, we shall develop and test a theoretical model, and propose and evaluate hypotheses. This is the first study evaluating and testing the underlying causal mechanism, or empirically verifying the relationships among social capital and identity, and member knowledge contributions in virtual communities. This

study has important implications for academic researchers and practitioners who seek to understand why people are willing to contribute their knowledge to others in computer-mediated communication.

2. Theoretical Background

2.1. Social capital theory

The social capital theory suggests that social capital, the network of relationships possessed by an individual or a social network and the set of resources embedded within it, strongly influence the extent to which interpersonal knowledge sharing occurs. Nahapiet and Ghosal (1998) presented social capital as an integrative framework for understanding the creation or sharing of knowledge. They defined social capital with three distinct dimensions: structural (the overall pattern of connections between actor), relational (the kind of personal relationships people have developed with each other through a history of interactions), and cognitive (individuals' capacity to understand and apply knowledge). Each of these forms of social capital constitutes an aspect of the social structure and facilitates the exchange of the knowledge between individuals (Wasko and Faraj 2005, Chiu et al. 2006).

Although Nahapiet and Ghosal's model focuses on group level social capital factors to explain the creation of intellectual capital within organization, social capital is widely recognized as exhibiting a duality. At the group level, it reflects the affection nature and quality of relationships, while on the individual; it reflects their access to network resources. In this study, we propose that social capital is relevant for explaining individual-level knowledge sharing in virtual communities and adapt the concept of social capital from the organizational level to the individual level. Base on Nahapiet and Ghosal(1998), we adapt structural capital to the individual level to the community influences his or her willingness to contribute knowledge to others. We also examine how an individual's cognitive capital affects his or her level of knowledge contribution to the community. Similarly, we adapt the concept of relational capital from the organizational level to the individual level, examining how an individual's relational capital influences his or her participation in the community.

2.2. Identity theory

Identity communication reflects an individual's efforts to express and present one's identity to others with the goal of achieving a shared understanding (Ma and Agarwal 2007). Identity refers to the individual's self-appraisal of variety of attributes along long the dimensions of physical and cognitive abilities, personal traits and motives, and the multiplicity of social roles including worker, family member and community citizen (Whitebourne and Connolly 1999). Individuals are fundamentally motivated to present their identities in everyday social life. The importance of identity communication is underscored in Goffman's (1967) influential self-presentation theory. Goffman (1967) argues that people desire to explain themselves to others regarding their identities before concentrating on work or other goals that may bring them together. From a relationship-building perspective, people with similar interests or attitudes are more likely to communicate and build relationships with each other (Newcomb 1961).

Identity communication can help community members find similar others with whom to build relationships (Jensen et al. 2002). Furthermore, identity communication facilitates and promotes knowledge contribution. Many studies have provided evidence

that recognition and acknowledgement from group members increases a focal person's overall participation (Hertel et al. 2003, Ma and Agarwal 2007). Research on social behavior in a virtual environment emphasized that people help other members because of altruism and future reciprocation (Ackerman 1998). Thus, presenting one's online identity provides significant motivation for knowledge contributors not only by helping them enhance their recognition, but also by amplifying the possibility of future reciprocation (Donath 1999).

Of relevance to this study are the work of Wasko and Faraj (2005) and Chiu et al. (2006). They examined how individual motivations and social capital influence knowledge contribution in electronic networks of practice. There are notable differences between the research model of this study and those of Wasko and Faraj (2005) and Chiu et al. (2006) in terms of independent variables and dependent variables.

First, Wasko and Faraj (2005) and Chiu et al. (2006) addressed individual motivations in terms of reputation and enjoy helping and expectation of benefits to the community. This study examines individual motivations in terms of identity-related motivations (i.e., self-presentation and group identification), which was ignored by Wasko and Faraj (2005) and Chiu et al. (2006). Second, Chiu et al. (2006) followed Nahapiet and Ghosal (1998)'s manifestation of each of structural, relational, and cognitive dimensions. This study followed Nahapiet and Ghosal (1998) to classify social capital into the three dimensions but did not adopt their manifestation of each of these dimensions. Third, Wasko and Faraj (2005) addressed structural and cognitive dimensions in terms of centrality and self-relation expertise and tenure. Our measure for those dimensions, however, contains items for measuring cohesiveness and affection similarity. Finally, Wasko and Faraj (2005) used the response message reviewed by one of the authors and a domain expert for measuring knowledge contribution. Chiu et al. (2006) measured the dependent variable in terms of quality and quantity. In this study, we measure knowledge contribution in terms of participation and experiences of contribution and use self-report measure.

The proposed theoretical model is shown in Figure 1. We describe each of the constructs and their relationships to knowledge contribution in the following sections.

3. Hypotheses

3.1. Cohesiveness

Social capital theory proposes that the connections between individuals, or structural links created through the social interactions between individuals in network, are important predictors of collective action (Putnam 1995). When interactions or direct ties between members are dense, collective action is relatively easy to achieve (Krackhardt 1992). Cohesiveness is relevant for explaining individual actions, such as knowledge contribution, within a collective. Research has suggested that there is more altruistic behavior in highly cohesive group (Hog 1992), and their members have a greater desire to contribute and participate in group activities (Henry et al. 1999).

Cohesiveness refers to the desire of individuals to belong to a group, because of interpersonal relationship and the attractiveness of the group task (Widmeyer et al. 1985). The degree of cohesiveness can predict whether community members consider group interests to be their own, whether they cooperate with other members or whether they assist others (Moreland and Levine 1984). Generally, virtual communities are

informal groups of voluntary participants. The lack of common background makes them treat others as strangers with no shared understanding. The impact of cohesiveness on building network ties could be strong enough to override distance and individual characteristics (Yu and Chu 2007). With increasing interaction and interdependence, the community members can build up a sense of being in-group and develop habits of cooperation such as knowledge contribution. Thus, this leads us to the following hypothesis:

H1: Individuals with higher levels of cohesiveness will contribute more knowledge to virtual communities.

3.2. Reciprocity

We examine two constructs of relational capital (reciprocity and commitment) that prior research indicates may be relevant to virtual communities. Coleman (1990) suggests that relational capital is an important asset that benefits both the community and its members. Members are willing to help other members, even strangers, simply because everyone is part of the collective and all have a collective goal orientation (Wasko and Faraj 2005). Relational capital exists when members have a strong identification with the collective (Lewicki and Bunker 1996). Reciprocity is a sense of mutual indebtedness, so that individuals usually reciprocate the benefits they receive from others, ensuring ongoing supportive exchanges.

Reciprocity relates to an aspect of social trust and expectations that an individual's collective efforts will be reciprocated (Putnam 1995). A basic norm of reciprocity is a sense of mutual indebtedness, so that individuals usually reciprocate the benefits they receive from others (Shumaker and Brownell 1984). According to Davenport and Prusak (1998), a strong sense of reciprocity facilitates the knowledge sharing. In this research, reciprocity refers to knowledge exchanges that are mutual and perceived by the parties as fair. In addition, the social exchange theory suggests that participants in virtual communities expect reciprocity that justifies their expense in terms of time and effort spend giving their knowledge. When there is a strong norm of reciprocity in virtual communities, individuals believe that their knowledge contribution efforts will be reciprocated, thereby rewarding individual efforts and ensuring ongoing contribution (Wasko and Faraj 2005). Thus, this leads us to the following hypothesis:

H2: Individuals with higher levels of reciprocity will contribute more knowledge to virtual communities.

3.3. Commitment

Commitment represents a duty or obligation to engage in future action and arises from frequent interaction (Coleman 1990). Commitment to a collective, such as virtual communities, conveys a sense of responsibility of help others within the collective on the basis of shared membership. Individuals posing valuable advice or knowledge are motivated by a sense of obligation to the organizations such as virtual communities (Wasko and Faraj 2000). Therefore, individuals participating in virtual communities who feel a strong sense of commitment to the services are more likely to consider it a duty to assist other members and transfer their own knowledge. Thus, this leads us to the following hypothesis:

H3: Individuals with higher levels of commitment will contribute more knowledge to virtual communities.

3.4. Self-presentation

In addition to structural capital and relational capital, knowledge contribution is also facilitated by cognitive capital. Cognitive capital refers to those resources that make possible shared interpretations and meanings within a collective. (Nahapiet and Ghosal 1998). Identity refers to the individual's self-appraisal of a variety of attributes along the dimensions of cognitive and physical abilities, personal traits and motives, and multiplicity of social roles including workers, family members, and community citizen (Whitbourne and Connolly 1999).

Many studies have provided evidence that cognition from group members increases a focal person's overall participation (Hertel et al. 2003; Ma and Agarwal 2007). Thus, presenting one's identity in virtual communities provides significant motivation for knowledge contributor by helping them enhance their reputation and self-esteem (Donath 1999). Thus, this leads us to the following hypothesis:

H4: Individuals with higher levels of self-presentation will contribute more knowledge to virtual communities.

3.5. Group identification

Nahapiet and Ghosal (1998) argued that identification is the process whereby individual see themselves as on with another person or group of people. In this study, group identification refers to an individual's sense of belonging and positive feeling toward a virtual community, which is similar to emotional identification proposed by Ellemers et al. (2004). Group identification fosters loyalty and is useful in explaining individual's willingness to maintain committed relationships with virtual communities. Individuals engage in more pro-social behavior (i.e., knowledge transfer) in order to benefit the group and to be perceived positively by group members (Constant et al. 1996; Ma and Agarwal 2007). In addition, given that valuable knowledge is embedded in individuals and they usually tend to hoard the knowledge, one would not contribute his or her knowledge unless another person is recognized as his or her group-mate (Chiu et al. 2006). Therefore, the perception of group identification will elevate one's activeness to share knowledge. Thus, this leads us to the following hypothesis:

H5: Individuals with higher levels of group identification will contribute more knowledge to virtual communities.

4. Method

4.1. Instrument development and data collection

A survey study was conducted to validate the research model. A survey was conducted using a two-part questionnaire. The first part solicited demographic information such as age, sex, and types of occupation. The second part presented questions pertaining to the proposed model. In order to assess the face validity of the measures, a group of business professors, doctoral students, and industry experts were asked to read and refine the questionnaires. As a result, changes were made in several

items. Furthermore, a pretest with graduate students who were virtual community members was performed to ensure that the target population understood the wording as intended by the researchers. As a result of this pretest, some questions were modified to enhance clarity. The pretest also provided reasonable assurance of the validity of the scale items.

All the measures were adopted from existing studies by the authors. Knowledge contribution was assessed with items adapted from Wasko and Faraj (2005). Self-presentation and group identification was measured with items adapted from Ma and Agarwal (2007). Reciprocity and commitment was assessed with items adapted from Wasko and Faraj (2005) and Constant et al (1996). Cohesiveness and affection similarity were measured with items adapted from Yu and Chu (2007). For all the measures, a seven-point Likert scale was adopted with anchors ranging from strongly disagree (1) to strongly agree (7).

A cross-sectional field study was conducted and the target subjects were individual members of virtual communities. Sample subjects were recruited from popular online portals in Korea which provide communities for discussion forums about various subjects (e.g., business, politics, health, etc.). Altogether, 202 community members in Naver, Daum, and Yahoo portals agreed to participate in this study. Data were collected from October to November 2008. Out of 202 responses, 10 were dropped due to incomplete or unusable answers, resulting in the final sample of 192 participants. Among those, 12 claimed to have never contributed knowledge (6.3%), 59 claimed to have contributed knowledge between one and five times (30.7%), 32 from six to 10 times (16.7%), 38 from 11 to 20 times (19.8%), 21 from 21 to 50 times (10.9%), 17 from 51 to 100 times (8.9%), and 13 over 100 times (6.8%).

4.2. Measurement model

We used Partial least squares (PLS) to assess the scales and to test the research model and hypotheses. PLS, which uses component-based estimation, maximizes the variance explained in the dependent variable, does not require multivariate normality of the data, and is less demanding on sample size (Chin 1998). Furthermore, PLS is more suitable when the objective is a causal-predictive testing, rather than testing an entire theory (Fornell and Larcker 1981; Yoo and Alavi 2001). Given that the model presented in the previous section has not been tested in its entirety and considering the sample size of 192 individuals, we chose to use PLS. All scales were assessed within the context of the structural model by assessing discriminant validity and reliability.

All scales were assessed within the context of the structural model by assessing discriminant validity and reliability. The research construct scales are assessed in terms of item loadings, discriminant validity, and internal consistency, with item loadings and internal consistencies greater than 0.70 considered acceptable (Fornell and Larcker 1981). As evidenced by the PLS factor analysis results, composite reliability scores, and cronbach alpha values, the scales meet the 0.70 guidelines for internal consistency and item loadings. All items of each construct exhibit high loadings (greater than 0.70) in their respective constructs. All constructs in the model exhibit good internal consistency as evidenced by their composite reliability scores in Table 2. To assess discriminant validity, indicators should load more strongly on their corresponding construct than on other constructs in the model (i.e., loadings should be higher than cross-loadings

shown in Table 1), and the square root of the average variance extracted (AVE) should be larger than the interconstruct correlations (i.e., the average variance shared between the construct and its indicators should be larger than the variance shared between the construct and other constructs). All indicators in the present analysis load more highly on their own construct than on other constructs. Furthermore, examination of the inter-construct correlations and square root of AVE (shared leading diagonal) reveals that all constructs share considerably more variance with their indicators than with other constructs.

<Table 1>. Factor analysis (factor loadings and cross-loadings)

4.3. Structural Model

The path coefficients and explained variances for the research model using a bootstrapping procedure are shown in Table 3. All constructs were modeled as reflective and included in the model using multiple indicators, rather than summated scales. In the research model, we hypothesized that Individuals

with higher levels of cohesiveness will contribute more knowledge to virtual communities (H1). The results suggest that cohesiveness significantly influences knowledge contribution and are as follows: path coefficient = 0.203, t-value= 2.419, p-value = 0.016. Thus, H1 is supported. For reciprocity and commitment, we hypothesized that Individuals with higher levels of reciprocity will contribute more knowledge to virtual communities (H2) and Individuals with higher levels of commitment will contribute more knowledge to virtual communities (H3). The results suggest that reciprocity significantly affects knowledge contribution (path coefficient = 0.429, t-value= 4.277, p-value = 0.000) and commitment does not significantly affect knowledge contribution (path coefficient = 0.075, t-value= 0.706, p-value = 0.481). Thus, H2 is supported, however H3 is not supported.

We also hypothesized that Individuals with higher levels of self-presentation will contribute more knowledge to virtual communities (H4). The results suggest that self-presentation significantly affects knowledge contribution (path coefficient = 0.211, t-value= 1.998, p-value = 0.047). Thus, H4 is supported. Finally, we hypothesized that Individuals with higher levels of group identification will contribute more knowledge to virtual communities. (H5). The results suggest that affection similarity significantly influences knowledge contribution (path coefficient = 0.005, t-value= 0.054, p-value = 0.957). Thus, H5 is not supported.

<Table 3> Hypothesis testing results

Path	Path Coefficient	t-value	Significance (p-value)
Cohesiveness → Knowledge contribution	0.203*	2.419	0.016
Reciprocity → Knowledge contribution	0.429**	4.277	0.000
Commitment → Knowledge contribution	0.075	0.706	0.481
Self-presentation → Knowledge contribution	0.211*	1.998	0.047
Group Identification → Knowledge contribution	0.005	0.054	0.957

* Denotes significance at the $p < 0.05$ level. ** Denotes significance at the $p < 0.01$ level.

5. Discussion

As a result of the PLS analysis, three hypotheses are supported and two hypotheses are not supported. The hypothesis testing results are listed in Table 3. Our empirical data strongly supported the core structure of the research model. Overall, our research results confirm the hypothesis suggested by the theories. In sum, the three factors, i.e., cohesiveness, reciprocity, and self-presentation, have positive relationships with knowledge contribution. Our study indicates that practitioners should be aware of these effects when they formally or informally establish virtual community forms. They should create an environment within which knowledge contribution is promoted effectively. By understanding the key roles of identity and social capital in virtual community communication, we suggest that and cohesiveness, reciprocity, and self-presentation will influence voluntary knowledge contribution in virtual community.

We acknowledge that this study has several limitations. Because of the cross-sectional design, no causation can be determined. The significant paths between constructs can only be interpreted as co-relational; the causal inferences are based solely on theoretical argumentation. Furthermore, although we have a sample size that is more than adequate for testing the theoretical model, respondents surveyed are mainly in their 20s and 30s. Additional investigation into communities with members outside this age range is necessary to generate findings that are more generalizable. For future research, it would also be useful to apply the framework developed in this study to research on computer-mediated knowledge creation. It would also be interesting to study the extent to which community members disclose their real identities online.

Abstract

At the heart of *A Passage to India* – and in the background - is a clash between two fundamentally different cultures, those of East and West. Conflict is the keynote of the story of *A Passage to India*. The novel depicts the clash of the culture of the East with the culture of the West, the clash of imperialists with natives, the clash of the human heart with the machinery of the government, class, and race. The main theme of the book is this collision between civilizations, between communities, between religions, between groups, and even between individuals. The object of this study lies not in an assertion of normality, but in an exploration of extremes. And this exploration is not only social and political but further issues are involved, and finally, to try to find out a potential possibilities to bridge the gulf between the East and the West.

A Passage to India portrays the life of the small English community in a city called Chandrapore, and the relations of this community with the local population. The relations between the English and the Indians are depicted on both an official and a social, personal level. The relations between the two Indian communities – Hindus and Moslems – are depicted too. The gap between the two sides in this novel is, roughly speaking, the gap between head and heart. Forster's view of the British in India may be found in the following observation which occurs in his notes on the English character: "The English go forth into a world that is not entirely composed of public-school men or even of Anglo-Saxons, but of men who are as various as the sands of the sea. They go forth into it with well-developed bodies, fairly developed minds, and undeveloped hearts. And it is this undeveloped heart that is largely responsible for the difficulties of Englishmen abroad. An undeveloped heart – not a cold one". Forster's Indians, on the other hand, make up for any failure in cold judicial reasoning by their highly developed hearts. Between the two groups there is a failure. But if the British are to be blamed for the failure, that is only because they were the group from which any initiative must necessarily have come.

Conflict is the keynote of the story of "*A Passage to India*". The novel depicts the clash of the culture of the East with the culture of the West, the clash of the imperialists with natives, the clash of the human heart with the machinery of the government, class, race, the clash of Hindus and Moslems. The main theme of the book is this collision between civilizations, between communities, between religions, between groups, and even between individuals.

The theme of separateness, of fences and barriers, runs through all Forster's novels. But in *A Passage to India* this theme is vastly expanded and everywhere dominant. The separation of race from race, sex from sex, culture from culture, even of man from himself, is what underlies every relationship. The separation of the English from the Indians is, of course, the most dramatic of the rift in this novel. But there are other rifts too. There is a gulf between Hindus and Moslems, and

there are divisions among Hindus themselves. Even personal relationships at the individual level break down and crumble. Thus a sense of separateness broods over the book. (Bradbury, 240).

The theme of the novel is stated at the very outset. A group of Moslem discuss whether it is possible for them to be friends with an Englishman, and the answer to this question is no. The English come out to India with every intention of behaving like gentlemen, but immediately on their arrival they are informed by their brethren who have already lived there that this is an impossible intention. An Englishman loses much of his refinement of manners and behavior after a two years' stay in India, while an Englishwoman takes only six months to undergo this change. The average Englishwoman is like Mrs. Turton, says Hamidullah. Granted the exceptions, are Englishwomen are haughty. Thus the Moslems collectively maintain an attitude of antagonism towards the English.

On the Individual level too, the Indians have their grievances against the ruling class. Hamidullah says that the City Magistrate insults him in the court. Aziz is fed up with his boss, the civil surgeon, who is not only arrogant but who takes pleasure in harassing him. Nor does he see any grace in the way the civil surgeon's wife behaves. The English club bars entry to Indians. Aziz does not attend the Collector's party mainly because of his ill-feeling against the English. He experiences an "unconquerable aversion" against Mrs. Callendar and Mrs. Lesley. The general view of the Moslems is that the Collector is giving a party under the instructions of the higher bosses, because they cannot believe that, left to himself, the Collector would make such a friendly gesture towards the Indians. The party itself proves a complete failure. If it was intended to be a kind of "bridge" between the two races, it does not serve its purpose at all. There is no real communication between the Indians and the English at the party.

The English officials in Chandrapore are extremely suspicious and distrustful of the Indians. The attitude of the City Magistrate, Ronny Heaslop, is a typical of the entire white bureaucracy. When Ronny's mother speaks of Aziz in a natural voice, Ronny feels annoyed because he expects member of the ruling class to indicate by the tone of their voice that they are talking about an Indian. He wants to know what Aziz was doing in the mosque at that time of the night, because it was not his prayer time. He suspects that Aziz was playing some trick in calling out to the English visitor to take off her shoes before entering the mosque. He thinks, and rightly too, that the Indians consider the white man a "brutal conqueror", and a "sun-dried bureaucrat". He holds a low opinion about Indians in general. "They used to cringe, but the younger generation believes in a show of manly independence", he says. Whether the natives speak in a boastful or humble tone, there is always some motive behind his remarks. Most of the Indians, in Ronny's opinion, are seditious at heart. He feels upset to learn that his mother and Adela have accepted Aziz's invitation to visit the caves, and he says to them in a loud, lecturing voice, "I won't have you messing about with Indians anymore! If you want to go to the Marabar Caves, you'll go under British auspices". He points out all the three types of Indians whom his mother and Adela have met have let them down and are therefore not reliable – the Bhattacharyas, Aziz, and the Nawab Bahadur. Holding such views about the Indian character, it is hardly likely that Ronny can have any warmth of feeling towards Indians or can develop any understanding with them. The English rulers, he says, are in India not with the object of behaving pleasantly, but "to do justice and keep the peace." India "has got to put up with" its rulers. Thus at every step, we are made conscious at the cleavage between the East and the West, between the imperialists and the native Indians, between the rulers and the ruled.

The central incident of the novel, mainly Adela's accusation against Aziz, and Aziz's trial, reveals even more emphatically how irreconcilable are the differences between the imperialists and the natives, and how wide apart are the two cultures of the East and the West. None of the

member of the ruling class, with the exception of Fielding and Mrs. Moore has the least doubt that Aziz is guilty. The bureaucracy has taken Adela's accusation at its face value. The Collector takes this incident as confirming the view he has always held that the English and the Indians should never try to become intimate socially: "I have had twenty-five years' experience of this country, and during those twenty-five years I have never known anything but disaster result when English people and Indians attempt to be intimate socially". McBryde, the Superintendent of police, has his own theory, namely that those who live south of latitude thirty degrees are criminal at heart. He feels perfectly certain that Aziz is guilty of the crime alleged against him. In his opinion, the records of the Mutiny, and not the Bhagavad Gita, should be a guide for Englishmen in India. The subaltern is very loud and emphatic in his criticism of the Indians at the gathering at the club. The English ladies are unanimous in their view about Aziz's guilt. Mrs. Turton is, of course, their leader. She had never made a secret of her contempt for the Indians. In her opinion the Indians "ought to crawl from here to the caves on their hands and knees whenever an Englishwoman is in sight." She believes that the English have been far too kind towards the Indians 'with their bridge-party and the rest'. She even shed tears over Adela's misery, though she had never been known to weep ever before. The Police Superintendent states the prosecution case with great vehemence and, when Adela withdraws the charge against Aziz, Major Callendar shouts that he "would stop the proceedings on medical grounds." The prejudice of the Westerners against the Indians could not have been more effectively exposed. The trial, indeed, shows the collision of the individual against the machinery of the government and against the prejudice of an alien race.

Nor do the Indians fail to retaliate. They all combine against the English in order to defend Aziz of whose innocence they feel certain. The Indian servants make no secret of their dislike for their English masters. The sweepers go on strike. The Nawab Bahadur offers to pay all the legal expenses on behalf of Aziz and "would ruin himself sooner than let an innocent Moslem perish". The Indian children throw stones at the Collector's car. Mrs. Turton tells her husband: "Really, it is ridiculous to pretend they do not hate us". The college students hold a demonstration and jeer at the City Magistrate. The Nawab Bahadur renounces his title after Aziz has been acquitted, and there is a general shouting of slogans against the English officials.

There can be no doubt that the rift between the English and the Indians is deep. This fact is highlighted when Adela's recantation is commented upon by the author after the trial. Forster tells us that Adela's behavior "rested on cold justice and honesty". She had left, while withdrawing the charge, "no passion of love for those whom she had wronged". Indians do not treat "truth as truth unless it is accompanied by kindness, and more kindness, and kindness again". Adela's sacrifice is rejected by the Indians because "though it came from her heart, it didn't include her heart. A few garlands from students were all that India ever gave her in return". In other words, a lady, who is very favorably disposed towards the Indians and who had a genuine desire to know the real India, cannot emotionally get closer to the Indian people even after she has exonerated the man against whom she had brought a serious charge. The gulf between the East and the West is emphasized by the author in various other ways too. For instance, we are told that the Indian blessing of leisure is unknown to the West (Chapter XXVII). Civilization in India says the author, is to be found "not in great works of arts or mighty deeds, but in the gestures which well-bred Indians make when they sit or lie down" (Chapter XXVII). "Victory which would have made the English sanctimonious, made them aggressive. They wanted to develop an offensive, and tried to do so by discovering new grievances and wrongs, many of which had no existence" (Chapter XXIX). Suspicion is the Oriental's demon, as the Westerner's is hypocrisy" (Chapter XXXI). "The sanctity of private correspondence has never been ratified by the East" (Chapter XXXVI). All these observations are significant.

The message of this novel is that the gulf between the English and the Indians, the gulf between two cultures, is so wide that it cannot be bridged. Each race is to the other “people whose emotions they could not share.” They offend one another. Aziz ridicules Adela’s unattractive appearance and promises to provide Fielding with “a lady with breasts like a mango”; Adela asks Aziz, meaning no harm, how many wives he has, and he thinks, “Damn the English even at their best”. When Aziz and Fielding urge, “something racial intruded – not bitterly but inevitably, like the color of their skins “. Misunderstanding interrupts their intercourse – “a pause in the wrong place, an intonation misunderstood, and a whole conversation went awry”. One reason for the gulf between the English and the Indians is that the Englishman has an “undeveloped heart” while the Indians has an “undeveloped head”. The Englishman, in other words, is somewhat cold and unemotional, while the Indian is somewhat irrational and unduly suspicious.

Nor are the relations between Hindus and Moslems very cordial. It is true that they get closer to each other as a result of their common stand against the English on the occasion of the trial of Aziz. But otherwise the two communities are poles apart. Godbole reminds Aziz of cow-dung, and the rhythm of Hindu drums is uncongenial to Aziz. Aziz thinks that Hindus in general are slack and have no idea of society or punctuality. All illness proceeds from Hindus, says Haq. Syed Mahmoud describes Hindus religious fairs with biting scorn. The annual riots between Hindus and Moslems on the occasion of Mohurram prove to Ronny “that the British were necessary to India; there would certainly have been bloodshed without them”. Godbole thinks it is necessary to have another wash if he has been touched by a Moslem at the time of religious ceremony. In short, Hindus and Moslems represent two different cultures and cannot become one. Then there are the divisions among Hindus themselves. For instance, in the Hindu state of Mau, “the cleavage was between Brahman and no-Brahman; Moslems and English were quite out of the running”. In this connection Forster says: “The fissures in the Indian soil are infinite: Hinduism, so solid from a distance, is riven into sects and clans”. In short, the native Indian scene too offers a spectacle of social conflict and lack of understanding.

Personal relationships were one of the dominant preoccupations of Forster. The supremacy of personal relationship constitutes the real plot of the novel, *Howard Ends*. “It is private life”, he writes, “that holds out the mirror to infinity. Personal intercourse and that alone, ever hints at personality beyond our daily vision”. *Howard Ends* closes with an emphasis on personal relationship. Indeed, Forster seems to believe that the salvation can come only through the personal relationships of human beings. (Macaulay,187). The principal theme of *A Passage to India* is of course the conflict of East and West, and the gulf that separates the culture of the orient from that of the Occident. But the problem of personal relationships is also a theme of this novel, and this theme, though subsidiary is quite important. Forster’s effort to explore the possibilities of personal relationships among human beings in this novel is quite obvious.

The friendship between Aziz and Fielding, though intended mainly to illustrate the impossibility of adjustment or understanding between the English and the Indians, has also to be studied at personal level. This friendship becomes fairly intimate and deep, but it does not last. Aziz and Fielding take an instant liking to each other. Aziz is drawn towards Fielding in spite of his general hostility towards the English, while Fielding quickly becomes fond of Aziz in spite of the marked racial prejudice among the members of the English community against the natives. Aziz, who had kept away from the Collector’s bridge party, makes it a point to attend Fielding’s tea-party. Fielding visits Aziz in the latter’s illness because he feels solicitous about his friend’s state of health. On this occasion Aziz shows his wife’s photograph to Fielding, thereby showing his faith in the Englishman who has won his heart. Aziz finds that Fielding is truly warm-hearted and unconventional. The new bond between the two is thus described by Forster: “But they were

friends, brothers. That part was settled, their compact had been subscribed by the photograph, they trusted one another, affection had triumphed for once in a way". Fielding stands by Aziz in hour of crisis in the latter's life. He alienates his own community, but he does not budge an inch from the position he has taken up as a champion of Aziz whom he truly thinks to be innocent. On this occasion, Fielding has to pay a heavy price in terms of the goodwill of his community which he loses by his advocacy of the Indian, but he is not at all sorry. His friendship for Aziz overcomes all differences of race, religion, and cultural outlook. Later, he is even able to dissuade Aziz from pressing his claim for compensation from Miss Quested.

And yet this friendship does not last. There are forces that pull the two men apart. Aziz, too readily believes the rumor about a secret affair having developed between Fielding and Miss Quested, and he therefore finds a selfish motive in Fielding's advice to him not to claim any compensation from the English girl. He even taunted Fielding on the latter's reported love-affairs with Miss Quested, whereupon Fielding feels somewhat annoyed and calls him a "Little rotter". Although this quarrel is soon made up, yet Aziz continues to be suspicious and thinks that Fielding intends to marry Miss Quested for the sake of her money. Aziz's suspicion of fielding, we are told, is characteristically "Oriental". The Oriental "trusts and mistrusts at the same time in a way the Westerner cannot comprehend". For a moment Aziz even imagines that it was Fielding who followed Miss Quested into the cave and molested her. Subsequently, when Fielding is reported to have got married, Aziz thinks that Fielding has married Miss Quested. And, when told that Fielding has married Stella, Aziz still does not relent because now Fielding has, in his eyes, committed the fault of having married the sister of Ronny Heaslop whom Aziz regards as his enemy. Even Fielding begins to doubt whether there can be any friendship between him and Aziz. When he visits Italy on his way to England, he realizes that no real understanding between the two civilizations, of the East and the West, is possible. When Aziz and Fielding happen to meet in the state of Mau, Aziz is emphatic and categorical in saying that he does not want any friendship with any Englishman or English woman. But Aziz's final declaration makes such greater impact on us. He says to Fielding: "Down with the English anyhow. We may hate one another, but we hate you most". A friendship between English and an Indian will be possible only when India becomes free. When Fielding asks why they cannot be friends now, it is not Aziz who supplies the answer, but the author himself: "But the horses didn't want it – they swerved apart; the earth didn't want it ...; the temples, the tank, the jail, the palace, the bird, the carrion, the guest-house: they didn't want it". Thus this friendship breaks down completely.

A friendship between Aziz and Mrs. Moore also begins to take shape as soon as the two meet in the mosque. Mrs. Moore later says that Aziz is her "true friend". When Aziz takes her and Miss Quested to the caves, he feels quite overwhelmed by the sentiment of friendship that he feels for the older lady. On this occasion he would even sacrifice his life to make her happy. Mrs. Moore, like Fielding, is certain that Aziz is not guilty of the charge that has been brought against him and says so to Miss Quested, but for some mysterious reason, she does not publically defend Aziz and promptly accept her son's suggestion that she should go back to England. Aziz still continues to cherish sweet memories of Mrs. Moore, and it is partly because of what he thinks would have been Mrs. Moore's attitude in the matter that he accepts Fielding's suggestion not to press his claim for compensation from Miss Quested. Indeed, Aziz is profoundly influenced by Mrs. Moore, but Mrs. Moore dies in the course of her voyage back home, and this relationship between her and Aziz thus proves to be more or less futile. In this case, we might say, fate has intervened to terminate a relationship which could have proved fruitful. (White, 646).

Then we have Aziz and Godbole, who one would imagine, might have become friends, and friends, they do become eventually, though this friendship has a flimsy basis. There is a basic discord between these two men. Aziz is fanatically devoted to his own religion, while Godbole is

no less devoted to his. Aziz considers Islam a glorious faith, while Godbole goes into an ecstasy in the course of the ceremonies connected with Gokul Ashtami. The sound of the Hindu drums is uncongenial to Aziz who otherwise too expresses contempt for Hindu as, for instance, when he says: "Slack Hindus – they have no idea of society". Indeed the Hindus remind him of cowardice. Godbole on his part thinks that Moslems are violent people. Towards the end of the story, we find that Aziz has got his new job through the influence of Godbole. In the state of Mau, there is no conflict between a Hindu and a Moslem because Hindus are preoccupied with differences among themselves. Aziz's relations with his fellow-Moslems are very cordial and friendly, but the basis of this friendship is religious and communal and not personal in any sense of the word. Thus, even among the Indians themselves, Forster finds no example of a deep or lasting personal relationship.

Nor are the English more fortunate in this respect. Among them, too, we find no example of a true personal relationship. The relationship between Ronny and Adela breaks down soon after Adela's arrival in India. In the first place, Adela finds that India has developed those sides of Ronny's character which she had never admired – "his self-complacency, his censoriousness, his lack of subtlety". Secondly, she finds that the attitude of the English towards the Indians is too haughty. She does not approve of the way Ronny behaves at Fielding's tea-party. Thirdly, she discovers that she does not love Ronny after all. Ronny, on his side, feels that Adela is unduly inclined towards the Indians. Adela frankly tells Ronny that she will not be able to marry him, though soon afterwards she withdraws this remark, and they become engaged. In the course of the expedition to the caves, Adela reconsiders her position *vis a vis* Ronny, and comes to the conclusion that they do not love each other. But on this occasion she does not think of breaking off her engagement with him because she thinks that love is not necessary to a successful marriage: "If love is everything, few marriages would survive the honeymoon". Ultimately, however, this relationship comes to nothing, because Adela's withdrawal of the charge against Aziz deeply offends Ronny and this time it is he who breaks off the engagement.

Another personal relationship depicted by Forster in this novel is the one between Fielding and Adela. Fielding's initial reaction to Adela is unfavorable; he thinks her to be "priggish". But when she shows her basic honesty by withdrawing the charge against Aziz, Fielding feels drawn towards her. He not only protects her from a possible attack by the Moslem crowd after the trial, but places his own quarters at her disposal when she has no place to go to. He now becomes friendly with Adela and they have intimate conversation. However, there is no sexual love involved in this relationship, as Aziz wrongly suspects. Adela promises to write to Fielding when she gets back to London, and the author says: "they spoke the same language, and held the same opinions, and the variety of age and sex did not divide them". And yet even this relationship proves abortive, as is evident from the following comments by the author: "So it petered out. Ten days later Adela went off by the same route as her dead friend".

Yet another relationship, which also fails, is the marriage of Fielding and Stella. Fielding is not quite happy about his marriage. While he loves his wife passionately, she does not love him as much, with the result that he does not wish to pester her too much. During their visit to Mau, however, the situation improves somewhat. There seem to be a link between them at last. "In the language of theology, their marriage is blessed". But the basic difference between them, we feel, will remain. There is something mystical about Stella's temperament which she inherited from her mother, while Fielding is a hard-boiled rationalist. Thus all the personal relationships in this novel seem to "peter out" (to use Forster's own expression).

The view that *A Passage to India* is essentially pessimistic and defeatist is based on the facts of the novel and is largely true. Hope is not altogether lacking, and the future is not altogether

regarded as barren or bleak, but the dominant impression that the novel produces is one of darkness and negation. The pessimism and defeatism of the novel consist, firstly, in the irreconcilability of the cultures of the East and the West (and even of the Hindu and Moslem cultures) and, secondly, in the failure of personal relationships. If there is neither the possibility of a mutual understanding between the East and the West nor any durability in personal relationships among individuals, what is there to console and comfort us in the story? Some critics have, no doubt, found hope in the principles, beliefs and convictions of Hinduism as depicted by Forster, but a close look at Forster's treatment of the theme of Hinduism in the novel shows that, if Forster's portrayal of the Hindu faith is reverential, it is also partly derisive.

As Lionel Trilling notes, "here at last the vision in which the arbitrary human barriers sink before the extinction of all things". (181). Indeed what happens in the "Temple" is reconciliation between enemies, a sort of cancellation of the effects of the Marabar Caves represented an aspect of "reality" which the major character must confront, and the Hindu festival is a final image of an all inclusive reality through which some of the characters must pass before the novel can be concluded.

As Allen puts it, Forster seems to suggest that "only through imaginative perception of beauty and through love can we understand other people and the universe in which we live". (940). The moral and imaginative effect of Mrs. Moore's odyssey in the mosque is a greater sensitiveness to the importance of love and imagination in human affairs, a greater responsiveness to the unique power of beauty and personal relations. The implication here seems to be that complete union between man and man will never be attained until the confines of time and place are finally demolished. Meanwhile, man must do everything he can to fight against and subdue these forces of disorder, if not conquer them. It is an undertaking a passage in which everything depends upon man himself to make or mar.

Finally, I can conclude this study so far as it is a study of the conflict between two civilizations, at extreme poles from each other and separated by the Mediterranean by exploring Forster's moral vision which the passage offers the only hint of a solution. Forster's originality shows itself in the freshness of his moral vision, which is a private, independent affair, owing something no doubt to previous moral systems, but not the same as any of them. To see human nature from his point of view is to see it in a new moral perspective. His point of view unites two qualities seldom found together. Forster is at once tender-hearted and unattached. He is unattached because he feels himself part of no corporate unit, and is temperamentally unresponsive to such forces as national feeling, class feeling, family feeling, comradely feeling. Sex in his stories is a curiously bloodless and un compelling affair. The only emotional relationship between human beings into which he enters fully is friendship. Here is where his tender-heartedness comes in. He believes that only in close relationship to another person can the finest part of a man's nature find fulfillment. That human being should be united with each other in love is to him the first need in life. The first fact about it, on the other hand, is that they are not so united. This contrast between what man wants in relations to his fellows and what he gets, is the outstanding feature of Forster's vision of the world.

Forster's moralism shows itself in his considering this state of affairs to be wrong. It is deplorable, he thinks, that people should be divided from each other. He is deeply concerned to discover how this wrong can be righted. In his earlier books he seeks a remedy in a sort of faith in nature. The primitive, spontaneous, natural man does not feel cut off from his kind. But artificial divisions have made him so: division of class, of convention, of nation. If man would put aside these false idols, erected by tradition and selfish worldliness, and yield himself to the worship of

god pan, god pan would save him. ("Pan" represents a state of nature and personifies the natural impulses and instincts of man).

Classical Arabic Narration: Eastern and Western Visions

Dr. Walid Ghabbour
King Saud University, KSA.

The contribution of Arabs in the field of creative narrative writing have been taken for granted in classical and modern times. And now, it is not the question of existence of Arab writings in this particular genre but the focal point is, "how far they employ the elements and narrative techniques in different textual narrative patterns and forms."?

If there had been a contrast between Eastern and Western vision towards the existence of classical Arabic narration in the past (opponent and exponent) (Solyman, 37), today, the degree of differences have been changed dramatically not in terms of the existence, but in terms of forms and its concomitant such as structure and narrative techniques and also with regard to the content and its concomitant such as variety in narrative patterns.

Although most of the old opponent (Eastern and Western) to the existence of classical Arabic narration focused their perspective on the lack of style and narrative techniques in modern narrative forms in the West, today this issue is changed.

Now, We have variety of Eastern and Western academic studies about classical Arabic textual narratives, which acknowledged the existence of significant classical Arabic narration as a prose genre that makes up the basis for modern narratives whether Arabic or western, in addition to variety in forms and patterns (Al-Mowaafi, 54).

But now, there is a contradiction between the Western perspective and Eastern perspective in terms of pattern of imaginative contextual narratives. The classical Arabic narration is characterized by multitude of patterns: historical, romantic, religious, philosophical, folk, sexual, didactic, educational, anecdotal, symbolic, comic, fabulous and linguistic. Despite the critical studies of most of these patterns which take up different narratives forms such as anecdote, tale, story, autobiography, these studies in general were not balanced and based on selective yardstick in their studies which made the overall perspective towards classical Arabic narration unclear and deceptive.

The problem here arises apparently with a particular pattern which is sexual narratives pattern. The Eastern Arabic vision has eliminated this sort of pattern from the classical Arabic narration as if it did not exist at all. While the western vision looked at it as a realistic historical texts that truly represents the Islamic Arab society. This is very apparent from different Western studies concerning sexual issues in the Islamic Arab society where they tried hard to quote some imaginative Arabic literature texts, particularly the narratives which deal with sexual pattern in order to assert their perspective that lacks of objectivity and credibility (El-Rouayheb; Habib; Kugle; Murray and Wright).

Therefore, what exacerbated this biased perspective is the disinclination of many Arab researchers and critics to investigate these sexual narrative texts for certain reasons that would be clear later on. Despite the fact that it is very simple to prove it artistically within the context of imaginative literature, which ultimately may help refute the biased Western perspective due to the apparent contrast between imaginative literature and documentary, realistic, historical literature.

The sexual narrative texts in Arabic literature can not be considered as an evidence of the existence of some aberrant sexual phenomena in the Arab or Islamic society. Moreover, if this phenomenon deserves investigation, it will not give a true picture of the concerns of Arab Muslims in general and the Arab writers in particular because the creative Arabic literature writing on sexual narratives

pattern are less apparent comparing with different writing patterns such as: didactic, religious, moralistic and even philosophical and symbolic ones.

The amalgamation of all these different patterns is an evident of the significant contribution of the classical Arabic writers particularly in the field of narration, taking into consideration the multitude of dual contradiction in the classical Islamic Arabic culture and in the modern times too: disintegration – commitment, heterodoxy – blasphemy, mysticism and faith, entertainment and sumptuous, asceticism, obscenity and profligacy, piety and godliness.

Despite the evident richness of the classical Arabic narration, the classical Arabic criticism sought to underestimate and scorn it in such a way that many noteworthy genres were excluded from prose work by some authoritarian critics (Al-Roubi, 21). That attitude was primarily originated in the atrocious political, social, cultural and intellectual authoritarianism. In fact, such prejudice represents the intellectual deterioration that the Arab society suffers in both ancient and modern times.

Critics of that age related the innovative narrative works that rebelled against the constraints of the political and religious authorities with the rabble at the lowest rank of the social ladder and with the inferior non-canonical culture (Ibn Al-Jawzi, *Talbees Iblees*, 129). Accordingly, the body politic imposed its control over authors of the narrative: it appointed the "canonical and conventional" authors at mosques and expelled the creative and imaginative. Still worse, it tracked down the latter and punished them, however prominent they were all over their societies and among the peer victims of authoritarianism. Nonetheless, their works survived.

Such an imaginative narrative technique of the Arabic Muqamat as attracted men of letters (e.g., Al-Hamazani & Al-Hariri) did infuriate the authorities to the extent that they refused acknowledging its literariness (Al-Tawhidi and others; as cited in Al-Roubi, 134). Contrary to all expectations, the more they were rejected by the authorities, the more they attracted writers to innovate and reader among common people to admire. Consequently, the public awareness of the authorities' prejudice grew and the attempt of the body politic to manipulate narrative forms in its favor was disgracefully exposed.

In fact, at the top of such distinctive influential patterns of the classical Arabic narrative stood the sexual pattern that was the field of creativity for great writers (e.g., Al-A'bi, Al-Dinuri, Al-Jahiz, Al-Nafzawi, Al-Seyouti, Al-Tawhidi, Al-Tifashi, Al-Yamani, etc.) whose works varied to encompass literature, criticism, science and thematic encyclopedias. The sexual pattern was also the integral part of encyclopedic works such as *Alf Lila Wa Lila (The Arabian Nights)*, *Alhayawan*, *Nathr Addur*, and *Uyun Al-Akhbar* (Younis, 17). It was even the one and only theme of many great narrative works, including those of Al-A'bi, Al-Jahiz, Al-Seyouti, Al-Tifashi and Al-Yamani, in addition to its emergence as the foregrounded, yet sometimes implicit, sub-theme of many other works just as those of Al-Seraj and Al-Yafe'i in which the didactic element is emphasized. Nevertheless, it did not receive due critical interest.

Sexual narrative was born in a controversial arena. Classical writers and critics were divided into two groups of supporters and refuters, and their conflict was never settled. The critics of the first group (e.g., Al-Dinuri, Al-Jahiz, Al-Tawhidi, etc.) unashamedly accepted it in a defensive way, accusing those who felt ashamed of it of affectation, and writers satisfied themselves with the act of innovation. The other group, whether writers or critics, shunned the narrative genre entirely and deemed it inferior and worthless and, when writers moved to the narrative, they wrote on forms other than the sexual. That was why, in his famous book *Al-Nawader*, Ibn Al-Jawzi ignored all sexual anecdotes recurrently introduced by his predecessors.

In a similar vein, the modern Arabic critical studies have inherited that cultural neglect of sexual narration. A few studies of the pattern are even tied up by the superficial sick viewpoint that heavily and blindly relies on the moral utilitarian and the authentic realistic criteria which, in

turn, chain most creative writers. Hence, no profound critical study of the highly promoted sexual pattern (in primarily sexual narratives or in narratives with sexual sub-theme; e.g., sexual tales and anecdotes) has been emerged yet. The sexual narrative text is almost marginalized by critical reviews and is totally ignored by academic researchers in universities, in thematic critical periodicals and journals and in respective conferences and symposiums. Surprisingly enough, critical surveys of the classical Arabic narration (e.g., works of Al-Ghannam, Al-Muwafi, Al-Najjar, Al-Shura, Ibrahim, Murtad and Wadi.) and critical studies of the narrative forms (e.g., anecdote) that foreground the classical Arabic sexual text (see works of Abdul-Hamid, Al-Najjar, Al-Najm & Sharaf) mostly bypassed that narrative tradition. Besides, no critic has ever referred to the sexual stories that prevail, in a highly imaginative technical style, in the works of Al-Nafzawi, Al-Seyouti, Al-Tifashi and Al-Yamani.

Few modest studies, however, attempted to investigate the literary aspects of some of these sexual texts — but with no critical depth. They were basically driven towards proving the authorship of such texts in the classical Arabic literature and towards attacking critics and readers' attention to them. Unfortunately, the entire task is surrounded by challenges.

And this Arabic Eastern vision resulted from the challenges that faces the modern Arabic critical studies on sexual textual narratives which, in turn, has led to such cultural neglect and marginalization of the pattern are actually the same as the chains that fettered the classical innovative sexual narrative. Authoritarianism seems to be the dominant context of all creative and critical fields as well as political, social and cultural domains.

These challenges manifested themselves in the political repression that the Arab society has suffered in such a manner that has tied it down through a huge inheritance of intellectual, cultural and artistic restrictions and disappointments. It was such inheritance of repressive authoritarianism that made the body politic kill Ibn Al-Muqaf'a on charging him with heresy, the most common charge in the Abbasid era. It was that which forced Ibn Mamata Al-Misri to flee from his homeland, compelled Al-Tawhidi to burn his books and impelled Al-Jahiz to disclaim his basic rights of expression and innovation and to ascribe his own works to his predecessors for fear of clashes with the tyrannical cultural authority at that time. It was that which obliged Al-M'arri to isolate himself from that corrupt environment of repression, suppression and authoritarianism and still made him a target of charges for some official critics and writers of the regime, just like Ibn Al-Jawzi who spoke in the name of the body politic and charged him, Al-Jahiz and Al-Tawhidi of heresy (Ibn Al-Jawzi, *Almontazem*, 134).

However, the body politic has justified its authoritarian acts as being a way of conforming to the religious instructions and to the moral norms. Nevertheless, in the ancient Arab society, some politicians themselves were the first to violate the rules and to get rid of all that apparently restricted the entire society. Some of them even dared to promote adultery and sexual perversion, not feeling ashamed of earning money from running that "dirty business" (Al-Jahiz, *Al-Ras'ael, Resalat Al-Qeyan*, 175; Shukri, 63). But this is can not be considered as an evident on the spread of these congenital social diseases according to some academic researchers.(Habib, 78).

Besides, the religious authoritarianism represents one of such serious challenges. To illustrate, there is always a group of some religious pedants believing that they, and only they, have the power to understand religion, to judge the religiously permitted and/or prohibited and to judge people's belief. There is always a group of religious figures trying to direct the public opinion of the masses in every situation regarding religion, according to them. Doing so, they deprive those people from their own right to think and express their opinions. Yet, some men of thought and letters would reject that trend in a manner of believing in the power of the mind and in the freedom of expression. To name but a few of the rebellious who are numerous throughout the Arabic literature history, we have Al-Dinuri, Al-Jahiz and Al-Tawhidi in the ancient times as well as many others in the modern times.

This is why the political authority in the ancient Arab society sought to manipulate the religious authority and, eventually, the latter was confused with the social authority. Many attempts at creativity were thus disappointed by the claim that they disrespected religious instructions and social customs and traditions. In effect, these acts built an entire world of intellectual suppression, quite similar to forms of political repression in some countries.

Such aspects of authoritarianism, suppression, and repression are also recurrent in the modern society that has witnessed lots of confiscatory acts of intellectual and innovative works, including narrative texts. The respective creative authors have also experienced incommunicable detention, threats of killing, assassination attempts and judgments of heresy based only on a reading of their imaginative innovative works (Asfour, 391). That sort of misconception has reflected the deformed integration of the political and social authorities insofar as the numerous conflicts that successively befall the various domains of life in the Arab society simultaneously influence cultural attitudes and thoughts. Consequently, some official critics of the regime enjoy practicing intellectual and cultural authoritarianism vis-à-vis creative writers (Abou Zaid, 9).

Here, sex is shocking. The taboos of the Arab society are three, namely, politics, religion and sex, yet the strongest and most influential of the three is sex since politics and religion collaborate in restricting its artistic functioning. Metaphorically speaking, politics and religion are the two jaws of the millstone that crush sex and all that is related to it. "Sex talks" never begin without a political permission, even implicitly; they always yield to many censorship authorities. They never go without a religious permission; they have to be presented in a "religious style" and to depend on implication, although there is no such imaginative text that fits that style. Mostly, sexual texts are categorized as scandalous and lewd. Thus, academic research and/or science can be the authorized channel of expressing sex, away from religious and political authoritarianism, whereas imaginative creative works about sex are severely suppressed.

The main reason for the shortcomings of the respective modern Arabic critical narratives studies is that they are restricted to the academic researches in universities. This is because there is a strong connection between the educational organizations and the body politic in the Arab world. Simply, the university is seen as a political organization and most of the university staff members just follow the policy preset by the government. Still, clashes between them are innumerable.

The cultural authoritarianism and the modern Arabic critical narratives neglect of sexual narrative are also evident in the expulsion of Classical Arabic narratives from the critical scene — a flagrant bias against them, no doubt. As a result, many readers know nothing about innovative sexual works of Al-Seyouti, for example, or even Al-Nafzawi and Al-Tifashi who depended heavily for their prose and poetry on the sexual pattern and who created many narrative technical forms. This pattern is considered a failure of the Arabic literature, for being lewd, offensive and disgusting for the readers and for being disgraceful for the writers. Some others believe that it marks the moral looseness, dissipation and sexual perversion of the Arab society (Al-Baze'i, 178).

Undoubtedly, that perspective refers back to the ancient Arab society with which the modern society can be easily compared when we define the relationship between the classical critical attitude and its modern counterpart towards sexual narrative. While the former was originated in the social, cultural and political milieu of these writings, the latter emerges — with such inherited classical cultural neglect of the sexual narrative — in the modern world that suffers countless forms of tyranny and repression. Yet, noticeably most of modern Arab critics are impressed with the modern innovative narrative, so they focus on criticizing classical narrative texts in terms of modern narrative techniques although the former were restricted to such primitive forms as the anecdote and the tale. This reveals the poor critical and creative awareness of classical Arab writers vis-à-vis these techniques, which somehow appeared in their works but in a superficial

traditional form. The sexual narrative texts, on the other hand, are technically rich and tempting to study.

Recognizably, that pursuit is erroneous and illogical, for any attempt at comparing modern narrative with classical Arabic narrative can eradicate every apt feature of the narrative from the classical texts (including the sexual texts) that reveal some essential stages of the Arabic narrative development. That malicious superficial attitude deems sexual anecdotes and tales trivial and trite, despite their literary and social significance.

Here comes the challenge of the lack of objectivity. Some critics believe that the only function of the anecdote is to meet the didactic canon (Al-Najjar, 611). Even when some others acknowledge its indirect criticizing implications of the political, economic, social, moral and cultural deterioration, they never refer to sexual anecdotes as if they were not included in the classical Arabic (humorous) narrative.

Generally, concerning the artistic employment of sex in literary writings, modern Arab critics are still divided into supporters and refuters although that debate obtains only in the Arab society. Evidently, some Arab scholars investigate the various manifestations of the theme of sex in the classical Arabic culture, but only in non-Arab societies, the fact which is a blatant indication of the intellectual and cultural alienation and an obvious symptom of the cultural suppression — despite the inefficiency of the critical apparatus on dealing with the classical Arabic sexual narrative.

Remarkably, the anecdote was the favorite form of the sexual pattern (Al-Nafzawi, 10). With reference to the classical literature, the anecdote is a narrative form partially based on humor. This shows how the sexual anecdote spread, especially because they began as an oral genre belonging to the folklore or the art of common people, as some prefer to call. Then, it came to be written and to be classified among the formal literature first by Al-Jahiz and some of his contemporaries. Interesting it is to mention the minister Al-Ared when he skid Al-Tawhidi, his companion in nightly entertainment, to prepare for an entertaining night. Eventually, Al-Tawhidi sent him thirty-one sexual anecdotes, followed by justifications for writing these texts, and thus he was counted among the supporters of the anti-authoritarian trend.

Therefore, we believe that sexual narrative texts should be thoroughly and thoughtfully investigated because, like every other text, they do deserve critical interest. This is how we can reach an objective viewpoint about the classical Arabic narrative and, in turn, trace the development of some narrative forms and think of the reasons for the decline of the other forms. For instance, the humorous sexual tales of Al-Nafzawi, Al-Seyouti, Al-Tifashi and Al-Yamani mark the palpable development of sexual anecdotes and of some Muqamat.

The humorous sexual tale mixes the sense of humor and the directness of sexual anecdotes with the mature narrative form developed from Al-Muqamat and tales of *Alf Lila Wa Lila* while it gets rid of all that caused Al-Muqamat to gradually deteriorate, namely, the extremely strange language and the excessive interest in the application of the various rhetorical figures of speech in a straightforward didactic fashion. In addition, the hero in the sexual humorous tale is somewhat similar to the model of the loose character in the sexual anecdotes and to the model of the cunning character in Al-Muqamat (Ghabbour, 267).

What really led to the decline of Al-Muqamat was the confusion writers fell into when they adopted different religious and intellectual attitudes. It is also noticed that they showed a strong interest in the form, the (strange) language and the figures of speech while avoiding plots that present frauds and lies and avoiding characters of an immoral background. Al-Zamakhshari's Muqamat follow that pattern and come to be known as didactic texts.

A strong interest in the humorous content is also found in Al-Muqamat, but with a dramatic shift in their significant morphological functions from a character performing the fraud to earn

money into a character performing the fraud for sexual pleasure. Besides, the superior rhetorical capacity of the hero that qualifies him to proceed with his narrative turns into an exceptional sexual ability enabling him to perform some odd sexual actions, thus adding an element of the supernatural to the narrative (Al-Nafzawi, 10).

Accordingly, this proves that sexual texts have developed insofar as there is no such thing as the defending campaigns, which were necessary on the emergence of these narratives. At least, they are few now. By the same token, various sexual writings are also developed in all fields: we have lots of thematic books about sex, though not always restricted to that theme. Authors writing about sex and its various aspects often use quotations from poetry and/or prose to support his argument. How glorious it is; sex moves to the fore.

Most of modern writers of sex in the Arab and/or Islamic society depend for their material on many literary works. Regardless of their attitudes and objectives, their works are still significant in that they prove that the various revelations of the theme permeated classical Arabic culture. They also show that the modern Arabic critical studies of sexual texts are few or even rare (and superficial) and that, implicitly, the sexual narrative has been critically underestimated and has been deemed as non-worthy of study and as non-literary form. Hence, it is believed that sexual texts cannot represent any aspect of the Arab society, which is the basic motive behind the unjustified critical neglect that evades acknowledging them.

Most of the Western Perspectives look at these texts an authentic and true-to-life history of the Arab and/or Muslims' sexual affairs — which could be probable — but the mere attempt at transforming the imaginative literary inheritance into a reliable historical reference of some deeply-rooted religious and social phenomena can obscure the literariness and the imaginative innovation of the texts.

Hence, some critics have denied altogether the presence of sexual perversion in the Arab world and believed that their recurrent occurrence in literary writings is only for mere humor. They depend on such sayings as "Poets do not commit themselves to what they say" and "Authors are just liars" (Daef, 27). Yet, Al Gahez, the pioneer of the sexual anecdote once confessed that he narrated two types of events: the realistic and the imagined.

Hereby, sexual texts can fairly reflect features of the ancient Arab society, yet they remain imaginative artistic works nevertheless. After all, they are a landmark in the development of the classical Arabic narrative that embraces humorous and sexual aspects in addition to many ideological and social dimensions all of which contribute to forming these texts.

In the final analysis, we should affirm that we do not seek or call others to survey the history of the sexual affairs in the Arab society. Simply, this study attempts to convey that the classical Arabic sexual narrative has been marginalized and obscured by the modern Arab critics due to innumerable repressive and authoritarian challenges. Some Arab scholars assume that critical studies of that type are maliciously initiated and, thereupon, they avoid tackling sexual texts, but we believe that this should be a motive for undertaking a profound academic investigation of the objective manner. This is how we can find out the remarkable characteristics and the technical richness of the sexual texts, which can unveil the gradual development of the classical Arabic narrative.

Abstract

Barisan Nasional (National Front), the ruling party in Malaysia inherited the trust and tradition initiated by the Alliance Party that achieved the Malayan Independence 1957. The support received by National Front undeniably since the Kuala Lumpur Municipal Council's election in 1952 and the support continued in the 1955 General Election, where they won 51 out of 52 seats contested. Nevertheless due to the May 13th 1969 incident, the Alliance has experienced a major loss. Under the new brand name of National Front (1972) the party expanded their components into a bigger coalition parties. It has become a unique political formula in Malaysian politics to reduce politicking and keeping the divided ethnicized parties together. The National Front kept their dominance in most General Elections handsomely proved that its strengths cannot be challenged easily. In the Malaysia's 2008 General Election, the supremacy however, started to deteriorate when the two-third usual majority suddenly successfully is being denied. The ability of opposition to deny its majority has put the National Front into a very difficult position. Using Gramscian concept of hegemony, this paper tries to elaborate how National Front has successfully maintained their power until suffer big loss in 2008 and at the same time the paper will discuss whether hegemony of National Front is still relevant throughout the administration of Tun Mahathir and Abdullah Ahmad Badawi leadership.

Introduction

Malaysia has managed to practice the arrangement democracy effectively until the year 1969. Nidzam (2006:69) stated that the parliament was suspended for more a year after the said event but was again practiced in the year 1970 till date. Before the 13th May 1969 event, the development of politics in Malaysia was performing well. But this does not reflect that there are no conflicts and events which involve force. Throughout the six weeks of the 1969 Election campaign, it has lead to various racial issues that almost caused the emotional state of the Malays and Non Malays to explode. Even though the campaign went on well without any untoward events, the feelings of tension became obvious as the Election Day on the 10th May 1969 approaches (Comber 1983:63).

**Title: Making Sense of Political Hegemony in Malaysia: An Analysis,

Email: nsya77@yahoo.com**

In the said election campaign, the leaders do not seem to have a new formula to fight and receive a strong contest from the opposition parties like PAS, DAP, Gerakan and PPP (Comber 1983:63). To the Perikatan party, they were very confident of winning. Thus, they have permitted the ongoing campaign to the maximum under the Constitution (Mahathir 1999:6). In terms of the Perikatan election manifesto, Comber (1983:63) stated that it is more of a government report. The Manifesto summarizes the success of Perikatan in power after winning, focusing on the 'economic development', 'defence and safety', 'international affairs', and 'racial integrity' (Comber 1983:63-64). This harmony does not cause anxiety on the National Front as the governing party but in fact has made it a lot stronger.

Therefore, the question that states the democracy system in practical has thus far been unable to be fully executed has arisen. Contrary to the said guarantee, many scholars define the type of leadership practiced in Malaysia as immature, no freedom, "half cook", limited, authoritative and full of control. Whether we realize it or not, the definition of democracy in Malaysia proves that the governing system in Malaysia is in fact a form of hegemony. It is obvious that the elements of hegemony like being too extreme towards a leader, loyal and faithful, obeying to orders given, complying with the leader's wishes, opposing all activities to topple the government and so on existed but in fact is hidden in the Malaysian democracy system.

The emphasis on democracy based on its practiced in Malaysia intend for the peace and political stability to be practiced (Lijphart 1997:152). This strategy has been applied to preserve the public's loyalty towards their leader who has become a 'protector' in their daily lives. This hidden practiced of hegemony causes the public to give their undying support to their leader even though they were fully controlled.

This phenomenon has lead a scholar like Syed Husin Ali (1996:95) to be of opinion that this has become a norm to the monarch or local leaders asking for the public's undying support. For example, in the traditional leadership system the concept of 'loyalty' is link to 'betrayal'. This means that the king cannot be opposed because it will be regarded as treacherous. As a result, this has lead to an inferior psychology among the subjects until they become devoted and 'servant-spirited'. The neofeudalistic people of today have a feeling of fear, humble and 'servant-spirited' towards their king or leader and this feeling has lead to them having the same feelings towards their new leaders. With this power the leaders are able to expand their wings to the economic sectors, and leaving a very narrow road which then lead to the struggle among the people. Obviously, the political power has given them the opportunity to expand themselves in the economic sectors and the control on economy has strengthened their political position. All government machinery and other government tools are also used to strengthen and protect their interest. The socialist political process plays a role in ensuring that this practice and perception is ongoing for the next coming generation when youngsters are trained to be loyal and be afraid of their leaders.

Email: nsya77@yahoo.com**

According to Nidzam(2006:256-257), the public's acceptance and loyalty towards their leaders, the leader's power and involvement in economy has been conferred by lots of titles to recognize their contributions. This showed that the elements of feudalism still exist in democracy. These elements among others have a picture of the subjects or people still being loyal to their more powerful leader. The voices of these leaders must be complied with and not opposed. They are also lavish with titles such as Tun, Tan Sri, Datuk and Datuk Seri. However it is undeniable that the democracy was practiced together with the citizen's traditional ways like culture and a strong believe in religion which has become an important essence.

In reality, the type and practiced of the Malays political culture in this globalization era has been managed to be constructed. Not only it was constructed but it goes right to the foundation of the spirit of the Malays who are too absorb with their culture and having a strong believe in religion, therefore it needed reconstruction. Without us realizing it, the leaders have managed to gain full control until they are in their comfort zone and managed to reconstruct the people to accept their dominant position without much questioning. Obviously the political hegemony is visible in the Malay political culture especially when it is a result of unification in the Malays traditional structure. Therefore, the public became weaker politically including the NGOs, the opposition parties, media and judiciary whose words and fights on modern democracy are left unattended.

With that, all government machinery and tools including the Acts, Enactments, police departments, military, the prosecutors, courts and so forth are used to strengthen and preserve the higher positioned interests. The socialists' political process plays a role in ensuring this as an ongoing process. Besides that, the introductions of several Acts like the Incitement Act, Official Secrets Acts, Internal Security Act (ISA), Print Press and Publication Act, University and Colleges Act (AUKU) are used by the government to control the political situation in Malaysia and punish executive offenders (Mauzy 1995:117).

The democracy practiced is not an open democracy but only limited; it has an element of authoritarian and so forth. Even if a writer or a journalist writes or reports on certain issues of government secrets like (a scandal, deviation and elements of nepotism), they will be arrested and charged under the Official Secrets Act 1972. This shows that the position of the elite political government is not at stake and their influence became stronger. The fanatical hegemony towards a leader is not relevant anymore in Malaysian current democracy and should be replaced with the hegemony culture of being 'afraid' of a leader. This phenomena picture the culture of being 'afraid' is not only to threaten the public of the punishment against them by a leader but the feeling of 'afraid' to lose their interests if the orders are opposed.

Hence, this writings discuss the elements that form hegemony in the Malays political culture which in actual fact is not a true or actual hegemony. Not only that, the hidden element of hegemony practiced in the Malays political culture are also overlapping with the Malay culture but religion also plays an important role. This proves that the hegemony of Malays political culture is very 'unique' and 'special' and different from the political culture in other countries. The Malays political culture in Malaysia is very adamant in holding to their culture and religion of Islam which has been significant in the lives of the Malays since then. However, there are several main indicators which leave an impact on Malays political culture in Malaysia.

2. The Practice of Feudalism in Malaysia

The elements of feudalism still exist till to date because the monarchs is pictures as a protector of people and are very powerful and have '*daulats*'. For example in the traditional Malay politics the phrases or words that picture a king as a powerful symbol and have a connection with God were also used like "a king is a reflection of God on earth". This phrase is a reminder to the people that the king is of higher position and possesses special relationship spiritually. These words have placed the people to be more afraid towards their king. The level of loyalty of local people at that time can be regarded as a blind-acceptance which only accepts whatever orders from their leaders. They need to instill full loyalty, respect and faithfulness towards the leadership of their king and seldom they become disloyal.

Therefore, Syed Hussein Al Attas (1972:109) agrees with the said assertion and regarded the state and federal state have spend lots of money in giving titles like '*Tun*' and '*Dato*' to the experienced political leaders and bureaucrats who act as an honest protector in this monarchical constitutional system. The amount of honors given has increased since the independence of Malaysia for 51 years.

Position, status and awards have replaced the traditional practice during the Melaka Sultanate in the era of feudal Malay politics. This situation pictures UMNO leadership as a 'hero' and 'savior' in the Malay community. Contrary to heroes like Hang Tuah, Hang Jebat, Tun Perak, Tun Biajid and many more who were discussed in earlier chapters but in this neo feudal era, UMNO is able to influence the governing country's decision. Mahathir (2007) felt that there is no difference between the people's loyalty during the feudal time and the people's loyalty towards their current leaders.

According to him, the level of loyalty given towards their leaders or government is a reward to their loyal services towards them in response to their protection. This is a main factor towards undying loyalty that has been formed a long time ago in this neo feudal era. Mahathir's thoughts has been

**Title: Making Sense of Political Hegemony in Malaysia: An Analysis,

Email: nsya77@yahoo.com**

seen as very interesting when he denies that loyalty given by the people is not a form of political hegemony. As long as the people love and is loyal to their king, leaders, '*penghulu*', principal and also the '*wakil rakyat*' children, it is not a big issue. They are loyal because they know and trust their leader. As long as they did not feel oppressed, pressured, abused, it means that they are comfortable with their doings.

Therefore, the system of governance in Malaysia has been formed through a social bargaining process that proves the ability of the earlier patriots forming a '*daulat*' country intelligently has been inherited by the leaders since then. The concept of nationalism is seen as a tool of firm hegemony in governing Malaysia inoculated by the spirit of patriotism and loyalty to the country. The shifting of paradigm has not been excluded from the scope of discussion about the interest of Malay culture which thinks highly of their king or leaders since then.

The State has not given at all any free space for free participation. The competition is so narrow and the state was always used by the government to put pressure and this gives them extra power. Besides that, the government party has taken the opportunity to draft and amend Acts to protect the government from any threatening challenges. For example, the ISA can detain anyone without trial and was officially introduced in Article 149 of the Malaysian Constitution. This Act is also use to prevent opposition leaders or any other organization from challenging the status quo (Jesudason 1995:338).

Their position became more consolidated and hard to challenge that makes it easier for them to gain more interests in the economic sector. Further, in the current democratic governing system, there are laws to control and protect the higher class's position. However, most political Malay leaders are of the view that the enforcement of laws has permitted the taking over of individuals land for the purpose of development and this should be restricted and be more transparent to guarantee the people's rights in their comfort zone.

Results from the discussion of the political figures has not given any direct and satisfied answer to support and prove the involvement of the economic and political elites on the issues of acquiring the public's lands. Perhaps this is a sensitive question and involves certain individuals. Not only the fear culture is planted deeply in the minds and souls of the Malay community and constructed as well, the culture is also hidden in the soul of Malay political figures. With much ease the hegemony proceeds well and is obvious for there is no collision between these two relationships.

3. The *Open* Policy of Abdullah & Democracy: Reality or Rhetoric?

The leadership culture of Abdullah's was undeniably different from the latter leadership approaches used by the previous Prime Ministers. Even though Abdullah in the office for a short term (2003-2009), his leadership can be considered as significant in creating pragmatic leadership culture that promotes openness as an indication that places on its scale. The open policy practiced by Abdullah is not an established policy or imposed according to laws. Thus, it plays a huge impact when his leadership tries to gain support and trust of the Malaysian people since the incident of 1998 national leadership crisis. Although Abdullah was not directly involved in the crisis, Malaysian sociopolitical situation were at the vague phase which brought to the decline of 1999 election. The leaders started to conflict and the masses chose to be influence by the opposition parties as their representatives.

The crisis helps Abdullah to receive a new space when he was appointed as the Deputy Prime Minister. He has been labeled as '*Mr. Nice Guy*', once he won the masses support during the 2004 General Election with a two third majority vote. The remarkable success of National Front gave him the freedom to pattern his own administration style. In one aspect, the transition moved very well enable him to focus on the agenda that shows Abdullah is very committed to endure stability and preserve effective administration and economic condition of the country.

Basically, Abdullah's open policy succeeds to pioneer an ethical practice, values and transparent culture, democratic and integrity. This is a real great challenge encountered by the national leaders and party especially the ruling party as to maintain the people's trust. Every leader obliged to give full commitment with transparency and responsibility given to them. Abdullah's open policy filled with dominant integrity value, transformation occurs including openness in the media practice, judiciary body, electoral system and many others. The open policy gave him many advantages to help him uphold good leadership and democratic political culture in Malaysia. The result of this Abdullah empowered paradigm shift in building Malaysian democratic values and at the same time denies the skeptical thoughts which label Malaysian democracy as artificial, undemocratic and premature. Abdullah's motto of his policy encourage to a better open and democratically practices.

Incapability of Abdullah invites the opposition to strategize their steps to colonialize and gain support of the masses as compared to Mahathir's legacy. The biggest implication was proven in the National Front lost their two-third majority votes to the opposition parties. They also lost five states (Kelantan, Kedah, Selangor, Pulau Pinang, Kedah and Perak) to the opposition during the Malaysia's 12th General Election in 2008. This situation was the beginning indication of Abdullah's policy did not guarantee the status quo of the ruling class. Maybe the openness promoted by Abdullah unsuccessful to maintain its momentum was the reason of Abdulla's failure to blend with its environment and current sociopolitical.

3. Media as an Agent of Hegemony: During Mahathir's administration

The introduction of several Acts to stop the freedom of mass media from the government's aspects is actually to stabilize the country's peaceful environment. According to the Printing Presses and Publications Act 1984, Section 7(1) stated that the Ministry of Home Affairs has the authority to grant, deny and withdraw any publication permit as they wish. (Rosidah 1997: 99). As far as the public is concerned, every Malaysian citizen has the rights of freedom to obtain knowledge and the freedom to obtain various opinions and views. However, the Malaysian government lately has strictly controlled the media activities and strict in granting media license. Reason being is to block or evade groups and free organizations from publishing and broadcasting issues that portray bad images on the government. Whether direct or indirectly there are individuals with interest to preserve their status quo by using the media as their hegemony agent.

The government has played a dominant role in ensuring that sensitive issues or political issues and filter any information before it is made known to the public. These filtering by the media responsible of reporting such events and the media are subjected to several rules and regulations and Acts which barred the media from reporting the truth. The media operates as a source of information and not to persuade the public to act as such when any information is reported.

In the event the public obtained such favorable and positive news or information, their thoughts and movement will make them more optimistic. It is true that information reported by the media to public is not parallel with the context and actual meanings to be made known. According to Shaukat (2004:2), *"The capsules of information we get are often detached from their contexts and meanings and are essentially packaged for easy consumption. For instance, before we are told about the real causes of a riot, another riot plague plane crash war is upon us."* The media control is an easy and smart route which is benefited by the government as a hegemony agent to provide information that eventually will influence the public's thinking.

When the media is strictly controlled it deters the public from their rights of freedom as stated in the Malaysian Constitution. The media is prone to broadcast and promote the elite political and economic agenda while the society's autonomic interest, poverty, needing help and group outcast's rights to justification will be ceaseless. In reality, the mass media role has to be parallel with the theory of social responsibility that gives freedom to the press, for example an individual's freedom of speech and both basic freedom is seen as a moral right which cannot be disrupted by the country (Abdul Latiff 1988).

**Title: Making Sense of Political Hegemony in Malaysia: An Analysis,
Dr. Noor Sulastry Yurni Ahmad,
Department of Anthropology and Sociology, Faculty of Arts and Social Sciences,
University of Malaya, 50603 Kuala Lumpur, Malaysia.
Email: nsya77@yahoo.com**

With that, the main media will play an important role in controlling the public's mind and will not support any reports from alternative parties and will always label them as a defector, destroyer of a country's future, traitor, a pompous and etc. This sentiment further strengthens the status quo of the government for managing to gain support and trust from the public. It is undeniable that the role of schools and universities are used to further strengthen the hegemonies politics of the government among students and educators. The information about the governance system are provided without a flaw in accordance with the ready made system and executed all orders given by the government efficiently.

Therefore, the Malaysian media has suggested several motions to the government to reach transparency in media democracies; the government should abolish all controlling laws. In addition, whichever political parties cannot monopolize the media and any interconnected commercial interest. As the media has become more corporative with stricter control by the parties who has political and economic interest, the media should not take sides with any individuals, political parties, groups and others to guarantee full freedom to the media.

The mass media are regarded as an instrument that can strengthen the loyalty of local societies and enhance the development of political parties. Realizing that the mass media be it the press i.e. newspapers and magazines and also electronic media like television, radio, other visual aids that is able to give wider coverage right up to the countryside, it is definitely undeniable. The mass media is often an instrument used by certain parties to create racial tensions among our multi racial society. According to the research by Syed Arabi (1994), he stated that the mass media is able to influence strongly people's attitudes especially during election process. For example, during the 1999 election, the main mass media have been influence by the National Front to report their ideology, while the Barisan Alternative (BA) depends on the internet and tabloids like "*Harakah*" (PAS), "*The Rocket*" (DAP), "*Suara PRM*" (PRM) and "*Keadilan*" (National Justice Party or KeADILan).

Besides that, the print media has been manipulated by the political and economic elites to exclaim the solidarity of society, to smear or purposely discussing sensitive issues that risen the public's anger. As an example, Dr Mahathir has given warnings to a Chinese daily (*Nanyang Siang Pau*) because of the issues played out about *Sekolah Wawasan*. The said issue is regarded as a sensitive issue and probably will create tension among the multi racial society. Before that, in 1987 during the *Tall Grass Operation (Operasi Lalang)*, the government has taken action against the daily *Sin Chew Jit Poh*, *The Star* and *Watan* for spreading racial issues. The government is of the opinion that these dailies have been spreading news which might cause tension among people and this information should not be reported to the public.

**Title: Making Sense of Political Hegemony in Malaysia: An Analysis,
Dr. Noor Sulastry Yurni Ahmad,
Department of Anthropology and Sociology, Faculty of Arts and Social Sciences,
University of Malaya, 50603 Kuala Lumpur, Malaysia.
Email: nsya77@yahoo.com**

Magazines, learned books and novels have also been exploited by irresponsible group of people in creating racial tension, religious tension, education, economy, politics and much more. This sort of interests is able to affect the harmony of society. The efforts of print media should not be look down because the words are able to change and construct the minds of the society. For television programs, they are prone towards presenting government issues to instill public's loyalty towards the government. Most television channels presents government agendas like the national development, education, society social culture and inserting elements of government's "loyal services". These issues or agenda are controlled and complied nicely to ensure that the government always receives support from the public. The message in the special presentation is clear in fostering and highlighting the Malays fights through UMNO and thus succeeding in governing Malaysia.

Various slogans and symbols are used to portray the Malaysian people's unity towards the government. The element of hegemony is dominant thus far. It seems that the electronic media will only side certain parties and those who supported the government or the governing party. As this while, the rights of freedom of the people and opposition parties are pushed aside and their struggle and fights not shown in the electronic media like television because everything is controlled and blocked prompting them to use alternative channels which is seen to be more effective and fast through the use of internet. Even the mass media be it the print media or electronic media is able to disintegrate the races in Malaysia if it is not taken seriously by the government because the Malaysian people is still not able to leave their ethnicity whether they realize it or not.

Conclusion

Even though the politics of Malays has gone through a long evolution process since then, the discussion on hegemony will not stop as it is. The sentiments of loyalty, devotion, faithful and others have formed a stronger bond in ensuring that the leadership of Malays is not challenge by any parties. The discussion on hegemony has shown that it is not suitable and relevant anymore to be practiced. However, the hegemony practiced has its own pro and contra towards society development and smoothen the administration of a country. The most important aspects chosen by the government will determine whether the hegemony practiced is a burden or not. The Malay traditional government has placed an importance in the Malay traditional monarchy as it involves with the absorbance of Islam in the system itself. Now, on the contrary, the approach used by the Malaysian government has put an importance on the people's unity that may guarantee the well being of the country. This seems to connect closely to the religion of Islam because Islam encourages the Muslims to be united not only between Muslims but also with non-Muslims. That is the unique hegemony approach in the Malay administration that looks like Gramsci political hegemony theory but this Malay hegemony is more unique and special.

The rights of freedom that is always a polemic and politicized by certain parties in Malaysia are the rights of the press. The parties concerned have thrown various accuses that Malaysia does not practice the rights of press freedom. They accused that Malaysia does not adhere to the principal freedom which are stated in the Declarations of Human Rights. They also publicized in intensity the freedom of the press ranking in Malaysia which was given out by various international bodies to support the accusation that Malaysia is not press-friendly and using it for their own safety. Ironically, the majority group of accusers is not of journalism background. They were also not professional in discussing the issues.

Sustainability and Housing Needs in Malaysia

Tan, Teck-Hong

Sunway University College, School of Business

waltert@sunway.edu.my

Abstract

The concept of sustainability has become central not just in environmental preservation, but also in the consideration of the quality of development in human settlements. In the context of housing, several researchers indicated that housing policies based on sustainability criteria – meeting basic housing need - must be viewed as a necessary. The purpose of this paper is to examine how effective is the Malaysian government in meeting housing needs by reviewing national housing policies for the past 20 years. Malaysia is a multi-cultural country with 3 basic racial-religious groups. The residential patterns of the three main ethnic groups are noticeable due to their economic activities 30 years ago. In order to change these stereotypes of the ethnic groups, the government encouraged the rural dwellers migration to urban centres. However, the urban migration has caused a severe shortage in affordable housing (low-cost) in many cities. The urban poor have responded to the shortage by the formation of extensive slum and squatter settlements. Affordable housing provision, is carried out by both the public and private sectors, has become a priority of Five-Year Malaysian Housing Policies and Plans. But, housing achievement under these plans for the past 20 years has not been satisfactory, particularly for the poor. In addition, a massive over constructing of houses has created the problem of property overhang in the country. These unsold houses do not attract the target market and cater to the housing needs of the target group. In order to meet the housing needs of all, government should formulate policies aimed at reducing costs of housing and improving the efficiency of the housing delivery system. Additionally, the government should make easier for them to leap to homeownership

Keywords: Sustainability, Housing Needs, Housing Policies, Malaysia

Introduction

In recent years, the concept of sustainability has become central not just in environmental preservation, but in the consideration of the quality of development in human settlements (Choguill 2007). In the context of housing, several researchers indicated that housing policies based on sustainability criteria – meeting basic housing needs – must be viewed as a necessary. As stated by Currie (1980), housing is a human right and a basic need and must have priority. The purpose of this paper is to examine how successful is the Malaysian government in meeting the need of housing in Malaysia for the past 20 years.

Meeting housing needs for all has long been an objective of national policy in Malaysia. Housing policies and programs are developed and implemented to increase the homeownership rate in the country, particularly the low-income group. Governments often perceive housing solely as a welfare issue (Arku 2006). In fact, housing is a productivity activity that can form an important and integral part of either developed or developing countries. Researchers justified the role that housing could play in the economic development. Studies that focused on the role of housing in economic development included those of Burns and Tjioe (1967), Strassman (1985, 1987), Tu (1999), Phang (2001) and Arku (2006). These studies focus on employment and income effects, labor productivity, and growth effects of housing provision.

History of Housing Development in Malaysia

Malaysia is a multi-cultural country with 3 basic racial-religious groups. The housing industry has to take this into consideration in the housing development and planning. The residential patterns of the three main ethnic groups in Malaysia are noticeable due to their economic activities 30 years ago. For example, most of the Malays live in rural areas, most of the Chinese live in urban areas and most Indians live in rubber and oil palm estate. In order to change these stereotypes of the ethnic groups in the country, New Economic Policies (NEP) were implemented in 1970. The overriding objective of NEP is to foster national unity and nation-building through the eradication of poverty, irrespective of race, and the restructuring of society to eliminate the identification of race with economic function and geographic location (Agus 1989). The Malaysian government encouraged the Malays to migrate to urban centers as part of the NEP strategy to change the character of urban population which was dominated by the Chinese and also as part of the strategy to create a new Malay commercial community in urban area. The rapid rate of rural Malay migration to urban center in the 80s has caused the growing demand for affordable housing in many cities (Sivar and Kasim 1997). The urban migration has resulted in a severe shortage in affordable housing. The urban poor have responded to the shortage by the formation of extensive slum and squatter settlements.

In an effort to reduce slum and squatter settlements and meet basic housing need for all Malaysians particularly for the low-income groups, sustainable housing policies and programs must be formulated to ensure that all have access to adequate housing. In the

First Malaysian Plan (1966 – 1970) and the Second Malaysian Plan (1971 – 1975), a variety of programs are designed to promote the welfare of all Malaysians regardless of ethnic background by providing improved housing, community facilities, welfare and other services. In the Third Malaysian Plan (1976 – 1980), the goal of housing is to eradicate poverty and restructure the society whereas the goal of housing in the Fourth Malaysian Plan (1981 – 1985) is a continuation of the goal of the previous five-year plans. In the Fifth Malaysian Plan (1986 – 1990), housing programs are being implemented in the context of the human settlement concept. Under this concept, the provision of social facilities, such as school, clinics, and community halls, is emphasized rather than the provision of basic infrastructural facilities. In the Sixth Malaysian Plan (1991 – 1995), home owning within various income groups is emphasized. Low-medium cost house is introduced in the Seventh Malaysian Plan (1996 – 2000). Based on the Ministry of Housing and Local Government definition (Residential Property Stock Report 2000), the house price categories can be divided into low-cost housing (below RM 42, 000), low medium-cost housing (RM 42, 001 – RM 60, 000), medium cost housing (RM 60, 001 – RM 100, 000), and high-cost housing (more than RM 100, 001). In the Eight Malaysian Plan (2001 – 2005), the priority is continued to be given to the development of low- and low- medium cost houses. Under this plan, both the public and private sectors are urged to cooperate with each others in order to meet increasing demand for housing. In the Ninth Malaysian Plan (2006 – 2010), the objective of the housing is to ensure that all Malaysians, especially those in the low- and low-medium income groups, will have access to adequate, quality and affordable housing.

Housing Provision by Public and Private Sectors

The housing industry in Malaysia is highly regulated. All housing activities, except individual and group housing, are subject to approval from the relevant state and federal authorities. The approval processes include land conversion for housing, preparation of layout plans, building and structure plans, planning of infrastructure and assessment on environmental impact with involvement of many government agencies, both at federal and local levels. These include the Land and Mines Departments, the Land Offices, Local Authorities, the Survey Department, Telecom Malaysia, Tenaga Nasional, the Water Work Department and the Town and County Planning Department for planning approval and the provision of public utilities and infrastructure (Fourth Malaysia Plan 1981). In addition, all housing development projects must be in line with housing policies and requirements by state and federal authorities, such as bumiputera quota, control on price and standard built-up areas for low-cost housing, and provision of public amenities for residential housing projects (Second Malaysia Plan 1986).

In the first phase of Malaysian housing policy development, the emphasis was upon the public housing approach. The public sector holds an important social responsibility in fulfilling the housing needs by providing public housing for lower income groups. The provision of public housing, particularly low-cost housing has become a priority of the public sectors in the Five-Years National Plans. Prior to Independence in 1957, the concept of public housing was known as the institutional quarters. Under this concept, the

British administration provided housing facilities for the government officials who worked in public institutions such as hospital, schools, and district offices. After Independence, the public housing programs have implemented to provide public housing for all (Agus 1989). Additionally, public sectors are directly responsible in providing public housing in urban areas through establishment of the various government and urban development agencies. For example, the land and regional development agencies such as Federal Land Development Authority (FELDA), Federal Land Consolidation and Rehabilitation Authority (FELCRA), Johore Tenggara Development Board (KEJORA), and Central Terengganu Development Authority (KETENGAH) are to provide housing for land settlers, as well as those displaced as a result of opening up of new land schemes with the financing by the Federal Government. The target groups under this scheme are participants of land and regional development activities from the low-income groups (Third Malaysia Plan (1976)).

The public sector alone cannot meet the housing needs for all in the country. The licensed private developers are also major providers of housing to all levels of society in the country. In Malaysia, there are two distinct components within the private sector. The first comprises housing developers. Such companies can initiate projects themselves and engage in speculative building. This activity clearly distinguishes them from simple construction firms, which work only to construct. Developers generally provide the organization, entrepreneurial skills and capital required for residential development, including the purchase, conversion and subdivision of land, but generally do not construct the dwelling themselves. This is done by the second component of the industry – the construction firms who usually work based on contracts tendered by housing developers (Drakakis-Smith 1977, Yap 1991). Housing development activities by the private sector are subject to the Housing Developers Act (Control and Licensing 1988) and Housing Developers Regulations (Control and Licensing 1989). Under these Acts, private housing developers are required to obtain licenses and sales and advertising permits from the housing controller. Licenses and permits are issued after the developers have obtained planning approvals from the Land and Mines Department, District & Land Office, Town and Country Planning Department and the local authorities and utility agencies who are responsible for water, electricity, road and telecommunication supplies.

Meeting housing needs has been identified as a major objective to promote social and economic stability. In order to ensure this desirable goal is not difficult to obtain for some families in Malaysia, several housing development programs have undertaken by both public and private sectors for the last 20 years. First, Public Low Cost Housing (PLCH) is a direct government effort towards the provision for the low-income group. PLCH projects are financed by the federal government to the state governments in the form of loans. The main functions of state governments under this program are identifying and allocating suitable lands for low-cost housing, assisting in tender procedures and monitoring the work progress at the work sites. The state governments also identify eligible buyers to buy low-cost units and make the necessary arrangements to extend the end financing facilities from the federal government to the successful buyers. The selling price of each unit does not exceed RM 25, 000 (Sixth Malaysia Plan 1991). Second, the Site and Service Scheme (SSS) is to provide houses for low-income groups especially for

those who cannot afford to own a house under the PLCH program. This scheme was first introduced in the Fifth Malaysia Plan and continued in the Sixth Malaysia Plan. The SSS program is financed by the federal government and implemented by state government agencies. Housing options include a serviced plot plus a core house with a minimum land size of 2600 square feet at RM 10, 000 per unit and a vacant plot of size 2600 square feet at RM 5, 000 with basic services. Third, Housing Loan Scheme (HLS) is developed by the Ministry of Housing and Local Government for the poor who have limited access to housing credit. The objective of this scheme is to provide housing loans to land owning among low-income groups, who could not get financing facilities from other sources. Eligible borrowers can apply for an interest free loan up to a maximum of RM 7, 500 for a house not more than RM 20, 000 (Fourth Malaysia Plan 1981). Fourth, the Special Low Cost Housing Program (SLCHP) was a special program launched for the period from 1986 – 1989, involving the public and private sectors. In this program, the state and federal government became enablers in providing incentives as well as facilitators to developers participating in the program, while the private sectors undertook the actual construction work. In other words, the main role of the government in this program is to facilitate and enable the implementation of private low-cost housing development. Towards this end, facilities such as speedy land and sub-division and conversion, minimizing planning and infrastructure standards and lower land premiums are provided and extended. The low-cost houses developed under this program are subjected to a ceiling price of RM 25, 000 per unit (Seventh Malaysia Plan 1996). In addition to PLCH, SSS, HLS and SLCHP, the other significant measure undertaken by the Malaysian government to accelerate the implementation of housing programs for low-income families was the establishment of Syarikat Perumahan Negara Malaysia Berhad (SPNB) in 1997. SPNB was established with a capital of RM 2 billion to increase the supply of houses costing less than or equal to RM 150, 000 through the provision of bridging finance to housing developers (Eight Malaysia Plan 2001).

Challenges of Meeting Housing Needs in Malaysia

Despite efforts by the government, there still exist an enormous number of issues which need to be urgently addressed to ensure that housing needs of all Malaysian could be met. First, housing achievement for the poor under Five-Year Malaysian Plans has not been satisfactory. As seen in Table 1, it is noticeable that the public sector has been giving low priority to the public low-cost housing program. Total housing needs for low-cost units during the 1986 – 2005 has been estimated at 550, 700 units, but only 57% of this target are completed by public sector. The low achievement levels are due to a complicated and ambiguous relationship between federal, state and local levels. Such relationship has caused the overlapping in the distribution of work which may retard the performance of the public sector (Yahaya 1981). The most common problem of the public sectors is the delays in the processing and approval of applications for land development, conversion, subdivision, and issuance of titles (Agus, 1989). Additionally, building codes vary from one state to another. On the other hand, the public sector's involvement in the medium- and high-cost housing is high as clearly indicated in the Sixth Malaysian Plan with a total

achievement of 79% and 110% respectively. Such high involvement has diverted resources in the public sector from low-cost housing allocation (Yahaya, 1989).

In the case of private sector, the completed low-cost houses by private developers fell below the targeted level as they are not keen in building low-cost houses due to a low level of profitability. During the Fifth Malaysia Plan, the private sector only completed about 24% of its target of low-cost housing units. It is not surprising to learn that the construction of medium- and high-cost housing by private sector has exceeded targeted level with a 158.6% for medium cost and a 386.2% for high cost housing during the Sixth Malaysia Plan. The level of achievement for medium- and high- cost housing has further increased to 187.5% and 435.3% respectively for the period 1996 through 2000. In the Seventh Malaysian Plan (1996 – 2000), 737, 856 units of houses were built by the private sector in which 206, 208 units were medium-cost and 348, 250 units were high-cost units. During the Eight Malaysian Plan (2001 – 2005), the private sector, which was targeted to build 169, 000 units of medium-cost and high cost houses, completed 496, 996 units or 294 percent of the target. Once again, the achievement levels of medium- and high-costs houses by private developers were much higher than targeted units. There are various reasons to explain why private developers usually build middle- and high-cost houses, particularly in urban centers. First, they can obtain greater profits because middle- and high-cost houses in urban centers offer greater benefits and few risks in general. Second, they can access to finance facilities easily because financial institutions are likely to finance housing projects in urban centers (Johnstone, 1980).

Table 1: Housing Achievements under Five Year Malaysian Housing Plans

Public Sector	Targeted (units)	Completed (units)	Achievement (%)
5th Malaysia Plan (1986 – 1990)			
- Low cost	120,900	74,332	61.48%
- Medium cost	27,900	21,354	76.54%
- High cost	200	1,440	720%
Total	149,000	97,126	65%
6th Malaysia Plan (1991 – 1995)			
- Low cost	126,800	46,497	36.7%
- Medium cost	44,600	35,195	78.9%
- High cost	2,600	2,850	109.6%
Total	174,000	84,542	49%
7th Malaysia Plan (1996 – 2000)			
- Housing for poor	35,000	17,229	49.2%
- Low cost	60,000	60,999	101.7%
- Low medium cost	110,000	18,782	17.1%
- Medium cost	20,000	21,748	108.7%
- High cost	5,000	2,866	57.3%
Total	230,000	121,624	53%
8th Malaysia Plan (2001 - 2005)			
- Housing for poor	16,000	10,016	62.6%
- Low cost	192,000	103,219	53.8%
- Low medium cost	37,300	22,826	61.2%
- Medium cost	46,700	30,098	64.4%
- High cost	20,000	22,510	112.6%
Total	312,000	188,669	60.5%

Private Sector	Targeted (units)	Completed (units)	Achievement (%)
5th Malaysia Plan (1986 – 1990)			
- Low cost	371,100	90,064	24.27%
- Medium cost	152,300	95,428	62.66%
- High cost	26,100	18,310	70.15%
Total	549,500	203,802	37%
6th Malaysia Plan (1991 – 1995)			
- Low cost	217,000	214,889	99%
- Medium cost	155,900	247,241	158.6%
- High cost	26,100	100,788	386.2%
Total	399,000	562,918	141%
7th Malaysia Plan (1996 – 2000)			
- Low cost	140,000	129,598	92.6%
- Low medium cost	240,000	53,800	22.4%
- Medium cost	110,000	206,208	187.5%
- High cost	80,000	348,250	435.3%
Total	570,000	737,856	129%
8th Malaysia Plan (2001 - 2005)			
- Low cost	40,000	97,294	243.2%
- Low medium cost	94,000	61,084	65.0%
- Medium cost	64,000	222,023	346.9%
- High cost	105,000	274,873	261.9%
Total	303,000	655,374	216.3%

A massive over constructing of medium and high cost housing by both private and public sectors has contributed to the problem of property overhang in the country. The term property overhang means only to housing, industrial and retail shop units that have been issued with the certificate of fitness for occupation (CF) and have remained unsold for more than 9 months (Property Overhang 2006). As reported in Property Overhang (2005), the residential overhang units increased to 15, 558 units worth RM 1.82 billion in 2004 from 9, 300 units worth RM 1.34 billion in 2003. The overhang figure jumped further 25.8% to 19, 557 units valued at RM 2.65 billion at the end of 2005. Most of the overhang units (15, 410 units) had been in the market for more than 24 months. The majority of these units remain unsold for reasons beyond price factor, ranging from poor location, and to unattractive houses with lack of adequate amenities and facilities. The development of property in the wrong location is the most important factor that contributed to the overhang. These unsold houses do not attract the target market and cater to the housing needs of the target group. It is important for both public and private house builders to know the housing needs before constructing houses.

Another issue that undermines the success of meeting housing needs is the problem of abandoned housing projects. There are many housing projects, mostly low-cost housing, that have been abandoned (Property Market Report 2004). Owning a house is every person's dream. But, their dreams have turned into nightmares after the homes they bought are left uncompleted. The victims, in most cases are the low and middle income groups. They carry a large portion of the risks involved when purchasing a house. They start paying even though the houses that they have purchased are nowhere near completion. They continue paying progressive payments until such time when the houses

are completed. If the construction of the houses are disrupted or abandoned, they are the ones who bear the stress. As a result, they are no houses for them to take over to occupy and they continue to pay rents to shelter their families. In addition to abandoned housing projects, another nightmares faced by innocent house buyers who have filled themselves with problems created by errant house builders. These problems range from the irritating ones like leaking roofs, defective rectification works and uneven floorings to the serious one where private housing developers hand over houses that are of sub-standard or unaccepted quality, no connection of water and electricity despite Certificate of Fitness been issued.

Recommendations and Conclusions

In order to achieve sustainability in the housing industry, housing policies and programs must be economically viable, socially acceptable, technically feasible and environmentally compatible. Meeting housing needs for all requires affordable housing financing. Mortgage lending has to reconcile affordability to borrowers and viability to lenders. The policies and programs developed are for those attempting to cheapen the cost of public homeownership through financial assistance with down payment and mortgage interest payments. The government should also increase the availability of alternative home financing by liberalizing EPF withdrawal for down payment and mortgage payment. EPF withdrawal seems to be an important role in promoting externalities of homeownership (Tan, 2008). As such, rules and regulation of EPF withdrawal, particularly documentation needed for the submission of EPF withdrawal, need to be simplified in order to enhance the efficiency of the withdrawal system. Also, a better EPF withdrawal information system is required to integrate land office in every state and financial institutions as well as EPF department for the simplification of withdrawal system.

In addition, the government should make home financing more available and affordable by providing subsidies to meet housing needs of low-income families. Housing subsidy is a central issue in the housing policy for the poor. Since public low-cost housing is regarded as a public duty, not a commercial operation and the government's housing policy is to sell homes for the people at prices they can afford. The government should provide rental housing for householders who cannot afford to buy their own low-cost housing. For renters who can afford to buy low-cost housing, a special housing policy and program is required to make easier for them to leap to homeownership. The sales of public low-cost housing need to be expedited to ensure that those who are eligible will be provided houses for sale. In this regard, appropriate policy guidelines of the sale of public low-cost housing must be drawn to smooth the implementation of the sale of public housing to sitting tenants.

As for the efficiency of the housing delivery system, public and private sectors are required to carry out research to ascertain market needs as a lot of housing projects were started without proper plans. As indicated earlier, the majority of unsold houses are situated in poor location with no adequate amenities and facilities and less employment opportunities. Efforts needed to provide housing in the target area must be accompanied

by investment in infrastructure and employment opportunities. Instead of merely building properties, public and private housing developers should embrace the concept of building communities by envisioning the process from a community builder's viewpoint. They are also advised to provide integrated amenities in a single location because mass townships are equipped with all the elements of healthy living, learning, work and play will become more sought-after.

The government should be sensitive to the problems of thousand of house buyers caused by errant and irresponsible housing builders who had abandoned their projects. First, the government should take measures to ease buyers' problem by reviving abandoned housing projects. Managing and reviving an abandoned project is a complicated affair involving the developers, purchasers, bridging financier, landowner, and other parties interested in reviving the project as it takes time for all parties to reach an agreement. To ensure the success of reviving abandoned housing projects, an effective revival agent for abandoned project to be set up at the Ministry of Housing and Local Government to monitor progress of rehabilitation. It is also advisable to request all house builders to maintain the project account with the Ministry to ensure money collected from buyers will go into the project account to build houses. They are not allowed to draw out the fund out from the project account. Second, the housing industry should change the house buying system from the progressive system to a 10-90 system. The progressive payment system is no protection from failed projects and financially unsound housing developer as house buyers are lumbered with housing loans that are partially disbursed and for which they have to continuously pay interests. In the 10-90 system, buyers sign the Sale & Purchase Agreement and pay a deposit of 10% of the selling price. They do not make any more payment until the houses are completed with Certificate of Completion and Compliance, water and electricity available for tapping and running as well as vacant possession with keys. The government should provide incentives to housing developers to adopt the new system in order to phase out the progressive payment system. The quality of houses will also improve with the 10-90 system because developers will not risk the likelihood of dispute with buyers over quality when they come to full payment time. Presently buyers having paid up 95% prior to hand over time, have little or no bargaining power over the quality of their houses. With the 10-90 concept, developers have to seriously focus on more on building better quality houses and executing greater care and responsibilities in ensuring that the houses are constructed in accordance with specification and proper workmanship manner. In addition to the 10-90 system, the government should study applicable laws to be promptly and vigorously executed to relieve the sufferings of these innocent house buyers by arresting failed and abandoned housing projects. Land ownership in Malaysia is governed by the National Land Code, 1965 (Act 56) in force since January 1966. The National Land Code empowers the land administration authorities to confiscate any land where any of the conditions of usage have been breached (Residential Property Stock Report 2004). The abandoning of any housing project is clearly in breach of the development order and other legislation. The government should need to take drastic measures, including forfeiture of such land so that the forfeited project can be revived and the completed houses delivered to rightful house buyers.

In conclusion, the government should seriously and urgently adopt to create changes to meet housing needs of all. They should be sensitive to these needs and will gather housing experts and related players to seek immediate solution and be determined to resolve such unsatisfactory state of affair. In order for the industry to be sustainable, the interests of house buyers need to be taken into serious consideration. While the house builders are privileged to walk the corridors of power, house buyers, on the other hand have only an inaudible voice in the wilderness. As such, the government should work tirelessly in various capacities towards the betterment of housing delivery system. Additionally, there should be a National Housing Policy to provide firm direction for matters related to housing in Malaysia from a wider, in-depth, comprehensive scope and in a more balanced manner. Factors such as destructions and damage to resources should be controlled. There shall be strict enforcement of laws to ensure well-being of the Malaysian and for their next generation. It is vital to ensure that infrastructure, industrial, economic and commercial development is not at the cost of the Malaysian's well being and health.

Nationalism in Bosnia and Herzegovina as an urbanism issue
Sanja Trivic, anja_trivic@yahoo.com
Ana Spiric, a.spiric@yahoo.com
University of Banja Luka, Banja Luka, Bosnia and Herzegovina

Abstract

The encounter of east and west in Bosnia and Herzegovina is a very specific phenomenon. The crush between several absolutely different cultures produced one mixed, but still disintegrated, society.

Overview of the most current problems in BiH society, confirmed that nationalism is dominant way of thinking in the society.

In this paper, nationalism is perceived as a position of respect for the other.

Many members of the society, such as political, religion or art leaders, are recognized as known and their responsibility is doubtless. But there are some others who operate indirectly, and they are responsible too.

The priority is to think that everyone could take different roles.

Results of one student's research, which was performed in BiH (City of Banja Luka), show that an urban planner can create a position of respect for the other. Urban planner is also responsible. He (she) creates quality of environment in terms of housing. Respect for the other certainly depends on that quality.

Key words: nationalism, Bosnia and Herzegovina (BiH), urban planner, responsibility, quality of housing

1. Introduction

Nationalism in Bosnia and Herzegovina is not getting any weaker even fifteen years after the war ended, and social-economic conditions in the society are being more and more weakened. After the war from the 90ies of the 20th century in BiH, the cities were left wounded in many ways, not even the period of expected advancement brought good.

BiH is a Balkan country, created after the former Yugoslavia split up. It is a federation of two entities – Republic of Srpska and Federation of Bosnia and Herzegovina. The state's constitution defines three constitutive ethnic groups – Serbs, Croats and Bosniaks within different religious groups – Orthodox, Roman Catholic and Islam.

Starting with the belief that division of multiethnic society is based on differences in tradition of the religious groups dominating on BiH territory, the research deals with the issue of nationalism.

Nationalism expressed through social division makes the progressive social development in terms of quality of life impossible. The quality of life can be improved through strengthening social cohesion being the paradigmatic social goal. Thus, this paper deals with researching the possibilities for strengthening social cohesion from urbanism practices aspect.

It is suggested that the urban planners, being participants of social changes, can contribute to weakening the nationalism present in BiH, that is, contribute to social cohesion strengthening without any intention to deny anyone's ethnicity. The goal of the research is to determine the

existence of positive correlation between improvement of the quality of life, being the urbanism practice topic, and the process of personal identity development, being the basic of collective consciousness.

The methodology is based on a confirmation of theoretically given hypothesis, through featuring a case study performed in the beginning of 2008 in the central zone of Banjaluka city. Banjaluka is the capital, thus cultural and administrative center of Republic of Srpska, and the second largest city in BiH based on the number of inhabitants. The case study questions urban planners work through creating the organizational dimension of housing function, being the most common and most complex function in the center of Banjaluka, with the goal to determine to what extent and in what way the urban planners influence the forming of an individual's identity with their work.

2. Division of society and nationalism in Bosnia and Herzegovina

Territory of BiH was occupied by other nations often throughout the history, which conditioned creation of a specific culture. The encounter of eastern and western civilizations contributed to creation of a culture typical for the relationships between several ethnic groups. The “ethnic group” term is related to belonging to group based on subjective belief in common ancestors, that is, common origin (Stojkovic, 2008). In relation to this, it is considered that the ethnic differences depend on relationship between the groups and not on cultural differences (Eriksen, 2002). In case of BiH, the cultural differences between Serbs, Croats and Bosniaks are very small, and the relationships between them are really conflict.

The term close to nation¹ is nationalism, and according to Ernest Gellner, as quoted by Thomas Hylland Eriksen, this is before anything else a political principle based on which the political and national unit must correspond (Eriksen, 2002). On the other hand, identifying state and nation is solely ideological construction, largely denied by the reality in the world, so the statement by Edgar Moren and quoted by Branimir Stojkovic seems to be well based.²

The issue of emphasizing national belonging over other elements of individual identity in BiH has been present for years. What contributes to it are daily limitations which the citizens of this developing country encounter. These limitations are in the field of not being able to accomplish different development processes, among others, the ones related to housing, education and work.

Although there is no precise overview of the condition in BiH society, the fact that it is really bad is supported well enough by some social-economic standard indicators data. According to the data from Agency for Statistics of BiH, over the past two years the average monthly income has

¹ Etymologically speaking, the word “nation” comes from the Latin verb *nascere*, meaning the action of being born, that is *nation*, meaning a kind or race. Serbian noun *narod* is literal translation of this word. From the 18th century, the English word *nation* meant blood relationship, while later on, it was more and more often understood as common origin, this being supported within corresponding myths (Stojkovic, 2008).

² According to Moren, not a single state/nation corresponds with some natural region or some homogeneous unity of a nation. They were created in everyday association, heritages, annexations and wars. Within, they carry large geographic, ethnic, economy and social differences. These states/nations however, created not only governing but also matri-patriotic unity exactly because only one mythical-patriotic nature was able to strengthen such a deep and various diversity (Stojkovic, 2008).

been constantly decreased, while the monthly expenses for a family of four are increasing.³ On the other hand, political control of the collective consciousness of an ethnically divided society, with constant accent on the impossibility to reach an agreement, encourages and maintains the emphasized presence of nationalism.

The condition in BiH society as shown does not represent satisfied needs nor the wishes of its citizens. The citizens of this country are seeking healthy and successful life, the opportunity for education, work, appropriate compensation for one's work. At the current moment, when the only challenge in the world is development, for citizens of BiH, the only challenge is survival.

3. Strengthening of social cohesion and responsibility

The shown social division does not represent an exclusively political issue. Quite oppositely, the above issue of emphasized presence of nationalism can also be treated as the result of passive attitude of different social participants. Such an opinion is based on the statement by Bernhard Giesen. As per this statement, the intellectuals are responsible for emphasized presence of nationalism (Giesen, 1998).

There are many definitions of the term “intellectual”⁴, but all are indicating the presence of high level of morality and awareness of the surrounding found in intelligent individuals.

Based on this, it is supposed that intelligent urban planners, among the others, can contribute to weakening of nationalism present in BiH, that is, to strengthening of social cohesion, without any intention to deny anyone's nationality.

Social cohesion, as a paradigm, implies the main social goal aiming at individual's quality of life improvement.

In the end of the 19th century, the concept of social cohesion was introduced to the theory for the first time by Emile Durkheim. Within social cohesion, Durkheim understands the interdependence among society members, mutual loyalty and solidarity, as desired relationships among the members. After Durkheim, many theorists dealt with social cohesion concept, including sociologist Max Weber, who also emphasizes the importance of individual's role in society (Novy, Moulaert, Beinstein, 2009).

Contemporary efforts to define the concept of social cohesion⁵ include many different definitions, which is a result of disagreement in understanding it as a cause or effect of other aspects of social, economic and political life (Golubovic, 2007). Still, all definitions confirm social cohesion

³ The prices of products and services used for personal consumption in Bosnia and Herzegovina and measured by consumer price index, in January 2010 compared to December 2009, are higher for 1.4% on the average (<http://www.bhas.ba>).

⁴ According to Eisenhower (Dwight D. Eisenhower), an intellectual is a man who uses more words than needed in order to explain things he does not understand. Somewhat broader definition of this term is that the intellectual is a tolerant person with high level of creativity, broad education and social views, but before anything else, a spiritually independent person, which goes through life with head up, marked as “unspoiled goods” (Tarle, 2002).

⁵ Jenson, 1998; Woolley, 1998; Berger-Schmitt, 2000; Kearns and Forrest, 2000; Fainstein, 2001; Forrest and Kearns, 2001; Kronauer, 2002; Chiesi, 2004; Maloutas and Malouta, 2004; Kronauer, 2007 (Novy, Moulaert, Beinstein, 2009)

as multidimensional, with strong bonds and common characteristics of those dimensions that, at a particular level, can be independent one from another.

Social cohesion, seen as a paradigmatic social goal, is based on behavior, attitudes and mutual assessment of the society members, being the elements which influence the individual's quality of life.

Progressive development of social qualities, based on improvement of individual's quality of life, demands for accomplishment of at least two dimensions of social cohesion. The first dimension refers to reducing the differences, inequality and social exclusion, while the other dimension refers to strengthening the social relationships, interrelations and bonds.

On the other hand, strong bonds among a particular ethnic group can cause discrimination and social exclusion of the other groups members, which is exactly what happened in BiH. Nationalism, as the base for discrimination and social exclusion, prevents strengthening of social cohesion being the social goal oriented towards improvement of quality of life.

4. Quality of life in Bosnia and Herzegovina – case study

The issue of responsibility in terms of questioning the responsibility of urban planners for individual's identity development, implies emphasizing the need of every intellectual to accept the responsibility. An example of questioning the responsibility of urban planners is shown through a case study performed in the beginning of 2008 in the central zone of Banjaluka city.⁶

The urban planners work is examined through creating the organizational dimension of housing function, being the most common and most complex function in the center of Banjaluka⁷, with the goal to determine to what extent and in what way the urban planners influence the forming of an individual's identity with their work.

Due to many different definitions of “quality of life” concept, for the purpose of this case study, the most important relations between the most common elements shown in further text are determined.

4. 1. Culture and identity

⁶ This case study is a part of thesis by A. Spiric and S. Trivic “Improvement of quality of housing in the center of Banjaluka”, defended in 2008 in the Faculty of Architecture and Civil Engineering, Banjaluka University, within the subject Housing units. The collection of data was performed through questionnaires, on the sample of 300 examinees.

⁷ The function of housing is the essential element of urban. Quality of housing in the center, preserved, supported and attended, is one of the most important factors of daily city life. The case study refers to space as defined by Ruzica Bogdanovic, who believes that the urban quality, being the element of quality of life, is always related to the state in city center (Bogdanovic, 2000).

There are many definitions of culture, and for the purposes of this research, the most important of them are listed. Anthropological approach, the most adequate for the research topic, defines culture as a set of learned patterns of human behavior and thinking.

According to Boris Dudas, English culture theorist Raymond Williams understands culture as “a whole way of life”. He believes that the culture needs to be observed through different kinds of representations and practices of everyday life in the context of material conditions of their production. According to German psychologist Dorothee Röseberg, culture means general knowledge about the world and connecting that knowledge to everyday life being a level of social reality (Dudas, 2004).

Philosopher Henry Lefebvre emphasizes the importance of everyday life, that is, its critique, when defining cultural development. Everyday life is the indicator showing the level a society reached in economic, social and cultural development, while the critique of everyday life represents the critical approach to the way people live (Lefebvre, 2002).

While the culture definition is typical for groups, according to Berger and Luckmann who believe that the identity is exclusively subjective reality thus existing only within individual consciousness, identity is typical for an individual. The consciousness of a subject about continuity of self existence is included within such a relation of identity (Radenovic, 2006). Based on this opinion, but also based on anthropological definition of culture, it can be said that the personal identity includes patterns of behavior and thinking.⁸

The identity as a process is created through relationships with others. Thus both the individual and the social group live in a dynamic social and cultural environment, and constantly need to accord their relationships, an individual within a group and both categories within a society. They do so in order to know their place and their roles, as well as to know which principles are acceptable, and in accordance with which their lives will be conducted (Golubovic, 2009).

In relation with the above, it is important to establish dependency relation between cultural identity being collective identity and personal identity.⁹

By defining personality as the totality of all those aspects of behavior which give the meaning to an individual in society and differentiate it from other members in the community, Edward Sapir emphasizes the attitude towards oneself, the others and the world¹⁰ (Sapir, 1974).

⁸ According to individual and developmental psychology, personal identity represents unity of personality within a particular period of time (Radenovic, 2006). By introducing the concept of identity in personality psychology, Danish psychologist Erik Erikson claims that individual identity presumes the attitude of an individual towards other individuals (Radenovic, 2006). According to psychologist Erich From, there are five types of human needs: for relatedness, for creativity and creating, the need to be a personality, the need of man to find his place and the role in the world, and the need for having a certain view at the world (Milojevic, 2006).

⁹ Branimir Stojkovic defines cultural identity as self-consciousness of the members of one group historically created and developed depending on the criteria this group sets in relations with other social groups. The relation between cultural and individual identity is established through the opinion that different types of personalities influence the thinking and acting of the community as a whole (Stojkovic, 2007).

¹⁰ Similar opinion is given in the work by Ivan Cifric and Krunoslav Nikodem. According to them, the relations, foundations of individual's identity shaping, are represented in attitude towards oneself, the others, nature and god. This relational dimension of an identity is confronted with social identity, referring to following dimensions: cultural, socio-professional, regional, national-religious and neighboring-local (Cifric and Nikodem, 2006).

On the importance of finding and shaping a personal identity in terms of establishing identity distinction defining the character of a community, Nada Lazarevic-Bajec speaks quoting François Matarasso:

„Culture is the expression of human values. When we express ourselves we create meanings where there were none, and consequently change the way in which we and others behave. In shaping European society, and the values of nations and communities within it, culture is utmost important. It is, indeed, perhaps the only thing which can save the city.“ (Lazarevic-Bajec, Maruna, 2009, 13)

4. 2. Quality of housing and individuality

Individuality, expressed through everyday life of an individual, for the purposes of the case study is taken as the organizational indicator of quality of housing.

The relation between the level of individual and collective in housing effects the organization and quality of the house. In case the housing has many qualities of individual, its quality is improved, but at the same time its urbanity is reduced (Stoiljkovic, 2009). Individuality and privacy are being observed through the relation private-public, that is, individual-collective and imply introvert attitude towards urban surrounding.¹¹

Individuality implies autonomy, independence and a certain level of being singled out from the closest surrounding (Alexander, 2005).¹²

The given organizational criteria of individuality, in accordance with which the most important urban parameters are determined (stories in the building, the purpose of the site, density of housing units per story, the position of the building on the belonging lot, access for vehicles and pedestrians, parking, level of noise, existence of open spaces, sunlight and ventilation), conditioned the following typology of housing in the central Banjaluka zone.

Type 1 provides a very high level of individuality. It implies single-family housing within detached houses and houses on the edge of the lot¹³, with stories mostly up to G+1+L (ground floor + story + loft). These buildings are accessed from the lower level roads (residential street). The parking is provided within belonging lots. Described urban parameters provide a low level of noise, good sunlight and ventilation. One housing unit per story, existence of intimate gardens and front gardens are additionally some of the factors providing a very high level of individuality.

Type 2 provides high level of individuality. It implies single-family housing with business in the ground floor, houses on the edge of the lot, with stories up to G+2+L (ground floor + two stories + loft). These buildings are accessed from the lower level roads (residential-business street). Parking is provided within belonging lots, but only for the residential part of the building.

¹¹ According to Igor Kalcic, privacy implies high level of family life intimacy, the freedom to change interior structure, overview over assets, conformity and safety. The belonging refers to human relation towards the space and defines identifying of a personality with space, identification and feeling of belonging to a house and its surrounding, being used to the space (Kalcic, 2001).

¹² To fulfill the feeling of belonging, according to Christopher Alexander, it is necessary to provide individuality in space, that is, an intimate relationship with the surrounding. Also, he claims that the feeling of belonging as well depends on the way a human within this space behaves.

¹³ Houses located on the frontage of the lot

Described urban parameters provide medium level of noise, good sunlight and medium level of ventilation. One housing unit per story and the possibility for development of intimate gardens into depth of the lot, physically separated from the business next to the road, are an opportunity to gain privacy.

Type 3 provides the highest level of individuality. It implies single-family housing within detached houses with stories up to G+1+L (ground floor + story + loft). Although the lots of these buildings are between the roads of different levels, the access to the buildings is provided from the lower level roads (residential street). Parking is provided within belonging lots. Described urban parameters provide a low level of noise, good sunlight and ventilation. The spacious comfort of the lot, one housing unit per story, existence of intimate gardens and front gardens are additionally some of the factors providing the highest level of individuality.

Type 4 provides a medium level of individuality. It implies multi-family housing within detached houses and houses on the edge of the lot, with stories up to G+4+L (ground floor + four stories + loft). These buildings are accessed from the lower level roads (residential-business street). Parking is provided within belonging lots. Described urban parameters provide medium level of noise, good sunlight and medium level of ventilation. Up to four housing units per story, existence of common gardens which are not arranged in the shape of front gardens are additionally some of the factors providing medium level of individuality.

Type 5 provides a very low level of individuality. It implies multi-family housing with business in the ground floor, within houses on the edge of the lot, with stories up to G+6+L (ground floor + 6 stories + loft). These buildings are accessed from collector roads (residential-business street). Parking is provided within belonging lots for the residential part. Described urban parameters provide very high level of noise, medium level of sunlight and medium level of ventilation. Up to four housing units per story and no gardens are additionally some of the factors implying very low level of individuality.

Type 6 provides a low level of individuality. It implies multi-family housing, rarely with business in the ground floor, detached houses, with stories from G+5 (ground floor + 5 stories) up to G+14 (ground floor + 14 stories). These buildings are accessed from the lower level roads (residential-business street). Parking for several buildings is provided within common lot. Described urban parameters provide medium level of noise, good sunlight and good ventilation. Up to eight housing units per story, existence of half-public open spaces are additionally some of the factors implying low level of individuality.

The analyses of the above housing types show that the highest level of individuality is found in detached family house, as well as that it gets lower going towards types of multi-family housing. The conditions provided by single-family housing in the center of the city, regardless whether it is housing with or without business, are more human, provide larger comfort, that is, the level of offered quality of housing is higher.

4. 3. Case study results

The goal was to determine personal identity dependence on individuality being the organizational indicator of quality of housing. The goal set is directly connected with already determined importance of accomplishing and shaping identity while strengthening social cohesion.¹⁴

From the concept of culture, defined as pattern of behavior, and identity seen through the relation (attitude) of an individual towards other individuals, three tasks of the research emerged. They are related to examining the attitude of an individual towards self, the others and the world. Hence, the inclination is to point the importance of the way an individual summarizes its own perception about itself, that is, the way it relates to others and the world in general.

In accordance with established tasks of the research, the following indicators are defined:

- attitude towards the world – interest in events in the world, ability for objective evaluations and absence of prejudice,
- attitude towards oneself – realistic evaluation of self and acceptance of self as is, thus
- attitude towards the others – respect of someone else's personality, sensitivity to the needs of others and conduct in accordance with such norms and moral principles that can be taken as general.¹⁵

In accordance with defined goal of the research, the following hypothesis emerged.

The higher the level of individuality is, being the organizational indicator of quality of housing, the higher level of personal identity of the inhabitant of that space is.

With the goal of getting reliable research results, the main hypothesis was decomposed in several sub-hypothesis. They represent the relation between a particular parameter of the above determined typology of housing and tasks set.

Based on the number of urban parameters and tasks set, it is possible to set a large number of sub-hypothesis, but considering the importance of particular sub-hypothesis for the goal defined in this paper, the following ones are set:

- 1) The more stories a building has, the attitude of individuals towards the others is worse
- 2) Inhabitants of single-family houses have better attitude towards the world.
- 3) Inhabitants of residential buildings with business in the ground floor have worse attitude towards the world.
- 4) The more housing units per story there is, the attitude of an individual towards the others is worse.
- 5) The better the living space is arranged, the better the attitude of inhabitants towards the world is.
- 6) The more intimate space around the building is, the better the attitude of an individual towards the others is.
- 7) The more intimate the space around the building is, the better the attitude of the inhabitants towards the world is.

¹⁴ Finding identity becomes individual task. An individual must determine its place in society, it must make a compromise about its role in interaction with others (Dudas, 2004).

¹⁵ The listed indicators of attitude towards the others in literature are often defined through concepts of tolerance, responsibility, incident, problematic behavior.

For the analyses of data in this research, the method of conclusion statistics is applied. Within this method, the statistical analysis of cross-tables (chi-square test) is applied. Data analyses gave the following results.

The answers important for determining the attitude towards oneself, lead to the conclusion that the most of examinees have high opinion of themselves, which also conditions their attitude towards the others and the world.

Most of the examinees of housing units of all types consider themselves as patient persons ($p = 0.686$).

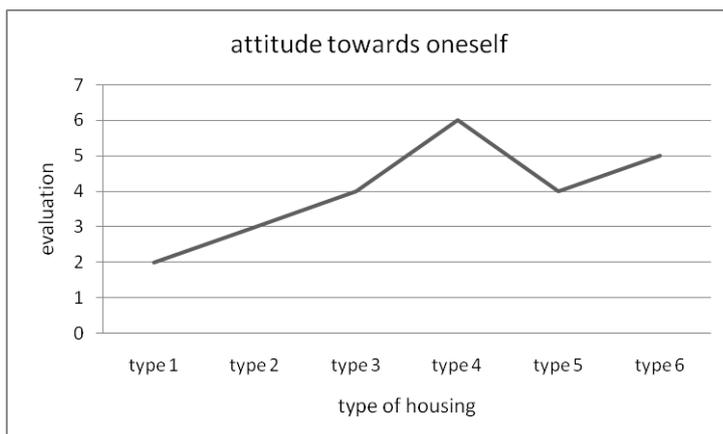

The typical question is the question of responsibility towards the others. The examinees of type 3 do not consider themselves as responsible for the others ($p = 0.728$), and would accept a job requiring responsibility ($p = 0.053$). Most of the examinees of other types would also accept a job with larger responsibility and larger incomes (except for type 2).

Except for types 1 and 3, the examinees are mostly sometimes bothered by persons disturbing their habits ($p = 0.645$).

Within all types, the examinees equally participate when having conversations with friends in most cases ($p = 0.241$). Also, most of them gladly have guests ($p = 0.253$).

Most of them are always willing to provide help ($p = 0.017$), especially type 6 (100%).

All of them mostly follow technological development ($p = 0.023$) – type 5 has the largest number of “completely” answer and least of “not at all” answer.

Graph 1. Determined attitude of the examinees towards oneself in accordance with types of housing

The answers significant for determining the attitude towards the world indicate limited of examinees at the world, that is, indicate low level of housing culture.

Most of the examinees of all types do not use musical instruments ($p = 0.130$), except for the type 3 (50%).

Most of them have a large circle of friends ($p = 0.228$), except for the type 1.

Most of them occasionally practice some sport or recreation ($p = 0.042$), except for the type 2.

Most of them do not spend a lot of time in the front of television ($p = 0.404$).

The largest number of examinees of all types most often relaxes with taking walks ($p = 0.712$) (type 3 – 50%) and watching television (type 5 – 50%) ($p = 0.258$).

The number of smokers and non-smokers is equal ($p = 0.344$).

Half of the examinees have some plan about apartment design ($p = 0.573$), except for the inhabitants of type 4.

The largest number of examinees, when designing the space, consider material ($p = 0.573$) and color ($p = 0.792$).

Balcony is most often used for drying the laundry ($p = 0.108$) and sitting (resting) ($p = 0.551$).

Balcony is most often closed in type 6 ($p = 0.070$).

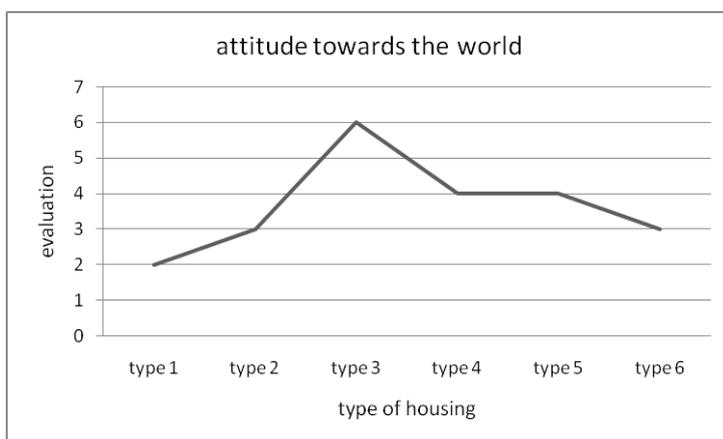

The examinees of types with single-family housing use the yard more than the examinees of multi-family housing types ($p = 0.000$).

Most of the examinees do not use the yard for some type of recreation ($p = 0.442$).

For the most of examinees not using the yard, noise is the greatest problem ($p = 0.000$).

Most of the examinees would accept professional improvement ($p = 0.017$).

Most of the examinees are not bothered with business in the ground floor of a building ($p = 0.000$).

Graph 2. Determined attitude of the examinees towards the world in accordance with types of housing

The answers significant for determining the attitude towards the others, indicate partial lack of tolerance which sometimes causes problematic behavior.

In all types, residents meetings are most often held sometimes, except in type 5 which stands out with the largest percent of regular residents meetings ($p = 0.016$).

Most of the examinees of all types regularly attend the residents meetings ($p = 0.662$) and are mostly satisfied with how it works, except for the type 4 which is not satisfied with the work of residents council (31%), ($p = 0.025$).

The noise does not bother most of the neighbors, while a large numbers is sometimes bothered ($p = 0.409$). Out of the number of examinees sometimes bothered by noise coming from the neighbors, most of them do not react at all, significant number brings it to their attention in person, and the smaller number responds in the same manner (type 4 in particular, which evaluated itself with the highest mark) ($p = 0.358$).

The examinees of multi-family housing care less about the timing for starting loud home appliances compared to the examinees of single-family housing types ($0.090 < p < 0.744$).

Most of the smokers smoke in apartments as well ($p = 0.499$).

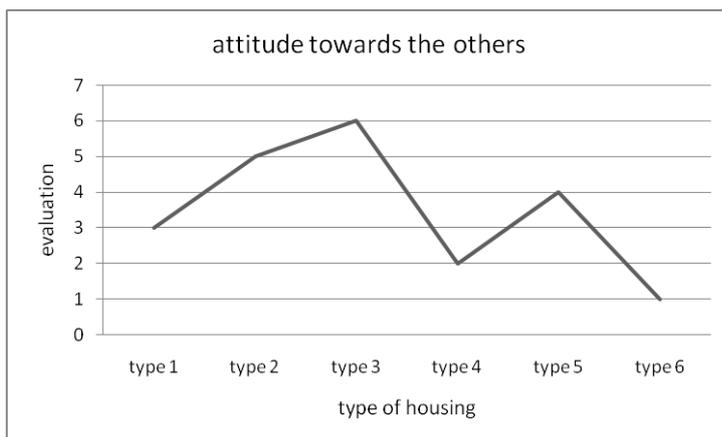

Most of the examinees use central heating during the winter, while the ones using classical system of wood combustion belong to the types of single-family housing ($p = 0.000$).

Half of the examinees use air conditioning, especially type 3 and type 6 ($p = 0.134$).

Only 2,7 % of the examinees use ionizers ($p = 0.864$).

Most of the examinees ventilate apartments several times a day ($p = 0.851$).

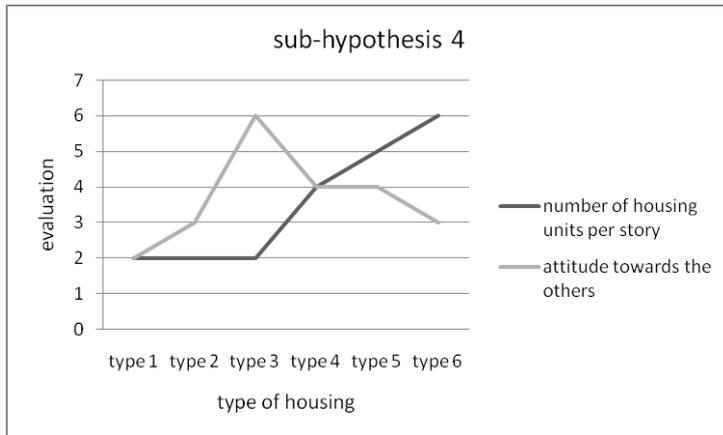

Almost all examinees pay the bills for cleaning hallways and stairs ($p = 0.005$), maintenance of the elevator ($p = 0.000$) as well as for garbage removal ($p = 0.595$).

Graph 3. Determined attitude of the examinees towards the others in accordance with types of housing

The conclusions of the research are made based on comparison of the found quality of housing and evaluated level of personal identity of its inhabitants. Based on this relation, previously defined hypothesis and sub-hypothesis are confirmed or denied. For the purposes of this paper, case study results are selectively shown, an in accordance with anticipated responsibility of urban planners.

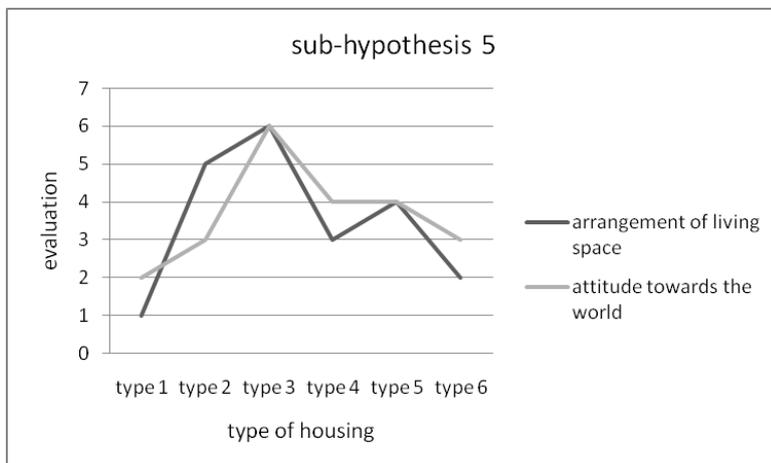

Sub-hypothesis 4, which presumes opposite dependency of the attitude of an individual towards the others on the number of housing units per story is confirmed.

Graph 4. Relation of number of housing units per story line and attitude of an individual towards the others line

On the graph showing the relation of number of housing units per story line and attitude of an individual towards the others line, it can be seen that with the growing number of housing units per story the attitude of the inhabitants towards each other is worse.

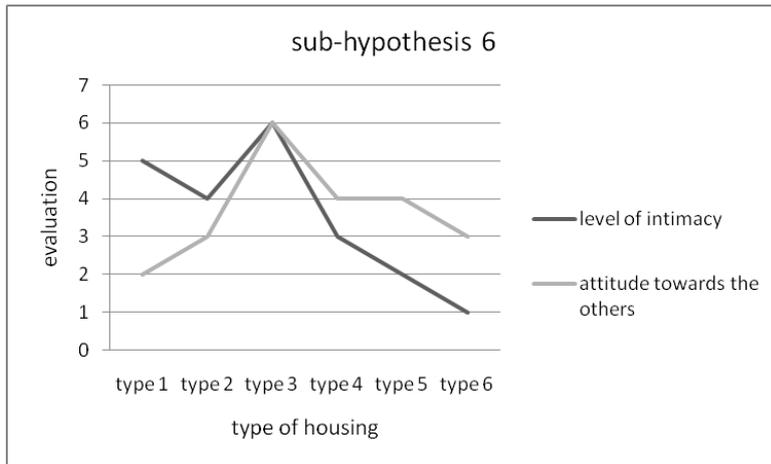

Sub-hypothesis 5, which presumes direct dependence of the attitude of an individual towards the world on the level of living space arrangement, is confirmed.

Graph 5. Relation of living space arrangement line and attitude of inhabitants towards the world line

The graph shows the relation of living space arrangement line and attitude of inhabitants towards the world line. It can be seen that with the growing level of living space arrangement for a particular housing type, also grows the level of the attitude of an individual towards the world.

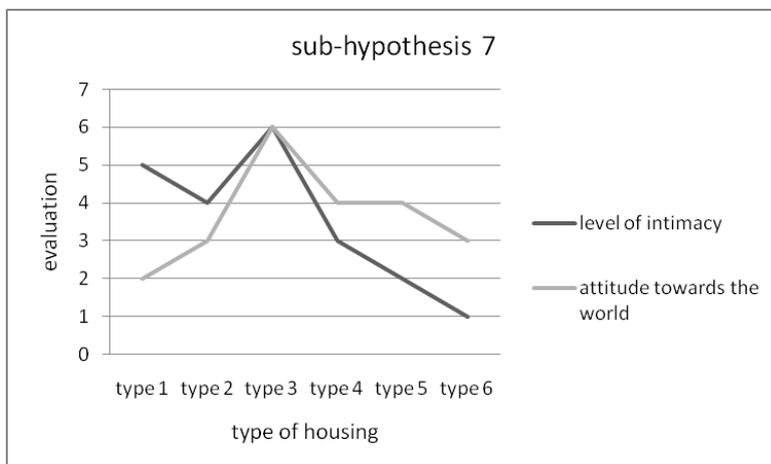

Sub-hypothesis 6, which presumes direct dependence of the attitude of an individual towards the others on the level of intimacy of the space around the building is confirmed.

Graph 6. Relation of level of intimacy of the yard line and attitude of an individual towards the others line

The graph shows the relation of level of intimacy of the yard line and attitude of the inhabitants towards each other. It can be seen that (with the exception of type 1) the higher the level of intimacy of the yard is, the better the attitude of the inhabitants towards each other is.

Sub-hypothesis 7, which presumes direct dependence of the attitude of an individual towards the world on the level of intimacy of the space around the building is confirmed.

Graph 7. Relation of the level of intimacy line and attitude of inhabitants towards the world line

Similarly to the previous graph, this one also shows (with the exception of type 1) that the higher level of intimacy of the yard conditions the better attitude of an individual towards the world.

5. Conclusion

What contributes to the long lasting presence of the issue of emphasizing nationality are daily limitations the citizens of Bosnia and Herzegovina encounter. These limitations are in the field of not being able to accomplish different development processes, which results in social division.

Regarding social division, the carriers of high political, religion or art functions are most often being held responsible for it.

The outlined issue of emphasized presence of nationalism can also be viewed as a consequence of passive attitude of other social participants, which is the base for the paper's thesis.

It is suggested that the urban planners, among the others, can contribute to weakening the nationalism present in BiH, that is, contribute to social cohesion strengthening without any intention to deny anyone's nationality.

The issue of responsibility in terms of questioning the responsibility of urban planners for individual's identity development, being the base of collective consciousness, implies emphasizing the need for every intellectual to accept the responsibility.

An example of questioning the responsibility of urban planners for social division is shown through a case study performed in the beginning of 2008 in the central zone of Banjaluca city. The goal of the research was to determine personal identity dependence observed through the attitudes towards self, the others and the world on individuality being the organizational indicator of quality of housing. The research showed that certain urbanism parameters, such as the number of housing units per story, level of arrangement of open spaces and intimacy around the building, influence development of personal identity.

This confirms the relative responsibility of urban planners for personal identity development, implying the existence of positive correlation between urbanism practice, and the process of personal identity development, being the base of collective consciousness. When defining the principles about responsibility of urban planners for personal identity development, it is required, besides housing being the subject of this research, to also deal with other urban functions.

The importance of this paper can be perceived through the contribution to determining the principles of responsibility being the paradigm. Complexity of determining these principles demands for questioning responsibility from the standing point of other practices as well.

The image of park. Spain vs Japan in a study on civics and everyday values.

Keywords: park, image, ideal, city, civics.

Abstract:

The communication pretends to show and discuss the conclusions of the first studies carried out about the image of park that younger generations living in big cities have. The countries of Spain and Japan have been selected as an example of western and eastern culture that can be compared in order to make similarities and differences more easily come to surface in a study that aims to transcend local focus. Therefore, intensive and creative thinking can be developed through the analysis to point out conclusions about the interaction between globalization, national, communal and personal interests and the specific part that each on them represent in the forming of the concept of park.

Younger generations have been surveyed in a first step in order to stress and prioritize the emerging perception of next future adult inhabitants. It should be emphasized that the image they conceive is considered as highly relevant as they mirror the real assimilated approach to sustainability and therefore, the data can be very helpful to predict and adequate future responses in a nowadays critical historical time. Moreover, they being very active members of social communities, their understanding of public natural spaces becomes a relevant characteristic that influences current social habits and will shape coming behaviors in the path of a changing cultural field.

Therefore, the intention is not so much to deepen in a comparison of formal and designing affairs of parks as to emphasize the role they have in urban perception and their consequence as social links.

The image of park. Spain vs Japan in a study on civics and everyday values.

This investigation constitutes the first step in the more general aim to study the park as a universal concept and to research about the different implications it reveals in several countries and groups of ages. Being aware that the understanding of an abstract concept like the park, is always strongly influenced by the culture surrounding us and the personal background, we decided it was important to find an homogenous group of population, both in Spain and in Japan, in order to make more easily flourish the differences, nuances and similarities related to the idea of park in each of the countries.

The group to analyze is then consciously reduced to young adults of an age between 18 and 29 years who are studying careers related to Arts or Humanities at the University. The Faculty of Architecture chosen in Spain gathers people from three main cities, Madrid, Alcalá de Henares and Guadalajara. The Faculty of Contemporary Life Science in Japan, gives education to citizens of Osaka, Nara and Kyoto. Therefore, they all have the experience of living in a medium size and big city. The study focuses on the relationships between the social and cultural environment and the use of urban parks in both countries. We will investigate the parallels and dissimilarities between the conceived image of a park and the description of the personal ideal one. The linkages between the urban environment and valued qualities will deserve special attention as well as the consequences that age and intellectual level represent in the complex and multicultural society of cities.

The survey was made physically in the classrooms at each of the Faculties. Several different groups were asked to fill a questionnaire and in all the cases, they were sat close one to another and they were allowed to talk and watch their colleagues' answers and drawings. This investigation will focus on the analysis of mainly only two parts of the questionnaire: the subject of the image of park and the description of one's ideal park. It will try to throw some light in the parallels and disconnections that both concepts have inside the same culture and in comparison with the foreigner one.

BASIC ELEMENTS IN IDENTIFYING A PARK

The investigation suggests that despite the many different kinds of parks and the blurring limits between parks, squares, waterfronts, school playing fields, community gardens, etc that are becoming more and more usual today, the park is still identified mainly with a green space. This fact had been already the conclusion of seminal studies as the UK Park Life report (Worpole 1995). This study shows, however, that the equipment and the facilities available in parks are gaining a relevant importance in the meaning and use of these open public spaces.

T.1. MAIN ELEMENTS DEFINING THE IMAGE OF A PARK

		SPAIN		JAPAN	
	Typical responses	f	%	f	%
PHYSICAL SUPPORT	Green, trees, plants, flowers, grass, meadows, lawn, fountain, lake, pond	129	127,72%	74	64,91%
ARTIFICIAL ATTRIBUTES	benches, garbage bin, athletic equipment, children playground,, covered areas, resting areas, sports courts, cycleways, bathrooms, restaurants, coffee-shops, sculptures, monuments, classic statues	98	97,03%	103	90,35%
PURSUIT OF ACTIVITIES	walk, walk with dog, run, play, bath, picnic, eat-drink, bicycle, rolling-skate, jog, camp, feel nature, hear birds singing, watch plants, feel attachment, smell, rest, relax, think, read, lay down, sit, watch, performances, open-air theatre, events	45	44,55%	37	32,46%
SOCIAL	meeting place, communication, social place, make friends, people gather, chat, people, all ages, children	7	6,93%	34	29,82%
PSYCHOLOGICAL EFFECTS	lively, bright, happy, enjoy, quiet, oasis in city, isolated, not confusing, inactive, nothing, low pollution, heal, feel better, safe	35	34,65%	11	9,65%
QUALITIES	beautiful, cared for, organic, classical, harmonious, scenery, sun, shade, cool, fresh, comfortable, interesting, pleasant	54	53,47%	9	7,89%
N° questionnaires			101		114

Japanese seem to recall smaller spaces and tend to notice objects and equipment, specifically the playing one, as characteristic elements of the park (swings, slides, benches, garbage litter, little fountains, etc) while the Spanish young people tend to perceive areas, sport courts and bigger spaces (avenues, aerial views, lakes, etc). In latter cases, it is also remarkable that the natural support is represented more specifically, paying attention to orography and topography, and the green element and water resources are remarked in almost any of the images.

The human being is one of the basic elements that signify a seminal difference between the two countries. In the Japanese picture of a park, the students of the oriental country have drawn persons and stressed them in written words in more than four times the percentage that the Spanish ones. In the sketches, humans play a key role and this fact stresses the aspect of social interaction and body proximity perceived in Japanese common parks.

Fig. 1. Typical Japanese and Spanish sketch

THE DESCRIPTION OF THE IDEAL PARK

When the students were asked to describe their ideal parks, we found that there was a shift in the most appreciated elements in the comparison with the ones that refer the usual image of parks. This was not disconcerting as there are many theorists that have recorded the relationships that link the use of places to the attachment of feelings and memories the users develop (Moore in Chawla 1992). There are differences between the frequent used places and the preferred ones, and therefore, they confirm the distinction between a functional realm of actual use and the conceived realm of values. In our study, the question of image pretends to act as a condenser of the everyday values that citizens find and assimilate from the real park settings they have access to. The question of the ideal park, will reflect, on the contrary, the equilibrium between memory and desire, between importance and meaning.

T.2. MAIN ELEMENTS DEFINING THE IDEAL PARK

	Typical responses	SPAIN		JAPAN	
		f	%	f	%
PHYSICAL SUPPORT	Green, trees, plants, flowers, grass, meadows, lawn, fountain, lake, pond	123	121, 78%	29	25, 44%
ARTIFICIAL ATTRIBUTES	benches, garbage bin, athletic equipment, children playground,, covered areas, resting areas, sports courts, cycleways, bathrooms, restaurants, coffee-shops, sculptures, monuments, classic statues	65	64, 36%	23	20, 18%
PURSUIT OF ACTIVITIES	walk, walk with dog, run, play, bath, picnic, eat-drink, bicycle, rolling-skate, jog, camp, feel nature, hear birds singing, watch plants, feel attachment, smell, rest, relax, think, read, lay down, sit, watch, performances, open-air theatre, events	48	47, 52%	46	40, 35%
SOCIAL	meeting place, communication, social place, make friends, people gather, chat, people, all ages, children	15	14, 85%	38	33, 33%
PSYCHOLOGICAL	lively, bright, happy, enjoy, quiet, oasis	35	34, 65%	39	34, 21%

EFFECTS	in city, isolated, not confusing, inactive, nothing, low pollution, heal, feel better, safe				
QUALITIES	beautiful, cared for, organic, classical, harmonious, scenery, sun, shade, cool, fresh, comfortable, interesting, pleasant	62	61,39%	51	44,74%
	N° questionnaires		101		114

Assuming these basic schemes, the analysis of the results shows that the attention paid to the physical support that constitutes the very materiality of the park, whether natural or artificial, diminished in favor of more intangible attributes when we think about the ideal park. There is a slightly increase on the pursuit to be able to do different activities, but the main differences concentrate in a raise of the interest in social factors, psychological effects and very specific qualities. The qualities mentioned by the students are mainly referred to formal, functional and physical aspects and are frequently in close relationship with desires of complex mental effects. For example, the organic patterns and beautiful and cared environments are followed by adjectives as pleasant or harmonious. The demand to have not residual spaces but well projected parks, with many routes or facilities, are focused to the achievement of a long-time interesting environment.

THE PARK AS A SOCIAL PLACE OF UNCONCIOUS CIVIC LEARNING

We will analyze more precisely the general grow of social matters and mental benefits that take place in the definition of the ideal park.

Surprisingly for our expectations, we did not find a feeling of social exclusion towards the usual groups that are most commonly discriminated in cities such as immigrants, gypsies or tramps. No racial, religious disagreements, nor cultural contrasts were neither referred by those polled when they were asked to define their ideal park. In Spain, nothing was mentioned about any kind of rejection of a certain group of population. Less than 3% of the Japanese students expressed clearly the preference to filter the kind of persons to be allowed to enter a park. 1% mentioned that in the ideal park there would not be homeless, meanwhile the other 2% claimed to avoid children in the aim to find a park with only adults.

T.3. SOCIAL MATTERS IN THE IDEAL OF PARK

		% SPAIN	% JAPAN	
SOCIAL	FREEDOM do not allowed things	6,93 %	7,02%	Do anything, free to play, lay on grass, play ball, every purpose
	EXCLUSIONS	0,00 %	2,63%	No homeless, no children
	MEETING	0,99 %	5,26%	Meeting place, communication, social place, make friends, people gather
	PEOPLE	4,95 %	9,65%	All people, people, all ages
1,98 %		2,63%	children	
0,00 %		6,14%	Adults, young people	
	N° questionnaires	101	114	

The park remains as one of the last urban sites that is conceived to be a democratic public space. The percentage of young adults that remark that popular finality when thinking about an ideal is sensitively superior to that one that results from remembering the image of park.

There is a strong identification of the Japanese park with the children collective (16,67 %), versus other social groups as it shows the confronted amount of only a 2,63% of adults and young people and 2,63% of all ages references in general. In the case of the desired park, the tendency is inverted and the children reach the lower rate, meanwhile the interest in youth grows to the 6,14% and the goal to imagine a place for every kind of people raises to a 9,65 %. In Spain, the sensitivity with this democratic feeling is also an obvious gain in the terms of the concept of the ideal park, where it grows from a 0,99 % of the allusions in the question of image to a 4,95 % in the preferred park.

Another shade of meaning about the park as an archetype of public open space is reflected in the level of consciousness of its civic benefits and rights. Although there is a similar amount of the time spent in parks in pursue of chatting, 54,39 % in Japan and 59% in Spain, the specific definition of the ideal park as a meeting place, as a site where you can gather and make friends in 5,26% of the cases of the Japanese students versus a 0,99 % of the Spanish students, shows that there is stronger conscience of this social role of the park in the Asian culture.

Nevertheless, there is a question related to civic coexistence that can result in the coming years in serious conflicts and in insurmountable obstacles in the regular use of parks. It is based on the generalized allusions to the matter of safeness that proved to play a key role in the answers. This undoubtedly request a singular approach in the future of parks as 6,93 % of the Spanish students recalled a safe place when imagining the ideal park, but the double amount, 12,28% of the Japanese, were worried about this fact. Indeed, the condition of a safe environment is the second most common feature demanded in the Japanese ideal park, being divided equally towards the general safeness of people and the focused secure settings for children.

The arising of this subject in both cultures, suggests that the phenomenon of insecurity is globalized and transcends local pattern of behaviors. It seems to be perceived as a real pressing problem for the Japanese youth. At least, the inexistence of specific references to aggressive gangs, drug addicts or poor people shows that it seems to be induced by a latent generalized fear that it is not directly associated with any social group.

THE INFLUENCE OF THE URBAN CONTEXT

Ward Thompson in her studies of the American parks (1998) remarks that the “the symbolism of the park as a refuge or paradise is deeply embedded in our psyche, a kind of cultural memory”. This statement shows to be especially clear in the case of urban parks in big cities.

We can affirm that, especially in the Japanese case, the concern with children security is highly emphasized in comparison with Spain (T.3.), and the urban public space is felt as a potential danger for children. It should be interesting to explore the causes for this specific problem, analyzing the urban form, the traffic rates in residential areas, etc .

On the other hand, Spain gathers the double amount of persons than Japan that consider the park as an entity that has to be isolated from the city, whereas in distance, its limits and enclosure and its climate and ambient atmospheres. This could be a sign of a more inhospitable living environment or disliked model of urban pattern in this country.

T.4. PSYCHOLOGICAL EFFECTS IN THE IDEAL OF PARK

		% SPAIN	% JAPAN	
PSYCHOLOGICAL EFFECTS	POSITIVE	2,97 %	10,53%	Lively, bright, happy, enjoy
	OPPOSED TO CITY	24,75 %	12,28%	Quiet, far from city, oasis in city, isolated, not confusing, inactive, low pollution, heals, no traffic
	SECURITY	0,0 %	6,14%	Safe for children
		6,93 %	6,14%	Safe, good illumination
	N° questionnaires	101	114	

QUESTION OF REAL PUBLICNESS

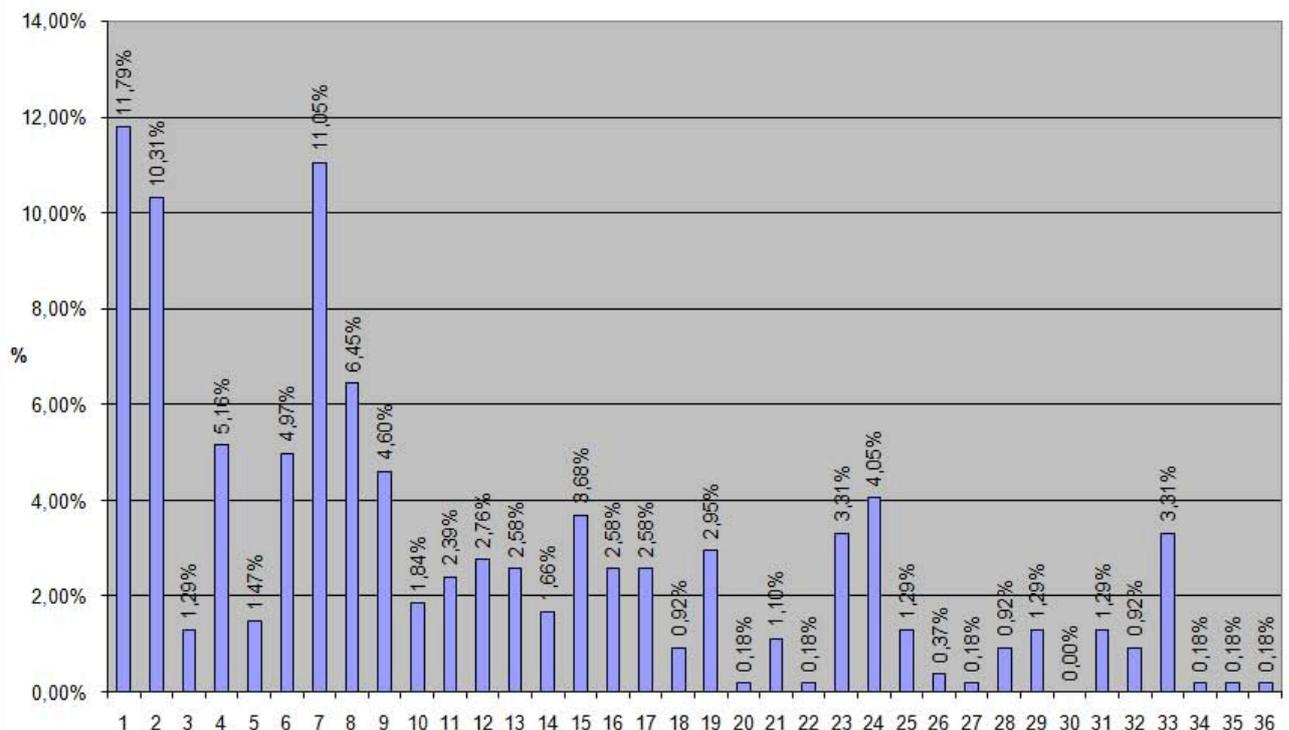

In many cities, building fabric and government or city authoritative policies seek to undertake activities that have not been purposely designed or planned in those public spaces. Helen Wolley has given evidence of this reality for several distinct groups, such as minorities, disabled people, old people and her studies specially points out about the case of children and young people. We can find cameras that record our movements, our faces and our behaviors. Business interests join forces with residential population in the demand of leisure activities to take place outside open air areas inside the cities. Public space is often highly controlled and therefore, many groups find exclusion by regulation. The streets and the squares were traditionally during ages the natural places for people to spontaneous socialization. The environmental and social current conditions that characterize most big cities have shifted the preference towards parks. This is mostly true in the case of teenagers and young people who have made of many parks around the world a place for reunion and leisure activities. A programme of fifteen years of research has been carried out in America to investigate how young people inhabit their local environments, identified a range of outdoor spaces which teenagers value and shows that they were mainly “natural landscapes” rather than urban spaces (Owen 1985 cited by Wolley).

The survey proves that proves that parks are valued by young adults as gathering sites but even more as spaces for freedom projection. In both countries, there is a significant percentage of persons that resume the social factors of their ideal park in the question of avoiding regulation and behavioral laws. The park desired is a place with no apparent restrictions, where “you can do anything”, follow “every purpose”, “you are free to play”, and where teenagers can specially break the social or maintenance rules and develop activities usually not allowed as “lay or play on grass”. In Spain there is the same number of answers (6,93%) that enhance this potential quality of liberation than recall people as the main social objective of the ideal park . Japanese students maintain a much higher percentage of general social consideration towards people as global users (18,42 %) but it is interesting that the feeling of park as a place for non normalized behavior is more intense (7,22 %) that the one about communication and social meeting (5,26%) (T3). Young adults seem to visualize the park as a space where they can more or less define their own laws and individual or collective ways to interact between them and with the natural qualities of the space itself.

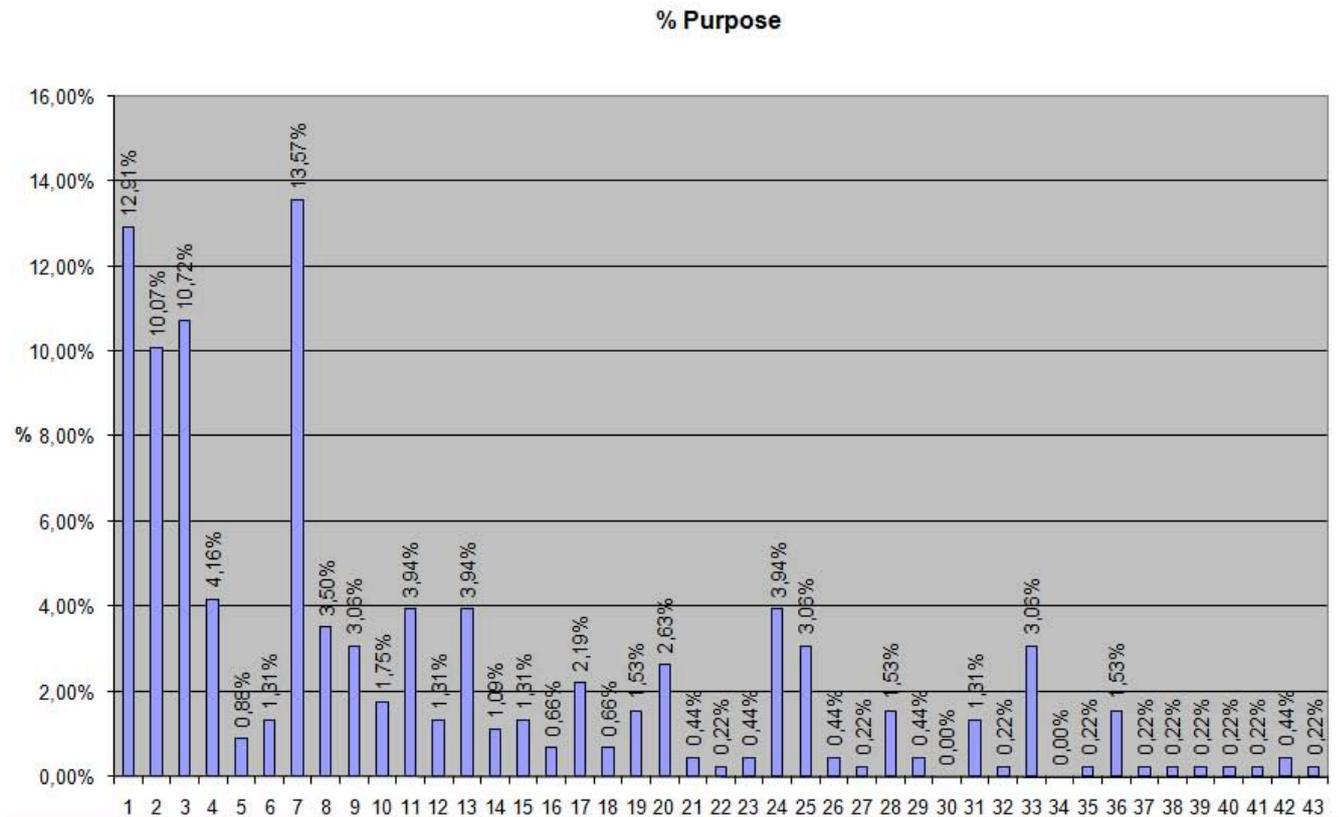

As a result, this conclusion leads to the crucial affair of civic education as a necessary and efficient mechanism to make different global, cultural, communal and individual interests and levels of freedom come reasonably to terms. “The tension between determination by managers to restrict what is seen as inappropriate behavior in a park and the desires of many users for more varied recreational opportunities has remained a constant form the 19th century to today”. (Ward Thompson 2005: 104). The author explains how in Olmsted’s time, horse-racing in Central Park was controversial. Today we find thousand of different cases in which the setting of a varied range of activities in the same park, leads to some kind of conflict. The confrontation sometimes remains only as a psychological upset or disgusting disagreement, but in other occasions the clash can have medium or long term consequences forcing people to misuse a park, to reject the idea of visiting some specific areas or even, in the worst cases, getting involved in a physical aggression.

The increasing availability of activities in parks may be seen as a further complication, but the survey shows that sometimes, as in the case of Spain, variety is an important quality that defines the ideal park. For the Spanish students the concept of multiplicity extends to the natural environment in a 24,75% of the answers but is also precisely described in the field of activities in a 10,89 % percentage. There is no relevant number of answers enhancing this aspect in the activity’s interests in the Japanese side nor even in the natural support characterization, where it reaches 6,14%, below qualities such as cleanness (8,77%) or children equipment (9,65%). It should be noted that this fact contrasts with the slightly most open spectrum of activities developed by Japanese in parks. (T.5) . On the contrary, the results confirm a minor increase in the number of activities carried out by the same person in a park in Spain, where less than 10% of the students practice only one or two activities when they are spending time in a park and 69,31% of them follow from three to six purposes. In Japan 36,04% of the young people stated to fulfill 1 or 2 purposes when using a park, and only 9,91% asserted to do more than six activities.

% Purpose

T5. Spanish range of activities in a park

T5. Japanese range of activities in a park

THE PARK AS A MULTIACTIVITY SETTING VS A HEALING ENVIRONMENT LIVELY

The idea that the park is felt as an access to some kind of nature to maintain a healthy and well-balanced life in cities, is also supported by the results of this study. Nevertheless, the nuances between the two countries studied, reveals interesting differences in the ways used to reach this goal and the before mentioned question of variability of use place an important role.

The double analysis between the patterns of use of parks by the Spanish students and the elements signed as meaningful in the concept of the image and ideal of park, shows that in the Spanish culture, there is relationship between use and valued location. The multivalent character described by the Spanish students to the ideal park is confirmed by the similar number of mentions about quiet activities (13,86%) and varied activities (10,89%) . There is also an interest in the existence of particularly defined areas (19,80%) and specific equipment (13,86%) which can be understood as a conscious natural disposition to organize the space for the civic goal to avoid mutual incompatibilities.

The ideal park remains as an abstract concept in Japan, as a reality that is not so clearly defined physically and that lies, on the contrary, in psychological effects. Despite the youth of the persons polled and the assumed vitality they presumed, the study shows that for 21,05 % the park is mostly thought as a special place inside the city where one can develop quiet activities as simply watch, sit or rest, aimed basically to reach a relaxed state of mind.

The park is also conceived as an optimum channel to feel nature (11,40 %), to interact in a pleasant way with natural elements such as plants, birds or water, and it is remarkable, that

the Japanese students mentioned in several occasions specifically, the search for a healing consequence. The park as restorative element has been largely studied by Kaplan and Kaplan (1989: 182) giving extensive evidence of its mental benefits. It is an idea that also links with the modern concept of the functional city of the twenties, where the implementation of open green spaces was a priority in the patterns of new town-planning. The park as natural space was firstly opposed to the urban fabric and was at the same time a clear setting to do exercise (almost obliged for a physical healthy life) and to rest from mental fatigue. Olmsted with Central Park, or Le Corbusier with his continuous ground plan, created parks, architectures and cities with this conception of park in mind; as a social facility with curative qualities in chaotic, over-constructed and confusing urban sites.

PARKS AS AN OPPORTUNITY AND A NECESSITY

This paper principally addresses the condition of public parks, and their social, psychological and civic environmental values for citizens in big urban areas. The survey reveals that there is a generalized symbolism on the green quality of parks that attaches them with the anthropological concept of nature. They are very special places in cities that are profoundly valued by people when perceived as more pleasant and kind environments that serve the rushing society that lives mainly in polluted and noisy cities. Based on the results of the questionnaires, we can pose that the demand of the younger adults of our societies on parks seems to be much more simple than many designers or politicians would think. There is no expectation for the new technologies to take part in parks, no manifestation in favor of responsive or intelligent landscapes (Ward Thompson 2005, 115). The desired features of parks seem to be, on the contrary, intrinsically related to the deficiencies detected during the current use that citizens make of them as exemplary democratic sites that should, at the same time, be capable to permit an intimate contact with some kind of nature.

The requested qualities of these ideal green open spaces vary depending on the country and their cultural and civic traditions. Ken Worpole in the revision of his UK Park Life report of 1995 enhanced that “many people said that they visited the public park for privacy now often unavailable in the media-dominated home” (Worpole 2000,20). In our study, we found no evidence of special rejection to new technologies and virtual interconnection, but there is a focalization in atmospheric aspects and psychological effects of parks. It becomes remarkable that the Japanese youth expressed a preference for peaceful environments to develop quiet activities and general relax (20,18%), some of them demanding a specific inactive place, with nothing inside of it. There is also a sharp desire to feel nature (11,4%) versus the students that recalled making sports and physical activities (7,89%). None of the surveyed of this country showed an interest on any kind of artificial small buildings, artistic elements nor cultural events. In Spain the park is clearly associated with more tangible natural elements such as lakes or fountains, green areas and trees. The variety is one of the most important features in the ideal of park, specially of plants (24,75%), but also of atmospheres and enclosures. The preference for quiet activities is more similar to that of dynamic or physical ones (13,86%, 9,90%) and this multiple range of activities is confirmed by the percentage of people that express precisely the will to carry out a variety of possible activities in parks (10,89%).

The urban environment of big cities seem to be highly influential in a globalized way, affecting in the same manner, transcending nationalities; placing the park as opposed to the city in such a way, that many of its most valued characteristics as a meaningful setting are

based not on intrinsic qualities but in a clear contrast and isolation from the surroundings. The study also suggests that the range of possible activities have a direct effect on the image of park, and that the conceptualization of the ideal is far from a utopia but mainly shaped by the shortcomings and faults of the most used parks.

We think urban parks are seminal places for the demonstration and continuity of civic and pluralist values. We tried to summarize some of the key findings of these reports, and make some comments on the situation as we see it today. The challenge is to think carefully how parks can be designed, managed and adapted in future to add a new quality to urban life and to guarantee a space of freedom in a deep regulated consumer society. The park probably has to keep as a place to be oneself in coexistence with the others and with nature. Consequently, an effort can be made to improve the development of parks in the aim to widen the range of opportunities to reach those healing properties, so emphasized in this study, and make them compatible with more dynamic and personal approaches. Moreover than allowing the receptive position that citizens usually have towards the urban environments, the generation of young adults seem to demand the possibility to find in parks the right amount of facilities, equipment and design, but also a safe and tidy space to be oneself, implying a scenery where the user projects itself, through activities, or even quite unconscious manner, wandering, letting oneself to walk in a psychogeographical way, not even expecting to do, see or act in a certain manner, which probably leads to a satisfactory, surprising and creative living result.

Acquisition of Soft Skills

Dr Berrington Xolani Siphosakhe Ntombela

Caledonian College of Engineering (Oman)

Abstract

This paper looks into the incorporation of soft skills in a University College's programme of study, in Foundation. The study is about project approach (PA), and its place in the curriculum and how soft skills are incorporated therein. The study reveals that though soft skills feature in the programme of study, PA is not fully implemented, negatively affecting acquisition of soft skills. Recommendations on how PA could enhance acquisition of soft skills are presented.

Defining soft skills

Perhaps it is appropriate to first establish the general understanding of soft skills. Pollick (2009) refers to the axiom most common among business circles which suggests that hard skills will get a person an interview, but soft skills will land that person a job. That means, years of education enhances ones experience in the field, but soft skills give one the ability to function and perform well in the job. So, what are soft skills?

According to Parsons (2009) soft skills are attributes that enhance an individual's interaction on job performance and career prospects. Parson's further asserts that soft skills are differentiated from hard skills that tend to be specific to a certain task or activity in that they are broadly applicable and are sometimes broken down into personal attributes viz. optimism, common sense, responsibility, a sense of humour, integrity, time management, motivation; and interpersonal abilities, such as empathy, leadership, communication, good manners, sociability, and the ability to teach.

Pollick (2009) and Parsons (2009) approach soft skills from a business or industry point of view. Waggoner (2006) on the other hand regards soft skills as encompassing a range of interpersonal skills such as courtesy, respect for others, work ethic, teamwork, self discipline, self confidence, conformity to norms, language proficiency, behavior, and communication skills. Her (ibid: 4) perspective is from the academic standpoint. For her, soft skills comprise a cluster of personality traits, social graces, facility with language personal habits, friendliness and optimism which individuals acquire as they grow and mature. Depending on the perspective on which soft skills are viewed it is evident that they consist of a number of traits. However, the question is whether soft skills are simple personal or interpersonal traits that are innate in different individuals or are abilities that could be attained in an academic or training environment, which brings us to our next discussion.

Acquisition of soft skills

It has been presented that soft skills embody a range of personal and interpersonal traits that may be influenced by personality types. For instance, it might be naturally difficult for an introvert to make friends as compared to an extrovert. However, the fact that soft skills are increasingly

becoming a determining factor of success in the employment sector, it behooves higher institutions of learning to prepare students for the job market with soft skills; i.e. bringing soft skills into a classroom environment.

The concern about acquisition of soft skills has grown with different writers and researchers tackling the topic; for instance Waggoner (op cit) conducted a study where she presented strategies for teaching soft skills. She (ibid: 3) argues that there is a need to employ effective strategies that facilitate learning, which is essential in teaching the whole person and that leaves professors with a responsibility of teaching soft skills explicitly. Nevertheless, she (ibid: 4) acknowledges that such a responsibility should be driven by professors' perceptions of deficient soft skills among individuals in their classrooms. However, she rightly points out that soft skills are not to be exalted above hard skills; instead there should be recognition that teaching soft skills with the hard skills is analogous to teaching the whole person.

Furthermore, Hertlein (2008: iii), having noted the shortage of soft skills among Canadian workers, argues that although soft skills have been considered a part of 'hidden' curriculum in children education, outcomes from primary and secondary education curriculum appear not to be meeting the soft skill requirements essential for today's job market, which prompted her to conduct a study on the acquisition of soft skills in online distance learning context. Her research is ground-breaking as she acknowledges that soft skills are generally learned informally through socialization, i.e. the interaction with people and the viewing of the models in one's life, which is facilitated through face-to-face contact; but such contact is notably non-existent in distance education, which has become a convenient choice of earning degrees. The profound question she (ibid: 3) raises pertains to formal training or testing to measure soft skill outcome from an educational standpoint. There is undoubtedly an onus resting upon educational systems, which, as Hertlein (ibid: 41) assesses, currently operates on the notion of 'teaching to an exam', suggesting that soft skills are not presently being effectively taught in schools. In fact, the findings in her study show lack of seriousness of acquiring soft skills by the student body who viewed such as irrelevant, which made Hertlein (ibid: 44) conclude that the acquisition of soft skills had lost its value because there was no attached mark to enforce it.

Similarly, Pulko (2003) asserts that there has been an increase in emphasis on 'soft skills' in Higher Education engineering programmes, but reports that modules on soft skills seemed unpopular with students or with engineering staff; with students reluctant to attend and claiming that the subject is irrelevant. Nevertheless, he suggests a modified teaching approach which should be more dynamic in order to stimulate students in place of traditional lecturing styles based essentially on one-way communication. Thus, he proposes techniques that can be used flexibly to transform any 'standard' lecture into a more dynamic one, summarized as: an emphatic and captivating introduction; use of relevant examples and 'story telling'; group exercises; brainstorming / simulations; opinion polls; and the mind break. Of significance to this study, Pulko argues that soft skills should be embedded in the overall degree structure rather than taught in semi-isolation. Nonetheless, she admits that soft skills are relatively new to engineering degree courses, and perhaps the soft skill culture is not yet mature enough for effective embedding. Notably, embedding would address one of the difficulties of poor attendance of the sessions that explicitly teach soft skills as students, observed by Pulko, attached less importance to it as compared to engineering modules. Similarly, Waggoner (ibid: 24) correctly asserts that embedding would improve students' soft skills.

The University College where this study was conducted follows the practice of explicitly teaching soft skills through ‘Project Component’ (hereafter Project). The discussion that follows presents an overview of the Project.

Project overview

Project came into being after feedback from Industrial Interaction Group (IIG) highlighted that workplace performance of new graduates from the institution lacked demonstrable soft skills (QAP 2009: 70). It should be noted that the institution in question is an engineering institution, which might explain the paradox of introducing Project in Foundation programme. That is, we have pointed out that the embedding of soft skills in engineering modules is very much on its infancy and in fact is yet to be realized in the University College where the study was conducted. Nevertheless, according to Foundation 1 Module Descriptor (2009: 3), by the end of Project delivery, students are expected to have achieved a list of learning outcomes, mainly consisting of soft.

In fact, Blake (2009) says that the teaching and learning strategy adopted is teamwork, where students appoint team leaders and allocate tasks to team members. He further recognizes four benefits of Project namely: independence, teamwork, planning, and implementation of six steps. Project consists of three projects viz. (i) Staff portrait gallery where students interview members of staff and prepare a poster presenting collected information; (ii) Pamphlet where students conduct a survey and prepare a pamphlet to be distributed in the college; and (iii) Class magazine where students study how magazines are organized and then, after conducting at least one survey and one interview, produce a class magazine. The most important premise that underpins Project is the six steps approach that Blake considers as key to students achieving learner independence, in the light of which we shall turn to what this approach entails.

The six steps approach

This approach as applied in Project is also known as Blank Page Method (BPM) (Blake 2009; Walker 2009) and literally consists of six steps (think, research, plan, write, edit, and present) that students go through as they carry out their projects. We shall consider each step and discuss the rationale behind each. Thus the terms ‘six-step approach’ and ‘BPM’ shall be used interchangeably in this discussion.

Think

Thinking or brainstorming, rests on the notion that students need to utilize their thinking capabilities by recording ideas pertaining the topic using a spider diagram. Walker (2009a: 4-6) emphasizes that it is more effective and practical for students to use a spider diagram during a brainstorming session because it allows them to record ideas without having to, say list them in order of importance, which, she asserts, limits the flow of ideas. She (ibid: 18-19) argues that students are able to add as many ‘legs’ to the spider as the flow of ideas, which she considers not possible in a list format as there’s little or no space between items. It should be pointed out that, like all other steps, as we shall see, this one emphasizes thinking together, i.e. in a team rather than individually.

Research

In this step students find information elsewhere through various means such as interviews, surveys, library, internet, etc. Since initial ideas may be vast and touch numerous aspects of the topic, researching narrows down the scope of information. Similarly, this step is carried out in teams as each group is expected to assign duties to each member of the team; suffice to say that each team has a formally elected or appointed leader whose duty is to ascertain that the remit is accomplished. For instance, in the event that students need to gather information through interviews, all group members must contribute interview questions, after which the leader must secure an appointment with the interviewee. However, only two members of the team are sent to carry out the interview.

Plan

In this step students need to plan what they will do or how they will organize the information. During planning stage they, for example, plan which information will be part of introduction, body, or conclusion; if, say, they are required to write a poster, they decide the theme, the layout and how they will make connections on the information they have - they decide just about everything including where they will put their names as contributors to the project (e.g. poster). In fact, it is envisaged that the information generated during brainstorming would be helpful in planning the outlook of the project. Notably, the scope of information during planning stage is further narrowed as students decide on the crucial information they feel should be included in the project.

Write

During the writing stage students put together all the information according to the agreed plan. Although all the steps are executed in teams, during the writing stage, each individual is expected to write a portion, say introduction, one paragraph in the body, or conclusion – after which all the portions are put together into a coherent whole. This is meant to discourage strong members of the team from doing all the writing solo.

Edit

Once students have knitted their writing together, they need to review what they have written; correcting grammar, spelling, punctuation mistakes and errors. Most importantly, they should check whether they have not left out important information like sources, graphs, diagrams, etc; and whether they have accurately responded to the remit. Students should first edit own work, give it to the other member of the team (preferably the strong one) before handing it to the teacher for further editing.

Present

The last step is about the outlook of the finished product. Walker (2009b: 10) points out that students should pay attention to the presentation of a project they have worked on. She (ibid: 12) emphasizes that ‘if beauty is in the eye of the beholder we better make sure that we capture the attention of that eye.’ It is at this step that the work students have done gets its expression; even though it is not meant to be regarded as the most important step, failure to present unfortunately nullifies all the other steps.

We have so far described Project, and because of noticeable similarities with Project approach (hereafter PA), we shall briefly consider PA and draw some parallels between the two.

Project approach

In order to understand PA we shall consider two learning theories that underpin methods of teaching and learning. Cook (2006: 3) argues that current curricula are typically based on behaviourist theories where teachers view their roles as transmitting information to children to be remembered and thus are preoccupied with instructing through sequencing content, drilling, correcting, and testing. Similarly, Buck Institute for Education (BIE) (2010: 3) admits that cognitive and behavioral models of learning support traditional direct instruction. On the other hand, Piaget's social-constructivist theory suggests shift of the teacher's preoccupation from that of 'instruction' to the child's 'construction' (DeVries et al 1990: 374).

Thus, Branscombe et al (2003) regard constructivist teachers as providers of creative opportunities for children to experience ideas related to content, which guides a child to consider the content and clarify thinking. Therefore, learners are no longer regarded as passive participants; and teachers are active constructors through scaffolding the learner's learning process, creating a partnership between the child and the teacher, and functioning as provocateurs that can support and help children in building their own knowledge (Cook 2006: 4). In fact, research, according to BIE (2010: 3) shows that learners not only respond by feeding back information, but they also use what they know to explore, negotiate, interpret, and create, i.e. they construct solutions, thus shifting the emphasis towards the process of learning.

In the light of this exposition, it is apparent that PA has its roots on constructivism. Proponents of this approach (Katz 1994; Follari 2007) define it as an in-depth investigation of a topic by a group of students; the whole class or an individual. Katz (1994) clarifies that project work is not a separate subject like Mathematics, but provides a context for applying concepts and skills, and therefore should not be regarded as integral to all other work included in the curriculum. Alongside PA is Project Based Learning (PBL) which BIE (2010) defines as a systematic method that engages students in learning knowledge and skills through an extended inquiry process structured around complex, authentic questions and carefully designed products and tasks. Advocates of PBL, according to Katz (op cit), do not suggest that project work should constitute the whole curriculum; rather that it should be best seen as complementary to the more formal, systematic parts of the curriculum, which notion parallels BIE's (op cit) argument that PBL should not be thought of as taking time away from the regular curriculum – instead it should be considered as a central method of teaching and learning that replaces conventional instruction for a portion of a course. BIE (ibid: 4) goes beyond defining PBL and articulate what they consider to be attributes of effective projects as distinguished from other activities in the classroom. Among other things, BIE (ibid: 4) argue that project work is central rather than peripheral to the curriculum, and that it encourages collaboration in some form, either through small groups, student-led presentations, or whole-class evaluations of project results.

Alongside PBL attributes are PA characteristics propounded by Follari (2007). She argues that PA seeks to engage children in a deeper, inner process and outer expression through discussion, research, sharing experience – prior and new; fieldwork investigations, and creating many representations of data and knowledge. Furthermore, Katz (1994) asserts that project work includes activities such as drawing, writing, reading, recording observations, and interviewing

experts. Follari (op cit), moreover highlights that project teaching emphasizes teachers acting as consultants; guiding children's investigations; parent and community interaction; applicability of skills that children can use today; child directed or initiated; learners being active – investigating and creating; and children being intrinsically motivated – being interested because topics emerge from their lives.

Katz (1994) and Follari (2007) further present the structure in the form of three phases of PA discussed below.

Phase 1

This phase mainly consists of discussions between the children and teacher relating to the topic of investigation. Since it is the initial stage, it is characterized by brainstorming which is usually done through a web or spider diagram. Children have the opportunity to raise questions about what they want to know whilst they recall past experiences related to the topic.

Phase 2

The second phase is dominated by fieldwork where children collect data, explore their questions and hypotheses and review webs created in phase 1. This phase is regarded as the core of the project because the actual investigation; observations; construction of models; recording of findings; discussions and dramatizations of new understandings take place.

Phase 3

The last phase represents the culmination of the project where debriefing events; preparation of report in the form of findings and artifacts; talks; dramatic presentations, or guided tours of children's constructions, etc occur. That is, the project is wrapped up as children showcase their achievement or demonstrate what they have learnt.

It is vital at this point to draw parallels between PA and Project whilst simultaneously considering the soft skills embedded therein.

PA, Project and soft skills

There are notable structural similarities between PA and Project, albeit PA realizes three phases whilst Project is grounded on six steps. Notwithstanding, the thinking stage of the Project is similar to phase 1 of PA in a sense that both deal with brainstorming using a web diagram. Both recognize the importance of children recording their past experiences relating to the topic. During the thinking stage in Project, teamwork as a soft skill is pronounced. In fact, Walker (2009a: 3) rightly emphasizes that students working as individuals cannot know all the answers, but need the input of others. The other soft skill realized in brainstorming stage is critical thinking as students think about all aspects relating to the topic including how tasks would be allocated; who would be leading the team and so forth. Timetabling is another common feature in Project, where students need to allocate time according to six steps, i.e. how much time they will spend on, say, thinking, researching, planning, etc. These soft skills also form the core of PBL as BIE (2010) states that rigorous and in-depth PBL requires critical thinking, problem solving, collaboration and various forms of communication.

Similarly, phase 2 in PA has elements of Project's research step. As mentioned, students are expected to collect or find information during this stage either through surveys, interviews or library, depending on the topic. When students do research, they do so in teams – allocating specific duties to different individuals. For instance, if they are researching through interviews, the leader ought to choose one person who would do the interviewing and the other to do the recording. In this way, students further learn teamwork, but also have individual contribution that arguably boosts their motivation and self-worth. They also acquire soft skills of listening, verbal skills and politeness.

The planning step of Project is embedded in phase 2 of PA. In this step students, having collected information, organize it. Questions like how they are going to present information such as clip art, photographs, graphs, etc should be addressed. They further need to plan how they are going to organize information in terms of headings, introduction, body, conclusion, etc. In addition, since the whole project is done in teams, they will have to decide which members of the team will write which parts of the project. Also, students do statistical analysis for their surveys and summaries of interviews or information gathered from print media; planning whether to present their writing in point or paragraph form. The soft skill apparent in this step is again teamwork and critical thinking. They also acquire decision-making skills.

Phase 2 in PA is the actual execution of the project and is similar to the writing step in Project. During the writing step students write the plan they formulated in the previous step. In phase 2 of PA, students make representations or constructions of data or knowledge. When they write their first draft they need to take into account recipients of their work (Walker 2009a: 16). This helps them develop the soft skill of communication.

The fifth step in Project is 'edit', where students revisit their first draft so they can address errors, mistakes and omissions. This step coincides with PA's phase 2 where students review their webs. During this step, students need to ascertain that all their work is well-referenced. This enforces the soft skill of integrity. In addition, they need to make sure that all survey results are accurately interpreted.

The last step in Project is 'present', and is similar to PA's phase 3 where students wrap up their work. During this step students design the final version for presentation. Walker (2009c: 10, 12) contends that you cannot spend the whole day preparing a delicious meal only to serve it on a dirty plate. Hence, students are expected to design their project work in a manner that befits the audience. Most importantly, students should ascertain that their project is completed and presented within the stipulated deadline, failing which the whole project gets a zero. This rather harsh measure is meant to foster the soft skill of time-management. In PA students plan or implement a culminating experience; this could be parent visit, open house, movie, book, or community showcase (Follari 2007).

Discussion

It is evident that structural features of Project resemble PA, and that soft skills such as critical thinking, listening, oral or verbal skills, time-management, and most notably teamwork are promoted. That is, students apply a logical step-by-step approach in completing their projects.

However, the topics that students pursue in their projects are not really self-initiated as Trepainier-Street (1993) asserts that since PA is child-centred, projects may either be initiated by an individual child or by a group of children. In fact, at other times, while the teacher may initiate the project, the children's involvement may take the project in a whole different direction (Trepainier-Street: 1993). For example, Cook (2006: 7), following 'Regio Emilia' philosophy, observed six five-year old kindergarten boys, moving around particular objects from within their classroom to recreate cars moving fast; and from that observation 'The Race Car Project' was initiated. In other words, the teacher acts as a guide and facilitator whilst students drive the project into whatever direction that suits their learning experience. This, of course, is not the case with Project because students are given a specific remit with preconceived outcomes that specify the final product which by default determine their project's success. For instance, in their first project they are supposed to interview four members of staff, with justification of their choice; i.e. they should find connections and meanings among the four interviewees (Walker 2009b: 23). In their second project they are given four topics which Walker (ibid: 23) suggests that they brainstorm each so that they would eventually find the most suitable or interesting as opposed to the easiest or least active. She believes that this would give them a skill they would need later in life. On the whole, it is clear that students must only choose from one of the topics offered by the teacher.

In addition, concerning the place of project work in the curriculum, Katz (1994) argues that project work is not a separate subject like Mathematics; rather it provides a context for applying say, mathematical skills and concepts. This means, Project should be treated as an approach through which students apply the knowledge they have acquired. In fact, Katz (1994) contrasts systematic instruction with project work where, on the one hand, the former helps students acquire skills; addresses deficiencies in their learning, stresses extrinsic motivation, and allows teachers to direct their work; the later, on the other hand, provides students with opportunities to apply skills, addresses their proficiencies, stresses intrinsic motivation, and encourages them to determine what to work on.

On the contrary, Project is a subject on its own, despite that BPM, which underpins it, is thought to be transferable to other subjects (Walker 2009b: 24). In fact, Murphy (2009: 6) reports that even though students understood BPM, most teachers felt that it was not directly transferable to other subjects without being explicitly highlighted. We should reiterate that Project came into being as a reaction from IIG feedback, which as mentioned, highlighted lack of soft skills among new graduates. Therefore, Project, among other aims, is principally meant to facilitate the acquisition of soft skills. Conversely, Pulko (2003) argues that soft skills should be embedded in the overall degree structure rather than taught in semi-isolation. That is, soft skills should be spread evenly throughout courses so that students would not confuse them with mere requirements only applicable to one particular course.

Reflection questions are notably central in PA especially in judging the effectiveness and the benefit of the project (Follari 2007). Moreover, Treinier-Street (1993) states that upon completion of an activity, children and teacher collaboratively evaluate what they did and why; what they will do next and how; and together they decide when they are finished studying the topic and what they have learnt from their study. However, in Project, the culminating step is 'presenting' after which the teacher evaluates or assesses the completed project according to the

extent at which BPM has been implemented. Unlike PA, students don't have an opportunity to evaluate what they gained from the project, but must rely on teacher's assessment.

Undoubtedly, there are tremendous benefits of Project as demonstrated by 75% students who found it enjoyable; and 85% who liked the fact that it allowed them to work in groups (Murphy 2009: 3). Murphy seemingly envisages Project as a BPM powerhouse on which other subjects need plugging in for transference of the skills. Suffice to say, these skills are embodied in BPM and must be realized in other subjects. However, as argued, PA works best when it is incorporated within each subject and not a subject on its own because it should be treated as a means by which students apply the skills and not the end.

Conclusion and recommendations

The importance of soft skills is evidenced by the drive for tertiary institutions to incorporate them in study programmes. In this study, such drive is realized in Project that undoubtedly facilitates the acquisition of such skills as teamwork, time-management, critical thinking, etc. Nonetheless, the acquisition of soft skills in this study seems to be limited to Project and thus raises doubts about long-term benefits. This is said in the light of the fact that PA that has parallels with Project needs to be incorporated to other subjects as a teaching and learning approach and not as a subject *per se*. That is, subjects would need to be offered through PA so that the soft skills embodied, in this case, in BPM would have immediate relevance and application to students, rather than being expected to be automatically cut and pasted onto any subject. The other shortfall in the long-term benefits of the acquisition of soft skills through Project is that it is offered at Foundation level which does not address the lack of soft skills at exit point. It may as well be argued that by the time students graduate, they will have forgotten what they learnt in Project.

In the light of this the following recommendations are made:

- Soft skills should be incorporated in subjects offered at tertiary level;
- PA should be implemented as an approach rather than as a sole subject;
- Emphasis on the acquisition of soft skills should be concentrated on graduate courses rather than on pre-degree subjects so that there would be immediate application after graduation.

English today is spoken by three billion people all over the globe. It functions as a mother tongue, as a medium of instruction, as a link language, as a language of communication in establishing its role as powerful identity marker. English today represents scientific knowledge modernity and development.

In India from the nineteenth century onwards English education has been operational and this language has been associated with western knowledge, power, prestige and social status, English in India is a diglossically high language. The reason for this lies in the colonial times when power was attributed to English, the language of Raja Ram Mohan Roy, a prominent Indian reformer and spoke person for English felt that English provided Indians with the key to all the knowledge (Bailey 199:136). The developing countries have accepted the dominant position and status of English in science and technological education. Its purpose was to instill the right "English value" in colonized subjects and to project a vision of all was finest and most admirable in English culture. Thomas Babington Macaulay presented in his famous "Minutes on education".

That one of the most efficient ways for colonial authority to legitimize its cultural ideology was to perpetuate the myth of English high culture through the valorization of specific kinds of literary texts. Through this education as theory, the language and there by the culture of the colonies origin was filtered down to percolate in the minds of the colonized subjects thus establishing a hierarchy. The early 19th Century politics also promoted the founding of a Standard English. Language was used as an emblem of a bond that brought together otherwise disunited cultural factions Macaulay's recommendation in 1835 made English education act, made English, the government, education and advancement (Krishna Swamy 19831, in 1947).

The Language-Literature conflict in India seems to be a post-independence Phenomenon. Thanks primarily to foreign returned experts from UK, the conflict was staged under the benign eyes of the British Council in the classrooms and corridors of the CIEFL (now EFLU). A whole generation of experts comprising Kachru, Varma, Nihalani and Nadkarni debated the merits of Indian English vs. British/International English. The conflict seems to have ended in an uneasy truce. Language and Literature were allowed to operate in somewhat separate spheres, while the college teachers learned to teach English language through anthologies of literary and non-literary texts, usually prepared by University Professors.

When India became independent Hindi was chosen as the national language in the constitution and English as the associate official language.

By the twentieth century English language was associated with power and prestige in India. Bhatia (1940:104) argues that "the study of English deserves the place of honour in our curricular not because of its practical usefulness as means of livelihood but also because it had been and still is

to a very considerable extent the only lingua franca for the educated class.”

In India, English serves as a linguistic tool for the administrative unity of the country and serves as a link language for wider communication where people from different languages communicate in this language. For many educated Indians, English is the first language.

The present era is said to be an age of globalization. English as a universal language has become a key tool of globalization. English has lasting impact on the educational system which has undergone drastic changes. Education is an important investment in building human capital that is a driver for technological innovation and economic growth. Since the service sector is based on imparting skills to the students, the education sector is the most sought after. Education as a service industry is part of globalization. The teaching of English has evolved and today students use internet effectively. Students are required to submit their assignments on line. Every state in India is competing to introduce English. The effect of globalization on Indian society is felt in the VIIIth five year plan.

Nearly all states in India are compelled to introduce English in schools. The Maharashtra state government in an ambitious plan to bring tribal children into mainstream decided to open English medium schools in the tribal districts in the state from the next academic year. So the English language has engulfed into the lives of rural dwellers, towns and cities in India. In the wake of globalization process ,the planners are bound to revise the strategies in the education sector and ensure that vital importance of qualitative education permeate down to the lowest income groups across the country. In view of globalization corporate universities, both foreign and Indian are encroaching upon government institutions. The globalization of the Indian economy in the 90's seemed to signal the

need for globalized work force. Foreign companies needed English speaking men and women. The rapid proliferation of globalization and liberalization has revolutionized global business. Regional markets, boundaries have been erased compelling them to open market for global trade and business. India with the wealth of English speaking skilled talented unemployed youth became the most sought for BPO and Call center. From technical customer support to bill handling to medical transcription services to banking backend operations and insurance services, BPO put India on world map. India saw the emergence of knowledge process outsourcing in 2005. Knowledge process outsourcing is the outsource of specialized services that warrant the expertise of highly skilled persons from professional courses like engineering, medical, consulting services, market research and banking with the growth of KPO industry in India, there were greater employment opportunities for the educated mass of the country.

The BPO travel and tourism and entertainment sectors clamored for communicative English. Demand for communicative skill courses rose in universities/colleges. In an article ‘Speaking to the global village: towards globally usable accents of English’ published in C I E F L bulletin 1996, Prof Shirish Chawdhary maintains that global communicative English is the need of the hour. Students aspire not only for job assignments abroad or take up jobs at the corporate level but also for globalized work force in India.

English is advertised as a product and English is everywhere in politics and business. New English speakers are shaping the language like Hinglish, a mixture of English and Hindi language. For example a mobile service provider called ‘Idea’ advertises very humorously mixing both the languages to promote his service as “What an Idea Sirjee?”

English is a dominant international language in communication. Globalization has been achieved in the 90's through the invasion of Information Technology. Internet is a boon in the global era. English language has impact on the global evolution of the language with nearly 80% of the digital information of the world stored in English. The Internet makes the information accessible to whoever is connected. English is the default language of the internet. One uses English in a different way. The spread of English language has been ascribed to the process of globalization. Business executive leaders recognize the challenges and opportunity of developing business English competence. For many companies e-learning, online training is an ideal solution.

English is the language of cyberspace. Indian BPO companies have provided efficient business solutions using state of art technology. Skilled manpower competition is attracting investment in IT. As a result of technological advances there has been tremendous growth in the service industries. Salaries of senior managers, public relations, personnel working for MNCs have risen. This is a boon for the upper middle class. Numbers of Indian Professionals are employed by national and international companies who provide customized services to US and Europe. This was possible because of globalization; the world has become a global village through the use of English language. About 45 million people speak English in India and it is this segment of population that controls professional and social prestige.

Newspapers are published in more than hundred languages and dialects in India. Languages have undergone drastic transformation. 'Code-mixing' takes place. English words are freely used in Indian languages. English Language newspapers are published in all states. English serves as the connector between people speaking different mother tongues. The demand for learning and use of English is on the rise. The number of English

newspapers, journals is on the increase. According to BrajKachru, there are at present 3,582 Indian newspapers. With India's emerging economic and political power in recent years a new generation of writers like Salman Rusdie, Amitav Ghosh, and Arundhati Roy are making impact internationally. These writers have depicted the impact of globalization and capitalism on Indian society and the status of women through their writings.

Television is the dominant gateway of globalization affecting India. The satellite TV arrived in 1991 bringing Indian versions of MTV. Television globalizes in helping NRI'S (non resident Indians) in contact with their country and culture and stay connected viewing regional languages in their houses. With globalization's economy and communication revolutions abroad felt closer to India. Globalization has its impact on the media. Mass media courses, English news channels are some of the examples cited. Mass media has become a global means to convey ideologies and discourses that demand critical analysis. Globalization brought in new technology. Designer wear, cosmetic invasion are new entries in the market. Same is the case of manufactures of consumer and non-durable goods.

Globalization in India has been advantages for many companies. With minimum investments and providing services too many consumers, many companies are now players in the globalization through international expansion, goods and services of international standards are available to common people. Due to globalization the social network of people is widening through such internet sites like "Orkut," "face book" etc. People are able to communicate, understand each other in better way. Enabling to communicate with people from one nation to another is the biggest achievement in terms of globalization.

The success of global economy is Business English proficiency. Successful leaders are using technology to break down the language barrier. Business is global and companies are sourcing highly skilled workers from every nation. English has been adopted as the common language of business. Non native speakers rely on English to speak with one another. [English as a second language] speakers “own” the English Language

It is estimated roughly that by 2016, 33% of the world population will learn English. Soft skills and communication skills in English are essential for global business. Presentation, negotiation, problem solving all depends on language and cultural proficiency. Global corporates will definitely benefit from investments in English language training. The impact of globalization has ushered in the changes not only in Indian culture, society, economy but also in education system. The pen, paper, text book, handouts have changed to keyboard, screen, pot and e-text. The traditional concept of education system rote memory has moved to one of exploration and research. Teaching and learning is a two way process. Blogs, discussions, emails are used by the present generation. We have flexible classrooms, virtual classroom teaching, on line courses, texts and assignments.

The status of a language in a society is education. English has achieved this status. English as a universal language has become a key tool of globalization. The importance of English for international business depends on the number of people who speak and use the language.

The study of English constitutes more than grammar, and spelling. Students are prepared to sharpen their reading and written skills. In India earlier emphasis was given to two skills mainly reading and writing, but in the globalized era, emphasis is on the spoken English. Indian English has

emerged as a variety of its own. Although many acknowledge RP (Received Pronunciation), BBC English as the best model. It is felt that Indian English was more suitable. English has become more notarized in the Indian soil.

English in India should be learning for its values in the changing scenario of globalization. This change in attitude will help us to understand and acquire the skills of the language for ensuing success. India cannot be successful in the globalized competence world if it does not produce qualitative and profitable knowledge, since globalization English has become the lingua Franca of the global village. Even though English has become an epicenter of power and knowledge in the world, it cannot survive without transforming itself. Hence today the impact of globalization on English language has resulted in to the variety of 'English's.' We have to remember this aspect while planning language policy in India especially in relation to English.

Abstract

As it appears that the de facto language for the global dissemination of architectural thought has become English, it is critical for architecture students to be conversant in this language. Because of this necessitated conversance in architectural English, Western ideas now significantly influence the design vocabularies of non-Western cultures. This influence, especially in early design education, appears to have detrimental effects upon the development of a vocabulary that is suited to the particularities of local cultures and places. It appears that regional identity, and its critical engagement by those particular to that region, is overlooked in favor of a set of formal vocabularies that are derivative of Western influences unintentionally introduced as by-products of the globalization of Western architectural thought.

For three semesters, beginning in May 2004, I taught beginning design as a Special Foreign Lecturer of the Faculty of Architecture of Chiang Mai University. This program provided English-speaking professors, with Western design backgrounds, to teach architecture studios to Thai students. On the surface, this seemed to be a straightforward task; providing instruction in an “architectural English.” Through this experience, and based upon further introspection, I have come to realize the importance of the role of professors who facilitate interactions between Eastern and Western architectural ways of knowing. This paper explores my experience as it relates to notions of particular identity, critical engagement with place, and the globalization of architectural thought and education. This exploration allows for reflection upon methodologies that enable the teaching of architectural English, while reinforcing the necessity of maintaining one’s own particular identity.

Teaching English, Teaching Architecture, Teaching Identity

Thomas J. Cline, Jr.

Introduction

Yi-Fu Tuan begins his seminal text, *Space and Place*, with a seemingly effortless differentiation between place and space; he states that “Place is security, space is freedom: we are attached to the one and long for the other. There is no place like home” (Tuan 2002, p. 3). When establishing this differentiation—one where “home” informs the role of place as that construct which offers security, compels attachment, and implicitly, provides familiarity—one is obligated to explore the idea of attachment to familiar place and the security that is offered by that familiarity. Tuan implies that the security offered by particular place is an ontologically informed security when he suggests that “space and place are basic components of the lived world” (Tuan, p.3). Tuan’s lived world is a world of experience, experience being broadly defined as “the various modes through which a person knows and constructs a reality” (Tuan, p. 8). “Stated in simple terms, ontological security is a security of being, a sense of confidence and trust that the world is what it appears to be” (Kinnevall 2004, p.746). Karsten Harries further reinforces this ontological relationship with place when he describes the ethical function of architecture as being a means of articulating “the way human beings exist in the world; their way of dwelling” (Harries 1997, p.4). This ontologically informed conception of security as a form of knowing, as being, problematizes the defining of “who we are” for those people with attachments to, and familiarity with, particular place.

This problematization requires an exploration of what is meant when a particular “we” seeks to define “who ‘we’ are” in relation to any particular place. The question “who are we?” is a question of identity, an identity both personal and cultural that moves far beyond Tuan’s effortless differentiation above. As Christian Norberg-Schulz stated, “place is the concrete manifestation of man’s dwelling, and his identity depends on his belonging to places” (Norberg-Schulz 1984, p. 6). It is this ontological question—“who are we” in relation to particular place?—that allows me a means toward understanding a situational incongruency that my particular experiences have brought to light. This incongruency centers on the seemingly inevitable need for a globally coherent language of architectural discourse, that conflicts with the inherent necessity to maintain and critically engage particular personal, regional, and cultural identities.

Beginning in May 2004, I taught three semesters of beginning design as a Special Foreign Lecturer of the Faculty of Architecture at Chiang Mai University. This program provided English-speaking professors, with Western design backgrounds, to teach architecture studio courses to Thai students. From the outset, this seemed to be a straightforward task; providing instruction in an “architectural English.” In hindsight, this straightforward task now provides the impetus for exploring the incongruency of globalization and its effect on particular identity as raised in relation to Tuan’s ontological prioritization of place. This paper explores my particular experiences as they relate to notions of personal, regional, and cultural identity, critical engagement with particular place, and the globalization of architectural education. This exploration serves to suggest potential pedagogical methodologies appropriate to an increasingly global architectural culture. These methodologies should enable the teaching of an English-language architectural discourse, while simultaneously providing students with the skills necessary to critically engage their own particular identities as

means of generating meaningful places that offer security, compel attachment, and provide familiarity.

Framing Experiences

In order to propose—and eventually evaluate—teaching methodologies that allow for the globalization of architectural discourse, while also providing students with the methodological skills required to create meaningful places, it is necessary to position my particular experiences and assess their effect on the perceived disconnect problematized by my interpretations and assessments of those same experiences. Further, in problematizing this incongruity, I am obligated to attempt an understanding of the implication of that disconnect in regard to the ontological structure of identity exegetically associated with Tuan. Initially, before I can begin to articulate the incongruity noted, I must establish a means of situating, and then evaluating, my particular experiences. If it is our constructed realities that inform—and are informed by—“who we are,” then all of our lived experiences can be conceived of as providing and framing this information. To fully flesh out all of my formative experiences is a task beyond the purview of the question at hand, but a brief synopsis of my lived experiences will aid in positioning my exploration of the incongruities of globalization and the maintenance of identity, and the relationship of these notions to the education of architects. At its foundation, my identity—that defining character which frames my critique—is tied to experiences afforded me by my family, my education, and my career.

I was born into a middle-class family in suburban southwest Georgia; a family—on both sides—one generation removed from the farm. I grew up among quilters, seamstresses, gardeners, mechanics, repairmen, and carpenters; my entire family brought the self-sufficiency, “can-do” attitudes, and moral obligations instilled in them on the farm to careers more suited to their new suburban environments. In most cases, I never knew that there were others, “professionals,” who might repair the leaking faucet, change the oil in the truck, patch my torn jeans, or even build our house. Those acts, the domestic acts of our particular middle-class, were all grounded in family; they were enacted by my parents or some other member of our extended family or the friends that were ever-present in our lives. My most vivid formative experiences are all related to the idea of domestic self-sufficiency; to the idea that when things needed to be done, we would be the ones to do them. I paid attention and I learned from my family, because I was convinced that I would be expected to do all of the things that they could do and then pass that knowledge down to the next generation. I lived, and learned, a lifestyle grounded in the authentic experience of working toward actual solutions informed by genuine needs and tangible materials.

My early formal educational experiences seemed to have had no coherent relation to my lived experiences; school was the place we learned categorical facts, procedural modes of thinking, and the expected forms of civic responsibility. For the most part, school was not grounded in tangible experience and seemed to lack the immediacy of life. I was certainly not provided with the skills necessary to articulate the differences between my experienced life and the emptiness of procedural forms of knowing. My perception that school could never be related to the world of my experiences began to change when I entered Auburn University, a public institution located less than two hours drive from the familiar environment of home. After years of a simplified and positivist system, the university offered me a place that was secure, compelling, and familiar. I performed rather poorly in subjects that continued to be procedural; however, I began to excel in areas that allowed for individuality, that encouraged the questioning of my identity, and that stimulated engagement with

an experiential world; I was challenged in ways that had not been possible in high school. Thus, after brief stints in engineering and the fine arts, I found my way to an architectural education.

As an architecture student, I was introduced to the forms and means necessary to unite the disparate structures of education and my lived experience. At Auburn, in the mid-1980's, there was a strong and legible form of phenomenological discourse that seamlessly integrated experiential and ontological ways of knowing with equally robust critical engagements with both place and materiality. The confluence of phenomenological discourse and critical engagement sanctioned, for me, an architecture that was theoretically grounded in the immediate and tangible world of considered and constructed place. My particular experiences were encouraged as valid means of expressing my environment; the life I knew—one familiar and secure—shaped place-making that was qualifiably meaningful. The theoretical stance that architecture can, and should, be meaningful was most readily informed by Norberg-Schulz's assertion that one of the basic needs of people is to experience life-situations as meaningful and that architecture exists as one means of "keeping" and transmitting this meaning (Norberg-Schulz, p. 5). At the same time that my particular experiences were being validated as meaningful, I was also taught by the faculty and my peers at Auburn to be rigorously critical of those very experiences and my interpretations of them. It was not enough simply to accept things as they appeared; a methodological process of analysis, evaluation, and synthesis was crucial to ensuring that architecture did not devolve into sentimentality or deliberate form making. These critical and theoretical approaches to architecture subsequently informed my professional and academic careers.

Upon graduation with bachelor's degrees in architecture and construction science, I spent the beginning of my professional career as an assistant project manager in a small commercial construction company. This choice of career was the result of a deep recession in the architectural marketplace; however, fortuitously, it allowed for further exploration of the tangible materiality of our built environment. I experienced first-hand the reality of building the designs conceptualized and documented by practicing architects. This education—in the metaphorical and literal "trenches"—allowed for the further intermingling of my lived experience with my educational background. I know that it eventually made me a more informed architect; I learned from having to critically mitigate the oversights of other architects. When the economy began to improve, three years later, the construction company that I worked for was absorbed by a mid-sized architecture firm. As I had a degree in architecture, I slowly transitioned from construction management duties into the design environment of an architectural studio. It was in the studio that I began to meld the knowledge I had gained in construction with the critical and theoretical approaches to architecture afforded by my undergraduate education.

Reframing Beliefs

After eleven years of practice, predominantly in public housing, entertainment venues, and aviation design, I found that the critical and theoretical approaches to architecture that I had learned as an undergraduate were still not fully informed by a coherently robust theoretical position. Simultaneously, I realized that the things I did know—the tangible realities and experiences of architectural practice—could be passed down to a new generation of designers; a realization that cohered to my childhood notions of how families transmit practical and ethical knowledge from one generation to the next. The convergence of these two realizations led me to graduate studies in philosophy, both to further my interests in ontological and phenomenological discourse and as a means of obtaining the credentials necessary to teach at the university level. The rigor of

philosophical discourse with an emphasis in architectural phenomenology and ontological forms of knowing both implied a pedagogical methodology of architectural education and reframed my personal world-view. Both of these repositionings reinforced a synthetic understanding of lived experience, enlightened by an informed awareness of contemporary critique. By adopting this synthetic world-view, personal issues related to my lived experience significantly altered the course of life-events that I had previously envisioned. It was during the completion of my coursework in philosophy that my wife and I decided that our daughter should be exposed to the myriad realities of the developing world as opposed to the absolutist mythologies of American wealth, privilege, and excess.

Our decision to engage the realities of the world—a decision predicated on a more critical awareness of our life as a family—led me to the Faculty of Architecture at Chiang Mai University (CMU). Thailand, a place we had both visited, seemed a model location to engage the tangible world and be rigorously aware of that engagement. Thailand was, for us, the ideal place; a place indifferent to my western sensibilities and removed from the particulars of my wife's Chinese/Indonesian heritage. Thailand provided no tangible links that might influence our expectations and observations; it was truly foreign to both of us. Thailand, conceptually, became the place that tested my understanding of the ways that I might engage and construct my particular world as an educator in the field of architecture. As noted previously, my position as a Special Foreign Lecturer, tasked with teaching an “architectural English,” seemed to be a straightforward assignment. My actual day-to-day interactions with Thai students, interactions both pedagogical and personal, exposed me to the ostensible incongruity of globalization and its effect on particular identity.

While at CMU, I had the opportunity to interact with faculty and students through participation in both curricular and extra-curricular activities. As an integral member of the faculty—and in conjunction with my teaching appointment—I was encouraged to participate in the intellectual and cultural life of the Faculty of Architecture and the city of Chiang Mai. I participated in faculty and committee meetings and assisted in the development of course syllabi, instructional strategies, and design projects conceived to provide students with the skills required of practicing architects. I worked with various faculty members on academic and professional projects that were ancillary to, but interwoven with, my teaching responsibilities. I observed, and to some lesser extent participated in, traditional Buddhist ceremonies related to the dissemination and acquisition of architectural knowledge. I joined faculty and students in the myriad cultural celebrations associated with Lanna identity—banquets, dances, processions, parades, and the larger national/regional celebrations of Loi Kratong and Songkran. I also spent countless meals, coffee breaks, evenings, weekends, and holidays with both my students and my colleagues; all of these activities populated with discussions of our differing ways of viewing our worlds. These exchanges served to introduce me to, and involve me in, the activities of a particular group of people with attachments to and familiarity with a particular place.

As a lecturer my primary duties involved teaching beginning design to second-year students who had had previous exposure to both technical and expressive means of visual representation. These students were quite well versed in drafting and sketching but had no structured exposure to design elements and principles, the foundational components of any design vocabulary. As a matter of curriculum, the faculty of CMU thought it beneficial for these second-year students to be exposed to the elements and principles of design from a Western viewpoint. I spent at least half of each workday actively involved in teaching the elements of point-line-plane-volume and the mechanics

of ordering systems articulated through the principles of hierarchy, rhythm, symmetry, and repetition. While it appeared to be a reasonable pedagogical method—introducing a Western architectural design vocabulary in conjunction with introducing the basic components of a visual design vocabulary—the second-year design studio problematized the point of intersection between the globalization of architectural discourse and particular Thai engagement in the world. The studio became the place of incongruency, the place where globalization came into conflict with particular identity.

Interpreting Conditions

My straightforward task became anything but straightforward in the second-year studio. My students were certainly interested in the words, the English words, that might establish a globally informed design vocabulary; however, they were much more interested in the forms represented by the images of Western architecture that bombarded them on a daily basis. These were not images that I brought to Thailand; they were the images already there—the images available in the library, on the internet, and especially available in the journals and trade publications of the architectural press. My student's consumption and co-opting of images representing a Western architectural formal vocabulary can be seen as analogous to the consumption of market commodities in the field of advertising. According to Gillian Dyer:

Advertising helps us to make sense of things... by associating goods with personal and social meanings and those aspirations and needs which are not fulfilled in real life. We come to think that consuming commodities will give us our identities" (Dyer 1982, p. 185).

The consumption of Western architectural form appeared to be the principle means of identity construction for my students; their projects—littered with the formal vocabulary of Western architectural practice—became the image-matic representations of their constructed identities. These co-opted, commodified, and imagematic forms of Western architectural practice that were consumed and venerated by my students appeared, to me, to be inconsistent. They did not cohere with the formal and material vocabularies present in traditional Thai architecture, with the inescapable climate of Thailand, and with the cultural identity that I had observed. Seemingly, the globalization of architectural English was bringing with it a significant problem, the dilution of particular identity by a globalized Western formalism. Particular place could no longer be held as particular.

The impression that place was no longer particular, because students seemed to establish identity through uninformed image consumption rather than through the critical engagement of the familiar, was reinforced by additional observations. The vast majority of my students expressed interest in progressive; i.e. Western, forms of architectural expression rather than in the traditional forms prevalent in the architectural artifacts integral to the urban and cultural fabric of Chiang Mai. They were not just co-opting Western form, but were actively prioritizing it over the traditional forms of Thai architecture. This prioritization of the progressive over the traditional can be perceived of as a manifestation of modernism, where modernism is equated with the abandonment of tradition, history, and particular identity in favor of the promise of progress, an increased reliance on rationality, and a dynamic and evolving social order. Concomitant to the consumption of Western form and the valuation of the progressive, my students prioritized image over content; a prioritization that can be construed as a direct influence of architectural postmodernism. This form of imagematic postmodernism cannot necessarily be seen as a reaction to modernism that resituates

architecture in the local and familiar. Rather, it acts to re-adopt traditional forms without the attachment of the original culturally engendered meaning inherent in those forms. Even more paradoxical, in this case, is that the images prioritized are contemporary Western architectural images, images that have never had particular cultural significance to a traditional Thai architectural vocabulary. Finally, and most contributory to the perceived incongruency between globalism and place, was the observation that my students had no methodological framework for evaluating the appropriateness of design solutions. Solutions that might produce secure, compelling, and familiar place could not proceed beyond a co-opted and imagematic formalism lacking exposure to methodological rigor. Without a methodological framework, students had no established mechanisms for the self-evaluation and self-assessment necessary to respond to particular place and identity.

Reflective Analysis

Some time has passed since those remarkable days we spent engaged in observation of, and participation in, the particular cultural life of Chiang Mai and the CMU Faculty of Architecture. My family returned to the United States, I completed an MFA in Furniture Design at the Savannah College of Art and Design, and then accepted a tenure-track Assistant Professorship in the College of Architecture at the University of Oklahoma (OU). I currently teach beginning design to incoming first-year students and this has given me both the time and impetus for reflection. My interactions with beginning design students here have elicited reflective comparison to my interaction with beginning design students at CMU. This reflection has led me to question my initial conclusions concerning the incongruency problematized by the need for a globally coherent language of architectural discourse conflicting with the necessity of maintaining and critically engaging particular identities. The problems that I saw in Chiang Mai as indicative of this incongruency are the same problems that I now encounter in the beginning design studio at OU. Here too students are consumers of form, they value the progressive over the traditional, they prioritize image over content, and they possess no methodological basis for evaluation and assessment. It appears that my belief that the globalization of Western architectural discourse was the primary component of the perceived inability to critically engaging particular identity is not necessarily valid. Upon reflection, it is perhaps that this inability is particular to all beginning design students. Irrespective of their particular cultural backgrounds, beginning students do not have a methodological framework for the self-evaluation and self-assessment necessary to produce design solutions that prioritize attachment to, familiarity with, and the security offered by particular place.

The realization that globalization cannot be held as the primary contributing factor in eroding the creation of meaningful place, compels me to revisit my suggestion that appropriate pedagogical methodologies should be proposed in response to the increasing globalization of architectural education. This realization also calls into question my notion that professors have an obligation to facilitate interactions between Eastern and Western architectural ways of knowing. Explicitly, I stated that new pedagogical methodologies should be envisioned to enable the teaching of architectural English, while simultaneously providing students with the skills necessary to critically engage their own particular identities as means of generating meaningful places that offer security, compel attachment, and provide familiarity. Implicitly, I established a conflict between Eastern and Western architectural ways of knowing that may not be so diametrically opposed. I believe that a re-visioning of pedagogical methodologies is fundamentally sound; however, I now hold that the scope of that re-visioning can be simplified. It is the teaching of critical engagement, not the difference implied by Eastern and Western knowledge construction, which must be prioritized in order to

ensure that students have the necessary skills to engage the profession of architecture. In prioritizing critical engagement, I return to Tuan and my interpretation of his differentiation between place and space. It is the question of particular identity—“who are we” in relation to particular place?—that is foundational in constructing a pedagogy of critical engagement.

Critical pedagogy acts as a means of enabling students to ask the question “who are we?” which allows for the prioritization of identity in architectural education. Critical pedagogy is defined as a methodology that introduces students to:

Habits of thought, reading, writing, and speaking which go beneath surface meaning, first impressions, dominant myths, official pronouncements, traditional clichés, received wisdom, and mere opinions, to understand the deep meaning, root causes, social context, ideology, and personal consequences of any action, event, object, process, organization, experience, text, subject matter, policy, mass media, or discourse (Shor 1992, p. 129).

An architectural pedagogy that is prefaced on relating these meanings, causes, contexts, and consequences, through critically engaged frameworks, leads students to question their previously held notions of the validity of knowledge. Having been routinely taught that the only valid forms of knowledge are scientific and procedural, students dismiss ontological contemplation of identity as sentimental, invalid, and insubstantial. Particular identity, as a means of knowing, has no practical value in comparison to students’ procedural understandings of their worlds.

Scientific and procedural means of knowing and reality construction have constrained students abilities to critically engage their particular experiences and evaluate these experiences in relation to their particular identities and their particular environments. This diminished engagement allows for the co-opting of formal vocabularies that do not inform, and are not informed by, the particular environments that are inherently reciprocal to personal, regional, and cultural identity. In not knowing to ask the question of identity—“who are we” in relation to particular place?—students have lost the ability to articulate more than a simplified understanding of the necessary relation between place and identity construction. Identity construction is relegated to procedural modes of knowledge, and as such, is viewed as a static construct grounded in the realm of tradition; this form of identity has no influence on the purely formal vocabularies of constructed space. In this simplified system, there is no reciprocal relationship between place and identity; one cannot inform the other in any meaningful, symbol-laden way. Procedural approaches to knowledge, approaches that reinforce the dominate forms of knowing, further reinforce this conceptual difficulty. Students, irrespective of their particular cultural forms of knowing, are at a theoretical disadvantage when presented with questions intended to elicit synthetic understanding of the engaged relation between place and identity.

Synthetic Outcomes

The prioritization of a theoretical discourse that reinforces the relationship between place and identity is necessary in developing the methodological skills students need to critically engage an architecture fully grounded in particular place and responsive to particular identity. In order to insure this interaction and engagement, it is useful to construct a methodological framework informed by a critical pedagogy that employs synthetic approaches to knowledge construction. This framework encourages the individual formation of relationships that address the conflict between beginning design students’ procedural approaches to knowledge and the necessary formation of

critical responses to identity and place. These critical responses act to mediate the co-opted and uninformed image consumption currently associated with architectural form. The employment of a synthetic approach to knowledge and reality construction encourages student work that represents each student's unique way of interpreting the world he or she engages. These interpreted worlds are the intricate and synthetic assemblages of events, experiences, associations, and reflections that do not necessarily conform to categorical frameworks or to the procedural structures resultant of their previous educational backgrounds. The synthetic intricacies of identity do not have to cohere to procedural ways of knowing, but, rather, are more appropriately understood as the impure products of personal experiences, life-narratives, and muddled reflections.

Having only begun to construct and evaluate methodological frameworks informed by critical pedagogy, I have had no time to reflect upon the formal outcomes of student work. I am not yet willing to make any definitive statements about the potential of these frameworks to produce design solutions that actually prioritize attachment to, familiarity with, and the security offered by particular place. That said, I am willing to offer—based upon observations and interactions—that my current students are making progress toward critical engagement. Most of these observations involve students' actually engaging in critical dialog, as compared to their lack of engagement prior to implementation of critically informed methodologies. Students now appear prepared to actively and critically explore, engage, and reflect upon the complexities of their identities in relation to the evolving particularities of place. In constructing methodological frameworks, rather than relying upon procedural frameworks, there appears to be a reduction in initiatives aimed at categorical explanations of synthetic experiences. Unmitigated, these categorical initiatives prevent reflection upon particular identities that might allow for the creation of meaningful places.

As beginning design students develop their individual methodological approaches, it is imperative that critical pedagogical methodologies moderate prioritization of procedural methodologies that allow for uninformed form making. Critical engagement with particular identity and particular place emphasizes the necessity of hybrid and synthetic approaches to knowing, constructing, and participating in the world. Synthetic interpretation of experience and particular place, coupled with awareness of the intricate complexities of identity, begins to mitigate the incongruencies associated with students' simplified procedural backgrounds. These simple backgrounds, both educational and cultural, encourage paradoxical attempts to create procedural ordering systems in response to the confusing complexity of existence. When employed as methodologies of design, these ordering systems are ineffective in communicating the complexities of experience—robust complexities that are antithetical to categorization—that constitute our particular identities and allow us to both construct and find meaning in particular place.

In response to categorically mandated exclusions of the robust existential complexities of identity and place, the incorporation of a critical pedagogy into beginning design education encourages students to question the priority given procedurally focused and ontologically uninformed approaches to knowledge. The methodological frameworks provided by critical pedagogy endow students with the skills needed to both participate in a globalized architectural discourse and recognize the inherent necessity in maintaining and critically engaging particular personal, regional, and cultural identities. In accepting critical methodologies, students can simultaneously explore an ontologically grounded knowledge framework while becoming fully conversant in a global architectural discourse. Critical pedagogy allows students to both experience the freedom afforded by globalized space and be secure in knowing the particular places they call home. This synthesis of the global and the particular allows for fully considered responses that prioritize architectural

solutions that are capable of generating meaningful places that offer security, compel attachment, and provide familiarity.

The Use of Webblog Enhancing English Literacy in Globalization Society

“New Direction for Study English as a Foreign Language (EFL)”

Ornsiri Wimontham

English Program, Faculty of Humanities and Social Sciences
Nakhon Ratchasima Rajabhat University, Nakhon Ratchasima Province, Thailand
onsiri22@hotmail.com

Abstract

The experimental group for this research was 52 first year students majoring in English of Nakhon Ratchasima Rajabhat University. The research instruments were webblog, questionnaires and open-ended response questions. The data was analyzed by Percentage, Average, Standard Deviation, and Rating Scale. The results showed that the experimental group's English literacy was widely enhanced. The experimental group was very satisfied using webblog as an outside class activity. This activity helped experimental group to gain more literacy on English vocabulary, conversation, slang, idiom, reading and writing. Besides, descriptive data analysis showed that 52 percent of students were satisfied to develop English literacy by themselves using webblog, 59 percent got more knowledge on international cultures from bloggers, 68 percent wanted to learn third languages like Japanese, French, and German.

Keywords- *webblog and English literacy*

Introduction

At a university level in Thailand, writing a course syllabus for English subject is similar to other countries where English is taught as a Foreign Language (EFL) . As a result, the main purpose of the course syllabus is to help students to be fluent in English language so that they can use it for their future career effectively. At the end, students are expected to be better in listening, speaking, reading, and writing in English. For communicative skill, they are expected to use the language in speaking, communicating, dealing, and contacting with foreigners efficiently. However, many EFL researches

show that Thai students at a university level are not fluent in using English language as well as they are not confident in communicating with foreigners. These EFL researches have revealed that the important cause of these problems is that the students are not satisfied on teaching materials as well as this makes them feel bored in study English language both inside and outside class.

According to the above reason, it can be said that teaching material is essential for study English. Without it, students are not motivated and not satisfied to study this language as well as this causes them do not have English literacy. To enhance students' English literacy, it is essential that students to be interested in finding, reading, or searching for updated English contents by their own. This learning behavior helps students to wider their English knowledge and skills till they are adults. This is like a concept of “Life Long Learning Education”. The view point shows that students' English literacy will be more developed if they study it as outside class activities. This study style is called “self-access learning”

The concept of self-access learning is that it is better to push students to have motivation for studying English than just to let them be “passive students”. A teacher is a key person who will encourage students to be “active students” who are eager to search for new English knowledge after class. For this reason, we have to accept that studying English is the practical learning process. The students should not be allowed to sit, listen, and write on the book only. In a classroom, a teacher is like a monitor who provides the contents and prepares teaching materials for developing students' English skills. Besides, the teacher may provide interesting English sources for searching for more information outside class. Whenever students do not understand any English contents, the teacher is the advisor who will give them clearer explanation and encourage them to

continue their learning. Because of the importance of interesting learning material, the researcher selects “webblog” which is one type of online social network to be the research instrument.

Illustration 1 : Webblog

Webblog is to relate “online social network” that is the world trendy activity. People from different countries can get in touch and communicate with each other from this network. They can write and post their ideas on their webblog. They can read, share ideas, comment, and up-load video clip on other webblog also. At the same time, they can chat with online bloggers who have never met before. There are a lot of websites created by webblog systems such as www.friendster.com (75 million members), www.myspace.com (72 million members), www.hi5.com (80 million members), www.linkedin.com (5 million members) and www.facebook.com (90 million members).

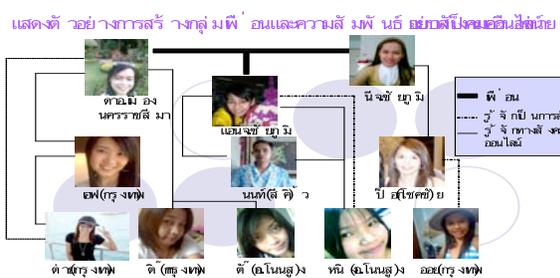

Illustration 2: Online Social Network Education

In Thailand, the use of webblog has been popular for the last five years. Like people all over the world, Thai students surf on this network everyday

and it becomes one of their daily activities. The students use this cyber site to create their own webblog group. To build the groups, they can create or join any groups which they are interested in the same topics like music, food, entertainment, sports, culture as well as foreign languages. In each group, the students can see and know foreign online friends. Some students said that they are excited to join and to chat with foreigners who are in the same webblog network. They are satisfied to share their idea with their foreign online friends. Interestingly, the students try to mail, post, comment, and communicate with foreign online friends although they are not fluent in English and they are weak at English language.

According to this interesting online system, the researcher selected webblog system to be the research instrument for enhancing students’ English literacy.

Research methodology

The experimental group for this research was 52 first year students majoring in English of Nakhon Ratchasima Rajabhat University. They studied in semester 1 of educational year 2008. The research instruments were webblog, questionnaires and open-ended response questions. The data was analyzed by Percentage, Average, Standard Deviation, and Rating Scale.

Results

The results showed that the experimental group’s English literacy was widely enhanced. The experimental group was very satisfied using webblog as an outside class activity. This activity helped experimental group to gain more knowledge on English vocabulary, conversation, slang, and idiom. Students gained more comprehension in English reading and writing. Besides, descriptive data analysis showed that 52 percent of students were satisfied to develop English literacy by themselves using webblog, 59 percent got more knowledge on international cultures from online friends, and 68 percent wanted to learn third languages.

Discussion

This research found that EFL teachers are able to develop students’ English abilities by using the things that the students are interested in as a teaching

aid. Definitely, the teachers may promote students' English literacy by encouraging them to take part in the social trendy activities. Like other researches, this research found that Thai students always pay high attention in reading, writing, posting, chatting and connecting themselves with online bloggers. They have spent much time in writing for webblog network like www.seeyou.com, www.letlink.com, www.highway.com www.hi5.com, www.myspace.com, www.twistter.com, www.wideclub.com, and www.blogger.com. To apply this theory, the teacher should take online social network to be used as a research instrument. It can be said that the students will be able to enhance their literacy by using world fashionable activities.

In addition, the results showed that the teacher should not wait to see what students' learning problem is and then solve it. On the other hand, it will be better if the teacher focuses on activities or materials which students are interested in or happy to involve with. Then, the teacher brings those activities or materials to be used as research instruments to solve students' English problems. To sum up, this is called doing the research on "students' satisfaction based learning".

Abstract

People go to the hospitals or clinics with the expectation to be aided by excellent paramedics. What are the nursing majoring students' interpretations on the idea of being an excellent paramedic? This research approaches the question by means of investigating the statement of the sophomore students in the five-year nursing schools, analyzing their opinions of being an excellent nurse and discussing the trend of the viewpoints of the students. The requirements of nursing majoring students are mostly related to individual characters, the profession and humanistic background. Among them, most students rate "the profession" the highest one, then the "individual characters" while only very few emphasizes "humanistic background." According to the result of the study, this paper suggests that there should be more humanistic background related courses or activities introduced into the training process of the paramedics so the students can be a nurse with profession and humanistic care. The research result can also be a reference for the nursing courses' plan or professional development.

Keyword: Individual characters, Profession, Humanistic background

Introduction

With the development of society, economics and culture, nursing care has been changing its past emphasis on diseases, into a current emphasis on disease prevention and health promotion. But no matter how it has been changing, it is always intimately related to people. In a nursing care that is mainly based on person, patients and their families are deeply affected by whatever behaved by any nurse, including their professional and non-professional conducts such as their attitudes, appearances or nursing skills. Various hardware and software of a hospital, such as its environment, the expertise of its nurses and its attitude on medical services are also taken into account by patients as how valuable it is for any medical consumption in that hospital. Thus, the public seems to demand higher standard on medical personnel and so nurses that are in numbers are definitely included.

In nursing profession, any nurse should bring their own social function into full play so that any patient being cared will stay in the best condition under treatment. To achieve that, a nurse has to establish good interpersonal relationships with any patient through his/her conducts, manners and professional skills. It is often heard that a nurse is like an angel, which indicates that a nurse is supposed to be a sweet and tender carer. However, this is only one facet from which a nurse is regarded by the public. All these conclude that outward appearance and inward nature are complementary and indispensable for any all-round nurse.

The purpose of this study is to find out how do nursing students of a junior college think about “a good nurse”. A suggestion regarding curriculum planning and learning is then proposed based on their opinions, for a future review on nursing curriculum planning of a junior college.

Research Methodology

The purpose of the study was to find out nursing students’ thoughts and initial concepts about “a good nurse” through the perspectives of grade 11 nursing students in a five-year vocational school. Qualitative research methods were adopted. The results of the study can serve as reference materials for nursing curriculum planning in five-year vocational schools as well as for nursing profession development.

Research Subjects

Convenience sampling was used in the study, and the subjects consisted of 49 nursing students in the 11th grade from a five-year vocational school. Over the past year they had taken basic courses in anatomy, physiology, biology and chemistry, as well as the *Introduction to Nursing*. The *Introduction to Nursing* (2 credits/2 hours) was one of the core nursing courses. The other basic courses they had taken included

Human Spirit, Chinese, English, Modern History, Geography and Mathematics. The 4-credit *Human Spirit* was one of the core courses of the school and was offered in the first term of the 10th and 11th grade.

Data Collection

Fundamental Nursing and Experiment (5 credits/7 hours) was one of the core nursing courses and was offered in both terms of the 11th grade. In the first class of the course, the researcher informed the grade 11 students of the aim and content of the study and requested their consent. After obtaining their consent, the researcher asked the participants to answer an open-ended question: “Based on either your personal experience of seeing a doctor or accompanying someone to see a doctor, or your understanding of the courses you have taken, what do you think makes a good nurse?” The question was answered anonymously and voluntarily. There was not a limited time span for answering the question, nor was there a limited length of the answer.

Data Analysis

Qualitative research produces large amounts of complicated data. It is necessary for the researcher to apply full attention to the data, and to read the words carefully and repeatedly so as to not miss any information. A total of 49 questionnaires were returned. The data was analyzed by the researcher’s reading the answers repeatedly. After the researcher understood all the information provided, the answers were coded and similar opinions were marked, in which significant statements were identified. Statements with similar meanings were gathered to form subtopics, to each of which a clear definition was given. Comparative analysis of the raw data was then performed. The results were organized to form topics and construct a conceptual framework of a good nurse. Nvivo 7.0, a computer-assisted qualitative data analysis software package, was used in the process of data analysis to help clarify the correlations of the concepts and record the process of analysis and thinking.

The Rigor of the Study

In order to maintain the credibility, auditability and confirmability of the study, the research data was collected solely from the written answers of the informants. The rich raw data was coded and preserved. The researcher transferred the original textual data faithfully to the computer and later to Nvivo 7.0 for analysis and induction. No subjective opinions of the researcher or the analyst were added. With nine years of nursing clinical experience, the researcher has taught nursing for years, seven of which are spent teaching nursing students; and the researcher maintains close, trusting relationships with the nursing students. After the preliminary analysis, the researcher

discussed and revised the analysis results with the co-researcher, who held a doctorate degree. Moreover, a nursing expert with rich experience in qualitative research was invited to compare the analyses to ensure the credibility and reliability of the data analysis.

Results

A content analysis of the data gathered in the study revealed that the 11th grade nursing students' thoughts and concepts about a good nurse could be categorized into three thematic groups. Each group contained 18 subthemes. The themes and subthemes are explained below with examples.

Personality Traits (72)

Personality traits were mentioned 72 times in total in the students' responses. Personality traits are distinguishing qualities with which a person is born, and they may not be changed or may be changed only slightly. Some examples include characteristics, physical and mental conditions, and appearances. The personality traits mentioned in the students' responses are:

1. Gentle and considerate: For example, such qualities as "gentle," "considerate," "understanding," "gentle, polite and considerate," and "soft-spoken" were mentioned in many students' answers. A total of 17 students (35%) thought a good nurse should have a gentle and considerate personality. (No. 1, 2, 5, 6, 11, 15, 16, 17, 20, 27, 29, 35, 36, 37, 47, 48, 49)
2. Good-tempered: 6 students (12%) mentioned that a good nurse should be good-tempered. (No. 2, 3, 8, 19, 24, 36)
3. Patient and caring: 20 students (41%) mentioned a good nurse should be caring, patient and kind. More specifically, some wrote that a good nurse should be patient towards patients and their family, and not lose her patience because a patient asks too many questions. The other expressions used include "loving and kind," "(she) doesn't lose her patience because a patient asks too many questions," "(she) strives to do acts of kindness to others," "(she) should always be willing to explain to and educate patients and their family without feeling bothered," and "(she) shows great patience and endurance." (No. 4, 7, 8, 11, 12, 13, 15, 17, 18, 19, 20, 21, 28, 29, 30, 34, 36, 40, 41, 46)
4. Healthy physical and mental conditions: 9 students (18%) mentioned that a nurse should be mature and in good physical and mental conditions. The expressions used include "self-motivated and energetic," "vibrant," "spirited," "in high spirits," "healthy, with a good immune system, not easily infected with a cold or flu virus, not easily tired because of short sleep," and "mature and stable." (No. 4,

5, 9, 10, 12, 19, 22, 27, 42)

5. Meticulous: 15 students (31%) mentioned that a good nurse should be meticulous with her jobs. The expressions used include “careful,” “careful and responsible,” “(she) gives meticulous attention to details all the time,” and “thorough.” (No. 2, 13, 14, 15, 21, 24, 29, 33, 34, 36, 38, 40, 41, 43, 44)
6. Appearance: A few (5) students (1%) mentioned that a good nurse should be good-looking. The words used are “cute and kind,” “better look pretty,” “better be good-looking,” “I don’t think a good nurse should be pretty,” and “looking good, knowing how to dress up and use makeup.” (No. 13, 14, 26, 40, 46)

Professionalism (178)

With the progress of medical technology, the nursing job has become more complicated. Nursing education should continue to be reformed. Nursing students should be trained to possess professional skills so that they can handle clinical nursing work after they graduate, and that the quality of nursing profession can be maintained. Based on the analysis results, a good nurse should possess the following characteristics.

1. Smiling: Many (25) students (51%) mentioned that a good nurse should wear a smile when serving patients. The expressions used include “(she) should wear a smile when facing patients and their family,” “a sweet smile,” “(she) should smile instead of keeping a straight face,” “(she) should smile even when she is tired,” and “It’s most important to smile, so that people won’t feel worse because of seeing a serious nurse.” (No. 1, 4, 5, 6, 7, 8, 9, 10, 12, 16, 17, 18, 19, 24, 25, 26, 28, 32, 33, 35, 37, 42, 45, 47, 49)
2. Polite: 13 students (27%) mentioned that a good nurse should treat other people with courtesy. The expressions used include “with good manners and a good attitude,” “gentle and polite,” “polite to patients and their family,” “ (No. 2, 7, 8, 9, 12, 16, 17, 18, 19, 23, 25, 26, 27)
3. Friendly and approachable: 21 students mentioned that a good nurse should possess friendly qualities, including “not pulling her face straight, looking kind and approachable,” “projecting a friendly image,” “looking easy-going,” “treating people friendly,” and “not treating patients in a nasty way.” (No. 1, 2, 4, 5, 6, 9, 10, 11, 12, 13, 14, 15, 16, 25, 26, 31, 44, 45, 46, 48, 49)
4. Talk nicely and communicate well: The students also mentioned that a good nurse should be elegant in speaking, such as “(she) should not talk loudly and rudely,” “(she) should not chatter,” “(she) can communicate well with patients and experiences no language barriers,” “(she) chats to patients often,” (she) knows how to deal with people,” “(she) asks patients how they feel,” and “(she)

- speaks softly.” A total of 17 students (34%) thought a good nurse should possess this quality. (No. 1, 2, 3, 5, 7, 8, 14, 22, 24, 26, 28, 30, 31, 35, 40, 42, 47)
5. Good attitude of service: While good service quality is much emphasized nowadays, an attitude of service in clinical care has become more and more important. The nursing students interviewed provided many thoughts on the issue. According to them, the attitudes a good nurse should have include “works with a professional attitude,” “holds a friendly attitude and projects a kind, responsible, cheerful attitude when receiving an emergency call from the patient,” “being earnest and responsible at work,” “works earnestly and tirelessly,” “treats patients with a good attitude so as to earn patients’ trust besides helping them get well.” (13 students, 27%) (No. 9, 10, 11, 17, 18, 24, 34, 35, 36, 37, 39, 40, 45)
 6. A neat and clean-cut appearance: A majority of (32) students (65%) thought a good nurse should keep her appearance neat and tidy. The expressions used include “Clean and neat- she should look clean, instead of being unkempt,” “a comfortable and clean feeling,” “clean, tidy and eye-pleasing,” “clean and well kept,” “dressed clean and neatly,” “clean,” “looks clean from top to toe,” “dressed neatly and in uniform shoes,” neatly dressed and clean,” “a neat, clean appearance,” “with good hygiene,” “pays attention to bodily cleanliness and orderly appearance,” “dressed neatly and clean,” “neatly dressed,” “keeps herself clean,” “well-groomed and clean,” “neat, clean-cut appearance,” “not necessarily pretty, but looks clean and neat,” “nicely dressed,” “looks clean and tidy,” “has fair and clear complexion,” “looks clean overall,” “neat and clean appearance,” “look well kept,” “keeps herself clean and the patient’s environment clean,” “looks clean, has good grooming and hygiene,” “pays attention to bodily cleanliness,” “hygienic and clean-cut.” (No. 1, 2, 4, 5, 6, 8, 9, 10, 11, 12, 14, 15, 16, 17, 18, 20, 22, 24, 25, 26, 27, 28, 31, 32, 34, 41, 42, 43, 44, 45, 47, 49)
 7. Adequate professional knowledge: The subjects had not learned clinical nursing practices yet; however, they not only wrote their thoughts about appearances, but also expected a good nurse to be equipped with professional knowledge and skills. 15 students (30%) talked about this aspect. Their thoughts include: “she should be skillful and knowledgeable,” “she should have a certain level of professionalism,” “she must be able to answer questions and careful with medication and everything else,” “she must have a good knowledge,” “observant and knowledgeable,” “with a cool head, a feeling of expertise and opinions,” “has professional nursing knowledge,” “enriches her knowledge anytime, anywhere,” “most important is to have the professional knowledge required,” “has professional nursing knowledge and is scrupulous,” “professional

- knowledge,” “has professional knowledge and is brave enough to bring up any question,” and “pays meticulous attention to patients’ conditions and strengthens her nursing knowledge anytime.” (No. 1, 13, 14, 15, 20, 21, 24, 31, 27, 39, 40, 41, 44, 45, 48)
8. Good professional skills: In the aspect of professional skills, the students mentioned “good skills and a good knowledge,” “must have a gentle touch instead of being rough,” “professional and not rough,” “has good nursing skills,” “skillful,” “skillful and not rough,” “has good skills,” “with good speed and efficiency, intermediate-to-high-level skills,” “with quick and accurate movements, is observant and knowledgeable,” “skilled,” “is adept, works extra hours, checks out patients frequently,” “showing great dexterity,” “masters basic skills,” “must master basic skills,” “must be quick and accurate when performing tasks, be able to make decisions calmly, not hesitant when giving a shot,” “pays attention to procedures and other details, as well as the sanitation and cleanliness of the surroundings,” “skilled and responsive,” “is skillful and strengthens her knowledge anytime, anywhere,” and “masters professional skills.” (18 students, 37%) (No. 1, 3, 8, 11, 16, 20, 21, 24, 25, 26, 27, 28, 30, 31, 33, 37, 39, 42)
9. Cares about professional responsibility and ethics: Part of the (24) subjects (49%) thought a good nurse should be responsible and conscientious. The expressions used are “conscientious, responsible, easy-going,” “not lazy, with good hygiene,” “earnest and responsible, with a sense of justice like the Powerpuff Girls,” “earnest and not slothful,” “does not show her emotions in front of patients no matter how tired she is, does not make other people nervous,” “must not talk about coworkers’ private matters in front of patients, find faults with others or be unfair,” “must be able to deal with patients’ demands quickly,” “thinks a lot for patients beforehand,” “must interact well with patients,” “is tireless and does not vent her emotions on patients,” “is able to separate work from personal life and does not bring her emotions to work,” “must be brave to admit her mistakes, know herself and where she stands, be dutiful but not an interfering busybody,” “willing to sacrifice, helpful, honest,” “punctual,” “is responsible, does not bring her negative emotions to patients,” “respects patients’ privacy and does not gossip about patients’ private matters,” “protects patients’ privacy,” “does not bring emotions to work,” “must have enthusiasm for nursing care,” “makes hospitalized patients feel comfortable,” “reads new information anytime,” “with a proper attitude and a sense of responsibility,” “tireless and kind-hearted,” and “must not vent anger on other people when feeling upset, does not reveal patients’ private matters, must not hold a grudge, and must be decent.” (No. 1, 3, 5, 6, 9, 10, 11, 12, 17, 18, 19, 23, 24, 25, 27, 30, 31, 32, 33,

39, 42, 44, 45, 46)

Human Spirit

1. Has people-centered concepts: Part of the (14) subjects (28%) thought a good nurse should pay attention to patients' physical and mental responses, and think for patients. The expressions used include "patient-centered," "must serve patients attentively and make patients the focus," "puts patients first," "thinks for patients," "has a helpful nature," "takes heed of patients' mental state and offers proper consolation and encouragement," "instead of viewing doctors as gods, she should make patients the center - an indispensable part of nursing expertise," "puts patients' comfort and privacy the first priority," "must make patients' safety and comfort the first priority and allow them to recover at peace," and "must make patients' comfort and privacy the first priority whatever she does." (No. 4, 15, 16, 18, 22, 25, 28, 29, 30, 31, 34, 38, 40, 43)
2. Feels much concern for patients: 6 subjects (12%) expressed that a good nurse should show much concern for patients, and listen to their opinions, such as "consoling patients from time to time, listening to their opinions or cheering them up," "cares much about patients and builds good rapport with them," "feels much concern for patients," "takes patients seriously and cares about them," "feels concern for patients all the time," and "cares for patients and asks them how they do." (No. 18, 38, 43, 44, 45, 48)
3. Shows empathy: Part of the subjects also mentioned that a good nurse should be able to stand in patients' shoes and think for them, such as "sympathizing with patients' and their family's feelings," "showing empathy and thinking for patients from their perspectives," "thinks for patients," "treats patients as her own family," "stands in patients' shoes," "treats patients like her parents," "thinks a lot about patients' needs from their standpoints," and "is kind-hearted and sympathetic." (No. 4, 18, 21, 22, 26, 32, 35, 43, 44)

Conclusions

A nursing director ever mentioned that good nurses should possess medical skills and embody virtues which included mercy, perseverance, agility, teamwork spirit as well as excellent skills (Zhang, 2006). These ideas were just as the same as most of the personal characteristics brought up by this group of students. For example, they mentioned the idea to be gentle and considerate which conformed to the opinion brought up by the graduate school that the nursing staff should possess mercy and sympathy to help patients timely. Perseverance and durance were similar to patience mentioned by students. These showed that students and clinical nursing supervisors shared the same viewpoints. As for the appearance and health conditions, these

belonged to individual features which could not be changed. A research targeting on medical students showed that female medical students concerned the health issue more than male students did (Hong, Chen, 2004). Most of the nursing staff as well as participants of this research were female, and this showed female would care the health issue more when being engaged in medical field. Nursing students involving in this research mentioned that nurses should possess gentleness, thoughtfulness, mercy, patience and good temper. These characteristics might be or might not be changed. Per F. Drucker (2001) said that manpower was one of important assets in the organization, and each employee owned his (her) unique personality which would result in different behavior and performance. In consequence, another research proposed to put emphasis on employees' personality and recruitment screening from the angle of HR management in order to enhance the labor quality (Huang, Xue, 1998).

In addition to expertise and skills, this research also categorized several dimensions into "Professional Quality", including smiles, politeness, good speech and conversation, and appearance because they could be changed through training. Students who participated in this research also figured out most of the personal features that the nursing staff should possess, and these almost belonged to "Professional Quality". It was perceived that students had certain cognition regarding the expertise of nursing staff. Moreover, almost a half of students mentioned that excellent nursing staff should put emphasis on professional liability and ethics, as well as to be responsible for the nursing work. It clearly showed that a half of students already agreed to have the sense of responsibility to the nursing work before they studied in the college. This was also one of the important findings in this research.

Education should start from the awareness of human nature instead of merely vocational trainings. Therefore, the mission of education should be reemphasized together with conferring knowledge and skill training (Huang, 2008). The nursing education is such a profession very closely related to human beings, and therefore should concern the humanity more. The working attitude with humanity becomes more and more important to many professions. As one of the jobs to contact patients the most frequently, nursing staff's service attitude with humanity has been more and more emphasized. Most of the nursing students thought that good nursing staff should possess expertise and medical skills, but only 10~15 students mentioned to take patients as the principle thing, to care patients more, and to possess compassion. A research investigating the current status of humanity education in vocational colleges indicated that besides assigning a specific department to arrange courses, the colleges should actively tie in with activities of student unions, the teaching of each subject and relevant measures to enforce humanity education and to elaborate the spirit of

humanity (Lin, Chen, 2004). Therefore, it is very important in the nursing course planning to enhance students' attention toward human beings and to possess compassion when taking care of patients.

Regarding the development of talents in the nursing education, people usually focus on the expertise and professional skills but neglect the cultivation of humanity spirit. Only through the equal emphasis on humanity spirit and other expertise and skills, should it be the very appropriate mode of talent cultivation in the modern higher education of nursing, as well as to tally with the education philosophy which stresses people orientation and comprehensive development. As a result, the traditional concepts in higher education of nursing should be changed, and talent cultivation should emphasize the development and enhancement of students' quality. Hopefully the research result can be references to the nursing education and course planning in the future.

Education program on conservation of genius loci of the spatial cultural heritage is very important for heritage conservation, which was disregarded regularly in Taiwan. The genius loci of the spatial cultural heritage is defined as the tangible space and the intangible elements (memories, oral narratives, written documents, rituals, festivals, traditional knowledge, values, odors). Some advancing countries regard education plans on conservation of genius loci of the spatial cultural heritage as significant foundation for heritage conservation. Successful education plans can aware people the importance of heritage conservation.

Therefore, this research, which includes the collection and generalization of the references and real cases, will reveal the education plans from National Park Service in America on conservation of genius loci of the spatial cultural heritage, which include the systems of education plans of National Park Service and the executing methods from cultural heritage managed by National Park Service. Then, this paper will discuss how to evaluating the possibility of improving conservation of the Genius Loci of cultural heritage in Taiwan by educational program from the experience of U.S. National Park Service.

Keywords: cultural heritage, historic place, conservation

* The authors acknowledge National Science Council of Taiwan for supporting this research work under Grant NSC 98-2221-E-153-003.

Rethinking of cultural heritage education: the genius loci of the spatial cultural heritage is defined as the tangible space and the intangible elements

In Roman mythology, a genius loci was the protective spirit of a place. It was often depicted as a snake. In contemporary usage, a genius loci usually refers to a location's distinctive atmosphere, or a "spirit of place", rather than necessarily a guardian spirit¹.

In 16th General Assembly and Scientific Symposium of ICOMOS in 2008, Quebec City Declaration: On the Preservation of the Spirit of Place was made to announce that a genius loci was discussed as an important mission of conservation of cultural heritage in the future. It was written that the spirit of place is defined as the tangible (buildings, sites, landscapes, routes, objects) and the intangible elements (memories, oral narratives, written documents, rituals, festivals, traditional knowledge, values, odors), the physical and the spiritual elements, that give meaning, value, emotion and mystery to place. Rather than set apart spirit from place, the intangible from the tangible, and consider them as opposed to each other, we have investigated the many ways in which the two interact and mutually construct one another. The spirit of place is constructed by various social actors, its architects and managers as well as its users, who all contribute actively and concurrently to giving it meaning².

The spirit of place offers a fuller understanding of the living and, at the same time, permanent character of monuments, sites and cultural landscapes. It provides a richer, more dynamic, and inclusive vision of cultural heritage. The spirit of place exists, in one form or another, in practically all the cultures of the world, and is constructed by human beings in response to their social needs. The communities that inhabit place, especially when they are traditional societies, should be intimately associated to the safeguarding of its memory, vitality, continuity and spirituality³.

Real historic places generate excitement and curiosity about the people who lived there and the events that occurred there. From ancient ruins, homes of presidents and poets, and battlefields that comprise national parks, to the main streets, factories, and temples listed in the Cultural Heritage for the nation because they make a state or community special, places grab our attention. They offer experiences and information that help make the past real for anyone who visits or studies them. If a historic place can be taught by education, the spirit of cultural heritage can be felt by the tourists properly. Therefore, education is an important way to protect the spirit of cultural heritage.

Educational program for cultural heritage managed by National Park Service, USA

The National Park Service (NPS) is the U.S. federal agency that manages all national parks, many national monuments, and other conservation and historical properties with various title designations. It was created on August 25, 1916, by Congress through the National Park

¹ In the context of modern architectural theory, genius loci has profound implications for place-making, falling within the philosophical branch of 'phenomenology'. This field of architectural discourse is explored most notably by the theorist Christian Norberg-Schulz in his book, *Genius Loci: Towards a Phenomenology of Architecture*.

Service Organic Act. It is an agency of the United States Department of the Interior.

National Park Service archeologists, architects, curators, historians, and other cultural resource professionals work in America's nearly 400 national parks to preserve, protect, and share the history of this land and its people. Beyond the parks, the National Park Service is part of a national preservation partnership working with American Indian Tribes, states, local governments, nonprofit organizations, historic property owners, and others who believe in the importance of our shared heritage – and its preservation. One of the NPS's Programs is "Heritage Education Services Program" which is managed by one of the partners of the NPS: Heritage Education Services (Figure 1).

The Heritage Education Services Program has three responsibilities. The first responsibility is to carry out a program to enable the NPS to be fully engaged in using cultural resources and historic preservation programs to educate people of all ages, promoting public knowledge and support for cultural resources in parks and communities nationwide and the role the NPS plays in their identification, preservation, and interpretation. The second responsibility is to administer the Teaching with Historic Places program with its series of on-line lesson plan series and the Discover Our Shared Heritage travel itineraries. The third responsibility is to work with NPS cultural resources programs and other organizations and partners inside and outside of the NPS to develop, better coordinate, and extend the reach of education, training, and public awareness activities relating to cultural resources and the programs of the National Park Service⁴.

Teaching with Historic Places (TwHP) is a program of the National Park Service's Heritage Education Services office (Figure 2). Over the years TwHP has developed a variety of products and services. These include a series of lesson plans; guidance on using places to teach; information encouraging educators, historians, preservationists, site interpreters, and others to work together effectively; and professional development publications and training courses.

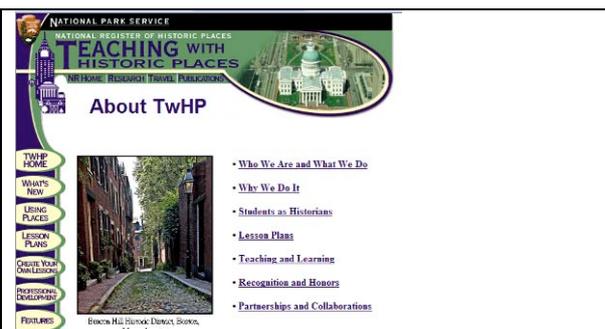

Figure 2 webpage of Teaching with Historic Places (adopted from <http://www.nps.gov/history/hes.htm>, March 15, 2010)

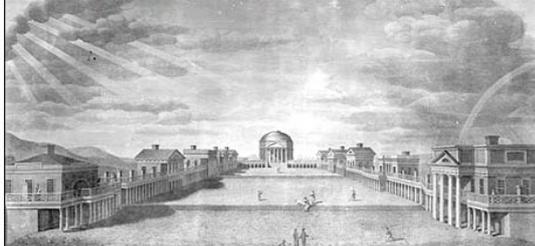

A decade ago, amidst widespread interest in the quality of education in America, the National Register of Historic Places began seeking ways to make teachers and others more aware of the educational value of historic places and documentation about them. Formally organized in 1991, Teaching with Historic Places (TwHP) set out to demonstrate how historic places—as both tangible links to the past and also sources of evidence—can help teach academic subjects, raise awareness of available information about places, and foster an appreciation for the value of cultural resources⁵.

Educational program of NPS: Thomas Jefferson's Plan for the University of Virginia

Thomas Jefferson's Plan for the University of Virginia: Lessons from the Lawn is one of lesson of TwHP. The contents of this lesson include six parts: about this lesson, getting started: inquiry question, locating the site: maps, determining the facts: readings, visual evidence: images, putting it all together: activities, and supplementary resources. In the part of locating the site, two maps are shown in the webpage, map of Virginia and Washington, D.C., and map of Charlottesville are in 1877. After simple introduction of maps, there are some questions for readers. In the part of determining the facts: readings, there are three readings: about education as the deystone to the new democracy, building the academical village and Jefferson's philosophy of education for readers. Several questions follow the readings. In the part of visual evidence: images, the topics of pictures which include College of New Jersey, Princeton in 1764, the University of Virginia in 1826 (Figure 3), plan of the University of Virginia in 1825, study for anatomical theatre in 1825, students on the lawn in 19th century and aerial view of the lawn in 1997 are shown in the webpage. In the part of putting it all together: activities, the topics of activities which include village for learning, local schools and education through the generations are shown in the webpage. There are some questions about these two parts for readers (Figure 4)⁶.

<p>Drawing 2: The University of Virginia, 1826.</p>  <p><i>(The Papers of Thomas Jefferson, The Albert & Shirley Small Special Collections Library, University of Virginia Library)</i></p>	<p>Questions for Drawings 1 & 2</p> <ol style="list-style-type: none"> 1. Compare Drawings 1 and 2. What differences do you observe in the design of these two universities? 2. In Drawing 2, how can you tell the difference between the professors' residences and the student dormitories? What features do they have in common? 3. Do the pavilions in Drawing 2 look identical, or not? Why do you think they were designed this way? 4. What elements of the architectural design of the pavilions made them "models of good taste and architecture" in Jefferson's mind?
<p>Figure 3 drawing of Thomas Jefferson's Plan for the University of Virginia: Lessons from the Lawn (adopted from http://www.nps.gov/history/NR/twhp/wwwlps/lessons/92uva/92uva.htm, April 10, 2010)</p>	<p>Figure 4 questions of Thomas Jefferson's Plan for the University of Virginia: Lessons from the Lawn (adopted from http://www.nps.gov/history/NR/twhp/wwwlps/lessons/92uva/92uva.htm, April 10, 2010)</p>

Educational program of NPS: Independence Hall

Independence Hall: International Symbol of Freedom is another lesson of TwHP. The contents of this lesson also include six parts: about this lesson, getting started: inquiry question, locating the site: maps, determining the facts: readings, visual evidence: images, putting it all together: activities, and supplementary resources. In the part of locating the site, two maps are shown in the webpage, map of The Thirteen Colonies, and map of Plan of the city and environs of Philadelphia, 1777. After simple introduction of maps, there are some questions for readers. In the part of determining the facts: readings, there are five readings: American Democracy Takes Shape, The Declaration of Independence (with partial transcript), The United States Constitution (with partial transcript), From State House to World Heritage Site, The World Heritage Convention. Several questions follow the readings. In the part of visual evidence: images, the topics of pictures which include Independence Hall (north façade), Independence Hall (south façade), Assembly Room, Independence Hall, The

⁶ <http://www.nps.gov/history/NR/twhp/wwwlps/lessons/92uva/92uva.htm> (April 10, 2010).

Declaration of Independence in 4 July 1776 (Figure 5) are shown in the webpage. In the part of putting it all together: activities, the topics of activities which include The Signers, Legacy of Freedom, World Heritage Sites, Local Government Buildings are shown in the webpage. There are some questions about these two parts for readers (Figure 6)⁷.

	<p>Questions for Painting 1</p> <ol style="list-style-type: none"> 1. How many years after the event did Trumbull start his painting? What do you think were some of the challenges he faced in creating this work? 2. Why do you think Trumbull thought it was important to capture the portraits of these men? Why do you think it took so many years to complete this painting? 3. Based on what you learned in Reading 1, who are the five men standing at the center of the painting? Who do you think is seated in the chair at the right? Why might Trumbull have chosen to portray this scene? 4. Study the painting carefully. What feelings does it evoke for you?
<p>Figure 5 drawing of Independence Hall: International Symbol of Freedom (adopted from http://www.nps.gov/history/NR/twhp/wwwlps/lessons/132independence/132independence.htm, April 10, 2010)</p>	<p>Figure 6 questions of Independence Hall: International Symbol of Freedom (adopted from http://www.nps.gov/history/NR/twhp/wwwlps/lessons/132independence/132independence.htm, April 10, 2010)</p>

Independence Park Institute, cooperative organization of NPS, and its educational program⁸

Beside the official educational service provided by National Park Service, some private organizations make efforts to education of cultural heritage. For example, the Independence Park Institute (IPI) offers education programs for Independence Hall that connect participants of all ages to the resources and stories of Independence National Historical Park (Figure 7).

The educational goals of the Independence Park Institute include: providing hands-on, interactive school programs for learners of all ages, providing trip planning resources for teachers and group leaders, conducting professional development workshops for teachers, creating standards-based education materials that teachers can use to make their students experience more relevant and meaningful while at the park.

The IPI Education Center at the Independence Living History Center is located on 3rd Street between Walnut and Chestnut Streets at Philadelphia. Its three learning labs will give students the opportunity to experience hands-on, interactive programs about archeology, 18th century life, and Benjamin Franklin. They can role play as delegates to the Continental Congress, explore symbols of freedom, or learn about Philadelphia connections and significant contributions to anti-slavery efforts in the 18th and 19th centuries Over 20,000 school children per year will be able to participate in the education programs at this facility when it is fully operational (Figure 8).

In order to become fiscally self-sustaining, the Independence Park Institute will charge program fees for pre-booked education programs at the IPI Education Centers. When both facilities are renovated and operational, over 50,000 students per year will be able to take advantage of exciting, hands-on history experiences in the IPI learning labs. All funds generated through program fees will be used to directly support ongoing education program needs. The park also plans to utilize volunteers and student interns to support IPI program

goals.

Independence Park Institute (IPI) was supported by Eastern National, the William Penn Foundation, which will provide an ongoing source of financial support for IPI education programming and staffing. Independence Park Institute (IPI) hope that the principal core of this endowment will grow through the continued financial support of our partners in education.

The visitor’s educational experience of travel to Independence Hall

When you visit the site of Independence Hall, there is interpreter of National Park Service guides you to see the rooms where history was made and learn the story of conflicts and compromises which led to the Declaration of Independence and the U.S. Constitution (Figure 9). In the Independence Hall, some educational panel were set to teach the history about the building (Figure 10). Besides, you can get a visitor’s guide which was provide by National Park Service to show how to visit this historic site (Figure 11). You can know all of the important building in this site, special days and events about this site and other affiliated sites from this guide. This guide also provides the program descriptions and times that you can learn from these programs (Figure 12).

Governmental organization in charge of cultural heritage conservation in Taiwan

Headquarters Administration of Cultural Heritage Council for Cultural Affairs (文化資產總管理處籌備處) The Cultural Heritage Preservation Act, which was revised and took effect in 2005, designated CCA as the authority in charge of all cultural heritage except cultural landscapes. CCA created HACH, in charge of affairs related to cultural heritage. HACH has added administrative, technical and research personnel to form a comprehensive network for protection of cultural heritage, and create environments suitable for the development of cultural heritage by working closely with local governments, colleges and universities, and civil and community organizations.

HACH produced a webpage for children to learn about cultural heritage (Figure 13). The working resource in this webpage included three parts "To know what cultural heritage is", "Review of the cases of cultural heritage", "The game about the learning of cultural heritage"⁹. In the part of "To know what cultural heritage is", there are some articles to introduce the meaning of cultural heritage (Figure 14). In the part of "Review of the cases of cultural heritage", the webpage introduces the information of cultural heritages in every city in Taiwan. In the part of "The game about the learning of cultural heritage", there are three interactive games for children to learn cultural heritage from play (Figure 15).

However, the content of this webpage did not attract children to browser (Figure 16). The effect of the function cultural heritage education seems limited.

<p>認識文化資產</p> <p>你有沒有想過：如果把時間倒轉回一百年前，你現在坐的地方，可能也有個小朋友正在搖滾晃盪的聽書呢？我們現在生活的空間，也保存著過去祖先</p>	<p>台北孔廟</p> <p>孔子廟</p>

Educational program of cultural heritage in British Consulate Residence at Dagou in Taiwan

British Consulate Residence at Dagou (22222222) was built in the Ching Dynasty in 1879. Now it is very important public cultural heritage at Kaohsiung City in southern Taiwan, and it also popular with not only domestic tourists but international tourists (Figure 17). In 2004, this building was reused for local cultural museum, and some exhibitions and cultural shows would display in this building. Meanwhile, this building also managed by private company. One coffee shop and bookstore were set in this cultural heritage. Recently, the exhibitions includes History of the Former British Consulate Residence at Dagou, The Beatles Music Gallery, Revitalising the old town: Liverpool & Kaohsiung, A new urban landscape: Liverpool & Kaohsiung, Arts and Culture: Liverpool & Kaohsiung, The Cavern Club were held in this old building. Most topics of these exhibitions are relationship with British.

Tourist can learn history from the exhibition “History of the Former British Consulate Residence at Dagou” which was displayed in one room of the building. The items of this exhibition include waxen statues which introduce the history of consulate affairs in the Ching Dynasty, and some old pictures and posters show the history of British Consulate Residence (Figure 18 and Figure 19). Posters and cultural goods are sold in the shop (Figure 20). However, books about the history of British Consulate Residence had not been displayed in this shop.

Free handbills about this cultural heritage are provided to tourists. However, most of the contents are advertisements of coffee shop instead of the history of British Consulate Residence (Figure 21). The other way tourist can acknowledge the history of this building is from a educational board standing in front of main entry (Figure 22).

Educational program of cultural heritage for elementary school students in Taiwan

Indigenous education was valued and practiced in elementary school since 1994 in Taiwan. Indigenous education includes five parts: indigenous language, indigenous history, indigenous geography, indigenous art and indigenous nature¹⁰. Cultural heritage in Community is one part of indigenous history that the children have study. This curriculum is practicing. Some curriculum is notable.

British Consulate Residence at Dagou which is discussed in this study is one of educational topic in the website of Indigenous education of Kaohsiung City (Figure 23). This website is managed by Center of Indigenous Educational Resource of Juguang elementary school at Kaohsiung City (高雄市莒光國小鄉土資源中心). There are two goals of this center. One is to promote the understanding of the culture and nature of Kaohsiung City for the elementary school students. The other is to develop school-based curriculum which combines the community resource¹¹. Cultural heritage is an important community resource, and become one of the educational topics in this website. Ten cultural heritages at Kaohsiung City are introduced in this website which includes British Consulate Residence at Dagou. History about buildings and some old pictures are showed on the webpage (Figure 24). One game is design for the children to test if they understand the content of the webpage¹².

¹¹ <http://kstown.chukps.kh.edu.tw/index1.aspx> (March 12, 2010).

¹² <http://kstown.chukps.kh.edu.tw/index1.aspx> (March 12, 2010).

<p>Figure 23 webpage of Indigenous education of Kaohsiung City (adopted from http://kstown.chukps.kh.edu.tw/index1.aspx, March 12, 2010)</p>	<p>Figure 24 education of cultural heritage on the webpage of Indigenous education of Kaohsiung City (adopted from http://kstown.chukps.kh.edu.tw/index1.aspx, March 12, 2010)</p>

Beside indigenous education, some cultural heritage education are promoted by elementary schools. For example, Xinjie elementary school (新街國小) at Zhongli City was reward by Ministry of Education in 2010 for practicing “Education of cultural heritage protection” (文化資產守護教育). This school was established since 1930s during Japanese colonial period so there were some Japanese official residences in the campus for the Japanese teachers. One of them was preserved and registered to historic building of city. For reusing this historic building, curriculum committee of school decided the school should develop some curriculums to educating cultural heritage protection. Therefore, the curriculum titled as “Love Xinjie and toward sunrise: protect the historic building and create the new campus” (戀戀新街／迎向朝陽：守護歷史建築物/開創校園新風華) was created. This curriculum teaches the children to know not only the Japanese official residences but the other historic buildings in the community around the campus. This curriculum also became the model for elementary school education in Taiwan (Figure 25 and Figure 26)¹³.

<p>Figure 25 interpretation about historic building for children</p>	<p>Figure 26 interpretation about historic building for children</p>

Conclusion

“Heritage Education Services Program” of U.S. National Park Service is responsible for education of cultural heritage. This program focuses on using cultural resources and historic preservation programs to educate people of all ages. For example, “Thomas Jefferson’s Plan for the University of Virginia: Lessons from the Lawn and program of Independence Hall: International Symbol of Freedom”, this program works with other organizations and partners of the NPS, like Independence Park Institute, to develop more activities relating to cultural resources of the National Park Service.

In Taiwan, governmental organization, school and public cultural heritage all have cultural heritage educational program. However, these programs are not well organized, and have few cooperative partners. As result, the content and types of educational programs are

¹³ <http://www.epochtimes.com/b5/10/3/2/n2833217.htm> (March 12, 2010).

monotonous. The programs provided by U.S. National Park Service are diversified, and the content of program can express more meanings of intangible elements of cultural heritage. The spirit of place is defined as the tangible and the intangible elements, the physical and the spiritual elements, that give meaning, value, emotion and mystery to place. In the educational program of NPS, we can see all the material related to cultural heritage that can make people feel more the spirit of place. The cultural heritage should be the place where exists many meaningful story to the visitors, and educational program is the important way to show these story. Furthermore, the content of educational program should be the historic information about the cultural heritage, historic building knowledge just can be one part rather than main part of the content of educational program. Therefore, educational program of cultural heritage in Taiwan need more resource support to develop to make the effective conservation of the genius loci of cultural heritage.

Network Embeddedness and Relationship Learning on New Product Development Performance

1. Introduction

In today's fast-changing business environment, enterprises have found innovation to be an indispensable element of survival. However, innovation exists in many forms, including product, process, service, and business model innovation, among others. Therefore, the measurement and key influencing factors of innovation are important research issues.

In the early 1980s, various international corporations began working with each other, which resulted in the competitive phenomenon of business network. These firms used complementary enterprise resources to develop cooperative business network to proactively innovate, overcome entry barriers, reach economies of scale and scope, and replace leadership positions in traditionally advantageous enterprises (Moore, 1993). Currently, because of the overall environment and such factors as the maturity and lower costs of information technology, there is greater interaction and cooperation among corporations. These phenomena show that the interaction among business network helps to enhance corporate competitiveness.

The learning theory plays an important role in the new theory of competitive advantage (Baker and Sinkula, 1999). The learning orientation of an organization has been conceptualized along with the cultural dimension including a shared vision of learning, commitment to learning, and an open mind (Baker and Sinkula, 1999). Learning is not only an organizational phenomenon, but also an inter-organizational phenomenon. Selnes and Sallis (2003) have studied the relationship between suppliers and customers, and discussed the learning behavior among organizations from the procedure perspective. They call this concept of organizational learning "relationship learning."

Rapidly changing competitive environment has forced companies to seek creative and flexible ways to counter the competitive situation, therefore, many companies have responded to the environmental challenges by establishing relationship with customers

and suppliers (Dertouzos, Lester & Solow., 1989). This kind of cooperation relationship relies on the exchange relationship with high degree of trust¹ (Morgan and Hunt, 1994). Due to the characteristic of high degree of trust, the two sides of the exchange relationship will focus on the long term interests (Ganesan, 1994) such that in the end they can enhance their competitiveness and reduce the cost of transaction (Noordewier, John & Nevin., 1999). From above analysis we can see that relationship learning is a kind of learning behavior among organizations, which will also affect their innovation performances. Logically speaking, first there is relationship network embeddedness, then the phenomenon of relationship learning will take place.

In this study we think that the network embeddedness among enterprise organizations is a very important key factor affecting innovation performance. But is there any intermediate factor between these two factors that lead to different influence from network embeddedness on the performance of new product development? This study mainly discusses the effect of inter-organizational network embeddedness between suppliers and customers on the performance of new product development. The researchers select the learning model developed from organizational learning which examines the special organizations between suppliers and customers---the relationship learning model - to be the intermediate variable for further inspection on the relationships among the network embeddedness, the relationship learning, and the performance of new product development. Then we develop the hypothesis and questionnaire for sampling survey with respect to Taiwan medical equipment industry in order to verify the research structure and hypothesis for this study. The research purposes of this study are: 1. To discuss the influence of network embeddedness on relationship learning. 2. To discuss the influences of different network embeddedness on relationship learning. 3. To discuss the influence of relationship learning on new product development performance. 4. To discuss the influences of different relationship learning models on new product development performance. 5. To discuss the effect of the relationship learning mode as an intermediate factor between network embeddedness and the new product development performance.

2. Literature Review And Hypotheses

2.1 Network Embeddedness

Gulati (1998) argues that the more connections a business has, the greater will be the amount of valuable information it receives from partners. Rowley et al. (2000) use network density, which refers to the number of connections to the outside from the center of an organization, to measure the structural embeddedness of organizations.

Direct ties among enterprises provide opportunities for organizations with indirect ties to the former to establish cooperative relationships (Jones, Hesterly & Borgatti, 1997). This third organization acts as a bridge between two unconnected organizations (Burt, 1992), which creates new opportunities for cooperation between the latter.

The structural position of an organization within its industry influences its opportunities for expansion and establishment of relationships. Hence, the relationship structure formed by organizations within networks directly influences the cooperative

inclination among firms (Granovetter, 1992). Structural embeddedness mechanisms enable organizations to directly come into contact with other enterprises and form cooperative relationships with them through the intermediation of other enterprises, which increases the interaction among organizations within an industry.

2.1.1 Relational embeddedness

In the initial stages of the development of enterprise relationships, the subjects of cooperation tend to be those among which there has already been cooperation or which have been selected based on recommendations (Uzzi, 1997; Gulati & Gargiulo, 1999). This is relational embeddedness, which involves primarily the direct or indirect ties formed by organizations in the cooperation process and various interpersonal relationships among organization members. Relational embeddedness can influence the selection of cooperation subjects, establishment of cooperative relationships, and development of business networks.

Relational embeddedness is characterized by strong connections among people (Gulati, 1998). Participants utilize powerful social relationships to enhance the common understanding of benefits, which in turn influences behavior; hence, relational embeddedness emphasizes social ties, the strength of which influences the extent of knowledge sharing.

2.1.2 Structural embeddedness

Transactions occur in the context of complex social relationships, and these relationships influence the transaction subjects with which people come into contact and the kinds of opportunity incurred, which affects the amount of human and social capital that can be obtained. This is structural embeddedness. Gulati (1998) argues that the more connections a business has, the greater will be the amount of valuable information it receives from partners. Rowley et al. (2000) use network density, which refers to the number of connections to the outside from the center of an organization, to measure the structural embeddedness of organizations.

Direct ties among enterprises provide opportunities for organizations with indirect ties to the former to establish cooperative relationships. That is, even if two organizations do not have direct ties, they can be connected through another organization, which is called a third-party relationship (Jones, Hesterly & Borgatti, 1997). This third organization acts as a bridge between two unconnected organizations (Burt, 1992), which creates new opportunities for cooperation between the latter.

2.2 Relationship learning

Relationship learning, the unique form of organization learning, belongs to the learning between organizations. It is a kind of common activity emphasizing the willingness of both parties to involve in the sharing and understanding of market information, and to integrate the information with shared memory (Selnes and Sallis, 2003).

Inter-organizational learning mechanism refers to that by utilizing the relationship with their partners during the collaboration process of R&D, enterprises try to obtain complementary resources and capabilities to enhance the organization learning and the technology acquisition performance through some certain institutional agreements and

leverage (Lorenzoni & Lipparini, 1999). For obtaining effective inter-organizational learning, there must be nice inter-organizational relationship such that through inter-organizational collaboration the knowledge from both sides can be obtained and utilized to speed up the development of organizational capability and to contribute to the inter-organizational knowledge creation and transfer. This inter-organizational collaboration is one of the important channels for mutual access to external knowledge (Lane and Lubatkin, 1998).

2.2.1 Information sharing

Selnes and Sallis (2003) think that the information sharing of customer-supplier is a starting point and necessary factor for relationship learning. The result of study on customer-supplier relationship has shown that information sharing is the major factor affecting behavior (Sinkula 1994; Slater 1995). Anderson and Narus (1990), and Cannon and Perreault (1999) have discussed how both organizations exchange their information in order to coordinate and plan the working relationship for improvement of operating efficiency. Biong and Selnes (1996) also study the relationship between information exchange and the job duty of sales personnel.

2.2.2 Joint sense making

Dialogues in the relationship constitute the elements of the explanation or understanding of the shared relationship-specific characteristics. Organizational learning can help to explain whether or not the organization has the key capability of understanding marketing information, and it involves the understanding of a wide range of organizational phenomena such as organizational culture and regulation. At the same time it includes the relationship and mutual dependence between individuals and groups, and the ordination of usage of intangible resources (Bell et al., 2002).

The result of the interview of Selnes and Salliss (2003) shows that, the best interactions between suppliers and customers are related to solving certain operational issues with many examples of face-to-face meetings. Individuals in each field with different expertise obtain information through communication (Walsh, 1995).

2.2.3 Development of shared relationship memories

Learning is a process of the integration of the knowledge acquisition, and the diffusion, interpretation and memory of information (Nevis et al. 1995). The core element for all kinds of learning is to integrate them to the existing memory, to develop the memory of specific relationship, i.e. memory integration (Selnes and Salliss, 2003). At the level of organization, memories such as the beliefs of organization, behavior practices, and physical artifacts are scattered all over the places inside of organization (Lukas et al., 1996; Moorman and Miner, 1997). The development of shared relationship memory is to integrate the obtained information to the shared memory of specific relationship during the continuous joint activities between customers and suppliers, and these memories might affect behaviors (Sinkula 1994; Slater 1995). Therefore, each partner in the customer-supplier relationship should develop common beliefs in reference, norm (Macneil, 1980), symbol or other objects (Walsh and Ungson 1991).

2.3 New product development performance

Kleinschmidt and Cooper (1991) introduce the three dimensions of financial performance, window of opportunity, and market impact, and develop ten indicators to evaluate new product performance.

Song and Parry (1997) introduce the three dimensions of financial performance, operational performance, and organizational effectiveness.

Swink (2000) discovers three dimensions of financial performance, quality of design, and the timing performance from the result of research focused on manufacturing industry.

Gomes et al.(2003) introduce the three dimensions of cost, product quality, and the time duration of products entering the market.

Summarizing the above descriptions we can say that the new product development performance is evaluated from the financial, procedure, and market perspective. Therefore in this study we use these three dimensions to evaluate new product development performance.

2.4 Network embeddedness and relationship learning

Powell et al. (1996) develop organizational learning with the concept of business network. After empirical analysis it is found that the speed of organizational learning can be enhanced by the number of alliance in the business network, the degree of network centralization, and the network experience.

Dyer and Nobeoka (2000) use Toyota as a case study to explain what the manager should do to create and management knowledge sharing network, and advocate that the establishment of network can enhance the dynamic learning capability and improve the organizational competitive edge.

Based on the above studies and inference, this study proposes the following hypotheses.

Hypothesis 1: The greater the network embeddedness of an enterprise, the better is its relationship learning.

Regarding types of business network embeddedness, this study proposes the following sub-hypotheses:

Hypothesis 1a: The greater the relational embeddedness of an enterprise, the better is its relationship learning.

Hypothesis 1b: The greater the structural embeddedness of an enterprise, the better is its relationship learning.

2.5 Relationship learning and new product development performance

Facing the rapidly changing environment, an organization with special advantages on information and knowledge must renew its knowledge through learning mechanism in order to enhance the capability of original knowledge and improve the organizational competitiveness (Sanchez & Heene, 1997). For the transferer and recipient of knowledge to have same knowledge and similar acknowledgement, regardless of the

type of knowledge transfer, during the “teach and learn” dynamic knowledge transfer process (Verkasalo & Lappalainen,1998) the organization must go through socialization, education and learning procedures and appropriately deliver knowledge to the members in need. And with the complete absorption of the knowledge, the organizational capability, performance and value can be improved (Joanne, 2000).

Innovation comes from all members within the organization, not just from several R&D personnel. One of the key of organizational learning is to ensure all members have a broader range of “common knowledge” based on which innovation or new knowledge can be quickly spread out, and the dispersed knowledge can be easily integrated (Brown & Duguid, 1991). With the knowledge circulation mechanism (Housel & Bell,2001) established by the integration of accelerated organizational learning, the culture of knowledge sharing, and the systematic intelligence information, both sides of the knowledge providers and recipients will be able to duplicate, transfer, accumulate and innovate knowledge through interaction, participation in communication, mutual commitment and adjustment such that they can increase the business profit, improve the organizational capability and strengthen the organizational competitiveness (Hickins,1999).

Based on the above studies and inference, this study proposes the following hypotheses.

Hypothesis 2: The greater the relationship learning of an enterprise, the better is its new product development performance.

Regarding factor of relationship learning, this study proposes the following sub-hypotheses:

Hypothesis 2a: The greater the information sharing of an enterprise, the better is its new product development performance.

Hypothesis 2b: The greater the joint sense making of an enterprise, the better is its new product development performance.

Hypothesis 2c: The greater the development of shared relationship memories of an enterprise, the better is its new product development performance.

2.6 Network embeddedness and new product development performance

Moran (2005) points out in the research on social capital and management performance that, the stronger the network embeddedness among enterprises, the higher the efficiency of resource transfer. This will also facilitate the transfer and exchange of implicit and complicated knowledge, and possibly encourage mutual innovation activities to improve the innovation performance.

Adner (2006) thinks once the innovation ecological system begins to operate successfully, companies will be able to create enormous value. However, this cannot be achieved on one company independently. Whether the innovation market can be formed? When can it be formed? These will be determined not only by the performances of companies, but also by the performance of their partners. The so-called innovation ecological system is in accordance with the business network embeddedness in this study. The so-called partners include upstream suppliers, downstream customers, and the parallel academic research institutes.

Based on the above studies and inference, this study proposes the following

hypotheses.

Hypothesis 3: The greater the network embeddedness of an enterprise, the better is its new product development performance.

Regarding types of business network embeddedness, this study proposes the following sub-hypotheses:

Hypothesis 3a: The greater the relational embeddedness of an enterprise, the better is its new product development performance.

Hypothesis 3b: The greater the structural embeddedness of an enterprise, the better is its new product development performance.

2.7 Network embeddedness, relationship learning and new product development performance

Finally, based on above literatures, in this study we will utilize regression analysis to verify the intermediate effect of relationship learning between the network embeddedness and new product development performance. Therefore the following hypothesis is introduced in this study:

Hypothesis 4: relationship learning will show intermediate effect on the relationship between the network embeddedness relationship among companies and partners, and the new product development performance.

3. METHOD

3.1 Research framework

The operating structure of this study is shown in Figure 1.

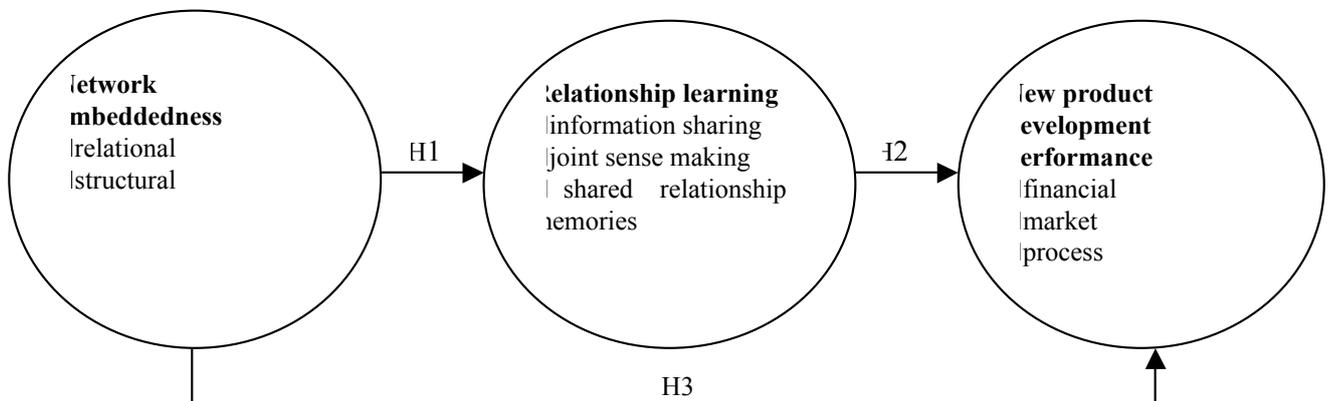

Figure 1. Research framework of the operating structure.

3.2 Sample and data collection

After the research structure is developed in this study, six experts/scholars confirmed the feasibility of the research structure before developing the questionnaire. Then we conduct full-scale questionnaire survey with respect to all the 220 business members of

Taiwan Medical and Biotech Industry Association. In the end the recovery rate of valid questionnaire is 59.1%.

3.3 Variable definitions and measurement

We developed a seven-point Likert scale for each of the constructs, tapping core conceptual tributes developed in prior research. Respondents were asked to indicate the degree of their agreement (1 = “strongly disagree”; 7 = “strongly agree”) with statements about their enterprise’s network embeddedness.

Statistical tools, including reliability analysis, validity analysis, correlation analysis, t-testing, structural equation modeling (SEM), and regression analysis, were used to analyze the questionnaire results to verify our hypotheses.

4. RESULTS

4.1 Reliability analysis

The evaluation criteria of reliability analysis are: (1) the α value of Cronbach’s reliability must be larger than 0.5; (2) the coefficient of item to total correlation must be larger than 0.5. From the result of reliability examination we can see that the Cronbach’s α of the dimensions in this study are all larger than 0.8, and the item to total correlation value is also larger than 0.5, indicating a certain level of reliability.

4.2 Validity analysis

The evaluation criteria of validity analysis are: (1) composite reliability (CR) must be larger than 0.7; (2) the average variance extracted (AVE) of latent variable must be larger than 0.5. From the result of validity examination we can see that the CR values of the dimensions in this study are all larger than 0.7, and the AVE values are also larger than 0.5, indicating that the evaluation model of this study has good convergent validity.

4.3 Correlation analysis

In this study we use Pearson’s approach of correlation analysis to conduct the correlation verification on the relationships among various dimensions. The result of the verification shows that, there are high and ultra-high correlation between the dimensions of network embeddedness and relationship learning. There are also high and ultra-high correlation between the dimensions of relationship learning and new product development performance. Between the dimensions of network embeddedness and new product development performance, most of them show high and ultra-high correlation while a small number of them are showing moderate correlation.

4.4 Regression analysis

In this study we use regression analysis to verify the effects generated between network embeddedness and relationship learning, between relationship learning and new product development performance, between network embeddedness and new product development performance, and among network embeddedness and relationship learning and new product development performance. The results are shown in Table 1, 2, 3 and 4.

From Table 1 we know that the H1a and H1b introduced by this study are supported, meaning that H1 is supported.

From Table 2 we know that the H2a and H2c introduced by this study are supported, meaning that H2 is partially supported.

From Table 3 we know that the H3a, H3b introduced by this study are supported, meaning that H3 is supported.

From Table 4 we know that due to the effect of network embeddedness on new product development performance is weaker than the effect of relationship learning on new product development performance, that H4 is supported and the relationship learning is the partial intermediate variable between network embeddedness and new product development performance.

Table 1. Results of regression analysis: network embeddedness and relationship learning

Dependent variable	Independent variables	β	SE	t	p-value

5. DISCUSSION

5.1 Conclusions

5.1.1 network embeddedness and relationship learning

Research results show there is significant position correlation between them. Therefore we think for improving the effectiveness of relationship learning, it is necessary for enterprises to establish all kinds of close connections with partners in order to deliver better performances in this environment with intensive competition.

5.1.2 relationship learning and new product development performance

Research results show that there is significant position correlation between them. Therefore, we think enterprises must work with external partners to establish a good relationship system including knowledge sharing and interaction pattern in order to improve the new product development performance.

5.1.3 network embeddedness and new product development performance

Research results show there is significant position correlation between them. Therefore, we think for improving the new product development performance, it is necessary for enterprises to establish all kinds of close connections with partners in order to deliver better performances in this environment with intensive competition.

5.1.4 network embeddedness, relationship learning and new product development performance

The result of empirical analysis in this study shows that relationship learning has generated intermediate effect between the network embeddedness and new product development performance. Therefore we conclude that during the process of new product development, relationship learning is a very important key factor, and enterprises must work with external partners to establish a good relationship system including knowledge sharing and interaction pattern in order to improve the new product development performance.

In summary, that enterprises must develop tighter network embeddedness with all kinds of business partners to get better effectiveness from relationship learning, and with more effective relationship learning they can achieve the goal of improving new product

development performance.

5.1 Limitations and future research directions

(1) This study only targets the medical and biotech equipment industry in Taiwan, therefore the follow-up studies can focus on different kind of industry with the research structure introduced in this study to develop different questionnaire for similar studies. Then they can compare the result with that of this study as a reference.

(2) the study was conducted under time and funding constraints. Hence, it used cross-sectional data as the basis for verification, which might have affected the research results. Future studies could use longitudinal data to further explore the relationship between network embeddedness and service innovation performance, as this would better reveal the causal relationship between them.

(3) In this study the choice of research indicator is limited such that we only use new product development performance to represent the performance evaluation. However, the innovation of the enterprise is not limited to the development of new products. Proceeding researchers can consider other innovative models such as open innovation, process innovation, business model innovation, strategic innovation, and service innovation as the targets for analysis. Or they can divided the innovations based on their natures into the incremental innovation and revolutionary innovation, and explore the effects and differences of business network embeddedness on these two innovations. Due to the lack of sufficient research on relationship learning, we hope in the future we can further explore the correlation among business network embeddedness, relationship learning, and performance.

**The Influence of Sino-Culture on the Meanings of University Diplomas in
Taiwan : The Cultural Gap between the West and Taiwan**

Taiwanese Panel

Abstract

Western societies have extended their hegemony from the political field to educational research, as witnessed by the phenomenon that most Taiwanese researchers have long employed western theories/thoughts to conduct educational studies. Such an approach is unable to gain precise findings because it largely neglects the unique characteristics of Sino-Culture. This essay attempts to argue that for Chinese people, university diplomas have different meanings than for their Western counterparts. Besides their function as indicators of labour market value, university diplomas also project honor and excellence, and thus create a strong sense of social symbolism penetrating in Sino-societies. Therefore, acquiring a university diploma is not only an individual's personal concern, but also a key matter for his/her parents and family.

Keywords: university diploma, cultural meaning, Sino-culture, Taiwan

1. Introduction

The global economic system significantly benefits western advanced countries, granting them the status of hegemony that allows them to export their thoughts and values to other countries. Therefore, western theories are generally viewed as unproblematic in educational research. However, it is almost impossible for this

approach to obtain complete and solid findings due to its neglect of the cultural gap. Individual countries tend to develop their own cultures with unique characteristics and meanings that are able to shape people's minds and behaviors. Sino-culture, for example, has different characteristics from western culture. Agriculture, which was the main industry in ancient China, required organized manpower, so it gradually brewed big-scale families that functioned as a vital core of life by providing shelter and adequate food. When people needed to be reliant upon family, family-oriented culture gradually developed and eventually become part of Sino-culture. In such a context, people were concerned with sustaining and enhancing their own family status and reputation rather than their own individual concerns. This collective approach substantially constrained the scope of individual ideas. It also further created a special form of culture – face-oriented culture. This was because a big scale family in ancient China required a harmonious relationship among its numerous members so that emotional solidarity was fostered. A key way to mediate the numerous and unpredictable conflicts among a large number of family members was to maintain their face. In other words, saving face served to maintain a strong sense of emotional solidarity, which was vital for running a big scale family.

These unique elements of Sino-culture function to condition Chinese minds and behaviors. This linkage suggests that Chinese people should have different viewpoints about the meanings of university diplomas from their western counterparts. This essay sets out to argue that beside their function as indicators of labour market value, university diplomas should embody the meanings of excellence and glory in Taiwanese society. Acquiring a university diploma is not only the concern of an individual, but also an important matter for his/her parents and family.

2. Globalization and Western Hegemony

The evolution of a powerful trading system in the world has gradually changed the nature of economic activities, as witnessed by the shift from an international form to a global one. In the stage when trading took an international form, individual companies attempted to enlarge their own size in order to dominate the market by establishing more branches in overseas countries. Internationalization, thus, became a core value in running a company. However, it was almost impossible for international companies to achieve such a goal. This was simply because every internationalized company had its competitors. Small companies were able to threaten big companies as well by producing better quality commodities. Those factors appeared to end the competitive dogma in the market and breed a new form of belief – cooperation – pushing international companies to produce commodities together. This new era reallocates the positions of individual companies and the meanings of manufacture.

Individual companies are no longer the only company in charge of manufacturing and selling certain items or commodities. The need to achieve profit gives those big companies no choice but to cooperate together in order to survive in the market. Furthermore, incomes are able to change the market nature. As Storey (1999) argues, consumers cannot produce texts. However, this doesn't mean that texts are able to impose themselves on consumers. Higher incomes bestow power upon consumers, allowing them to 'select' the text that they want. When the consumers get richer, preferences may act as the key factor in the choice of commodities, rather than prices. The above factors have gradually pushed the market away from an internationalized form and moved it into a system of global economy.

The global economic system establishes cooperation as the central value, penetrating not only into the economic sector but also into the political field. In order to enlarge the market size, trading barriers need to be eliminated as much as possible. Therefore, capitalists have devoted themselves to creating relevant organizations successively, such as GATS, WTO, and the IMF, both in local regions and the world, in order to move away trading barriers and facilitate the gain of larger capitalist profits than before:

One of the defining characteristics of globalization is the enormously accelerated expansion of capital --- especially of financial capital. However, even in these circumstances, and even in the case of financial capital, points of fixity are essential. This is because (1) capital cannot guarantee the conditions of its own existence and (2) it always has to be institutionally embedded. In other words, capitalists social relations must be set in a configuration of social institutions that is supportive of, or at least not obstructive to, its continuing expansion. (Robertson, Bonal, and Dale, 2006: 229)

Alongside the development of those regional and global institutions, individual territories are fused into regions and, thus, blur the boundaries between countries (Giddens, 1990). Furthermore, massive economic profits give most free countries no choice but to accept the system of economic globalization (Dale, 2003). As a result, the authority of nation-states is gradually eroded, as witnessed by the giving up of rights on importing commodity tax policy under the constitution of the WTO (Dale, 2003; Robertson, Bonal and Dale, 2006; Schriewer, 2003). As far as we know, those advanced countries that tend to belong to western bodies are eager to propagandize the importance of economic globalization via their agents, such as the regional and global institutions mentioned above. When those western advanced countries are the main impetus of economic globalization, western thoughts will intrude into those of importing countries. Dale (2003) argues that this cultural intrusion will generate a

profound impact on local cultures of importing countries and, thus jeopardize their national identities. In order to sustain or protect national identity, those importing countries will employ a policy of localization. For Green (2006), education serves as a key means to achieve such an intention. In order to sustain national identity, the nation-state may address the importance of citizenship education.

However, these arguments tend to separate material and psychic aspects and, thus, neglect the interactive linkage that may further create the phenomenon of modeling. Marxists have long condemned the negative influence of material needs on the human spirit. Terms such as alienation (Marx, 1961), reification (Lukacs, 1971), one dimensional man (Marcuse, 1964), or hedonism (Bell, 1976), have been created to depict the phenomenon that human beings are subject to material needs. Nevertheless, such perspectives, which are deeply rooted in Marx's two un-exchangeable concepts, use-value and exchange-value (referring to real needs in life and symbolic meanings in social activities respectively (Marx, 1961)), tends to divide human life into two separated segments – material and spiritual. In contrast, Veblen (1994) tends to see an interchangeable nature in material and spiritual aspects:

Gradually, as industrial activity further displaces predatory activity in the community's everyday life and in men's habits of thought, accumulated property more and more replaces trophies of predatory exploit as the conventional exponent of prepotence and success. With the growth of settled industry, therefore, the possession of wealth gains in relative importance and effectiveness as a customary basis of repute and esteem... The possession of wealth, which was at the outset valued simply as an evidence of efficiency, becomes in popular apprehension, itself a meritorious act. Wealth is now itself intrinsically honourable and confers honour on its possessor. (Veblen, 1994: 18-9)

Veblen's argument reveals that the meanings of property cannot be viewed only as a simple form of material possession, but also embody a social value. Therefore, pecuniary emulation becomes a key way of demonstrating one's superior financial condition to others and, in turn, enables one to gain social honor and functions as an excellent social symbol. This social value further suggests that wealth tends to bestow superior status with the meaning of excellence upon those people or countries that are wealthy or advanced. As we know, the industrial revolution commenced in Western Europe and created a considerable degree of wealth in countries in that region, thus conferring on them the title of "advanced" countries. This title becomes the target of modeling for other countries. The phenomenon of modeling penetrates almost all parts of the world. The new right, for example, initially emerged in the UK and USA at the outset (Chiang, 2008a, 2009a), but since then has become popular in many

countries like New Zealand (Codd, J. Gordon and Harker, 1997) and Taiwan (Chiang, 2003, 2009b). Due to its powerful function in economic and political fields, English language, another archetypical case, has acquired a new social value, based on the assumption that the acquisition of English is able to let its learners possess global vision and competitiveness. This powerful value drives many parents to devote a considerable time and effort to letting their children learn English (Lai and Byram, 2006).

The above analysis indicates that people are subject to the allure of materials. If wealth enables its possessors obtain a superior position and dignity, people will tend to worship wealthy/advanced countries. However, Said (2006) reminds us that such an inclination serves not only to appreciate the value of Western cultures but also to devalue the cultures of importing countries. This phenomenon derives from the situation that when the elites of Muslim countries return to their countries from American universities, they tend to use Western thoughts to interpret the meanings of their home country cultures. Therefore, Muslim cultures are devalued, resulting in a post-colonial phenomenon in which importing countries voluntarily support Western hegemony.

3. The Unique Meanings of Individual Cultures

Although the system of global economy allows Western advanced countries to export their thoughts, the unique meanings of individual cultures cannot be ignored. Schutz (1972), for example, argues that individual cultures develop within a specific context with unique meanings that are created by people's interactions. All members of a given society participate in constructing their own cultures. Without such participation, it is very hard for others, termed as cultural strangers, to understand the deep meaning of a given culture. Schriewer (2003) also argues that globalization has created homogeneity in many regions and let Western countries obtain a position of hegemony. However, it doesn't mean that individual societies develop a similar or even the same culture. It is also wrong to use the same criteria to evaluate all cultures. This is simply because the process of cultural development is dynamic rather than static. A lot of unexpected factors are able to affect this process and, then, infuse special meaning elements into a given culture. Luhmann's theory (1995) also provides a similar account. According to Luhmann, there are ceaseless interactions between systems/subsystems and their environments. However, such interactions tend to enlarge the differentiations between them rather than to generate similarity. This is because individual system/subsystems need to sustain their own unique social functions in order to gain autonomy. Otherwise, they will lose their independent operation and be merged into others. Therefore, every system needs to observe the

changes in its outside environment and to undergo functional innovation – a process which can be conceptualized as self-reference:

Self-reference produces recursive, circular closure, but closure does not serve as an end in itself, not even as the sole mechanism of preservation or a principle of security. Instead, it is the condition of possibility for openness. All openness is based on closure, and this is possible because self-referential operations do not absorb the full meaning, do not totalize but merely accompany; because they do not conclude, do not lead to an end, do not fulfill a telos, but rather open out.

... The “self” or self-reference is never the totality of a closed system, and it is never the referring itself. It is always merely an aspect of the constitutive nexus of open system that carries its autopoiesis: elements, processes and the system itself. (Luhmann, 1995: 447)

Therefore, the conditions of an environment not only act as constraints to inhibit the operational scope of a system but also provide the base for reconstructing its functions. Self-reference allows a system to choose the best way to achieve its functional complexity and difference that further sustain its autonomous operation. Therefore, a system will continue to maintain its own differentiation from its environment and other systems. This phenomenon also indicates that it is almost impossible to have similarities or resemblances among cultures. Archer’s (2003) morphogenetic approach also highlights the notion of cultural difference rather than similarity. She argues that human beings need to be viewed as reflexive agents with the ability to surmount obstacles of their contexts. Social structure may constrain one’s actions. However, the actor is able to evaluate his/her abilities and develop action projects via internal conversion. Creative actions lead to reshaping social structure. A new structure becomes a new form of structural constraint. Therefore, social development follows a solid model with three steps: concerns → projects → practices:

... our mental powers of reflexive deliberation firstly secure our unique personal identities through our singular constellation of concerns, meaning that we are radically heterogeneous as people, rather than having common ends. Secondly, our subjectivity is dynamic rather than static because we modify our own goals in terms of their contextual feasibility, as we see it. Finally, by virtue of our internal dialogues, we are active rather than passive because we adjust and adapt our projects to those practices that we consider have a better chance of realization. (Archer, 2003: 134)

The above arguments show that individual cultures have their own unique meanings. It is unwise to use the same criteria or concepts to view all cultures.

Unfortunately, Western advanced countries have extended their hegemony from the economic and political fields to culture. Their thoughts and theories have been viewed as a sacred dogma for conducting research in other countries. Obviously, this approach neglects cultural differentiations, and results in the generation of poor or incomplete findings and theories.

4. The Characteristics of Sino-Culture

As noted previously, when wealth is linked with prestige and social honor, Western countries are able to gain the status of hegemony. The global economical system further assists Western countries to export their values and thoughts. Therefore, Western thoughts have penetrated almost all parts of Taiwanese society, including political, economical and cultural fields. The education system, for example, has been converted to follow a similar track to the western style. Generally speaking, Taiwanese educational researchers have long absorbed western thoughts to conduct research. In terms of methodological approach, although a positivist approach allows researchers to find relationships between dependent and independent variables, this linear linkage cannot help people to understand the deep meanings of a given social culture. It cannot let us understand the complex accounts behind the generalized rules of positivism.

As Weber (1949, 1962) argues, people tend to have different tastes and styles, shaped by different experiences. What they are concerned about differs from individual to individual. Therefore, in terms of deep meaning, it is very hard to have the same rule. Such different concerns and experiences tend to make people initiate subjective behaviors, heading to achieve specific targets that individual people prefer. This argument describes why the positivist approach cannot reveal the unique meaning of a given social culture. Such a weakness may also appear in qualitative studies. If researchers employ western thoughts to do research, the findings that they get cannot be complete and solid. What they touch will be restricted to the surface level rather than attaining a significant scope. This is simply because they neglect the unique meanings of a given social culture that shape people's minds and behaviors significantly.

The actions of organized teachers can be used as a typical case for illustrating such a phenomenon. Generally speaking, western primary teachers are much more militant, as witnessed by their conducting of long-term and large scale industrial actions against their employers in order to improve their material rewards (Barber, 1992; Ozga and Lawn, 1981; Tropp, 1957). However, Chiang (2008b) gained a contrary picture in which Taiwanese primary teachers displayed a lukewarm attitude towards collective action due to a strong sense of professional commitment. This was

because Chinese culture bestowed on primary teachers a great degree of teaching autonomy and social status. In ancient Chinese society, there was a close relationship between the Emperor and the teacher. As a national leader, the Emperor had to behave as a model for his people, to whom he was also a teacher. This symbolic meaning gradually extended to both senior officials and teachers and their relationships. A very high level of social status thus adhered to teachers who were defined as one of the five superior-social-status groups (God, the Earth, the Emperor, the Family and the Teacher). They had an important symbolic position to sustain as guardians of social morality. They had to possess a high level of academic knowledge, as well as sound social attributes, in order to influence other people. Furthermore, the outstanding achievement of Confucius has further ensured teachers function as a key element in protecting social morality and social solidarity (Tsurumi, 1977). This has influenced their rewards in Taiwanese society, resulting in them being viewed as professionals and given high levels of social status, prestige and salary (Chiang, 1996). The interplay of these factors has led to the construction of a very protected context for teachers, and deeply formed their professional ideology.

If we admit the fact that individual cultures have their own meanings and, thus, generate a profound influence on the formation of people's thoughts and actions, Western theories and thoughts should be viewed as problematic rather than unchallengeable. As we know, Western cultures can be characterized as individualist, referring to the phenomenon that individual people devote themselves to actualizing their own personal goals rather than others' concerns. Social changes are able to reinforce this individualism. Castells (1999), for example, argues that the operation of the computer network is mainly reliant upon individual persons. By providing a personal platform, this network is able to cultivate the culture of individualism as seen by the situation in which individual persons are able to satisfy their own desires or needs in the networked world. The global economic system also favors the culture of individualism. Blackmore (2006), for example, believes that the concept of international competitiveness has replaced the idea of social welfare in the arena of the global economical system. This is mainly because the economic system appreciates personal achievements rather than collective concerns. Furthermore, pursuing more capitalist profits will change the national state's policies, shifting to the economic aspect rather than social welfare.

Some scholars argue that the characteristics of Sino-culture are different from those of Western culture. Yang and his associate (Yang, 2002; Yang and Ye, 2005) argue that Sino-culture has long addressed the importance of family values. This is because the size of Chinese families used to be big, normally having over three or even four generations. A big-sized family was able to form organized manpower that

perfectly fitted in with ancient Chinese society, in which the main industry was agriculture. In this stage, land and water supply were key ingredients for survival. A big family was able to hold a big piece of land and to construct an irrigation system for supplying its members with adequate food and to accumulate a fortune. Furthermore, such families not only provided their members with good shelter but also protected them from enemy attacks. The family had gradually become a vital core of life. This situation eventually formed a family-oriented culture, making its members sustain and enhance the reputation of their family. Although industrialization has lasted for about fifty years in Taiwan, this family-oriented culture is still preserved. As noted previously, wealth is viewed as a symbol of social prestige, so this family-oriented culture will force family members to protect and enhance their family's honor and reputation with their achievements. As a result, what he or she pursues may not be his/her will but the expectations of his/her family.

Hwang (1987, 2005) argues that such an effort functions as a symbol of family/parental face. This is because this family-oriented culture will further incubate a face-oriented culture. A big family tends to have a considerable number of members and, thus, numerous and unpredictable conflicts occur between them easily. In ancient Chinese society, this situation required the family master to maintain the harmonious relationship among his family members. If he failed to complete this mission, the big family would start to fall apart. This mediatory role further bestowed a considerable degree of authority upon him. The combination of authority and family concordance tended to create a special way of resource allocation. Regarding this issue, what came to his mind was not an equal principle, an iron dogma as in Western culture, but an emotional coherence. This harmonious principle expanded its influence to society and eventually became part of Chinese culture. Therefore, the right of resource distribution was normally given to an important person. However, the harmonious principle was always mixed with an emotional account that was initially brewed within the family, as mentioned previously. The distributor of resource allocation normally needed to consider personal and social linkages, with the blood relationship as the top priority, friendship next and the equality principle finally. This method of determination embodied a strong sense of emotional concordance and generated a face-oriented culture. Because this culture lasted for thousands of years in ancient Chinese society, it is able to survive now under the impact of industrialization. The face-oriented culture now becomes a matter of courtesy for interacting with others. Due to its original birth context, face-oriented culture is also fused with family-oriented culture. Therefore, someone's outstanding achievement is not only a matter of family reputation but also an issue of parental face.

5. The Meanings of University Diplomas in Taiwan

Obviously, industrialization has generated a profound influence on the division of labor, as witnessed by the expanding size of the professional and middle class population (Dahrendorf, 1959; Durkheim, 1933; Tocqueville, 1945). This change ensures the importance of meritocracy, so that social mobility is no longer based upon someone's family background but his/her professional training (Young, 1961). This mechanism of selection, argued by Parsons (1961), allows working class children to achieve upward social mobility via excellent educational achievements. When people recognize the importance of schooling, the development of education becomes an issue of institutionalization (Myer, 1977). Therefore, almost all democratic countries devote a considerable amount of resources to expanding the size of higher education in order to achieve two parallel purposes – social civilization and social mobility (Dale, 2001). However, when higher education is in over supply, the university diploma cannot maintain its original value as the professional club passport for its possessors (Chiang, 2000, 2009b). Furthermore, the theory of cultural reproduction also highlights the pessimistic fate of working class children due to a limited volume of cultural capital invested by their families (Bernstein, 1996; Bourdieu, 1993). As argued by Archer (2003) and Giddens (1979, 1984), the rational mind is an inborn gift of the human being, so that under such a situation, most working class parents would stop engaging in educational investment for their underachieving children.

Currently, Taiwanese society is facing an increasingly serious problem of university over supply. The buyers' market for higher education institutes offers over 100% chance of university entrance. This over supply suggests that the value of university diplomas in the labor market has decreased significantly (Brown, 1997) so that working class parents may be reluctant to send their underachieving children to university. In contrast, the rate of children who study in university demonstrates an increasing trend – 87.52 % in 2008. Obviously, this picture goes against the western theories mentioned above. This gap indicates that the meanings of university diplomas are not confined within the scope of the labor market. Wang (2002) argues that Chinese society has long valued university diplomas significantly. This is because in ancient times officials were ranked as social elite with dignity and wealth. Passing imperial examinations not only let the successful candidates enter into officialdom, but also brought significant glory to their parents and families. Although the imperial examination has been abolished for decades, a new form of examination, the national examination, operates with a strictly selective mechanism that endows successful candidates with the social symbol of excellence and glory. Therefore, selection has an added meaning: excellence. When higher education institutes only had a limited capacity, the entrance examination was very strict, so that university diplomas

embodied the same social symbolism as the above. A university diploma normally ensured its holders to occupy white collar posts that would bring glory to their parents and families. Therefore, studying in university was not only the precursor to a bright future, but also indicated the status associated with mental excellence.

Although the over supply of universities has decreased the value of university diplomas in the labor market significantly, the symbol of university training, the *literati*, generally remains. Veblen (1994) argues that possessing precious commodities is a key means of proving one's superior wealth to others and, thus, of winning social honor. Therefore, the divide between 'have' and 'have not' refers to a division between excellence and poverty respectively. This derived social value, as argued by Marcuse (1964) and Bell (1976), creates a strong desire for people to purchase precious commodities in order to promote their social standing. This linkage suggests that if university diplomas can be viewed as rare commodities, people will be eager to earn them in order to prove their ability. When university capacity is over enlarged, the rarity value of university diplomas is diminished, and, thus, people's desire to have them is reduced. However, 'have not' carries the symbol of poverty, so that the oversupply of university diplomas may create another form of social value, a basic requirement, indicating the yardstick for a minimal level of ability. Therefore, if someone doesn't acquire a university diploma that is prevalent, he/she would be viewed as intellectually deficient. This possibility is much more likely to occur within Chinese society. As spotlighted in previous sections, two unique characteristics of Sino-culture, family-oriented culture and face-oriented culture, function as key factors to drive Chinese behavior. Therefore, not acquiring a university diploma is not only someone's concern but also a matter of parents/family. Under the influence of face-oriented and family-oriented cultures, Chinese parents are likely to push their children to chase university diplomas because it is a real matter of face, and a matter of family glory as well. Therefore, although working class parents generally have economic difficulty, they are likely to be motivated culturally to invest capital in their children's education. Chinese students would feel that it is important for them to meet parental expectations or complete family missions. This inside drive and outside expectation correspond to construct a coherent structure, creating a certain scope of action for people. This possible linkage indicates that for Chinese parents, the meanings of university diplomas are not confined within economic and scholastic scopes. Acquiring university diplomas is involved with matters of parental face and family glory.

6. Conclusion

Advanced technology has allowed western countries to gain the power of

hegemony. The global economic system further benefits them to export their thoughts and values. Under such a situation, western thoughts and theories become unproblematic for doing educational research. However, it is almost impossible for such researchers to obtain complete and solid findings due to their neglect of the fact that individual cultures have their own unique meanings, functioning to condition people's behaviors significantly. Chinese society, for example, tends to display two unique characteristics – face-oriented and family-oriented cultures. These two elements generate a profound influence on shaping the meanings of university diplomas. When university students were strictly selected, the acquisition of a university diploma was a symbol of excellence and glory. Therefore, Chinese parents were eager to push their students to study hard in order to enter university. Now that an oversupply of university places has arisen, the decreasing value of university diplomas in the labor market should have lessened such motive. In contrast, Chinese people still appreciate the symbolic value of university diplomas. A reasonable explanation would be that when university training becomes a basic requirement, not acquiring a university diploma may indicate the un-possessor's deficient intelligence, and humiliate his/her parents and family. Therefore, even working class parents would be willing to encourage their underachieving children to acquire university diplomas. This picture suggests that the unique characteristics of Sino-culture function to profoundly influence the molding of the meanings of university diplomas, in ways that are different from Western countries.

Relationships among Self-directed Learning Readiness, English Learning Motivation, and Learning Satisfaction of University Students in Taiwan

ABSTRACT

The arrival of the global village epoch has made interpersonal exchanges among different countries more frequent. Information interchanges rapidly; language is a bridge for people to communicate with each other. From an educational point of view, at the university stage, English is an important basic course, which fortifies the nation's competitiveness. The English language exists in every communication activity in today's world—global economy and trade, mass culture, international diplomacy, scientific and technological research, sports exchange, higher education, etc. English is the indispensable basic common language. This research adopts the questionnaire investigation method and carries on the sample investigation to students at Grade 1 in Day School, 2009, of National Cheng Kung University. The effective sample is 607. Methods of descriptive statistical analysis, correlation analysis, and multiple regression analysis have been adopted mainly for processing the data.

Keywords: University student; self-directed learning readiness; English study motivation; study satisfaction

Introduction

After Taiwan joined the World Trade Organization (WTO) in 2001, the ability to use English and having a cosmopolitan worldview become more important. To improve English language ability of the whole people, the government planned to classify English as the quasi-official language in 2003 and has made a great effort to promote English study. The Education Ministry plans to start English courses at Grade 3 in primary schools and reduce the gap between cities and countryside. Foreign teachers have been employed; a bilingual environment is being developed; and TOEFL, TOEIC, IELTS, and GEPT remediation and overseas study are popular. English requirements for university graduates; English weighted grading system for recommendation-and-selection entrance; and supporting measures such as full English teaching in universities, etc., have been implemented. Taiwan is trying hard to build an excellent environment for English study, which has become an activity for all. The society devotes a great deal of money, time, and energy, and an atmosphere of "every one studies English" pervades.

In "Investigation of the Most Cherished Graduates and Talent Tactics of Taiwan's 1000 Big Enterprises," *Cheers Magazine* (2008) found that enterprises' view of the abilities of

freshman that most need to be strengthened consider a cosmopolitan worldview and foreign language ability as third most important (34.3 percent). Foreign language ability is indispensable in this competitive era.

Teaching English Skill — the special edition of *Common Wealth Magazine* (2007) reveals five important data that illuminate the English language's significance in the current world: (1) In 2000, there were 1 billion people study English all over the world. (2) In 2010, there will be 2 billion people study English all over the world (one-third of the world population). (3) In 2010, half of the world population will communicate in English. (4) David Crystal (linguist) said that since the dawn of human civilization, English has become the language spoken by various countries. (5) Countries regard English as a springboard to study new knowledge and "citizens' ability" of the twenty-first century.

"Globalization" is the path that Taiwan will follow. Therefore, the main principle of the Ministry of Education's four-year administration already has classified undergraduates passing an English test as its administrative goal. The question of improving students' English ability becomes the development emphasis of colleges. *Cheers Magazine* (2008) had adopted eight indicators to appraise enterprises on graduates. National Taiwan University continues to hold first place this year, while National Cheng Kung University ranks second. Regarding the indicator of "cosmopolitan worldview and foreign language ability," National Cheng Kung University ranks fourth. National Taiwan University succeeds as enterprises pay great attention to students' "cosmopolitan worldview and foreign language ability." Indicators show that National Cheng Kung University still need to improve.

Based on these data, this research regards students at Grade 1 in Day School, Year 96, of National Cheng Kung University as research object. The research probes relations of English learning motivation, self-directed learning inclination, and learning satisfaction. We hope to reach the following purposes, and offer suggestions for the reference of student, teacher, school, and future researcher.

1. Understanding the relevant conditions of university students' self-directed learning readiness and English study satisfaction
2. Probing the relevant conditions of university students' English learning motivation and study satisfaction
3. Probing the relevant conditions of university students' self-directed learning readiness and English learning motivation
4. Finding the influence of self-directed learning readiness and English study motivation on study satisfaction

Literature review and hypotheses development

Definition and theory of self-directed learning inclination

Ting (1996) pointed out that Guglielmino (1977) offered self-directed learning readiness theory in his doctoral dissertation, *Self-directed Learning Readiness Scale (SDLRS)*. SDLRS is applied mainly to evaluate the examinee's skill and attitude of self-directed learning readiness. However, Guglielmino had not defined the phrase "self-directed learning readiness" clearly. He only explained that self-directed learning refers to "individual studies voluntarily, continuously without external drive. The individual has plans of learning procedure, further development and completion, and time schedule." Brockett & Hirmstra (1991) said self-directed learning is a kind of characteristic existing in the individual studying process. It should be considered a continuous variable that is neither utterly deficient utterly nor completely replete. The only difference is in the degree. Hsiao (1998) called self-directed learning readiness a learner's consciousness to one's own learning motivation and ability. An individual has efficient points of self-directed learning readiness. Theories are as follows:

1. Theory of Brookfield

Brookfield (1986) pointed out that self-directed learning readiness fits adult learners. He said critical thinking ranks importantly in adult education. He regards adult students as consumers of higher education, and proposes four research methods.

Structure: Making a series of study focuses for students with different demands, making students enjoy the experience of self-directed learning.

Climate: Building a climate of active learning with emphasis is on study satisfaction. Study should be an initiative activity. Cooperation is important.

Learn engagement: The course centers on the learner. A certification program system is set up to examine the effect of study.

Learn competency: Guide and learner wish to utilize surplus time for a self-development schedule. Introspection ability is requisite. Successful self-directed learning takes place in the social train. Information, personnel, skill, and advice in the surrounding environment are important for study and should not be ignored.

2. G. O. Grow's "staged self-directed learning model"

In 1991, from the view of teaching, Grow proposed the SSDL theory based on self-directed learning readiness—"the staged self-directed learning model." SSDL evolved from the theoretical foundation of Hetsey & Blanchard's "climate lead manner" (1988). The staged self-directed learning model supposes that learners self-develop from periodical progress. A teacher can promote or hinder this kind of development. Good teaching can act in concert with the learner's self-directed learning stage and promote the learner's self-directed learning readiness.

Definition and theory of study motivation

Stipek (1995) pointed out study motivation is a kind of achievement motive for study. It is a psychological need to pursue success, and a main influence on schoolwork achievement. McCombs (2000) found that strong study motivation and true interest obviously would raise study efficiency. If students have expectations that are more correct and higher motives, better learning will be achieved.

Motive promotes people to take action and keep going. The motives of adults who participate in further education receive even more concern. Without motive, study behavior will not happen. Inducements and interest can stimulate motive. Inducement is an external factor, such as remuneration, which raises study motivation. Interest is an individual's feeling caused by reading the curriculum or observing the study environment. Interest can elicit efficiency and is important to the learning process. Liao (1999) pointed out that during the learning process, the key to fondness and initiative is study motivation. It is a strong impetus for pursuing one's study goal. McCombs (2000) expressed that intense study motivation and interest elevate study efficiency and that high study motivation increases study effect. Theories of study motivation are as follows:

1. Weiner's self-attribution theory

Weiner (1985) brought forward the "self-attribution theory" based on Heider's (1958) causal attribution theory and Rotter's (1971) locus control concept. He proposed that people with different motives explain success or failure differently. His three-dimensional attribution theory aims at verifying three assumptions: (1) An individual has intent to understand one's own behaviors in certain situations. (2) When different individuals explain behavior results, their attributions are diverse and complex. (3) Intensity of similar motivation appearing thereafter depends on the attribution the individual made for previous behavior results. Grounded on these three assumptions, Weiner found that common people always sum up six factors causing success or failure in work. These are ability, diligence, difficulty of work, luck, physical and psychological state, etc. Weiner integrated and generalized them in three dimensions: internal and external factor, stability, and dirigibility.

2. McClelland's achievement motivation theory

McClelland (1953) said that achievement motivation is achievement need, meaning that the individual expects to do things well. This expectation influences working attitude. Therefore, achievement need is a significant factor for achievement motivation. A man provided with achievement need tends to make a greater effort, so he is provided with behaviors embodying achievement motivation. Besides, students' achievement motivation level relates to parents' cultivation type. Children with higher achievement motivation often receive encouragement,

praise, stimulation, and reward from parents.

Definition and theory of study satisfaction

Tough (1979) said satisfaction means feeling or attitude of study activity. Pleasure or positive attitude represents “satisfactory.” Displeasure or negative attitude represents “unsatisfactory.” Knowles’s (1970) research pointed out that study satisfaction is a learner's happy feeling and attitude toward learning activity. Li (2002) said study satisfaction refers to a learner's study experience and contentment in the whole learning process. The feeling depends on whether the learner enjoys the learning process, and whether study achievement meets the learner's demands. Tien (1995) defined study satisfaction as the trainee’s perception of or response to study activity, e.g., during the studying process, the degree of consciousness of one’s own wishes or need. Theories of study satisfaction are as follows:

1. Need–hierarchy theory

Maslow (1970) pointed out that needs induce behaviors. Human needs have different levels. He classifies them into five levels (from low to high): physiological needs, security needs, belonging and love needs, esteem needs, self-actualization needs. After the lower ones are satisfied, people will focus on higher needs. Therefore, adult study motivation differs according to different needs. Later, Maslow revised his need–hierarchy theory, and put forward the sixth-level need—the highest need “spiritual need of self-transcendence.” It means one can surmount the personal need and help others to reach self-realization. The goal of life that one should pursue is altruism and self-transcendence.

2. Input–output theory

From the angle of the economics of education, he proposed the “education input–output elements interaction chart.” He used the production function to represent the relationship between the input and output factors in the education process. The major role of the production function is to research various factors influencing study and study achievement. He thought that input factors, which influence school production process, could be summarized into three kinds: school environment—including teaching environment, teaching equipment, teachers' quality, etc; family environment and background—including parents' educational status, job, and income, etc; and student factor—including students’ study motivation, learning ability, etc.

Research of variables and relevant examples

1. Relevant research on self-directed learning readiness and English study satisfaction

Guglielmino (1977) found that students provided with high self-directed learning readiness always make more study achievements than those with low readiness. Partridge (1979) considered that people with high self-directed learning readiness are able to make

choices freely, react reasonably, and possess strong aspirations. Their academic credits often are good. Garver (1996) and Sandsbury (1997) discovered that higher self-directed learning readiness leads to better work behavior. The two cases have a common characteristic. Li Limei's (2002) findings showed that the student with more self-directed learning readiness always feels more content about study. As the relation between background variables changes, self-directed learning readiness diversifies, and the degree of study satisfaction varies. Self-directed learning readiness has positive correlation to study satisfaction.

Integrating the above-mentioned opinions, we conclude that self-directed learning readiness influences study effect and satisfaction. Adult with more self-directed learning readiness will feel more satisfied about study. Herewith an assumption is proposed:

H1: Self-directed learning readiness has positive correlation to English study satisfaction.

2. Relevant research on study motivation and learning satisfaction

Wang (2003) found a correlation of study type, motive, and satisfaction of adults. It shows that study motivation has significant correlation to satisfaction. Intense motivation will produce high study satisfaction. Yan (2004) investigated students of former habitants of a mountainous area in Chiayi County. He discovered that students with higher study motivation have higher satisfaction. Sheffield (1964) found during the study activity that if a student's expectations come true, s/he feels content. Lam & Wong (1974) said that if learning content tallies with students' interest and need, study satisfaction would increase. According to these researches, study motivation and satisfaction are related. Herewith an assumption is proposed:

H2: English study motivation has positive correlation to English study satisfaction.

3. Relevant research on self-directed learning readiness and English study motivation

Knowles (1975) pointed out that self-directed learners have higher study motivation and clear purpose. They are able to engage in study activity for longer periods and achieve better consequences. Tasi's (2003) research showed that self-directed learning readiness has a positive correlation to English study motivation. That is to say, higher self-directed learning readiness induces higher study motivation. Liang (2001) investigated students of the Affiliated College of Continuing Education and students of Junior 2 years In-service Training Division of Continuing Education. He found that students with higher self-directed learning readiness possess higher study motivation.

Colligating these opinions, we can observe that high self-directed learning readiness influences study motivation and satisfaction. Accordingly, we suppose that after self-directed learning readiness regulates study motivation, satisfaction degree changes. Herewith an assumption is proposed:

H3: self-directed learning readiness has positive correlation to English study motivation.

4. Research on self-directed learning readiness, study motivation, and study satisfaction

Chu (2007) discovered that public servants who participate in English study generally have high study motivation. Nevertheless, their motivations diverge because of various backgrounds. These participants acquire study satisfaction universally. The higher the scores, the higher satisfaction they will attain. Study motivation will become stronger. Correspondingly, there is better appraisal for degree of satisfaction.

Colligating these views, we are aware that correlation exists among self-directed learning readiness, study motivation, and study satisfaction. We suppose that self-directed learning readiness influences English study motivation and satisfaction. Herewith an assumption is proposed:

H4: self-directed learning readiness and English study motivation have positive correlation to English study satisfaction.

Methods

Questionnaire distribution is done in this way: First, we visit English teachers, asking them to distribute and collect the questionnaires in class. The researcher distributed and collected most of the questionnaires himself, but the teacher did some. The sample selection adopts the convenience sampling method. Formal questionnaires were distributed at the beginning of March 1997 and the collection finished at the end of the month. There were 670 samples distributed and 636 collected a recovery rate of 95 percent. After deleting incomplete and invalid ones, there were 607 effective questionnaires, 91 percent of all those sent out.

First, we collect relevant documents developed by scholars. Then, we revise the collected questionnaires to formulate ours. The revised questionnaire mainly includes four parts: 1. Self-directed learning readiness measuring scale; 2. English study motivation measuring scale; 3. English study satisfaction measuring scale; 4. Basic Information for personal background. The questionnaire adopts the Likert-type Five Point Scale: Strongly Disagree, Disagree, OK, Agree, and Strongly Agree. From one to five points will be given to each choice separately.

1. Self-directed learning readiness measuring scale

We classify five aspects of self-directed learning readiness: study motivation, continuous study, self-understanding, and independent study, and active learning— 30 questions in all.

2. English study motivation-measuring scale

The English study motivation scale of this research refers to relevant documents, and quotes self-directed learning readiness measuring scales of Huang Youjun (2003) and Gardner (1985). The measuring scale includes four dimensions: internal motivation, language communication skill, motivation dimension and external motivation—16 questions in all.

Huang (2003) has permitted the quotation.

3. English study satisfaction-measuring scale

The English study satisfaction measuring scale of this research quotes the form of measuring scale of Chen (2005) and refers to the forms of relevant measuring scales of Liu (2000), in order to formulate our measuring scale. The content of measuring scale includes four dimensions: course design, teacher's teaching, study achievement, study environment, etc.—29 questions in all.

4. Basic personal information

This questionnaire includes the answerer's basic personal information, such as gender, college, previous study period of English, institute, growth place, father's education level, mother's education level, and family's monthly gross income.

Results

Reliability analysis of sample information

Reliability means the measuring scale content is provided with consistency or stability. This research adopts Cronbach's α coefficient to analyze the reliability. The purpose of this statistical method is to measure the reliability. Via reliability coefficient, inherent consistency, and relation will be verified. Cronbach's α coefficient value of self-directed learning readiness measuring scale amounts to 0.940. Cronbach's α coefficient value of English study motivation measuring scale amounts to 0.817. Cronbach's α coefficient value of English study satisfaction measuring scale amounts to 0.937. Each measuring scale shows a good or better result.

Analysis for the sample Information

A brief introduction to effective questionnaire samples: males comprise the major part of the effective sample (63.9 percent), as do technical colleges (63.9 percent). Most people first study English at primary schools (65.6 percent). Fathers' education levels mainly are college, university, and military institute (39.9 percent). Mothers' education levels are mostly senior middle school, vocational college, and sergeant school (44.5 percent). Most families' monthly gross income ranges from 40000 to 60000 Yuan (23.9 percent).

Relevant analysis

1. Self-directed learning readiness and English study satisfaction

Self-directed learning readiness has a positive correlation to English study satisfaction ($p < 0.01$). Overall, self-directed learning readiness has the highest positive correlation to English study satisfaction. Upon each dimension, study satisfaction has the highest positive correlation to study achievement. Continuous study has the highest positive correlation to study achievement. Self-understanding has the highest positive correlation to teacher's

teaching. Independent study has the highest positive correlation to study achievement. Active learning has the highest positive correlation to study achievement. Research results show that university students with higher self-directed learning readiness will get higher English study satisfaction, and vice versa.

So assumption H1: “Self-directed learning readiness has positive correlation to study satisfaction” is validated.

2. English study motivation and English study satisfaction

English study motivation has positive correlation to English study satisfaction ($p < 0.01$). Overall, English study motivation has the highest positive correlation to the dimension “study achievement” of English study satisfaction. Upon each dimension, internal motivation has the highest positive correlation to study achievement. Language communication skill has the highest positive correlation to study achievement. Motivation dimension has the highest positive correlation to study achievement. External motivation has the highest positive correlation to study achievement. Research results show that university students with higher study motivation will get higher English study satisfaction, and vice versa.

So assumption H2: “Study motivation has positive correlation to study satisfaction” is validated.

3. Self-directed learning readiness and English study motivation

Self-directed learning readiness has positive correlation to English study motivation ($p < 0.01$). Overall, self-directed learning readiness has the highest positive correlation to the dimension “motivation dimension” of English study motivation. Upon each dimension, study motivation has the highest positive correlation to motivation dimension. Continuous study has the highest positive correlation to motivation dimension. Self-understanding has the highest positive correlation to motivation dimension. Independent study has the highest positive correlation to motivation dimension. Active learning has the highest positive correlation to motivation dimension. Research results show that university students with higher self-directed learning readiness will get higher English study motivation, and vice versa.

So assumption H3: “Self-directed learning readiness has positive correlation to study motivation” is validated.

Regression analyses

Self-directed learning readiness, English study motivation, and English study satisfaction have significant positive correlation to each other. Multiple regression analysis is implemented for further research to prove self-directed learning readiness and English study motivation have prediction effect to English study satisfaction.

1. Overall prediction effect by self-directed learning readiness and English study

motivation to English study satisfaction

We make a regression analysis of prediction effect by self-directed learning readiness and English study motivation to English study satisfaction. As illustrated in Form 4, the F value of self-directed learning readiness is 26.295 ($p < 0.001$) and reaches a significant level. This means that five factors of self-directed learning readiness influence overall satisfaction. The β values of standardized regression coefficients such as “study motivation,” “independent study,” and “active learning” reach a significant level. These three coefficients have positive correlation to study satisfaction. The other two coefficients have not reached a significant level. Overall influence accounts for 17.3 percent; i.e., the prediction effect by self-directed learning readiness to overall satisfaction of English study is 17.3 percent. The result of Manner 2 reveals that the F value of English study motivation is 32.386 ($p < 0.001$). It reaches a significant level, and indicates that the whole manner has relevance and adequacy. Internal motivation, language communication skill, motivation dimension, and external motivation reach a significant level. The overall influence is 17.2 percent; i.e., the prediction effect by English study motivation to overall satisfaction of English study is 17.2 percent.

In Manner 3, we make a regression analysis of self-directed learning readiness and English study motivation. The F value is 20.313 ($p < 0.001$) and reaches a significant level. Self-directed learning readiness and English study motivation have prediction effect to English study satisfaction. The β values of standardized regression coefficients such as “study motivation,” “independent study,” “active learning,” “internal motivation,” “motivation dimension,” and “external motivation” reach a significant level. These coefficients have positive correlation to overall satisfaction. Other coefficients have not reached a significant level and overall influence is 22.3 percent.

2. Prediction effect by self-directed learning readiness and English study motivation to the “course design” dimension of English study satisfaction

We make a regression analysis of prediction effect by self-directed learning readiness and English study motivation to the “course design” dimension of English study satisfaction. As illustrated in Form 5, the F value of self-directed learning readiness is 6.509 ($p < 0.001$) and reaches a significant level. This means that five factors of self-directed learning readiness influences course design. The β values of standardized regression coefficients such as “study motivation” and “self-understanding” reach a significant level and have positive correlation to course design. The other three coefficients have not reached a significant level. “Study motivation” has a positive influence, while “self-understanding” has a negative influence. The whole influence accounts for 4.3 percent. Manner 2 reveals that the F value of English study motivation is 6.671 ($p < 0.001$). It reaches a significant level, and indicates that the whole

manner has relevance and adequacy. The β value of motivation dimension amounts to 0.125 ($p < 0.05$). It has positive correlation to course design. The whole influence is 3.6 percent; i.e., the prediction effect by English study motivation to course design is 3.6 percent.

Manner 3 shows the results of regression analysis of self-directed learning readiness and English study motivation. F value is 4.637 ($p < 0.001$). It reaches a significant level, i.e., self-directed learning readiness and English study motivation have prediction effect to English study satisfaction. The β value of standardized regression coefficient “self-understanding” reaches a significant level. This coefficient has a positive correlation to course design. Other coefficients have not reached a significant level. The regression coefficient is negative: $\beta = -0.113$ ($p < 0.05$); i.e. this variable has a negative influence on course design. The overall influence is 5.1 percent, meaning that explanation power is 5.1 percent by self-directed learning readiness and English study motivation to course design.

Prediction effect by self-directed learning readiness and English study motivation to the “teacher’s teaching” dimension of English study satisfaction

After regression analysis, the prediction effect of self-directed learning readiness and English study motivation on teacher's teaching is observed. For details, please refer to Form 6. ($n = 607$)

Manner 1 shows that the F value of self-directed learning readiness is 21.535 ($p < 0.001$). It reaches the significant level. Five factors of self-directed learning readiness influence teacher’s teaching. The β value of standardized regression coefficient “learning motivation” amounts to 0.274 ($p < 0.001$). The β value of “self-understanding” amounts to 0.109 ($p < 0.05$). Both reach significant level. Both coefficients have positive correlation to teacher’s teaching. The other three coefficients have not reached significant level. The whole influence reaches 14.5 percent; i.e., explanation power is 14.5 percent by self-directed learning readiness to teacher’s teaching.

Manner 2 shows that the F value of English study motivation is 22.465 ($p < 0.001$). It reaches the significant level, and indicates the whole manner has relevance and adequacy. The β value of “language communication skill” amounts to 0.185 ($p < 0.001$). The β value of “motivation dimension” amounts to 0.221. ($p < 0.05$) Both reach the significant level. Both coefficients have positive correlation to teacher’s teaching. The whole influence reaches 12.4 percent; i.e., the explanation effect by English study motivation to teacher’s teaching is 12.4 percent.

After regression analysis of self-directed learning readiness and English study motivation, Manner 3 shows that the F value is 15.123 ($p < 0.001$). It reaches the significant level. Self-directed learning readiness and English study motivation have prediction effect to

“teacher’s teaching.” The β value of standardized regression coefficient “learning motivation” amounts to 0.212 ($p < 0.01$). The β value of “self-understanding” amounts to 0.100. ($p < 0.05$) The β value of “language communication skill” amounts to 0.120 ($p < 0.05$). The β value of “motivation dimension” amounts to 0.143. ($p < 0.01$) All reach significant levels. All have coefficients of positive correlation to teacher’s teaching. The other coefficients have not reached significant level. The whole influence is 17.3 percent; i.e., the explanation effect by self-directed learning readiness and English study motivation to “teacher’s teaching” is 17.3 percent.

2. Prediction effect by self-directed learning readiness and English study motivation to the dimension “study achievement” of English study satisfaction

Via regression analysis, the prediction effect of self-directed learning readiness and English study motivation upon study achievement is observed. For details, please refer to Table 7.

Manner 1 shows that the F value of self-directed learning readiness is 29.567 ($p < 0.001$). It reaches significant level. Five factors of self-directed learning readiness influence study achievement. The β value of standardized regression coefficient “self-understanding” does not reach significant level. The other four coefficients reach significant level and have positive correlation to study achievement. The whole influence is 19.1 percent; i.e., the explanation effect of self-directed learning readiness to study achievement is 19.1 percent.

Manner 2 shows that the F value of English study motivation is 81.038 ($p < 0.001$). It reaches significant level, and indicates the whole manner has relevance and adequacy. The β value of “internal motivation” amounts to 0.401. ($p < 0.001$) The β value of “language communication skill” amounts to 0.087. ($p < 0.05$) The β value of “motivation dimension” amounts to 0.163 ($p < 0.001$). The β value of “external motivation” amounts to 0.086 ($p < 0.05$). All reach significant level and have positive correlation to teacher’s teaching. The whole influence reaches 34.6 percent; i.e., the explanation effect by English study motivation to “study achievement” is 34.6 percent.

After regression analysis of self-directed learning readiness and English study motivation, the F value turns out to be 41.779 ($p < 0.001$) in Manner 3. It reaches significant level. Self-directed learning readiness and English study motivation have prediction effect to “study achievement.” The β value of standardized regression coefficient “independent study” amounts to 0.145 ($p < 0.01$). The β value of “internal motivation” amounts to 0.383 ($p < 0.001$). The β value of “external motivation” amounts to 0.082 ($p < 0.05$). All reach a significant level and have positive correlation to study achievement. Other coefficients have not reached significant level. The whole influence is 37.7 percent; i.e., the explanation effect by

self-directed learning readiness and English study motivation to “study achievement” is 37.7 percent.

3. Prediction effect by self-directed learning readiness and English study motivation to “study environment” dimension of study satisfaction

Via regression analysis, the prediction effect of self-directed learning readiness and English study motivation upon study environment is observed. For details, please refer to Table 8.

Manner 1 displays that the F value of self-directed learning readiness is 15.736. ($p < 0.001$) It reaches significant level. Five factors of self-directed learning readiness influence study environment. The β value of standardized regression coefficient “study motivation” amounts to 0.186 ($p < 0.01$). The β value of “independent study” amounts to 0.227 ($p < 0.001$). The β value of “active learning” amounts to 0.132 ($p < 0.05$). All reach significant level and have positive correlation to study environment. The other two coefficients do not reach significant level. The whole influence reaches 10.8 percent; i.e., the explanation effect by self-directed learning readiness to “study environment” is 10.8 percent.

Manner 2 shows that the F value of English study motivation is 8.622 ($p < 0.001$). It reaches significant level and indicates the whole manner has relevance and adequacy. The β value of “motivation dimension” amounts to 0.154. ($p < 0.01$) The β value of “external motivation” amounts to 0.083 ($p < 0.05$). Both reach significant level and have positive correlation to study environment. The whole influence reaches 4.8 percent; i.e., the explanation effect by English study motivation to “study environment” is 4.8 percent.

After regression analysis of self-directed learning readiness and English study motivation, Manner 3 shows the F value to be 9.596 ($p < 0.001$). It reaches significant level. Self-directed learning readiness and English study motivation have prediction effect to “study environment”. The β value of standardized regression coefficient “study motivation” amounts to 0.164 ($p < 0.05$). The β value of “continuous study” amounts to -0.123 ($p < 0.05$). The β value of “independent study” amounts to 0.212 ($p < 0.001$). The β value of “active learning” amounts to 0.121 ($p < 0.05$). All reach significant level and have positive correlation to study environment. Other coefficients have not reached significant level. The whole influence reaches 11.3 percent; i.e., the explanation effect by self-directed learning readiness and English study motivation to “study environment” is 11.3 percent. Based on these results, self-directed learning readiness and English study motivation have prediction effect and positive correlation to English study satisfaction.

Self-directed learning readiness and English study motivation reach significant level. They have positive correlation to overall English study satisfaction ($F = 20.313$, $p < 0.001$) and

the four dimensions of English study satisfaction. Four dimensions are course design ($F=4.637$, $p<0.001$), teacher's teaching ($F=15.123$, $p<0.001$), study achievement ($F=41.779$, $p<0.001$), and study environment ($F=9.596$, $p<0.001$).

Assumption H4: "Self-directed learning readiness and study motivation have positive correlation to study satisfaction" is validated.

Discussion and implications

Conclusion

This research studies freshmen of National Cheng Kung University. As shown in variables of personal background, males comprise the major part of effective samples (63.9 percent). Technical colleges occupy the majority (35.1 percent). Most people first study English at primary schools (65.6 percent). Growth places are mostly in the north (39 percent). Fathers' education levels are mainly college, university, and military institute (39.9 percent), and mothers' education levels are mostly senior middle school, vocational college, and sergeant school (44.5 percent). Most families' monthly gross income ranges from 40000 to 60000 Yuan (23.9 percent).

In connection with the research topic, a conclusion is drawn about correlations of self-directed learning readiness, English study motivation and English study satisfaction. Students provided with high self-directed learning readiness and good motivation for English study has comparatively high English study satisfaction. Self-directed learning readiness, English study motivation, and English study satisfaction have significant positive correlation to each other. A learner provided with high self-directed learning readiness and high English study motivation will produce good study results and high satisfaction. University students' self-directed learning readiness, English study motivation, and English study satisfaction are closely related to each other.

In addition, as the research result shows, the dimension "study motivation" of self-directed learning readiness has the highest correlation to overall satisfaction of English study. When a student has stronger motivation, stronger study impetus is produced. Accordingly, satisfaction to English study will increase. University students with high self-directed learning readiness and excellent English study motivation will acquire high English study satisfaction. Internal motivation has the highest correlation to overall satisfaction of English study. When students want to study to their hearts' content, English study satisfaction will be enhanced.

The dimension "study motivation" of self-directed learning readiness has the highest correlation to overall satisfaction of English study. We can see that motivation and study are related. This research is one of the few that chose university students as the investigation

object. It probes the relations of self-directed learning readiness, English study motivation, and English study satisfaction. This research finds the following significant relationship: Self-directed learning readiness and English study motivation have positive correlation to English study satisfaction. There are five dimensions of self-directed learning readiness and English study motivation on overall satisfaction of English study. They are “internal motivation,” “motivation dimension,” “external motivation,” “study motivation,” and “independent study.” All of them have prediction effect of university students’ English study satisfaction.

“Study motivation” has the strongest prediction effect of university students’ study satisfaction. Better study satisfaction is predicted if the researcher observes that the student has higher study motivation. If an individual can continue a certain activity that motivates study, and can keep studying, he will acquire higher satisfaction in the study process. In accordance with the dimensions of self-directed learning readiness and English study motivation, the course is designed to realize study satisfaction. “Self-understanding” can predict university students’ satisfaction of the course design most exactly. If one can know his own study need specifically, one will have higher satisfaction toward the course design and arrangement.

Among all dimensions that influence teacher’s teaching, “study motivation” can predict most exactly students’ satisfaction to teacher's teaching. If the individual can continue a certain activity that bestirs study, and can keep studying, he will feel more content with the teacher’s teaching. Among all dimensions that influence study achievement, “internal motivation” can predict most exactly predict students’ satisfaction with study achievement. If students enjoy studying English to their hearts’ content, they will be comparatively more content about study achievement. Among all dimensions that influence study environment, “independent study” can predict most exactly students’ satisfaction with their study environment. If students have the ability for independent study that enables them to study English well by themselves, they will become comparatively more content about study environment.

The purposes of education should lie in promoting students’ spontaneity and persistency in study activity. Adults mostly are adopted as investigation object in domestic self-directed learning readiness research. This research picks college freshmen as objects. We observe that high study motivation can help a person understand his/her own needs. Choices then are made according to needs. “Active learning” is the characteristic of self-directed learners. Self-directed learning readiness can help students study actively, independently, and with less dependence on teachers.

Students with high self-directed learning readiness always are provided with high study motivation and satisfaction. During the studying process, highly self-directed learners are more active, responsible, and conscious of their needs. They utilize curriculum more independently.

Suggestions

1. Suggestions for schools

In this pluralistic society, universities and colleges should adopt the most proper way, based on their specialties and characteristics, to reach their educational goals. Language ability is the foundation of academic research, knowledge acquirement, and wisdom inspiration. The emphasis of studying English not only lies in training listening, speaking, reading, and writing. Learning English has macroscopic meaning. When we discuss how to promote students' learning motivation, we should be aware that individuals' study motivation is on different levels. This research reveals the intensity of study motivation of university students. It also reveals the amount of their study satisfaction. College teachers should teach according to students' ability. Whether learners can acquire satisfaction from the studying process will influence their ulterior study. High satisfaction solicits high study motivation, and vice versa. Colleges should employ teachers with the ability of listening, speaking, reading, writing, translating, and interpreting English. Together with vivid, innovative, "multiple interactions" teaching methods, the teaching content and teacher's image will make an impression on students' mind. Students' study motivation will be strengthened. Nowadays, many university students do not fully understand the difference between educational categories of university and high school. If a mentor's guide is devoid, high school-type University and university-type research institutes will appear. Instructors should think about teaching methods, curricular arrangement, and course design, to help learners obtain satisfaction from their study and enhance study motivation. Instructors should work out strategies to awaken learners' study motivation, and build a favorable English study environment.

2. Suggestions for students

"Study motivation" is one dimension of self-directed learning readiness. It has the most exact prediction effect on the study satisfaction of university students. A student more content with his/her study motivation will be more content with study. If one has self-motivation, and participates in certain study activities in accordance with his/her own needs and interests, study motivation and satisfaction will grow. "Motivation dimension" is one dimension of study motivation. It has the most exact prediction effect on satisfaction of university students. A student who has more satisfaction about motivation dimension will be more content with

study. When learning English, a student should not only learn the curriculum content of class, but also learn from life. This will boost internal needs and elevate study motivation. English study should not be confined to the campus. Students can regard the living environment as an English study environment, and study in many ways. When confronting problems, a student should consult teachers or classmates for correct answers and learning methods. This will cultivate a positive study attitude and increase study satisfaction.

3. Suggestions for follow-up researchers

This research adopts the students at Grade 1 in Day School, Year 96, of National Cheng Kung University as research object. We suggest that future researchers adopt students of other grades or schools, for comparison and for increasing validity of research result. This research relies mainly on a statistical questionnaire to analyze English study motivation, self-directed learning readiness, and study satisfaction of university freshmen. Future research can add qualitative research such as interviews. University students' English study motivation, self-directed learning readiness, and study satisfaction will be better understood. Qualitative and quantitative approaches will make research results more representative and convincing.

The fusion of culture between East and West and how it has defined the roles of elementary school teachers in Taiwan between 1919 and 1994

Hsu Chih-Ting

Assistant professor

Department of education, National University of Tainan

Abstract

One of the functions of a formal Education system is to shape the consciousness of the people going through its systems. Education systems have been a tool of government's through-out human history, and the same goes with Taiwanese history. Teachers play a key role in deciding what material can be taught in class, and what criteria must be met to pass certain classes. These and other factors effect how teachers conduct a class and it also depends a large part how the teachers' personality is.

In order to explore the changes of the teachers' role in Taiwan history there are three main periods of Taiwanese Teacher Education to look at. Teachers Education can be cut into three different time period's between-1919-1994.

"The Mandate of Taiwan Education" launched in 1919 under Japanese Colonial Rule established the initial system of Taiwanese Teacher Education. Within this system Taiwanese teachers were attached to the Japanese government and helped the Japanese carry out its colonial political policies to weaken and immerse Taiwanese awareness via Japanese education and culture.

After the KMT government took over Taiwan in 1949, the Teacher Education system founded by Japan was dropped along with its administrative orders and there weren't any new laws pass about Teacher Training until the "Normal Education Act." This law was passed in 1978; with this law the KMT government characterized teachers as the spirit force of national defense.

Since the early 1990's, the government has been more open to public debate and new ideas from different parties. Instead of forcing an Education system based on political view points, society has adapted a western standpoint. Based on the way of the western society views school teachers, Taiwan has adapted the same viewpoint that regards teaching as an independent occupation. Teachers should teach general knowledge instead of guarding the country hegemony. The translation of the society's situation to school teachers gave the indigenous regime which set up in 1988 to renew the teacher training program. When the new indigenous regime came into office, they grab the social atmosphere as reason to set up the 'Teacher Education Act'. In this act deregulate the Sinicize ideologies in teachers training program.

Key words: history of teacher education, teachers' role, Taiwan

Introduction

The role of the teachers' relative position in society refers to the occupation hierarchy which depends on culture. In the construction-function agenda theory, the more contributions an occupation makes in society, the higher status in society that occupation has. In comparison, Eastern culture widely believes that the teacher has an extra symbolic meaning more than any other ordinary occupation. Teachers are not just communicating knowledge to next generation. They are also playing the role of the virtue model. This is the object everyone is learning about. That is the reason why teachers can embrace high respect from people of the East.

The high society status teachers have attained, has let them be more useful citizens when it involves the mechanism of governing. The rulers can make teachers the agency to help them transfer their ideologies to people of their country. For a long time in Taiwan, teachers have been the agent of the ruler.

Due to this unique development of politics in Taiwan, there have been many regimes that have ruled Taiwan. The teachers' role always seems to correspond with the era of government. Historically, there have been many immigrants who migrated to Taiwan from Southern China. During the Zheng Chenggong period and Qing Dynasty, in spite of them both having different political positions, they both embraced the traditional culture of China giving teachers' high social status. This is the same status teachers received when teaching in Taiwan. Teachers symbolized the intellectual community and earned respect from all folks. According to the studies of Treiman(1977) and Lin(1992), it indicated that teachers in Taiwan are indeed receiving more respect than their international colleagues. Treiman's study also shows the teachers status in the international community. If the teacher taught in secondary school they were ranked fifth out of twenty-six occupations. If the teacher taught in the primary level they were ranked seventh out of the twenty- six occupations. According to Lin's study, the secondary school teacher was ranked ninth and the primary school teacher was ranked eleventh out of twenty-six positions.

But after 1895 when the Japan took over Taiwan, the contexts of the teachers' role were mixed with different culture and political goals. In order to clarify the change of the teachers' role in Taiwan at different times, there are three time periods to look at which are the Japan colonial era (1919-1945), Chiang's KMT government (1945-1993) and Lee's KMT government (1994-). These time periods will be discussed in the following sections.

1. Teacher education in Japanese Colonial Rule 1895-1945

In 1895, Taiwan became part of Japan's colony as compensation. This compensation was the result of the Qing Dynasties loss in the "Sino-Japanese War." Finally in 1945, Taiwan was restored to Chinese. In this fifty year period, the Japanese established the first systemic Teacher Education system and it had an important impact on the way the public viewed teachers.

The Japanese, accepted the cultural heritage from ancient China that viewed the teacher as one of five most important ethnic kinds, 'God, Land, Empire, Parents and Teacher.' This showed that the Japanese had high respect for teachers. Teachers were viewed as intellectuals and not just as another occupation. The relationship between teacher-student was beyond an occupation and was always placed on the same level as parent-son. One old Chinese saying expresses this phenomenon: "One must treat teacher as father all the life even if the teacher-student relationship exists just for a day."

There was also another measure to ensure Japanese teachers have great esteem in

society. In Japanese society teachers have been treated as government officials. They were recognized as army soldiers. In order to express the teachers' special status, their uniform was equipped with a ceremonial sword (Wu, 1983).

In the initial times of the Taiwan takeover, almost all teachers came from Japan, in spite of the given cultural prestige. The members of the dominant group gave Japanese teachers' authority over the Taiwanese teachers. Although in 1896, the Japanese established a public school. But it was not until 1902 when just the very few bright and loyal Taiwanese could be admitted into the Japanese public schools. But there were two separately different systems adapted to Japanese and Taiwanese in curricula during the years at school. The former students studied the history of civilization, history and geography of Taiwan in two years. The later students studied Japanese, mathematics and science in three years. The Taiwanese teachers were located in a lower stratum of society (Hsu, 1996)

As many colonial rulers will face, the rulers of Japan needed to figure out how to embody the identification of Japanese to Taiwanese. If not done properly, it can cause gigantic problems for the any kind of government. According to Gramsci's(1981) concept of culture hegemony, education is one of the ideological state apparatuses that could help the rulers group gain the consensus of the people. So during the times of Japanese governed Taiwan, the government of Japan actively established an elementary system to teach Taiwanese children were taught how to become people of the Japanese Empire. The first Compulsory Education system was implemented in 1943. All children in Taiwan including Taiwanese and Japanese must attend elementary school for at least six years.

In the end of the colonial period, the rate of children attending elementary schools in Taiwan had reached beyond 90% (Hsu, 1996).

In short, in the Japanese colonial era, teachers, almost as Japanese, combined both functions of oppressions and ideologies to submit Taiwanese to Japanese.

2. Monopolizing teacher education by a Nationalist Regime : 1945-1993

After World War II, and after undergoing fifty years' of Japanese rule, Taiwan was restored to China in 1945. After four years from being restored the KMT government withdrew to Taiwan in 1949. Taiwan became the fortress to counterattacking China's communist regime.

How to enhance the defense of Taiwan had been the main priority of all society, after being threatened from communist China. Teacher education was no exception.

Due to the resulting failure of the inner battle with communist party in mainland China, this result came from the failure of not educating the young. The KMT government immediately put education on top of the agenda among tactics for fighting the communist party in Taiwan.

The military training was implemented in 1949 in eight teacher trained institutions to enhance the loyalty of the pre-service teacher (Lee, 1976) . Then teachers were included in the military system to foster the next generation of "mental defense".

In this political endeavor there were two main missions that teachers must work on: to eradicate the Japanese influence from the last fifty years of colonial rule and to strengthen political socialization to earn the agreement on what to do for military actions towards mainland China. Teachers took the responsibility to educate the docile bodies in school for government.

Based on teachers' important missions to instill the anti-communist consciousness of people, the Taiwanese government launched the 'Normal Education Law' in 1978 that intended to establish a uniform teacher education policy to control the ideologies

of teachers.

In 'Normal Education Law,' the state was the only sponsor for the teacher training programs and this excluded the participation of private schools. There was a national standard for curriculum and assessment. The teacher training programs were designed like the military programs. Pre-service teachers must live on campuses together without exception and every teacher must affiliate with the KMT party.

For the sake of recruiting talented students to be teachers, the tuition of all students was burdened by public expense. These fees included the fees of the board, books and clothing. In addition to the free fees, when students graduated from the teaching program, the government had an obligation to assign the students to public elementary or junior high schools nationwide.

These measures mentioned above were put in place to attract young talented people from working class families to go into the teaching field. There was also another strategy to avoid these young teachers from leaving their positions.

According to the stipulation in the 'Normal Education Law,' when pre-teachers graduated from school, they were required by the government to teach for a minimum of five years when they enrolled into a primary teacher training program. Four years when the teacher enrolled into junior or senior high school teacher training program. If these pre-teachers failed to fulfill their obligation, the teacher must return the public expense for their tuition during the pre-service education as compensates. Also the government provided better working conditions for teachers than other occupations. Teachers' salaries were higher than other officers as well as other occupations that had the same diploma. They also got two months of summer vacation and one month of winter vacation with full pay. When teachers retired they could enjoy the best pension system in Taiwan. This pension system gave them a pension equal to 75% to 95% of the salaries when they were teaching.

In order to promote the best students; all primary teacher training were reshuffled from a junior college to four year college in 1987. The recruitment had also shifted from junior high school students to senior high school students.

Under the protection provided by Taiwan, Taiwanese teachers became the best agency for the KMT government. They didn't question the curriculum filled with political ideologies, which they ought to have. The autonomy to develop curriculum and the critical ability to teach students, was deskilled (Apple, 1987).

3. Teacher Education Reform 1994-the present

In the two periods mentioned above, Japanese Colonial Era and the Nationalist Regime, the ruler governed people by controlling what teachers taught in the classroom. The difference between both regimes was ethnic, Japanese or Chinese. The goals of education were the same to ruin the consciousness of the Taiwanese.

When President Chiang Ching-Kuo suddenly died in 1988, Lee Teng-Hui became the first Taiwanese President. He started to construct a regime of indigenous position. This position put the indigenous people's advantage in the priority position.

The most important thing that the Indigenous Regime initially wanted to do was raise the consciousness of the Taiwanese people, in doing so; they could earn more votes in the election campaigning on "the identity of Taiwanese."

In order to reach the goals of raising Taiwanese awareness, the government ruled by Lee decided to change the curriculum of education that was inclined towards China. To avoid struggles among political factions, it was a good approach to adapt multiculturalism as a motivation of educational reform to cover the real identity of the country. Along with ending the martial law in 1987, multiculturalism was conveyed to

Taiwan society from the west. First, multiculturalism was accepted in political fields and it admitted that people had the right to participate in political affairs such as to setting up a political party and to publish newspapers freely.

In educational fields President Lee used the concept of localization to resist Sinicization. The apparent action added the new subject “Learning more about our native land” into the Elementary School Curriculum Standard” in 1993.

“Learning more about our native lands” was the first subject focused on in the history element of school. In this element of school, there were many materials about Taiwan history that was supplied to classes by the government. These materials were related to Taiwan geography, the local productions of every place in Taiwan, the famous historical figures and events about Taiwan. In the past, these subjects were rarely mentioned.

Henceforward the Indigenous Regime had opportunities to construct the “superstructure” by resettling the curricula to arouse the Taiwanese Consciousness of people. These new forms of educational knowledge still needed teachers’ agreement and interpretation. If not the goal of the new subject could not come true.

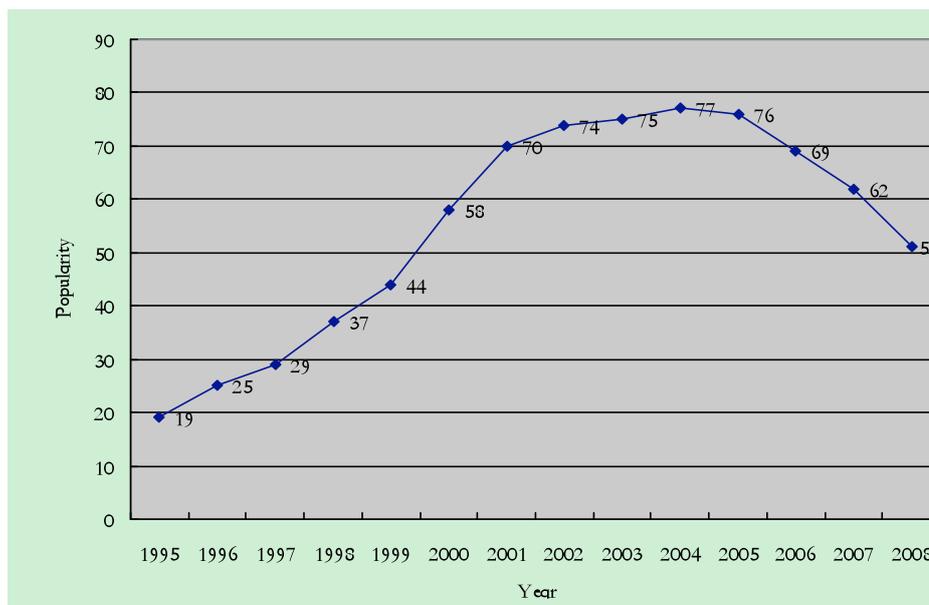

Chart □. The popularity of teacher training programs on a Year by year basis

It seemed to the Indigenous Regime, that reconstructing teacher education was necessary to assure that teachers have the will and ability to teach the curriculum about Taiwanese. On the account of deregulating the teacher education it inclined to Sinicize. The new Teacher Education Act was launched in 1994. According to the new stipulate, teacher training programs were available at all regular universities. Every university could apply to set up a “Center of Teacher Education” which are programs that train pre-service teachers. Each school needed permission from the Ministry of Education before they could admit students. It was believed that adding competition between programs can improve the quality of teachers.

In this new model of teacher education systems, many universities have striven to set up teacher training programs regardless of being a public or private school. The number of teacher training programs rose drastically. It rose from nineteen programs in 1995 to seventy-seven programs in 2004. This was the highest number ever(see Table □). In fact there haven’t been enough positions to arrange for the enormous

amount of pre-service teachers. The large numbers of Jobless Teachers have become a large social problem in Taiwan.

The teaching occupation is no longer a high status job. Teachers have become people who are just the winner in the very competitive job search and not people of moral character.

The overload of jobless-teachers caused the administration to diminish the popularity of teacher training programs by evaluating the performance of the program in 2005. There were many training programs closed by the Ministry of Education based on the evaluation done by the Ministry of Education on each school. This diminishing strategy is going on now.

Conclusion

Influenced by the traditional culture, teachers gained high social status in both Japanese and Taiwanese society. The role of teachers goes beyond instructing student knowledge and moral. Teachers have the prestige to be the leader of the community and people will listen to their opinion because of this prestige.

Realizing teachers play a key role in the process to produce ideology; teachers have become the suitable people to be the tools to instill the government spirit into the recognition of students.

How to utilize the teacher to benefit the government in governing people is the ruler's main consider about making teacher education policy.

In the Japanese colonial era the role of teachers is to instill to the Japanese identification to Taiwanese. In the Nationalist Regime the role of the teacher was to cut down the Japanese identify and substitute it with Chinese to Taiwanese. Lastly, in the Indigenous Regime, they used multiculturalism as motivation of education reform to deregulate the teacher education monopolization of Chinese ideologies.

In sum, the political climate is always the main factors to decide the role of Taiwanese teachers.

Exploring the Similarities and the Differences of Culture Patterns Between the West and the East— examples for Ohio and Taiwan

Ya-Hui Hsueh, William-Wayne Wilen

Abstract

If the meaning of culture could be defined as the Wikipedia definition of “The set of shared attitudes, values, goals, and practices that characterizes an institution, organization or group”, then there would be several similarities and differences between culture patterns in obvious or obscure forms.

This research aims to investigate the similarities and the differences, and culture clashes of culture patterns from the encountering of an Easterner and a Westerner. The Easterner is a Taiwanese and the Westerner is an American from Ohio.

There are some major culture clashes to distinguish between the West and the East. Obviously, the broad pattern is individualism versus collectivism, and the sub-pattern is independence versus interdependence.

Based on the results, the cultural similarities and differences, and culture clashes between the East and the West are as follow:

- 1. Seating strangers at dining table— Individualism or Collectivist practice**
- 2. “Mother” Ya-hui— Independence or Interdependence**
- 3. Sendimen elementary school— Loss of privacy or Collectivism on observing**
- 4. 禪— A way of life in Taiwan culture**
- 5. Kinmen western style building— Meaning of decoration**
- 6. Wind Chicken God— folk custom**

Key Words : culture pattern 、 globalization 、 Westernization 、 Easternization

Part I – The relationship of culture pattern and culture clash

The Westerner, William-Wayne Wilen is the Professor Emeritus of Education in the Department of Teaching, Leadership & Curriculum Studies of Kent State University in Ohio. He has visited many countries in the world to give lectures or teach classes, so for him being a visiting professor to Taiwan is just another one of many life experiences to foreign country.

The Easterner, Ya-Hui Hsueh was Chairman of Department of Social Studies Education of National Taichung University in Taiwan. Dr. Wilen and Dr. Hsueh became acquainted with each other from 2008 September, while he taught a graduate course in her department. Over the four months, they communicated with each other on their different perceptions about Taiwanese and American cultures. Some of these cultural perceptions could be called “culture clashes” because they were so conflicting.

During the period while Dr. Wilen visited Taiwan, he noticed many cultural patterns that Americans shared with Taiwanese: hard working, concern for family, and importance of education. Meanwhile, he made some behavioral adjustments to fit into Taiwanese culture to try to be less individual and more collective.

Dr. Wilen has visited many countries in the world, but he also learned about culture differences when exposed to Taiwan. Further, some culture practices for him to respond to even are culture clashes. Dr. Wilen said: To me a “culture clash” is when culture practices are very different from what one expects when living in a new and different culture. While for Dr. Hsueh, she still lived in her own culture to be a host for providing assistance to and connecting with her guest-Dr. Wilen, so there doesn't seem to be culture clashes happened for her. By getting along with Dr. Wilen, she only can make comparison of the similarities and differences of culture patterns between the West and the East.

Here we clarify the connections between the culture pattern and culture clash. The relationship of culture patterns between two different places can be showed with three possibilities -similar to, different from and very different from as resulting to conflicts. When some one exposed to a culture pattern, which was perceived different from his living experiences, he doesn't need to make adjustments. Furthermore, when some one is fitted to a complete new, very different from the situation of his culture pattern, he will meet with culture conflict to adjust to and the intensity of his culture clash is strong (Fig1) .

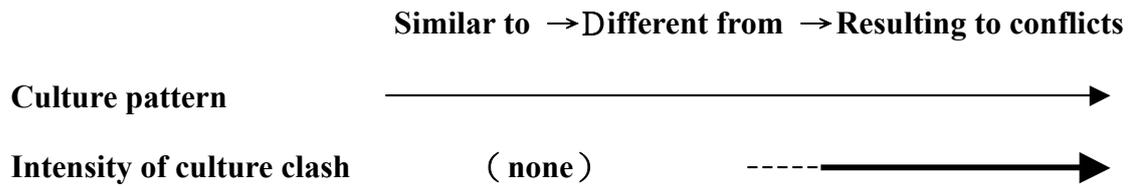

Figure1 The relationship of culture pattern and culture clash

Part II – The series of culture clashes for the Westerner

During the period of Dr. Wilen's stay in Taiwan, Dr. Hsueh took him and his wife to visit many places to further understand Taiwan culture. All of these places, including parts of northern Taiwan, central Taiwan, southern Taiwan, and off-shore Kinmen islands (composed of Big Kinmen Island and Small Kinmen Island), the Kinmen islands impressed Dr. Wilen most deeply. The experience of visiting Kinmen islands evoked several culture clashes between them from dieting habits to religious beliefs. By recalling memories of Kinmen islands and other visited places, their differing cultural perspectives are illustrated as the following discussions.

1. Seating strangers at dining table – Individualism or Collectivism

Dr. Wilen was surprised to find out that strangers are seated at one's breakfast table. This incident occurred at an inn in Kinmen where they were staying. Dr. Hsueh thought we are all Taiwanese, and no one seemed to be stranger. So, she explained to him: It's okay because we are just making conversation, and as long as you are not telling stranger your name, address, you still hold your privacy. By the way, Dr. Hsueh told Dr. Wilen: Maybe, the strangers will give you gifts a few days later. Yes ! This expectation came true. A man who they all met at the Kinmen B&B really sent Nantou County champion tea (the most famous tea of Taiwan) to Dr. Wilen as a gift. What a surprise to him !

The experience of seating strangers at a dining table apparently exposed a difference in culture patterns as experienced by the Westerner Dr. Wilen and the Easterner Dr. Hsueh. This difference centered on the Westerner's loss of individual choices and the Easterner's maintenance of group harmony.

Easterners are more aware of the feelings and attitudes of others than are Westerners (Nisbett, 2003, p.59). For an Easterner, there is a concern for the feeling of others and building social relationship is important in order to maintain the group harmony.

This difference of culture patterns became evident during the Kinmen experience of dining together at a beef restaurant. At the famous beef noodle restaurant in Kinman, because of a large number of customers, the manager of the restaurant asked Dr. Hsueh if he could seat some other customers dining together at their table. Dr. Hsueh responded

quickly saying “yes” without noticing Dr. Wilen’s reaction.

At that moment, Dr. Wilen turned to Dr. Hsueh, saying he have never seen this happened in U.S. Strangers are not seated at restaurant tables because a meal is a personal experience not shared with strangers. It might be perceived as a violation of privacy, which is a characteristic of an individualistic culture.

Dr. Hsueh explained that her intention of helping the boss handle more customers, and the behavior of sharing the table with strangers is a part of Taiwan culture pattern. It is a way of maintaining group harmony and constructing a social network of group interdependence. These are characteristics of collectivism.

So, Dr. Wilen said:

Since being exposed to collectivist cultural practices in Taiwan, I have found them slightly frustrating but generally quite positive experiences. I wonder if the problem is my individualism which includes rights of having a choice in the decisions made and privacy when seating strangers at your table, or my lack of acculturation and not readily adjusting to the group-oriented culture. Individualists want more control in situations and are not as willing to go along with the expectation and wishes of group no matter how well-intentioned.

It is probably due to privacy – perhaps we are more private and not as accepting of strangers. Taiwanese do not see the people as strangers because the vast majority of Taiwanese are primarily of one ethnicity. (Dr. Wilen, 2009/01/22)

2. “Mother” Ya-hui – Independence or Interdependence

Nisbett stated that Easterners are constantly being primed with interdependence cues and Westerners with independence cues. As a result the cues that surround them would make people living in interdependent societies behave in generally interdependent ways and those living in independent societies behave in generally independent ways (Nisbett, 2003, P.68).

During the period of Dr. Wilen’s stay in Taiwan, Dr. Hsueh helped him settle into the culture. At one point Dr. Wilen said he thought that Ya-hui was acting like his kind and concerned mother. He said in a letter to Dr. Hsueh:

I got started thinking about the whole collectivist concept again and realized you were continuing your role as our host. You didn't need to accompany us to the airport but I think you considered it a continuation of your concern and care for us. (Dr. Wilen, 2009/01/22)

In his journal Dr. Wilen wrote: **I wonder if being overly concerned and protective is part of the group mentality – a way to take care of and help each other in the group.**

I have noticed this when Ya-hui showed great concern for us, especially if we have to venture out on our own. (Dr.Wilen, 2009/01/22)

Dr.Wilen noticed that Dr.Hsueh showed great concern for him and his wife, especially if they had to venture out on their own. But, Dr.Hsueh assumed that if they took a trip on their own to an unfamiliar environment, they could meet with many troubles and therefore might be faced with danger and problems that needed to be solved. The intention of Dr.Hsueh in accompanying them was to offer service and assist them have a pleasant journey.

So, there are really differences of culture patterns between the West and the East. The Westerners practice individualism with an emphasis on self-independence and doing things on their own, and making their own choices. Easterners, on the other hand, practice collectivism with an emphasis on group interdependence and consideration for each other.

3.Sendimen Elementary School— Lose of privacy or Collectivism on observing

When Dr.Wilen and Dr.Hsueh visited an elementary school of Sendimen to give an intern student teaching feedback, Dr.Wilen found the teacher observation and follow-up conference session very different from how they are practiced in the US. In Taiwan, many teachers can observe the teaching performance and give the intern student feedback during the follow-up conference. But in US, only the supervisor or principal does the observing and evaluating because it is a way to respect the teacher's privacy. So Dr.Wilen said:

What was interesting and I think a very professional collectivist characteristic was that the principal and most of the teachers were invited to observe and critique the lesson. This large group consisted of about 10 professionals including the 4 of us. I can't imagine the pressure on the intern but she maintained poise and had what I thought was a successful Chinese language lesson.

In this professional collectivist culture the teachers observe each other and conference with each other as a group. Ya-hui gave her critique and then I was asked for my perspective. Even though the lesson was completely in Chinese, I said she was impressive especially in terms of the wide variety of active teaching techniques and methods she used in one class period. As a result the students were focused, on task, and very cooperative in achieving the learning objectives. I didn't need language translation to observe this. The evaluation form was completed based on the collective comments of everyone. Ya-hui said that they all had compliments and there were no suggestions for improvement. In the US professional education culture, privacy is important with only the supervisor or principal doing the observing and evaluating.(Dr.Wilen, 2009/01/22)

Part III – Culture similarities and differences between the West and the East

1. Wind Chicken God – Folk custom

What is the difference between superstition and folk custom? The Wikipedia definition is that superstition is a credulous belief or notion, not based on reason, knowledge, or experience, while folk custom is a tradition handed over, and passed from generation to generation.

Dr. Hsueh told Dr. Wilen that there are so many superstitions in Taiwanese culture patterns, especially in the fishing villages of Taiwan. Dr. Hsueh's grandfather was a fisherman, so she heard of many superstitions in the fishing villages of Taiwan. She recalled her grandfather said -when fishermen eat fish, they can't turn the fish over. If they turn the fish over, that means their own fishing boat will be turned over in the sea. Now the old fishermen of Taiwan still believe in this superstition. So, the way of eating fish in fishing villages of Taiwan is eating the surface part of fish first, and then taking away the long, central fishbone with chopsticks and finally, eating the bottom part of fish.

Dr. Hsueh found it interesting that some customs and superstitions in western cultures are similar to the eastern ones but for different reasons. They explored the superstitions as listed below:

1.) The western umbrella superstition – You should not open an umbrella indoors because it will bring you bad luck. The reason according to ancient custom is that it might insult and anger the sun gods.

The eastern umbrella superstition – You should not open an umbrella at home because the ghost hiding inside the umbrella will come upon your opening it. If you open the umbrella, especially a black one in the home, the ghost will jump from the umbrella and stay in your home scaring and bothering your family.

2.) The western mirror breaking superstition – Breaking a mirror could bring you seven years of bad luck. It was thought that the image in the mirror is a reflection of your soul and if you shatter your soul you could not protect the body from misfortune. The Romans believed in life renewing itself every seven years.

The eastern mirror breaking superstition – Old Chinese people thought that breaking a bowl or plate during the Chinese New Year holidays is a sign of something terrible would happen in future.

3.) The western black cat superstition – A black cat crossing your path is bad luck. Black cats have been associated with witchcraft, which is likely the source of this superstition. During the Middle Ages, it was believed that black cats could put a curse on you.

The eastern black cat superstition – Black cats have been associated with ghosts in Chinese culture. If dead people's body was crossed by black cats, the dead people

would become zombie who was possessed by ghost's souls.

During the period while Dr. Wilen was staying at Taiwan, he learned of different life styles and he wondered why there were so many superstitions and folk customs practiced in Taiwan. Some of the questions he had were— why are there so many different Gods in Taiwan ? What is a Pig God ? Why do people burn spirit money in their furnaces ? Why do people believe in Wind Chicken God ? Are these superstitions or folk customs ?

Dr. Hsueh explained some of these superstitions and customs to Dr. Wilen. He found out that these are ways to meet the psychological needs of the people. It is believed that spirit money is burned because the ancestors in heaven need a lot of money to live a better life. Wind Chicken God (photo 1) can “eat” strong east northern wind and so on. After understanding the reason why Taiwanese worship, Dr. Wilen thought that these seem more like folk custom and religious customs rather than superstitions. He said some superstitions in western culture are funny because there are no scientific research studies to support them. But, some people take them quite seriously probably because the superstitions came from "the old country" and became traditions.

Photo1 Wind Chicken God of Kinmen

2. Kinmen western style building— Meaning of decoration

In Kinmen islands, there are examples of western-style buildings, estimated about 130 buildings, most of them dating from the 1920s and 30s. They were constructed by local wealthy merchants seeking their fortune in South East Asia. The western style buildings often feature outer hallways and Western style gables, typically with two storey and luxurious gable decorations.

From the luxurious gable decorations, with the sculptures of carved fruits, animals and clock in photo 2, we can find a lot of meanings given by the western style building owner. The sculptures of carved grape, peach, peacock, butterfly, lion and dragon symbolizes happiness and long life, and the time pointed to pm12:40 on the clock means not taking a rest until pm12:40 in order to work hard than others. After realizing the meaning given by decoration, Dr. Wilen said everything is meaningful, the same situation as the West !

Photo2 One luxurious gable decoration of western style building in Kinmen

3. 禪— A way of life in Taiwan culture

There are certainly indications that the West finds many attractions in the East. While the rest of the world drinks Cokes and wears jeans, Westerners are rapidly fusing their

cuisines with Eastern ones (Nisbett, 2003, P.225). Yes, Nisbett's viewpoint is right.

To Dr. Wilen, visiting Taiwan was a cultural adventure; so everything was new, exciting and meaningful for him. He was sensitive to the surrounding environment, especially as he explored the deep cultural meaning of visual arts and shapes of architectures. During his travel he saw a big Chinese character—禪 hanging on the wall in a kendo club. He has been wondering about the meaning of 禪.

Dr. Hsueh thought about how to tell him the meaning of 禪. One day an interpretation came to her. She told him—禪 is meditation, reflection on oneself, and a way of life in Taiwan culture. In the garden, drinking tea and listening to music by a performer playing a Chinese traditional instrument is one way to keep a serene mood in traditional Chinese culture. Keeping a serene mood is the deep meaning of this Chinese character—禪. Here in Taiwan the garden means a beautiful place made complex with plenty of plants, rocks and river (natural or artificial).

Dr. Wilen thought that since it snows so much during the winters in Ohio, one way not to be upset with the weather and try to be serene about the situation is to drink tea and listen to traditional Chinese music while watching the snow flakes fall. Therefore it can also be supposed that the people get the essence of 禪.

Besides learning of 禪, Dr. Wilen and his wife began to prefer a diet consisting of sticky rice, Taiwanese local dishes and Taiwan Mountain tea. This attitude developed as they found the restaurant food so tasty! During the period of his stay in Taiwan, his wife learned about how to cook rice and stir-fry dishes from Dr. Hsueh. This means they began appreciating and practicing the Taiwanese way of life and approaching Eastern culture pattern.

Part IV — Conclusion

The definition of culture clash, as Fagan defined the term, was based on the changing attitudes of Westerners toward non-Western societies. This happened when voyaging Europeans searched for paradise on earth during the long centuries of Western discovery. Culture clash was perceived as a progressive confrontation between an expanding, sophisticated civilization with radically alien beliefs, and dozens of societies whose people lived in careful balance with natural resources of their environments (Fagan, 1998, p23).

According to the Wikipedia—the free Encyclopedia, globalization can be defined as an ongoing process by which regional economies, societies, and cultures have become integrated through a globe-spanning network of communication and trade. And this term can also refer to the transnational circulation of ideas, languages, or popular culture through acculturation. So, the exchange of culture patterns is part of the globalization

process.

Dr. Wilen experienced many cultural similarities and differences and some major cultural clashes over the four-month period he visited Taiwan. Dr. Hsueh was instrumental in assisting him to adjust academically, socially and geographically; answering his many inquiries, and guiding his learning of new cultural practices and patterns. During this period of many conversations and visits to cultural sites, no evaluative comments were made about these cultural differences. They were all perceived as valuable learning experiences.

Dr. Hsueh's research of the literature led to the conclusion that there are three major different perceptions of a world view. First, Fukuyama's view is westernization is taking over the world - people in every country wear jeans, T-shirts and Nike shoes and drink Cokes and listen to American music (Fukuyama, 1992) . Second, Huntington's view is of continued divergence- the world will be on the brink of fault line wars due to clash of civilizations, differences in values and worldviews, and the influence of the West will be in decline (Huntington, 1996) . Third, Nisbett's view is convergence- the world will converge rather than diverge and that this convergence will not be based purely on Westernization but also on Easternization (Nisbett, 2003) .

The discussion of cultural similarities and differences, and culture clashes, between Dr. Wilen and Dr.Hsueh resulted in an agreement that the process of globalization is approaching the third worldview. This is a blending of Westernization and Easternization which will integrate culture patterns between the West and the East. Through the experiences of exchanging culture patterns, Dr. Wilen and Dr.Hsueh learned more about each other's cultures and are better able to adjust to differing cultural situations. This realization is absolutely essential in order to live as a global citizen in a modern converging world. Dr. Wilen and his wife felt they became better global citizens as a result of living and learning in Taiwan especially with Dr. Hsueh's concern, care and assistance.

A Comparison Study of Marketing Strategies and Advertising Strategies in Adult Education Between Taiwan and U.S.A.

Guang-Han Chung / I-Fang Wang

Abstract

The birthrate declined, but the number of the universities increased. Many schools faced the decrease of students, and teachers had the difficulties to find jobs. Recruiting students became the big challenge for schools. Therefore, in order to compete effectively, ascertaining how to successfully attract and recruit students to the program has become an important part of successfully maintaining adult education programs.

The purposes of this research were to determine what advertising strategies were effective, what marketing strategies were effective when promoting its adult education program and to compare the different marketing strategies which were used in Taiwan and U.S.A.. Moreover, this research will assist institutions in developing practical strategies for effectively recruiting adult learners to choose the respective program offered by the respective institution.

Various advertising and marketing strategies were analyzed and compared in this study. The random sampling technique was used to achieve more reliable results. The Education Marketing (Kuo, 2004) was the instrument used in this research. The t-test, the Mann-Whitney U test, the Kruskal-Wallis one-way analysis of variance and the Pearson Correlation Coefficients were used to analyze the data (Frankel & Wallen, 2006).

The results of the study indicated:

- (1) The most popular and effective advertising strategy in Taiwan was media advertising, followed by oral advertising, then advertising recognition. In U.S.A., media advertising was the most popular advertising strategy, followed by advertising recognition, then oral advertising.
- (2) Most participants considered the orientation consultant before they joined adult education programs in Taiwan. In U.S.A., most participants considered price consideration first, and then followed by professional skills.
- (3) There was only one demographic characteristic of the participants that affected their opinions about the advertising strategies used, namely marital status. But the difference of gender, age, and occupation also affected the advertising recognition of the participants.

Before the schools create the plan, they should do a sound analysis of all variables and the target groups in order to make a successful strategy to recruit students. Hence, the finding of the study could provide useful and practical information to help Taiwanese and American education to design better and more effective strategies to help the schools to recruit more students.

Keywords: Marketing Strategies, Advertising Strategies, Adult Education, Recruiting Adult Learners

Research Problem Description

In recent years, the population structure of Taiwan has experienced some big changes. The birthrate declined from 412,779 newborn babies in 1981 to approximately 200,000. This phenomenon challenged the operation of the Taiwanese education system. For example, many local governments tried to close small schools over economic and profit concerns. However, this action affected the rights of children who lived in remote areas. Moreover, challenges were also manifesting in the higher education system. The birthrate decreased, but the number of the universities and colleges increased. Currently, there are over 150 universities and colleges in Taiwan, and the numbers of students will soon reach 250,000. Because of the declining birthrate and the number of universities increasing, the acceptance rate of entering universities has increased. In 2007, the university acceptance rate was over 95%. From a positive point of view, people could see the phenomenon as a popularization of university education and an increase of professional skills. However, there were still many potential problems behind the popularization, such as the commercialization of education, an excess of talented professionals, and too many idle spaces in higher education institutions. Taiwanese education and higher education institutions should face these problems and find solutions before the issues get worse (Jiang, 2003).

The 1990's to the present became the period of a knowledge-based economy and the trend of life-long learning thrived in many countries (Chen, 2004). The average age of the population was also getting older and the demand for life-long learning opportunities for adult learners was increasing (Lin, 1999). Therefore, life-long education had become the trend for many countries (Chen, 2004; Lin, 2003).

In response to demographic trends and in support of the government's focus, many schools started to build and promote adult education programs. In order to effectively increase revenues and compete with the numerous other institutions in Taiwan, the advertising and marketing strategies became a primary focus for schools to recruit students and increase the revenues. In response, many universities and colleges started to pay closer attention to effective strategies for advertising the schools differentiation, strengths and methods for attracting and successfully recruiting adult learners to go back to school (www.edu.tw, Retrieved December. 23, 2009).

Hence, the purpose of this study was to find out what advertising and marketing strategies were effective in recruiting adult students in Taiwanese universities and colleges specifically from the adult learners' perspective. In addition, the study helped to identify possible correlations to the relationship between advertising and marketing strategies and the demographic backgrounds of adult learners. Although the results were not generalizable, the information is now available to use as a basis for helping schools plan practical strategies and useful programs to attract adult learners. In addition, the findings of the study can help universities and colleges save time and therefore money in recruiting students because they have a foundation with which to start, specific to education program.

Research Question

1. What is the most effective advertising strategy for education programs used by colleges and universities in adult education?
2. How do people feel about the marketing strategies for education program currently used by colleges and universities in adult education?
3. Is there a relationship between the demographic backgrounds of the participants, the advertising strategies, and the marketing strategies for education program in adult education?

Review of the Literature

Adult Education

Adult education programs are part of the Taiwanese education system, but they developed much later than other education programs and did not become part of Taiwanese schools' curriculum until the 1990's, long after the field for adult education had begun (Lin, 2003). In 1920, E. Thorndike started a science experiment for adult learning, which was the beginning of documented research studies specific to adult learning (Huang, 1997). Adult education research in Taiwan began in about the same timeframe. In 1922, Chang published an article called "adult education theory" in an education magazine, and since then, the magazine started to publish articles to introduce adult education (Cai, 1997). However, the field drew minimal interest until after 1960 when the number of research studies conducted for adult education was increasing, and the studies of adult education started to develop (Huang, 1997).

The development of adult education was very helpful in developing adult education programs for educational institutions and would become even more important for Taiwan as the demographic trends in Taiwan shifted to a higher average age. In Taiwan, the average age of people increased, and the social structure was increasingly moving toward an older average age (Chen, 2004). In order to maintain or enhance productivity and competent ability, it was important to improve the knowledge and skills of adults (Lin, 1999). Governments, realizing the benefits to citizens and the country overall, took the necessary steps to support adult education programs.

Adult education

In 1976, the education department of the United Nations defined adult education as the educational process designed for continuing education of working adults within an organization. The term adult education applied whether the continuing education was formal or informal, an extension of schools or a substitution for schools. The purpose of adult education was to provide opportunities for adults to develop their potential, to gain new knowledge, to improve skills, and to increase their professional knowledge. By maximizing adult education potential, these people could benefit from new development, or have some positive change in their attitudes or behavior (Husen, & Postlethnaite, 1985). Huang (1997) indicated that adult education programs provided the necessary educational activities for adults to improve skills for their future development. The field included formal and informal education activities. The purpose was to help people gain knowledge, skills, and promote change of attitude about learning in order to increase problem solving capability, and improve the development for individuals within a society (Lin, 1999).

Continuing education

Hsia (2000) defined continuing education as the education activities engaged in after compulsory education. After 1980, extension education of American universities described continuing education as the process of continued learning for organized education activities for adults (Kuo, 2004). Huang (1997) thought that continuing education was the continuing education activities for adults after finishing their mandatory education.

Advanced education

Lin (2003) defined advanced education as the education activities for adults who had jobs while taking courses. Typically, this kind of education occurred in the work place. These adult learners had the basic knowledge of their work, and the continuing education curriculum was for the purpose of learning more about their chosen field or gaining information specific to their jobs.

Recurrent education

Recurrent education was a way of alternating between education, jobs, and leisure, and practicing full-time or part-time education activities (Hsia, 2000; Lin, 2003; Kuo, 2004). In the beginning, recurring education referred to adults who went back to school to obtain a formal education, but the definition was expanded to include formal or informal education (Lin, 2003). By attending education courses, people who had jobs could continue learning and use this knowledge in their jobs or lives.

Lifelong education

Lifelong education was the overall name for education activities and processes that people experienced throughout their lives (Lin, 1999). According to Yang (1996), lifelong education studies originated from educator's individual opinions of students, and focused on continuous learning behaviors. These learning behaviors became the personal model. Cross (1986) indicated that lifelong learning was the growth of self-directed learning. The purpose of lifelong learning was to gain self awareness, and to be understood in the world. Continued learning was for the purpose of gaining new skills and abilities, and it was one kind of self-investment.

Extension education

In the middle of the nineteenth century, the Cambridge University of the United Kingdom acknowledged this term. The term was popularly used by American universities. However, after 1970, people used the terms adult education or continuing education instead of extension education (Malcolm, 1994). In Taiwan, people still used the term extension education to represent all continuing education activities which were provided by universities (Hsia, 2000). Yang (1996) indicated that extension education is the full time or part time education that was provided for adult learners. Extension education was the overall name for many kinds of adult education or continuing education.

The History Development of Adult Education in Taiwan

According to Lin (1999), there were six stages of research in the history of adult education development in Taiwan. The first stage occurred in 1900. In this stage, adult education was called reading education, farmer education, worker education, commoner education and society education. In 1922, Chang published an article called "adult education theory" in an education magazine, and since then, the

magazine started to publish articles to introduce adult education (Cai, 1997). In 1959, Chu published an article titled *The Characteristics of Adult Education* in *Education and Culture* magazine, and this was the first published record of the term “adult education” in the education field (Cai, 1997). However, Taiwan researchers also showed minimal interest in adult education studies until the 1960’s when research studies became more prevalent in published articles. In 1980, Mr. Yang and Huang started to position adult education into action for future research (Chen, 2004). In 1990, the education department set up a five-year plan to improve adult education based on the conclusion of the sixth national meeting (www.edu.tw, Retrieved Dec. 23, 2009).

The research studies of adult education then began to really become accepted. In 1993, there were two masters programs of adult education established in National Chung Cheng University and National Kaohsiung Normal University (www.edu.tw, Retrieved Dec. 23, 2009). This helped Taiwanese adult education to initiative research studies and achieve huge developments for research studies specific to Taiwan (Lin, 1999).

According to Huang (1997), there were four periods in adult education development in Taiwan, namely the Practical period (before 1930), the Initial period (1930-1950), the Development period (1950-1964), and the Systemic period (1964-1990). In the practical period, people saw adult education as practical, as it related to job skill enhancement, and the schools only focused on providing remedial activities for adults. Then, in the initial period (1930-1950), universities started to set up professional programs for adult education, and researchers started to analyze existing theories and studies of adult education in order to provide information to implement adult education. In the development period (1950-1964), the number of research studies pertaining to adult education grew quickly, and many theories of adult education were established in this period. Finally, in the systemic period (1964-1990), adult education researchers not only used studies in its own areas, but also used theories and research from other disciplines to expand and add to available research studies conducted about adult education. From this period, the knowledge and information for adult education started to become more systematic.

The Future Trend of Adult Education in Taiwan

Hu (2001) indicated that because of the development of education and the progress of information technology, access to educational institutions and in particular adult education programs should not be limited in the traditional way with high standards typically used by institutions to attract higher quality students with more potential for high achievement. Adult education should include new ideas, strategies, and new ways in adult education activities. There were six strategies that could help universities improve and achieve progress for adult education programs if the schools used them.

1. Open learning opportunity. The universities could reduce the limitations that may prevent accessibility of programs for adult learners to enroll in higher education schools, such as minimum GPA requirements for entering schools, the limits of space, time, and cost. Then by providing better access for adult education, in addition to providing traditional classroom teaching, the schools could provide more education channels for adults to learn from each other. They could then connect this knowledge and information that they were able to gain and synthesize it to other learning opportunities. Moreover, the classes’ design should be flexible in order to give more freedom and choice for adult learners.

2. Quality management. By increasing learning opportunities for adult students, colleges and universities could increase the number of courses offered by expanding adult education availability and program while maintaining quality management. This will ensure that the expansion of the programs benefits all students because it would incorporate a focus on quality with the added benefit of the knowledge and experience that adult learners attain from life experiences.
3. Marketing the activities. The purpose of marketing adult education was to provide accurate and motivational information to adult learners about the benefits of continuing their education. The marketing strategies help colleges and universities to bridge the gap when courses were available and create demand for adult education programs.
4. Merging the local communities. This strategy was to merge the community and to segment the market in order to save resources and to avoid overlapping of resources. This marketing strategy was developed as a tool to identify similar characteristics within communities and to break markets into sections based on similarities in order to choose the most effective marketing strategy that would have the widest reach and provide the most return for a particular or multiple market segments. This strategy helped advertisers to avoid overlapping of resources that would inevitably occur if every consumer were to be targeted within every community.
5. Distance education. Adult education should combine computer and Internet technology as a tool to attract adult learners and increase the enrollment numbers within adult education programs, and thus enlarge the programs of adult education offered at colleges and universities.
6. The participation of adult learners. Universities should encourage adult learners to participate in the process of the classes' design, setting learning goals, evaluating the learning outcomes, and implementing the learning planes. Adult education should be learner-centered, and the schools should set up two-way communication in order to help adults to achieve lifelong learning while receiving valuable information that will help the educational institution to achieve continuous improvement.

The Consumer-Direction of Adult Education

When adults needed access to formal learning and expected the education institution to supply their need, the consumer-direction of adult education would occur (Cranton, 1994). During these years, the government continued to promote adult education. Also, people started to feel the need for continued learning because of the rapid expansion of technology and the need to increase knowledge to keep up with ever-changing trends (Chen, 2004). This demand for adult education prompted government organizations and universities to create programs in response to market demand to meet the ever-increasing needs for adult education (Shiao, 2002).

Hsia (2000) thought that if adult education adhered to consumer-directed learning, then learning would include negotiation in the learning process, and learners and educators would be equal in some ways. Learners and educators would negotiate about the process of learning in order to achieve the best learning outcomes.

Based on the theories of self-directed learning and self-regulated learning, adult learners had more self-control than young learners. Moreover, adult learners would choose adult education programs based on knowledge, universities, instructors, and even the services (such as parking or food). Because the supply of adult education was more than the demand, it was easy to see that adult education tended to be

consumer-directed (Shiao, 2002). Therefore, schools had to work harder to effectively compete to recruit students by advertising the benefits of their program, or why the potential student should choose their university instead of another school.

Educational Marketing

Educational marketing divisions used the traditional ideas of marketing to more effectively manage and promote colleges and universities successfully (Wang, 2003). By increasing the understanding and support of the students, the schools could also increase their competitive advantage and effectiveness of the product based on customer feedback. Kolter and Karen (1995) thought that educational marketing used the ideas and methods of marketing to analyze the environment of the school, the source of students, competitors, and the strengths and the weaknesses of the school, in order to position the school and find out the target market (students).

By positioning the school, the organization could show its strengths and characteristics in order to recruit more students and attract more resources for the school. Moreover, Peng (2000) thought that educational marketing was the process of marketing management of the school, and used the ideas of marketing in the school. Educational marketing was divided into internal marketing and external marketing. The major content focused on the ideas of educational marketing, the marketing combination of the school, and the recruiting promotion. In addition, Chen (2004) pointed out that educational marketing viewed education as a market. The school used distinguishing skills to divide the market, to position itself, to focus on the target market, and used excellent class designs, good instructors, targeted advertising and so on, to increase their competitive advantage.

According to Brown (1984), the first stage of educational marketing was to identify the problem, followed by focusing on the target market, to conduct marketing segmentation, create the marketing strategy, implement the strategy, and evaluate the outcome of the implementation. Please see Figure 1.

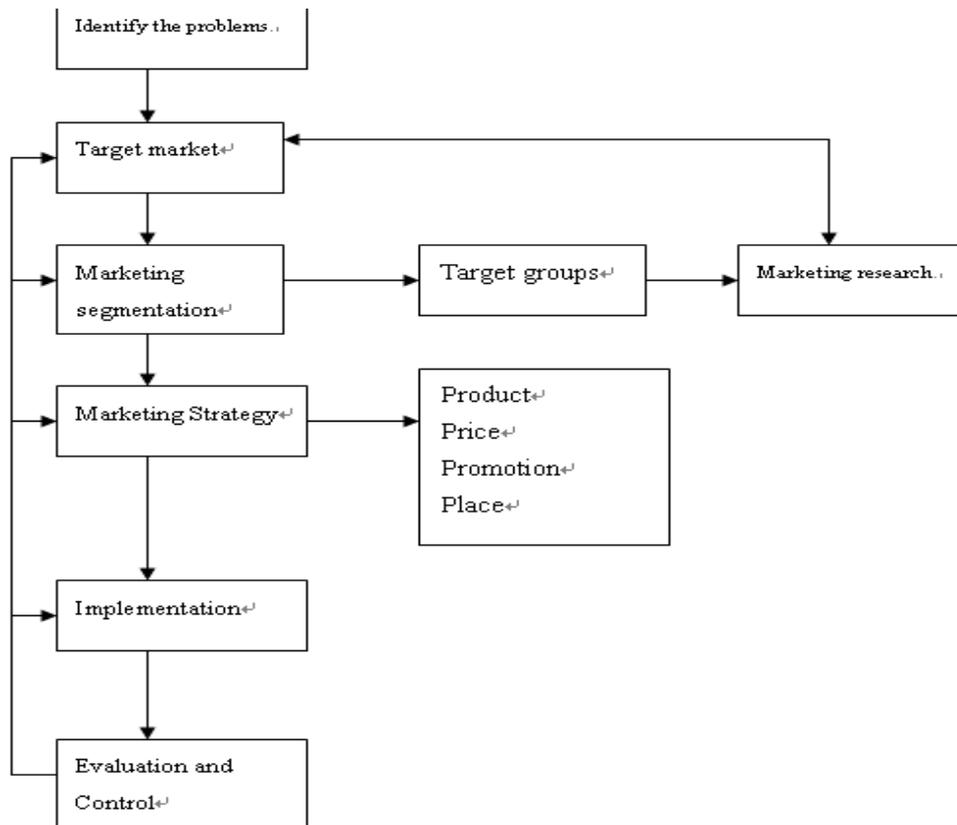

Figure 1. Educational Marketing Stages

From Brown, S. A. (1984). *Marketing Extension Program: Extension*

Huang (1997) introduced the idea of the process of planning the strategy of educational marketing. The steps of planning the strategy were to complete the market research, to analyze the organization, to set up the target of the marketing, to analyze the marketing segmentation, to plan the strategy, to implement and to evaluate and control. Please see Figure 2.

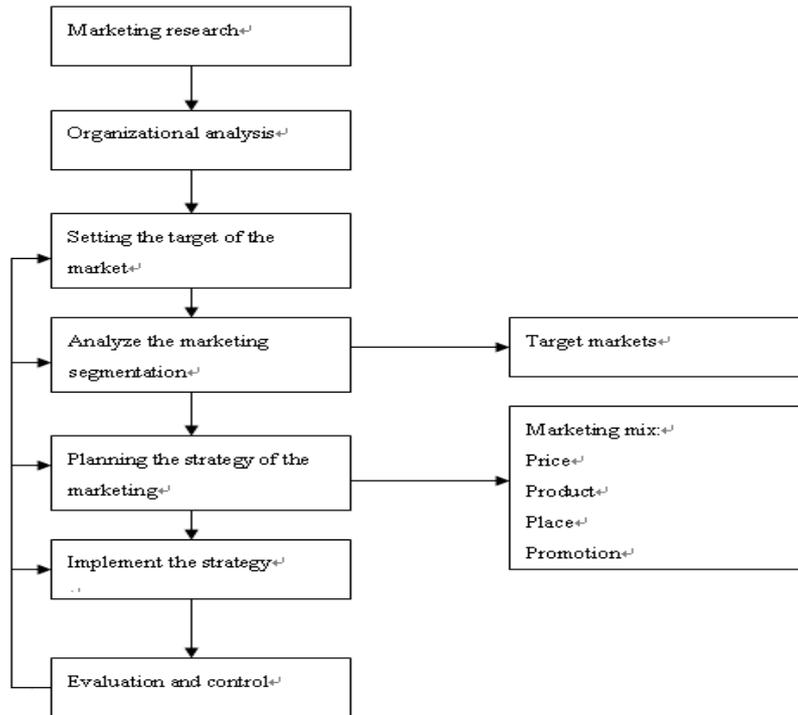

Figure 2 the Steps of Plan for Educational Marketing
From Huang, M. (1997), *Educational Marketing Strategy: Theory and Practice of Adult Education*.
Taipei: Book store of National Taiwan Normal University.

Based on the research of Deng (1998), there were six steps of planning educational marketing. The first step of the plan was to decide the primary goal of the organization. Then, the organization had to analyze marketing opportunities of the organization, study and choose the target markets. Moreover, the organization was to then set up the strategy and plan for educational marketing. The organization could use this information to build up the system and the structures of the marketing plan, and finally implement the strategies and evaluate the outcome. Please see Figure 3.

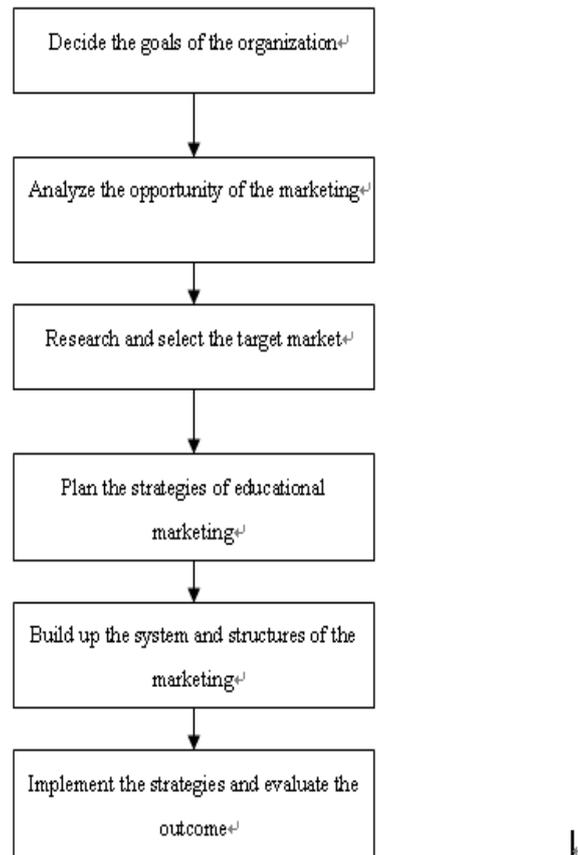

Figure 3 The Steps of Planning Strategies for Educational Marketing
From Deng, W. (1998). Planning the strategies for educational marketing of extension adult education, *Adult Education*, 45, 33-39.

To sum up, the steps of planning strategies for educational marketing used almost the same theories, except the first step of Deng's study (Kuo, 2004; Wang, 2003). Many of the research studies used the 4P marketing strategy, namely product, price, promotion, and place (Brown, 1984; Deng, 1998; Huang, 1997; Kuo, 2004; Wang, 2003). In this research, the steps of planning the strategy for educational marketing of education program used Huang's steps as the foundation, and also used other literature to assist in the research process. The steps for this research were to find the marketing segmentation. Also, based on the theory of customer behavior, the research process used the marketing mix to check the quality of instructors, classes, pricing, location, equipment, and information (Deng, 1998; Huang, 1997; Kuo, 2004).

Methodology

Description of the Research Design

The purpose of this research was to find out what advertising was effective and which marketing strategies for Taiwanese and American universities and colleges were the best to recruit adult students. In addition, the study helped to identify possible correlations to the relationship between advertising and marketing strategies and the demographic backgrounds of adult learners. The findings of the study could help universities and colleges to save a lot of time and money in recruiting students because they could use the findings to create a more effective marketing strategy that would increase student enrollment and understand the difference strategies between Taiwan and U.S.A .

The population of the study was students who were enrolled in adult education courses in the Taiwanese and American universities which the researcher chose for the study. The survey was conducted by the researcher and the testers. The consent forms were signed by the author of the instrument, the university, and the participants. The SPSS for windows was used to analyze the data. The descriptive statistics, the t-test, the Mann-Whitney U test, and the Kruskal-Wallis one-way analysis of variance and the Pearson Correlation Coefficient were also used to analyze the data (Frankel & Wallen, 2006).

Sampling Method

The random sampling technique was used, because the researcher wanted each of the population participants to have an equal chance to participate. The two stage random sampling techniques were used in this study. First, the researcher used a table of random numbers to select fifteen classes from each school, and the total class numbers were thirty. Also, the same sampling method was used in U.S.A. Then, the researcher used a table of random numbers to select 10 participants from each class based on their student ID numbers. Those students were the participants for this study.

Instrument

The instrument of the Education Marketing in adult education (Kuo, 2004) was used in this research. The instrument used a five-point Likert-type scale. The number five represented “strongly agree”. Four represented “agree”. Three represented “no comment”. Two represents “disagree”. Then, number one represented “strongly disagree”. There were 66 total inquiries in the instrument.

Reliability of the Instrument

This instrument had stability reliability and internal consistency reliability. Because there was only one form, this instrument did not have alternate form reliability. In order to have the stability reliability, the author of the instrument conducted the test-retest. According to Fowler (1993), the value of Cronbach’s α was bigger than .9, which meant the instrument had high internal consistency reliability. But if the value of Cronbach’s α was smaller than .3, this meant the instrument had low internal consistency reliability. The instrument should be fixed. For internal consistency reliability, the Cronbach’s α was .877. Because Cronbach’s $\alpha = .877 > .7$, the internal consistency reliability of this instrument was accepted.

Validity of the Instrument

Content validity and construct validity were established for this instrument. For construct validity, the instrument had the literature review to support it (Fry, Stoner, &

Hattwick, 2001; Jones, George, & Hill, 2000; Juran, 1974; Parasuraman, Zeithaml, & Berry, 1985). Moreover, in order to establish content validity, the author of the instrument had a panel of experts to review the questions. Then, Kaiser-Meyer-Olkin (KMO) was used to find out the common elements between variables. According to Kaiser, if the number of KMO was smaller than 0.5 (<0.5), the instrument was not good for factor analysis. In this instrument, the number of Kaiser-Meyer-Olkin (KMO) was 0.741, 0.916, and 0.920 in leisure type, advertising strategies, and marketing strategies. These values were all bigger than 0.5. Hence, the instrument worked for the factor analysis. Also, in Bartlett's Ball test, the X values were 7490.159, 8796.441, and 12934.404. Therefore, it showed that there were common elements in the sampling group, and the instrument could do the factor analysis. Based on the factor analysis, the invalid questions were taken from the questionnaire. This was also used to decide whether to keep the question or delete the question from the analysis.

Research Procedure

First, the researcher got permission from the author of the instrument before continuing with the research study. Also, the researcher obtained permission from the university in order to conduct the survey in the school. Then, the researcher set up a schedule for conducting the survey. In this study, the researcher hired the testers to help with the survey process.

The testers delivered the instrument to the school, and also conducted the survey. The testers explained the study, and the rights of the participants, to the participants. Also, the testers asked them to sign a consent form in order for the researcher to use their information. The process of the survey took about one hour. After the participants finished the survey, the tester collected the survey, and brought back the completed forms to the researcher. The researcher analyzed the data and the testers helped to double check the completion rate of the surveys.

Data Analysis

The SPSS for windows was used to analyze the data. The descriptive statistics, the t-test, the Mann-Whitney U test, and the Kruskal-Wallis one-way analysis of variance and the Pearson Correlation Coefficient were also used to analyze the data (Frankel & Wallen, 2006).

Results

Q: How Do People Feel About the Marketing Strategies?

In this study, the research used Kuo's definition (2004), which considered three factors in the marketing strategies, namely the orientation consultant, price consideration, and professional skill. The results showed that most participants considered the orientation consultant first when they tried to join an education program. The orientation consultant in this study included the attitude of the consultant, how they introduced the program, and how they represented the program. For the participants, the first impression was important. If the schools wanted to recruit more students, they should invest resources to train and educate their orientation consultants in order to increase the level of satisfaction that students gain from taking the education courses. Moreover, after the orientation consultant, the rank was followed by professional skills, and then price consideration.

It should be noted that the mean of the three strategies were very close. The findings indicated that the participants thought that professional skills and price

consideration were also important. Hence, the schools might still need to pay attention to professional skills and price consideration. By improving professional skills of the instructors and setting a reasonable price, it would meet the needs that students feel are important and address their preferences, thus attracting more students to the program.

In U.S.A., most participants considered price consideration first, and then followed by professional skills. The participants consistently seek out the programs that were less expensive. The price of the programs was the first consideration for them to choose the programs or to make the decision for coming back to the school. Then the professional skills were the second consideration for the participants. Hence, for attracting American adult learners, the schools should research to set up the reasonable price in order to gain more students. Also, the schools should encourage their instructors to improve their professional skills in order to satisfy the adult learner. The price and the professional skills of the instructors would be the major concern for American adult learners to select the adult program.

For American participants, media advertising was the most popular advertising strategy, followed by advertising recognition, then oral advertising. Media was the most effective advertising strategies for the adult learners. Through media, the information could be reached by most people. Then, the second one was advertising strategies, and followed by the oral advertising. Hence, the schools should choose the media to do the advertising year-round. Or based on the needs, the schools should advertise frequently. The media advertising would help the participants to recognize the schools and the news about the schools. Moreover, the schools could use advertising recognition and oral advertising to help the promotion in order to get the effective outcomes.

By using the t-test, the results showed that the gender differences of the participants did not affect their opinions about the marketing strategies. The α value of the orientation consultant, price consideration, and professional skills were .474, .191, and .905. The α values were all above the target of $\alpha = .05$. Hence, the gender of the participants did not affect the opinions toward preferred marketing strategies.

Moreover, the results showed that the differences in the marital status of participants did not affect their opinions about the orientation consultant ($\alpha = .858 > \alpha = .05$), the price consideration ($\alpha = .900 > \alpha = .05$), and the professional skills ($\alpha = .533 > \alpha = .05$). Therefore, the findings indicated that whether or not the participant was married did not affect the opinions toward the marketing strategies. When the schools implement marketing strategies, they might not need to consider the marital status of the participants or incorporate a strategy into their plan with consideration to this characteristic since the findings showed that this demographic variable is not significant.

*Q: Is There A Relationship Between the Demographic Backgrounds, the Advertising Strategies and the Marketing Strategies for education Program in Adult Education?
The advertising strategies*

The Kruskal-Wallis one-way analysis of variance was used to analyze the data. The findings indicated that there was no significant relationship between adult learner's preferred advertising strategies and gender ($p = .32 > p = .05$). This also meant that the gender difference of the participants did not affect the participants' feelings about the advertising strategies. Also, the results showed that the gender difference of the participants affected how they felt about the advertising recognition ($p = .006 \leq p = .05$).

Moreover, by using the Kruskal-Wallis one-way analysis of variance to test the data, the results showed that there was no significant relationship between adult learner's preferred advertising strategies and gender ($p=.32 > p=.05$), age ($p=.052 > p=.05$), educational level ($p=.219 > p=.05$), jobs ($p=.334 > p=.05$), personal income ($p=.062 > p=.05$), and location where the participants lived ($p=.985 > p=.05$). Hence, the differences in gender, age, educational level, jobs, personal income, and location where the participants lived did not affect the opinions of the participants about the preferred advertising strategies.

For advertising recognition, the findings indicated that for advertising recognition, gender ($p=.006 \leq p=.05$), age ($p=.004 \leq p=.05$), and jobs ($p=.025 \leq p=.05$) had significant relationships. Hence, the difference of gender, age, and jobs affected how the participants experienced advertising recognition. According to Table 16, the results indicated that there was a significant relationship between adult learner's preferred advertising strategies and marital status ($p=.046 \leq p=.05$). This also meant that the participants' marital status affected the opinions about which advertising strategies were effective.

There was only one demographic background of the participants that affected participants' opinions about advertising strategies, namely marital status. But the difference of gender, age, and jobs also affected the ideas of the participants about advertising recognition.

The Marketing Strategies

For the marketing strategies, the findings indicated that there was no significant relationship between the marketing strategies and gender ($p=.916 > p=.05$). This meant that the gender difference of the participants did not affect their opinions about marketing strategies.

By using the Kruskal-Wallis Test to analyze the relationship between the marketing strategies and age variables, The results showed that there was no significant relationship between marketing strategies and age ($p=.688 > p=.05$). Hence, the age difference of the participants did not affect how they felt about marketing strategies.

The results showed that the marketing strategies had no significant relationship with the educational level ($p=.395 > p=.05$). This also meant that the difference the education level of the participants did not affect how the participants felt about marketing strategies.

Moreover, the findings indicated that there was no significant relationship between the marketing strategies and jobs ($p=.684 > p=.05$). The job difference of the participants did not affect their opinions about the marketing strategies. Then, the results showed that there was no significant relationship between marketing strategies and personal income ($p=.979 > p=.05$). Hence, the difference in personal income did not affect how the participants felt about marketing strategies.

In addition, the result indicated that the marketing strategies and the marital status did not have any significant relationship ($p=.607 > p=.05$). This meant that the marital status did not affect how the participants felt about marketing strategies.

Also, the finding showed that there was no significant relationship between the marketing strategies and the location where the participants lived ($p=.311 > p=.05$). Hence, the location where the participants lived did not affect their opinions about the marketing strategies.

To sum up, the results showed that there was no significant relationship between adult learner's preferred marketing strategies, gender ($p=.916 > p=.05$), age ($p=.688 >$

$p = .05$), educational level ($p = .395 > p = .05$), jobs ($p = .684 > p = .05$), personal income ($p = .979 > p = .05$), marital status ($p = .607 > p = .05$), and location where the participants lived ($p = .311 > p = .05$). So the difference of gender, age, educational level, jobs, personal income, marital status, and location where the participants lived did not affect the participants feeling about marketing strategies.

Discussion of the Findings

There were several findings in this study, and these findings can be used to help schools to create useful and practical strategies to recruit more adult learners to education programs.

The first finding was that the most popular and effective advertising strategy was media advertising, followed by oral advertising, and advertising recognition. Hence, the findings indicated that media advertising could be the best choice for schools to attract students in Taiwan and in U.S.A.. Therefore, based on the findings of this study, schools should focus on utilizing media advertising as the most effective means of recruiting students. However, based on Lin's research (2003), people focused on oral advertising, such as the suggestion from friends, or introduction of a product by relatives. However, in U.S.A., the oral advertising was the third choice. The difference might be caused by the culture differences. Also, the finding difference could be due to the difference in participant characteristics, different instruments used to survey study participants, and so on. However, both findings are still valuable and can be used as a basis for future education adult education marketing and advertising strategies. The schools would determine which study is more appropriate by identifying what different information pertains to their specific target market and choose the basis of marketing and advertising plans accordingly.

The next finding was that most participants considered the orientation consultant first when they considered joining an education program. The orientation consultant in this study included the attitude of the consultant, how they introduced the program, and how they represented the program. For the Taiwanese participants, the first impression was important. The orientation consultant in this study included the attitude of the consultant, how they introduced the program, and how they represented the program. For the Taiwanese participants, the first impression was important. If the schools wanted to recruit more students, they should invest resources to train and educate their orientation consultants in order to increase the level of satisfaction that students gain from taking the sports education courses. Moreover, after the orientation consultant, the rank was followed by professional skills, and then price consideration.

Then, in the U.S.A., the price consideration was the first factor for the participants to select the program. In order to recruit students, the schools should research and set up the reasonable price to gain more students and improve the satisfaction of the students. Moreover, the school should pay attention to improve the professional skills of the instructors, because the professional skills were the second concern for the students to join the adult education programs. Hence, when the schools plan the strategies, they should focus on the price, and followed by professional skills.

The findings indicated that the participants thought that professional skills and price consideration were also important. Especially, in American participants, they thought that the price consideration was the most important, and followed by professional skills. Hence, the schools might still need to pay attention to professional

skills and price consideration. By improving professional skills of the instructors and setting a reasonable price, it would meet the needs that students feel are important and address their preferences, thus attracting more students to the program.

Moreover, Chen's study (2004) indicated that price consideration was one major issue for people as a decision factor for joining an education program. Hence, the findings of the study were aligned with Chen's study (2004). Based on the findings of these studies, when schools try to plan marketing strategies, they should pay attention to setting up reasonable prices or making participation as affordable as possible, in order to attract more people.

The next finding indicated that there was only one demographic background of the participants that affected participants' opinions about the advertising strategies, namely marital status. But the difference of gender, age, and jobs also affected the ideas of the participants about the advertising recognition. In Kuo's study (2004), it also pointed out that the gender difference affected how people felt about advertising strategies. Hence, when the schools focus on advertising recognition, they should pay attention to the difference of gender, age, and job type of the target group, because these demographic variables might affect how the target group felt. Also these variables will affect the success of the advertising recognition approach. Moreover, single or married status of the target group might also affect the outcome of the advertising strategies. Based on these findings, the schools should consider the marital status factor into their plan.

In regards to the marketing strategies, demographic background variables of the participants did not affect their feelings about marketing strategies, namely gender, age, the education level, job type, marriage, income, and location. Hence, when schools create a marketing plan, based on the findings of this study, demographic background variables of the participants should not be considered in the plan.

Conclusion

The finding of the study could provide useful information to Taiwanese and American schools and help them to plan a marketing and advertising strategy that identifies effective methods for recruiting Taiwanese and American university students. By using the suggestions which were developed from the results of the study, schools should save time and money in designing effective advertising and marketing strategies. This study could also provide direction for schools to design research studies that can build upon the findings of this research to create effective strategies that are tailored to the respective school. Moreover, the findings indicated that media advertising might be the most effective advertising approach, so the schools could take this into consideration when creating an advertising plan. In addition, the results showed that the relationship between demographic background variables could affect whether advertising and marketing strategies are effective. Hence, before schools create an advertising and marketing plan, they should do an in-depth analysis of all demographic variables of the target group in order to construct a successful advertising and marketing strategy to recruit students. Overall, the findings of the study could provide useful and practical information to help Taiwanese and American education programs to design better and more effective strategies to help the schools to recruit more students for education programs.

Nanyang Technological University, Singapore.

Email: tzubin.lin@nie.edu.sg

Abstract:

During the education reform movement starting in 1990s, many educational initiatives have been introduced to East Asian region including Taiwan, Hong Kong and Singapore. Media literacy education is one of them. As a borrowed educational discourse, media literacy education experienced a process of localization. This paper aims at exploring the localizing process of a western educational discourse in East Asian context. The case of Taiwan will be discussed. The trajectory of localization will be analyzed. Data are from policy documents, academic papers and teaching materials in the field of media literacy education. This paper will offer a case study of policy-borrowing and the localization of western discourse in Asian context.

Key words: Media literacy, discourse, localization, Taiwan

Localization of western discourse in Asian context: a case study of media literacy education

1. Introduction

Following the expansion of Taiwan's mass media after the end of military rule in 1987, there has been growing concern about the worsening media environment. The worsening media environment has been a long-lasting social phenomenon in Taiwan since the early 1990s after the lift of martial law and the open of media market. This phenomenon brings various debates and causes moral panic among educators and parents. Advocates from different sectors of Taiwanese society successfully lobbied the Ministry of Education (MOE) in 2002 to initiate media literacy education that is viewed as one solution to the worsening media environment in Taiwan. As the first country in the East Asian region to promote media education in both formal and informal education systems, Taiwan's media education policy occupies a significant place in the development of media education in the region. This policy initiative aims at preparing students for a complicated media environment through borrowing the idea of media literacy from other countries like the UK, US and Canada.

This paper is going to address the following series of questions:

1. How did the Taiwan look for a solution to a local problem globally?
2. Where is the borrowed idea from?
3. Is a borrowed idea successfully practiced in a local context?

Empirical data are from interviews with policy-makers and stakeholders as well as the policy text. Drawing on theoretical and methodological approaches from the model of policy-borrowing (Phillips & Ochs, 2003, 2004a) and policy sociology (Ball, 1998), this paper focuses on how the discourse of media literacy which is borrowed from other countries is constructed to suit the local context and provide a potentially workable solution to the social problem locally. The importance of the paper is to provide a case study of policy borrowing and transferring in East Asian context. There will be four sections below: the local context, the global discourses of media education, the policy borrowing and analysis, and conclusion. Some remarks on methodology will be discussed in the third section. As Halpin (1994) indicates, there is a need of doing comparative study in education policy. This paper is able to provide a case for further comparative study in education policy.

2. The contexts – Two driving forces of media education:

(1) Media environment

After lifting martial law in 1987, the government's controlling power over the mass media became weaker, hundreds of newspapers and magazines and dozens of television stations were established within a short period of time. The majority of media are commercial ones and there is one non-commercial terrestrial television station, the Public Television Service (PTS), which is

sponsored by the central government and was established in 1998. Moreover, the penetration rate of television is about 100 per cent and of cable television, which has the highest penetration rate in the Asia-Pacific region, is about 80 per cent (GIO, 1999).

Magnier (2005) describes that ‘Taiwan’s media have the reputation of being among the most aggressive in Asia’ and provides an insightful observation and example from an outsider’s perspective:

Concerned about the media’s excesses and ability to ruin reputations and lives, reformers in and outside the industry are trying to stem the sensationalism, partisanship and corruption that characterize the business. Some argue that the media are merely a reflection of Taiwanese society, which is one of the most freewheeling in Asia.

After years of debating about the regulation of media, the National Communications Commission (NCC) has been set up to take over the regulatory responsibilities from the Government Information Office (GIO) with the legal mandate in 2006 (for details see GIO, 2009). Besides the official regulatory body, there are several advocacy groups trying to use media education as a way of protecting the younger generation from the ill effects of media and an alternative to government regulation. These groups include the Media Literacy Centre (MLC), the Fubon Cultural and Educational Foundation (FBCEF) and the Public Television Service (PTS). They promoted media education in Taiwan before the government got involved. After years of lobbying, the former Minister of Education, Dr. Tseng decided to form a policy-making committee on drafting a white paper on media education in 2002 (see Lin, 2008). Since then, media education develops into another way of responding to the chaotic media environment in Taiwan.

(2) The education reform

As aforementioned, the worsening media environment is one of the pushing forces for advocate groups and the governments to promote media education. However, there is also an opportune moment because of the education reform/modernization that takes place in these three regions. During the reform period, the old education system is under critical examination by the public and a lot of new ideas and initiatives are proposed by various stakeholders (Chou, 2003). All these changes in the reform era are to reconstruct the education system so that the fundamental purpose of education can be restored. That is about how the nation can foster its younger generation to be responsible, well-informed and competent citizen to face the challenges and opportunities in the global and digital world. Traditional subject knowledge is no longer valid in the new times. The up-to-date education system should provide a holistic education for all instead of focusing on the academic performance only.

Influenced by the trend, some dimensions that had been neglected in the traditional education system are brought into the educational agenda. After realizing the power of media, educators start finding solutions for responding to it. The MOE Taiwan (2002, p. 4) makes this point clear in its policy statement:

The majority of educators around the world acknowledge that “the school,” the system, as the education process and educational content evolved over the past century, replaced the family, in particular, as the main source of education. However, few realized that with the emergence of television and other forms of mass communication that developed over the past four decades, mass media has become the second education curriculum for children and youth. The dominance of the media is so strong that it is possibly threatening the position of schools as the first education system. The media has also pushed the role of the family as an educator further aside and is gradually undermining the authority of schools. Mass media is not only “educating” the young, but also every member of society. It is becoming more difficult for most of us to differentiate fact from fiction in what is presented or reported in the media. Some of us do not believe that we are biased by the media, but tend to think that others are influenced. This is the so-called third-person effect in

media studies. As the hours children and youth are exposed to the media (including the Internet and computer games) already exceeds that the time they spend in the classrooms of elementary and high schools, it could be claimed that the media is the first education curriculum rather than the second.

Also, Cheung (2009) points out education reform movement in different countries offers media education opportunities to develop in Asia including Taiwan where media education is viewed as a grass-root movement (Lee, 2007; Wu & Chen, 2007) that starts from a form of social movement and then moves into the formal school system.

3. Discourses of media education

Lin (2008) identifies eight various discourses of media education in major English-speaking countries. They are cultural protectionism, moral anxiety, anti-consumerism, ideological exposure, vocational training, citizenship, 'new' media education and digital literacy. The first three discourses are usually categorized under the umbrella of 'protectionist' approach that claims that adults need to protect children from the negative effect of media. Therefore, they all have negative assumptions about the media and media effect and appear in the early stage of the development of media education (Buckingham, 2003b). Ideological exposure is influenced by vulgar Marxist approach of education and media studies. Peter McLaren (see McLaren, Hammer, Sholle, & Reilly, 1995) and Len Masterman (1985, 1998) are two representative advocates of this discourse that focuses on enlightening learners to discover the hidden ideology in media content.

As to the fifth discourse, it exists in the British education system that views media education as a preparatory course for those who have interest in working in media industry. Media literacy as part of citizenship in the digital era is one of the most common discourse worldwide. The 'new' media education refers to diverse and collective reflections of a group of academics with their findings from empirical studies aiming at redefining the role and content of media education. David Buckingham at the Institute of Education London is the leading academic and practitioner with other international colleagues (Buckingham, 2003a, 2003b; Burn & Durran, 2007; Luke, 2003). Practical work, the media production, becomes a must-have component in this discourse and the concept of literacy has been fully expanded to cover various media. The last one focuses on new media mainly and sometimes overlaps with 'digital literacy' and 'information literacy'. Lin (Lin, 2009a, 2009b) argues that this should be part of the media literacy discourse. The latter three discourses, to some extent, can be viewed as liberal approaches to media education with a positive view towards media.

It is necessary to define the two terminologies, media education and media literacy. Media education refers to the process and media literacy refers to the outcome of media education (Buckingham, 2003). In some cases, these two terms are combined together as media literacy education. In this paper, these three terms will be used accordingly.

4. The policy borrowing

As Ball (1998) argues, policy-makers are looking for 'magical solutions' of various issues in education. A global-scale policy borrowing is a prominent phenomenon. Ochs & Phillips (2004b) expresses that policy borrowing is a complicated process and provides a model of analyzing it. The model has four stages (Ochs & Phillips, 2004b, pp. 10-11):

1. Cross-National Attraction: Why is a country looking for solution of a specific issue from elsewhere?
2. Decision-Making: What are the various intentions and goals of importing borrowed policies. Is the borrowing offering a practical solution or a 'quick fix'?
3. Implementation: How is an imported policy implemented? Is there sufficient support to implement the borrowed policy?

4. Internalisation/Indigenisation: How is a borrowed solution localised?

However, applying this model without adjustments may cause problems because they focus on the historical dimension. Media education policy in Taiwan is a new initiative and there is not enough time for it to be indigenised. Therefore, this paper will focus on the first three stages to analyse the policy borrowing.

4.1 The Cross-National Attraction

As aforementioned, the notion of media education in Taiwan originates from a need identified by some voluntary advocate groups as a potential solution for the worsening media environment. The cross-national attraction comes from the need of attempting to educate young people how to survive in the media era because the government failed to regulate the media. As a brand-new concept, this initiative relies on the experience of practicing media education from Western countries.

However, media education does not have the priority in the long list of various education reform agendas. One of the stakeholders expressed that she and others have tried to lobby the Minister of Education about the idea of media education but failed several times. As a result, several private organisations started the initiatives and searched for useful experiences from other countries. Meanwhile, an unexpected sex video event triggered the policy-making process of media education that is not in the policy agenda in Taiwan. It is an example of ‘serendipity’ of policy-making (Ball, 2006).

Once the Minister decided to promote media education, the duty of drafting the White Paper was assigned to the FBCEF, one of the organizations that promoted media education. A ten-member committee has been formed in charge of producing a white paper. Seven out of the ten members are academics from communication and education department. The rest three are primary and secondary school teachers and a media professional. As one of the members from the practical background pointed out, this committee was dominated by the academics who got their master or doctoral degrees from US. Due to the social and historical context of Taiwan, the English-speaking countries become the prior source of policy borrowing.

Among these English-speaking, the UK is the most prominent case because it has a long history of doing media education in formal and informal education system with a strong support of theoretical and empirical studies. On the contrary, in terms of promoting media education, the US is in the bottom of the table of English-speaking countries. Kubey (1998) listed various obstacles of implementing media education in the US. Moreover, some protectionist discourses are prominent in the US (Gerbner, 1999). Where did these policy makers look for the discourses of media education to borrow? In the following section, the discourses of media education in the policy will be discussed.

4.2 The decision:

The White Paper on Media Literacy Education was officially announced by the MOE in a press conference in October 2002 demonstrating the ‘determination’ of the Ministry to fight against the worsening media environment and to help students be better equipped in the information era. However, the policy-making process from beginning to end took approximately four months. It shows a highly ‘efficient’ policy-making process.

Key terms and metaphors in the following interview extracts and the policy text can be significant indicators of various discourses borrowed by these policy makers. The main finding of analysing the interview of key stakeholders and the policy text is that discourses are mobilized in

different ways and by various stakeholders. There is a mixture of some discourses while the others are absent.

As a response to a worsening media environment in Taiwan, it is not surprising to discover that the most prominent discourses are ‘moral panic’ and ‘citizenship’. The prevailing ‘moral panic’ discourse is highlighted by the overt ‘health’ and ‘environmental protection’ metaphors. Interviewee A explicitly indicates that one of the main themes in the White Paper, ‘health literacy’, is borrowed from the US. As one of the most important themes for the moral campaigners health or health literacy runs through the discourse of moral panic.

Extract 1

- 1 Interviewer: What is the difference between literacy and media literacy?
2 Interviewee 1: We are planning to extend the concept [of literacy]. People even use *health literacy*.
3 We are now moving into the second phase.
4 Interviewer: Excuse me. Now is the second [phase]. What is the first phase?
5 Interviewee 1: The first phase is to produce the White Paper / to raise the awareness ... erm... of the
6 government.
7 Interviewer: I see.
8 Interviewee 1: There is not an explicit explanation in the White Paper. We want to extend media
9 literacy to health literacy. In other words, it is about how the media content influences
10 health.
11 Interviewer: You mean mental or ?
12 Interviewee 1: In many aspects. In many aspects. In fact, media is closely related to personal health.
13 No matter what you watch, sitting to watch television for three hours is unhealthy.
14 Moreover, there are many false messages in television. We even called it health
15 literacy. It is very popular in the United States now. Even WHO [World Health
16 Organization] also proposed this term [concept]. In the old days, it was doctors who
17 could decide whether an individual was healthy or not. But, now this decision is on the
18 individual, on oneself. Like WHO and the College of Public Health at Harvard
19 University, they focus on health literacy. There is a Health Literacy Center in the College
20 of Public Health at Harvard University. So, we start from media literacy and extend it to
21 health literacy.

According to Interviewee 1’s examples (lines 13 to 14), health literacy has both physical and mental dimensions, and the cause of individual health problems is ‘television’ and its ‘false messages’. The assumption is that media, or at least television, is negative in terms of health:

Extract 2

- 1 Interviewer: In the White Paper, ‘health literacy’ is a key concept. Where is this concept from?
2 Interviewee2: This comes from two origins. One is, when we were drafting the White Paper, like the
3 United States, Taiwan had joined WTO [the World Trade Organization] and many new
4 taxes have been introduced for example, the tax on cigarettes, which is one billion per
5 year. Therefore, the Bureau of Health Promotion (BHP) is wondering where they can
6 spend the money. Another origin is Professor SMC. He set up the Department of
7 Communication in Tzuchi University. The main theme is Health Communication. When
8 we discussed the [content] of the White Paper, Professor SMC mentioned
9 public health. That is the report, *Healthy People Healthy Community 2010*, in the US.
10 He proposed the idea of healthy community and viewed media as an environment.
11 Half of the media education in the United States is about health literacy. The
12 money comes from CBC. Those health messages include alcohol, smoking, drugs,
13 and pre-marital pregnancy. Maybe these [social problems] are too serious in the
14 United States so Americans focus on them. As to Taiwan, why did we
15 incorporate ‘media health literacy’? It is because we receive lots of media texts from
16 the United States. Secondly, there are also these kinds of [social] problems in Taiwan.
17 The most common image is people smoke or drink when they feel anxious.

Like Interviewee 1, Interviewee 2 says that the metaphor of health is borrowed from the United States and at the same time, she also claims that the same phenomenon happens in Taiwan.

Claiming that Taiwan and the United States face the same phenomenon is a rhetorical strategy that allows her to generalize the social context of the moral panic discourse so that the rationale for adopting an American ‘health literacy’ approach can be legitimated.

Several key terms such as ‘smoking’, ‘alcohol’, ‘pre-marital pregnancy’, and ‘media as an environment’ can be identified in this extract. The first three are clearly moral issues and the fourth is a combination of the health metaphor with one of environmental protection. Two metaphors of the moral anxiety discourse, as explored in Chapter Four, have been mixed together here. Health literacy or ‘media health literacy’ is a solution to address the moral panic about the ill effects of media.

The adoption of the discourse of ‘moral panic’ is finer and more complicated in the White Paper than in the interviews analyzed previously. The ‘health’ metaphor suggests that any ill effects caused by the media are not only an individual problem but also a collective one. As the White Paper states, ‘the community culture, community environment and community structure should take the responsibility for the individual’s health’, thereby upgrading risk to community level. This idea comes from an American report, *Healthy People 2010*, where ‘health literacy’ is described as follows (Ministry of Education, 2002, pp. 14-15):

Health literacy of modern people and the communication media are highly relevant. Therefore, the basis for promoting health literacy can be applied in promoting media literacy. Simply put, one's media literacy is shaped by the community and social culture. That is why the key to media literacy lies in making a ‘Healthy Media Community’. This is the core value of media literacy education.

To build a ‘Healthy Media Community’ is the ultimate aim and core value of media literacy education, and it is seen to reinforce citizens’ capacity for ‘liberation and empowerment’. The aim of empowerment is to construct ‘community standards’ and to ‘raise the cultural quality of the whole society’, which is based on the idea of ‘collective knowledge’. In the middle of the above extract, it is stated, ‘one's media literacy is shaped by the community and social culture’. The use of a passive voice with an anonymous human agent as the subject implies that the social actor is denied agency. In contrast, the community and social culture are those taking the action of ‘shaping’ the actor. By exploring the use of verbs and voices in this extract and the previous one, one can identify a common theme – that human agency is low and the socialising forces and institutions are more influential. The above discussion shows a tendency to apply American responses to the ‘moral panic’ discourse in response to the wider moral panic about the media in Taiwan.

In viewing this moral anxiety as a force behind the promotion of media education, policy makers concentrate on this discourse. The ‘citizenship’ discourse is also popular because of the full support of Interviewee 2, a key figure, in the policy-making process, and the terms ‘citizen’ and ‘citizenship’ are repeated through the White Paper without clear definition.

The second strong discourses are ‘anti-consumerism’ and ‘ICT’. The former has a strong supporter in Interviewee 1, who believes that media aims to provide public service. As for ‘ICT’, there is no expert in the policy-making committee. Therefore, policy borrowing takes place but it is not effective. Although the role of new media is admitted in the written text and strongly represented in visual images in the White Paper, there is no in-depth discussion or significant attempt to incorporate new media into the practical project of media education in Taiwan.

‘Cultural protection’ and ‘ideological exposure’ only appear in one or two phases. There is implicit cultural discrimination in the Discourse of media education in Taiwan – the criticism of

rap is an example. While blaming low-quality programmes, there is no account of what makes up a high quality programme. The 'ideological exposure' does not exist in the public sphere but it is a prevalent discourse within academic circles. It still occupies a place in the White Paper. One finding from analysing the above discourses is that apart from the policy borrowing, it is full of examples of media education discourses borrowed from abroad, mainly the US.

As key concepts such as 'literacy', 'production' and 'preparation for job market' are absent, the discourse of 'new media education' and 'vocational training' are silent in this context. The general tendency of the Discourse is to adopt a protectionist ideology while conflating it with citizenship. Ignoring the cultural dimension of the audience's media consumption is another feature. The targets of the policy – children and teenagers – have no voice. On the contrary, it is the adults – the policy makers – that speak for them. As a new education policy, the prominent social phenomenon of the internet café and of computer games (especially online role-playing games) is missing, while the policy focuses more on the ill-effects of traditional media. The moral anxiety caused by this newly-emerging phenomenon is replaced by an optimistic view of new technology. This contradictory mixture of pessimistic views of traditional media and optimistic views of new media is a key feature of the White Paper.

The discourses employed by the policy makers display consistencies, contradictions and ambiguities between and within them. These characterise the policy text and reveals limitations of the policy-making process. Indeed, it has been suggested that 'it is crucial to recognise that the policies themselves, the texts, are not necessary clear or closed or complete' (Ball, 2006, p. 44). A policy cannot be too precise and definite. Otherwise, it runs the risk of narrowing its scope. This may be an excuse for these ill-defined terminologies and concepts in the White Paper. However, it is essential to give, at least, a working definition of what media literacy represents, or it perpetuates confusion among its audiences.

4.3 The implementation phase:

It has been seven years since the White Paper was announced. The status quo of media education in Taiwan is that the MOE has failed to keep the promise made by the former Minister of Education – to integrate media literacy into the national curriculum and make it a part of lifelong learning project. The only progress made by the Ministry has been to form an Executive Committee with members from the Ministry, private foundations and communication studies academics. The composition of this committee reveals an exclusion of academics from the educational research community who has the ability to provide consultancy and design the curriculum. The communication academics consider the education academics as conservative and hard to change while the education academics view media education as the business of communication studies. Lack of bilateral understanding and mutual communications causes a predictable threat to the further development of media education in Taiwan.

There is only a one-week teacher training programme was offered by MOE in these seven years. In contrast, the various private foundations keep providing workshops. There is no systematic way of promoting media education in school. Without a proper strategy of promoting media education, most school teachers do not have a idea about what media education is. Therefore, there is no resistance from teachers currently.

5. Conclusion

Under similar circumstance with a strict time limit, the policy makers have tried their best to produce a White Paper. What they have done and achieved should be accredited. Yet, in this

policy-making process that relies strongly on a couple of key players, the ‘personalization of policy’ needs to be considered as an issue. As Ball (1994, pp. 112-113) argues, ‘there are clearly attractions but also enormous dangers involved in reducing policy making to the skills, beliefs or personality of individual actors’. The policy text is written by core policy members, Interviewee 1 and Interviewee 2, so that it is strongly influenced by them.

During the process of searching for solution of worsening media environment in Taiwan, media education in western countries has been proposed as a potential educational solution. Policy makers are looking for possible and useful discourses worldwide to construct a local one because there is none in Taiwanese context. Although UK has a significant achievement in media education, the prominent liberal approaches in the UK do not attract policy makers’ attention. Some of them mentioned that they know UK is prestigious for its long history and applicable materials and methods in the field of media education. However, these policy makers are more familiar with the media education in the US due to their personal history. Therefore, as I have demonstrated in section 4 with limited examples (it is because of the word limit), the discourses Taiwanese policy makers have borrowed is mainly from the US although it is necessary to point out that the US is also seeking for a better solution of their media education outwards. Besides the policy makers’ personal preference, the limited time for the whole policy-making process is another possible reason for not being able to look at more successful models of media education in the UK (Buckingham, 1992; Craggs, 1992; Jones, McDougall, Bennett, & Bowker, 2001; McDougall, 2006; Ofcom, 2004), Australia (Penman & Turnbull, 2007) and New Zealand.

After the change of Minister of Education right after the White Paper has been put into reform agenda, there is no subsequent support from MOE. The implementation becomes a mission impossible. To some extent, it shows that the policy is a ‘quick-fix’ (Ochs & Phillips, 2004) to specific social event that caused moral panic. After the panic fade away, the policy has less value. This paper provides a case study of a policy borrowing with deficiencies.

The study on significant others and critical incidents of the female university student's career development in Taiwan - a sample from females that choose Nontraditional Occupation Majors

Shu-Ming Hsieh

(Assistant Professor, Institute of Curriculum Instruction and Technology, National Chi Nan University, Taiwan)

I .Introduction

There was an old saying in Chinese 「 A girl hide her talents is a virtue 」 . It means that boys had better to work outside to earn money, girl stay at home to manage the affairs of the family and take care of the children. After the arise of the feminist movement , the new women in this generation have the equal rights to go to school.

They also have the opportunity to make choices to stay at home or go to work. More and more women leave their house and go to work. According to the report of the China Newspaper (2004) ,the working women in the America are 59.6 percent, 53.4 percent in Singapore, 52 percent in Hong Kong, 49.7 percent in the Democratic People's Republic of Korea, 48.5 percent in Japan, and 46.6 percent in Taiwan. (site from Shu-Ming Wu,2004) Taiwan has the lowest number of the above country. There are some meaning beyond the low rate of women go to work.

Young boys and girls are in the period at which the body attains maturity. They are also looking for their self identity. This is a time that many factors would affect one's career aspirations. Enter into adolescence; youngsters get more and more interest in the opposite sex. It will strengthen the identity of stereotyped gender differences for the adolescences. At the same time, they are more and more understand of their school work and records of studies. They also had the idea of their aptitude and ability level. That would help the youngsters to make a practical career choice. (Monks & Van Boxtel , 1985) .

In the socialization of the role model for the adolescences, they are easy to form a narrowed career choice that was influenced by gender differences (McMahan & Patton,1997) .There are many factor would affect young girl's career choices such as Gender ; academic record ; age level ; and academic environment.

Almost half of the people are female, and only a small number become scientific and technical personnel. On the basis of the report of Enman and Lupart(2000), female engineer account for eight percent of their population, female mathematician and computer scientist account for 36 percent of their population, and female chemist account for 27 percent of their population. According to official statistics in Taiwan(Ministry of Education , 2004), female university students in science and technology account for 31percent of their population, female master degree candidates account for 23 percent of their population, and female doctoral student account for 17 percent of their population, lower than

twenty percent .We can find that female university students major at science and technology cut down by eight percent after they move to master degree; and cut down five percent from the master degree to doctor's degree.

The females that choose Nontraditional Occupation Majors, what kind of significant others and critical incidents produce an effect on their career development process, and help them have the courage to fight for one's own end, is an important issue to answer the question of how to enhance females people to attend the science and technology world.

By the current tendencies in society, there are more and more females that choose Nontraditional Occupation. And the restrictions of the females in the working place make considerable reduction. Women in the present age can choose Nontraditional Occupation, such as medical science; medicine; natural science and engineer.

Some research fond there are some restrictions of the females in the non-traditional major. For example, Jing-ying Ning(2002) explored Gender differences in career development of graduates in non-traditional major and fond women who chose male-dominated professions all felt it was a pity they could not hardly find the chums. Women in male-dominated professions sometimes needed to deal with the sexual-discrimination, so they needed to put much more efforts on stay at their non-traditional career choices.

Some research fond there are not so much restrictions for females in the non-traditional major. Such as Yi-Jia Hsieh (2001) , In the research, she choose the graduates among 1973-1997 of civil engineering department of National Taiwan University and Cheng Kung University to be the population. The outcome shows that women's average level of education is higher. They tend to choosing job of programming (44.6%). Just few of the female workers deal with construction manage and site work. But it makes no difference about the income between male and female. Also, most female employees are stable jobholders.

Women in this century are faced with numerous social changes. In this decade, the society gets more and more open-minded, that encourages girls to major in Nontraditional Occupation. This research wanted to know How about the developmental context of career themes of the female student who study in non-traditional fields of science and technology program. Why women chose male-dominated professions. How did they feel about studying in the non- traditional field ? What career plans do they have and what barriers may occur to them in the future ? Through this research, we want to find the answer of how to encourage girls go to study at the non- traditional field. In the long run women would play an important role in science and technology here in Taiwan and improve the competitive power of Taiwan on a global scale.

Above all, the purpose of this research was illustrated under here.

1. Explore the influences of social, cultural, educational, environmental and other related factors on female college students that choose non-traditional fields of study.
2. Explore how the significant others and key events in various stages affect the career development of the female college students that choose the non-traditional fields.
3. Explore the career development position of the girls that enrolled non-traditional fields. Learn about

women's career development block, and allow educators to understand how to become a significant others of the students.

4. Based on the finds, provide educators some recommendations to help young people on career development and to encourage adolescent girls in non-traditional learning fields to pursuit their goals in life with courage.

II .Method

1. Research method

Naturalistic inquiry was adopted as the methodology of this research. An interview guide approach was adopted for data collection. The open-coding method was used to analyze the influence of the significant others and critical incidents of the female university students ' career development. And the data were categorized by using constant comparative method.

2. Subject

Ten college students' form a school in the middle area of Taiwan was chosen as participants' base on maximum variation sampling. They are from the different major in College of Science and Technology that are Consist of Department of Electrical Engineering, Department of Computer Science and Information Engineering, Department of Civil Engineering, Department of Applied Chemistry, Department of Applied Materials and Optoelectronic Engineering.

3. Research instrument

The instrument used in this study is an interview guide that is Consist of the basic data of the subjects and some major problems. The major problems were designed to answer the question of this study.

The other instrument used in this study was the researcher. All the interviews of the ten subjects were done by the researcher.

The major problem concluded such topic as the follow.

- a. In the career development of the Female university students, how did they overcome the burden of traditional gender role stereotypes? And how did they become a student in the non-traditional fields.
- b. Girls who study in non-traditional fields, in her school years, who was the significant others to influence her selection ? What's important to influence her selection, encouraged her to overcome difficulties, and pursue their ideal career?
- c. Female who Study in non-traditional fields of college, in their school history, what key events affect or inspire them to choose to enter science and engineering majors?
- d. College girls who Study in the field of non-traditional learning, what kind of the dilemma had they face ? How did they coping with these difficulties?
- e. Female university students in the non-traditional learning areas, in their stay at male learning area, did they has suffered unequal treatment or impediments ? How did they respond?
- f. Studying in the field of non-traditional learning , how did the college girls plan for the future ? In the pursuit of personal career development and get married at the same time, how did they strike a balance

between family and career?

4. Research procedures

Researchers based on different departments, through the network, BBS, asked the female students major at science and engineering who are willing to assist in the interview as research subjects. And the interviews were done in 2010 from March to April.

Every case of interview time approximately 1 hour, all the interviews were conducted by the researchers. The researchers developed the interview guide in advance, for each topic, respondents one by one. If necessary, the researchers will clarify the discussion on certain topics. Whole interview process was recorded to facilitate analysis of data.

5. Data analysis

Researchers refer the phenomenological method to analyze the data. (Moustakas,1994) .Includes write down the interview content from the record, summarize the phenomenon, named from the elements, categorized under the title of the six questions, and based on 10 cases of cross-case comparison, integrated into the related tables and comprehensive discovery.

III . Results

1. Reasons for the college students' choice

subject	Reasons for their choice
A chemistry Department 4th	1.be pushed for money 2. bad grades in liberal arts 3. mathematical achievement 4. personal interest in chemistry 5.the teach of the school teacher
B Information Management Department 4 th	1. be pushed for money 2. personal interest in computer 3. the teach of the school teacher in primary school 4. mathematical achievement 5. ill achievement in liberal arts
C Information engineering Department 3 th	1.person interest in computer 2.hope to have a stable work 3.The teach of the school teacher in computer club 4.no interest in liberal arts
F chemistry Department 4th	1. personal interest 2. no interest in liberal arts
G civil engineering Department 1th	1. be pushed for money 2. because of the test scores to enter university. 3. parents expectations

	<ol style="list-style-type: none"> 4. no interest in liberal arts 5. mathematical achievement
H civil engineering Department 1th	<ol style="list-style-type: none"> 1. follow the choice of her sister 2. personal interest on reasoning 3. Like doing things 4. be pushed for money 5. the encourage of the school teacher
I photo electricity Department 3th	<ol style="list-style-type: none"> 1. mathematical interest 2. bad grades in liberal arts 3. the influence of the school teacher
J electric engineer Department 4th	<ol style="list-style-type: none"> 1. the influence of the school teacher 2. parents expectations 3. be pushed for money 4. no interest in liberal arts 5. no idea of the University subjects

2. The significant others that influence girls make the choices

subject	The significant others that influence girls make the choices
A	<ol style="list-style-type: none"> 1. her father 2. school teacher 3. the entrance extermination of the university
B	<ol style="list-style-type: none"> 1. her father 2. computer teacher in high school 3. Chinese language teacher in high school
C	<ol style="list-style-type: none"> 1. her father hope she have achievement 2. The advise of the school teacher
F	<ol style="list-style-type: none"> 1. school teacher 2. her schoolmates. 3. her father and mother 4. teacher in the university
G	<ol style="list-style-type: none"> 1. her mother 2. school teacher in the elementary school
H	her mother
I	<ol style="list-style-type: none"> 1. her father and mother 2. school teacher in the elementary school 3. mathematical teacher in the high school 4. teacher from extension school
J	<ol style="list-style-type: none"> 1. her father 2. herself

3. The key events that influence girls who study in non-traditional fields

subject	The key events that influence girls make the choices
A	<ol style="list-style-type: none"> 1. succeed in college entrance examination 2. her father's suggestion, 3. advice of the teacher from extension school
B	<ol style="list-style-type: none"> 1. succeed in college entrance examination 2. assist of the Chinese language teacher in high school 3. the teach of the computer teacher in high school
C	<ol style="list-style-type: none"> 1. personal interest in computer 2. succeed in college entrance examination
F	<ol style="list-style-type: none"> 1. the teacher's advice 2. succeed in college entrance examination
G	succeed in college entrance examination
H	<ol style="list-style-type: none"> 1. Someone give a lecture in high school, and said it would be flourishing in the future 2. personal interest 3. developed an interest in science and technology
I	<ol style="list-style-type: none"> 1. developed an interest in mathematic 2. have no idea of the photo electricity, it sound fantasy 3. succeed in college entrance examination
J	1. succeed in college entrance examination

4. The impact of gender differences or disruption

subject	The impact of gender differences or disruption
A	<p>The impact</p> <ol style="list-style-type: none"> 1. The attitude of family members or relatives and friends is supported and encouraged 2. Limitations of Physiology : In child-bearing age and chemicals harm on bodily 3. Limited ability level 4. Gender differences in school and in everyday life and not obvious. 5. girls no need to move heave things
	<p>Coping :</p> <ol style="list-style-type: none"> 1. the credit that not pass in the 3th, re-read it again in the 4th 2. make alternative choices, like chemical analysis 3. Want to have a child earlier, then can working hard
B	<ol style="list-style-type: none"> 1. Some boys would like to help and teach the girls. 2. The attitudes of some old people is not supported and encouraged. They think the computer is for boy 3. Some parents of the students distrust of her skills on computer

	<p>Coping :</p> <ol style="list-style-type: none"> 1. Prove her on one's own efforts. 2. Get some certificates and experiences on computer
C	<ol style="list-style-type: none"> 1. her parents are traditional 2. some people want to hire boys because they can work late 3. girls no need to move heave things
	<p>Coping :</p> <p>Feel it's a pity for lose the job</p>
F	<p>The impact :</p> <ol style="list-style-type: none"> 1. The attitude of family members or relatives and friends is supported and encouraged. 2. Supported and encouraged by the teacher. 3. Some boys would not want teaches you
	<p>Coping :</p> <ol style="list-style-type: none"> 1. Success in study mainly depends on one's own efforts. 2. Would seriously discuss the questions of learning with the teacher
G	<p>The impact :</p> <ol style="list-style-type: none"> 1. Grandfather not hope girl study in the college 2. Boys are more polite to girls, girls no need to move heave things. 3. Limited ability level, especially calculus 4. The old people look down female in the civil engineering
	<p>Coping :</p> <ol style="list-style-type: none"> 1. Prove self by show her ability
H	<p>The impact :</p> <ol style="list-style-type: none"> 1. Father only pay attention to boys in the family 2. Limited ability level, especially physics: 3. Sometime people want to hire boys because they can move heave sundries. 4. Teacher in the college think girls had better choice to work in the office, not to make a building in the outside.
	<p>Coping :</p> <ol style="list-style-type: none"> 1. Success in study mainly depends on one's own efforts. 2. Make them look girls can do as well as boys.
I	<p>The impact :</p> <ol style="list-style-type: none"> 1. The attitude of family members or relatives and friends is supported and encouraged. 2. Some boys have sex discrimination, is of the view that the teacher will have differential treatment for female students. 3. Teachers are more polite to girls than boy 4. parents are willing to hire female as a tutor

	<p>Coping :</p> <ol style="list-style-type: none"> 1. Success in study mainly depends on one's own efforts. 2. Make them look girls can do as well as boys.
J	<p>The impact :</p> <ol style="list-style-type: none"> 1. A male fellow student will be willing to mentor a female student. 2. A teacher declared not-to accept female graduate students 3. Limited ability level 4. Gender differences in school and in everyday life are not obvious.
	<p>Coping :</p> <ol style="list-style-type: none"> 1. That teachers do not take girls, can choices the other teacher 2. Would seriously discuss the questions of learning with the teacher 3. Not be fear of failure

5. Career development and career anchor of the girls

subject	Career development and career anchor

I	1. you should be interested in 2. have the basic background in high school 3. you need to do your best to be top
J	1. you have to think carefully in advance 2. those who like doing research, will be very suitable 3. you need to do your best

IV. Conclusion and suggestion

Conclusion

1. The main factors impact non-traditional learning area college girls' career choice include: family economic reasons, parents values and expectations, school or the school teacher, bad grades in liberal

arts, mathematical achievement, personal interest, and no idea of the University subjects, fill out the choices of major in accordance with the test scores to enter university.

2. The significant others that influence girls who study in non-traditional fields were :

Their fathers, their mothers, school teachers, the entrance examination of the university, themselves, as well as their schoolmates are the significant others.

3. The key events that influence girls who study in non-traditional fields were :

The female students are admitted by succeed in college entrance examination.

The exam systems allow them to enter the University, Their father's suggestion, the teacher's advice, as well as personal interest, and also because they had developed an interest in science and technology.

4. Female university students in the non-traditional learning areas, in their stay at male learning area, the impact of gender differences or disruption have been such as the follow :

Think of restrictions parts include:

a. Limitations of Physiology : In child-bearing age and chemicals harm on bodily, would made the Girls need to give birth of babies before the age of 35, as well as on the consideration in the selection of professional field.

b. Limited ability level, unlike some boys so easy to grasp the situation, can read quickly.

c. Some boys would not want teaches you.

d. Sometime people want to hire boys because they can move heavy sundries.

e. Some boys have sex discrimination, is of the view that the teacher will have differential treatment for female students.

f. A teacher declared not-to accept female graduate students.

Think of no restrictions parts include:

a. The attitude of family members or relatives and friends is supported and encouraged.

b. Gender differences in school and in everyday life and not obvious.

c. Women studying in science and engineering field, gender factors have bring some advantages, such as parents are willing to hire female as a tutor, a male fellow student will be willing to mentor a female student. Teachers are more polite to girls than boys, girls no need to move heavy things.

5. Those students have a modern concept on their future career development. They almost get rid of the old women's thought patterns, in the future career planning, they want to pursue career development, do the things they want to do, to seek work stability and economic independence.

Most girls said after they have stable life, they would further planning to get married, have children, and seeking support for their work outside from their husband. A small number of students say they want to have children even without a family.

They consider to adopting children or have a child without husband.

6. Their suggestions of the adolescent girls that want to enter non-traditional areas of study were very consistent.

you should be interested in, and need to try; have the ability, have the basic background in high school physics and chemistry ; made your mind to study hard by yourself to own a good study. Most people said that the learning for women in non-traditional areas is hard, you have to think carefully in advance. In the learning process, in order to cope with the pressures of schoolwork, you need to do your best to complete their studies successfully.

Suggestion

Taiwan's efforts in gender equality, there has been significant progress over the years.

There are more and more girls go into non-traditional fields of study. And there is a space for female to play a role in this area.

For this study, the researchers made the following recommendations:

1. Proposed education executive authorities continued to advocate for gender equality, is committed to creating fair competition opportunities between the sexes and the environment. Also in sex education courses, advocating the idea, make housework sexes sharing of household duties, and let the female compatriots can have a friendly support environment, able to balance work and family.

Then we can encourage more capable and interested women entering the field of science and technology without worries.

2. For educators, most girls go into science and engineering are inspired by the teachers of mathematics and chemistry. Teachers should enrich professional know-how, development the potential and interest of students, and as the student's learning model.

3. Before the majority of students entering University, most students are not familiar with the teaching content of the relevant departments and the future areas of work.

It is recommended that the executive authorities should implement senior career counseling for the students, assisting students in high school understand their own inclinations and the contents of university departments to assist students in developmentally appropriate.

4. Advice for parents, one of significant others that affected girls to enter university studying science and engineering department are their parents, it is suggested that parents should explore the potential of children and to encourage their pursuit of career development without gender differences.

Treating and Curing Diseases, and Trying Local Cases—
the Written Records of the Dream Promises Chronicled by
Scholars Themselves in Ming and Qing Dynasty

National Chi Nai University (Taiwan)
Department of Chinese Language and Literature
Assistant Professor

Yi-Lung, Lin

Abstract

Facing lots of documents written by the scholars in Ming and Qing Dynasty, the author not only focuses on why and how the scholars wrote themselves, but also pays more attention to their plight which they suffered from the crisis of self-identity; furthermore, through their multiple ways of literature writing style, restructuring the meaning of their existence, and inscribing the domains identified by themselves, how did the scholars delineate the lifestyle of their expectation to establish their entities and positions in the society they lived?

For this plan, the author has especially selected some of offbeat written autobiographies—the autobiographical chronologies—as the basic documents for making a deep inspection and study. The author also notices the facts that the scholars fully intended writing the experiences of their unusual dream promises into autobiographical chronologies by means of reviewing their past lives and selecting some kinds of material to write. Obviously, the speakers were highly interested in whether their dream promises came true or not, and they thought there would be profound and abstruse principles in their promises. Such narrative models of “a promise and confirmation of a dream” brought the scholars a positive attitude toward their experiences of the dreams, which came from the close linkages of the causes and results in their daily lives, and their admiring expressions. Thus, during the period of Ming and Qing dynasty, they tried to annotate the possibilities between the linkages of “promise” and “meaning,” which perhaps revealed some kinds of tone and atmosphere while writing on the themes of dream promises

一、問題的提出：

(一)、明清時期的自撰年譜：說一段自己的生命故事

在「知人論世」的研究大纛之下，「年譜」向來被視為在正史以外，足以「補苴罅漏」的重要文獻。在學界長久的關注之下，已然日積月累、與時俱增地形成一套專門學問。面對繁赜如山的年譜文獻，筆者依其撰述態度析為二類，其一，乃持「大歷史敘述」角度，將譜主放置於天下國家的標準，衡量其撰譜之價值，倘若符合「立德、立功、立言，三者有其一」的標準，則其人翹然可傳，方足為後世楷模。這類年譜的譜主，多半為史上不世出之人物，不是功績彪炳、舉足輕重的帝王將相，就是才高八斗、生徒甚眾的文學家或思想家，故其年譜之撰寫多成於後人之手，如曹錫齡所言：「唐之昌黎（韓愈）、少陵（杜甫）、香山（白居易），宋之坡（蘇軾）、谷（黃庭堅），金之遺山（元好問），元之道園，後人讀書論世，景仰遺行，以附於史家年表之例」¹，蓋出於「自為敘述」者甚少矣！

唐、宋、元三代年譜，論者可如是觀之，但到了明代以降，出現為數不少的自撰年譜，則似乎隱隱然揭示了另一類的年譜撰寫態度。

異於大歷史敘述角度，這類自撰年譜，有著力破重圍、爭取個人發聲、肯認自我存在的撰述態度。本文姑且將之列為年譜文獻中的第二類撰述態度。

面對立德立功立言的傳統期許時，士人們仍不免焦慮，正如[清]曹錫寶所言「於德、功、言三者，無一有焉，是鄉人之不若，而猶欲臚述其生平、出處、閱歷，冀以傳示來茲，豈非惑之滋甚者歟？」²，然而自陳焦慮之餘，卻又理直氣壯地、以諤諤之士的論辯姿態，企圖以文字書寫力破重圍，找尋無名小卒得以在歷史中不被消音的合理性——如何以人殊人異的個人姿態，因著目睹時代、參與歷史甚或僅僅為個人生命之體悟與成長作見證，說一段自己的生命故事，爭取無可替代的發聲權！

¹ [清]曹錫齡：《翠微山房自訂年譜》一卷，清嘉慶間朱格稿本，收入北京圖書館編：「北京圖書館藏珍本年譜叢刊」（北京市：北京圖書館出版社，1999[民88]）第110冊，頁199-204。以下版本皆同此。

² [清]曹錫寶：《曹劍亭先生自撰年譜》一卷，清光緒二十三年印書公會鉛印本收入第104冊，頁245。

「The Asian Conference on Arts and Humanities」, June 18-21 2010, Osaka Japan
「ACAH2010 · 亞洲人文與藝術國際學術研討會 · 會議論文」

清朝嘉慶年間李鑾宣為曹錫齡《翠微山房自撰年譜》³所撰寫序言當中，除了消極地反省後人撰寫之年譜，遠不如自家人所載紀之賅備詳盡；還進一步思索：即便是自家子孫所修纂的記載卻也可能犯下「有所罣漏，甚且摭拾諛處厚誣其先人而不之覺」的闕失，唯有譜主親自操觚，「以事繫月，以月繫年，手訂年譜一書，其間君臣之遇合，庭訓之諄嚴，師友之切磋，以及研窮理道，陶鑄性靈、瀏覽山水、靡不綱舉目張，瞭若指掌」，這種來自本尊的一手說法，才有可能避免上述二種弊病，在文字敘述中建構出一套「生命大事記」式的個人歷史。

在消極除弊的功用之外，自撰年譜又具有何種表述自我的積極意義？李鑾宣序言指陳他撰年譜「未必如自言之親切有味也」⁴，係就「說話者」(speaker)與「閱讀者」(reader)之間所引發的共鳴深度而言，這也是自撰年譜在文學表達上的優勢。自稱念道人的方孩未，則宣稱「先生年譜非先生自筆不可，必先生自筆而後可悲與可敬者，委曲肖像如寫生然，要亦不過自存其本色耳！」而所謂人生中無可避免的「悲」劇與不可不給予高度「敬」意的人格形象，皆來自於年譜中亟力陳述的那種——為世人所不能理解、根深蒂固於本性而昧於通權達變的「愚」：

視羊脂橫玉弗若長版套頭，尚書衙、丞相署弗若匣床⁵一席，長安六尺輿弗若桁楊⁶三木，珠襦玉匣弗若熱血市場者，此所謂愚於性而不移其愚也。可悲其愚於性也，可敬是則為孩未方先生⁷。

無視世人所追求的榮華權祿，方孩未寧可選擇的是手鐐腳銬、匣床坐監甚至東市赴死，語氣一層勝過一層地強烈表述處世抉擇，勾勒出譜主係乃鐵錚錚、不屈強權的男子漢！

這牽涉到撰寫年譜之時，說話者正遭逢了何種人生局面。

丙寅那一年，方孩未年方四十二歲，卻面臨了「秋審及期（案：東林會審）」死生交迫的大局，深感「余暫時人耳」，故於兵馬倥傯、風雨飄搖之際，「縱筆錄其行略以留示子孫。若傾巢而卵不盡碎，讀此知余之辛苦坎（土稟）矣。」⁸；清人王澐續撰年譜

⁴ 李鑾宣序：《翠微山房自訂年譜》，收入第110冊，頁199-204。

⁵ 舊時牢獄中的一種刑械。形如木床，行刑時命囚犯仰臥其上，再將其手腳緊緊夾住，使其全身不能轉動，痛苦非常。[元]高文秀《黑旋風》第三折：「將軍柱上拴了頭髮，上了腳鐐手扭，抬上匣床。」水滸傳第四十九回：「樂和便把匣床與他兩個開了。」亦稱為「押床」。

⁶ 古代夾頸項、腳脛的刑具。莊子《在宥》：「今世殊死者相枕也，桁楊者相推也，刑戮者相望也。」《幼學瓊林》卷四「訟獄類」：「桁楊兩潤，下無冤枉之民。」

⁷ [明]方震孺：《方孩未年譜》序言，清同治七年樹德堂刻《方孩未先生集》本，收入第59冊，頁1。

林宜蓉

時，言及陳子龍當年如何將年譜初稿托付予他：「昔先生自作年譜成，愴然執手曰：自茲以後，我不復措筆矣！患難之餘，獨子朝夕，我死，

子其為我續書之。」⁹清順治四年（丁亥年）陳子龍四十歲，五月官方御史及巡撫下令「乘此盡除三吳知名之士而以先生為首」，無怪乎譜成之際要愴然如此，執手交付王濬時，已如同託付身後事；崇禎十一年戊寅年八月十五日，天山翁鄭鄭口授年譜時機，乃是初入獄時，「曾欲自敘年譜，以病置，乃從提牢，借紙筆，口授玃兒，略記生平，以俟後之論世君子。」¹⁰，而當其時「錦衣衛提牢百戶...予寄食提牢廳仁齋。」¹¹大抵自揣無法活著走出牢獄，難逃死劫矣！明人薑採於己亥年五十三歲撰寫年譜，亦是兵荒馬亂、流離遷徙、貧病交迫之際。¹²最善好的撰作狀態，莫過於安養天年者，如崇禎十二年己卯年，王思任年已六十五歲，「析產與諸兒輪膳」，而此際「始作年譜」¹³，然而也是日薄西山的垂暮之年矣！

綜觀諸人自撰年譜的時機，大都不離生命垂危之際，不論是年事已高或是牢獄臨難，皆自揣時日不多，趁時提筆自書生平大概。而在筆者所披閱明清自撰年譜當中，特別值得一提的是——文人葉紹袁，佛者方顯愷及刑名專家汪輝祖三位。

明代文人葉紹袁撰寫《年譜》的動機，是因為接年數年之間，遭逢了劇烈的家庭變故——喪母、喪妻、喪女、喪子，悽惻輾轉之餘，透過文字書寫（包括年譜）的撰寫，感嘆旦夕禍福、生命無常，並且深情追憶逝水年華：

其間晦明風雨，悲忻得喪，所可為色舞者幾何？流涕太息者又幾何？歷歷在我目前，而追之已杳不可得，盡歸於夕陽流水也久矣！（頁381）

西堂共北堂交痛，掌珠與眉案偕傷，撫今憑昔，低徊問影，有一善狀可容自慰者耶？（頁382）

李群玉詩「往事隔年如過夢，舊遊回首漫追思」，日久情湮，凝眸而恍憶，亦什之二三而已矣！（頁383）

葉氏於四十九歲作《自撰年譜》，之前壬申年（）即痛喪二女，乙亥年又逢北堂之卹，撰譜之後，於庚辰年復遭（人容）兒之變，「因詮次三年情事，繫為《續譜》」¹⁴。葉氏以文人特有的一往情深，透過文字反覆書寫，不斷藉由各種面向凝視著過往種種之記憶

⁹ [明]陳子龍：《陳忠裕公自著年譜》三卷，清嘉慶八年青浦何氏籛山草堂刻《陳忠裕公全集》本，收入第63冊，頁655。

「ACAH2010·亞洲人文與藝術國際學術研討會·會議論文」

片段。字裡行間流露之悲情甚為誠摯感人，痛失愛女葉小鸞尤為一大打擊，《年譜別記》中載記他一再期盼夢中與瓊章相遇，甚至透過民間流傳之扶乩招魂、繪圖寫真等行徑，頻頻回首、留連眷顧，幾近於耽溺無法自拔！此種情感，即便後世閱眾如你我者，恐怕也不忍責難其執著至此！

清人汪輝祖則是一位頗負盛名的刑名判官。深染重疾、自分必死的汪氏，藉病情稍緩之暇，口授二子，撰成年譜一書。譜錄中大量載記一生所判定之兇殺案件與參與地方政策的事蹟。對於個人而言，他認為撰寫年譜最大的作用在於，時至晚年者仍可藉此回顧過往得失，達到規範警醒的自惕作用：

前序

古人晚節末路，不忘箴儆，往往自述生平，藉以考鏡得失，亦行百里者半九十之意也。...去冬嬰末疾，轉更沉劇，自分必死，恐無以見先人地下，循省舊事，不已於懷，嚮之所忘，今迺歷歷在目矣！感夢中案冥事，益信一言一行，如有臨鑑。入春以來，病體稍間，口授培、壕二兒，依年撮記，至今夏而止。六月，坊兒試禮部還，命其重加排比，析為二卷，題曰：「病榻夢痕錄」。錄東坡詩云：「事如春夢了無痕。」¹⁵余不敢視事如夢，故不免於痕，雖然，夢虛也，痕實也。實則誠，誠則毋自欺，硜硜之守，實即在此，書其端以告子孫，俾知涉世之難、保身之不易也。歸廬主人輝祖識。嘉慶元年七月一日。¹⁶

「誠實毋自欺」是自言撰寫時戒慎恭謹的態度；詳載諸多刑殺案件則暗指人之窮途末路皆事出有因，年譜之傳，實具有昭示後代子孫「涉世之難、保身之不易」的深遠用意。

明清之際的方顯愷，早年即皈依佛門，八十年來，未嘗刻意記憶俗世種種，然而在晚歲某年之深秋霜降後，因備受足疾磨難而養疴於湖山堂中，日日抱膝呻吟¹⁷，「忽於痛苦中，迴光返照，童時、壯時、老時、衰時，種種人、種種物、種種事、種種因緣、種種苦樂，洞見現前，如鏡鑿形，鬚眉畢露，如水照物，動靜全收」，此種「人生走馬燈」多半出現於瀕死經驗¹⁸，而方氏遭逢此事時雖老病交至，然由其表述得知，係將此種「迴

¹⁵典故出自東坡《與潘郭二生出郊尋春》：「東風未肯入東門，走馬還尋去歲村。人似秋鴻來有信，事如春夢了無痕。江城白酒三杯斝，野老蒼顏一笑溫。已約年年為此會，故人不用賦招魂。」

¹⁶ [清]汪輝祖口授：《病榻夢痕錄》卷上，清光緒間刻江蘇書局刻《龍莊遺書》本，收入第107冊，頁1-2。

¹⁷ 此段敘述係根據原文：「予年八十，生平行履，未曾記憶，丙申九秋霜降後，足疾復作，養疴於湖山「得我堂」，坐臥山閣，抱膝呻吟」，見 [清]方顯愷：《紀夢編年》一卷《續編》一卷，清同治二年南海伍氏粵雅堂刻《嶺南遺書》本，收入第84冊，頁164~165。

¹⁸ 瀕死經驗 (NDE) 不只揭示了最深邃且震懾靈魂之美，同時一如研究所指，它也具有一種力量，能夠徹底轉化並改善那些死亡關口復生者的人生。相關論述可見 Kenneth Ring 著，李雅寧·李傳龍譯：《穿透生死迷思：瀕死經驗真實個案教你如何去看生命》，台北：遠流出版，2001.12。Kenneth Ring 向來專研瀕死經驗，另其他相關著作如《死後餘生》(Life after Death)、《奔向終點》(Heading toward Omega) 和《終極企劃》(The Omega Project)，以及即將出版

〈疾病療癒與官司判案—明清自撰年譜「夢兆書寫」之初探〉—Taiwan, 國立暨南國際大學中文系
林宜蓉

光返照」視為高度體悟的生命境界——「所謂荊公禪定耶？抑別通一路，與本來人相遇於百苦交煎時也！」於是「迅筆疾書，追述前事，題曰《紀夢編年》，將個人之過去、現在、未來三世之間的種種因果關聯與頓悟契機、成長歷程，繫諸此譜，同時也昭告後世讀者，姑妄言之、姑妄聽之：

緣以事有詳略，語多遺忘，時有後先，序或倒置，悉以夢緣該之，觀者不妨諦當作夢會，也不得不作夢會也！不得，昔東坡居士強人說鬼曰「姑妄言，予以妄聽之」，則得之矣。…丙申冬，《紀夢編年》脫藁，手錄一冊，以貽後人，跋此。八十歲老僧成驚書於鼎湖「得我堂」中。¹⁹

蓋人生體悟並不全來自閱讀他人的故事，觀者並不得依此規劃人生藍圖或企圖藉此複製他人成功或悟道之途徑，故強調觀者不得不作夢會。譜錄中所有載紀的種種事績，無非僅僅為體悟之資藉，文字敘述更只是糟粕、只是工具，那麼觀者面對文字所紀錄的《年譜》究竟該採取何種閱讀姿態？又將如何藉此體悟來回應自我人生？——無非是回到自己當下的生活中細細品嚐、體會箇中意義，找回自家面目，這才是方氏撰譜的初衷罷！

(二)、議題的選擇——頗富爭議的夢兆書寫

既然自撰年譜之動筆時機，多半處於時日不多之死生關頭，說話者不得不自我表述（再不說就沒機會說了），其書寫態度理應慎重嚴肅，非關緊要則無須列入年譜。年譜內容可以李鑾宣敘言為代表，舉凡「君臣之遇合，庭訓之諄嚴，師友之切磋，以及研窮理道，陶鑄性靈、瀏覽山水」²⁰，皆可以綱舉目張的方式羅列昭示，便於後世覽者感恩懷念，上述項目論者當無疑義。然而，筆者深感興味的是，自撰年譜為何要寫入缺乏具體事功之強烈佐證、理應刪去以避免爭議的「夢兆經驗」？而說話者又是如何編織敘寫而使之合理存在？

明清自撰年譜中所寫入的**夢兆經驗**，似乎因為是當事人自陳親眼所見、親身經歷的事件，會被擇選為入譜的材料，必然有非說不可的原因，但卻又怕說了別人不信，因此下筆成文時遂多加著墨、鋪陳細節，似乎想將前因後果、相印相證之處交代清楚，編織成合理說法，為的就是求信他人、昭示後代。於是，身為一個年譜研究者，在披閱這些**夢兆經驗**時，重點似乎已不再是孜孜矻矻地善加考證，其經驗倒比較像是看了篇志怪小說或是宗教感應錄、上帝神蹟錄之類的部分情節，只不過是文中主角——譜主，是第一人稱，內容上天下地，或幻遊天府仙境，與神人面示；或遊歷冥間，與亡故親友相晤。因夢兆之靈感，而後還有詩文、圖繪作品等等，不一而足。

的一份專題著作：〈盲人瀕死和靈魂出體經驗〉（Dear-Death and Out-of-Body Experiences in the Blind）。

¹⁹ 同前註。

²⁰ 同註6。

「The Asian Conference on Arts and Humanities」, June 18-21 2010, Osaka Japan
「ACAH2010 · 亞洲人文與藝術國際學術研討會 · 會議論文」

論者或可由大環境來談其成因，如明代是個儒釋道三教混行的時代，正逢西方信仰的進入（有人聲稱夢見上帝），以及民間信仰（如關聖帝君、城隍廟祈夢、扶乩招魂等等）流傳廣佈，不可不謂此間大有關聯，但需要追索譜主與上述宗教氛圍浸潤接觸之事實，方可避免泛泛之論。倒是在年譜中已然陳述了更直接的因素，蓋當事人認為「夢兆」值得書寫入譜，是因為真實人生處境中恰恰有相應之人、事、物，其前因後果之昭示意義深刻異常，並且讓當事人產生莫名震撼，直至多年後，書寫成譜之時，還免不了嘖嘖稱奇（如葉紹袁《年譜後記》所載女兒瓊章逝世當晚入舅夢與之較勁詩句事）。

撰者將這樣的經驗載入年譜，加以編織因果關聯，就算是後代子孫或是贊刻者在修纂之際，仍舊免不了揣測世人觀看後會有何負面想法。焦慮不外有二，其一是「侈談夢語以自榜異」，其二則是「迷信」。如清人潘士超在光緒年間重刻《堵文忠公集》中的《堵文忠公年譜》²¹一卷，即保存了有關夢兆的相關敘述。文中堵胤錫(1601-1649)自述誕生夢兆，正文之後，堵子表述不刪該文之立場：

萬曆二十九年辛丑十二月八日辛未酉刻，不孝生於夾山之麓 村名十房街
時大人年幾四十再娶而艱於嗣，禱於句曲之峰，夢神語曰：「考汝醇篤，恨汝薄祿無子，惟壽則上算耳。」大人泣曰：「願以壽易。」出遇一道士，手招一牧童，至乖，雙辮，著犢鼻，指謂大人曰：「是爾兒也。」遂寤，至是不孝生，先慈懷孕夢牧童笑入懷中，既一牛突入，毛角猙獰，觸慈於地，慈驚寤，腹遂楚痛坼副，幾絕，因名不孝曰：「授」，志神授也。慈因是成疾不起，大人年止五十而卒，初月川公悉讓其田宅與諸父，乃居武進之夾山外家王氏別業也 符錄因果諸書，予素不喜附會，至侈談夢語以自榜異，尤為君子所厭，聞第此出大人手遺，不忍刪抹，且以見大人一生勤積，有感必應。²²

此則年譜資料簡明扼要地載述堵氏父親當年辛苦求子，禱祝之後夢神許以折壽易子，到了母親臨盆之際，夢見牧童與年牛，還因此而命名為「授」，蓋「神授之子」的特別紀念也。這種夢兆經驗多半出現在道釋符錄因果一類的書籍中，若在年譜，又成了「侈談夢語以自榜異」的襲用套語，堵氏之子基於此乃出自父親手遺，不忍刪抹，但嘗試對於此種載記，提出一種「天人感應」式的詮釋，認為這是父親一生勤勞積善，故真有所感，則上天應許之。

自稱「詩禮士夫之家」²³的楊繼盛，因其自撰年譜中有類家訓數則，足以傳諸後世（故謂之《傳家寶》），後來在民國九年，上海宏大善書總發行之石印《楊椒山公傳家寶書》本，刊印者即於卷首，就書中數事可能涉及迷信的部分，採取模糊論述：

²¹ [明]堵胤錫自記：《堵忠肅公年譜》一卷，清嘉慶十年海寧吳騫抄本，收入第62冊，361頁。

²² [清]潘士超：《堵文忠公年譜》一卷，清光緒間刻《堵文忠公集》本，收入第63冊，頁2。

²³ [明]楊繼盛：《椒山先生自著年譜》，民國九年上海宏大善書總發行所石印《楊椒山公傳家寶書》本，收入第49冊，頁502-503。

〈疾病療癒與官司判案—明清自撰年譜「夢兆書寫」之初探〉—Taiwan,國立暨南國際大學中文系
林宜蓉

則椒山年譜中，事三人疾不染疫，謂有神佑；受打至五六十後不覺痛，謂有神助；其他夢見大舜，夢見三金衣人灌藥癒瘡，何一非涉迷信者？椒山雖迷信，無害於其為椒山，世之迷信者而皆如椒山，迷信亦何害於世道。²⁴

筆者考訂文中所指大抵乃二十三歲及三十四歲事。一為神祐病癒，一為夢中神示、創作樂器。楊氏在明戊戌年二十三歲，和兩位姪子到佛寺僧房，正逢夏季瘟疫橫行，人人自危，而楊繼盛痾瘵在抱，不忍捨病僧而去，連事三人而不染疾，當時人皆傳為有神庇祐：

引二姪復居縣寺佛永僧房，夏，天行瘟疫，主僧病倒，同舍生即亡去。兄遣人促予，及姪歸，予曰：「如予去，則此僧死在旦夕。」善遣家人回。兄又遣人促曰：「如相染，毋家歸也。」予曰：「平日相與，有病去之，心寧忍乎？如予相染，同死於此可也。」於是止取姪歸，予為之親供飲食，遍求醫藥，夜則同寢。二十日則僧癒，時兄亦染病矣！信到，予即歸，不解衣而事者月餘，兄癒，妻又病，無一人近，予自調養之，數日而癒，是年傳染甚多，予親事三人而不能染，人皆以為有神佑云。²⁵

己酉年楊氏三十四歲，投注心力於古代五音五律之樂，其師鼓勵他自行製作樂器，多日無所得，一夜竟夢大舜，恍然若有所悟，醒後感而成管：

予退而欲製，漫無可據，苦心思索。廢寢食者三日。忽夜夢大舜坐於堂上，予拜之，案下設金鍾一，舜命予曰：此黃鐘也，子可擊之。取之連擊三，醒而恍然若有所悟，呼妻燃燈，取竹與鋸鑽，至明而成管。至巳而十二管成。²⁶

論者如你我，視此究竟是靈驗？抑是迷信？恐怕是見仁見智。刊行者索性說，就算是「迷信」又何害其為楊繼盛？企圖以楊書中教化世人之正面例證，為世人「迷信」之責，開出一條生路。這與前述「不忍刪抹」，都站在「最好不寫」以免引發爭議的立場，提出了一種讓「它」繼續存在的消極說法。

無視此種爭議困境，反而還堂而皇之為夢兆等無稽事，正面提出論點者，莫過於刑名專家汪輝祖。敘中自言藉年譜自以儆惕，「感夢中案冥事，益信一言一行，如有臨鑑」²⁷，汪氏一生判案無數，六十七歲那年恍惚夢境中被召喚至冥間當判官，委任處理多年積累的懸案。數十日後某一日如尋常夢境至冥府判案，一婦持帛前來告狀，告的居然就

「The Asian Conference on Arts and Humanities」, June 18-21 2010, Osaka Japan
「ACAH2010·亞洲人文與藝術國際學術研討會·會議論文」

是庭上安座的冥間判官汪輝祖！而汪氏仔細一看，堂下站的竟是他三十二歲那年受理的自盡案主！多年來該婦「自認」含冤莫白，故前來控訴伸冤。觀者如你我者披閱至此，豈不心上一驚、冷汗直流！幸而汪氏無愧於心，冤告誤會得以紓解，之後，該女即頹首離去。而此案正是汪氏年譜所載諸多刑殺案件中最特別者，故於序言中具名指稱「**夢中案冥事**」，此事載入之重要原因，在於讓汪氏驗證了平生信仰，並且深深相信——一個人所作所為是無所遁逃於天地之間的，就如同照著一面鏡子一般。深信「敬鬼神」的他，特別要藉年譜之傳使後世子孫明瞭「涉世甚難、保身不易」，世間種種作為皆當戰戰兢兢、戒慎恐懼。汪氏如此深意，讓「夢中案冥事」在年譜諸例中躍升為最重要的敘述，不但不可刪除，還要讀者準此戒慎行事，夢兆書寫得此高度重視的現象的確引人注意！

綜觀上述諸例，不論是由「勤勞積善而天人感應」、「就算迷信又有何害世道」等消極論述，抑或是「期以敬鬼神昭示後代」的積極標舉，夢兆等神異經驗在世人的注視中，已然穿越時空甬道而存留至今，與嘵嘵不休、捍衛道統秩序的聲音，混雜成了多元的敘述現象，這顯然已非昔日立德立言立功一元準則所可以輕易涵蓋。

（三）核心研究文獻、研究方法與論述進程

本論文以自撰年譜中的夢兆經驗為主題，研究主力在於明代與明清之際的自撰年譜，行有餘力則下及清代。迫於時間才力之限，僅僅追索至足以成論即止，無法賅遍，終究有遺珠之憾，故假現今叢書所錄之便，據以為核心研究文獻。這套『北京圖書館藏珍本年譜叢刊』，係於1999年由北京圖書館所編定，收入了歷代年譜1200餘種，約十五萬頁，譜主千餘人，上起三代，下至1949年9月新中國建立前。所收錄之年譜版本，有三分之一是首次披露面世。卷首之〈編輯體例〉中言及，這套叢書所認定的年譜為「以年系譜主事迹之書」，所以符合此原則者，雖不以年譜名之，亦收入，如年表、年略、觀生紀、夢痕錄、知非錄、言舊錄、鴻爪錄等。年譜的變體如詩譜、讀書譜亦收入。

為便於閱讀者一目瞭然，茲將所搜羅之相關文獻資料，以簡要表格羅列於下：

編號	自撰年譜名稱	傳主 生卒年	版本	收藏冊數 及頁數	夢兆經驗

全文以明清時期自撰年譜為研究核心對象，考察當中之夢兆經驗，借助了當代文化理論相關研究成果，如過往經驗牽涉到「記憶」²⁸（包括選擇性記憶、記憶的再現與敘述策略）與「自我」²⁹意義的安置。有關「夢」的研究，則除了心理學界之作還有中國夢文化研究等專書足以參考³⁰。

依序分節論及「夢兆經驗」，第二節中分別由「夢兆之一：病亟夢癒」「夢兆之四：幽冥判案」四個小題論述之。最後，再以總觀年譜撰作者的人生觀作結語。

二、 夢兆經驗：越界想像與慾望投射

人有生之年，所作之夢，不可勝數。然而，歷經漫長歲月，仍可於時間巨輪之輾壓下殘存者，已是萬中之一二。到了撰寫年譜之生死當頭，乍然於驀然回首之際，猶且歷歷在目、驚心動魄者，足見該夢境所引發個人感受之強烈、意義之迥異尋常，故於記憶圖版之銘刻如此深刻而不可磨滅也！

說話者在撰寫年譜時，所擇入的夢兆經驗，實與人之生老病死、功名、婚姻、生子、置產等生命經驗，形影相伴。而每個人所認定最重要、印象最深刻的生命情節，又各自有別，故年譜中的夢兆敘述可謂千奇百怪。唯獨異中有同之處，在於「夢」，皆提供所述情節之中，跨越現實藩籬之可能。諸如時間與空間、身體與靈魂（包括過去、現在、未來三世，生死陰陽兩界、空間移動與穿越等等），都可以在夢境中輕易自原有疆界脫

²⁸專書有蘿普著，洪蘭譯：《記憶的秘密》（台北市：貓頭鷹出版，2003），詹姆斯·麥高著，鄭文琦譯：《記憶與情緒》（台北縣永和市：靈鷲山般若基金會，2005）

期刊論文則如李振亞：〈歷史空間/空間歷史：從「童年往事」談記憶與地理空間的建構〉，《中外文學》，卷期/年月 26:10=310，民87.03，頁48-64。徐培晃：〈完美聆聽者：試論羅智成詩中的夢、記憶與漫遊特質〉，《臺灣詩學學刊》，3卷，民93.06，頁107-151。等等。

²⁹如程文超等著：《欲望的重新敘述—20世紀中國的文學敘事與文藝精神》（桂林：廣西師範大學出版社，2005.10），其中〈心靈安頓的自我對話〉一節論及個人慾望指向、慾望主體的意義生成。

³⁰有關中國夢文化的研究，專書部份有劉文英：《中國古代的夢書》（北京市：中華書局，1990），妙摩，慧度著：《中國夢文化》（北京：中國文聯出版：新華書店經銷，1996），盧澤民：《夢書：中國古代夢學探源》（北京：工商聯合出版社，1994），盧元勛等編：《古代占夢術註評》（北京市：師範大學出版社，1993），姚偉鈞著：《神秘的占夢：夢文化散論》（廣西人民出版社，2004.1），羅建平著：《夜的眼睛：中國夢文化象徵》（成都市：四川人民出版社，2006），楊啟樵：《明清皇室與方術》（上海：上海書店出版社，2004.7），姚偉鈞著：《神秘的占夢：夢文化散論》（廣西人民出版社，2004.1）。

〈疾病療癒與官司判案—明清自撰年譜「夢兆書寫」之初探〉—Taiwan,國立暨南國際大學中文系
林宜蓉

逸而出，到達「他界」（包括天界、冥府、未來、過去、他方等等），並以語言或語言以外的方式溝通訊息。

就文學表述或個人歷史而言，前因後果之繫連，意義之賦予，皆需要「想像」(image)加以編織裁成。此乃本節以「他界想像」作為「夢兆經驗」附標題的緣故。古老中國即已「想像」人有三魂七魄，靈魂與軀體又可以或分或合地因時運用之。而「夢兆書寫」中說話者如何發揮「想像」作用，論者可以如是理解：因為「想像」人的生命從何而來，故年譜中常見主角誕生時因夢兆而命名；因為「想像」人的生命消失後，靈魂可以如白鶴一飛回返天際，故年譜中死亡夢兆則見白鶴返天；因為「想像」世間功名係屬前定，故年譜中士人總期待夢兆有得；因為「想像」靈魂可以穿越時空，故年譜中主角夢至冥府與親友相見。這些夢境中的「想像」，其實又承載了人生中諸如愛恨生死之種種慾望，故文中亦以「慾望投射」名之。

自撰年譜中出現的夢兆書寫，透過了越界想像（天界、冥府等），與現實慾望（戀生、功名等）交織並陳。倘若夢所昭示之意義，在於主角自身的體悟，所產生內心潛在的改變，終於於日後的現實生活中引發一波波漣漪般的擴大效應，進而使主角原本陷入的生存困境與焦慮，迎刃而解！如此說來，夢兆訊息之所以會被寫入年譜，最重要的原因，似乎是因為——它提供了主角解決困境、安頓自我的特殊途徑。

如葉紹袁所述，曾在病痛中，恍悟夢見「前身」為何：

八年乙亥，四十七歲。...先是七月間，夢在一小寺中，蘿徑幽僻，軒館甚小，有香火寥落，（移，木改成“阜”）垣蔓草之感，古柏數株，清瘦如削，似夜雨曉霽，蒼翠猶濕，獨余步廊廡間，寂然無人，余恍然若有所悟，自念云：吾前身名氏為某，今在此為僧，字天寥也。亡何，有內人之戚，得無恩愛已斷，宜證無生，故預示此兆，苦海一筏耳，而今猶沉淪世趣中，竊自愧此一夢矣！³¹

幽微夢境中，他跨越此世到達前世，親臨自己的歷史現場，了悟自己曾經是個「夜雨曉霽」、寂然於青燈下苦修的僧人。就在此夢之後沒多久，葉氏即遭喪妻之痛³²，撰寫年譜時回顧前夢與喪妻之事，葉氏認為此夢顯然具有強烈的預示意義，旨在狠狠敲醒夢中人——既然曾經為僧人，必然了悟人生無常、苦海無邊，而為何此種智慧未能在今世開花，導致此生還沉淪世趣、深深為親人之喪所苦？如此之後設式的夢境詮釋，回應了主角所面臨的困境（沉淪世趣、喪妻之苦），在書寫中愧悔，主角似已然找到了超越困境、安頓自我的途徑！

³¹ [明]葉紹袁：《天寥自撰年譜》，民國間吳興劉氏嘉業堂刻《嘉業堂叢書》本，收入第60冊，頁452。

³² [明]葉紹袁：《天寥自撰年譜》有載：「內人病亟，遣兒輩往求泐公，泐公不能致力，兒歸已瞑目矣！」文中所述，對於妻子之病回天乏術，感到憾恨無限，幾令人不忍卒睹。見第60冊，頁453。

「The Asian Conference on Arts and Humanities」, June 18-21 2010, Osaka Japan
「ACAH2010 · 亞洲人文與藝術國際學術研討會 · 會議論文」

在世之人，深情凝視過往，眷戀亡故親人，苦於不得相見，而「夢」則提供了跨越陰陽兩界的橋樑。如葉紹袁在癸丑八月之夢，夢到亡女隨侍之亡婢：

癸丑八月病起，一夕，斜陽將闌，心境清絕。俄而，夢至一所，如虎丘半塘光景，綠水平隄，清波盪漾，橫橋斜映，兩岸垂楊數百株，黃鶯飛鳴其間，浮瓜沉李，蔭樹為市。余正顧樂心賞，忽見一青衣小鬟，望之阿娜，然即之，則亡女昭齊之亡婢繡瑤也。余問：汝何至此？曰：兩女郎遣我出買瓜耳。余問：昭齊、瓊章同居邪？曰：同在此山中。遙指西南一山，遠望蒼松翠柏，菁蔥掩靄，余曰：余欲往視之。曰：望之如邇，去之甚遠也。余曰：然則汝何以至此？笑而不答，余亦遂寤，殆或仙境矣！³³

夢中描繪亡女之亡婢現身於如虎丘山塘般的江南小鎮，生活愜意閒適，奉命到市集採買應時瓜果，而亡女所居處所，「遠望蒼松翠柏，菁蔥掩靄」，有若仙境。現實生活中的葉氏，顯然掛念亡女³⁴，而此夢則回應並紓解了他的擔憂與焦慮。³⁵

從這個角度來思索，夢，若可以讓身心靈所壓抑、滯鬱的負面能量，得以釋放紓解，間接也達到了療癒疾病的奇效。另外，夢中情境讓主角頓然有悟，使之面對現實困境時，時而有天外飛來一筆的特殊靈感，從而迎刃而解。以下析為「病亟夢癒」、「判案示訊」兩節，分別闡述夢兆可能為主角帶來生命改變的契機。

（一）、夢兆之一：病亟夢癒

自撰年譜中，出現不少例證，敘說自己曾經病重垂危，在恍惚夢境中，魂魄離開身軀而飄飄然到達天界或地府，或見亡故親友，或見神人昭示，夢後悠然醒轉，竟然不藥而癒。

如曹錫寶之例，康熙十一年，方才十五年少，參加縣試時面呈試卷，為主試者讚許為「髫年佳器」。後來院試不售，返歸鄉里。不料，隨即染上當年鄉中流行的死亡疫症，發作時高燒不退，「七日昏憤不省事」，通曉醫理的大伯，診斷病情後料定，當夜五更是生死關鍵，若出汗，「尚得治，否，則殆矣！」：

³³ [明]葉紹袁：《年譜別記》收入第60冊，頁545-54。

³⁴ 葉氏屢次夢及亡女，又如甲戌上元之夕，余夢瓊章寄詩云：「可是初逢萼綠華，瓊樓煙月幾仙家。坐中吹徹涼州笛，笑看窗前夜合花。」又二語云：「昨夜簫聲雲際響，無人知是麗華來。」余以漢光烈皇后、陳後主后妃外，不識更有否邪？」見[明]葉紹袁《年譜別記》收入第60冊，頁547-548。

³⁵ 葉紹袁深信可以跨越生死陰陽之界，除了夢中如此，他還嘗透過紫姑招仙術、繪製圖像等方式接觸亡女瓊章之冥魂。如《年譜別記》，頁553載「顧太沖為瓊章作「返駕廣寒圖」，點染精絕，余曰君善紫姑術，盍招仙來。」又《年譜別記》，頁570又載「五月顧太沖同一浙中馮生來，能致仙，鎖於密室中，具諸繪彩於內，招魂傳神甚奇術也。」

〈疾病療癒與官司判案—明清自撰年譜「夢兆書寫」之初探〉—Taiwan,國立暨南國際大學中文系
林宜蓉

自先祖以下，俱深以為憂，及至夜半，予睡夢中，覺啟扉而出，至一所，洞門高敞，其內昏黑不可辨，惟見右首一矮屋，內有燈熒然，即趨赴其處，見一婦人，年可二十許，見予至，命之坐，問及予祖父母、叔父，慘然不樂，余欲啟問，則又曰：「予蓋汝叔之元配也。」予即下拜，頃之，謂予曰：「汝可速行，但向南疾走，遲則城門閉，閉則不能出矣。」予遂往南狂奔，而門已半閉，見予表叔日新徐公，方入門向予問故，予倉猝不能應，急循舊道回家，由門而達至房，至床前見祖父母、父母、伯叔父輩，皆垂涕環視，予大聲呼曰：「兒歸矣！」一躍赴床，聞先伯云：「汗來矣！不可入風。」少停，汗止，予便覺清爽，以頃所涉歷，告之先祖，謂是夢耳。及天明，徐表叔來視予疾，予不敢言所夢，越三日而徐竟以吐血暴亡，始知前所夢見之真，而予之得以再生者，非無因也，先是予孀成婚四十日而卒，停柩城西鐸庵中，予病癒後往設奠，則所設帳幃燈影，歷歷如夢境云。³⁶

夢境所歷處所，即孀孀設奠靈堂；城門係為陰陽兩界之隔，夢中自城門彼界歸返人間的曹氏，醒後渾身發汗，由原本醫石罔效的病危狀態，豁然痊癒；夢中自外而入城門之徐表叔，在現實生活中，竟於三日後吐血暴亡！前因後果相互印證，「始知前所夢見之真，而予之得以再生者，非無因也」，曹氏為此夢震撼不已，時隔多年，仍於撰譜之際印象鮮明，夢中種種情狀躍昇腦海，故擇入詳敘，銘刻入譜。

葉紹袁在二十九歲那年，深秋某一日，內人歸寧，只剩他一人獨居家中書室，不料舊疾復發，兩脇作楚，至夜不能寐，神智昏聩於恍惚之際，夢至他界：

四十五年丁巳，二十九歲。秋杪，內人歸寧，余居家中，西風蕭蕭，獨處書室，於時十月朔矣！忽患兩脇作楚，夜不能寐，痛昏昏然，夢至一所，景光慘黯，街巷寂寥，如天色將曙而晨旭未升者，道無行人，閤門盡閉，但有誦彌陀聲叢叢入耳，比屋皆然，余心訝之。忽見一老父，杖筇而來，余問曰：「此間人何梵唄之早也？」答曰：「彼欲求託生耳！」余（）然曰：「若言託生，此豈冥府耶？」老父笑曰：「子以為非是乎？」余驚恐莫措，私念必求觀音大士方能有濟，即發想間，身已在支硎山麓矣！淒晦之景，猶然如故，捫蘿而登，迫思慈覆方在？焦皇又值貴人傳呼，前至以二旗，旗上各書「甲子」二字，余徬徨且又悶甚也，蹲避巖石間，貴人在輿中，問曰：「何為有生人氣？」命前趨緝之，余不得已，出見，自通姓名，具言所以瞻禮大士之故，貴人乃下輿與余揖曰：「不必恐也。爾故我門生，異日爾功名富貴一似我，方將以余為舉主焉？又何虞乎！」語訖，仍上輿去，余乃驚寤，病數日而瘥。迨越六年甲子，始獲

³⁶ [清]曹錫寶：《曹劍亭先生自撰年譜》，收入第104冊，頁249-250。

「The Asian Conference on Arts and Humanities」, June 18-21 2010, Osaka Japan
「ACAH2010 · 亞洲人文與藝術國際學術研討會 · 會議論文」

偕公車，亦異矣！³⁷

「誦彌陀聲叢叢入耳」係指身之所在已是冥府，而葉氏驟然到此幽淒地府，竟然是「驚恐莫措」、「徬徨」、「焦皇」，顯然全無離開人世的心理準備，對於俗世種種仍十分戀棧。夢中私念尋求觀音大力士求救，隨即瞬間穿越空間到了支硎山麓，與貴人相晤，貴人面示「異日爾功名富貴一似我」，這似乎又揭示了葉氏心中的功名焦慮。由此看來，葉氏的現實生活困境是痼疾纏身與舉業功名之挫敗焦慮。透過這場夢，穿越時空的冥府之遊，掀開潛意識的世俗慾望（戀生與功名），夢中貴人面示所言，隱隱然化解了潛在焦慮。夢醒之後，葉氏陳年痼疾在數日後豁然痊癒，而夢後六年「始獲公車」。撰主在年譜中敘述夢境，文章末尾又將日後所發生事證列入，編織其前因後果，意謂此夢預告未來訊息，如此靈驗，讓葉氏發出「亦異矣！」的讚嘆，足見其心中感受之強烈！

（二）、夢兆之二：判案示訊

人稱謔庵的小品文作家王季重，曾經到茂陵當知縣，年方二十出頭，「貧不能具夫力，乃攜二童跨蹇之官。關中人訝之，見先生文弱未髭，綠袍玄鬢，一美少年也，號為呱呱知縣」³⁸。不久，縣民梁氏與李氏互訟命案，兩家大鬭，該晚即「夢童年關廷訪來顧，不語而別」，當時並不解曉夢境有何用意：

萬曆二十五年丁酉先生二十三歲

太安人北上春祀 茂陵竣，大吏檄往查盤武功，均站馬，議處台渠底張二驛夫役。會齏使者尋涇陽檄先生閱觀風卷，先生警篆馳馬，襄其事，所前士皆高第去。齏使者吳公楷曰：「牛刀小試！」不意公如此妙年，老練至此。邑民梁應龍訟李洪占地界，李揉下妻胎訟之，梁則以毆殺其子三寬鬭告求驗，是夕夢童年關廷訪來顧，不語而別。越三日，兩姓復大鬭，不及吊□（疑為「符」）人，即徑詣之自驗。至此村已停午，扶老攜幼來觀者環集，舊例諸生約，正供具，先生曰：「嫌疑之際，麾去之。」憩關帝廟中，法嚴，即不敢窺視，偶一起居，見庭柱有字：梁小寬在此一樂。先生悟曰：「疇夕之□（疑為「夢」），啟我耶！」至場，訊兩家，佐具不証所以。先視李胎，一水雞腊也，先生曰：「一月如白露，二月如桃花，三月形象成；此胎未分男女，而汝告殺子，何也？」亟刑之，李直對曰：「懼其兇也。攔之，是實，然伊子之死，實不知故，凌晨，民啟戶，見一尸，方鳴之甲長，而梁家錘鎖交至，今妻將危，家司盡抄去矣」，問梁只呼喧喊撞，第云「活活打死」，哭而已矣。先生喚應龍至案下曰：「吾驗三寬喉下血痕，八字交匝，明係勒死，汝哭雖厲，不見淚湧，此兒必非汝生！」

³⁷ [明]葉紹袁：《天寥自撰年譜》，收入第60冊，頁403。

〈疾病療癒與官司判案—明清自撰年譜「夢兆書寫」之初探〉—Taiwan,國立暨南國際大學中文系
林宜蓉

旁觀者咋舌，問總甲曰：「梁家有梁小寬乎？」應聲曰：「有。」亟呼之至，年十三矣，至則面色如土，一嚇之，具吐情實。先生曰：「兩家皆圖賴也！應龍故殺子孫，應徒耳。」一時呼青天者響振林木，三寬癩而酗賭，荒年所拾蓄也；應龍搯之死，假仇快其私也，人人秉掌。三十八州縣傳聞，訟上臺者，願就呱呱縣官質，牒如雨下，亦可備一笑譚矣。³⁹

由於兩家鬧到不可收拾，連請驗屍官作證都等不及了，王季重遂逕自驗屍。判案當日，在關帝廟中休憩，偶然間見梁上有字：「梁小寬在此一樂」，忽然靈光一現，了悟夢中所示訊息。整個開庭判案過程，如有神助，王季重對案情真相彷彿早已瞭然於胸，針對案情破綻層層逼問，偽證之處一一現形：先看李氏胎屍，未具人形，係不足三月，何來之凶殺！盤問之下李氏遂和盤托出——揉下妻胎是製造事由以控訴對方，純粹為了反制對方之凶悍。再訊梁氏，觀察屍訊非如其說之「活活打死」，乃以繩勒死。又觀察梁哭三寬似哀不及衷，顯然並非親身己出！此種破案關鍵之推論靈感，其實來自夢訊與關帝廟事。蓋關帝廟係法度森嚴之處所，連判官大人都不敢隨便窺看，而何人竟放肆如此，近乎蠱神之舉地在廟柱上塗鴉留名！顯見此「梁小寬」之家大人必溺愛無度。相對於梁三寬之死而淚不及泉湧，梁應龍之偏心昭然具現。王季重遂據此查辦：發現梁三寬係梁應龍在荒年撿拾扶養的養子，而三寬癩而蓄賭，早就是梁應龍的眼中釘，今日藉此誣仇並一除心中大患，原為一石二鳥之計，卻被王季重看穿揭發！

真相至此大白，蓋兩人皆動手殺了自家人（一墮胎、一殺無賴養子），然後再藉此誣告對方，王季重破案之迅速，讓「扶老攜幼來觀者環集」，皆「呼青天者響振林木」，一時「呱呱知縣」聲名傳遍三十八州縣。

此則文獻在王季重自撰年譜中，詳述經過，而夢兆示訊，讓判案過程順利如有神助，令觀者稱奇。古代判案雖重證據，卻因為深信鬼神之說，也接受許多冥冥中的訊息與感召。蓋深信人之所作所為無所遁逃，所謂天理昭彰是也。

三、 結論：跨越視域之可能

明中葉以降的自撰年譜，代表著私人記憶、個人歷史的自覺意識已然覺醒，透過此種書寫，建構個人生命史、編織小我之存在意義，而「夢兆」之所以被擇入年譜的現象，的確不容忽視。本論文企圖解釋夢兆經驗對於說話人本身，可能具有紓解身心靈內在鬱積能量達到療癒疾病的奇效，並帶來天外飛來一筆式的靈感，讓主角在回應現實困境與焦慮時，找到安頓自我的途徑。

明佛僧方顯愷於年譜中載記晚年常飽受疾病痛苦，而在痛苦至極中，頓悟了「疾病痛苦皆真我也」的道理，眼耳鼻舌身意識之苦，若皆可使主角有所頓悟，這表示當中皆

³⁹ (明)王思任編；(清)王鼎起，王震起訂：《王季重先生自叙年譜》不分卷，收入第57冊，頁314-317。

「The Asian Conference on Arts and Humanities」, June 18-21 2010, Osaka Japan
「ACAH2010 · 亞洲人文與藝術國際學術研討會 · 會議論文」

是真我，如此說來，「疾病」與痛苦、「判案」與困頓的夢境，何嘗不也是個人在滾滾塵世中的覺悟之資？就在觀看年譜中的「滿紙荒唐言」中，吾人深刻地感受到，這當中又有何其嚴肅的自我凝視與生命體悟。

綜觀本論文可能開展的研究視域有二，其一，乃持以研究「年譜」的學術態度，已由傳統定位為「知人論世」的史學功能，再度拉回到文學甚至心理學的領域；而有關「紀夢」的研究文獻，學界向來都偏重於文集、占夢書籍，此研究已經拓展到「自撰年譜」之中，對於開墾新領域而言，本論文可略盡微薄力量。

其次，有關「自撰年譜」之中，個人展現對自我夢境之高度關懷與深切凝視，敘述上則著重個人於此夢兆的種種體悟，與現實生活的回應（徵驗），此種書寫的基本態度，與晚明以降叢林論夢之「夢覺如一」觀點不謀而合（詳見廖肇亨文）。本論文之研究，恰可呼應晚明「夢覺如一」觀點，並將研究文獻拓展至個人自撰年譜（廖文以佛教文獻為主）。

The Study on Teacher evaluation for professional development policy implementation from Local Government and School Level Leadership

Juei-Hsin Wang

National Chiayi University

Graduate Institute of Educational Administration and Policy Development

gloriawang2004@mail.ncyu.edu.tw

1. Preface

Ministry of Education announced the experiment of Teacher Evaluation for Professional Development Policy Implementation (TEPDPI) in 2006: “Encourage schools and teachers to be volunteers to apply for.” It shows its position on the policy: under the prerequisite of voluntary, schools should build mutual trust and positive atmosphere, remind teachers to prepare for the trend, encourage them to enhance enthusiasm of teaching quality, and provide the necessary administrative support with compassion. What important is to reach success steady at once, rather than in a hurry. Now the policy is no longer an experiment, and the participation of schools is growing years by years till 2009.

A comprehensive education policy has many stages, including planning, evaluation, analysis, legalization, implementation and review stage. The focus of this study is the implementation stage. Because the promotion of policy relies on the interpretation and participation of local school principals and relevant superintendent, the key is the leading pattern in the implementation of such policies, and leadership styles are related to organizational culture of schools, behavior and work attitudes of school members. Principal’s leadership style is a combination of his or her own cognitive and behavior. Western saying goes: “As is principle, so is the school. As is school, so is the student.” It also represents the importance of leadership style. As a facilitator in local school level, the researcher realizes the strategies to promote TEPDPI. In this study, superintendents, principles and directors from four local counties were interviewed for reference in the future.

2. The analysis of leadership style

Many researches of leadership style focus on different aspects due to the researcher’s profession and viewpoint. By the analysis of domestic and foreign researches, they mainly focus on advocacy, caring, vision, stimulation of morale, and edification of intelligence. Institute of leadership often focus on the aspect of advocacy and caring, and we can see leadership cares about both research purposes and human dimensions. Transformational Leadership often focus on vision, stimulation of morale, and edification of intelligence, and leaders are required to stimulate members’ morale and potential to stimulate innovation of

school and achieve the vision and goal. Therefore, according to the analysis above and the actual results of dialectical interaction in interviews, the leadership of superintendent in education department include four aspects, consideration, initiating structure, vision and impoverished management.

In this study, according to the six aspects concluded by principal and director, “the planning and promotion of the policy”, “stuff’s cognition and communication”, “stuff’s skill and capability”, “stuff’s attitude”, “the support from the group to the stuff”, “the supervision of implementation”, the researcher summarizes the leadership style of principal and director. Moreover, according to the five aspects “interpretation of policy”, “policy planning and promotion”, “mobilization of policy”, “adjustment of policy” and “institutionalization of policy”, the researcher summarizes the leadership style of superintendents from four counties. While everyone’s leadership styles is various and not belong to any certain style, the researcher attempts to classify them simply, in order to understand the effect of leadership styles on TEPDPI.

3. Analysis of strategy on TEPDPI

(1) Superintendents of education department from four counties

(a) the interpretation of policy

Education Department superintendents are the key in promotion of the program, while their point of view will affect their practices. In the promotion of TEPDPI, superintendents’ different devotion and interpretation for TEPDPI also affects the following promotion and practices.

Superintendents from four counties all believe that TEPDPI is benefit to teachers, and the encouragement of the Ministry of Education to promote is quite good, and therefore they are willing to devote on the policy.

Superintendents of county B suggest that the promotion of TEPDPI enable teachers to be better, “*I think the purpose is good to teachers.*” (B-E6-033-091029) Superintendents of city A also believe that the promotion of TEPDPI not only enhance teacher’s professional knowledge, but also “*enhance students’ interest on learning and learning performance.*”

(B-E6-033-091029) Superintendents of city C joined the project in person for a better understanding of TEPDPI.

Superintendents of county D also endorse TEPDPI, but unpleasant to the word “evaluation” because “*I think that word is really hateful.*” (D-E6-035-090922) He thinks that as long as teachers can find their own way to make progress, it is not necessarily for them to join TEPDPI. Moreover, due to the quantity of school business, it is not necessarily to focus on the project, which a promotion for one to two years is an acceptable range.

In promotion of TEPDPI, the superintendents have different methods and practices. Superintendent of city C thinks that before promoting to schools, they should have

identification to the project, or it will be treated as a general business.

(b) Policy Planning and Promotion

Education Departments of the four counties have different methods for TEPDPI due to their leadership style. On the distribution of work, superintendents of county A and city D make decision themselves mostly, without interference from their executive. Shortly, it treated by the superintendents on their own, only discuss with the executive when it is covered by more influential decision.

City C and county B are more similar. Superintendent of city C is the role of implement, so decision-making “*are mainly handled and led by the chief*” (C - E6-034-090914), but also discuss with the chief. Superintendent of county B will discuss with the chief first, and then make a decision with the help of chief.

The discussion outward is supported by the superintendent and school. City C and county B are similar, and they often discuss and plan with central schools, which have handled more than three years and experienced. The school members, such as principals, director or teachers can be superintendents, so when superintendents encounter problems, they will ask principals for help.

There is no center schools in City A, so the superintendent’ practice is somewhat different. The superintendent ask principals who are positive in TEPDPI for assist, “*I will find some seriously and actively principals to assist me.*” (A -E6-032-091105), and the schools can do good job through the help of these principals, even if there is no central schools. As for county D, while the superintendents worked just for a short period, he has an active center school as a backup, so that TEPDPI can be promoted well in the county. The superintendent thinks that “*the principal of the central school is more active and advocate.*” (D - E6-035-090922) However, the principal was changed this semester, and the current principals have not shown a very positive attitude, so the superintendent worried about center school would be closure in the future.

At last, the role of superintendent of education department in TEPDPI is discussed. The superintendents from four counties all consider themselves as transmitter and coordinator. To superiors, another schools and teachers, they want to transmit message exactly.

Superintendent of city A also stressed that the message should be not only conveyed but also understood by the superintendent, and then conveyed in a way which counties can understand, that is, message transforming. “*Not only convey but also transform and describe.*” (A-E6-032-091105) That is, superintendents can take the opportunity to know whether the schools can understand TEPDPI, and suggest improvement methods immediately. In addition, superintendents also play a coordinating role for communication between different levels. If schools reply problems, the superintendent would think of a solution as soon as possible.

(c) Policy to mobilize

When promoting TEPDPI, superintendent sometimes also need to listen and care promotion status, but most superintendent of four counties will find resources or ask for others' response after collect opinions of the school. Such as superintendent city C and county D are new and rarely contact with the school directly, "*I will not go to first-line promotion because I am not experienced enough.*" (C-E6-034 - 090,914) "I did not contact with advocacy and briefings", (D-E6-035-090922), asking the center school for assist most.

Superintendent of county B will go to the school to understand the status in person, but this year there are too many participating schools, superintendent worried about some schools will be absent and can not understand their problems. In order to control the presence of the school, in the occasions which superintendents have to attend will call the roll, "*I will be strict, and I give study hours only to who is present. I will call the roll.*" (B-E6-033-091029) Some schools consider education department is too strict.

Superintendent of city A let schools ask questions in advocacy, because there is experienced schools, the problem can be resolved immediately, and attract another schools to join.

In addition, superintendent of city A will bring up extra resources to schools which did good jobs, because such a real help of equipment or money is needed for the school. Of course, superintendents do not mention that specifically.

(d) Mutual adaptation of policy

Here we discuss the robustness, policy resource quantity and characteristics of the implementation group, including two aspects: authorization and participation. Superintendent of the four counties all consider that the promotion period of TEPDPI should not be too short. If the superintendent is transferred soon, the county's business may be stopped. As for county D, although the superintendent understands the importance of continuity, "*The county much care about and invite some experienced teachers to accept.*" (D-E6-035-090922) However, due to the county's policy planning, the superintendent can only accept.

In addition, superintendent of city A mentioned that, in addition to the continuity, the superintendent can be staff or teacher. Staff has more resources to schools, but they are not so clear with teaching. Teachers have a better understanding of teaching, but ignore the integrity of administrative procedures. Therefore, superintendent of city A believes that the most important is the "*input motivation*" of superintendent. (A-E6-032-091105) No matter what identity the superintendent is, as long as his attitudes and beliefs are correct, he can do it. Superintendent of city A also stressed that there should be training before the promotion, and a heritage of experience will be better.

(e) Institutionalization of policy

TEPDPI is still a new program and new experience for many schools, so some

superintendents of the four counties paid great attention to the status of implementation in schools, and they will try to realize and solve the problem as much as possible.

Superintendent of county B handled only for the principals and officers, but due to the reaction from school, the advocacy of teachers were added in 2009. Teachers have a better understanding after the advocacy, so more schools joined this year.

However, the increasing of schools from County B leads to a qualitative problem. Because many of the schools are small and faraway, and there will be a lot of problems in their first join, "*Many of them are small and have a few members, there are only three members, that result problem of resources, and how can we control these schools?*" (B-E6-033-091029) Because of this, superintendents discussed with executive and decided to promote partly this year, in order to take care about all the schools. However, schools increase fast, and the Education Department does not have an institutionalized system to handle. That is what the superintendent worried.

Such a situation also occurred in City C and A. Their schools are less than county B, but this year city C has also set up a strategy alliance, and directors who did better share with new school. Superintendents of city A found promotion difficulties for principals and directors after the advocacy, and a explain meeting was hold, which they face to face with teachers to encourage them to ask questions.

The superintendent of city A cares about teachers' idea after briefings, and therefore did a survey, "*Make a list before they left*" (A-E6-032-091105), and superintendents feedback against the problems. We can see that TEPDPI will be modified while promoting, and only revised while encountering problems, so this program have to be improved in institutional arrangements.

The office of city D does not focus on TEPDPI but other businesses, and the Center School was also altered, so they are helpless now. Except for holding TEPDPI briefing during summer vacation for all county's teachers, there is no other more institutionalized approach.

As for reward system for participation schools, all the four counties take record merits awards, which is the provision of the Ministry of Education, and there are a few other rewards. Superintendent of city A also mentioned that record merits commendation, which is a kind of feedback and encouragement to teachers, is necessary but "*not too much, or in the future we can not satisfy them*" (A-E6-032-091105) In addition, County B encourage schools which joined for three years and give them medals. In this way, encourage the school to continue, and as a model for schools which didn't joined.

Gasoline Prices and the Demand for Fuel-efficiency Automobiles: The Case of Taiwan

Jin-Long Liu
National Central University, Taiwan
and
Yi-In Liu
E.Sun Commercial Bank, Taiwan

1. Introduction

In recent years, Taiwan's gasoline prices have increased sharply due to the impact of international oil prices. The retail price has risen from US\$0.57 to US\$0.95 per liter between the year of 2002 and 2008. Although the unit price of gasoline is lower than neighbor countries like Korea and Japan, however, new car sales have decreased deeply during recent years. The statistics show that total amounts of new car sales were 430,814 units in 2004, the amounts decreased to 182,969 units in 2008. Since more than 80% of new car sales comes from nine domestic automobile producers, the gross products of auto industry in Taiwan has reduced by half from US\$6.57 billion to US\$3.22 billion.

The big drop of automobile sales leads to concern that higher transportation costs probably have adversely effects on the economy activity, in particular, the economy recession at the beginning of mid 2008. To help domestic automakers overcome the impact of 2008 recession, the government announced a reduction commodity tax plan for the purchase of new motor vehicles.¹ However, supporting consumers to buy new vehicles ignites the debate of what is the role of government in reducing gasoline consumption from concerns about global climate change as well as local air quality associated with human health.

Although there has been a great concern about the effect of increasing gasoline prices on the new car demand, however, none of the related studies has been provided in Taiwan. Understanding the relationship between gasoline prices and the demand for new vehicles has several meanings. First, consequences of oil price shock during

¹ According the tax-reduction plan, the commodity tax on new sedans, small trucks, and small passenger-cargo vehicles with cylinder volume of 2000 c.c. or less will be reduced by NT\$30,000; for new motor scooters and motorcycles having cylinder volume under 150 c.c., the tax will be cut by NT\$4,000.

2007-2008 have significant effects on the consumption spending and purchases of automobile. Recent studies show that the estimates of price elasticity of gasoline demand are low in the range of 0.034 to 0.077 for 2001-6 compared with the range of 0.21 to 0.34 over 1975-80. (Hamilton, 2009) Second, fuel efficiency, measured by driving kilometer per liter, has increased substantially in past decades. Part of reason comes from the command-and-control policy to raise corporate average fuel economy (CAFÉ) standards for passenger vehicles.² The stringent policies would reduce the gasoline consumption. Third, gasoline tax or carbon tax has been frequently proposed as an option to reduce the gasoline consumption for global warming issue. Examining the issue needs to consider the demand for gasoline consumption as a function of gasoline price and household income. However, the gasoline demand varies from automobile choice and utilization. Therefore, the effect of fuel economy standard or gasoline tax may depend on the effect of gasoline prices on the demand for fuel efficiency automobiles.

Several studies have investigated the impact of increasing gasoline prices or gasoline tax on the gasoline consumption or the purchases of new vehicles. Berry, Levinsohn, and Pakes (1995) used an oligopolistic differentiated product market model and construct a logit type of discrete choice demand estimation. By using the U.S. automobile sales and characteristics data from 1971 to 1990, the results show that consumers with high mileage car uses prefer to buy fuel economy cars while those who buy high price vehicles do not care about the fuel efficiency. Goldberg (1998) analyzes the effect of CAFÉ standards on the vehicle sales, prices, and gasoline consumption from the uses of Consumer Expenditure Survey. The author finds that the structure of the vehicle sales depends on both gasoline prices and the fuel efficiency of new vehicles. Since the average fuel cost elasticity is small, consumers would not be sensitive to the gasoline prices in the short-run whatever the driving distances might be. In the long-run, however, consumers will prefer to buy small vehicles and higher fuel efficiency cars. The increased CAFE standards also force the manufacturers to produce higher fuel efficiency vehicles. Austin and Dinan

² In Taiwan, the fuel economy standard was established in 1988. The standard has been revised three times since 1988. Depending on the engine size, the standards are from 4~11.3 kilometer per liter in 1988 to 6.5~15.4 kilometer per liter in 2001.

(2005) also examine the effect of CAFÉ standards and compare with policy of increased gasoline taxes by using an empirically simulation method. The results show that an increase a 3.8 miles per gallon in the standards would reduce annual costs of gasoline consumption by 10%. However, a gasoline tax would produce more benefits if consumers drive less and purchases higher fuel efficiency vehicles. The similar conclusion also proposed by West and Williams (2005), they suggest that the advantages of gasoline tax over a CAFÉ standards while consider rebound effects and interactions with labor market. Bento et al. (2005) further consider the distributional effects in examining the gas-tax option by an econometrically based multi-market simulation model. They find that over 95 percent of the reduction in gasoline consumption comes from the decreasing of vehicle used, rather than from improvements in average fuel efficiency.

Although there has been a substantial work on the effect of CAFÉ standards or gasoline tax on gasoline consumption, studies on the effect of gasoline prices on new vehicle demand, market shares, and fuel efficiency automobiles are relatively limited. Recently, Klier and Linn (2008) uses a unique data set of monthly new vehicle sales in US market from 1970-2007, and employs a discrete choice demand specification to estimate the effect of gasoline prices on new vehicle demand. After controlling unobserved vehicle characteristics, they find a significant demand response in 2002-2007 due to the increase in gasoline prices. The elasticity of average new vehicle fuel efficiency with respect to the price of gasoline is about 0.12, it implies that an increase in gasoline tax only have a modest effect on average fuel efficiency.

In this paper, we would follow the framework of Klier and Linn (2008) to investigate a similar issue of automobile market in Taiwan. The outline of this paper is as follows. In section 2 we discuss the framework for estimation. Our data is described in more detail in Section 3. Section 4 contains the empirical results. Section 5 gives a brief conclusion of the paper.

2. The Model

Consider the discrete choice model proposed by Berry, Levinsohn and Pakes (1995) that individual i receives utility, U_{ij} , by purchasing j brand of new car:

$$U_{ij} = X_j\beta + \alpha(p_j + c_j) + \phi_j + \varepsilon_{ij}$$

where X_j represents a vector of vehicle attributes such as power, size, weight for model j that can be observed by the individual; p_j is the purchase price of new vehicle for model j ; c_j is the expected operating costs on model j that include fuel and maintenance expenses; ϕ_j is the unobserved vehicle feature terms; and ε_{ij} is error terms associated with individual and model type. Assuming ε_{ij} has type-I extreme value distribution function, the traditional market share demand functions for j model are given by:

$$s_j = \frac{\exp(X_j\beta + \alpha(p_j + c_j) + \phi_j)}{1 + \sum_{j=1}^J \exp(X_j\beta + \alpha(p_j + c_j) + \phi_j)}$$

Following Klier and Linn (2008), we further assume that a model specific intercept, η_j , does not vary over time, which implies that vehicle price, observable vehicle attributes, maintenance costs and mean unobservable vehicle feature terms are time-invariant. The market demand share function can be written as:

$$\ln(s_j) - \ln(s_0) = \alpha f_j + \eta_j$$

where f_j is the expected fuel costs for model j and s_0 is the product of outside market.

Furthermore, an individual's decision-making for driving of a specific model is conditional on the present value of total expected fuel costs associated with the life of vehicle, T , and a discount rate, r . Each period's expected costs are described as the number of kilometers driven at time t , M_t , multiplied by the cost of per liter of gasoline, P_t^{gas} , divided by the fuel efficiency, MPG_j , that is in terms of kilometers driven per liter. The total expected fuel costs are:

$$f_j = \sum_{t=0}^T \frac{1}{(1+r)^t} \frac{P_t^{gas}}{MPG_j} M_t$$

If the prices of gasoline are following a random walk, the expected prices are equal to the current prices. The market demand function for a specific model is:

$$\ln(s_j) - \ln(s_0) = \alpha \left(\frac{P_t^{gas}}{MPG_j} \right) + \eta_j$$

As Knittel and Stango (2008) suggest that adding time dummies can eliminate the effect of outside market, the equation is modified as:

$$\ln(s_{jt}) = \alpha \left(\frac{P_t^{gas}}{MPG_j} \right) + \tau_y + \eta_{jy} + v_{jy}$$

where τ_y is the year dummies, η_{jy} is the vehicle characteristics that does not vary within the same period.

3. Data

The data used in this paper are collected from sever sources. The sales of automobiles data come from Taiwan Transportation Vehicle Manufacturers Association. The data consists of monthly sales of each model manufactured by different local firms. We organized these data into a time series panel that consists of year between 1997 and 2008. The characteristics data of each model are from monthly publication of People and Car Magazine. The publication lists engine size (displacement), horse power, length, width, weight, cylinders, fuel efficiency, prices, etc for each model currently in the market. The gasoline prices are from Taiwan CPC corporation, a government owned oil company. We use the consumer price index to obtain the real price in 2005 constant dollars.

We follow Berry, Levinsohn and Pakes (1995) to treat a model/year as an observation with the definition that two observations in adjacent years as the same model if the name does not change and the type (horsepower, length, width) does not modify more than 10%. With these definitions, a total observation of the model/year is 584 in this study. Table 1 shows some basic statistics of selected variables. The figures reveal some phenomenon of the domestic car market. First, the number of models increases significantly in recent years. It gives consumer more variety for the purchases of new car. Second, the mean prices (at the constant value of 2005) of new cars have increased about 46% from 1997 to 2008. Third, the mean values of car length do not change over year, however, width and height are increasing gradually. It means that more comfortable automobiles are provided. Fourth, average values of fuel efficiency, measured by kilometers driven per liter, increase from 8.47 in 1997 to 13.05 in 2008, a 54% improvement during the period.

4. Estimation Results

Table 2 reports the estimation results for the effect of gasoline price on the new car demand based on the logarithm share equation. The independent variable of interest is the real price of gasoline divided by the fuel efficiency, P_{gas}/MPG . In addition, in column (1), the independent variables also include year dummies and brand dummies that are not reported in the table. In column (2), we further include the characteristics variables into the estimation. The brand dummies are substituted by model dummies as a model fixed effect estimation in column (3).

The results in column (1), (2), and (3) indicate that all parameters of the variable of dollars-per-kilometer have the correct sign as expected and those are statistically significant. The estimates range from -1.3079 to -3.8768 based on the various specifications. We find that the coefficient is smaller in column (1) than other estimates. It implies that the characteristics variables or model fixed effects may play an important role for the estimation. To interpret the magnitude of the estimate, the value of -3.8768 implies that a one dollar per kilometer increases in gasoline price will decrease 3.8% market sales. The alternative explanation is that the elasticity of average fuel efficiency with respect to the price of gasoline is 0.03. Overall, our results are much smaller than those found in the US market by Klier and Linn (2008).

While looking at the column (2), the coefficients of the five characteristics variables have expected sign and most of those are statistically significant. The coefficients of *Cylind6*, a dummy for whether the car is six cylinders, and of *Styling*, a measure of length plus width over height, are negative. It indicates that smaller car has larger market share. The positive and statistical significant coefficients of *Comfort*, a measure of length times width, of *Safety*, the number of air-bag, reveal that consumers prefer new automobile with more safety and comfortable.

Table 3 report the estimation results for the effect on the market sales of firms and automobile features. To investigate the firm effects, we define eight dummies for different firms. Since most of Taiwan automobile manufacturers are technical collaboration with foreign vehicle makers, we use the name of cooperation firm as the dummy variable. The eight dummies are: Honda, Toyota, Nissan, Mitsubishi, Mazda, Suzuki, Hyundai, and Ford. The Formosa Automobile, a local firm that has exited the

market in 2007, as a base firm. The firm effect is reported in column (1). Looking at the parameter estimates of P_{gas}/MPG times firm dummy, most of those are positive and statistically significant. The magnitude of the coefficient can be evaluated the impact of firm on market sales. We find that Toyota is the most vehicle manufacturer in the market under the circumstances of increasing gasoline prices. The magnitude shows that a one dollar increases in gasoline price will increase 1.5% market sales compared with the Formosa firm. Other vehicle manufacturers, Mitsubishi, Honda, and Mazda, also show more than 1% increases in market sales. Overall, the Japanese-type vehicles have increased their market sales in the new car sales than American and Korean makers during the periods of increasing gasoline prices.

The estimation of the features of vehicle also shows the expected results. We find that the coefficient of the variable of $P_{gas}/MPG * Cylind6$ is negative and statistically significant. The magnitude indicates that a one dollar per kilometer increases in gasoline price will decrease 0.28% market sales. The coefficient of the variable of $P_{gas}/MPG * Small$ is positive and statistically significant, it indicates that small car, defined as length plus width over height is less than 4, will increase its market sales by 0.40% while the gasoline prices increase one dollar per kilometer. The coefficient of the variable of $P_{gas}/MPG * Midprice$ is positive and statistically significant, it also indicates that middle price car, defined as sale prices between US\$18,000 ~US\$28,000, will increase its market sales by 0.8% compared with the bigger car if the gasoline prices increase one dollar per kilometer. Although the coefficients of the engine size, two dummies according the displacement, have expected sign, however, none of them is statistically significant.

5. Conclusion

The path of increasing gasoline prices has called public attentions to its impact on economic activity. This also leads to concern whether consumers prefer to buy fuel efficiency automobiles in the market. Estimating the relationship between gasoline prices and the demand for new vehicles not only provide the evidence for auto makers as part of information for decision-making, but also offer the useful measure for policy makers to design available instruments for the issue of global warming.

In this study, we use the new vehicles market share model to estimate the impact of gasoline prices on the demand of domestic non-importing cars in Taiwan. Our empirical results indicate two major findings: First, the increase of gasoline prices has its negative effect on the sales of domestic vehicles, but the sales of high fuel efficient autos will relatively increase. Second, the Japanese-type vehicles have increased their market shares under the circumstances of increasing gasoline prices.

One of important limitations to our study is that it does not consider the household ownership and utilization decisions. Pursuing related research would be useful to get further realization on the impact of increasing gasoline prices. Collecting individual data on the purchases' decision as well as automobile utilization will get more insights to this topic. All of these are attributed to further efforts.

“Communication Factors that Sustain Employability of Call Center Agents in the Philippines”

Prof. Niel Kenneth Jamandre
University of the Philippines Diliman
kennethjamandre@gmail.com

INTRODUCTION

The business sector heavily relies on technological support in expanding to other markets and in increasing profit. Varey (2002) explains one method of modern marketing that relies on the use of the telephone is telemarketing. Telemarketing, as a tool of communication, functions when a seller or agent contacts a potential customer through a telephone gadget or connection to purchase products or services. It has been commonly used in insurance sales, contribution solicitation, credit card promotions and other businesses.

In spite of the success of telemarketing operations, the global economic instability has forced international companies to outsource this type of service. Business Process Outsourcing (BPO) is an outsourcing of services for a period of four to six years with an ultimate goal of lowering operation costs. These BPO operations are: 1) customer contact services, 2) content development, 3) backroom operations, and 4) core IT services (Abu and Matias, 2003).

Call centers serve as a model for multipurpose interaction such as selling, servicing and marketing that serves the needs of various constituents of an organization: customers, prospects, suppliers, distributors, and employees. The typical features of call centers are generally set up as large rooms with workstations or seats. Standard equipment are a computer, a telephone line (headset) hooked into a large telecom switch and one or more supervisor stations (Abu and Matias, 2003).

The Call Center News Service reports that between 20,000 to 30,000 call centers operate in Europe and Asia, among which many serve as outsourcer of operations for North America. According to McKinsey & Co., the market is estimated to have reached \$77 billion dollars with 2 million employees in 2008 (Abu and Matias, 2003).

The Philippines is considered a major call center destination in Asia. As an emerging global player, it continues to generate thousands of jobs with an annual growth rate of 15% with an estimated 400,000 people hired in 2010. According to A.T. Kearney's overall 2004 offshore location attractiveness index, Philippines ranks sixth and is the fourth choice location in Asia, preceded by India, China and Malaysia. The benefits of the Philippines as a BPO destination include its strategic location that allows 24 hours work with the US and UK and its low labor cost which is equivalent to about ¼ of the US rate. In addition, the Philippines is the fifth largest English speaking country, after the United States, India, Nigeria, and United Kingdom. It also has a high literacy rate of 96% with about 325,000 university graduates annually and has the availability of well educated computer savvy workforce and quality software firms (Abu and Matias 2003).

Call center companies already allot 70 to 80% of the operational expenses for “workforce optimization” of the human resources, which can lead to a substantial return of investments. But, Zemke (2003) notes that call centers in the U.S. suffer an average annual turnover rate estimated between 26% and 30%. Two recurrent problems that need to be carefully studied

are the (1) hiring ratio of only eight (8) of 100 applicants and (2) high attrition rate of 57% among CSRs according to the Contact Center Association of the Philippines (CCAP).

One way of addressing turnover is to take a closer look at employee retention. Phillips and Connell (2003) defines 1) Retention as the percentage of employees remaining in the organization; and 2) Turnover (the opposite of retention) as the percentage of employees leaving the organization for whatever reason(s).

Sharp (2003) adds that according to a Gartner research, 85% of CSRs leave because of their personal choices, while 15% are terminated. CSRs resign from the company either for career change or they want to leave the managers. One specific problem of the CSRs concerns stereotyping problems which refer to their competence, nationality, and persistence in a transaction. This is because there are irate and demanding customers who are arrogant and difficult to please. Call center employees also believe that they have minimal control of their work schedule and have little optimism on how their position can foster growth opportunities, which translate to higher pay or moving into management positions in the organization.

One way to reduce turnover in call centers is to change employee perception. Employees need to be attracted, recognized and rewarded. Sharp (2003) cites the following motivation factors for CSRs: wages, working conditions, work challenges, management appreciation, job security, promotion and career path opportunities, involvement in planning, employer loyalty, tactful human resource policies, coaching and training. According to Hechanova (2009), the intention of leaving the company is associated with age, career commitment, burnout, satisfaction with pay, boss, promotions, job responsibilities, firm management and promotions. She suggested the following to deal with call center turnover: 1) effective rewards system, 2) develop fun atmosphere and well being programs, 3) right fit for the person and the job, 4) job designs, 5) continuous growth, and 6) quality leadership.

These factors are helpful in addressing employee sustainability in the call center industry. However, it is also beneficial to look at individual CSR needs and concerns from the communication perspective, specifically by identifying and analyzing communication factors that may affect higher employee sustainability.

Research Objective:

“To identify and analyze the communication factors that sustain employability of CSRs in the Philippines; specifically the Speaker, Message, Channel, and Receiver Factors”

Theoretical Framework

Organizational Assimilation Theory

Fred Jablin (2001) proposes that organizational assimilation is made up of “a chain of events, activities, message exchanges, interpretations and related processes – essentially “links” – in which individuals use what they have learned in the past to understand new organizational situations and contexts, and as to appropriate realign, reshape, reorder, overlap, or fabricate new links so they can better adapt to their own and their organizations’ requirements in the present and future.”

The theory explains the role of the communication process in intervening in the relationship between the individual and the organization, specifically during the stages of:

1. organizational entry

2. assimilation
 - a. anticipatory socialization stage
 - b. encounter stage
 - c. metamorphosis stage
3. exit processing of employees

Jablin (1987) defines *assimilation* as “those ongoing behavioral and cognitive processes by which individuals join, become integrated into, and exit organizations.” Assimilation becomes a dual process based on socialization and individualization. The former refers to the formal and informal situations when the organization encourages the individual to be accustomed, while the latter refers to the attempts of the individual to alter several facets of the organization to suit his or her needs. The process of assimilation starts during organizational entry where an employee is at the entry level. During the first stage of anticipatory socialization (2.a), the future employee recognizes his or her work capacity based on his or her training and experiences since childhood and prior to joining the organization. The three portions of anticipatory socialization (2.a) are “learning about *work* in general, learning about a particular *occupation*, and learning about a particular *organization*.” The first aspect refers to an employee’s early experience in life such as during childhood where he or she does household chores or during the teenage period where an individual gets to work for a part-time job. Secondly, learning about a particular occupation deals with former beliefs like those related to future jobs. This experience introduces and “socializes” the individual leading to an occupation role. The third aspect refers to the actions or preparations of an individual in knowing about the organization where he or she plans to apply. He or she researches information about the company such that the individual has foreseen what work would be like in the prospective organization. Encounter (2.b) is the second stage of assimilation, where the new employee “learns the normal work patterns and thought patterns of the organization.” Jablin (1982) stated that the role of the immediate work group and direct initial superior is to provide key information about the organization; in which case the new employee soon acquires career benefits on a long term perspective. In effect, the employee who has a supportive work group successfully assimilates/ Furthermore, this is the phase where the newcomer first experiences and makes sense of the new organizational culture. This is also the phase where the newcomer learns to change old ways and principles.

The employee experiences the following communication-assimilation processes: (1) written and oral orientation programs, including the employee’s handbook and topics about organizational history, mission and policies, work rules and related practices and procedures and employee benefits and services; (2) socialization strategies among the unit and the individual; (3) training programs; (4) formal mentoring, which is the assignment of a “more skilled or experienced person or a lesser skilled or experienced one” with an objective of helping the lesser skilled one achieve certain competencies; (5) informal mentoring, which happens based on mutual agreement and occurs naturally between the mentor and the protégé sans the formal assignment and with a goal for positive outcomes; (6) information seeking, which are the tactics and behaviors of the employee for assimilation, namely overt, indirect, third party, testing, disguising conversations, observing, and surveillance; (7) information giving, where the employee performs active communication roles which are indicators of his or her ability for “sensemaking” and coping with stress; (8) development of relationships among peer and supervisors; (9) and role negotiation, where the goal of the individuals is to change to perspective of the other with regard to how a role should be acted out and assessed (Jablin, 1987).

During the third stage of socialization, which is metamorphosis (2.c), the employee tries to adapt to the organizational norms by developing new attitudes or by changing existing ones. The employee likewise looks for possibilities on how the organization can accommodate his or her distinct needs and his or her aspiration to influence the organization (Jablin, 1987).

David Berlo’s SMCR Communication model

Figure 1. David Berlo’s Communication Model

S SOURCE	M MESSAGE	C CHANNEL	R RECEIVER
Communication Skill Knowledge Attitude Sociocultural System	Element Structure Content Treatment Code	Seeing Hearing Touching Smelling Tasting	Communication Skill Knowledge Attitude Sociocultural System

Berlo (1960) states that “any human communication involves the *production* of a message by someone, and the *receipt* of that message of someone.” One dimension of the communication process is the purpose. The “who” of the purpose refers to the source and the receiver. As such, when someone sends a message, a receiver must hear the sent message. The “how” of the purpose dimension refers to how do the sender or receiver plans to influence behavior.

Berlo (1960) shows that the communication process involves events and relationships that are dynamic, on-going, ever-changing, continuous, and in motion. This process contains elements which interact and affect other elements in a “dynamic interrelationship.” These elements or “ingredients of communication” are inseparable, interrelated and indivisible into separate entities. He cites the following elements of communication: “*who* is communicating, *why* the person is communicating, and *to whom* the person is communicating; the communication behaviors: the *messages* produced, *what* the person tries to communicate; the style, how people *treat* their messages; examine the means of communication, and the *channels* that people use to get their messages to their listeners.”

METHODOLOGY AND SCOPE

Research Design

The study used both quantitative and qualitative methods.

Respondents

The survey respondents were 150 Filipino CSRs based on convenience sampling. Nine CSRs served as interviewees chosen through convenience sampling from the 150 survey respondents. A Human Resource staff member and a Recruitment staff member were also interviewed.

The chosen call center for this study is one of the world’s leading contact centers with executive offices in Arizona and corporate headquarters in Quezon City, Philippines and branches in Makati, Cebu, and Alabang. It operates with a highly skilled workforce and the best technology to meet client needs such as Customer Service Support, Technical Support,

Inbound and Outbound Sales, Customer Retention, and Marketing Surveys and Research.

Research Instruments

A. Questionnaire

A survey questionnaire was developed from a compilation of the factors related to job retention from the related literature, as well as the principles of the Organizational Assimilation Theory and David Berlo’s SMCR communication model. The survey items looked into the CSRs' speaking and listening skills, knowledge about the products, services, and clients, job description, company policies, feedback, attitudes towards self and others, expectations, peer and superior relationship, customer interaction, sociocultural system, spiels, and hyperspace or computer mediated environment among others. The factors derived for the survey came from the related literature. Also included in the questionnaire were items on preentry perceptions, employment experiences, personal and educational background, family and peer influence, job expectations, prior knowledge about the company, interview experiences, orientation, training programs, actual work, immediate work group, socialization strategies and relations, adjustments, mentoring, information-seeking behavior, role negotiation, the environment of the workplace, and development of new attitudes. The concepts of the anticipatory socialization, encounter, and metamorphosis stages were also included. These items were organized and designated as the Speaker, Message, Channel, and Receiver Factors based on David Berlo’s SMCR model. The factors were given values according to the Likert scale for statements with choices for Strongly Agree (SA), Agree (A), Disagree (D), and Strongly Disagree (SD).

The survey items were numbered and grouped as follows:

Item no.	Variables
1 to 7	Speaker Factors (Communication skills)
8 to 20	Speaker Factors (Knowledge level)
21 to 37	Speaker Factors (Attitude)
38 to 51	Speaker Factors (Sociocultural system)
52 to 55	Message Factors
56 to 60	Channel Factors
61 to 68	Receiver Factors
69 to 78	Anticipatory Socialization
79 to 90	Encounter Stage
91-92	Metamorphosis Stage

The final survey question, Q93, was “Will you stay with or leave the company?” answerable by “Stay” or “Leave.”

B. Interview Guide

An interview guide was developed to determine the procedures regarding to the recruitment, selection, hiring, training and nature of work of CSRs. The interview guide also looked into the specific processes that the CSR had to go through including interviews, orientation, training, and workload.

Research Procedure

Formal Survey

After a pilot test, the revised survey questionnaires were distributed to CSRs. Some questionnaires were personally administered to the CSRs during their convenient time while other forms were endorsed to the Team Leader to get the most number of respondents simultaneously. The formal survey was conducted during the free time of the CSRs particularly during their break time in the pantry area of the floor.

A. Qualitative Analysis of Data

The findings of the interview were encoded and patterns regarding the recruitment, application, selection, hiring, training, and orientation processes as well as the nature of work of the CSRs were documented.

B. Statistical Treatment of Data

Factor Analysis:

All the communication factors answered by the CSRs in the survey were tallied and analyzed to assess the significance of factors that sustain the employability of CSRs. The data were subjected to Factor Analysis to reduce the dimensionality of the data. The survey items were reduced and grouped into factors as a result of the Measure of Sampling Adequacy (MSA). The MSA measured the overall correlation of variables where the higher the value an item using the MSA meant that there is a high relationship of the factor. As a result, the number of survey items were reduced based on their value.

T-test and Analysis of Variance (ANOVA)

The t-test is used to compare two groups to a set of factors and the Analysis of Variance (ANOVA) is done to compare more than two groups to a set of factors from the Factor Analysis.

The t-tests were done for the 13 factors vis-a-vis those who responded to (1) Q93 whether the CSRs intends to stay with, or leave the company, as well as the demographic variables of (2) sex, and (3) social status. ANOVA was used to determine the correlation of the 13 factors and the (4) socioeconomic status, and (5) schools enrolled in, or graduated from. The demographic variables of (1) educational attainment and (2) place of origin were not subjected to t-tests because the data sets were not evenly distributed for the educational attainment and there were sparse data sets for the place of origin, which might arrive at a distorted estimate. There were 123 college graduates compared to twelve (12) college level respondents and two (2) high school graduates. There were also 73 respondents from the National Capital Region (NCR), 24 respondents from Region 4, 18 respondents from Region 3 and single-digit respondents from the other regions and foreign countries.

RESULTS AND DISCUSSION

A call center agent or a customer service representative (CSR) experiences a rigorous recruitment process and an enriching training program to ensure that only “the most dedicated, energetic and skilled individuals get to fill the available seats.” The common practice for the selection of potential CSRs includes phone screening, initial interview, examination, final interview, simulation, and assessment. The main responsibilities of a CSR include interfacing with the clients, providing customer service, or making sales. He/she also works during US daytime hours, with 24-hour shifting schedules, 8 hours a day, 5 days a week.

Training program in the call centers initially includes knowledge of the organization, product knowledge, customer knowledge, communication skills, guidelines for procedures, escalations, quality calls and monitoring, customer escalation procedures, computer systems, and office procedures and hours of operation. Subsequent training programs feature classroom activities (workshops and seminars), call observations, product knowledge tests, one-on-one coaching and on-line tutorials, and self-paced training aids for individual reference and self-learning or tool kits.

Survey Respondents' Profile

A total of 150 CSRs filled out the questionnaire. However, three (3) questionnaires were disregarded because they were incomplete.

The average age of the respondents was 25.22 years old. Their average length of stay in the company was 15.92 months or approximately 1 year and 3 months.

There were 71 males, 70 female CSRs, and six (6) with no answers. The social status of the respondents were 119 single respondents and 25 married respondents, and three (3) with no answer.

For the educational attainment of the respondents, 123 were college graduates, 12 were college undergraduates and two (2) were high school graduates. 10 had no answer.

For the socioeconomic status of the respondents: 11 belonged to Class A, 14 to Class B, 87 to Class C, 23 to Class D, and two (2) to Class E. 10 had no answer

The positions held by the CSRs were as follows: 63 Technical Support Representatives (TSR), 62 Customer Service Associates (CSA), five (5) Multilingual CSAs, three (3) Subject Matter Experts (SME), and two (2) Team Leaders. 13 had no answer.

For the places of origin of the respondents, 73 respondents were from the National Capital Region (NCR), 18 respondents from Region 3, and 24 respondents from Region 4, and 21 from other regions and foreign countries.

For classification of schools, where the respondents graduated from or were enrolled or had enrolled in, Sixty-eight (68) respondents came from urban private schools, 32 were from urban public schools, 10 were from rural private schools, 19 were from rural public schools, and two (2) were from foreign schools. 16 had no answer

After the Factor Analysis, 34 items were deleted. The result of the Factor Analysis and MSA confirmed 13 factors which were grouped to the appropriate factors in Berlo's SMCR model:

A. Speaker Factors

1. Factor 1 – Company loyalty
2. Factor 3 – Knowledge and expectations about the company and policies
3. Factor 5 – Skills perception
4. Factor 6 – Background and ability to adapt in the workplace
5. Factor 7 – Proactive attitude or self-esteem
6. Factor 8 – Attitude towards work environment
7. Factor 9 – Communication skills
8. Factor 12 – Optimism for promotion
9. Factor 13 – Technical skills

B. Message Factors

C. Channel Factors

D. Receiver Factors

1. Factor 4 – Customer interaction or relationship

E. Social relations

1. Factor 2 – Organizational interaction

- 2. Factor 11 – Attitudes towards others
- F. Work condition and environment
 - 1. Factor 10 – Company support system

The results of the t-test and ANOVA and the correlation of the 13 factors and the SMCR factors were generated with a level of significance of 0.05 deemed as sufficient for this study. The basis for the interpretation is that if the p-value is less than the level of significance, the null hypothesis must be rejected or conclude that there is a significant association between the 13 factors and the intention to stay with or leave the company and the three demographic variables mentioned.

Table 1. Summary results correlating communicating variables and factors by t-test and ANOVA

Communication variable	Factor
1. Intention to stay with or leave the company	#1 Company loyalty
2. Sex	#12 Optimism for promotion
3. Socioeconomic status	#3 Knowledge and expectations about company and policies #6 Background and ability to adapt in the workplace #7 Proactive attitude or self-esteem #10 Company support system
4. School enrolled in or graduated from	#5 Skills perception #9 Communication skills

Analysis

1. The first t-test was done to determine the relationship between the 13 factors and the respondents' response to whether to stay or leave the company. A total of 78 responded that they would “stay with the company”, 18 answered that they would “leave the company.” There is a significant relationship between Factor #1 Company loyalty and the CSR's intention to stay with, or leave the company. This means that the higher the score in Factor #1, Company loyalty, the greater the loyalty of the CSR to the company.

According to Manegdeg (2007), the significant variables in fostering willingness to stay among CSRs are the dedication to perform well and the feeling of fulfillment of a worthwhile job. These are indicators that a CSR has developed a sense of company loyalty because he or she has valued his or her contribution to the company, and is, therefore, motivated to consistently do well at work. This was confirmed by the interviewees who said that they promote the company to their friends.

With regard to the work environment and culture, the interviewees said that they appreciate the activities of the company that foster fun and camaraderie through recreational activities and the means by which the company tried to boost the morale of the agents in the team, program, and company levels which they perceive foster loyalty to the company. Sample activities are movie day, food day, raffles, outing, parties, freebies, and exchange gifts.

The CSR also has to learn how to effectively get along with the people in the company. A CSR belongs to a team with a ratio of 1 TL:10 CSRs. The interviewees added that they are

generally satisfied with their Team Leaders. They explained that they comply with the metrics of the evaluation and agree with the justifications for their coaching sessions provided by the TL. This kind of group structuring may lead to the development of company loyalty. Some interviewees admitted that they are dedicated to work because they have already developed a strong affiliation with their colleagues and everybody in the team is rewarded.

2. There is a significant relationship between the sex of the respondents and Factor #12, Optimism for promotion. This means that the males having registered a higher score, have a more optimistic outlook for promotion than the females. Gender and organizational studies show that the corporate world is dominated by males. Females experience a more challenging path in the corporate ladder. An Ateneo (2007) study also cites that female CSRs experience higher burnout rates than males after a correlational analysis. The high susceptibility to burnout are caused by “high stress, nature of night-work, pressure of meeting quotas, and difficult customers.” This finding may explain why the females are less optimistic about promotion since burned-out employees, unable to adapt to an organization, usually opt to get out or to just get on with the job.

Recognition is also a key factor for promotion in the company. Recognition programs in contact centers promote a sense of personal fulfillment among the CSRs for performing meaningful work. These programs recognize and reward the CSRs based on strategic quality and objectives (Levin 2006). The interviewees said that good work is always acknowledged in the company. There are opportunities for promotion in the company. CSRs can go up to CSA 4 or CSA 5 level, after which they can even become Team Leaders or Operations Manager (OM) depending on their performances.

3. There is a significant relationship between the socioeconomic status of the respondents and Factor #3, Knowledge and expectations about the company and policies, Factor #6, Background and ability to adapt in the workplace, Factor #7, Proactive attitude or self-esteem, and Factor #10, Company support system.

For Factor #3, Class C had the highest score followed by Class D, then Class B, and the last is Class A. This means that among the CSRs, those who belong to Class C are more knowledgeable of their job description, duties and responsibilities, and company goals and policies.

CSRs are expected to be knowledgeable of their duties and responsibilities. Respondents clearly understood the work standards and their specific task whether it be Sales, Technical, Service or Financial. A CSR is assigned to an account or unit based on his or her performance. The interviewees understood that the formal assessment for their performances are crucial to staying in the company. The company has a quality performance appraisal where CSRs are evaluated and the results are reflected on their balance scorecards. The interviewees mentioned the following as the evaluation metrics or key performance indicators (KPIs): (1) accuracy/ errors in processing, (2) random call monitoring, (3) average handling time (AHT), (4) security (for financial institutions), (5) lines per hour for sales, (6) compliance, e.g. to breaks, (7) schedule adherence, (8) attendance, (9) tardiness, (10) coaching, (11) team score or program score, and (12) client evaluation. Expectedly, other CSRs complained of the seemingly rigid and strict implementation of KPIs. If the bad performance continues, there will be a remedial program and a warning, then a possible transfer to another program or worse, termination. CSRs, who belong to Class C, may be

more conscious of these guidelines, because they are driven to keep their jobs compared to those who belong to Class A and Class B who may not need the jobs as urgently.

For Factor #6 Background and ability to adapt in the workplace, Class D respondents had the highest score compared to Class A, Class B, and Class C. This means that the Class D CSRs are more ready to adjust at work and have more positive support of the family and school prior to working in the call center. Class D respondents because of their low socioeconomic status may be more accustomed to a difficult life and, therefore, more prepared to adjust to the difficulties that their work may bring.

For Factor #7 Proactive attitude or self-esteem, Class D respondents had the highest score followed by Class C, then Class B, then Class A. This means that Class D CSRs have more appreciation for the development of their skills, more open to their colleagues and mentors, and are more confident to give comments and suggestions for the company. Information-seeking strategies are important for employees all throughout their careers (Rodrick and Knox 2002). The interviewees said that they are provided with venues where they can express their concerns about the company. They said that there are (1) general assemblies, (2) brown bag sessions, (3) quarterly employee satisfaction survey (ESS), and (4) focus group discussions.

For Factor #10 Company support system, Class A respondents had the highest score followed by Class C, Class D, and Class B. This means that Class A respondents perceived that they enjoy more of company privileges such as post-graduate and counseling. The CSRs are offered opportunities for personal growth. CSRs are also entitled to academic advancement aside from the company programs that promote loyalty and teamwork. One interviewee shared that his work schedule was adjusted to enable him to pursue graduate studies.

4. The results of the ANOVA show the significant relationship between the CSRs' schools and Factors # 5, Skills perception and #9, Communication skills.

For Factor #5, Skills perception, respondents from Urban Private schools scored the highest followed by respondents from Urban Public schools, then Rural Private schools, and last by Rural Public schools. The CSRs who enrolled in, or graduated from Urban Private schools are more confident in their skills and knowledge about work compared to the CSRs who graduated from other schools. This means that their perceived skills in handling calls, product knowledge, and services are attributed to the complimentary training of the call center and their school.

For Factor #9, Communication skills, respondents from Urban Private schools scored the highest followed by respondents from Urban Public schools, then Rural Private schools, and last by Rural Public schools. The survey items of Factor #9 referred to the positive attitude of CSRs toward their communication skills. The Urban private schools are generally regarded as the better schools in the country, and therefore, produce better graduates.

The Message factor did not come out as significant factors either probably because the messages of the CSRs are strictly scripted. The CSRs are taught "what to say" and "how to say it." Furthermore, no Channel factor came out as a significant factor. This may be attributed to the behavior of the CSR of this IT generation, whose average age is 25 years old, and who are accustomed to hyperspace interaction.

The results also subscribe to the findings of Manegdeg (2007). The significant variables that contribute to a CSR's willingness to stay were: his perceptions that he performs his job well, feels fulfilled, enjoys the work, considers the job as challenging, and treats the job as his passion.

CONCLUSION

This study sought to determine how the communication factors sustain employability of customer service representatives in the Philippines. The CSR's intention to stay with, or leave the company, sex, socioeconomic status and school enrolled in or graduated from were found to have significant relationships to some of the 13 factors. Factors #1, 3, 6, 7, 5, 9, and 12 are Speaker factors and Factor #10 is under Work condition and environment.

Implications

Filipino CSRs experience major adjustments in working in the dynamic environment of call centers. This study showed that some communication factors have significant influence on the sustainability of employment of CSRs. These demographic characteristics may guide the call center companies in identifying who among the hundreds of applicants have the inclination to stay or, and would, therefore, help reduce company time spend in the evaluation of applicants.

The study also showed that the assimilation and encounter stages are important in developing the loyalty and attitudes of the CSRs. Hence, there is a need for the company to look into the policies that foster such loyalty and attitude and their implementation.

According to business projections, the call center industry is here in the Philippines to stay and flourish. This study pioneers and provides empirical evidence through a communication grounded perspective that will address the needs of the industry, particularly sustaining employability. Companies may build these factors into their first stage of application and selection process to help predict the job retention of applicants. They may also be used in developing job retention programs and training modules. If properly validated, such program will save call center management resources that otherwise go to frequent turnover of employees, training and retraining.

For the call center industry, it is important to understand the needs of the CSRs to keep employed. Though there are available specialized job retention programs in each company, this research hopes to provide a fresh perspective and alternative analyses from an outside source. There are also many available books, articles and analyses on how to generally retain employees but only a few have in-depth research on the employee sustainability issue in the context of the call center industry, particularly in the Philippine setting.

Recommendations

Considering the scope and limitations of this study, the researcher recommends the following:

- a. Conduct longitudinal studies of CSRs from their entry to exit from the companies to investigate the application of the OAT;
- b. Replicate this study using other call center companies since each company may be different from others;
- c. For the replication studies, the questionnaire should be refined and subjected to

- more analysis in order to arrive at a more reliable and valid instrument; and
d. Do personal, social, and situational predictors of job retention in call centers;

Title: Asian Americans: Myth of the Model Minority
Submitted by: Shing Pang, LMSW
Affiliations: University of Texas at Arlington, USA

Abstract

The Asian-American model minority stereotype continues to thrive in the United States. While this stereotype embellishes a flattering portrayal of Asian-American—Asians-Americans are often portrayed as dedicated, intelligent, successful, and college educated professionals—this sterling image paradoxically exacerbates the plight and undermines the progress of Asian-Americans by eroding support for them in the education or social welfare arena. Critics have referred to this denial of assistance or support as “reverse discrimination”, a phenomena actuated by Asian-Americans when they had attained favorable socioeconomic indicators when compared to other ethnic groups.

Historically, the model minority rhetoric has served as a chasm against advocates of affirmative action and supporters of other minority groups by demonstrating that racial differences or even discrimination fails to impede socioeconomic success. In terms of political correctness, comparing Asian-Americans against other minority groups invites less criticism and provides a safer battleground because Asian-Americans are themselves a minority group. However, this reckless labeling of Asian-Americans as the model minority only perpetuates the disparities among the different minority groups by painting an inaccurate but propitious picture of Asian-Americans.

Findings in this literature review suggest that while Asian-Americans have secured a favorable socioeconomic status when compared to other minority groups, the model minority stereotype conceals problems and constraints its edification for Asian-Americans. Furthermore, this image engenders friction between Asian-Americans and other minority groups, mostly in areas of education opportunities and business rivalries. A first step in the elimination of this stereotype starts with the recognition of the myths behind the model minority label.

Introduction

The myth of the “model minority” represents another sad chapter in the portrayal of Asian-Americans in the United States. Not only does this myth affects Asian Americans in the affirmative action arena, the “model minority” myth provides excuses to withhold societal welfare actions, to limit educational opportunities, and to pit Asian-Americans against other minorities. Worse of all, Asian-Americans are being promoted as the “model minority” to discredit the protests and demands for social justice of other minorities (Suzuki, 2002). In a recent review of the available grants, stipends, and scholarships available to students in a public university in Texas, most of the financial aids that favor minority applicants specifically leave out Asian Americans. For example, an application for financial aid posted at this university’s School of Social Work stated

“Priority is given to under represented groups (African-Americans, Hispanics, and Native Americans)”. Asian-Americans were purposely left out.

The above example illustrates how the “model minority” myth hurts Asian-Americans. First, according to the National Association of Social Workers (2009), Asian-Americans comprised of 1.4% of the licensed social workers in the United States; with the Asian-American population hovering at 3.6 percent of the U.S. population (U.S. Census Bureau, 2000), Asian-Americans are not overrepresented in social work. Second, the fact that the application was intended for a social work student and was posted in a social work department, but ignorant of the under representation issue, shows that the “model minority” myth is alive and well even in a department that supposedly teaches awareness of ethnic diversity. Third, by exclusion of financial aid to Asian-American students, it limits educational and career opportunities to Asian-Americans.

History.

Asian-Americans comprised of at least twenty eight different ethnic diverse groups (Morales & Sheafor, 2004). In the early 1800’s to early 1900’s, Asians of different nationalities came to the U.S. to pursue economic opportunities, to escape political oppression, and to migrate to the West (Lum, 2000). As Asians began to succeed in some of their economic endeavors, anti-Asian sentiments began to grow. Riots, hangings, and evictions of Asians spread throughout the West Coast. In the late 1800’s, Asians were portrayed as “yellow peril”, a disease, a horde of uncivilized people who threatened to undermine the American way of living (Suzuki, 2002).

During this time period, the successes of Asians in businesses such as laundries, stores, and restaurants led Americans to use them as scapegoats. This led to the Chinese Exclusion Act of 1882. This act denied Chinese from entering the U.S., denied American citizenship to Chinese who were born here, and denied the right to interracial marriage (Lum, 2000). This is the same pattern of discrimination applied to African-Americans. Ironically, African-Americans and Asian-Americans constituted two groups of people who contributed to the early economic successes of U.S. by providing cheap labor. Yet, both groups were discriminated in an iron-fisted fashion.

During World War II, after Pearl Harbor, Japanese-Americans in the West Coast who have lived in the U.S. for many generations were forced to give up their homes, businesses, and properties under an executive order issued by Franklin Roosevelt (2000). Many were deported, left the country, or were forced into military service. Anyone with more than one-eighth Japanese blood was forced into one of the ten camps within the U.S. Japanese-Americans were economically ruined and forced to restart with minimal resources after the war. In 1988, the U.S. government agreed to pay \$20,000 to the survivors that stayed at the camps. It was a token remuneration for the property loss as a result of the internment (Lum, 2004), but critics stated that the money was given mostly because the Supreme Court ruled the internment illegal and unconstitutional. Today, 97% of the Japanese-Americans live above the poverty line, the lowest level for any group in the U.S. (U.S. Census Bureau, 2000). In less than twenty years from the coerced

internment, Japanese-Americans, but not all Asian-Americans, enjoyed a family income greater than that of Whites in the U.S. Thus, the “model minority” myth was born.

The Start of “Model Minority” Myth.

In 1966, two different articles appeared in *New York Times Magazine* and in *U.S. News & World Report* that praised the achievements of Asian-Americans and naming them the “model minority” (McGowan & Lindgren, 2006). Although the articles painted a flattering picture of Asian-Americans in the U.S., upon closer examination, the reports appeared less to present a flattering picture of Asian than to make pointed criticisms of African-Americans. The timing of these reports may be coincidental to the civil rights movement of African-Americans during this time. For example, *U.S. News & World Report* stated that “Chinese-Americans is a story of adversity and prejudice that would shock those now complaining about the hardships of Negroes,” and “Chinese-Americans, unlike some minority groups, depend on their own efforts—not a welfare check.” In the *New York Times Magazine* article, in comparing Asian-Americans, the article mentioned other “problem minorities” numerous times (2006).

Later, in the 1980s, another set of magazine articles sparked an interest in the “model minority” myth. This time, the articles were written in response to the sudden increase in college enrollment by Asian-Americans. In 1985, *The New Republic* reported that “Asian-Americans have become prominent out of proportion to their share of the population,” and that “Asian-Americans have made a spectacular entry into elite universities.” Likewise, the same year, *Fortune* magazine made the ridiculous statement that “Asian-Americans are simply smarter than us.” (2006). In 1998, although Asian-Americans represented 3.6 percent of the U.S. population, they represented 18 percent of the entering freshmen at Harvard, 29 percent at Massachusetts Institute of Technology, 24 percent at Stanford, and 45 percent at University of California at Berkeley (Yin, 2001).

In the 21st century, Asian-Americans earned some of the most impressive success indicators in the U.S. Shinagawa (2005) reported that Asian-Americans have the highest median family income, highest percentage of college degrees among the adults, highest labor force participation rate, highest occupational scores, low crime rates, one of the lowest divorce rates, and the lowest out-of-wedlock birth rates. The two statistics that stood out were the median family income in 2003, which stood at \$55,000 for Asians-Americans, \$48,000 for whites, \$33,000 for Hispanics, and \$30,000 for African-Americans, and the percentages of adult males with a college degree, that statistic stated the percentages of adult males with a college degree were 50% for Asians-Americans, 28 percent for whites, 17 percent for blacks, and 11 percent for Hispanics (U.S. Census Bureau, 2003).

The Reality.

The statistics above does not tell the whole story about Asian-Americans. For instance, although Asian-American’s median family income eclipses that of whites by 25

percent, and that of African-Americans by 83 percent, Asian-Americans have a higher percentage of their family members employed in the workforce. The number of single parent households for Asian-Americans is significantly less than that of whites or African-Americans (U.S. Census Bureau, 2000). Therefore, it should come as no surprise that when more people are working in a house, that family's income should be higher than one with less people working. Furthermore, double wage earners do not necessarily mean a healthier family; many people are single parents or choose to remain single because they have more freedom and happiness staying single.

Likewise, Asian-American population is concentrated mainly in California and New York, area where the housing and wages are significantly higher than the rest of the country (Robles, 2004). With less than 4 percent of the U.S. population, but a large majority of that 4 percent is concentrated in the most expensive areas in the country, it should also come as no surprise that the wages and family net worth would be correspondingly higher even though they may not necessarily be enjoying a higher standard of living. When adjustments were made for these factors, research showed that the median family income fell below that of the Whites (Suzuki, 2002). Similarly, studies showed that the per capita income of Asian-Americans was considerably less than their white counterparts who had the same level of education, and the disparity was even greater when level of education and geographical area of residence was kept constant (2002).

Despite the higher educational status attained by Asian-Americans, no evidence exists to support that Asian-Americans are more intelligent than Americans (Stevenson & Lee, 1990). In addition, studies have shown that whites consistently gain a higher return on education than any other ethnic groups, including Asian-Americans. Native born Asian-Americans are less likely to be in management than their white counterparts, and highly educated native born Asian-Americans are earning less—sometimes considerably less than the white counterparts (Suzuki, 2002). Just like women and other minorities, Asian-Americans have a glass ceiling as they try to move upward.

Poverty rate represents another misleading statistic that affects Asian-Americans. As stated earlier, Asian-American consisted of over 28 ethnic groups. Within those 28 groups, a large degree of diversity exists. For example, at the top end of the spectrum, less than 3 percent of the Japanese-Americans lived below the poverty level. On the other hand, 68 percent of the Laotians, 66 percent of the Hmongs, 47 percent of the Cambodians, and 34 percent of the Vietnamese live below the poverty line (U.S. Census, 2000). Despite the huge range in variation, Asian-Americans are all grouped under one group. The implications of this uneven grouping are that many needy Asian-American families may not obtain the educational resources, social welfare services, or employment resources because of their identification with the over representation in certain segments of the society and the myth of the “model minority”.

The media tend to portray Asians-Americans as hard working, frugal, obsequious, and slavish in becoming the “model minority”. Although that portrayal may be true in some cases, most are not true. First of all, most Asian-Americans, unlike African-

American who were forced to settle in the U.S., migrated here voluntarily, and unlike the Hispanics, who simply had to cross a porous border, Asian-American who migrate here usually had to pay a substantial sum of money. Throughout the history of immigration laws in the United States, the U.S. heavily favored immigrants with professional skills and higher education. Over decades of preferred status immigration laws, with few political asylum exceptions, the majority of people who were allowed to immigrate to the U.S. consisted of well to do and professional people. For example, after the Vietnam war, the first wave of Vietnamese refugees who came to the U.S. were professional people who had status at the upper echelons of the Vietnamese society. A large number of them acted as government officials in Vietnam who had dealings with the U.S. government.

Lastly, the successes of entrepreneurship of Asian-Americans in the U.S. mask the reality of discrimination. In 1997, more than 50 percent of all minority owned businesses grossing over one million dollars belonged to Asian-Americans. This status caused Asian-Americans to experience pressure from the white majority as well as from other minority groups (Karger & Stoesz, 2005). Partly because of this status, tension exists between Korean shopkeepers and inner-city African-Americans. This tension erupted violently during the Rodney King riots in California. What most people did not realized is that many Asian-Americans were forced to take on the entrepreneurship role because of the discriminations against them in the job market (2005). Without a decent paying job, the only way to move ahead is by self employment. Despite the successes, different estimates have stated that 85 to 90 percent of Asian-American small businesses start ups, like any other small businesses, fail within the first five years.

How does the “model minority” myth affect Asian-Americans and other minorities?

The “model minority” myth conceals the fact that many Asian-Americans are poor and poorly educated (McGowan & Lindgren, 2006). As a result of this perception by the general population, and in direct contradiction to the U.S. policy of equal opportunity to its citizens, not only do Asian-Americans receive less financial and educational aid from the society, often, they have to accomplish more just to have an equal opportunity. For example, Armor’s (2004) study of affirmative action at three universities—University of Virginia, North Carolina State University, and William and Mary Law School—showed that Asian-Americans had a significantly less chance of being accepted when compared to similarly-qualified whites. At North Carolina State University and William and Mary Law School, Asian-American’s chance of acceptance is 65 percent less than that of whites with similar grade point averages (GPA) or Law School Admissions Test (LSAT) scores.

Likewise, in a study of 124,274 applicants that show different factors that affect admission status at elite universities, Espenshade and Chung (2005) show that being Asian-American meant a loss in the admission point rating process that is equivalent to 50 SAT points. For comparison, the same study found the African-Americans receive the equivalent of 230 extra points on the SAT exam; a recruited athlete receive the equivalent of 200 extra points; and legacy candidates receive a equivalent of 160 extra points. Unfortunately for Asian-Americans, especially the Laotians, Hmongs, and Cambodians,

because of the “model minority” stereotype, their chances of education successes have decreased.

Likewise, Asian-Americans were initially not regarded as a protected minority group under federal affirmative action regulations. Governmental agencies and non-profit organizations were not inclined to fund programs for Asian-Americans in need of assistance because of the perception that the Asian community had few problems (Suzuki, 2002). In addition, during the past decade, China has slowly replaced Russia as the major threat to the global dominance of the United States. This threat, however, has been deflated somewhat by the events of 9/11, where a different type of adversary eclipses the political sentiments of the United States.

The irony of the “model minority” myth is the invidious effect for Asian-Americans and other minorities. Opponents of affirmative action can always silence critics by stating the if Asian-Americans can achieve success in the United States, other minorities can follow their success. Furthermore, what can be a better way to combat the criticisms of social injustice and discrimination of African-Americans, Hispanics, and Native-Americans than from another group of minorities—Asian-Americans? The “model minority” myth amount to blaming other minorities for their own troubles; the myth erode government assistance, educational programs and affirmative action for other minorities (McGowan & Lindgren, 2006). Unfortunately, despite the numerous indicators of successes for Asian-Americans, many of those indicators paint only a partial picture of the true status of Asian-Americans. This seemingly flattering portrait ends up hurts not only the Asian-Americans, but other minorities as well.

Conclusion.

As stated in the beginning of this report, Asian-Americans endured tremendous discrimination and violence in the U.S. during the 1800’s and early 1900’s. The lynching, rioting, and looting of Asian-Americans came about when they started to achieve some success in mining, farming, and other entrepreneurial endeavors. The same cycle is repeating today, but in more civil ways. The “model minority” myth engendered this renewed discrimination of Asian-Americans. The discriminations in social aid, education and employment opportunities are already happening. The earlier discussion of a financial aid application posted at a public university’s School of Social Work is a glaring example of the ostensible beliefs perpetuated by the “model minority” myth. The implication of these discriminations can be significant for other minority groups because the education and income gaps between minority groups and whites are slowly decreasing. One day, when the education and income gap becomes level for whites and other minority groups, similar to what Asian-American’s achieved today; will the other minority groups become targets of discrimination?

Submission Title: Subversion or Subservience? The Remains of the Empire in Nigeria

The question here is very simple. Does African literature written in the English language qualify as authentic African literature? Or can the African experience be accurately sustained by the language of the empire? This is crucial to the understanding of how imperialism still has its claws penetrated through the linguistic compromise reached by the writers. Language was an instrument of culture control in the colonial period and that is why some critics feel that a decentralization of language control is necessary. They think that the first step to free oneself from the colonial hangover is to forsake their language. The west was the center of the world exerting political, economic, and cultural power. Now this is when they used their language to dominate the locality in every possible way. Ngugi Wa Thiong'o in his collection "Moving the Centre"-The Struggle for Cultural Freedoms' is concerned with shifting the center. Unless a major shift takes place, it will not be possible to remove the colonial stain from the nation. He thinks the nation needs to detach itself from imperial ties. 'Imperialism and its comprador alliances in Africa can never develop the continent' (Preface XII). Thiongo also saw the significance of the culture-power nexus. The title "Writers in Politics' captures the essence of this cultural/imperial domination. These writers of English Expression using the language of the empire are armed with their pens. Of course we know that the pen is

mightier than the sword and somehow the English Language Empire grows stronger than anything else. My question here is how exactly are they engaged in the act of decolonisation? How are they planning to resist imperial domination? Are they writing back trying to beat the white man in his own game? Or are they match fixing? Some writers reject the language of the empire while others like Chinua Achebe and Wole Soyinka borrows and subverts the English Language. They have the notion that we have to defeat the White man in his own game. But by using English, these writers fall into the trap of defining the African culture inappropriately. The defining moment is distorted in the sense that the African experience, adorned with the language of the Empire, seems to be at a hyper sophisticated level. In Ngugi Wa Thiong'o's words, it becomes Afro-European. He writes in his preface to "Decolonising the Mind":

I am lamenting a neo-colonial situation...In the eighteenth and nineteenth centuries Europe stole art treasures from Africa to decorate their houses; in the twentieth century Europe is stealing the treasures of the mind to enrich their languages and culture. Africa needs back its economy, its politics, its culture, its languages and all its patriotic writers' (Preface XII).

If we entertain the nexus between language and power, we see that the writers in power (armed with their pens) shape Africa in an English style. These works are accessible to only a section of the people, that is, the bourgeoisie readers. African literature tends to be in the possession of the westernized educated class. A question springs up again, so what happens in the end? Writers have politicized the act of decolonisation. Their works, no matter how much they have modified or Africanized it, are kept in the bookshelves of the petty westernized educated class. Achebe, for example, writes his *Things Fall Apart* in the western mode. He Nigerianizes his narrative by inserting Igbo proverbs and keeping to the orality of the story telling styles, but it is definitely meant to be in the possession of the educated speaking standard Nigerian English.

"Its greatest weakness still lay where it has always been, in the audience-the petty-bourgeoisie readership automatically assumed by the very choice of language" (Thiong'o 22)

"Because of its indeterminate economic position between the many contending classes, the petty-bourgeoisie develops a vacillating psychological make-up. Like a chameleon it

takes on the color of the main class with which it is in the closest touch and sympathy” (Thiong’o 22)

In school I read Achebe’s *Things Fall Apart* with George Orwell’s *Animal Farm*. What good does the Nigerianized text do to the students? These pupils do not use Nigerian English. They are not fascinated by the ancestral stories, folktales, proverbs etc either. All these children are trained to wear the “white mask” Frantz Fanon talks about. They read it to pass the test and then resume their usual ‘Eurotistic’ behaviour. This is a word I created to describe their attitudes. It originates from the word “egotistic” which means practice of talking about oneself; selfishness. Now my word is close to this definition. Eurotistic describes the European style of the African who assumes a higher self-esteem and selfishly borrows the foreign behavioral patterns. Most of the students in school make fun of the superstitions associated with the folktales. They have formatted their minds in a rational way. As a result, they emerge as rational beings. The divine light of enlightenment has dawned upon them. They are too much of an Englishman to believe in their ancestral ghosts. These people have socio-culturally molded themselves into something alien from their tradition. They are detached from their roots and it is high time that they return to the land of their birth. Ngugi talks about the two mutually opposed forces in Africa today; the Imperialist tradition and a resistance tradition.

“The imperialist tradition in Africa today is maintained by the international bourgeoisie... The resistance tradition is carried out by the working people (the peasantry and the proletariat)” (Thiong’o 2)

It is true that the English language cannot be denied as the language of wider communication. The worldwide dominance of English does not allow its abandonment. But the questions of the African sentiments remain. It is not also wholly certain that if these writers opted for African languages, the problem of cultural invasion would be eradicated. But some critics believe that it’s high time that these writers stop ignoring African languages. They think it is being pushed to the periphery by the languages of the imperialist order. Since language is closely tied to culture, it is a dangerous pursuit to use the Empire’s language. In a way it feeds on the native and slowly transforms them to serve colonial interests.

...imperialism in its colonial and neo-colonial phases continuously press-ganging the African hand to the plough to turn the soil over, and putting blinkers on him to him view the path ahead only as determined for him by the master armed with the bible and the sword. In other words imperialism continues to control the economy, politics, and cultures of Africa' (Thiong'o 4)

The White man will still be overwhelmed even centuries after defeat to see a black or brown skin tamed/civilized like him. They will forever enjoy white supremacy over third world inferiority. This is an eternal superiority complex of the West. 'The Gods must be Crazy' according to the white man to have created an inferior species. In the movie, the black man was not equipped with the white man's language, but that makes him the *bushman*. He is powerless in a situation where he has gained no knowledge. Of course the urban public has mastered the English Language to keep up to a 'western' standard. How far can an indigenous man go without the gift of the Empire? In the movie, the bushman comes in contact with civilization, but ultimately returns to his people. He somehow communicates with the White man, a non-English form of interaction and they fail to grasp his expression of emotions. We see that the bushman saves the White man's life, but he does not care about their advanced technologies or refined behavior. He is happy in his own world with his own set of beliefs and customs. So in larger sense the African man welcomes the West into their land, entertains them, even endangers his life to save them, but never really tries to match himself with the whites. This attitude should be adopted by the Africans especially the educated westernized class. The bushman is an extreme example, but it offers a model for the Africans to follow. Its definitely not going to be the bushman style, but a heartfelt African sentiment needs to be kept alive.

Another problem is the African situation. The language question has many factors, especially when it comes to African literature. The popularity of the language in African can in part be traced to the fact that due to colonial imposition, it was the language of social mobility in the new order and therefore the language most studied and used formally. The African languages were neglected in terms of formal study and use, so that the displacement replaced what should have been mutual translation between English and African Languages. This is why the development in African Languages of concepts and

terms in modern sciences are at such a low level. English is, therefore the mostly used linguistic tool for intra/inter societal communication in the African continent. In Nigeria, for example, here there are many ethnic/tribal languages, English is more than simply a means of communicating ideas and information; it also serves a very important means of establishing and maintaining unifying relationship with other people of diverse cultures and mother tongues. So the African Writers Chinua Achebe, Wole Soyinka as the literary language of the continent, but have appropriated it as a act of decolonisation. They believe that the rigid hegemony of the language can be unmasked through this process of adaptation.

In some instances, these European Languages were seen as having a capacity to unite African peoples against divisive tendencies inherent in the multiplicity of African languages within the same geographic state'. (Thiong'o 6)

But in the end it happens to mask the black skin. In the name of unmasking, it actually masks. Here the 'other' is masked to make them participate in the sameness of the grotesque faces. Ngugi believes that using the language of the Empire gives it the power to capture the soul.

'...language was the most important vehicle through which that power fascinated and held the soul prisoner. Language was the means of the spiritual subjugation' (Thiong'o 9)

Nigeria is a large nation with hundreds of languages. The second edition of an index of Nigerian languages lists over four hundred languages. All the languages except pidgin and English are associated with specific indigenous people and are thus not pan-Nigerian. Only English and Nigerian pidgin can be called pan-Nigerian in the sense that no ethnic group can claim native rights to them. Since in Nigeria Ethnic particularism poses a serious threat to national survival, the installation of English is needed. A promotion of national literatures was necessary to stop the ethnic conflicts. This explains Achebe's motivation for choosing to write in English. They used it as a weapon since the survival of Nigeria as a nation required it. The African Writers of English Expression had to think of linguistic hegemony as well, so they engaged themselves in the process of domestication. In keeping with the fast pace of globalisation, these writers borrow and

adapt to the new order. They reshape the foreign tongue. The African writers using English are using the strategy of transliteration. This is a very effective way of conveying the local tendencies in an African manner. But that again has its limits. This was a doctrine originally conceived by the first generation of African Anglophone writers as a second language literary theory. They wanted to use this method to create national literatures in postcolonial African countries. Nigerian writers have successfully used it. They succeeded with this strategy because of their sociocultural and sociopolitical predicament. These African countries south of the Sahara emerging from colonial imposition in the late fifties had the problem of multiethnicity. Achebe felt the tension and this is clear in the following remarks in his essays *Morning Yet On Creation Day*.

The real question is not whether Africans could write in English but whether they ought to. Is it right that a man should abandon his mother-tongue for someone else's? It looks like a dreadful betrayal and produces a guilty feeling (62).

But for me there is no other choice. I have been given this language and I intend to use it. I hope, though, that there always will be men, like the late Chief Fagunwa, who will choose to write in their native tongue and ensure that our ethnic literature will flourish side-by-side with the national ones (62).

This explains Achebe's choice of language. These writers also realized that if they used the native speaker English as their model, they could not evade cultural domination in literature. So they created a pan-Nigeria language that unified the constituent ethnic groups. They were sure that it had no links with the language of the colonial master. Now there were three possible strategies—the use of a pan national modified English (i.e. Nigerian English), the use of various ethnic-Nigerian modified Englishes (i.e. Igbo English, Yoruba English etc), or the use of pidgin. But only one was feasible at the time of Nigerian independence namely the use of ethnic-Nigerian modified Englishes. Pidgin could not be used because of the hostility people showed to the English Language association. The nation tried to abolish the English language of its colonial master. It was considered corrupt. School children were forbidden to use it and writers could not connect themselves to it. It is proved in Achebe's "Things Fall Apart" (1958). There is no instance of pidgin in it, but his later novel "Anthills of the Savannah" (1987) contains a representation of pidgin. This Nigerian English caused identity problems. It closely

connected to the standard English and the people using it assumed a strong sense of superiority. Only the higher rank in the society used this English. The English used by educated Nigerians was the Nigerian English and not the ethnic Englishes. There is no difference between Nigerian English and Standard British English. The Nigerian pidgin performs the role of informal English in Nigeria, for e.g. “You don’t go there”, “I have seen you well well”, “habba o” “it don’t happen” etc.

This English can be distinguished from the Standard English. But the Nigerians speak English the way they write it and that is why it is identical in syntax and spelling with standard British written English. So the only way out was to write in various types of ethnic modified Englishes. This is what came to be known as transliteration. Transliteration does not have the same meaning in African literary theory as in Standard English. The Oxford English Dictionary defines the term as ‘the rendering of letters or characters of one alphabet in those of another.’ But in the early sixties following the political independence of several African countries, the word ‘transliteration’ was introduced in African Critical Terminology as a blend of translation and literal—that means it is glossed as ‘literal translation’—a meaning not listed in any English dictionary. This became an important term in the postcolonial language politics of African literature. As Bill Ashcroft, Gareth Griffiths, and Helen Tiffin have observed, postcolonial writing needed to constitute a language that would suit its purposes.

“The crucial function of language as a medium of power demands that post-colonial writing define itself by seizing the language of the center and re-placing it in a discourse fully adapted to the colonized place”(38).

Transliteration is a procedure for introducing tropes and idioms from an African ethnic language into English through a communication of equivalent words. In Achebe’s *Arrow of God* we see this equivalent transliteration. Thus, the Igbo idiom/ *Were ue gi guo eregi*, which means the same as the English idiom “Read between the lines”, can be introduced into an English text as “count your teeth with your tongue” (Achebe 137). The Igbo words are replaced by equivalent English words, but the idiom remains an Igbo cultural artifact. The use of transliteration here instead of translating is curious because thinking in one language and rendering the thought in another sounds like translation. But African

writers wanted to distinguish their own brand of translation. Gabriel Okara and Chinua Achebe classify it. Achebe recommends that the African writers try to develop their own varieties of English. These varieties do not coincide with any native-speaker varieties; rather its special features are able to carry an African's 'peculiar experience' to the world, a experience that is essentially bilingual and bicultural. In *Morning Yet On Creation Day* he writes:

So my answer to the question: Can an African ever learn English well enough to be able to use it effectively in creative writing? Is certainly yes. If on the other hand you ask: Can he ever learn to use it like a native speaker? I should say, I hope not. The African writer should aim to use English in a way that brings out his message best without altering the language to the extent that its value as a medium of international exchange will be lost. He should aim at fashioning out an English which is at once universal and able to carry his peculiar experience(61).

So what these writers want is a bilingual variety of English combining native features and foreign elements. The target language expressions cast in the formal mould of source language counterparts. To a British or an American reader, it seems stylistically odd in context, but generally they do not violate the rules of English syntax. There are instances of this in Achebe's *No Longer at Ease* as "a thing of shame" (13) , instead of 'a shameful thing' and in *Arrow of God* , "a man of riches" (40), instead of 'a rich man'. These expressions mirror the form of Igbo expressions.

Then we have the source- language loan words. This is the most alien in an English text. Ashcroft, Griffiths and Tiffin discuss this phenomenon in postcolonial writing under two headings- 'Glosing' and 'Untranslated Words' (61-66). They see the choice as essentially political.

"Ultimately the choice of leaving words untranslated in post-colonial texts is a political act, because while translation is not admissible in itself, glossing gives the translated word, and thus the 'receptor' culture, the higher status" (66).

Ashcroft terms these African language words "cultural sign(s)" (62)
A few examples from Chinua Achebe's *Arrow of God*:

'It ran away fiam like an ordinary snake"(Achebe 205)
'His nose stood gem like the note on a gong' (Achebe 10)

The Igbo words in these sentences are ideophones-sounds signify the ideas they convey. Since they cannot be translated, they are called 'cultural signs'. English does not use

sounds in this way. We may have onomatopoeic words, but ideophones signify more abstract ideas than sound. Achebe in *Arrow of God* invokes Igbo words not because they are untranslatable, but because of their unique music. In *Arrow of God* two of Ezulu's children repeatedly chant the Igbo sentence "Eke nekwo onye uka!" which is eventually translated as "python run! There is a Christian here"(205). No English expression can convey that music.

Some source language idioms are introduced into the target language text. In *Things Fall Apart* one finds the sayings "A toad does not run in daytime for nothing" (Achebe 20), signifying the same as "There is no smoke without fire". "Let the kite perch and let the eagle perch also" (Achebe 19), signifying the same as "Live and Let Live".

This kind of transliteration was flawed because it could not create a pan-Nigerian language and unify the tribes. English had an advantage over this form. The result was disastrous for national cohesion; it would have created a new type of ethnic particularism in which Igbo English would have been elevated to supremacy with Yoruba English, and other Englishes. The typical Nigerian Anglophone novel consists of two types of sentences-unadulterated standard English sentences, which constitute the bulk of the text, and Igbo, Yoruba sentences. The Nigerian Anglophone novel remains largely foreign. Achebe and Soyinka's works exemplify this point.

At last the rain came. It was sudden and tremendous. For two or three moons the sun had been gathering strength till it seemed to breathe a breath of fire on the earth. All the grass had long been scorched brown, and the sands felt like live coals to the feet. Evergreen trees wore a dusty coat of brown. The birds were silenced in the forests, and the world lay panting under the live, vibrating heat. And then came the clap of thunder. It was an angry metallic and thirsty clap, unlike the deep and liquid rumbling of the rainy season. A mighty wind arose and filled the air with dust. Palm trees swayed as the wind combed their leaves into flying crests like strange and fantastic coiffure (Achebe 130).

The rains of May become in July slit arteries of the sacrificial bull, a million bleeding punctures of the sky-bull hidden in convulsive cloud humps, black, overfed for this one event, nourished on horizon tops of endless choice grazing, distant beyond giraffe reach (Interpreters 167).

This type of English is hardly different from the English a native would use. Achebe captured folkloric dimensions of the Igbo language. His novels mediate orality and literacy by turning translations of folklore and discourses into a formal literary device. His English is hardly different from what a native speaker would write. But what happens when it becomes inaccessible to the Nigerian illiterate masses even when read aloud? It again creates a division/a cultural divide. A difference between those who perceive this mode and those who fail to understand. This time it is not the British Empire, but the native educated masters with the acquired knowledge exerting power over the locality. In an attempt to escape ethnic particularism, these writers have created a new sort of imperialism on their native land. It somehow allows the dead seeds of colonial imposition to germinate all over again. This time it has a new face and in the name of nation building, it actually breaks it apart. *Things Fall Apart* in a nation that has not been able to release itself from the shackles of the colonial era.

As culture is closely tied to language, the Nigerians are bound to follow the western value system. They reshape themselves to suit the west. So classes of westernized Nigerians emerge in postcolonial Nigeria. They don't find any interest in their ancestral heritage, customs, traditions, codes of conduct etc. They have their English/American way of life. I have spent nineteen years in Nigeria, so it will not be a difficult task to portray the texture of my experience in the country. All these years brought me in contact with the different types of Nigerians. The status differences as a result of their identification with the West are apparent in Nigeria. The upper class Nigerian is very much in love with the western lifestyle. My Igbo and Yoruba friends were not at all concerned with their customs. The west has entered their blood and they believe it to be the best way of life. From their choice of the language to their dress codes, hairstyles, eating habits etc are all very non-native. This is cultural imperialism in full bloom. These educated people have seriously instilled the western values into their mindset. My friend never wore her traditional suit (a wrapper with a head scarf). She was always in skirts, jeans, and tracksuits. She even preferred the straight and soft hair to the Afro ringlets. Some Nigerians bleach their skin to make it appear 'white'. Now this is definitely a color complex, which began with the arrival of the Europeans on the Black Continent. Even the

uneducated classes, like the housemaids strive to make themselves Afro-European to fit into the society. They also tend to speak in the British accent and the person with the British accent is considered superior. I went to a school in a northern state, Kaduna and the recollection of the moments evokes a very anglicized childhood.

African literature in Afro-European style has made the situation worse. Is it the literature of the Nigerian people or the native Empire? Definitely not a literature for the Nigerian populace. It is rather a literature of the people by the educated elite for the external world's consumption. The literature is patronized more outside the country than inside. They don't even realize that they are doing something outlandish. There seems to be a universalist strain in Nigerian literary thought. In English they found a universal medium of literary expression. In reality these writers have created another "hybrid tradition, a tradition in transition, a minority tradition that can only be termed as Afro-European literature; that is, the literature written by Africans in European Languages" (Thiong'o 26).

For Achebe, universal English means internationally intelligible English.

"The African writer should aim at fashioning out the English which is at once universal and able to carry his peculiar experience" (Morning Yet on Creation Day 61).

So there is international English implanted in Nigeria, which does not have a colloquial register. It is inaccessible to ordinary people who do not understand English. Consider the two citations from Achebe's *Arrow of God*:

"We have come to the end of our present mission. Our duty now is to watch Ezeulu's mouth for a message from Ulu. We have planted our yams I the farm of Anaba-nti" (Achebe 209)

I can see tomorrow, that is why I can tell Umuaro: *come out of this because there is death there or do this because there is profit in it.* If they listen to me, o-o; if they refuse to listen, o-o. I have passed the stage of dancing to receive presents" (Achebe 132)

The cultural signs-"Anaba-nti" and "o-o"- are buried in contexts where it is hardly accessible to ordinary Igbo people who do not know English. *Things Fall Apart* is created in favor of non-Igbo readers because there are few ethnic linguistic or folkloric artifacts in it. The work essentially consists of plain Standard English narration. By contrast

“Arrow of God” satisfies the Igbo bilingual reader. Now it is quite clear why *Things Fall Apart* is Achebe’s literary masterpiece not *Arrow of God*. It is important for Nigerian writers to reconstitute English to make it accessible to the masses and mirror the texture of Nigerian life. This does not mean that the use of standard English come to an end in Nigeria. It will only be used in fields requiring international input and cooperation. It will be valued in higher education, the upper levels of government and administration, and in certain professions.. The general people of Nigeria have little need for such proficiency. Ngugi wa Thiongo tries to give a solution to these linguistic and cultural complexities. His discussions about seizing the language of the center and replacing it with indigenous languages instead of modifying it offers a way out. According to him, the writers using English are involved in politics by using the language of the colonizer. The west saw itself as the center and now we are putting English (The Empire) at the center again. In the process, the African languages are pushed to the periphery. There is a post-imperial prejudice created in the socio-cultural situations. Thiongo writes in the preface of his book *Decolonising the Mind*

If in these essays I criticize the Afro-European choice of our linguistic praxis, it is not to take away from the talent and the genius of those who have written in English, French or Portuguese. On the contrary I am lamenting a neo-colonial situation which has meant the European bourgeoisie once again stealing our talents and geniuses as they have stolen our economies (Preface XII).

Thiongo describes the consequences of suppressing the local languages and elevation of English in *Decolonising the Mind*.

“...language and literature were taking us further and further from ourselves to other selves, from our world to other worlds” (Thiong’o 12).

This is what is happening to the African people. They have absorbed the culture of the language they are using. Since culture cannot be separated from language and it is a means of communication, these people have transformed themselves into foreign beings.

Thiongo talks about this image:

‘...language as culture is an image-forming agent in the mind of a child. Language as culture is thus mediating between me and my own self; between my own self and other selves.’(Thiong’o 15)

‘Colonialism imposed its control of the social production of wealth.... But its most important area of domination was the mental universe of the colonized, the control through culture, of how people perceived themselves and their relationship to the world.’(Thiong’o 16)

Thiongo does not support the use of English to escape ethnic particularism. He believes that it is an inadequate representation of the African reality by the western media.

“The study of African realities has far too long been seen in terms of tribes. Whatever happens in Kenya,Uganda,Malawi is because of Tribe A versus Tribe B. Whatever erupts in Zaire,Nigeria,Liberia,Zambia is because of the traditional enmity between Tribe D and Tribe C. This misleading stock interpretation of the African realities has been popularized by the western media which likes to deflect people from seeing that imperialism is still the root cause of many problems in Africa” (Thiong’o 1)

The cultural imperialism at work in Nigeria is mainly because of the weak resistance shown by the natives. The westernized and native ruling classes hold on to the western codes and instill the western system of values into their minds. There is a mental colonization of the people. Foucault’s knowledge-power nexus in the European society comes in when the westernized Nigerian gains a substantial amount of knowledge(the education system) and becomes powerful. It is only then they start to manipulate the less fortunate class. The people are not even aware of the psychological consequences of imperialism. They distance themselves from their own people and feel that they have attained a level of supremacy. Thiongo writes:

It makes them see their past as one wasteland of non-achievement and it makes them want to distance themselves from that wasteland. It makes them want to identify with that which is furthest removed from themselves; for instance with other peoples’ languages rather than their own (Thiong’o 3).

...all those forces which would stop their own springs of life.(Thiong’o 3)

“Imperialism continues to control. It is in its neo-colonial phases. They are still walking on the road built for them by their colonial master “armed with the bible and the swords” (Thiong’o 4)

The bible, that is, Christianity adds another layer to the complications of cultural imperialism. There is a serious conflict between nationalism and Christianity in Africa. The white man’s religion is embraced as subliminal. It is the Igbos and the Yorubas that

are actively involved in the missionary activities. Christianity means ritanche. In Africa, the native missionary figures assist in undermining the indigenous religions and traditional beliefs. In black Africa, as in the rest of the ex-colonial world, the expansion of European interests was accompanied by the spread of Christianity. Important to the process are the western churches, schools and ideas to the African people. The embrace of Christianity by the indigenous Africans was the reason behind the problematic cultural identity. Soyinka's *Ake-the years of my childhood* portrays the ambiguous role of the native missionaries. It is necessary to engage the native missionaries and converts of the late nineteenth and early twentieth centuries. The natives were inclined towards the establishment of churches. In *Things Fall Apart* we see that Nwoye abandons his parents and joins the church later on in the novel. He travels to an alien existence and symbolically mediates two worlds. The folktale of heaven and hell, the folktale in which there is a quarrel between heaven and hell shows that Nwoye is stuck somewhere in the middle. The vulture is like Nwoye, it travels to an alien dispensation. He moves between two worlds; traditional Umuofia on the one hand, and the colonial- Christian dispensation on the other. Achebe's use of the story of the vulture demystifies the curious new world that Nwoye's alter ego, the mediating vulture, discovers in the course of his trip to the sky.

Whenever Nwoye's mother sang this song he felt carried away to the distant scene in the sky where Vulture, earth's emissary, sang for mercy. At last Sky was moved to pity, and he gave to Vulture rain wrapped in leaves of coco-yam. But as he flew home his long talon pierced the leaves and the rain fell as it had never fallen before. And so heavily did it rain on Vulture that he did not return to deliver his message but flew to a distant land, from where he had spied a fire. And when he got there he found it was a man making a sacrifice. He warmed himself in the fire and ate the entrails. (Achebe 38)

Now Nwoye has to feed on the entrails of sacrifice just like the vulture. This new world is just as unpleasant as the world he already knows. In this process the novel reveals the conceit of Christian (or European) superiority. The church was an institution that had no mercy on the indigenous people. Those joining the church had to sacrifice their ancestral identity. Nwoye represents an emerging class of educated Nigerians who abandons his 'self' to serve the Europeans in the guise of the church Christ.

In *No Longer at Ease*, Achebe places his protagonist in a commuter bus. He forces them to experience the life of the masses of less-fortunate Nigerians. This is the western educated hero who distances himself from the local people. Obi Okonkwo's journey when he is going back to his village shows the transformation of his character. He climbs a wagon called "God's Case No Appeal"-this means that the God they are talking about is the Christian God and Obi is like a God boarding the wagon. It is almost as if the 'case' is Obi's case which has 'No Appeal'. There are many such inscriptions on buses in Nigeria that reveal the supremacy of the Christian God, for e.g. "Beware, Angels on Patrol". The discrimination is apparent when Obi sits in the front seat with the driver and the traders were at the back. The songs they were singing are also significant. The songs about young women who had become teachers and nurses instead of mothers.

"The journey itself was not very exciting. He boarded a many wagon called God's Case No Appeal and traveled first class, which meant that he shared the front seat with the driver and a young woman with her baby. The back seats were taken up by traders who traveled regularly between Lagos and the famous Onitsha market on the bank of the Niger. The lorry was so heavily laden that the traders had no room to hang their legs down...But they did not seem to mind. They beguiled themselves with gay and bawdy songs addressed mostly to young women who had become teachers and nurses instead of mothers(Achebe 48).

When Obi tries to translate one of the songs, he gets lost in translation. He cannot grasp the meaning of this popular song. How can he appreciate the true meaning of the song when he has distanced himself to a great extent from the traders. Obi has his interpretation, but that is an inadequate grasp of his own social location. The elite's standards are very different from the everyday life of food hawkers, bus driver of the postcolonial urban space. These people do not care about a God or the West. They are happy people unlike the elite who has to locate himself between two worlds. But what happens is that the educated elite speaks for the mass. A class prevails and looks down upon the locality. This is a piece of folk wisdom set in place by Achebe in *Things Fall Apart* namely, that no single individual or class should claim to speak for the masses, that is, for all of you. This is the tale about the tortoise who could not fly, yet claimed to speak for all the birds (Achebe 67-70)

In *Ake* we see a powerful attack on tradition in a small town of Abeokuta, and the emergence of a nationalist consciousness. Yoruba aristocratic tradition is humiliated against Christianity and western literacy. *Ake* tells the story of young Wole, from about the age of three to the moment he leaves home to attend secondary school in another town.

The first mission station of the church missionary society was established at *Ake*, Abeokuta in western Nigeria in 1845. One of the missionaries that built the station is Bishop Samuel Ajayi Crowther (1806-1891), the first black bishop of the Anglican church. Young Wole imagines meeting Crowther (in moments of childhood fantasy) on the grounds of the parsonage where the bishop once lived. Young Wole was sent to a missionary station by his father. Samuel Ajayi believed in the cultural inferiority of the native tribes and the moral superiority of Christianity. He believed that the tribes he met on the banks of the Niger live in spiritual darkness. Civilization and the Christian God had to be brought to them. He thought they needed to give up slave trading and turn to legitimate trade with British commercial concerns. Wole dreamt of Crowther and thought he would be blessed with moments of enlightenment. In chapter XI, we see the boy's confusing emotion of anxiety after a promise to his father to be the "man of the family" by winning a scholarship to the elite Government College(Soyinka 162)

I went back to bed, fatigued, suffering a mild relapse of the fever. The days regained definition and pattern. A sense of liberation, a deep psychic relief, a sense of lasting reprieve took over. Beyond a few times when I caught myself watching Essay (the father) with a baffled intensity, beyond the evidence of the photographs which had been framed and now hung on the walls. I accepted a sense of gratitude to an unseen Force for a deliverance from the suspected but unnamed Menace (Soyinka 163).

The language of menace comes from the Christian vocabulary of the protagonist's parents. The future to which the novel points is the decolonization movement of the 1940s that led to the independence of many African countries in the 1960s. In *Ake* the traditional ruler of Abeokuta appears to be corrupt. The native administration served the colonial interests. This is a dimension of black Africa's colonial experience that Africanist historians have demonstrated. British colonialism turned to the natives to take advantage and fulfill their intentions. There was a relative privilege of the indigenous power within the oppressive colonial authority. This is still at work in present-day postcolonial Nigeria. The Empire has left, but the native elites form structures of hierarchy and enliven the colonial apparatus. So resistance to the imperial effect in Nigeria is internal when the subaltern confronts the native. It is the subversive against the subservient native Nigerian. In the guise of the postcolonial elite, the west is still exerting power over Africa. In an

attempt to have anti-colonial nationalism; they must begin with overthrowing the native elites.

It could also be the subversive versus the subservient native Christian. Christianity always appears to be an extension of Western culture. It has been prevailing in the continent of Africa since the latter half of the nineteenth century. It is in clash with African nationalism. The Africans conscious about their nation have formed an attitude towards Christianity. African nationalism is the desire of the African people to rule themselves and abolish foreign rule. Now definitely this sentiment will go against Christianity since it ultimately assumes a colonial face. These people are strongly resistant to any kind of western domination. This is the African's struggle against western colonialism. This automatically rules out Christianity, which was introduced in the continent by the white man. These nationalists are psychologically trained to resist any form of imperial tendencies that is kept alive through Christianity. They consider it to be the European's religion. Christianity represents the religious will of those who have taken the teachings of Christ. It becomes more universal (the universal fatherhood of God, universal brotherhood of men, forgiveness of one another and purity of life). But the nationalists react to this since they are concerned about specific local interests. Becoming universal means accepting the 'global' and rejecting the 'local'. The nation is no longer under the colonial rule, but the remains are scattered all over. So the Africans in favor of African nationalism strongly believe that Christ's teachings play a part in the retention of western culture. In Nigeria it is seen that the Christian Igbos assume an aura of superiority. They are reluctant towards building a nation truly independent of foreign intrusion. Christianity brings with it a culture and this culture is somewhat suited to the West. I had a Yoruba friend who used to utter the name of 'Jesus Christ' at every step of her way, "Oh Jesus, what on earth is going on?" I am not saying it is bad to remember God at every step of your life, but there is a foreign flavor to it. I picked up the habit of saying the latter part from her. I still use this expression and I am still very anglicized! It is almost as if there is Jesus watching over us and on 'earth' we have nothing but 'Englishness'. Funmi Layo Ogazuma was a friend, the name was very Yoruba, but her family's way of life was very English. They spoke in English and never ever used Yoruba

to interact. Even at home, they preferred English to their mother tongue. For them the accent was also an integral part of the language. It sort of created a status quo where a British accent was highly valued. My friend went to the U.K. for a course that would refine her accent and make it British. Her father was the director of the Nigerian Petroleum Corporation (NNPC). This status elevated them to a level where they had to become westernized. Everything was done in the style of the Englishman. They were 'victorian' in taste and outlook. From birthday parties, weddings to eating habits and dress style each and every bit reflected the west. My other friend, Ulo Oputa was an Ibo. The American rap artists fascinated her. She was the 'Yo' type. She was very much into Afro-Americanism, but somehow ultimately became 'American'. There are indications of cultural domination in the mannerisms of these westernized literate elites and Christians. We had our western attitudes and were very rational beings, very Afro-European in Thiongo's language. He would have caged us for presenting ourselves in such a way if he saw us. I was not an African, not a Bengali either! I was oblivious to my customs and traditions, so I became Afro-American too. Never 'chutnified' my language. I was trained in school to use standard Nigerian English, the English that has worldwide acceptance. We were part of the 'global' village. Let me not forget that Ulo and Funmi were hard core Christians! They went to church every Sunday and sang the hymns in English. Did that make them very western? Now to go back to the conflict between African Nationalism and Christianity, the latter does not share the political will since it is only concerned with religious concepts. Therefore there is a tension between the two attitudes. How can the nationalists build up a true African nation and discard all foreign elements when the Africans themselves welcome the 'West' into their homes?!

Christianity has played an important role in the development of Africa. It was Christianity that introduced literacy. The education spread by Christian missions cannot be ignored. Christianity, just as the religion should be adopted. There is nothing wrong with being religious. People are naturally religious whether they are dependent or independent. It is dangerous if the Africans (in my experience the Nigerians) begin to wear 'White Masks' and make their land 'Wretched'. Thanks to Fanon for giving us these words. African nationalism cannot be devastated in the hands of Christian

westerners. They have given birth to freedom and democracy in Africa. The creation of 33 independent African countries is the credit of African nationalism. Could the church ever liberate these people? Nowhere in Africa has Christianity established a nation state. Its task is to spread moral values and let it not go beyond that. It should not become an instrument of control. It seems that the spread of Christianity among the Africans is taking them away from their roots to an alien existence. This time its not 'hybrid', it is a transformation into a pure form. As soon as this happens, a status quo emerges. Christianity is used indirectly to maintain this 'status' and therefore becomes an instrument of culture control. It is the Christianity that is used as an extension of western culture and not as a religion. It collides with the nationalistic claims. Every individual has the right to acquire religious morals, as well as national consciousness. They are opposing each other also because in African nationalism there is a lot of violence involved and Christianity advocates non-violence (peace). Some call it 'satanic' manifestation. In retaliation they describe Christianity as the white man's religion that hypnotizes the mind. So they think Africans should have nothing to do with it. In reality the Christians have turned a blind eye on the rights of the local people. In Nigeria I have witnessed the white supremacy pattern adopted by the people. I have seen this culture-centered Christianity and how the tribal people react to the emergence of this Afro-European Christian. I have heard of the burning of churches and beerhalls. Does this mean the Africans don't like beer? This shows that the Africans are angry at the supremacy of this religion and the fact that these elites are supporting an unjust social order. I grew up in a state where a riot between Christians and Muslims doesn't come as a surprise. The Hausa and Fulani people are the hard core practicing Muslims who do not smear themselves in western values. Islam has always been in sharp contrast to the West. On the other hand, Christianity is an embodiment of the west. There is nothing 'western' about Islam, but the point is do the Africans have to become Muslims to overthrow the West? I have heard of burnt pages of the Holy Quran and the Bible in public toilets. Do we support these desperate acts? It is the culture associated with Christianity that is endangering the African values. For the nation to survive in its uniqueness it needs to uphold the national values and not the Christian values. Christianity has to readjust itself in the new situation. It should speak to the actual people and not create a fanciful

environment. This African nationalism was preceded by African religious nationalism, that is, a desire to control their own religious affairs. But this desire was slayed by the Christianity's western supremacy. There are indigenous churches in Nigeria. The opposition of many missionaries to the establishment of the indigenous church in Africa often reminds Africans of the European opposition to the development of African political rule. These missionaries tend to maintain religious control of the African just as the white settlers often fight for political control. In a way, Christianity should die with colonialism in the African continent. It has now become a force of the colonialist type subtly accessing the mind. The cultural dimensions are apparent in the westernized Christian in post-independent Nigeria.

Africans have tried to retain their uniqueness in many different ways. They have their national anthems and even recipes for nation building. But some way or the other, they fall short of the ingredients needed to establish a positive socio-political overview. Somewhere along the way it cracks down. A section of the people can hardly stick to their traditional essence. I have seen that most Nigerians make fun of the concept of 'ancestral spirits'. This is an integral part of African culture/beliefs. My friends in school cracked jokes about the medicine man (the diviner). The diviner is a man or a woman whose function is to determine whether a disease or misfortune is due to witchcraft or to a 'ghost' and to prescribe treatment. In African Culture, it is necessary to accept, as a serious therapeutic hypothesis the existence of ghosts and witchcraft. But some Africans, especially the educated ones feel that it is foolish to depend on these medicine men to cure their diseases. The treatment resists the techniques of western medicine. This conflicts with the deep-rooted assumptions of western doctors who prefer to talk in terms of psychosis and neurosis. They eliminate the psychic factors in the external world. Do these Africans reject the spirit-possession because western science excludes psychic factors? Does it go against the rational thinking of the west? IN Nigeria, some medicine men are arrested for prescribing remedies. On the other hand some government hospitals allow diviners into their wards if patients ask for them. Our family doctor used to work with a diviner and sometimes treated his patients according to the diviner's advice. Some Africans believe that a disease originates from witchcraft/black magic. But only the

uneducated class entertains this belief. The literate Nigerians do not believe in the power of 'spirit possession'. In my class a girl was punished for keeping a 'voodoo' doll in her desk. She told the authorities that she wanted to stand first in class and that doll contained her soul. The voodoo man was in control of her soul through that doll and he would assist her to do well in her exams. That was too much of a 'story' to believe. Our principal seized the doll and warned her not to pursue such impractical means to pass examinations. They thought it was an utterly ridiculous practice. After some days, we had our examination and the brightest girl in our class fell sick the day before her exam. It is true that the voodoo girl could not take her position, but I believe that her magic had something to do with this timely misfortune. No one seemed to take notice of this. Fortunately I was not the brightest student in class! This is definitely an advantage of not being the 'center' of attention. This really works in Africa. It may sound a bit bizarre, but I have seen people recovering from incurable conditions when the medicine man set a trap to capture the ghosts that had possessed the bodies. Some Nigerians make 'bouncers' (this is a counter effect magic) that is used to ward off the effects of harmful medicines used against them. Our driver had a 'bouncer' done since evil spirits once attacked him. Some rich people permanently hire a medicine man to protect them from spells. My brother in Nigeria has a diviner working for him. I guess he sees the results. Most Nigerians do not believe in the inferior spirits. They pursue the Englishman's knowledge of diseases. The educated Nigerian thinks that it is stupid to make a wax image of someone and sticking pins into it. The medicine man claims that man cannot, by rational means, protect himself against the occult. He/she may dream of a danger or maybe a dead ancestor may warn him of a future mishap. Now, how does rational thinking work here? How can a rational man depend on dreams, take it seriously, and act accordingly? It is definitely unworthy of attention by a modern man. Descartes concluded that "I think, therefore I am". It is man's reasoning consciousness that matters the most in the world. This is the attitude of the other world, the world of western scientific man. Somehow he has managed to eliminate God. If thinking is rational, seeing is rational too and this leads to 'seeing is believing'. This automatically discards the existence of God. "Who on earth has seen God"? 'Funmi I still use your expression'. Why should we become blind supporters? The mind is conscious, and the rest is machine that can be wholly

understood. Freud took these emotions into consideration and analyzed the forces. He integrated these forces into conscious activity. But Freud made it pass through consciousness and then repress it into the unconscious. This is in line with the scientific man who sees the universe through his mind. The rational man with his consciousness versus unconscious state stands in contrast to the African who has seen the ancestral spirit and dream warnings come true.

The Rise of the Postcolonial Elite in Nigeria.

Nigeria gained its independence from Britain in 1960. Ceremonies of independence took place. Ghana was the first Sub-Saharan African colony to do so. It was definitely a moment of great joy. It was the end of the Empire. Images of heroism was scattered everywhere. People honored the sacrifices of millions to save their land. It was not a defeat, but a resistance. Ngugi wa Thiong'o, the Kenyan writer pictures the night of independence in his novel "A Grain of Wheat". This was not just a moment of ecstasy, but also a moment of a thousand expectations. Independence was not just an end to colonialism, but the beginning of an African nation. A new Africa was expected to emerge. They wanted something spectacular to emerge. Ayi Armah has written about the dawning of independence in his novel *The Beautiful Ones Are Not Yet Born*. Now has the dream been fulfilled? The literature of the immediate postcolonial era in Africa says it all. Writers realized that something had gone terribly wrong. Decolonization appeared to be a distant hope. The aftermath was not at all as pleasant as the dreams. This independence seemed to be only for a section of the people. It was for the intellectuals, bankers, and lawyers and not for the population at large. Writers like Achebe responded to these harsh realities of the independent society. These intellectuals were caught between the masses on their left and the postcolonial elite on their right. These elites were feeding on the nation much like the British rulers. Chinua Achebe in his novel *A Man of the People* exposes the Nigerian political elite. He portrays the self-interest and corruption of this elite. Achebe can imagine no solution to the growing lawlessness of civil society in postcolonial Nigeria. Consider the last sentences of the novel. His opponents murder a god man, an activist campaigning for political office. After his assassination, his lover

draws a gun and shoots the man responsible for his death. This incident shows the condition. Justice is done only after destruction and it was love that avenged his death. His people did not help him.

Max was avenged not by the people's collective will but by one solitary woman who loved him. Had his spirit waited for the people to demand redress it would have been waiting still, in the rain and but in the sun. But he was lucky. And I don't mean it to shock or to sound clever. For I do honestly believe that in the fat-dripping, gummy, eat-and-let-eat regime just ended-a regime which inspired the common saying that a man could only be sure of what he had put away safely in his gut...I say you died a good death if your life had inspired someone to come forward and shoot your murderer in the chest-without asking to be paid (Achebe 11).

This is the stagnation of postcolonial society. The elite in all its nastiness, vulgarity, greed, corruption rules the land. The atrocity of the postcolonial society will continue to worsen unless a major turn over occurs. Perhaps an African revolution will do. It cannot be sabotaged by its leaders. Leaders have long betrayed their people and its high time to revolt. These elites turned to power and wealth and ignored social justice. Independence was a hoax for the people. It was an extension of the colonial system, not an abolition.

Chinua Achebe reveals a lack of contact between the leaders and the ordinary people. He also shows that the condition of existence is poor in post-independence Nigeria. It is seen that the ordinary people are the sufferers. The freedom from colonial domination has turned into a nightmare. This problem prevails because the moment Nigeria gained state power, it was handed over to an elite social group. The same system works in many other African countries. The irony is that even though the old colonial rule has been substituted by the new system of rule, it has proved to be a new form of domination. A genuine leadership is needed for the improvement or recovery of the neocolonial condition of existence. The dominant social group has remained alienated from the expectations of the ordinary people. State power has been used as a means of attaining wealth and individual power. Achebe reveals this in his two novels, *A Man of the People* and *Anthills of the Savannah*. In *Anthills of the Savannah*, the military is already in power. They came with the intention of erasing the ills of the previous regime. Now, Sam, the military head of

Kanga, starts the same evil as the civilian politicians before him. The end of the novel shows that Sam is overthrown by another military regime. Since 1960, the control of state power in the country has switched between the military and the civilians. So who is caught in the trap? The ordinary people for sure. This is evident when we see a society full of contrasts and unevenness in development. Affluence exists alongside poverty in the Urban areas. This is what independence has given them.

There is also a contrast between the town and the rural areas. In both *Anthills of the Savannah* and *Man of the People*, the image of the rural area is a wasteland. The military intervention is portrayed as flawed. From a broader angle, the military takeover stops the violence that erupted after the elections. The military releases Eunice from prison and pronounces Max the hero of the revolution (Achebe 148). These examples appear to favor the military. In *Anthills of the Savannah* it is clear that Achebe turns bitter towards the military intervention in politics. He reveals that the nation's development does not lie in the hands of the military because its dictatorial form repels the ordinary people. This irresponsible leadership is nothing but another form of colonial domination. The image of the anthill in *Anthills of the Savannah* gives us an insight into the problematic structures in postcolonial Nigeria. The image is first revealed in the title of the novel, and then repeated in three other instances.

Anthills surviving... (28)
Anthills in the scorched landscape (194)
Gazing ut into the empty... (195).

The anthills we are referring to here are the mounds of the termites that are found in Savannah rain forest habitats. It is important to note that there is the hierarchical order that prevails in the nest. Within this order, the queen occupies the center, and life in the nest revolves around her. This shows that there is an internal structure of privilege. It is like the political order in post independence Nigeria. In fact the anthill reflects the overall condition/state of the country. Power is at the center, in the hands of the elite social group and everything else is pushed to the margins. A system of hegemony is recreated after the fall of the Empire in Africa. This important political concept in Marxist Scholarship can
