Continuing the fascination with *Arabia* journalists and writers flocked to the city, in an attempt to discover this new land, continuing a process that began in the 1940s with the travels of Wilfred Thesiger and others. One of them was Edna O'Brien, well known Irish writer, whose travel accounts were published in a pictorial book called *Arabian Days* in 1977. Filled with poetic depictions, encounters with locals – among them Sheikh Zayed – as well as a series of local women. Her experiences evoke a sense of wonderment, at times bewilderment, at how those residents of the desert are coping with modernity. Pervading the text is a sense of nostalgia for an authentic Arabia that is simply not there anymore. For example she notes that "Abu Dhabi had taken a plunge into the twentieth century" and she could not have imagined that she would see "...towers of concrete as far as the eye could see, cranes, tanks, a sense of unfinishedness as if the place had just been dropped higgledy-piggledy from the sky."¹¹ She criticizes the fast pace of development, and the danger of being "oblivious of the past," thus "...the illiterate have to be made literate, a breakwater built for the harbour, flats built, mobile homes hauled in, sodium streetlights installed, a traffic system and a traffic sense developed, kerbstones put down, paving slabs, polythene greenhouses, feed drips for the trees"¹².

Continuing along similar themes, journalist Edward Lee writes that Abu Dhabi is in "... the midst of a construction boom that makes the capital look like an American beachfront development."¹³ Another writer Edward Sheehan argues that it is "a paradigm of instant development" – noting that it consists of "boulevards of Parisian scope and a cornice that rivals Alexandria's crisscross sand as white as moonlight; cranes and scaffolds are more numerous than trees. Here is a salt flat, there a city dump; blink and see a bank, a school, a hospital, a Hilton hotel." Anticipating current migratory problems he observes that "the streets murmur with Omanis and Iranians, with Indians and Baluchis; they are the labor force and many of them live in hovels."¹⁴ Others observe with a hint of sarcasm (and racism) that this "... is a culture starting from scratch, from scratching in mere sand."¹⁵

The coexistence of the present and the past alluded to earlier in reference to Munif's writings captured the attention of one particular poignant observer, Jonathan Raban. In his account of Abu Dhabi in the 1970s he uses the Central Souq – a market located in the city's central business district – as a narrative device anchoring his experience in the city – characterized by restlessness, anomie, etc. The symptoms of decay, even squalor – become signs that there are elements of life in an 'artificial' city such as Abu Dhabi. His first depiction of the market notes its generic qualities and that it could be home in 'Levittown.' Its straight geometry and grid-like arrangement are lifeless. However, its inhabitants with their shops and stalls have taken over the space and ignored "all the architects design on them".¹⁶ In one particular insightful observation he writes:

... and under one umbrella an old man with a mouthful of gold teeth was crouched over the Koran. The book, which looked older than he was, was coming apart in his hands. Its pages were brittle and grey; the oldest, grimmest, most battered object in the whole of Abu Dhabi.

The space is thus subjected to a certain level of informality – enhancing its appeal for 'western' sensibilities. While the familiarity – or banality – of the architecture is evident, the arched backs of the praying inhabitants, and the old man gave the architecture "a fierce ironical twist" and thus the souk's "remoteness was accentuated rather than diminished by the banality of its appearance" (p. 128).¹⁷

While both the imaginary and the perceived city offer subjective encounters it is based, of course, on real developments which were (are) taking place. This takes us to the realm of planning – following the literary and poetic – perceptions and conceptions of the city. My aim in the following section is to first provide a glimpse of the actual developments that took place in Abu Dhabi after 1966 and second using the case of the Saadiyat Island as an illustration of how conflating the imaginary, the perceived and the real may have the potential for further alienating the citizens of Abu Dhabi.

Real and Future Cities: From Utopia to Dystopia

As I noted above, following the succession of Sheikh Zayed as ruler of Abu Dhabi the process of urban development began in earnest. Modifications were made to a 1962

masterplan. Accordingly, main roads in the northern part of the island were designed on straight lines. Also, a series of public works projects were constructed such as governmental buildings, airport, desalination and electricity plants, and the Maqtaa bridge. The central business district – received particular attention, Divided into small lots which were given to locals, resulted in a high rise district which shapes the overall character of the city today. Yet the suddenness of their construction – all in the 70s and 80s – and the subsequent low level of maintenance has resulted in the shabby appearance of today. Thus a series of demolitions are currently in progress to replace these outdated models with newer structures. At the same time a set of ‘quirky’ projects have become landmarks – the massive Emirates Palace Hotel evoking a 1001 fantasy, or the Mughal style mega-mosque of Sheikh Zayed. Drawing inspiration from Middle Eastern and Islamic references they are the ultimate orientalist imaginary manifested in built form. Encouraged by the city’s rulers it established their local as well as regional credentials. Yet clearly this would not suffice for a global orientation. Which leads us to the Saadiyat Island development.

Development plans for the Saadiyat Island – located approximately 500m from the main shoreline of Abu Dhabi, and encompassing an area of 25sq.km – go as far back as 1992 when it was conceived initially as a major financial center. Described by *The Economist* in 1999 as an “an elongated triangle of desiccated scrub and scorched sand criss-crossed by camel tracks” but where “skyscrapers will sprout, bankers and stockbrokers will congregate—and a financial centre on the scale of New York, London or Tokyo will blossom.”¹⁸ Changes following the death of Sheikh Zayed involved the redevelopment of the islands surrounding Abu Dhabi. Most significantly, in 2004, the Tourism Development and Investment Company (TDIC) embarked on a project to develop Saadiyat Island into a ‘world-class’, ‘environmentally sensitive’ tourist destination that included as its centerpiece the creation of a new cultural district for Abu Dhabi and the UAE.

Thus, the hope is that the city will finally emerge from the shadow of its neighbor, Dubai, and place itself squarely on the map of ‘globally significant’ cities. In July 2006 an agreement was signed between TDIC and the New York based Guggenheim museum to establish a ‘world-class’ museum devoted to modern and contemporary art to be built as part of the cultural district. The museum – designed by Frank Gehry – would be called the Guggenheim Abu Dhabi (GAD) covering an area of 30,000 sq.m – the largest of that franchises museums. The choice of Frank Gehry seems curious. Yet the architect admits that he knew little about the place but that his initial reluctance was overcome by three hours of ‘quality time’ with Sheikh Sultan, chairman of TDIC, in his office in California, which convinced him otherwise.¹⁹ Asked about his vision for the project, he said that one of its main ‘draws’ “were the “magic” of the Arabian desert – with its undulating peach-colored dunes and the turquoise Persian Gulf” – a curious statement given the fact that there is no immediate desert surrounding the island, which is for the most part a barren landscape. The project in its final form was unveiled in 2007. In addition to Gehry’s Guggenheim museum, the development includes a classical museum by Jean Nouvel (affiliated with the French Louvre), a maritime museum by Tadao Ando, a performing

arts center by Zaha Hadid and a museum dedicated to Sheikh Zayed designed by Foster Architects.

The architectural designs are signature pieces characteristic of the architects chosen; each is a unique tribute to the his/her style. Yet they, as Hassan Fattah, in a 2007 New York Times article poignantly observes, represent “a striking departure from Abu Dhabi's crumbling 1970s-style concrete buildings and more modern glass-and-steel high-rises.”²⁰ The notion of the “tabula rasa” designing within an unconstrained setting – figures highly in the design discourse of all architects – to varying degrees.²¹ Architects are creating their own context. Frank Gehry in a recent internet blog, titled *My Abu Dhabi Adventure*, agrees that his design alludes to the traditional alleyways of Arab towns, as well as paying homage to traditional ways of cooling and controlling climate.²² None of these images have existed in any way in Abu Dhabi – they are more an evocation of towns in Syria and Egypt, or even Dubai. Similar contextual references are made by Nouvel, (an ‘Arabian’ town covered with a gigantic dome – a homage perhaps to Buckminster Fuller’s 1950s proposal for a dome covering the city of New York), Ando (evoking the shapes of the *dhow* the traditional gulf boat). Zaha Hadid on the other hand utilizes an organic growth metaphor – which could be applicable anywhere.²³ Whether the references are regional or universal, their significance is twofold: first, by evoking linkages to traditional towns the project positions itself as the regions center and second the universalizing aspect of these designs establishes its global credentials. Taken together these two factors supposedly show that the project represents a perfect fusion between east and west, a model of happy co-existence – a politically correct hybrid.

Conclusion: The curse of the Tabula Rasa²⁴

Abu Dhabi since embarking on its drive towards modernization is constantly re-inventing itself searching for ways to define its identity through built form. This is happening elsewhere in the region too. Starting from a language of modernism, to an engagement with historical references it has seemingly fallen into the trap of an orientalist discourse where its image is defined by outsiders. Nowhere is this more evident than in the Saadiyat Island development where star architects freely adapt metaphors that are not directly related to the context of Abu Dhabi – Frank Gehry using windcatchers (which historically have never been used in Abu Dhabi); Jean Nouvel basing his design on an image of an object in the forest, modified to the oases of the Emirates. Such non-contextual metaphors avoid a more substantive engagement with the city’s context – resulting in a mixture of buildings that simply do not relate to each other. The curse of the tabula rasa as it were, leads to a constant questioning of identity, a re-invention and ultimately a sense of transience. As a result the city’s inhabitants lack any sense of identification with this project – which essentially is viewed as catering to its transient population – as Munif illustrated in *The Trench*, and sometimes pointed out by *strangers*.

This ultimately makes the project non-sustainable socially as well as culturally. To illustrate this point the recently concluded Picasso exhibition held at the Emirates Palace

hotel in Abu Dhabi, in spite of intensive media attention has for the most part attracted westerners. On a recent visit I only observed a handful of locals. While such observations are anecdotal it seems to illustrate the schism which these projects create – an attempt to import ‘western enlightenment’ into a region that has not been subjected to western culture as other parts in the Middle East. Thus, they become enclaves catering to a select number of residents and do not seem to enrich the local cultural scene. This may have social, cultural as well as political re-percussions (Munif’s citizens resentments).

To bring this into perspective one needs to take into account the larger political context in which this is taking place. The notion of Abu Dhabi becoming a ‘new’ cultural center in the Middle East has in fact occupied a central position in announcing the project and in providing a justification for such a massive undertaking. Officials note that “culture crosses all boundaries and therefore Saadiyat will belong to the people of the UAE, the greater Middle East and the world at large” thus effectively establishing the projects main credentials.²⁵ Taking this a step further the chairman of the TDIC proclaims that “What is happening is unfortunate in places like Beirut ... we want it to come back to its old days.”²⁶ Nicholas Ouroussoff the New York Times architecture critic in a major article titled “A vision in the desert” offers a similar view arguing that the traditional centers of the Middle East could effectively be replaced by Abu Dhabi which offers “... the hope of a major realignment, a chance to plant the seeds for a fertile new cultural model in the Middle East.”²⁷

Viewed in these terms such projects could be interpreted in relation to the larger notion of a new Middle East, imposed on the region by a hegemonic power such as the US. Richard Haass, a US policy advisor, in fact notes that if the US would like to change the Middle East it needs to ‘intervene’ in its affairs “with nonmilitary tools.”²⁸ Echoing similar sentiments, Thomas Krens – Guggenheim director – suggests that these museums could become a “tool of diplomacy.”²⁹ Taking this a step further it could be argued that they are tools of cultural imperialism. While I noted earlier the limitations of an orientalist perspective – in the sense that a certain vision of this region is imposed by outsiders – it becomes clear by looking at the Saadiyat project that even though it is initiated locally, it has perhaps unwittingly become part of this larger political vision. Or, it shrewdly utilizes these policies to further its own objectives. Consider the following statement by the CEO of Tatweer, a major developer in Dubai: “We are a city of bedouin nomads – we can change direction in an instant.”³⁰

²⁰ Hassan Fattah "Celebrity architects reveal a daring cultural xanadu for the Arab World." *The New York Times*, February 1, 2007, Sec. E, p. 1, 5

²¹ Gehry on context: "It's like a clean slate in a country full of resources ... It's an opportunity for the world of art and culture that is not available anywhere else because you're building a desert enclave without the contextual constraints of a city" (quoted in Fattah, 2007).

²² The complete statement is quite fascinating: "Abu Dhabi's going to be very different - a take on a traditional, spread out, organic Arab village or town. Not literally, but it'll have the equivalent of streets and alleys, souk-like spaces and plazas, some shaded and others covered. It'll be the biggest Guggenheim yet. There'll be fresh air and sunlight, and we'll be bringing in cooling air through a modern take on traditional Middle Eastern wind towers. Of course, the core of the building, or complex, will need to be air-conditioned, but this won't be a hermetic building; it'll be an adventure, a kind of walk through a town with art along the way" [Gehry, F. (2007). "My Abu Dhabi Adventure." *The Guardian Unlimited, Art Blog*. March 5.
http://blogs.guardian.co.uk/art/2007/03/my_abu_dhabi_adventure.html. Accessed, March 25, 2007].

²³ Both the Gehry and Nouvel project are described as being a perfect representation of a successful fusion of east and west: "Mr. Nouvel and Mr. Gehry have ingeniously harnessed local architectural traditions without stooping to superficial interpretations of historical styles. Intrinsicly their designs acknowledge that the flow of culture between East and West has not always been one-sided. If they convey nostalgia, it is for a belief in the future ... Yet overall it is heartening to see Western architects engaged in seeking a balance between the brute force of global culture — its ruthless effacement of differences, its Darwinian indifference to the have-nots — and the fragility of local traditions" (Ouroussoff, 2007) Zaha Hadid's design on the other hand "springs from the complex nature of the site rather than an exploration of cultural memory."

ABSTRACT

The purpose of this paper is to examine whether a multinational company can transmit its corporate management system and operations management system from its domestic operation to its subsidiary located in a country with very different national culture. According to Hofstede (2002), the national culture of the host country will dominate the internal management system of a multinational company. This research proposes that it is possible for a multinational company to override differences in national culture and create a 'company citizenship' across the globe with similar corporate management and operations management system. Another purpose of this research is to show that it is not true that globalization would create just one single culture, originated in USA and Western Europe, which is called 'Jet-Set Culture' by Freedman (2006). Japanese multinational companies are spreading their own unique organizational values of their management system across the world in their subsidiaries. Thus, different multinational companies may create their own unique organizational culture that produces their own company citizenship, which can be spread globally. To prove these hypotheses, this paper has reported the result of a survey conducted in the domestic operations of the Toyota Motor Company (Toyota) and in its operations in India. Core values of Toyota's management systems are derived from the values that are identified in the mission statement of Toyota. According to the results of the survey based on opinions of Toyota's employees, there are broad similarities in the values composing its management systems irrespective of national locations. Thus, Toyota has managed to form the 'company citizenship' in its headquarters in the host country, Japan, and successfully transmitted it

in its subsidiary located in the host country, India, with an alien national culture. Therefore, the company citizenships of different companies, based on their unique organizational cultures, but not on their national cultures, are emerging as a new organizational form in this global era.

This paper proposes that there are some specific espoused values in every important multinational company, which form their organizational cultures and create values, which in turn may form commitment of its employees. These commitments are the indicator of successful performance of a company because creation of commitment leads to success of the company. We can call this interrelationship between culture and commitment as company citizenship. This company citizenship can be transmitted from one part of the globe to another by a multinational company through the transmission of its corporate management and operations management system.

Formation of this company citizenship based on firm's organizational culture creates unique competitive advantage of a multinational company as the part of its international strategy. This is a new theoretical development because it is different from the existing theoretical explanations of the transmission of values from the social or national environment to the organizational values (O'Reiley, 1989; O'Reiley, Chatman and Caldwell, 1991, Cameron and Quinn, 1999).

This concept of 'company citizenship is directly opposed to two very important theories put forward in recent years. Thomas Freedman (Freedman, 2006) has coined the term "Flat World" to describe a world where people have the "Jet-Set Culture" (Triandis, 2006) of the high Anglo-American executive class, with similar language, education, tastes and preference but with varied citizenships and nationalities. Emergence of this Global culture is the result of globalization process that has started since 1990. That has

created a new breed of managerial class whose culture is global, not national. If that is the case, organizational systems that were developed using national characteristics are undergoing changes to include global characteristics. There is also the powerful argument of Hofstede(2002) who thinks organizational culture is related to the national culture of the country where the company is located and as a multinational company cannot avoid the strong influences of the national culture of the host country.

This paper, drawing upon the experiences of Toyota Motor Company, has examined the core values of corporate management and operations management systems of Toyota in both Japan, the home country and India, the host country, to demonstrate that both of the above two theories of Freedman (2006) and Hofstede(2002) are not exactly valid. A company citizenship can be formed even in a country with a very different national culture because a strong organizational culture of a multinational company, which gave rise to the values of corporate management and operations management, can override difference in national culture between the home and the host countries of a multinational companies. As there are different multinational companies with different organizational culture, there would be different company citizenships for different multinational companies rather than just one Anglo-American 'jet-set Global' culture.

Global Culture

Kluckhohn (1954) has defined culture as shared standards operating procedures, unstated assumptions, practices, tools, myths, art, kinship, norms, values, habits about

sampling the environment and shared meanings. There is the opinion of Hofstede (2002) that national cultures are different from each other and as a result, different organizational cultures can be formed. However, globalization gave rise to a new concept co-called 'Jet Set Culture' or 'Global culture' (Triandis, 2006). According to it, multinational companies are propagating just the corporate culture based on Western, mainly US, values and, thus, other cultures would be swept away soon by the force of Globalization. The main implication is that ultimately there would be one global corporate culture instead of separate individual cultures.

Triandis (1989) in his research has divided the people of the world into two parts. People in individualistic cultures (in North and Western Europe, North America) have complex culture while the people of the collectivist cultures (Asia, Africa, South America) along with Fascists, communists and religious fundamentalists have a simple culture. The 'Jet-Set Culture' is complex, they are sophisticated, multicultural, materialistic, and support liberalism, humanism and rationalism. The people with collectivist mind emphasize soul, instinct and intuition. There are two types of collectivist cultures. Vertical collectivist culture (Indian villages) emphasizes in-group cohesions, respect for in group norms, and directives of authorities (Triandis, 1995). Horizontal collectivists are less authoritarian. People in that kind of culture are interdependent with in groups (Markus and Kitayama, 1991), give priority to the goals of their in groups (Triandis, 1990) and behave in general communal way. They value patriotism, bravery, loyalty, and self sacrifice (Triandis and Trafimow, 2001).

The 'Jet-Set' culture emphasizes individualism, self-reliance, competition, uniqueness, hedonism, and emotional detachment within a group. Vertical individualistic culture (US corporate culture) values competitiveness. Horizontal individualistic culture (Australia, Sweden) de-emphasizes hierarchical differentiations (Triandis and Gelfand, 1998). Effects of Globalization is the creation of a 'Jet-Set Culture' who belong to an emergent global culture, which promotes primarily the vertical individualistic US corporate culture irrespective of national boundaries (Clark and Mathur, 2003). This global culture consists of people who are attached to other members of this global culture through a process of self-selection. Core values of global managers are not derived from ethnic group, national origin but from a cultural cross-pollination (Bird and Stevens, 2003).

Historically speaking the term 'global culture' is nothing new. Baron Macauley, who went to India in 1834 to reform the education system of the British India, 175 years ago wrote, "We must at present do our best to form a class who may be interpreters between us and the millions whom we govern; a class of persons, Indian in blood and color, but English in taste, in opinions, in morals, and in intellect" (Macauley, 1860). Karl Marx and Friedrich Engels wrote in 1872 about the globalization initiated by the industrial revolution in Britain. According to Marx and Engels (1892) the global character of business itself creates a world after its own image, where the need of expanding market chases business over the globe, and thus, that global market actually determines the cosmopolitan character of production, consumption and culture. Triandis and Freedman, have only repeated Marx-Engels and Macauley in different words. Indeed both British and the French empires had created a class of people in their empires very similar

culturally to the British or French; however, that had not changed the cultures of the countries in the British or French empires even after 175 years.

Global Citizenship

Husted (2003) has pointed out that the assumptions that global culture is homogeneous is questionable. The US corporate values are the values of the dominant group in USA, which may not be shared by everyone in U.S society. While national culture is heterogeneous there are heterogeneous cultures in the world, which may cross the national boundaries. That creates a number of global cultures for each affiliated groups but not a single global culture (Lincol, Kerbo, Wittenhagen, 1995).

The second question is adaptation of a particular managerial practice (for example, 'Just-in-Time' from Japan or 'down-sizing' from USA) does mean cultural adaptation of 'Software of mind' or values inherent in these practices (Shingo, 1985). These affects the culture at the level of "deep mental programming" referred by Hofstede (2002).

Sheth (2006) proposed that global culture may be viewed as fusion of cultures. He has pointed out that instead of a global culture based on values forming US corporate culture (monolith-type of a global culture), a combination of cultures of different countries may emerge in global era, which shall combine the best from all multicultural values (fusion-type of a global culture).

This papers argued that in modern business world not countries, but the multinational companies are establishing their own cultures over the globe. The corporate cultures of leading multinational companies are forming their own company citizenship within their borders and spread their way of doing things globally.

That organizational culture which exists globally in a multinational company is formed by major values introduced by of the founder/top management of that corporation, and may or may not necessarily be influenced by the values of the country where that MNC is operating. That corporate global culture in turn forms company citizenship, a new organizational form in the era of globalization. Some successful MNCs are transcending national cultural differences by developing a common pattern of drivers of business practices through the formation of the ‘company citizenship’. . This research aims to describe the components of company citizenship and to provide evidence of its existence.

Company citizenship in this research refers to a relationship between organizational culture and organizational commitment, working through corporate management and operations management system. O’Reilly, Chatman and Caldwell (1991) have identified

certain dimensions of values of organizational culture. Basu (1999) has pointed out the values of the Toyota's corporate management system. Shingo(1985) has defined values at the core of the operations management system of Toyota. These values are innovation, stability, respect for people, outcome orientation, detail orientation, team orientation and determination. These values are closely related to what Triandis (2006) has described as 'collectivist' values, which should give way to the 'individualistic' values in a fully 'globalized' value system according to the supporter of the 'Jet-Set Culture'. However, as we can see the 'collectivist' values from the East are associated with superior business performances of the Japanese multinational companies and are affecting the behavior of the 'Western' managers as well. Thus, the direction for the 'global' culture as suggested by the supporters of the globalization and existence of a monolith-type global culture may not be the correct one.

National Citizenship versus Company Citizenship

There are important differences as mentioned by Triandis (2006) between the Western (Individualistic) and Eastern (Collectivist) organizational cultures and as a result values of the corporate management system and operations management system in Eastern and Western companies also differ. These differences were explained in detail by Hofstede and Bond (1994), Hall and Hall (1990), Goodman (1981), and Yeh (1995). The cultural value system in Japan promotes hard work and attention to detail, group orientations and consensus orientations (Lincoln & Kalleberg, 1990). It focuses on conflict avoidance, importance of long-term relationship, and uniformity. The end result is very high level of

loyalty for the company (Lazer, Murata, Kosaka, 1985). US corporate culture on the other hand promotes more communication and coordination and short-term performance evaluations (Ueno, 1992).

Hofstede (2002) has concluded that the organizational culture created in the context of one specific national culture may not be implemented in a different nation because of the differences in national cultures. Recently the GLOBE project (Gupta, Hanges, Dorfman, 2002) has tried to categorize nations according to their leadership culture and organizational culture. In Hofstede's analysis, national culture and national characteristics form organizational culture.

However, the alternative argument proposed in this paper is that organizational culture along with corporate management and operation management system, as its components, can be transmittable from one nation to another by a multinational company. If a company can influence its employee with a strong organizational culture it can override influences of national characters and can have a superior organizational culture throughout the organization irrespective of national boundaries.

From the above analysis we can proceed to a concept which we named as 'Company Citizenship' (CC), Company citizenship does not depend on nationality but on the organizational culture of a company irrespective of nationality.

Company Citizenship

Company citizenship can be defined as the reflection of the reason for the existence of the company and its organizational culture. Values of the organizational culture, that are proposed by founders of a company and developed by top managers, create super-ordinate goals, visions, and purpose of the company, which binds the corporation to its members in spirit (Basu, 1999; Pascale and Athos, 1981). Leadership defines these features in practical terms in order to disseminate these to its employees. These provide guidelines for decision-making, coordination, evaluation or, in other words, in ways of doing things or corporate management and operations management system.

Corporate management and operations management systems through their beliefs and assumptions influences behavior and create values, which in turn affects decision and actions of the members of the organization and creates a citizenship or membership. Company citizenship is formed for a multinational enterprise first in its home territory but it spreads to the subsidiaries located in various parts of the world creating a common organizational culture throughout the organization. Company citizenship differs from one company to another, as the organizational culture of a company is different from that of another company.

Thus, this paper argues that instead of a global culture, which is supposed to produce a common global citizenship, in reality we can observe a common company citizenship for

a specific multinational company throughout the world. Moreover, there can be as many company citizenships as the number of multinational companies. Thus, in real business world in the era of globalization instead of monolith-type single global culture composed by Western values, or a fusion-type composed by multiple national cultures, there will be a multiplicity of corporate cultures, which form company citizenships, which differs from each other as the organizational culture of Toyota differs from that of Ford.

Company Citizenship as a Competitive Advantage: Evidence form Toyota

The purpose of the Toyota existence is to implement its vision proposed by its founders:

- 1. to reduce cost, improve profit to have sustained growth;*
- 2. to provide employee's satisfaction, fulfill its obligation to Japan to enhance its honour (Basu, 1999: 188):.*

The organizational culture of Toyota is designed to fulfill these objectives both in its Japanese operations and in its overseas operations. The organizational culture of Toyota can form a 'company citizenship' throughout its worldwide operations irrespective of national boundaries. "*Toyota has a strong organizational culture, which depends on its values, and assumptions*" (Basu, 1999: 235).

The continuous growth of the company is needed for the preservation of these values. Continuous progress and respect that can be gained to be associated with a company with continuous growth is the end objective of the employees of Toyota. A deep religious value to perpetuate growth is also the objective of the corporate growth of Toyota. Toyota's employees think and operate with their outlook for the long-term prospect of the organization and harmony with the work-place and broad social environment. These feelings lead them to develop a family feeling within the work-place and responsibility towards the fellow employees and the community at large. They believe they have a responsibility towards the organization and the local and global societies, as Toyota is now a global organization.

Irrespective of the location Toyota is striving to inject these values to its employees across the globe creating an organization citizenship, which would carry the essential values of the Toyota as a global organization. The fear of loss of face due to non-achievements of its objectives to the employees, Japan and the global community are the motives for Toyota's efforts to mould every employee irrespective of their nationality to a company citizen. The then president of Toyota in 1995, Shoichiro Okuda said that his task is "to encourage a change in nationality through globalization—to transform Toyota Motor Corporation into Toyota, a company with a world nationality"(Okuda, 1995).

In order to evaluate whether Toyota has managed to create a company citizenship in its India plant this research made a comparative analysis between the corporate management system and operations management systems in Toyota plants in Bangalore in India and in

Toyoda city in Japan. Interviews of the most senior managers in both of these plants were conducted in order to understand their systems and a survey of opinions of the 150 managers in both of these plants was executed. The results are given below.

Results of the Quantitative Research: Toyota's HQs vs. Subsidiary

Results of the quantitative research of a survey conducted in Toyota, in its headquarters (HQ) in Japan, and in its subsidiary in India are summarized below. There are certain key variables to characterize the corporate management system and operations management. These are given below, along with the statistical analysis.

The following six variables (Basu, 1999, Ouchi, 1981) composing the concept of 'corporate management' are selected for the analysis:

1. Community Feelings;
2. Innovations
3. Consultations
4. Stability
5. Employee Welfare
6. Contributions to Organization

Analysis of the Data from survey in Toyota India: Correlation Matrix: Corporate

Management:

Variable	Mean	SD	1	2	3	4	5
1	3.9	0.36					
2	3.9	0.52	0.72*				
3	4.5	0.42	0.79*	0.55*			
4	4.3	0.35	0.78 *	0.63*	0.69*		
5.	3.9	0.55	0.76**	0.65*	0.81*	0.79**	
6.	3.9	0.59	0.79*	0.81**	0.72*	0.68*	0.69*

* Significant at 5 % level; ** Significant at 10 % level

Analysis of the Data from survey in Toyota Japan: Correlation Matrix: Corporate Management:

Variable	Mean	SD	1	2	3	4	5
1	4.5	0.35					
2	4.8	0.55	0.72*				
3	4.2	0.42	0.81*	0.53*			
4	4.9	0.25	0.74*	0.63*	0.74*		
5	4.1	0.25	0.82*	0.68*	0.83*	0.87*	
6	4.7	0.33	0.84*	0.78*	0.69*	0.68*	0.71*

* Significant at 5% level

Thus, the following six variables (Shingo, 1985; Hayashi, 1989; Jaeger, 1983; Imai, 1986)) composing the concept of ‘operations management’ are chosen for the analysis:

1. Awareness of Return to Investment
2. Continuous Improvement
3. Total Quality Management
4. Customers Satisfaction
5. Facilitations
6. Goal Orientations

Analysis of the Data from survey in Toyota India: Correlation Matrix: Operations

Management:

Variable	Mean	SD	1	2	3	4	5
1	3.9	0.26					
2	4.9	0.51	0.82*				
3	4.2	0.32	0.89*	0.85*			
4	4.7	0.55	0.88**	0.73*	0.89**		
5	3.9	0.35	0.79*	0.85*	0.86*	0.89**	
6	4.4	0.55	0.89*	0.85*	0.79*	0.88*	0.89**

* Significant at 5% level; ** Significant at 10% level

Analysis of the Data from survey in Toyota Japan: Correlation Matrix: Operations

Management:

Variable	Mean	SD	1	2	3	4	5
1	4.6	0.26					
2	4.4	0.58	0.82*				
3	4.7	0.32	0.87*	0.83*			
4	4.5	0.55	0.84*	0.83*	0.84*		
5	4.7	0.35	0.89*	0.88*	0.83*	0.87*	
6	4.5	0.53	0.81*	0.88*	0.89*	0.88*	0.81*

* Significant at 5% level; ** Significant at 10% level

In both cases it is accepted Toyota' main operation in Japan as the bench mark for its operation and the subsidiaries are expected to emulate this process. The next step is to compare the behavior of Toyota's subsidiary in India to examine whether the operational characteristics in the subsidiaries are similar or different from the main operation in Japan. If they are similar, it clearly indicates the fact that Toyota is successfully transmitting its corporate culture from the headquarters to its subsidiaries worldwide.

In the tables given above the basic characteristics of corporate management system and operations management systems are identified. The opinions of the managers provide the quantitative measures of the degree of correlations among these characteristics. If these matrices are found to be similar, it will prove that the corporate management systems and operations management systems in both of these plants are similar both in Japan and in India.

To examine the similarities or differences between these two sets of matrices, the Likelihood-ratio test, of comparison of two covariance matrices (Manly and Rayner, 1987), were employed. Our initial hypothesis is that these matrices are not different. The results do not reject the hypothesis that matrices are not different. In the Discriminant Analysis, for the tests of covariance matrix, the results show there are not any significant differences between the two covariances. The smaller the Wilk's Lamda, the differences between the two samples, of Japan and India, will be smaller and insignificant. That is also supported by the Eigen value and Cannonical Correlation. Eigen value is small and the canonical correlation is very high, thus these two samples are similar.

Discriminant Analysis to Compare Corporate Management in Japan and India:

Tests of Equality of Group Means

Thus, we may say that there is no significant difference between the Corporate Management Systems in the Japanese main operations and the subsidiary operation in India, as perceived by the employees in Japan and India. As we can see similar characteristics of corporate management in their subsidiary operation in India, we can fairly conclude that the organization may have successfully transmitted its Japanese organizational culture to its subsidiary operation in India. Just like in Japan, in the Indian subsidiaries employees are reasonably satisfied with their perceived organizational culture and the resultant corporate management system, given the high values of the mean responses for each items.

For the components of Operations Management in two countries, the differences between the two samples of Japan and India are not significant, as the Wilk's Lamdas are quite small. The smaller the Wilk's Lamda, the more important the independent variable to the discriminant function, i.e. the differences between the two samples, of Japanese main operation and of Indian subsidiary operation, will be smaller and insignificant. That is also supported by the Eigen value and Cannonical Correlation. Eigen value is small and the canonical correlation is very high. Thus, we may say that there is no significant difference between the operations management systems in the Japanese main operations and in the Indian subsidiary operation as perceived by the employees in Japan and India.

Thus, there are close similarities of both corporate management system and operations management system of Toyota in Japan and Toyota in India. It signifies that although Toyota in India operates in a very different national cultural context, organizational culture of this Indian subsidiary is similar to the organizational culture of its parent

company in Japan. Thus, the organizational values in this subsidiary in India are not different from their Japanese counterparts despite of the vast differences of the culture of India and Japan. As a result, Toyota has managed to override the national cultural differences to implement its organizational citizenship in its Indian subsidiary as it did across the globe.

Conclusion

Successful multinational firms transcended national cultural differences to develop a common pattern of business performance by creating company citizenships. These included a primary focus on such values as organizational innovation, and a goal orientation. Corporate purpose of the company, its espoused values, vision of the leaders create values of its corporate management and operations management systems and for the organizational culture of the company as a whole. These values ultimately create commitment of the employees. Creation of commitment, an important index of a firm's successful corporate performance, in turn forms a company citizenship. Organizational cultures that "encouraged trust, participativeness, and entrepreneurial behavior were effective across" the globe, both in the home country and in the host countries all over the world (Basu, Miroshnik, Uchida, 2008).

In the context of a Japanese company, the role of culture should not be ignored, as culture implies resources of high economic significance. A multinational company, like Toyota,

with strong organizational culture can provide a global company citizenship compare to a company with weak organizational culture (Kotter and Heskett,1992; Basu, Miroshnik, Uchida, 2008). This research provides the evidence from the Toyota Motor company, that instead of the proposed co-called 'Jet-Set' or monolith-type of global culture as described by Triandis or Freedman (Triandis, 2006; Freedman, 2006) or fusion-type global culture as proposed by Sheth (Sheth, 2006), many different company citizenships of various multinational companies may be emerging as a new organizational forms in the global era.

The Memories of Exile, Disorientation, and Self-identity in
Li-Young Lee's "Persimmons"

Osmond Chien-ming Chang Sao-ming Kung
National Chung Cheng University, Taiwan

For many Chinese Americans, immigration proves a traumatic experience, especially in the case of Li-Young Lee, a Chinese American poet of the second-generation immigrant always suffering the conflict of self-identification and the anxiety of cultural confrontation in a foreign country far from home. As a Chinese American, Lee may exactly be said to undertake more cultural memories and obligations than any other Chinese immigrants when facing with such an ongoing impact of the dominant western culture. To such cultural confrontation, the poet's response and assimilation in turn are not allowed to suspend at any moment. In this regard, how the poet responds to his cross-cultural experience in his poetry is hence the foremost concern of this paper.

To such cultural conflicts, the alternative for the poet to free himself is, this paper suggests, no doubt necessary. Paralleling much with Lee's autobiography, "Persimmons" is a poem arguably dealing with painful portion of his own life experience in the conflict between his familial duties and public responsibilities when he straddles between two different cultures. As Wenying Xu argues, this poetry "drives largely from his ontological condition as an exile" and is full of "dialectic tension with his frequent usage of ethnic signifiers" (129). Reading in the historical context, I will first discuss the cross-generation/cultural exile/immigration from the distinctive legacy of the poet's family history, and then investigate an immigrant's sensibilities in "Persimmons" in order to elucidate the ambivalent position between Chinese and English cultures. In the final part, the conflicted self-identity between an immigrant's past and present will be explored to address a process of cultural transition in a multi-cultural or global context. With the growing number of the second-generation immigrant children in the twenty-first century, this study, through the discussion of these issues, looks forward to offering another interpretation of Li-Young Lee's ethnical identity and inheritance in "Persimmons" for local interests and global concerns.

I. A Cross-generation/Cultural Exile/Immigration: From China to America

As a second-generation Chinese American born in 1957 Jakarta, Indonesia, Li-Young Lee is a poet obsessed with an ongoing impact of the dominating western

culture for a long life. Lee's maternal grandfather is Yuan Shi-kai (the first president of Republic of China elected during the country transition from monarchy of the Qing Dynasty to republic), and his paternal grandfather is a gangster and an entrepreneur. During Mao Ze-dong's Cultural Revolution in China, his mother's family, the House of Yuan, encounters the fate of demise. Consequently, the marriage of Lee's father, a personal physician of Mao Ze-dong, and his mother from a family of Yuan's royal lineage, is inevitably frowned upon in Communist China. With his wife, the elder Lee hence decides to flee to Indonesia, where he teaches medicine and philosophy and also helps found Gamaliel University in Jakarta, but he is imprisoned by President Sukarno in the year 1958. As a political prisoner for nineteen months, Lee's father therefore decides to flee again, fleeing Indonesia with his family to escape anti-Chinese sentiment.

From Lee's parents to Lee, or even to Lee's sons, this cross-generation immigrant geographically from China to America or culturally from Oriental to Occidental culture mentioned above is somehow a process of cross-generation exile, and it might be said also that it must contain the confrontation with language and the conflicts of self-identity. Besides, this confrontation with language and the conflicted identity of Lee's family are global issues to any other immigrants as an outsider living in a foreign and unfriendly environment. Hence, after five-year diasporic journey throughout Hong Kong, Macau, and Japan, Lee's experiences living in exile still continue and have not yet stopped, though with his family he finally settled in the United States, a new country not only far from home but also a foreign culture. And, it is worth noting that even though American society has often been described as a melting pot, and all immigrants of various ethnic and cultural origins are supposed to be entitled to be a citizen like the white people without racial bias, the anxiety of belonging and identification actually hunts a vast number of these immigrants and newcomers at any moment, which shows the denial of citizenship in white society. In addition, all immigrants are designated by United States laws as "aliens," legal or illegal, resident or nonresident. As Sheng-mei Ma mentions, "Asian immigrants have in recent years become one of the newest waves of aliens arriving on the shores of American" (11). Because of this distinctive legacy of family history and predicament mentioned above, Lee could be said to be weighed down with more memories of his mother culture than any Chinese immigrants, and furthermore as an immigrant, he is also doubtlessly overwhelmed by the anxiety of identity and belonging problems to adjust and change himself anytime that are especially shown in his poems.

Like much Chinese American literary works, Lee's poems seldom suggest

ambivalence that underlies the straddling position of the immigrants. And, for the reason that Lee's parents have a classical education and used to recite Chinese poems from the Tang Dynasty to Lee, he learns to appreciate the aesthetics of Chinese poetry since he was a child, and at the same time is deeply influenced by Chinese classical culture. Therefore, his poetry may, in some degrees, indicate that no matter how distant an immigrant from Asia to America seems, he still feels himself in the dual position between his ancestral heritage and his American lifestyle. In other words, he has not yet left Asia behind, or fully assimilated America, but actually faces a dilemma between them. In his poems, it is not hard to find that, on the one hand, he embraces culture and history, even though memory afflicts him so much; however, on the other hand, he works out a way to keep an appropriate distance between the past and the present, or more precisely, between the dominating and dominated cultures.

For him, all immigrants are hardly free of such cultural identities. Thus, to the ambivalence of these ethnical stereotypes, he states in an interview, "it was important for me to take a breath and then go under. . . to try to escape all stereotypical views of what an Asian is in American, what an immigrant is The only way I could escape those stereotypes was to defy my own rational thinking" (qtd. in Xu 131). As a poet, he, of course, still needs to look back, but at the same time has to look forward with hope, though he is unwilling to regard America as his home since he is impossible to return to his motherland again. Through poetry, he is able to have a dialogue with his truest self and his most naked spirit; most importantly, this spiritual art also makes him able to shed his rational thinking or ethnical/cultural identities. Poetry for him is a great feeling of power and a silent voice but almost omniscient of a poet,¹ and in his view the poet as an artist "has to discover a dialogue cultural or canonical, but a dialogue with his truest self" (Marshall 132). Consequently, it is inevitable that Lee cannot help but force himself constantly to redefine his American citizenship in order to remind him of his status both as guest and citizen participating in American culture.

II. The Anxiety of a Chinese-American Poet within an English Context

Studying Li-Young Lee's autobiographical poem "in light of textual theories of deferred, hidden, or occulted meaning" is arguably "to re-examin [e] the notion of ethnicity" like reading an ethnic autobiography or autobiographical work of any other Chinese immigrants (Ma 13). Among his poetry, "Persimmons" is a poem that not

¹ Lee says in an interview, "for me poetry is both those things: that power and yet some mundane—in the best sense—some mundane thing we do," and "poetry could bring tears to a person's eyes" (Heyen and Rubin 18-19). For more information, see William Heyen and Stan Sanvel Rubin, "Seeing the Power of Poetry," *Breaking the Alabaster Jar: Conversation with Li-Young Lee*, Earl G. Ingersoll, ed. (NY: BOA, 2006) 16-29.

only sufficiently and vividly portrays his fragmented memories of exile and immigrant experience from repulsion and alienation to reconciliation, but also manifests an immigrant's sensibilities in several periods of his life: rage, disorientation, hope, tolerance, and so on. Besides, this autobiographical poem also embodies how Lee as a poet re-defines and re-creates the self in exile, experiencing disconnection or alienation in a foreign country. With the dynamic images and past memories featuring "Persimmons," Lee's presentation of the wor(l)dly perception implicates the significant allegation underlying language in which the semantic meanings of language make up the ethnic relation, the straddling position of an immigrant in particular. An epitome of Lee's reflection on his relationship with the Chinese (Eastern) and American (Western) cultures, "Persimmons" eventually neither simply reproduces Chinese ideas or memories within an English context, nor merely records his longing for his ethnic heritage because the power structure inherent in a dichotomy of Self and Other, of subjectivity and objectivity, etc. is essentially bewildering to the poet himself. In what follows, "Persimmons" will be discussed by the ambiguous position of the poet in two different cultures and his response to such immigrant journey.

As a second-generation Chinese American (poet), Lee has seldom chance to establish his mother culture as the center of his identity and his spiritual stability when living in America, which symbolizes a dominating culture full of power discourse. In light of this, if such a center does exist, it must exist in a borderless field, simultaneously extending into another area, and therefore be an endless process of re-locating and re-building. In addition, as Steven G. Yao points out, these experiences and aspects of an immigrant in America revealed in the poem also include

the trauma associated with learning (or failing to learn) English pronunciation, the ambivalence attendant upon assimilation, most powerfully emblemized in the form of an inter-racial sexual relationship, the sense of profound alienation and otherness that arises from a confrontation with mainstream ignorance and cultural insensibility, and finally the anxiety over a loss of connection with the original or parent(al) culture. (5)

This tension of cultural confrontation with a painful memory is explicitly shown in the first few lines of the poem when Mrs. Walker, Lee's sixth-grade teacher, slaps him on the back of his head, and makes him stand in the corner for his "not knowing

the difference/ between persimmons and precision” (“Persimmons” 1-5, 6-7). Unlike the other American students in the class, Lee, as an immigrant with ethnic accent, in his childhood experience of English-speaking learning at this point is categorized by Mrs. Walker as the “other” in the corner, or metaphorically as an alien different from the mainstream, only because he cannot pronounce these two words precisely akin to the typical American English speakers, and slurs English words often in his childhood. Even though they happened a long time ago, however, these traumatic experiences had haunted his mind for a life long. According to Mikhail Bakhtin, the self is radically dependent upon others, and the self, in his view, is an act of grace, the gift of the other.² In this sense, this frustrated and painful memory of learning second language to Lee himself, as well as the experience of fleeing Indonesia, is certainly full of feelings of disconnection, dislocation, and alienation, though he dwells in America, a multiracial country.³ Therefore, not only does the past torment him so much, but the present is also affected by the recurring memory.

Additionally, straddling between American and Chinese cultures, “How to choose” to Lee himself thus becomes a crucial question and a main concern in his poem without doubt (6). Overwhelmingly haunted by the fragmented and continental memories, Lee in some degrees reveals his anxiety and conflicts to the sense of belonging between Chinese and American cultures or between past and present. Take “Persimmons” as an example. Persimmon for Lee is not just a kind of fruit, but functions as a reminder that helps him remember the past memories of his childhood. As a symbolic sign, “every persimmon has a sun/ inside, something golden, glowing/ warm as my face,” said his mother (46-48). Moreover, Lee’s knowledge of choosing persimmons seems even better than his teacher when Mrs. Walker brings unripe persimmons to class so that each student can have chance to taste what she calls “Chinese apple.” As a Chinese immigrant, Lee doubtlessly well knows that those persimmons are not ripe or sweet at all, so for this reason he does not taste any of them but watches his classmates’ faces (40-45). In light of this, it is apparently ironical that Mrs. Walker, as an educator figure with professional authority in class, does not exactly know what differences between persimmon and apple in Asia are, either on semantic or on semiotic level. With few knowledge of persimmon, she is

² The idea of the self, Bakhtin argues, is that “[O]ur own relationship to our exterior does not, after all, have an immediately aesthetic character; it pertains only to its possible effect on others. . . . That is, we evaluate our exterior not for ourselves, but for others through others” (qtd. in Zhou 123). For more discussion, see Mikhail Bakhtin, *Art and Answerability: Early Philosophical Essays*, Michael Holquist and Vadim Liapunov, eds (Austin: U of Texas P, 1990) 3.

³As for exilic memory, Lee says in his dialogue “in my most pessimistic moods I feel that I’m disconnected and that I’m going to be disconnected forever, that I’ll never have any place that I can call home. . . . I don’t feel nostalgic because I don’t know what to feel nostalgic *for*. It’s simply a feeling of disconnection and dislocation” (Moyers 32).

hardly to describe precisely how to choose, peel, and taste a ripe and sweet persimmon like Lee does in his poem:

Ripe ones are soft and brown-spotted.
Sniff the bottoms. The sweet one
will be fragrant. How to eat:
put the knife away, lay down newspaper.
Peel the skin tenderly, not to tear the meat.
Chew the skin, suck it,
And swallow. Now, eat (8-14)

Although these few lines above seem powerful, in some aspects, however, they are imperious and defiant, based upon the virtue of respecting teachers deeply rooted in Chinese culture. Besides, his mischievous and revengeful psychology at this point perhaps can be viewed as a resistance to dominant culture in the act of self-defense or justifying his inheritance of Chinese culture.

Yet, ironically, Lee finds that his understanding of the dominant culture (Western culture) seems to be closer to precision than that of the dominated culture (Eastern culture) since “Persimmons” is written in English, his second/foreign language. Thus, the question of the precision of his understanding of Chinese culture begins to differ immediately when he says that “every time I try to write about a piece of fruit or the body of my father, it disappears under my looking, under my gaze”(Marshall 133). As a defender of his Chinese heritage, Lee also finds that he cannot precisely catch up the basic vocabulary anymore, and to him the cognition of Chinese words is even removed from his memory and trouble him even much when he teaches his wife, Donna (a white woman), to speak Chinese: “Crickets: chiu chiu. Dew: I’ve forgotten./ Naked: I’ve forgotten,” and says that “Other Words/ that got me into trouble were/ *fight* and *fright*, *wren* and *yarn*” (24-25, 29-31; italics original). In this situation, it seems that Lee is much closer to the center, the dominant Western culture that he tries to resist and struggle against. However, different from English or any other languages, Chinese is a language full of symbolic meanings and images in one word. With this feature of emphasizing the meanings and images even more than its pronunciation, Chinese words, from this respect, could make people easily to evoke their past memories, and even raise their emotions as well. Even though Lee does not remember the pronunciation of these Chinese words anymore, such as *fight* and *fright* or *wren* and *yarn*, by contrast, he indeed recognizes their meanings, and fully understands when he can use these words properly:

Fight was what I did when I was frighten,
fright was what I felt when I was fighting
Wren are small, plain birds,
yarn is what one knits with,
Wrens are soft as yarn. (32-36)

On the one hand, living in American, Lee may be said that he is departing from his heritage gradually, and a growing distance also makes him leave away his mother culture since he does not remember how to pronounce some of Chinese words anymore. However, on the other hand, Chinese words make Lee able to recall his past memories with his mother when “wren” and “yarn” these two irrelevant words come to bond together.⁴ Furthermore, through catalysis of Chinese words, Lee not only recollects his fragmented memories with his parents little by little in this poem,⁵ but at the same time ties his relationship to Chinese culture much closer in the English context, since yarn is strongly knit in the form of wren by his mother.

III. The Conflicted Self-identity between an Immigrant’s Past and Present

Besides the image of persimmon, the image of father in the poem is another important symbolic sign of the cultural precision. From his nostalgia for his heritage and Chinese tradition, the poet attempts to and is “looking for something” that he has lost. Nevertheless, through constant remembrance, he knows very well that his past origin and “home” are losing and fading away as he discovers that his father is “going blind” (55). Like his father’s eyesight, all (the unity, home, the origin, etc.) are gone, only left in the memory. However, the past for Lee seems to be fractured and discontinuous, and his dual identities of Chinese heritage and American culture always make him confuse. Hence, the struggle in the poem is not only “a struggle between words and the word,” but also an ambivalent position existing between Eastern and Western cultures (Butts 38). For Lee himself, either choosing Chinese culture (the past) or embracing English culture (the present) is a to-be-or-not-to-be question always bothering him from time to time.

And yet in comparison with the meanings of “future” and “past” in the western

⁴ In a literal sense, wren and yarn are in fact irrelevant to each other, but in the parabolic sense, these things are signified properly and figuratively: for instance, as yarn, wrens for Lee are soft, and wrens as songbirds could also further signify/sing a soft and warm movement of Lee’s past with his mother.

⁵ In the sixth stanza of “Persimmons,” Lee says, “My mother made birds out of yarn./ I loved to watch her tie the stuff; a bird, a rabbit, a wee man” (37-39). Apparently, the image of Chinese words somehow makes Lee able to remind himself of his past memories little by little.

culture, Lee goes to further indicate the differences in the symbolic meanings of Chinese words, for example, *hou* and *chien*, in a dialogue:

In the West we usually think of the future as lying ahead of us and we walk forward into it, leaving the past behind. But it's probably the other way around for an eastern mind. The Chinese word for the day after tomorrow is *hou*, meaning *behind*, and the word denoting the day before yesterday is actually *chien*, meaning *in front of*. . . to a Chinese mind, tomorrow, the future, is behind me, while the past lies in front of me. Therefore, we go backing up into the future, into the unknown, the what's-about-to-be, and everything that lies before our eyes is past, over already. (Marshall 133)

Consequently, in order to precisely know the past, the present, and the future, a backward notion is important to Lee, especially to a Chinese-American poet, when he faces such aforesaid predicaments in a foreign country. Additionally, though the conflicted self-identity between an immigrant's past and present afflicts him much, and though nostalgia for a totalized, fixed, and enclosed structure disappears, the issue of self-identity, either for Lee or for any other immigrants, however, is everywhere with an act of rebuilding self anytime when it is put in a larger multicultural or global context. At this point, Lee cannot help but is constantly forced to look at the immediate change. Apparently, it is not difficult to find that the pivotal concern in "Persimmons" is the idea of changing and strengthening the poet/ immigrant by learning to know and adapt both the known and the unknown from the beginning of the poem to the last stanza.

Still, it is also worth mentioning that memory is not simply a static experience, but as Edward S. Casey points out, it is

that remembering transforms one kind of experience into another: in being remembered, an experience becomes a different kind of experience. It becomes "a memory," with all that this entails, not merely of the consistent, the enduring, the reliable, but also the fragile, the errant, the confabulated. . . . The way that the past is relieved in memory assures that it will be transfigured in subtle and significant ways. (qtd. in Malandra 221)

Thus, in terms of Tim Engles' conception, Lee, in some ways, embodies his parents and their culture "in the figure of Donna, a white girl (or woman)," and this cultural transition or replacement is "involved a prostitution of sorts of his heritage" as he

parts her legs (191). However, what he finds lacking in American culture is “the rich, full warmth of his parents’ love, figured in persimmons,⁶ and their precise, caring ways, represented by their respective crafts” (Engles 192). Painting persimmons for hundreds of times, Lee’s father surely knows persimmons, and perhaps also masters all characteristics of persimmons, though he is blind and paints them eyes closed. Therefore, persimmons look like real that with two cats in the painting, “they want to drop from the cloth” (76). Through the effect of this father image, the poet is able to get equilibrium between his past and present, or even future. He finally realizes that “Some things never leave a person” since “scent of the hair of one you love,/ the texture of persimmons” is still in his palm (85-88).

Conclusion

Based upon the aforesaid analysis, Lee’s transition from exile, disorientation to self-reconciliation is clearly revealed in this poem. Apparently, “Persimmons” calls attention to Lee’s anxiety over a loss of connection with the original or parent culture to which he is inevitably indebted, and throughout the poem Lee also strives for certitude of precision in a multicultural context. With past memories, Lee, in his perspective, deals with the global issues of cultural confrontation and the conflicted self-identity to the growing numbers of immigrants worldwide. And, most importantly what confronts Lee or an immigrant most in this poem is the language learning, re-awakening him to the immediacy of languages in a forceful and imposing way. Language for him undeniably is an identity of the uncertainty and the tentative signified sign. Through infinitely referred words, the whole world and his experience become language and discourse in his poetry that is beyond the dichotomy of dominating/dominated culture, subjectivity/objectivity, past/present, etc. and possibly makes him keep moving forward in the future. In other words, in a multicultural sense, it could be said there is no static result for meaning making, but a constant shifting with flexible and innumerable possibilities.

Moreover, if this discourse of the middle position brings about the poet’s painful experience and the anxiety of his double identity as a Chinese immigrant and an American in citizenship, it in some degrees gives Lee or any other immigrants a way to be friendlier with the present mainstream culture by keeping himself properly detached from his insistence on holding past heritage. In addition, if precision lies nowhere in the multicultural vein, it could be said that the essence of precision is an imprecision and an endless play of its ever changing significations. Through language, structure, and content of his writing Lee deals with the question of identity beyond the

⁶ Persimmon for him is a fruit “swelled, heavy as sadness,/ and sweet as love” (“Persimmons” 59-60).

territorial boundary, tries to answer the continuous questions, and as a meaning maker, ever redefines meanings in a multicultural context. Eventually, what Li-Young Lee's memories and response to this cross-generation/culture exile/immigration manifested in this poem already shows an act of self-transcendence beyond time limitation and space.

Background

At the time I was writing this paper, the US President and other 47 world leaders were gathering in Washington to combat nuclear terrorism in the Nuclear Security Summit. One of the summit objectives is to prevent terrorists worldwide from laying their hands on nuclear arsenals, given that once terrorists possess the deadly weapons, its impact to the world can be disastrous. The summit, however, is ended with compromising results: Pakistan refused to stop producing weapon-grade plutonium and India failed to sign the Nuclear Nonproliferation Treaty, while Israel did not acknowledge its nuclear arsenal. However, one suspects whether the summit fails radically to take into consideration what should be done to reduce the incommunicado, misunderstanding and even hostility one country has toward the other. That is, they failed to solve the core issues.

At the time this paper was being written, female suicide bombers wrecked havoc at Moscow Metro leaving at least 38 dead and more than 60 injured. Though the problems confronting Chechnya and Russia may not be identical with those between the US and Al Qaeda, the tactics the poor/weak employ is to produce a grave sense of fear and horror at the most populated urban concentrations.

At the end of British colonization in India in 1947 occurred the Partition of India. Two Muslim-majority regions to the west and north-east of India were separated by over 1000 miles and known as West and East Pakistan. The Partition of India also mobilized the largest bi-directional human exodus, consequent of widespread rioting

and killing. Millions of Muslims moved to Pakistan, and millions of Hindus and Sikhs to India. However, structural imbalance between the two regions and natural disasters started the fire that eventually led the two parts of a country to warfare. East Pakistan had a larger share population of the land was the provider of crop economy, though the nation's capital Islamabad and other major cities were in West Pakistan. A sense of exploitation had long been with the East Pakistanis: they did not have proportional share of either political power or economic profits. After decades of tension, in 1970 the opposition Awami League led by Sheikh Mujib won a landslide election of 167 out of 169 East Pakistan seats in the National Assembly that enabled the Awami League to form government according to the Constitution. Zulfikar Ali Bhutto refused to acknowledge defeat and declared the Assembly postponed indefinitely, which in turn bred resentments. On November 12 Typhoon Bhola devastated West Pakistan and estimated 500,000 lost their lives, but aids from the West Pakistan never arrived and thus aggravated public resentments in the East. March 3, 1971 leaders from both regions met to decide the fate of the country. The failure of the talks led to Mujib calling a nationwide strike. In response, the West part announced "Operation Searchlight" which instigated crackdown of political discontent and cultural nationalism in East Pakistan. The war broke out soon after. Two million people died and millions of refugees flooded into India's eastern provinces. India eventually aided the Mukti Bahini, the Bangladeshi resistance army and involved in the Indo-Pakistan War in 1971. On December 16 West Pakistan surrendered. What else of Bangladesh is known besides the annual flood from the Brahmaputra and the Madhumati and their tributaries? In English, stories about the Partition had been dealt with, however partially, by Salman Rushdie, Amitav Ghosh and Rohinton Mistry, and Tahmima Anam. The ignored voice which constitutes the present study is Adib Khan.

Adib Khan's *Spiral Road* (2007) is a novel that dissects the ideological and religious confrontations, the causes and consequences, with a humanistic approach. *Spiral Road* tells how a Bangladeshi returnee from his adopted country Australia takes off the hurdles blocking the communication between family members, the masks disabling his seeing and being seen. This paper examines that by the end of journey back to Bangladesh the protagonist reaches reconciliation with his family and with himself. This paper addresses the diaspora is endowed with a lens different from that of the indigenous, given his special life experience constantly in different time and places, by which his observation could be rendered more objective and hence noninvolved. In other words, it is far from perfect; it is biased and with defects that calls for correction and revisioning. How and what the returnee fails to participate in

while he is abroad and accordingly the changes occurred between his leaving and return might disorient him and hence explains the differences in impression. This absence is pivotal in the sense that it can pose to him a sense of regret in his eventual understanding. This paper contends that the absence, far from a void, makes the presence/present possible: as he is hopping between chronotopes, the diaspora is able to superimpose two different time and places so as to reach a surrealistic presencing. This paper also argues that Masud Alam's humanism is squeezed out of post-partition and post-911 forces. Post-partition is here employed as a trope for separation, severance, discontinuity, whereas 911 as metaphor for explosion of mutual trust between countries and cultures. The journey back is then interpreted as one of self discovery and reconciliation. At a time when the world is shrouded with post-911 horror, Adib Khan subdues and disrupts national identity, on which the rigid dichotomy of us and them is easily installed and redefines what it means to be a hero and what courage is. He needs, however, to go through a spiral road to approach the elusive, shadowy figure to achieve his end.

Self-discovery

If to leave one's native land initiates one's quest of self-knowledge, then to return concludes the journey of self-discovery. On board of the plane heading for Dhaka, Masud Alam thinks to himself, "Here are those other selves that emerge from the shadows of my past. I appear in different guises, modeled by time. Voiceless figure. And the stories, some not worth recollecting, but others are intricately threaded and weave the design of who I am." (5) In the meantime, he is contented with, "The world hasn't really changed. Not from where I'm sitting" (8) Masud Alam is on the plane heading to Dhaka. What he sees now is a false impression and a wishful thinking, as later proves to be. The airplane is a significant setting in what one of the core issues of cultural politics is played out. He questions himself as he mutters to himself, "I'm home" and reflects that "the words sound hollow, like the beating on the rind of an empty gourd" (8). Here Masud identifies himself as a nomad, one engages in constantly coming and going, belonging to neither place. Nomadic life is known to be dictated by the weather, availability of animal feeds and water supply.

In the beginning chapter, however, one has no idea as to what these dictations are. The narrative begins with a reminiscence of the protagonist's great-grandfather, whose heroic chopping of a ferocious king cobra is said to be the beginning of the vicious cycle of family curse. What this paper contends is the significance of a

recollection of the past lies not only in the fact that the Alam family lacks a spirit to pursue after truth, but also by juxtaposing a memory with what is being seen outside the airplane creates a surrealistic effect to shake what is believed to be true. The first conundrum confronting Masud is at the immigration customs. Adib Khan shatters with an easy stroke the rigidity of national identity. Here Masud is depicted as an expatriate living in Australia for twenty years with still an ability to speak fluent Bangla. The customs official asks whether Muslims are discriminated in Australia. He answers that he is an Australian and he does not discriminate himself, and above all, he is a lapsed Muslim, though his physical look challenges the stereotype the official has in mind. The logic prompts the official with a condemnation, "Your country invaded Iraq" (14). This immigration experience, commonly experienced by travelers worldwide after 9/11, exhausts Masud's patience to he thinks that "already I yearn to return to my inconspicuous life as a librarian in Melbourne" (16). It is not until his identity is verified presumably in the computer databank that he is a war hero in the Bangladesh independence war he is released from the hassling red tape.

In the immigration experience, it seems that the past is in service to the present. This paper contends argues that the past and the present are engaged dialectically to the migrant's ends. That is, the past is to be renounced so as to give birth to a meaningful present, while it does not contradict that sometimes he excavates the past to fill up the void he faces at present. This applies to his present understanding of his Abba, as well as the changes Omar undergoes.

Reminiscence of the past can be amendable to the present. Amelia Goldstein, Masud's girlfriend in Melbourne, accuses him, "Your problem is that you don't passionately believe in anything! You don't seem to have any need for anchorage." (19) As their relationship is concerned, what Amelia says of Masud is certainly true in that he is a man lack of and afraid of commitment. However, this assessment can also be applied to his status as an atheist and agnostic as he reflects at the time seeing Omar's peers obsessed with a cause, "I can't say how these young men might think. It's like trying to figure out how my mind worked twenty-one years ago. Intensity of belief is diluted with age. But perhaps wisdom is in seeing our own failures, how we misdirected our energies? Nothing is entirely pure or sacred or certain as we grow older. Nowadays my dreams are rarely grand or fresh. They're smudged or chipped. Mundane matters occupy my fanciful moments. And I'm afraid of planning anything beyond my tangible grasp or if it entails risk." (263) he is drawn by the weight of the present. Throughout the narrative Masud is groping to know the evasive figure lurking behind whether s/he be his Abba, Abba's lover and his

illegitimate daughter, his unknown self, or the mastermind operating the murder.

Diasporization can be a journey of no return in the sense that the returnee is no longer his previous self. Different chronotopes fragments his self: “Fragmentation has grown in me here. I feel emotionally torn. All these landscape are too diverse to unify my thinking. The wandering migrant. . .the roaming atheist. The sense of loss is maddening because I’m unable to pinpoint the reasons for the regrets I feel. I doubt if I’ll come back to live here again, and yet there’s an elusive being within me that wants to redefine belonging, and whispers about home coming and morality. About ending where I began. About a completion to the circle of life.” (170) While Abba still retains his speech, Masud fails to maintain a close relationship with him. It adds to his remorse and hence a conundrum to him that when he attempts to, Abba is struck with the Alzheimer’s disease. He can only approach him as he was preserved in the diary kept and dated back to the 1960s, i.e., his father’s past speaks to him directly to make a meaningful picture to him.

Refutation of the Past

The farther back in time Masud retreats, the clearer the picture of his father and of himself appear. Jumping back and forth in time makes Masud one capable of correcting the errors done in the past and of amending the false impression. He problematizes what a hero is to stress the instability of identity. “Once I was among those classified as freedom fighters. *Terrorist* to some. . . *insurgent* to others. *Miscreant* to the Pakistani soldiers....” (27) As revealed in a later section, Khan rewrites his definition of hero. Hero is never one wields weapons and kills mercilessly; instead, he is one to face his vulnerability with courage. Masud recounts to his nephew the 1971 war against Pakistan, “You can create illusions of nobility and great deeds, and hide behind them. But recollections and the guilt surface later. You feel stained and dirty. . . And there are mistakes within mistakes. Darkness within darkness. Gross, horrible, soul-mangling errors that cripple you permanently. They suck out the marrow of life and leave you like the drought-stricken bed of a pond. A cracked and parched surface littered with the memories of what you once were. ” (121-22) It is obvious that a present retouch alters what was. The dialectics of past and present accentuates an inherent change.

The visit to Alya’s village gives Masud an impetus to quicken his change of perspective, not one with a foreign lens, but one with a genuine understanding. The episode exposes Masud’s condescending attitude toward the rural “innocent way of

life” (126), to whose slip of tongue Alya refutes, “People who settle overseas often come back and criticize changes they see. . . Is it because their remembrance of the past is threatened? Or do you lean on memory to keep away the guilt of leaving your native land?”(127) Alya insightfully perceives that changes are not only constant, but they are precisely the process the migrant fails to attend to in their absence overseas. Masud, thus, feels threatened due to unfamiliar landscape, otherwise put, their once fixed points of reference become loosened and unstable and call for urgent adjustment.

The imperative of the present also demonstrates in Masud’s symbolic farewell to his ancestral family house in Manikpur. “I realize my return to Manikpur was like meeting an old lover after years of separation---one cannot hope to revive the passion, but it is possible to bask in the warmth of recollection. I had expected a bitter-sweetness of past association, perhaps some sadness of transience. . . the visit has been merely a mechanical playback of a flawed recording that’s aroused mild interest in what was, but is devoid of yearning.” (156) The bland, tasteless past gives way to the urgent and pressing present, in which moment various family member is caught in crisis: Abba has the Alzheimer’s disease, Ma indulges in luxurious lifestyle oblivious of the dwindling family fortune, Nasreen moves back to Zia’s house after divorce with a slim chance to remarry, Uncle Musa the octogenarian is going to have his fourth marriage with a seventeen-year-old, and last but not the least, Omar the obedient nephew becomes a religious fanatic, while the Bangladeshi society is permeated with Islamic fundamentalism. It is at this moment that Masud attempts to bridge up the relationship gulf, to grasp his Abba’s true color, and as himself is concerned, to negotiate for himself a spot in a world where the cry of war on terror is loudest.

Changes Within & Without

As he is beset with familial problems, Masud chances to meet some religious zealots and the particular scene adds momentum to his change. “At the next tea stall a group of bearded men has gathered. Among them is a mullah, delivering a fiery speech on the religious imperative of Bangladesh becoming an Islamic republic and helping fellow Muslims around the world. . . It’s one of those emotionally charged criticism of the West. Conspiracy theories. Christian plots.” (171) Masud, fully aware that he has already stepped into a mined area, says to himself, “I’m now surrounded by religious zealots.” He is surrounded by extremists, war-mongers, people provocative of hostility toward the West, people “behave like holy warriors”

(172). Adib Khan, however, adds another layer of the past memory to erect a firewall for the Manichean identity politics. “A sense of irony sweeps over me. Something just like this might easily happen at an airport in America. Seeing my Muslim name, immigration officials there would want to know the motives for my visit, although the Australian passport would probably lessen suspicion. Here, it’s my name that suppresses hostility, but being an Australian isn’t an advantage, I am a resident of a Christian country, they remind me, mostly inhabited by whites...” (173)

Masud is suspected as “an outsider with insidious intentions” (178), though he eventually makes his way out by reciting a surah (174). This bazaar scene reminds readers of the earlier scene at the immigration. For these fanatics, identity comes too easy as far as a suspected outsider could recite a chapter from the Koran, he passes as one of us. What they fail to detect is that Masud indeed has intended something to change. What he experiences in the bazaar gives an impetus to quick his pace to enter the maze, as he calls it. “Everything’s different except my recollection of how things were once. And that too cracked after this morning” (184). That is, the morning bazaar experience. “It’s like standing on the edge of a maze. I fear if I enter I’ll be lost” (183)

Omar and Masud perceive in each other changes unsuspected so far. Detecting mutual changes enables them to “a meaningful existence” (190). As Masud reports, “I can’t put it in words. It’s something elusive that I sense in your father as well. It’s as if, in your own ways, you’ve each stumble upon a---a meaningful existence. And yet you don’t want to share with others. . . A kind of unshakeable faith seems to guide both of you” (190). Omar is certainly fallen to prey of the fanaticism suffused the society. Masud’s hunch is right for Omar and his father swerve toward conservatism unlike what they used to be.

Omar’s firm belief in the religious cause dismays Masud. The senior cannot persuade the junior out of his fundamentalist belief and eventually he resorts to his experience, trying to use his own past to talk Omar out of the present mire. “Nothing is worth of the loss of lives . . . Back then I knew nothing about the insidiousness of war, the way it can slowly wreck those who return, even as heroes.” (191) Young and strong-headed, Omar is never easily persuaded. He replies, “War should be fought for monumental principles, not personal glory. Individuals make sacrifices for a better world. . .What if the cause is to end oppression and injustice? To rid the world of ‘civilised’ exploitation? (191) An example of the past is employed in the service of the present, but failed to win Omar over. So Masud

becomes more interested in seeing what made Omar a changed person in the uncivilized nowhere he is about to take him to. For Masud, it is obvious that no cause, no principle, nothing is comparable to human lives.

Before Masud can further persuaded Omar, Adib Khan is meticulous enough to delineate with another episode how intolerant the Bangladesh society has become since he migrated to Australia, using the death of Shabir Jamal, a local journalist eager to excavate truth at any cost. A journalist is doing what his calling demands and is murdered because ironically he is dedicated to what he is supposed to do. The death of Shabir Jamal indicates severe ideological contestations in Bangladesh and he is merely a scapegoat. After a description of how he died, the novelist reveals Masud's thought of such a violent loss of life. "Without having known Shabir Jamal, I feel a tug of sadness for a life out with such brutality. I can't help wondering about the last moments before he died. Did he beg to be spared? I think of the pain, fear and the irrepressible hope of that unique experience. Ultimately life owes every human a peaceful death." (193-94) In other words, Masud is sympathetic with a man defending freedom of speech and oozing from his sympathy is his genuine humanistic concerns. Masud, unlike any other one of the Alams, would not let easily let go the unpursued truth just as his relentless attitude toward delving into his Abba's secret.

The Alams is wrecked with problems from inside the family as well as from the society without. Zia has become the only pillar of the family after his father is struck with the Alzheimer's disease and that worries Masud. He ruminates what if something happens to him the moment Steven Mills' innuendo that Zia could well be a terrorist suspect. The horrifying atmosphere pervaded the society has earlier menaced the returnee as Masud is identified as someone with insidious intentions by those religious zealots at the bazaar. What the Alams is facing coupled with the pressure from society make him impatient to do something. He thinks he could no longer be someone indifferent. At this thought, he rejects his earlier selfishness, "Absorption in my own wellbeing was a vehicle of escape, my way of keeping people at an emotional distance." (217) Hence, Masud reaches out for his family as much as he could for the twisted value in the society. He is desperate to know what and who is hidden beneath the façade of family harmony, to expose the disguises and disclose the evasive figures. "I curb a sudden urge to run. It's a familiar feeling. I've been good at it for a significant portion of my life" (210). He succumbs to the immediacy of the present.

From his moment of awareness the narrative is diverted into two parallel storylines.

On the one hand, the uncle travels with his nephew to “somewhere near Chittagong”, as the senior reveals that he is “intrigued by the vagueness of *somewhere*” (234). On the other, through Abba’s diary, Masud launches a journey to first discover his father and then himself. Both narrative lines intersect at the moment when he determines to stop escaping and boldly face what is at hands. I call the moment his emotional anchorage. It is a moment he decides to commit, “I must reach out and let [Amelia] know that I care. I must curb my expectations of others and wade into life without the fear of being swept away by the strength of its emotional currents” (218).

Significantly, the chapter entitles “Reaching Out” has a great deal to say about Masud’s change and again the past memory makes an inroad into the present. It is a retrospect with remorse: That night, March 25, 1971. Masud is depicted as shot through with “a sad realization chastened and frightened me on that terrace. My youth abandoned me. We had been dragged into the morass of a new world. And as the days passed, I mourned for myself and for the way of life that had died in front of me.” (227) Nine months later a new identity is born: Masud the East Pakistani turns a Bangladeshi. This change, however, pays dearly.

For Steven Mills, identity as much as one’s loyalty should remain stabilized. Masud, however, does not share what Mills believes. To Mills’ accusation that he hides something from him, Masud replies, “My loyalty is certainly not with any religion or race of people. I don’t believe in making a virtue out of patriotism. Or the stereotypes of national identity. Maybe I’m among the Muslim men of the twenty-first century living without permanent ties to the West, emotionally and spiritually uprooted. Someone to be viewed with reservation and even dread.” (240) What he has gone through these years in Bangladesh at war time and in Australia makes Masud think himself as flotsam and jetsam, someone/something useless and floating as the currents carry them. “Splinters of loyalty are scattered across my life, but I don’t have the skill to reconstruct them into a unified who and place it permanently in any one country. It’s not necessarily a satisfactory state of being, but then neither is an insular view of the world based on limited experiences.” (241) This splinter imagery echoes the trope of the partition. “I’m neither a traitor nor a blind patriot,” Masud says to Mills, “A safe occupation of the middle ground is so common to migrants” (241). A migrant without any pledge to loyalty to any one nation can be troublesome. He further ruminates on how to position someone like him in the post-911 era, “Who am I now? Born in a Muslim family, a Bangladi, a freedom fighter. A suspected terrorist sympathizer? An Australian, a librarian. . . a scarred person. An emotional nomad. . . Maybe I should have changed my name to

John Something and converted to Christianity. Solid citizen. Right religion. Probably of a conservative mould. There are plenty of advantages when you're one of the herd. For one thing, the ground beneath your feet remains stable." (245)

In this vein, Steven Mills can be interpreted as Masud's alter ego that at whichever crucial moment Mills and Masud would engage in dialogues to stage an ideological debate and trials of beliefs, be it on the plane, in Dhaka Club, or over the phone. The debates they go through is a series of self-doubt, self-denial and reaffirmation of the self. Masud is seen as one who would accept ideas unquestioned. After these trials and debate, he accepts his self as one with multiple identities, difficult to be place in any ready-made category. "Where does someone like me fit in? Sandwiched in the middle and squeezed from both ends until I'm mashed to a pulp. I've been spoilt by life in the neutral zone. Bland and inconspicuous, but physically safe." (267) With an understanding of himself as such, Masud is deeply shocked to find Omar's staunch identification with the cause and belief in a retaliation of an eye for an eye. In his dream he sees the ugly triangle relationship of his parents and Sumita. It is a dream, but he thinks the present here and now poses as too heavy a reality to bear. "All I want to do is to find a seat on a plane, heading towards a scorching desert, with all these experiences bundled into a deep recess of my memory." (272)

In Chittagong, a place symbolically far away from any sign of human civilization, Masud is shocked to find a "reptilian coldness in Omar" (280). To his chagrin, he attempts to lure Omar back to the right track and this time with his own confession of negligence of familial and filial responsibilities, his awareness reached with the aid of Abba's diary: "In Abba's weakness, I find consolation. Seeing such familiar echoes of flawed judgement and guilt makes me want to reach out to him and say that he's not alone in his frailty." (284). A past failure is amended with the present awareness, a past void to be filled up with a present understanding, however paradoxical this may sound. Sensing Masud's sentimentalism, Omar asks his uncle, "Could it be that you're giving the past a significance it doesn't deserve?" However, Masud ingeniously kills two birds with one stone, "blurt[ing] defiantly, 'It's the immediate present that I want to deny.'" (286) He would not accept his Abba's present condition without remorse, nor will he be moved with the prevailing fanaticism and intolerance. Masud duly whips his own failure of familial and filial negligence.

At the same time, Omar recounts his maltreatment and humiliation in the post-911 US and it is because his unpleasant experience as such that he sees himself as someone "to be netted in the sweeping generalizations of revenge" (289). Omar tore up his

return ticket back to the US and “continued the journey east. There were people I met and places I called home” (289). In a nutshell, Omar’s change explains the reason why there are photos posted in the camp with bruised and butchered bodies. Knowing the desperate action to be carried out in the city, Masud confesses, far from identifying himself as a wartime hero or freedom fighter, “that I realized now broken up I was inside. . . a voiceless chamber, full of rubble, bereft of righteousness.” (308)

The two parallel narrative lines merge into one to create a surrealistic effect in which it is not easy to distinguish the present and the past, the uncle and the nephew. “These memories are also the present, and the future. It’s me. I become my own witness again.” (308) Not know he is indeed tapping some vital message into Omar, Masud implores the youth to give up. He senses his own vulnerability again, “A single man’s words against a tidal force of history.” (309)

In the no man’s land near Chittagong, Khan explains how terrorists are trained. Visual reminders of photos of mutilated bodies, fanning anger and violence. As the leader Amin Haider explains, “We tap their emotional resources, release their frustrations. Life is a price they’ll pay, to strike at a world that pretends to be just and caring.” (301) Hearing his, Masud makes clear his position that he has renounced the use of force so that they are “in polarized and well-entrenched positions” (301). A stroke to deny the past errors draws him closer with his Abba, as he is duly reminded of the extent to which his father opposed his youthful ambition: “Belatedly, I understand the pain of a despairing father.” (303)

At the place with no sign of civilization Masud brings to Omar a genuine human compassion and understanding that, as Shakespeare would, “To err is human, to forgive divine.” So that explains why the novelist would depict Omar takes a bullet for Masud. Omar’s death once again accentuates the urgency for a humanist, however vulnerable and weak, to stay the place where he is needed.

Narrative Levels and Metafictional Structure of *Dream of the Red Chamber*

WEI Gailan, April
City University of Hong Kong

1. Introduction

This paper attempts to illustrate the metafictional structure of the 18th-century Chinese masterpiece of prose fiction, *Honglouloumeng* (*Dream of the Red Chamber*, also known as *The Story of the Stone*). I would like to propose that metafiction, which refers to the narrator's reflections on the fictionality of a narrative, is treated deliberately and systematically by the author Cao Xueqin through the constructing of its narrative structure. Since metafiction is a narratology term usually applied to western modern fictions, my effort to disclose that constructing is in a way to manifest the transcendence of the narrative art of this masterpiece.

Despite the fact that the fictional features of *Honglouloumeng* are easily recognized as David Hawks (1973) mentioned partly in the introduction of his world's popular English translation, it has received little attention in the traditional scholarly field. Scholars as Cai Yuan-pei, Hu Shi, Yu Ping-bo and others variously see the work as a political satire, a love story, a patriotic dirge to the fallen Ming dynasty, or a disguised autobiography. This predilection for "realism" is criticized by Lucien Miller (1975) who points out that they tend to misunderstand or ignore the novel's mythological framework or other structural aspects which precisely, stand for the work's artistry. Through a detailed analysis, Miller argues that the work is composed of polysemous layers and three primary literary modes: myth as the allegoric mode, mimesis as the realistic mode, and persona as the narrative mode. While Miller concentrates on the hidden beauty of the work's style and structure, Anthony Yu (1997) insists to clarify how Cao Xueqin weaves literally the origin, genesis, production, and reception of the tale into the plot of the tale itself, and how he deploys the Buddhist themes to aid the novel's fictionality. He claims that,

Honglouloumeng happens to be one text which places peculiar emphasis on its own nature and being and makes its own fictionality a subject of sustained exploration and dramatization...if such an emphasis and such a technique are commonplace phenomena in Western literatures (from, say, the *Odyssey*, through *Hamlet* and *Don Quixote*, to *Ulysses* and *The Auroras of Autumn*), they constitute a rare – perhaps even unique – achievement in the history of Chinese literature. (1997, p.VI)

There are also relevant researches done by other critics, such as Richard Kunst (1969) and Yaohua Shi (2005) who have specifically examined the beginning of the novel, Jing Wang (1992, pp.208ff), Wai-yee Li (1993, pp.202-30) and Karl S. Y. Kao (1997) who have mainly discussed the issue of intertextuality and self-reflexivity.

Although their researches vary in many ways, they do share one thing in common, that it is

impossible to discuss the novel's fictionality without touching its structural aspects, from which we could see the inseparable connection between the two. However, when it is easy to reach a consensus on the fictionality of the novel, a complete vision of its structural composition remains unclear. The techniques and devices are usually analyzed partly and separately in aid of text appreciation and interpretation, and there are ambiguities hidden in those analyses which might be caused by a lack of coherent narrative terminology. As a sort of response and revision, I am going to focus on the structure of the novel, using the updated narratology as a tool of analysis and with diagrams to illustrate it as clear and scientific as possible. I hope the structure could deepen our understanding of the artistry and fictionality of the novel, and the structure itself could be extended into a unique model of metafiction.

2. First Three Levels and Frame Tale (Figure 2)

My analysis starts from examining the novel's narrative levels, the notion of which serves to "describe the spatiotemporal relations between the various narrating acts occurring in a narrative" (Didier Coste & John Pier, 2009, p.295). Gérard Genette ([1983] 1988), who first proposed the term, explains (Figure 1): "Extradiegetic narrator A would produce a balloon—a first narrative with its diegesis—in which would appear an (intra)diegetic character B; she, in turn, would become the narrator of a metadiegetic narrative about a metadiegetic character C, who would possibly, in turn, etc" (p. 85). Each balloon designates a hierarchical subordinate relation between the adjacent levels, which means the authenticity of narrating goes like: $A \succ B \succ C \succ \dots$ Narrative level draws our attention to the narrating acts of a narrative, thus in a sense, expose the process of making fiction and undermine the realism of the narrative.

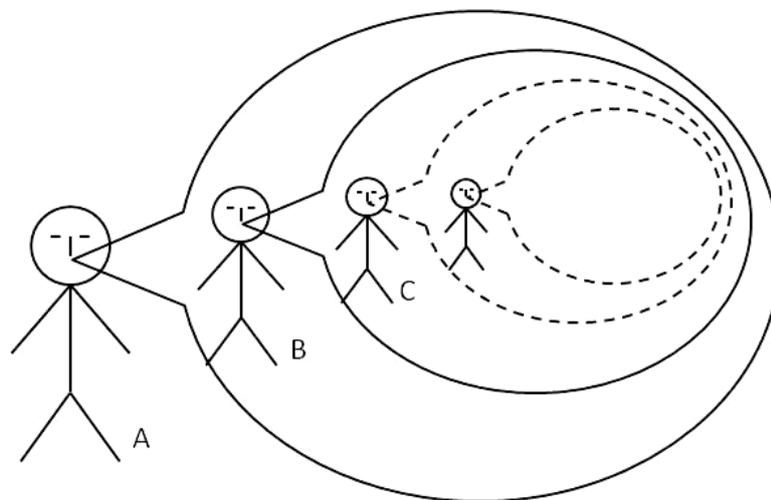

Fig. 1. Genette's narrative levels.

The multiple narrative levels of *Hongloumeng*, which are mainly produced in chapter 1, create a dazzling, complex narration termed by many critics as "a series of beginnings"¹. Though it

¹ A typical explanation comes from Lucien Miller (1975), who declares chapter 1 consists of nine episodes,

somehow highlights the designed ambiguity of the novel's beginning, the term "beginnings" dose runs a risk of juxtaposing the different narrative levels and confusing the narrative order. Here I mainly agree with Li Qing-xin (1995, pp1-25) and Wang Bin (1998, pp114-26) who put chapter 1 into "frame structure" analysis, but my analysis will be more in-depth and slightly different.

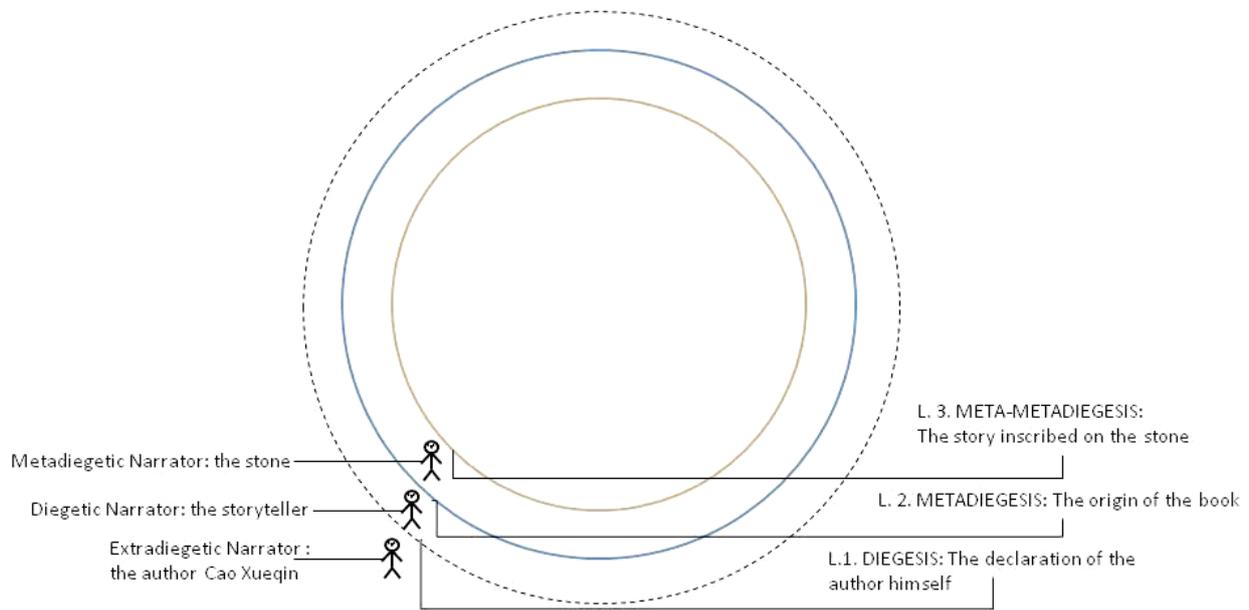

Fig. 2. First Three levels and Frame Tale.

No doubt that the author Cao Xueqin is extradiegetic narrator. The first narrative with its diegesis, as I propose, starts from:

This is the first chapter that begins the book, the author himself has declared that...²

and ends with:

Readers firmly remember this.³

This part is called the "Preface" or the "Entry" of the novel. Although it has aroused questions of

that "each episode in the first chapter, whether it be about a goddess, a divine Buddhist, a mundane Taoist, a gentleman, or a scholar, is a beginning. Each piece of the narrative represents another starting thread. Taken together, they constitute the start of the novel, so that we have to talk about the 'beginnings' of Dream of the Red Chamber, rather than about 'beginning'". (p.35)

² Cao Xueqin & Gao E 曹雪芹 (1982), 高鹗. *Hongloumeng* 紅樓夢. Beijing: Renmin wenzue. Vol.1, p.1. my translation.

³ *ibid.*

its authorship and whether it forms part of the intended novel,⁴ it is indeed incorporated into the main narrative in the printed editions, and accepted as the beginning of the first chapter by contemporary Chinese readers. In a sense, the way this preface weaving into the main narrative precisely verifies Linda Hutcheon's (1984) argument: "With metafiction, the distinction between literary and critical texts begins to fade. (p.15)" Just as Cervantes reflects his fabrication in the preface of *Don Quixote*, the author confesses in this outermost narrative balloon that he "deliberately had the true events concealed", that the work is overall a fiction. At this level, he also presents the inventing principle of two characters, Zhen Shi-yin as "true events concealed", and Jia Yu-cun as "false language enduring". As their double and opposite meanings indicate, they are two important functional characters.

The second level, the narrator of which is a storyteller, begins with the line:

Gentle reader, what, you may ask, was the origin of this book?⁵

The story at this level begins with goddess Nǚ-wa creation myth which introduces the story of the stone. Being rejected in the repairment of sky, the stone is helped by a Buddhist monk and a Taoist immortal to be reborn on earth to experience the pleasures of the earthly life. After countless aeons, a Taoist called Vanitas encounters the returned stone, seeing the words inscribed upon its surface, which is a record of its earthly adventures. Vanitas reads and copies the stone record for other readers. The record, passed down by a series of editors, is finalized by Cao Xueqin in the end.

Different from the extradiegetic author Cao Xueqin, the "Cao Xueqin" here at this level is a metadiegetic character. The way the narrative at this level engages the reader in reading and interacting with the fiction itself is something quite unprecedented in Chinese fiction. It invents a reading history of the story itself and structures this reading into its own plot. In other words, it is narcissistically self-reflexive and meanwhile focused outward, oriented toward the reader. Such a technique, which addresses the two major focuses of metafiction (one on its linguistic and narrative structures, the other on the role of the reader), is exactly what Linda Hutcheon (1984) called "metafictional paradox" (p.7). Through making the reading history, the sense of fictionality of the novel is intensified in a way. It is first emphasized by Vanitas, the first reader, that the narrative text has no dynastic period, no statesmanship, and no social message of any kind. Afterwards the book gets multiple titles when it is re-edited by multiple readers: *The Story of the Stone*, *The Passionate Monk's Tale*, *A Mirror for the Romantic*, *Dream of the Red Chamber*, *Twelve Ladies of Jinling*. As there is no established title, the extradiegetic reader may doubt whether the book truly exists.

The ending of the novel, which repeats the story episode that Vanitas copies and spreads the stone record, is also at this metadiegetic level. The episode is repeated in a slight different version. The copy is first passed to Zhen Shi-yin, who, as a witness of the whole story, confirms

⁴ See Chen Yupi, "Hongloumeng shi zenyang kaitou de?" Chen considers the entry to be a product of Red Inkstone, which is designed to explain away the novel's subversive features and shield it from political censorship.

⁵ Cao Xueqin & Gao E (1973-1986). *The Story of the Stone*. David Hawkes & John Minford (Trans.) Harmondsworth: Penguin.P.47.

the authenticity of that copy, subsequently to Cao Xueqin, who quite oppositely, considers it as an explication of absurdity. However, we could also recognize his words as “playful pretense”.

The third level is narrated by the metadiegetic narrator, the stone. Its first line is:

Gentle reader, have patience! This is how the inscription began: ⁶

This level is where the main narrative of the novel unfolds. The stone is reborn in the mouth of the protagonist Jia Bao-yu (also “Precious Stone”) to experience an earthly life for nineteen years. A detailed, episodic narrative represents the daily life of Jia clan and the fates of huge cast of characters.

The second level narrative, namely, the story about the origin of the book, is also called “frame tale”⁷ which brackets the main narrative proper—the story of the stone. Figure 3 depicts the spatiotemporal relation between the two. We could see that at both levels, the narrative speed is in inverse proportion to the duration of the story time. The origin of the book tale which covers countless aeons (from Nü-wa to Cao Xueqin) is only narrated in several paragraphs. The short earthly life of the stone, negligible to this infinite time span, is skipped in this frame (called *ellipsis* referring to narrative speed) and moved to the next narrative level, where it is narrated in an extremely slow speed. In terms of narrative order, the main narrative is retrospective to the frame tale.

⁶ *ibid.*, P.51.

⁷ “If the tale is conceptualized as subsidiary to the primary story frame, a relationship of embedding obtains; if the primary story serves as a mere introduction to the narrative proper, it will be perceived as a framing device” (Fludernik, 1996, 343)

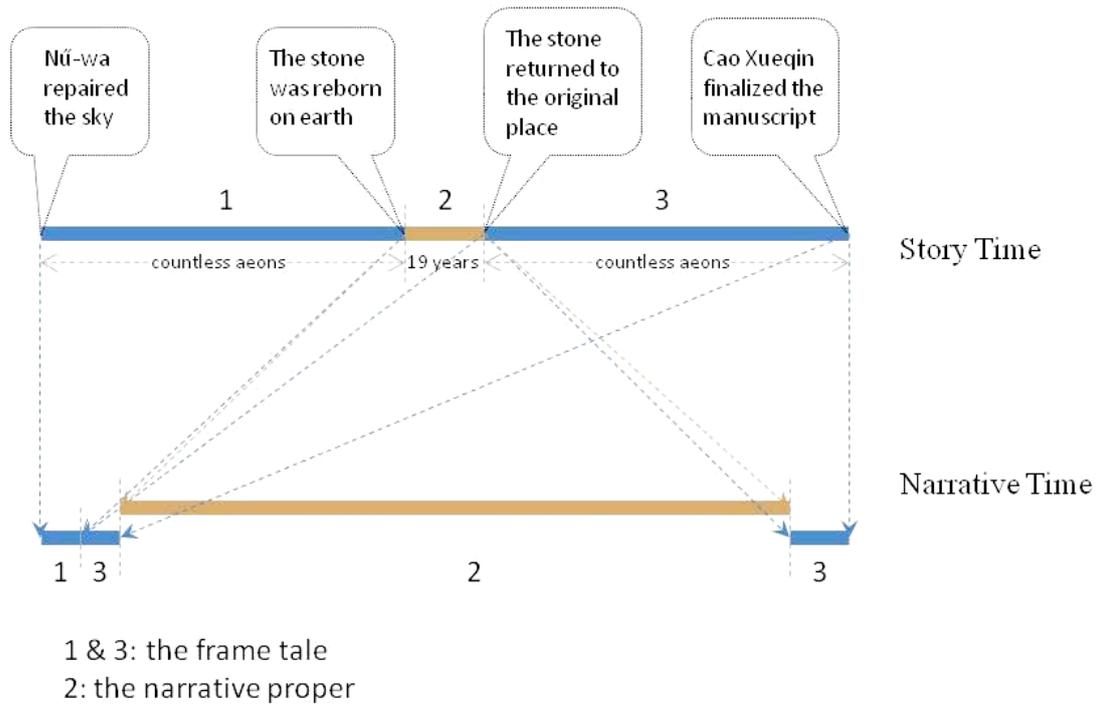

Fig. 3. Story Time and Narrative Time

3. Dream, *mise en abyme* and Different Universes (Figure 4)

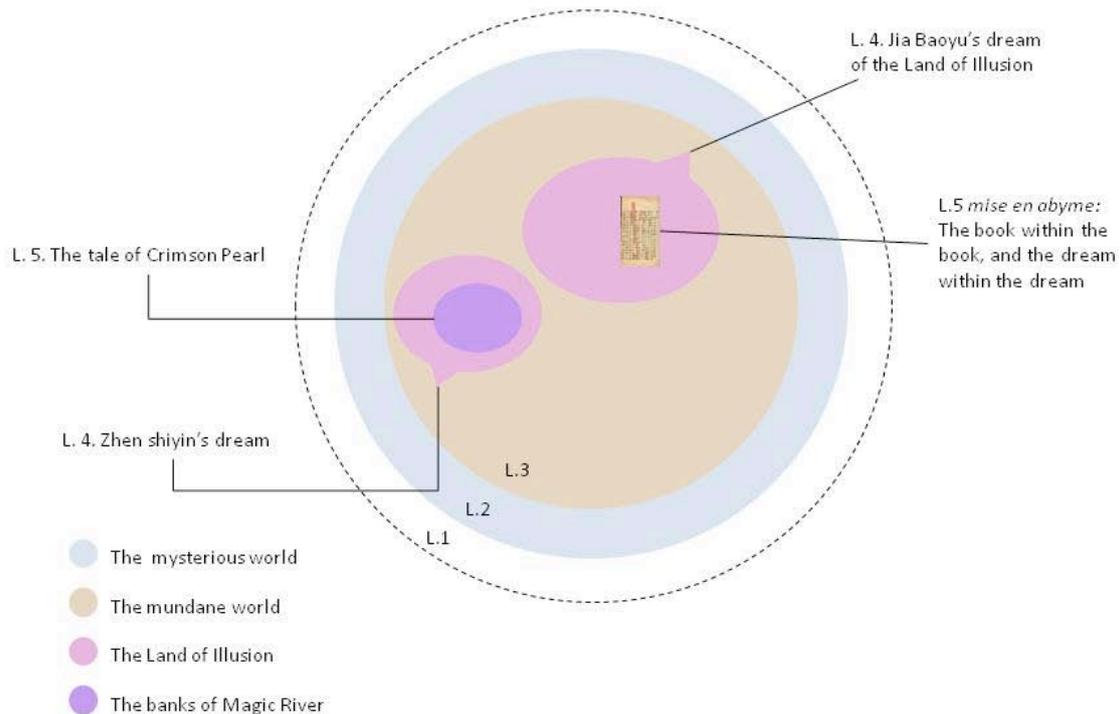

Fig. 4. Narrative Levels and Different Universes

According to Genette ([1983] 1988), narrative level marks a threshold in the transition from one diegesis (spatiotemporal universe within which the action takes place) to another (p.84). In other words, it is to introduce a new spatiotemporal universe and serve as a boundary between the new and the old. However, not only can narrative level, all embedding narratives, which demonstrate the importance of boundary but not necessarily require a shift of voice, can also play such a function, e.g. a painting, a memory, a fantasy, a dream...

3.1 Dream and *mise en abyme*

Hongloumeng is absolutely an important work of dream literature. The prominence of the dream metaphor is not only displayed in its title, but also through the repetition of the words dream and illusion in the entire work. And statistically, there are thirty-two dreams in total throughout the novel, serving multiple narrative functions to confound reader's sense of reality, among which two dreams are significantly related to the novel's structural development: Zhen Shi-yin's dream in chapter 1, and Jia Bao-yu's dream in chapter 5. They are imbedded in the main narrative proper and transit the narrative to another universe, a world where the Land of Illusion locates. Based on the preceding three narrative levels, I will mark them as "Level 4", even though this level is introduced by dream rather than by narration.

Zhen Shi-yin's dream is placed at the very beginning of the third level narrative. As soon as the reader enters the earthly world to make acquaintance of a new character, he is driven into an otherworldly space by the character's dream. It is somewhere in a dream impossible to identify the location. The monk and the Taoist, who have appeared on the stage in second level narrative,

show up again, taking the stone in their hands. A conversation carried on, the reader is soon brought into another story episode by the Buddhist monk, namely, the story of the pre-incarnate life of the protagonists Jia Bao-yu and Lin Dai-yu. This embedded story is at the fifth narrative level, with the monk as the narrator. It happens on the banks of the Magic River where the Crimson Pearl flower is growing. The stone, taking a figure as Divine Luminescent Stone-in-Waiting in the Court of Sunset Glow, waters the flower every day with sweet dew, thereby conferring on her the gift of life. This is the old bond between the stone and the plant which set up the tragic dilemma of the main plot. Following the two immortals, Zhen Shi-yin arrives at the archway of the Land of Illusion, but he wakes up in a sudden before entering into that land. What he has seen was a couplet inscribed on either side of the arch:

Truth becomes fiction when the fiction's true;

Real becomes not-real where the unreal's real.⁸

This couplet, perhaps the most important one in the entire work, consolidates the issue of truth and fiction which has preoccupied much of the scholarly investigation of *Honglouloumeng*. In the metaphorical sense, the couplet is not only an entry to the Land of Illusion, but also the right way for the reader to get to the narrative diegesis of the fiction. As soon as he has traversed multiple universes and gets a sense of the novel's circuitous narrative, he is warned of the trap of the narrative itself.

We soon meet this couplet on the archway again in chapter 5, when Jia Bao-yu visits the Land of Illusion in his dream. That the same location appears in different dreams creates a sense of illusion as a "short circuit" has occurred between the two dreams (I will discuss this phenomenon later). Bao-yu's journey to the Land of Illusion constitutes the second dream sequence in *Honglouloumeng*, and is also considered as "the last episode in the unusually elaborate prologue to the novel" (Shuen-fu Lin, 1992, p.97). The dream is conducted in the bedroom of Qin-shi, the wife of Jia Bao-yu's nephew. The Land of Illusion, which has only shown its archway in Zhen Shi-yin's dream, is depicted in detail in his own dream. When visiting the various departments of the Land of Illusion, Bao-yu browses in the book "Twelve Beauties of Jinling" (Main Register as well as the Supplementary Registers) which contains the information about the destinies of the women in his future life. He has also viewed a performance of a song-and-dance suite called "Dream of the Red Chamber", which intends to show his the future through a series of twelve songs that also hint at the fates of his female relatives and friends. After that, the fairy Disenchantment introduces her own little sister Ke-qing to be his bride. Ke-qing is also a name Qin-shi was called as a girl at her home, which nobody in the Jia household is supposed to know.

Inserted in Bao-yu's dream as a sort of embedded narrative, the book "Twelve Beauties of Jinling" and the song-and-dance suite "Dream of the Red Chamber" are at the fifth narrative level of the entire structure. The way either name reflects one of the five names of the book, and each narrative conducts as a miniature of the whole story, represents the characteristic of *mise en abyme*. According to Lucien Dallenbach ([1977] 1989), *mise en abyme* refers to "any internal

⁸ Cao Xueqin & Gao E (1973-1986). *The Story of the Stone*. David Hawkes & John Minford (Trans.) Harmondsworth: Penguin.P.55.

mirror that reflects the whole of the narrative in simple, repeated or specious (or paradoxical) duplication. (p.43)” It is a structural device of reflexivity widely used across art and media. The “book within the book” or the “dream within the dream” could easily remind us the “play within the play” in *Hamlet*, but it is more complicated than the latter. They are inserted into a much higher narrative level in *Honglouloumeng*, and the “book within the book” *mise en abyme* occurs twice, forming a fearful symmetry in the story timeline. In chapter 5 where the whole story just begins, Bao-yu is not able to understand the meaning of the book. In chapter 116, close to the ending of the story (120 chapters in all), Bao-yu rereads that book when he revisits the Land of Illusion in another dream. Then he realizes the book is all about the fates of women who are all related to him. Therefore the first *mise en abyme* reflects the story to come (prospective); the second reflects the story already completed (retrospective). With the double *mise en abyme* echoing each other, the development of the chronology of *Honglouloumeng* is challenged as well as enhanced.

3.2 Different universes

As the narrative levels in *Honglouloumeng* have been made clear, it is time to define the different universes in the novel, since narrative level marks a threshold in the transition from one diegesis to another. The multiple spatiotemporal universes in the narrative world of *Honglouloumeng* have attracted many critics’ attention. According to Richard Kunst (1969), there are three planes of illusion in the novel: the mythic, the mysterious, and the mundane, each referring to the legend of Nüwa, Zhen Shiyin’s dream, and the introduction of the human world represented by the conversation of Leng Zixing and Jia Yucun (p.31-32). Based on Lucien Miller’s three literary modes, Anthony Yu (1997) also proposes three levels of illusion: one is the myth of Nüwa and the myth of Crimson Pearl; another is the philosophical debate between the stone, the Buddhist monk and the Taoist; the third is the realistic, mundane world (p.47). Although they both put into “three” and use the same word “illusion”, their results diverge to a certain degree. Besides, there is a lack of clear definition of “illusion” in both of their arguments, as well as the “plane” or “level”. Therefore I may concern them as an attempt to articulate the orderly disorder of the diegetic world of the novel, but not rigorous analyses.

My differentiation of different universes in the novel is illustrated in Figure 4, marked by different colors. Principally, each narrative balloon may envelop its own universe. However, as there is no story happening in Level 1, and the *mise en abyme* is a sort of repetition of the whole narrative, I would simply count them out. And because the dream of Zhen Shi-yin and the dream of Jia Bao-yu are spatially overlapped, I would reduce them into one, namely, the universe of the Land of Illusion. Therefore the four spatiotemporal universes are:

- 1) The mysterious world (I borrow this term from Richard Kunst but use differently). It refers to the widest range of the space-time narrated by the storyteller. The time runs from Nü-wa to the character Cao Xue-qin. The locations are the Great Fable Mountains where Nü-wa repairs the sky and discards the stone, and the Nostalgia Studio where Cao Xue-qin edits the book. The characters are Nü-wa, the stone, Vanitas, and all the editors of the stone record.

- 2) The mundane world. It refers to the realistic life world narrated by the stone, covering nineteen years, and with the Grand View Garden and the house of Jia families as important

locations. Hundreds of characters are present in this world, including Zhen Shi-yin, Jia Yu-cun, and the inhabitants of the Ning mansion and the Rong mansion.

3) The Land of Illusion, a place to keep the registers in which are recorded the past, present, future of girls from all over the world. It is impossible to identify the time and location. One can only visit it in dream. The characters are the fairy Disenchantment and a bevy of fairy maidens.

4) The banks of Magic River, where the Stone-in-Waiting and the fairy Crimson Pearl make a relation. The time is before the incarnation of the two protagonists. Only two characters are involved.

As enveloped by narrative balloons, the diegetic realms are theoretically independent and ontologically distinct, which means each of the four universes sees itself as “reality”; each is real in its own term. But meanwhile, they are also hierarchically ordered by the levels: the universe in the outer balloon is more real than the one in the inner balloon. Therefore the mysterious world is more real than the mundane world theoretically. In this way, the author Cao Xue-qin turns the realistic and detailed narrative of daily life into a sort of illusion, and constructs a world magically embodying the paradoxical theme “real becomes not-real where the unreal is real”.

4. Metalepsis and Functional Characters (Figure 5)

In chapter 12, a mirror which comes from the Land of Illusion with A MIRROR FOR THE ROMANTIC inscribed on its back (another *mise en abyme* inserted in the novel), makes its appearance in the mundane world by the help of the Taoist to cure Jia Rui’s sickness. In fact, it is something impossible to happen in real world, as if the boundary between dream and reality had blurred. In the sense of narratology, such a paradoxical contamination between different universes is called “metalepsis”. This term is first identified by Genette:

Any intrusion by the extradiegetic narrator or narratee into the diegetic universe (or by diegetic characters into a metadiegetic universe, etc.), or the inverse, produces an effect of strangeness that is either comical or fantastic...We will extend the term narrative metalepsis to all these transgressions...e.g. characters escaped from a painting, a book, a press clipping, a photograph, a dream, a memory, a fantasy. All these games, by the intensity of their effects, demonstrate the importance of the boundary they tax their ingenuity to overstep, in defiance of verisimilitude---a boundary that is precisely the narrating (or the performance) itself: a shifting but sacred frontier between two worlds, the world in which one tells, the world of which one tells. ([1972] 1980, pp 234-35)

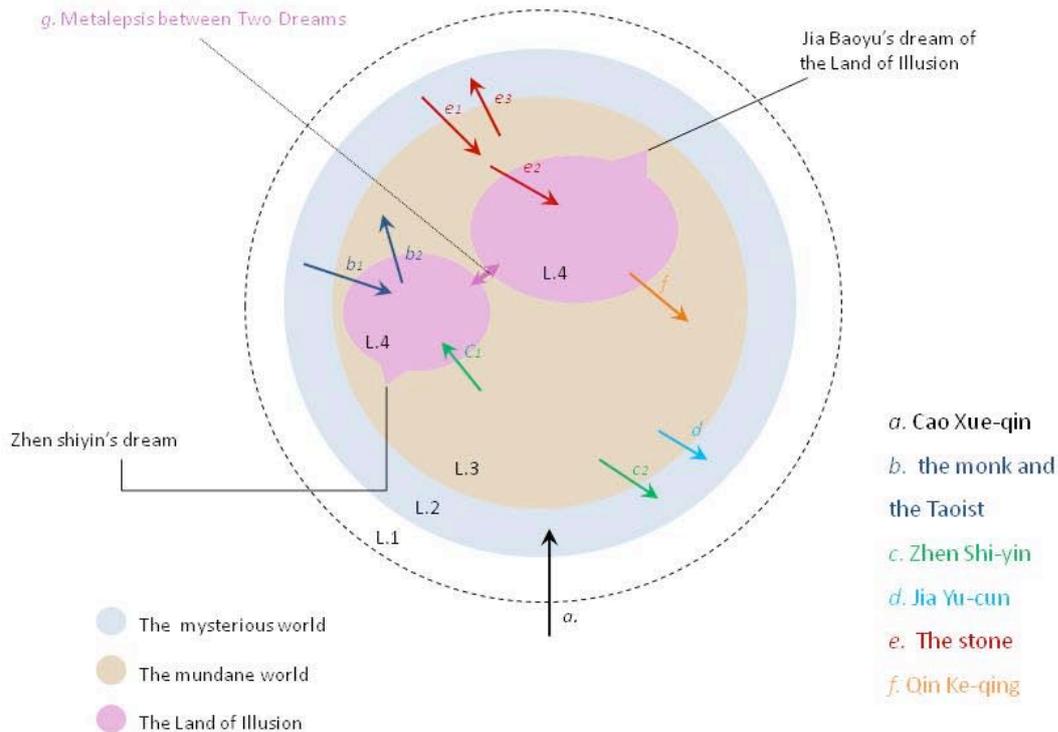

Fig. 5. Narrative Metalepsis:
 Trajectories of the Functional Characters

Metalepsis occurs quite often in *Honglouloumeng*. The collapsing or dissolution of boundaries does produce an effect of strangeness to entertain the reader. But meanwhile, just as Debra Malina (2002) argues that the rupturing of narrative by metalepsis encompasses both deconstructive and reconstructive tendencies (p.133), it also helps to redefine the relations between different universes. The characters who have transgressed boundaries are both symbolical and functional, that is to say, when they play a function of connecting different universes together and make the continuation of the narrative, they are qualified to conduct the transgression as symbolic figures. Following are the trajectories of those characters and many important narrative metalepses occurred in the novel:

a. The extradiegetic author Cao Xue-qin oversteps the diegetic level to be a character in the fictional world. This is an “authorial metalepsis”, “a metafictional strategy that undermines mimetic illusion, foregrounding the inventedness of the story.” (Fludernik, 2003, pp.382)

b. The Buddhist monk and the Taoist immortal first jump into Zhen Shi-yin’s dream from the mysterious world (*b*₁), and then jump out into the mundane world (*b*₂) where they disguise themselves as a monk scabby-headed and barefoot, and a Taoist tousle-haired and limping. Their appearance is narrated through the point of view of Zhen Shi-yin, who cannot remember what has happened in his dream when he awakes. Therefore the reader has to discern by himself that they are none other than the monk and the Taoist who have appeared in the dream. However, once the reader recognizes them, his sense of the reality of the novel will be challenged. The appearance of the monk and the Taoist occurs several times in the mundane world. In chapter 12 the Taoist

lends Jia Rui the mirror, which serves as a messenger between the Land of Illusion and the mundane world. In chapter 66, the Taoist takes Liu Xiang-lian away with him to retreat to the other world. In chapters 25 and 115, the monk meets the stone and enlightens Jia Bao-yu on the vanity of human existence. Through metalepsis, it is indicated that the two figures are omnipresent and omniscient, and as powerful as God.

c & d. Zhen Shi-yin jumps into his dream to be enlightened by the immortals (*c1*). In the end of chapter 1, Zhen Shi-yin vanishes with the Taoist (*c2*). He does not present again until the end of the novel, where he serves as a medium enlightenment for Jia Yu-cun, who, subsequently, retreats from the mundane world, and meets Vanitas in the mysterious world (*d*). These two symbolic figures (as their names reveal) show up together at the beginning in the novel to introduce the narrative of the mundane world. Zhen Shi-yin soon meets his ill fate while Jia Yu-cun experiences an alternating success and failure. But they arrive at the same end to link with the outer world.

e. The stone is reborn on earth, which makes the intrusion from the mysterious world into the mundane world (*e1*). Through a dream, his incarnation Bao-yu intrudes into the Land of Illusion to be enlightened by the Disenchantment (*e2*). In the end, the stone returns to its original place (*e3*). In a sense, the protagonist is designed as a three-in-one: in the mysterious world, he is the stone; in the mundane world, he is Jia Bao-yu; in the Land of Illusion, he is Divine Luminescent Stone-in-Waiting.

f. Qin Ke-qing. A sense of metalepsis occurs when a fairy girl in the Land of Illusion shares a same name with a lady from the Jia family. I would like to argue that Cao Xue-qin intends to make this coincidence not only for a source of confusion, but also to make her an important functional character in the narrative development. She dies mysteriously in chapter 13, and sends a dream to Xi-feng (who is in charge of the household matters of the family) to foretell the future of the family.

g. The short circuit between two dreams as I have mentioned earlier. It is a horizontal metalepsis occurs with “the juxtaposition of two communicative situations at the same level.”(John Pier, 2009, p.195)

5. Conclusion

In this paper, I have examined various narrative devices in *Hongloumeng* – authorial commentary, frames, embedded stories, *mise en abyme*, metalepsis – all of which are deployed by Cao Xue-qin to draw the reader’s attention to the storytelling process and undermine the realism of the narrative, and in doing so, I have also displayed the structure of the work constructed by such devices. The well designed structure, I may say, proves that the literary strategy of metafiction is treated deliberately and systematically in this Chinese masterpiece. One may find the reason as Cao Xue-qin’s intention to conceal the truth to escape political censorship, but I would rather insist it is the novel’s theme –world and life as dream – that calls for a theory of fictional narrative, or from another perspective, it resonates with the assertion that “All great fiction, to a

large extent, is a reflection on itself rather than a reflection of reality.⁹” Last but not least, *Honglouloumeng* provides us an important case toward the theory of metafiction. As its captivating structure implies, metafiction is structurally inspired, and the art is made of devices.

reception and relevance to the modern world.

Frankenstein: The Offspring of Happy Days

Susan Miller

[Nippon Sport Science University & the University of Glasgow]

The creature of Frankenstein is well known to most people, including children, and this is so beyond the English-speaking world. Recently, the author of this paper observed a professor in Japan refer to a “Frankenstein” in an impeccable German accent when alluding to something he feared would become a monstrosity, and as Anne K. Mellor notes, the concept has become a “trope of everyday life. The condemners of genetically modified meats and vegetables now refer to them as ‘Frankenfoods’”.¹ In Pasadena, California, in January 2010, “a team of scientists hunkered down at the California Institute of Technology to work on a ‘Frankenstorm’ scenario: a mother lode wintry blast that could potentially sock the Golden State”.² According to Botting, “monsters abounded in eighteenth-century writing”,³ the point at which this novel was conceived, yet most of these monsters have faded from memory. Frankenstein, on the other hand, not only remains alive and well, but is deeply embedded in twenty-first century consciousness and has proven to be “famously reinterpretable”.⁴ This article will consider the historical circumstances that helped inspire Mary Wollstonecraft Shelley’s act of imagination and creation, followed by an examination of the novel’s reception, its rise in academic circles, and its innovative role in drama, comedy and film. M.W. Shelley’s unsurpassed capacity to foreshadow modern controversies which are pertinent to this novel’s dramatic impact on the human psyche will then be explored.

I. HISTORY OF THE NOVEL’S CREATION - MARY SHELLEY’S ACT OF IMAGINATION

During the summer of 1816, the Shelley party frequently sailed across Lake Geneva (also known as Lake Lemman) to Lord Byron’s Villa Diodati in the village of Cologny, “where Milton had once stayed”,⁵ as it was a short distance from Campagne Chapuis, their summer residence. Whenever possible, their time with Lord Byron was spent out on the lake, but during stormy weather they stayed inside by the fire. On one particular evening in mid-June they turned to reading ghost stories from a collection entitled *Fantasmagoriana, ou Recueil d’Histoires d’Apparitions, de Spectres, Revenants, etc*.⁶ These German ghost stories, which had been translated into French, captivated the party. Late that night, Lord Byron suggested a contest in which they each write a ghost story, and all agreed.

The expectations upon M.W. Shelley concerning her writing in general, and this endeavor in particular, were high. First of all, the contest was proposed by Lord Byron, “the most fascinating literary character in Europe”,⁷ who was in the middle of composing Canto III of *Childe Harold*, and would read sections aloud to them. Secondly, she was the child of Mary Wollstonecraft and William Godwin, “two persons of distinguished literary celebrity”;⁸ and finally, Percy Bysshe Shelley encouraged her to write, so that, in her own words, “I should prove myself worthy of my parentage, and enrol myself on the page of fame”.⁹ But the idea for her ghost story would not come.

During subsequent evenings, “many and long were the conversations between Lord Byron and Shelley”,¹⁰ one of which turned to scientific pursuits:

They talked of the experiments of Dr. Darwin, (I speak not of what the Doctor really did, or said that he did, but, as more to my purpose, of what was then spoken of as having been done by him,) who preserved a piece of vermicelli in

a glass case, till by some extraordinary means it began to move with voluntary motion.¹¹

Desmond King-Hele confirms that this conversation “sprang from a mixed-up remembrance of the note on Spontaneous Generation in the *Temple of Nature*”,¹² in which Dr. Darwin conducted experiments on *vorticellae*,¹³ common microscopic animals of which approximately seventy species are known. Individual *vorticella* are invisible, but colonies can be seen during the summer when they multiply rapidly. Nevertheless, they are best observed under the microscope.¹⁴ Darwin noticed that these animals, after being dried out for a while and appearing completely lifeless, would come back to life when re-immersed in water.¹⁵

That night, M.W. Shelley had a vision which terrified her, and from which her creation and her creature sprang forth. At first, she did not realize that this could be the genesis of her ghost story, and was simply desperate to regain her senses and her composure. Slowly, it dawned upon her that she had undergone a precious moment of unsurpassed creative inspiration, terrifying though it was, and that this was the idea she had been waiting for. M.K. Joseph points out that Mary Shelley’s memory of this night, “written fourteen years later . . . is certainly inaccurate in some details”, but he wonders whether or not Dr. Polidori’s (Lord Byron’s personal physician’s) record is “any more reliable”. There is no guarantee that Dr. Polidori wrote his “brief and cryptic” diary entries on the day the events occurred, and he too was prone to make errors in dates.¹⁶ Therefore, as Mary Shelley is the ultimate author, even if her memory is slightly inaccurate, it is worth noting her thoughts concerning this matter. Of particular interest is that she did not have to “*think of a story*”,¹⁷ to the contrary, no amount of struggle or effort was required on her part:

Night waned upon this [scientific] talk, and even the witching hour had gone by, before we retired to rest. When I placed my head on my pillow, I did not sleep, nor could I be said to think. My imagination, unbidden, possessed and guided me, gifting the successive images that arose in my mind with a vividness far beyond the usual bounds of reverie. I saw – with shut eyes, but acute mental vision.¹⁸

From this emerged the beginnings of *Frankenstein*, crowning her as “the clear winner” of Lord Byron’s contest.¹⁹ Here is her opening (Chapter IV of the 1818 edition):

It was on a dreary night of November, that I beheld the accomplishment of my toils. With an anxiety that almost amounted to agony, I collected the instruments of life around me, that I might infuse a spark of being into the lifeless thing that lay at my feet. It was already one in the morning; the rain pattered dismally against the panes, and my candle was nearly burnt out, when, by the glimmer of the half-extinguished light, I saw the dull yellow eye of the creature open; it breathed hard, and a convulsive motion agitated its limbs.²⁰

P.B. Shelley encouraged her to expand her idea into a novel, and her diligent efforts enabled her to do so by late December of 1816. They went over her work together, during “happy days . . . [including] many a walk, many a drive, and many a conversation, when I was not alone”.²¹ In her brief journal entry for 14 May 1817, she recorded that the final corrections were completed, and that the preface had been written – “Read Pliny and Clarke – S. reads Hist of Fr. Rev. and corrects F. write Preface – Finis”.²² Later, in her introduction to the 1831 edition, she indicated that it was P.B. Shelley who wrote the preface – and only the preface –

to the original edition.²³ He subsequently began taking the manuscript to publishers, with the result that *Frankenstein* was first published (anonymously) in 1818, changing the face of the novel forever.

II. THE NOVEL'S RECEPTION - CREATION OF A GENRE

In one of the first reviews published anonymously in *Blackwood's Edinburgh Magazine* in March 1818, and later learned to have been written by Sir Walter Scott, praise is offered for the "great vigour of language", the "uncommon powers of poetic imagination", and the fact that "the tale, though wild in incident, is written in plain and forcible English".²⁴ Moreover, *Frankenstein* is described as "a novel, or more properly a romantic fiction, of a nature so peculiar" that Scott finds it necessary to explain its nature before proceeding with the review.²⁵ This indicates that the author had created something which did not quite fit into the existing categories of literature at that time, and this uncertainty has been carried into the present, as scholars continue to disagree and debate over its nature.²⁶ For example, due to the scientific discussion on the night of M.W. Shelley's vision, Desmond King-Hele considers Erasmus Darwin to be a "father-figure over this first and most famous work of science fiction".²⁷ Anne K. Mellor agrees:

Mary Shelley grounded her fiction of the scientist who creates a monster he cannot control upon an extensive understanding of the most recent scientific developments of her day. She thereby initiated a new literary genre, what we now call science fiction.²⁸

Scott further notes "that this class of fiction has been sometimes applied to the purposes of political satire",²⁹ a statement with which Lee Sterrenburg concurs. Sterrenburg deems *Frankenstein* to be a "new form" of the monster novel, an apolitical form which "translates politics into psychology" by relying on "political symbols to depict a psychological struggle".³⁰ In terms of the goal of the class of novels to which *Frankenstein* belongs, Scott determines that:

The author's principal object . . . is less to produce an effect by means of the marvels of the narrations, than to open new trains and channels of thought, by placing men in supposed situations of an extraordinary and preternatural character, and then describing the mode of feeling and conduct which they are most likely to adopt.³¹

This concept of opening "new trains and channels of thought" is now *Frankenstein's* most fertile avenue of research; however, this was not always the case.

III. FRANKENSTEIN'S ROLE IN ACADEMIA

Up to the 1970s, O'Flinn drily notes that "*Frankenstein* may have been on TV but it wasn't on the syllabus". He credits this change to three major factors: a) theoretical criticism; b) the predominance of different forms of media; and c) history. In terms of literary criticism, O'Flinn finds that the lasting value and adaptability of *Frankenstein* is due to the way in which M.W. Shelley skillfully delved into issues of the day, in particular "the impact of technological developments on people's lives and the possibility of working-class revolution". He commends her capacity to address these themes which "remain central and unresolved in industrial society" via "oblique, imaginative terms".³² Yet her flexibility and ambiguity in addressing these issues made some contemporary reviewers nervous. For example, while the review from *Blackwood's* quoted above was positive, not all critics shared Scott's enthusiasm.

A review that appeared in Edinburgh (Scot's) Magazine in March 1818 found the novel to be lacking in "morality and piety". Moreover, its "radical political positions" were deemed disturbing. That *Frankenstein* was "published anonymously and dedicated to a renowned radical, William Godwin, [made] the novel's political stance [seem] clear enough".³³ Nevertheless, *Frankenstein* became an immediate success, and this perhaps also played a role in it being shunned by the intellectual community, for it was not taken seriously for more than 150 years.

Johanna M. Smith provides a detailed analysis of the novel's historical reception, with a burgeoning interest in critical studies of the novel first occurring in the 1970s, followed by renewed research in the 1990s.³⁴ At one time, *Frankenstein* was dismissed offhandedly in academia, but it is now considered "great literature".³⁵ *Frankenstein's* emergence from its second-rate status in the 1970s occurred partly because "critical attention interrogated both *Frankenstein's* fit in established literary traditions and the status of those traditions themselves".³⁶ Feminists sought the inclusion of female writers into the canon and this provided the first breakthrough. In the 1990s, evaluation of the novel in terms of issues of class and race were incorporated. By that time, apologies for studying the novel were no longer necessary, with critical approaches ranging from Marxist theory, Lacanian psychoanalysis to gender and postcolonial issues (Botting 1995, Shelley 2000). Another groundbreaking shift occurred in the 1990s, with popular culture being deemed worthy of serious academic study:

What is striking about post-1990 *Frankenstein* criticism is an increased attention from practitioners not only of haute critique, especially deconstruction, but also of cultural studies; in other words, the novel remains a fit in both high and low culture.³⁷

As a further proof of its vibrancy, in April 2009 the Romantic Circles website issued a new online edition of *Frankenstein*. The editor, Stuart Curran, explains the rich source of this edition:

It began from a campus-wide project at the University of Pennsylvania in 1993, where all incoming first-year students were asked to read *Frankenstein* over the summer and begin their college experience with a seminar on the novel taught by faculty members from a wide array of disciplines. With the various faculty involved meeting in advance to discuss approaches, we discovered a process akin to what can be observed in critical and theoretical approaches to the novel. Whatever the disciplinary interests – from philosophy to chemistry to law or medicine – the novel fit neatly within them, absorbing their discourses like a sponge.³⁸

IV. FACTORS THAT DEEM *FRANKENSTEIN* RELEVANT

A. OBSESSION

M.W. Shelley clearly demonstrates that Victor Frankenstein has an obsessive, compulsive and addictive personality. His pursuit of natural philosophy, in particular chemistry, in Ingolstadt became his "sole occupation" and he applied himself to the task "so closely" that he "improved rapidly" (p. 29). Yet, his obsession came with a price. First, he began to lose his health, as his "cheek [grew] pale with study, [and] his person [became] emaciated with confinement" (p. 32). In addition, he grew isolated, while "the moon gazed on [his] midnight labours . . . in a solitary chamber" (p. 32). The summer was resplendent but he did not enjoy it, nor did he stay in touch with his family in Geneva. In fact, several seasons passed to which

he was oblivious. His attempt to bring a creature to life took “an irresistible hold of [his] imagination” and precluded him from engaging in “feelings of affection” for others until he had attained his goal (p. 33). As time wore on, his health worsened. Every night he “was oppressed by a slow fever, and [he] became nervous to a most painful degree” (p. 33). This was in complete contrast to his earlier state of “excellent health” (p. 33). (See Table 1 to observe Victor’s transformation.)

Table 1
Consequences upon Victor prior to the birth of the Creature

<u>Original State</u>	<u>Transformed Into</u>
Excellent health	Poor health, sleep deprivation
Firmness of nerves	Nervous to a painful degree
Close to family and friends	Isolation
In touch with nature	Oblivious to his surroundings
Physically active	Inactive; keeping late hours
Mentally content	Obsessed

Source *Frankenstein (The 1818 Text)*. Ed. J. Paul Hunter. New York: Norton, 1996, p. 33-34.

In addition, immediately after the birth of the creature, Victor took a dramatic turn for the worse, both mentally and physically. Although he had achieved his dream, it did not turn out the way he expected; quite the opposite, he was mortified by what he had done. That night, he suffered nightmares, cold sweats, teeth chattering and convulsions (p. 34). The creature came to his bedchamber, lifted the bed curtain, and attempted to communicate with him. However, Victor was repulsed, and could not offer any affection; instead, he “escaped, and rushed down stairs” where he spent the wet, cold night outside in the courtyard in agitation and fear (p. 35). In addition, he suffered from heart palpitations and a racing pulse followed at intervals by “languor and extreme weakness” (p. 35). At daybreak, he began to walk in a semi-conscious, zombie-like state, “without any clear conception of where [he] was, or what [he] was doing”; his heart “palpitated with the sickness of fear” (p. 35). (See Table 2 for a full listing of Victor’s symptoms.)

Table 2
Consequences upon Victor immediately following the birth of the Creature

<u>Physical</u>		<u>Mental/Emotional</u>	
breathlessness	sleeplessness	horror	disgust
pacing	cold sweats	agitation	bitterness
teeth chattering	convulsions	fear	disappointment
heart palpitations	racing pulse	nightmares	being in hell
languor	extreme weakness	wretchedness	desire to escape
aching eyes	irregular steps	hurrying	heartbroken

Source *Frankenstein (The 1818 Text)*. Ed. J. Paul Hunter. New York: Norton, 1996, pp.33-34.

For those familiar with the symptoms of addiction, such as occur in cases of alcoholism, Victor presents a striking example of the progressive nature of the disease. According to Doctor William D. Silkworth:

We believe, and so suggested a few years ago, that the action of alcohol on these chronic alcoholics is a manifestation of an allergy; ... These allergic types can never safely use alcohol in any form at all; and once having formed the habit and found they cannot break it. ... their problems pile up on them and become astonishingly difficult to solve. ... I do not hold with those who believe that alcoholism is entirely a problem of mental control.³⁹

The movement of Alcoholics Anonymous was founded in the 1930s and is based on a program of recovery following twelve steps.⁴⁰ These steps have since been used to help people with a variety of other obsessions, compulsions and addictions, leading Aldous Huxley to praise Bill W. (one of the co-founders of AA) as “the greatest social architect of our century”.⁴¹ According to Susan Zieger, the concept of addiction as a medical phenomenon did not emerge until approximately World War I,⁴² and although Victor is not addicted to any particular substance that the reader is aware of, his obsessive behavior can be accorded with Obsessive-compulsive Disorder, or OCD, making him very much a modern figure. (To offer a prominent example, David Beckham suffers from OCD.⁴³)

B. IDENTITY - WHO IS FRANKENSTEIN?

As LaValley has pointed out, film is the medium through which most people learn about the tale of Frankenstein,⁴⁴ however, the images portrayed in films frequently betray the novel, bearing little resemblance to it. As one reviewer in 1932 lamented in response to Universal Studio’s classic 1931 film adaptation starring Boris Karloff:

Mary Shelley’s story has artistic interest as an essay in German horrific romanticism and I think that if *Frankenstein* had been produced by a historically-minded German the result would have been much more interesting. ... What is the object of taking Mary Shelley’s story and then removing the whole point of it before starting to make the picture?⁴⁵

Yet this is precisely the point, according to O’Flinn. *Frankenstein* is highly adaptable and open to ambiguity, giving filmmakers plenty of opportunity to replace M.W. Shelley’s point of view with one which is more relevant to themselves and their times. This places film adaptations of *Frankenstein* in diametric opposition to adaptations of other texts from the same era. For example, films of Jane Austen’s novels aim to provide “a reasonably faithful reproduction of the text”,⁴⁶ with the latest releases taking pride in paying attention to the minutest details of costume, scenery, and historical accuracy. On the other hand, film versions of *Frankenstein*, with all of their differences from the novel, often become:

... so firmly imprinted on our minds that it is almost impossible not to filter the events and images of the book through the more familiar ones of the films.⁴⁷

The general public has never lost its fascination with this story, for “once published it became an instant success”.⁴⁸ Although the novel is serious and was written in earnest, M.W. Shelley has a light touch and a flair for the comedic. In the 1820s there were several productions on the London stage, and these highly successful plays immediately spawned parodies, including

Frankenstitch and *Frank-n-steam*.⁴⁹ Stevick asserts that Shelley demonstrates a great deal of diversity and subtlety in the range of her comic powers. He specifies three types of comedy: a) when the “intention is comic but the action is serious”; b) when the “intention is serious but the action is comic”; and c) when “both the intention and the action are serious”, but the audience finds the scene funny anyway. Stevick feels that *Frankenstein* “has affinities with all three of these modes”, but it also functions beyond them, for it manages to create a comic style all its own, “characterized by dream-like mechanisms and by much rather directly rendered psychic material”.⁵⁰

M.W. Shelley herself attended and enjoyed an adaptation of *Frankenstein* staged by Richard Brinsley Peake,⁵¹ as she recorded in a letter to Leigh Hunt written on 9 September 1823. Her sentiments are worth capturing, for she brings up the issue of identity:

But lo and behold! I found myself famous! – Frankenstein had prodigious success as a drama and was about to be repeated for the 23rd night at the English Opera House. The play bill amused me extremely, for in the list of dramatis personae came, ----- by Mr. T. Cooke: this nameless mode of naming the unnameable is rather good.⁵²

With the exception of The Living Theatre’s dramatization in the 1960s, in which even Paracelsus appeared as a character on stage,⁵³ film seems to be the main creative outlet for modern adaptations. Thus, the image of Boris Karloff as the creature inevitably comes to mind when Frankenstein is mentioned. Yet scholars are quick to point out the error of this assumption. J. Paul Hunter states in his preface to the Norton Critical Edition of *Frankenstein* that “you may not know whether Frankenstein is the monster or his scientist-creator (it’s the latter)”.⁵⁴ In a discussion of Eugene O’Neill’s *Long Day’s Journey Into Night*, Joseph Cordaro confirms that Jamie “makes a ghastly error” in the final act when he tells his younger brother, Edmund, “I made you! You’re my Frankenstein!”. Cordaro comments that instead “the logical conclusion for [Jamie’s] argument would be ‘I made you! *I’m your Frankenstein!*’”.⁵⁵ Yet is there a rationale which justifies and perhaps even necessitates the popular approach?

One possibility is that there is a widespread tradition throughout various world cultures to pass on a family name to children either through the mother (matronymy) or the father (patronymy).⁵⁶ As Victor’s first-born offspring, where Victor functions as both the father and mother (though he abrogates these positions in terms of nurture), it is a logical approach to seize upon the creature’s identity as a Frankenstein, like his father. Indeed, in an early review of the novel, John Croker refers to the creature as “Frankenstein’s hopeful son”, giving credence to this type of matronymy and patronymy for the creature.⁵⁷ Mary Shelley’s adamant resistance to giving her creature a name is one of the foremost reasons for his enduring attraction to the public and has cemented his extreme adaptability in meeting the needs of changing times; yet this very “namelessness” also created a gap which people are not comfortable with. Therefore, filling that gap by conferring his father’s name upon him not only gives the creature an identity and a sense of dignity, it also humanizes him, thereby mitigating to some degree the terrifying sensations imparted by the tale. In spite of Victor’s denials, clearly the creature is his in the eyes of the world.

C. BLURRING OF DISTINCTIONS AND ROLES

In the aftermath of the holocaust of World War II, the nature of evil has been a primary concern. At the same time, the capacity for human beings to destroy themselves and the

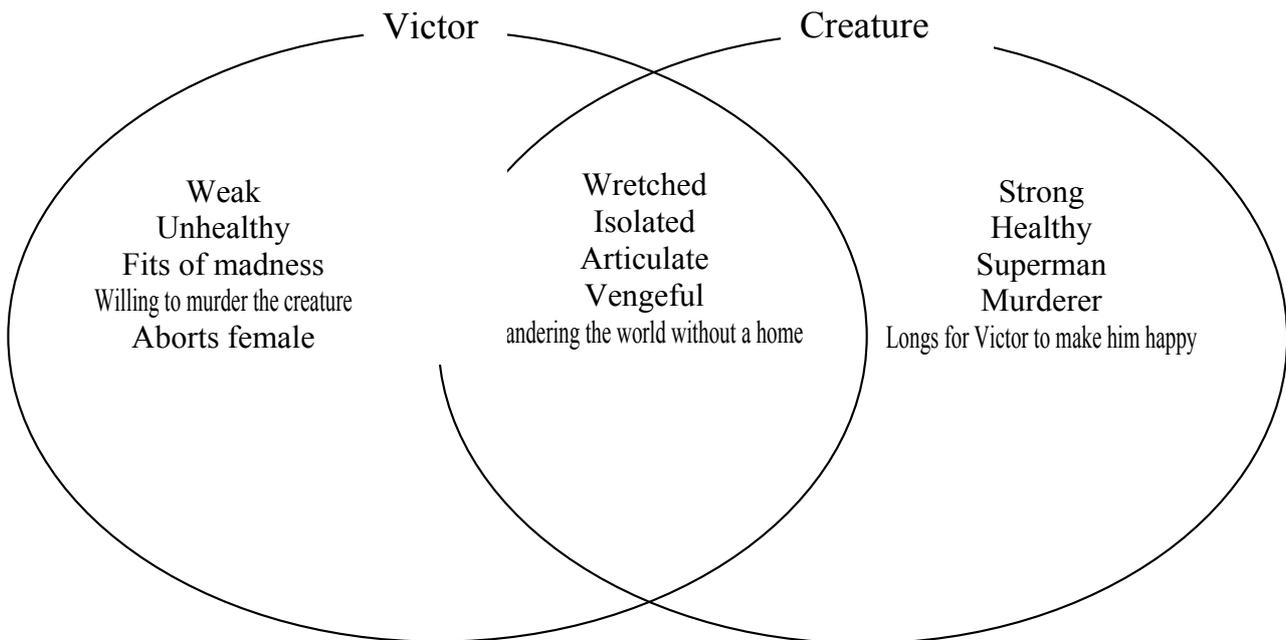

planet increased exponentially with the invention of the atomic bomb and its subsequent release upon Hiroshima and Nagasaki. This has led to a sense of malaise among young people, coupled with angst about the nature of existence. That which appears to be good, such as automotive transport, can often bring harmful consequences in its wake, including traffic jams which extend beyond the rush hour and destruction of air quality. Moreover, activities once deemed safe, such as eating certain foods, can raise one's cholesterol and increase the risk of stroke and heart disease. Chemicals abound in our modern world and along with them have come increased rates of cancer and infertility. *Frankenstein* is eerily in tune with these issues. For example, Victor's dream to create a human being was seen to be a positive endeavor. First, he discovered the "cause of generation and life; nay, more, I became myself capable of bestowing animation upon lifeless matter" (p. 30). Next, he contemplated how to use this gift:

I doubted at first whether I should attempt the creation of a being like myself or one of simpler organization; but my imagination was too much exalted by my first success to permit me to doubt of my ability to give life to an animal as complex and wonderful as man (p. 31).

Yet, at the instant that the being heaved with the breath of life, "the beauty of the dream vanished, and breathless horror and disgust filled my heart" (p. 34). "Unable to endure the aspect of the being I had created" (p. 34), Victor fled his laboratory and spent the night pacing, unable to sleep and longing for "forgetfulness" (p. 34). This describes the reaction to horror in the twentieth and twenty-first centuries with chilling accuracy. Moreover, film adaptations often address fears brought about by current events, such as *Frankenfish*, a 2004 film based on a controversy in Crofton, Maryland and the Great Lakes in which Northern Snakeheads, a non-native species, were found in the waters.⁵⁸ These fish contained potential to severely harm the local habitat and were dubbed "Frankenfish" because of their "ability to survive, even after extreme measures [had been] taken to eradicate them".⁵⁹ Genetically-altered salmon, called "transgenic fish", have also been nicknamed "Frankenfish", and this issue impacted the film as well.⁶⁰

Throughout the novel, Victor and his creature change roles and vacillate in their conduct, making it difficult to distinguish between them. At first, Victor flees his creation and the creature follows him; later, the creature flees and Victor pursues. Both are driven by vengefulness. According to scriptures emanating from the Hindu tradition, "our own age is called *Kaliyuga*, the Age of Anger", and Victor and his creation demonstrate this clearly.⁶¹ Each one harbors a desire to exact revenge upon the other, and this becomes an overriding obsession to the detriment of all else, mirroring Victor's earlier obsession to bring the being into existence. Moreover, while Victor is described as articulate by Walton, ("He is so gentle, yet so wise; his mind is so cultivated; and when he speaks, although his words are culled with the choicest art, yet they flow with rapidity and unparalleled eloquence") (p. 15-16), in fact, throughout the novel it is the creature who demonstrates eloquence in his speech patterns more so than Victor. This further blurs the distinction between them, for Victor is often reduced to silence and speechlessness, as one would expect the creature to be. (See Figure 1 for a diagram of their distinct and overlapping qualities.)

Figure 1

Thus, it is difficult to ascertain who is good, who is evil, what is right and what is wrong as this plot unfolds, making it very modern in its prognostication.

V. CREATION OF A MYTH & CONCLUSION

History has shown that M.W. Shelley's novel has remained not only viable down through the centuries, but even more profoundly, *Frankenstein* has gained the stature of a myth. Sir Walter Scott did not mention mythology in his review because he wrote it immediately upon the novel's release, but Cantor considers *Frankenstein* to have "as much claim to mythic status as any story ever invented by a single author". However, Cantor feels that Shelley "did not create her story out of thin air" even though the ambiguities throughout the book do not lend themselves to easy identification with "traditional mythic archetypes".⁶² Mellor, on the other hand, feels that the "myth is unique, both in content and in origin" because "the idea of an entirely man-made monster is Mary Shelley's own".⁶³

The vacillations in interpretations of *Frankenstein* by academic critics, theatre producers, film directors and members of the populace demonstrate that there is no one "real", "true" approach to this powerful story.⁶⁴ Its adaptability confirms the fact that Mary Wollstonecraft Shelley struck a deep chord within the human psyche during the summer of 1816, and that her fears continue to play out in various ways as embodied by *Frankenstein's* guises and metamorphoses. In 1831, she bade her "hideous progeny go forth and prosper"⁶⁵ and it is clear that her wish is being fulfilled.

Abstract

Globalisation has come to signify a whole new set of practices, ideas, and trends. Most scholars agree that globalization has been responsible for some of the major transformations in the structures of media production, representation and audience reception, hence creating strong demarcations between local and global, national and transnational cinemas. Where national cinema is believed to perpetuate hegemonic discourses in its narrative, global productions on the other hand are believed to contest those points of view and thus produce a new confrontational culture of cinema. My aim in this paper is to question and challenge the legitimacy of this strong oppositional relationship between the local and the global by illustrating how in the case of lesbian representation in *Fire*, there is in fact a constant interaction between the two forces making their relationship rather dialectic. I propose that instead of understanding Indian cinema as either local or global, a better way of interpreting sexual minority representation in Indian cinema is to read it as a Glocal enterprise.

This can be supported by the fact that even though diasporic films do present an attempt to go beyond mainstream characterisation and narrative techniques, they simultaneously incorporate a number of those very tools and ideas thus proving their high dependence on “pre-established networks of exchange” and local knowledge . I argue that despite a shift in the visualisation of gender and sexuality in global cinema, its core position and essence remain conservative and old making the dichotomy between the two genres highly debatable. In this paper, by conducting an in-depth textual and narrative analysis of Deepa Mehta’s popular global production, *Fire*, I argue that it is this consistent attenuation of the global forces by the local and the evident amalgamation of Indianness and Westernness in transnational cinema that makes it a marker of Glocalisation.

Introduction: (New?) Queer Cinema vs. (Main)stream Cinema

Globalisation has come to signify a whole new set of practices and ideas. It is held responsible for some of the major transformations in the structures of media representation and audience reception (Rao 2008). The advent of a new wave of global independent productions proved that the Indian National cinema was not able to meet everybody's interests because of its mass and uni-dimensional approach (Desai 2004; Rao 2008). New Queer Cinema, a term coined and archived by film theorist Ruby Rich gives the marginalised homosexual community a voice of its own, a life of its own, despite the rigid strictures of society that define what is acceptable and what is not (Aaron, 2004). In the specific case of lesbianism, it seeks to question the sexual agency given to a woman with a queer sexuality by breaking the governing gendered and sexual perceptions like "chastity and virginity, intra-racial romance, male-female relationships and arranged marriages" (Desai 2004:176).

The binary models of the local and the global have always been in clear antithesis to each other which can be supported by what Appadurai says in his seminal essay *Grassroots Globalization and the Research Imagination*: "New global spatial relations and communities are seen to occur in the local spaces of culture ... each resisting the other" (2000:12).

In light of this, my paper will question the legitimacy of this strong oppositional relationship between the local and the global by illustrating how in the case of lesbian representation in a global diasporic production like *Fire*², there is in fact a constant interaction between the two forces making their relationship rather dialectic. I propose that instead of understanding Indian cinema as either local or global, a better way of interpreting sexual minority representation in Indian cinema is to read it as a Glocal enterprise.

Some of the questions that this paper will address are: To what extent do the aesthetics of representation change when films travel and cross boundaries in order to serve a larger audience? To what extent does the constructed dichotomy between national and transnational in so far as representation is concerned, stand justified? Are global Indian films really forging new identities for lesbians or does the representation see a repetition of 'indianness'? Do the textual and narrative strategies in the case of lesbian portrayal create a space for empowerment or do they further root them into tradition?

² Plot summary and characters can be found in the Appendix

Theoretical Framework

Glocalisation: “Think Global, Act Local”³

Globalisation is understood as a process that is making the world more uniform by integrating all local cultures to form a superior homogenous global community resulting in the destruction of the heterogeneous and “microsociological” (Robertson 1995:25) concerns and leading to a complete erasure of locality and history. In order to complicate this idea, sociologist Roland Robertson (1995) came up with the concept of Glocalisation which as the term suggests recognises the simultaneous existence of centralisation and decentralisation, of local and global processes.

What Robertson does in his seminal essay ‘*Glocalisation: Time-space and Homogeneity-Heterogeneity*’ (1995) is reject the false oppositional relationship of global and local, of universality and particularity. He demonstrates how the local often reflects in the global and vice versa to suggest how this interplay of the two forces on the one hand constantly defends local histories and identities and on the other, allows for the entry of a resistant identity.

In this paper , by using Robertson's idea of Glocalisation, I break the antithesis between global and local Indian cinema and combine them into one single complex category of the glocal by showing how the former constantly adapts and redesigns its cinematic representation in order to bring back local cultural practices. Traditional Indian value systems and perceptions are constantly meshed with those of the west in order to appeal to both native as well as diasporic Indian audiences.

Feminist Theories: Judith Butler and Adrienne Rich

One of Judith Butler's biggest contributions to feminist and queer understandings is the idea of performativity. In her most influential book *Gender Trouble* (1990), she redefines gender relations by discarding the gendered dichotomy of male- female so as to open up new possibilities and new identities that can then be ‘chosen’ instead of being imposed by the society. Butler argues against the traditional idea of gender being determined by one’s sex and the genital organs that one bears and asserts how it is in fact a fluid and variable entity that is determined by one’s performance of it. She argues that “There is no gender identity behind the expressions of

³ This quote has been used by several theorists in several different contexts. The original use although first appeared in the book "Cities in Evolution" (1915) by town planner and social activist Patrick Geddes. (Wikipedia)

gender... identity is performatively constituted by the very expressions that are said to be its results” (1990:25). She uses this theory to justify the notion of drag by showing how gender can be mimicked and imitated when a man dresses up as a woman or vice versa.

Another important feminist theorist whose work influences my central thesis is Adrienne Rich (1980) who brings in the concept of ‘*Compulsory Heterosexuality*’ (1980). “It is certainly within the interests of patriarchy to keep women from examining their relationships to other women” (Zeck 1989: 143) for it poses a threat to male dominance. She states that people are typically divided into the categories of ‘Male’ and ‘Female’ making these socially institutionalised roles so powerful that they begin to be seen as natural and self-identified. When it comes to gender roles, what stands valid for years is for women to be inferior and subversive to men.

In this paper, I use the feminist theories of Judith Butler and Adrienne Rich to understand why the conventional idea of hetero-patriarchy surfaces in a global text like *Fire* through the use of strategies like cross dressing, male intermediaries, homophobia, paternalistic duty and eroticism to demonstrate how whether or not a filmic text is of global reach, normative hetero-patriarchal values take precedence and are often imposed by the dominant groups (men and heterosexuals) on those who fall below (women and homosexuals).

Postcolonial Theory: Gayatri Spivak

The last element that constitutes a big part of my theoretical framework is Gayatri Spivak’s seminal essay *Can the Subaltern Speak?* (1988). Spivak introduces a feminist perspective in order to critically examine the consequences of Imperialism on the colonised subaltern woman who she portrays to be a helpless and voiceless victim of an ‘epistemic violence’ with no recourse to any kind of agency.

By delving into the nineteenth century Hindu practice of widow immolation or the sati, she attempts to justify her argument that the subalterns really cannot speak and demonstrates how the subaltern woman is silenced by the violence and oppression inflicted upon her through the strictures of Hindu patriarchy. One of the most interesting points that she raises here is that of the “white men saving brown women from brown men” ([1988] 2006:33) and the idea of civilising and saving the women. The fact that British colonisers prohibited the indigenous practice of sati is seen by Spivak as a confirmation of how those in power often take the prerogative of speaking ‘for’ and saving the marginalised. She further argues that even if the woman is allowed to convey a message and speak ‘to’ those in power, her message is often misunderstood and interpreted in a way that fits within the boundaries of dominant ideologies depriving them of any kind of social or sexual agency.

My aim in this paper is to illustrate how the doubly marginalised subaltern group of lesbians is spoken for by those in power (men or heterosexuals). Even though, they are given a voice and are lent a kind of visibility in global Indian cinema, I argue that this is frequently done and interpreted within the boundaries of hegemonic hetero-normative and patriarchal discourses.

***Fire*: A Textual and Narrative Analysis**

I argue that where global films do allow for an injection of a lesbian narrative, they are also constantly supported by the traditional Indian structures of patriarchy and normative conceptualisations of female sexuality resulting in a perennial exchange between queer and Indian codes. In this section of my paper, with the help of an in-depth textual and narrative analysis of the film *Fire*, I will demonstrate how global queer texts are always ‘Indianised’ by infusing their narratives with constant reminders of Indian morals and practices like sexism, homophobia, patriarchy, chastity, female subordination and paternalistic duty. I believe that all Indian films, irrespective of the genre they belong to, provide a culturally grounded engagement of issues which makes me argue that the points of intersection between globalisation and cinematic representation create not only points of opposition between national and transnational cinema but also create points of concurrence, making the global-local nexus ridden with contradictions.

Compulsory Heterosexuality

In terms of sexuality, domination is practised by ‘natural’ and ‘healthy’ heterosexual relations that disallow homosexual ones (Rich 1980; Miller, 1994) from existing. In the Indian society, hetero-normativity functions as a strong marker of belonging. One of the most common ways of highlighting the importance of a man and thereby a heterosexual relationship is through the use of *male intermediaries*. Most lesbian movies have male intermediaries in the form of subtle references to men, husbands or lovers who act as reassuring devices to the male audience as an attempt to undermine the impact that women together can make (Sedgwick 1985). *Fire* is a story about two neglected housewives, Radha and Sita, who are falling apart under the patriarchal control of their husbands and eventually find in their love for each other, a reason to live. By setting the plot in a traditional Indian middle class family, Deepa Mehta forcefully brings in the presence of men in the house in the form of husbands and the servant, Mundu, who eventually reveals the secretive relationship between Radha and Sita to Ashok, thereby playing a significant role in the plot. Social messages conveyed continuously inform the audience of the existence of a conventional heterosexual family life so the attention is taken off the lesbian plot. Since heterosexual families attain social validation but lesbian connections do not, they are often made to fit inside a much larger heterosexual storyline.

The emphasis on a heterosexual lifestyle is also documented through the tool of *cross dressing and role playing* validating Mary Daly's (1978 cited in Radel 1994) idea that since women are

always understood as the 'Other' in the normative discourse, they sometimes try to achieve the identity of the male 'Self' and try to achieve acceptance by identifying themselves as men. This is primarily because it is the male heterosexual self that is the domain of sexual privilege and power and there is a cultural demand to witness the conventional male-female romance.

Fire, despite being a global movie, employs this technique on two occasions. The first scene is when Sita is by herself in her room, wearing a heavy gaudy saree. Looking at herself in the mirror she is disgusted and decides to get into one of Jatin's pants, lets her hair open, picks up one of his cigarettes and pretends to smoke. This enactment of a man by a woman in a way disregards the identity of woman as an independent and self-sustaining identity, making that of a lesbian's even more invalid. It also provides a brief distancing away from traditional Indianness shown in the way she dramatically shoves her saree down her shoulder and quickly puts on his trousers. However, considering the short span of time that the scene lasts and the immediate returning to her original Indian attire only proves how the narrative even though does present a bold female sexuality, also subtly stresses on the necessity to silence any kind of attempt for expression by women. The second scene is an interlude that has both Sita and Radha in a role playing sequence. Sita wears a pair of trousers, a coat, a shirt and a cap and plays the role of a bold, assertive man and Radha on the other hand, plays the role of a coy, docile, shy woman who is led and wooed by Sita.

These two scenes of cross gender identification and masquerade are perhaps employed in order to achieve distance from the text and to keep up with what is socially accepted so it's more palatable to any viewer who might otherwise be uncomfortable with a film that blatantly challenges the long held traditional views (Doane 2003). Also, such brief interludes of gender reversal and implied female homoeroticism seem to locate the film within Chris Straayer's definition of the 'Temporary Transvestite film' which offers spectators a momentary trespassing of society's accepted boundaries for gender and sexual behaviour but eventually goes back to a display of a traditional setup (1996).

The extreme emphasis laid on hetero-normativity in India makes the Indian society a highly homophobic one. This in turn results in an unconscious internalisation of it so much so that the injection of a homophobic discourse in queer cinema becomes inevitable. In *Fire*, this is mostly done through the characters of Biji and Ashok. It seems unacceptable to represent acts of homosexual expression but there exists no prohibition against depicting acts of homophobic violence. Towards the end of the movie, Radha, after the revelation of her secret lesbian relationship, is blatantly accused of how outrageous a sin she had committed after which her saree accidentally catches fire from the gas stove and her husband watches her struggle without doing anything to help her put it out. Even though it's not a direct infliction of pain but by acting like a bystander to the whole scene, the husband indirectly punishes her for crossing the line. Biji, owing to her inability to speak, expresses her disgust by spitting on Radha's face.

The common take on this scene that eventually results in her coming out of it unscathed is that she passes the test of purity (Negrea 2004; Arora 2000). Deepa Mehta borrows the trope of the ordeal of fire from the Indian epic of Ramayana when goddess Sita is rescued by her husband, Lord Rama, on being kidnapped by the demon Ravana. The society makes her go through a trial by fire to prove to the world that she is still in possession of her chastity and that she hasn't been sullied despite being in captivity by a stranger.

Even though I do agree with this inference, I would like to argue that this could in fact be seen as a symbolic death adding to the notion of the 'subaltern corpses' (Thomas Waugh cited in Goswami 2008). The fact that this leads to an ostracisation of the lesbians from the family and the community just goes to prove how Radha and Sita being Indian women are allowed to have visibility and a place in society only till the time they are faithful to the role of the devoted wife. Radha's sari catches fire and is left there alone by her husband so she can burn to death and Sita on the other hand, is abandoned by her husband and her family so she sits alone in a Muslim dargah (place of worship) being a Hindu woman herself. It is important to note here that as women are not allowed to enter the premises of a dargah, by doing so, she automatically assigns herself the position of the 'outsider'. In my opinion, this alienation seen on two levels, one at the familial level and the other at the societal level makes them both victims more than winners. The positive unison that some film critics (Negrea 2004; Arora, 2000) claim they achieve at the end of this film is in my opinion, predicated on seclusion, desolation and on a total lack of a support system making the ending far from empowering.

Compulsory Patriarchy

Indian cinema is a reflection of the Indian society making it work according to the postulates of a compulsorily patriarchal environment. The first strategy that re-iterates the idea of a compulsorily patriarchal society in film is that of *male gaze and female objectification*. Claire Johnston (1975 cited in Jackson 1998) claims that women's bodies are constantly projected as 'spectacles' within the film but the idea of a woman as a woman is essentially absent. Thus, the image of a female operates in the text as nothing more than a sign that suggests the desires and fantasies of men but not the reality of women's lives.

Visual pleasure according to Mulvey (1989) has two sides to it. One is mere 'Voyeurism' which refers to the active gaze at an erotised image of a woman and the other is 'Narcissism' which refers to the pleasure of identifying with one's more powerful and one's perfect version as shown in the film. But because of the sexual imbalance that exists in society and the split that exists between the active male and the passive female, this kind of fulfilment is offered only to the male spectator. Women are hardly ever assigned the position of the 'looker'.

In *Fire*, there is a constant use of the metaphors of food (in the form of the take away food stall that they own) and pornography (in the form of the side business that Jatin is secretly taking care of). Both represent “devouring, gobbling up, feasting ...a language that not only suggests a desire to eat but also to destroy the loved object” (Negrea 2004). This constant interplay or link between visual and bodily satisfaction, both that are provided by women to men, is again an essential way of perpetuating the oppressive strictures and the exploitative nature of a patriarchal society. Another scene that reinforces this idea is where Jatin is enticing three very young boys with a porn tape. The song in the background says “This is the place where you give love and take love”. It is ironic that the place to “give and take love” is actually a video store offering porn movies that normalise the objectification of women.

An extension of this strategy often used for the same purpose is the element of *eroticism and female bonding*. Even though lesbianism in the Indian society is understood as an unnatural sexual attraction, I argue that lesbian activity is often used as bait to the male audience. This is because lesbianism is an entity that is marked by sexuality whether or not she expresses it and behaves in a sexual manner (Heart 2007).

Fire is recognised for its bold employment of the practice of ‘Containment’ where homosexuality is ‘interiorised’ and is understood as part of one’s identity rather than a mere external behavioural pattern (Hantzis and Lehr 1994) by making the protagonists, Radha and Sita active agents of their love for each other instead of being objects that are consumed by the heterosexual male audience. However, I feel that it eventually does succumb to the heterosexual conventions of filmmaking by positioning itself firmly within the domains of national culture. The one scene that makes an explicit display of physical intimacy between the two women has Radha caressing Sita’s breast where Sita is out of the frame of the camera, giving the male viewer the freedom to fetishize her breast, forcing the audience to watch it from a man’s point of view and thus, taking it back to the idea of a necessary and compulsory heterosexual gaze upon women. I feel that this scene reinforces the convention of prostituting women in order to serve a male audience since the exclusion of a man from a totally satisfying and complete sexual relationship poses a threat to men, as it only makes them look unwanted.

On witnessing the sexual relationship between Sita and Radha, Ashok replays the whole scene in his head right after. I interpret this replaying as a way of incorporating the element of porn into a lesbian representation. I find it interesting that the first time when we are shown the scene in which the two women are making love; it is a long shot taking it further from the subjectivities of the filmmaker. But the same scene when replayed in Ashok’s head becomes a close up, lending a kind of voyeurism to it. I interpret it as Ashok’s subjective transformation of what he sees, into a pornographic activity, making him an audience to a lesbian performance. The use of the metaphor of porn not only objectifies women as tools for visual entertainment and gratification

but also makes up for the feared absence of men from a lesbian relationship and thus reassures men of their importance in the heterosexual world.

Indian cinema ordinarily focuses on family traditions and chastity and one of the ways of doing this is by projecting the ideals of a fulfilling heterosexual marriage and motherhood. By doing so, the structures of patriarchy are not just made visible but are also valorised by making a compulsory attachment of men to women (Negrea 2004). Mainstream Indian cinema certifies the traditional idea of hetero-patriarchy couched in an extremely misogynistic refusal of women's desire (Goswami 2008).

The first scene in *Fire* has Sita asking Jatin if he liked her indicative of how she acquires gender identification and acceptance through her husband, in a way internalising the process of self defining through the eyes of a man. Similarly, Radha recalls a saying that “the way to a man's heart is through his stomach”. In the economic structure of the Indian middle class family, women are the ones who have to cook and nourish and this aspect of their lives is often seen as an integral part of the definition of Indian womanhood, thus glorifying the idea of a woman's duty. Biji, the mother-in-law, assumedly fulfilled all her social and familial obligations also as she has two sons, is widowed and depends on her sons for survival now. Also, her muteness, her inability to communicate is a subtle indicator of the silencing of women which makes the system of male dominance even stronger.

The first time the two women are shown kissing, it is important to note that the posters in the room (from Kung Fu Movies) make it clear that it is a male space that they are transgressing and that lesbian characters need to be placed within the confines of a heterosexual storyline. In this way, the lesbian characters and what they stand for are often developed as being in contrast to the dominant characters in the narrative; heterosexual men (Gopinath 2000).

By using the private domestic chamber of the kitchen as a site of resistance and as an appropriation of the established doctrines into a space for the growth of their love for each other, Deepa Mehta has definitely initiated to present a positive and somewhat empowering image of the lesbian reality that was earlier labelled unrepresentable. But I argue that the positivity in the visual imaging of lesbianism is still couched under and determined by the existing local cultural debates around gender and sexuality in the Indian society causing a consistent interplay of the global and the local.

Representational Strategies

Stereotyping

I find that Indian cinema, both home and abroad, frequently succumbs to the traditional practice of stereotyping, resulting in an easy and convenient categorisation of individuals into specific groups making their identities fixed and rigid, also leading to a hasty generalisation of an individual's characteristics to the whole group's. What this kind of essentialist labelling does is simplify the inherent complexities of identity formation and label the 'differences' as abnormal and grotesque, thus widening the gap between those who follow the 'normal' behavioural patterns and the deviant 'others' referring to those who stand out (Mitra 1999). By doing so, films only legitimise the already existent misconceptions about homosexuality. "Stereotypes are vehicles for getting work done quickly, efficiently and with a lower risk of individual failure because they capitalise on what the audience can buy instantaneously" (Turow 1984: 169).

Fire depicts lesbianism as a commonly assumed *alternative choice*. Despite being a global production, it presents lesbianism as a result of the failure of their heterosexual marriages and the presence of another woman in the house. Lesbianism is offered as a solution to problems within a heterosexual relationship and not as a personal choice based on love. The gradual transition of both Radha and Sita from being in heterosexual relationships to transforming into lesbians due to the former's failure invalidates the independence of a lesbian sexual orientation suggesting that if sexual oppression didn't exist, lesbians as a group would not exist either. *Fire* confirms the need for the existence of men to give rise to a lesbian relationship.

Silence and Ambiguity

'Silence' is an important part of power relations since "Silence allows the lies about what it means to be a woman, to be a lesbian, to function as a form of societal control" (Miller, 1994: 211-212). It does not acknowledge the existence of difference and therefore allows the dominant ideals to take over as the sole ideals. In the case of lesbianism, silence is a way to affirm the power of the heterosexual 'Self' because when this silence is broken, it leads to the homosexual being labelled a deviant (Patton 2000). The inextricable link between silencing and power relations can be substantiated by how Indian cinema refuses to speak of female sexuality and instead works through suggestions and ambiguous representations. Throughout the movie, even though Sita being young and rebellious by nature seems forthright about her sexuality and prefers to be open about her relationship, Radha advises her to keep her identity hidden so as to avoid social rejection. Lesbianism is seen as a private activity throughout the movie as opposed to the love affair between Jatin and his Chinese mistress. There is an open display and acceptance of the illegitimate heterosexual relationship suggesting that it is rather acceptable for heterosexuals to show a public display of affection and to talk about their social lives even though it might be outside of the holy institution of marriage but if homosexuals did so, it would be a flaunting of their deviance. Heterosexual love making occurs without prohibitions of time and space which in a way normalises and endorses heterosexuality (Arora 2006).

Conclusion

Fire, to the naked eye, might seem to have ruptured many of the normative gender and sexual codes that are followed by the traditional Indian society but a deeper scrutiny of the movie can prove that for the most part, it is still not about two women who fall in love with each other but about two unsuccessful heterosexual relationships, the dynamics of a middle class Indian family and is a clear depiction of the sanctioned relationships appropriate to the joint family.

After an in-depth analysis of the films, I feel that at the end of the twentieth century, globalisation in film production and distribution has definitely reshaped the politics of Indian cinema as far as the market is concerned but I still find a great deal of historical, cultural and social attachment in its core aesthetics that somewhat limits the possibilities of a totally revolutionary and empowered depiction of a lesbian's journey.

Globalisation of cinema has always been considered to be a destroyer of tradition as it gave rise to new genres of cinema and a new wave of low budget, transgressive alternate Indian films that attempt to revise hegemonic ideologies (Gokulsing and Dissanayake 2004). In this paper, I contest the popular belief that Globalisation leads to 'Westernisation' and a subsequent destruction of Indian traditions by showing how 'traditional Indianness' in fact appears as a contemporary globalist construction owing to the diasporic Indian need to consume the best of both. Globalisation does not necessarily create two mutually exclusive entities but generates a fine balance between the old and the new, between tradition and modernity and I have taken the specific case of queer representation in *Fire* to show how this is possible. By illustrating the constant interplay of queer and Indian codes, I have thus shown why the local and the global must be seen as harmonious entities and not as antithetical formations and that Globalisation of Indian cinema has actually created a paradox in the representation of lesbianism. In my analysis, I have picked examples from the text that act as reminders of hetero-patriarchy, marriages, female subjugation and that re-use conventional mainstream aesthetic strategies like stereotyping and ambiguity in its portrayal of lesbian women in order to prove that there is certainly a complex interactive exchange between local and global pressures, making Indian cinema an example of the conventional clothed in a new visual language.

By doing so, my hope is to bring up the need to re-define boundaries. Almost everything in our society works according to the mechanism of a binary model. Every observation has been categorically made to fit into either this or that making the division both simplistic as well as unfair. My aim in this paper is to point out the grey areas that get overlooked in this process of polarisation. By taking the specific case of the intersection between globalisation and queer representation, I have shown how unstable the categories of mainstream and alternate cinema are

and thus proven the need to re-consider our frames of references. The overlaps and contradictions in the use of narrative and textual techniques in the two genres of cinema show why Glocalisation would be a better term for interpreting Indian cinema as it allows for a simultaneous accommodation of both local and global processes making the separation between the two obsolete.

Plot: Biji is a widow, who is unable to walk, talk and look after herself, communicates with a bell and lives with two sons, Ashok and Jatin. Ashok is married to Radha who is unable to have children, and Jatin is married to Sita but is in love with a Chinese-Indian girl named Julie. When Julie refuses to marry him as she dislikes joint family life, he is compelled to marry Sita assumedly so she can bear a male child to carry on the family name. Ashok leads life celibacy after becoming a follower of a religious leader, Swamiji, and spends all his free time with him. Jatin has not given up on Julie and continues to have an extra-marital relationship with her. Radha and Sita, shown as neglected wives start spending time with each other and eventually fall in love. Mundu, the servant, passes his free time watching some of the porno movies secretly sold by Jatin to some of his 'special' clients and masturbating, much to Biji's dislike but he is the one who ultimately reveals their clandestine relationship to the head of the family, ashok.

List of names used:

Radha and Sita: protagonists

Jatin: Sita's husband

Ashok: Radha's Husband

Biji: Mother-in-law

Mundu: Servant

Cross-dressing as Cultural Critique: the Work of Morimura Yasumasa

Cross-dressing as Cultural Critique: the Work of Morimura Yasumasa

Dr. Charles Exley

University of Montana

Since his debut in the middle of the 1980s, Morimura Yasumasa has amused audiences worldwide with his digitally manipulated self-portraits. In perhaps his most provocative guise, he poses as glamorous female movie stars from Marilyn Monroe to Greta Garbo, from Catherine Deneuve to Brigitte Bardot. In other work Morimura explores photographs of famous moments in postwar history (both American and Japanese), from Yukio Mishima's infamous speech to Self-Defense Forces before his staged suicide in 1970 to the assassination of Jack Ruby. His work makes the familiar strange, often with humorous results, and sets the stage for an interesting examination of self-portraiture committed to investigating the artistic past, parodying established conventions, and exploring the limits of what I propose to call the aesthetics of impersonation.

In conjunction with the East / West theme of this conference, I begin by examining the relation between East and West in Morimura's collection *Daughter of Art History*, in which Morimura restages and photographs famous works of Western art from Rembrandt to Velasquez by placing his face on those of the main characters. I will focus specifically on a reading of two of Morimura's remakes of Edouard Manet from this collection in order to elucidate the juxtaposition of gender, ethnicity, and geography.

Although Morimura's *Mona Lisa in its Origin* (1998) is perhaps the most familiar of his remakes of Western art, his relation to Manet is especially suggestive. Manet's formation as an artist included reproducing classic works of art from earlier ages, and consequently his works often refer to past masters as they express a modern sensibility. His *Dejeuner Sur L'Herbe* (1863) is famous for the juxtaposition of a nude woman looking provocatively at the onlooker amid fully clothed picnickers. In *Olympia* (1863), Manet remakes the reclining nude of Titian's *Venus of Urbino* (1538), deliberately accentuating the sexuality of the model through accessories (orchid in her hair, necklace, bracelet, slippers). The cat with arched back at the foot of the bed and the servant standing in attendance holding flowers also invoke traditional symbols of sexuality. Morimura restages the work in 1990 by putting his own body in place of the courtesan and the attendant. He maintains the flatness of the room in the original but renders the texture of the wallpaper and drapes a little more luxuriously. The sexually suggestive accoutrements are preserved, but Morimura replaces the courtesan's robe with a Japanese kimono in stand out gold, silver, and red with traditional Japanese themes. Finally, Manet's sexually suggestive cat is

transformed into a *maneki neko*, a porcelain cat placed at shop entrances reputed to bring in customers and good luck.

What does Morimura's remake do to Manet's classic? The two subjects in the artwork now bear Japanese facial features, rendering them twins of a kind. Morimura entitled his work *Twins* (*Futago*, 1990), likely for this reason. The courtesan is now male, unabashedly looking directly at the viewer. The fair-skinned female is now Asian. The symbol of Western art history has been, in a word, reoriented. The iconic oil painting has been reproduced as a photograph. As a self-portrait, the dramatically transformed work suggests Morimura seeing himself in and through the work of Manet. Morimura explains of another remake that "Various realms collide at different angles to create an ambiguous realm which is neither adult nor child, neither a contemporary image nor a historic painting, neither Asian nor Western, and neither woman nor man." (Morimura, *Daughter of Art History* 2003, 120)

Morimura's description of "collision" which is neither A nor B suggests the importance of both A and B, and the distance between the two. Manet's original is still recognizable, but strangely so. At the same time, the collision of Western nineteenth century and Japanese artist in the work is just as ambiguous here, presenting a model (and her attendant) who is neither male nor female (Morimura's covering hand preserves this ambiguity), neither Japanese nor Western, but an assemblage of both. Morimura's remake also transforms the gaze of the courtesan from a leisurely, self-assured, sexually provocative act into a leisurely, self-assured, but playful look. The overt sexuality has been represented as playful, much like the cat in the corner no longer reacts to provocation by the viewer but beckons him or her in to the field of view. Restaging the Manet calls attention to the staged quality already inherent in the oil painting. His own performative self-promotion aggressively drops Manet's work down from its elevated status in the museum in a manner likely to disturb fans of the work. At the same time, this distorted personalization renders the work more accessible. The estrangement experienced with regard to the work forces a second look, a reexamination of the original and its deformation.

A second example comes from Morimura's 1990 recasting of Manet's *Le Bar aux Folies-Bergère* (1882). Manet's original is a showpiece of nineteenth century consumption. A bar girl looks dejectedly out at the viewer, offering him or her to take in the atmosphere of the night club filled with Parisian patrons, aglow with light from chandelier and wall sconces, vibrant with the conversations of patrons, the clinking of glasses, and even the performance of acrobats, visible in the top left corner of the painting. The hostess looks ahead blankly, clearly out of sorts in contrast with the otherwise ebullient mood. Consumable items surround her—a brand of British

beer, a bowl of fruit, champagne—and suggest by association that she too is an object to be consumed. Her nosegay of flowers, already symbolic of sexuality, has been positioned centrally to call attention to her breast. The image behind her, sometimes described as an offset mirror image, may suggest a second moment earlier that evening when she was talking with gentleman to the right.

Morimura remakes this painting in two works entitled *Daughter of Art History (Theater A)* and *Daughter of Art History (Theater B)*, both from 1990. In the first, he puts his face on the three figures in the painting: the two women and the gentleman. He also adds a second pair of hands crossed at the barmaid's chest, as if shielding the bust from the view of the spectator or closing the open blouse of the barmaid.

In the further deconstructed second version of Manet's *Le Bar aux Folies-Bergère*, he swaps the body of the barmaid with his own nude body, reminiscent of the nude in the *Olympia*. The hands of the barmaid are left clinging to the counter, as if severed at the elbow, and wire protruding in place of veins suggests that the hands were artificial to begin with. Morimura accentuates the change in skin tone from the French barmaid to the Japanese photographer, painting his shoulders lily white and the rest of his body brown.

Manet's *Folies-Bergère* is clearly about putting consumption on display; Morimura's work, similarly, is predicated on an active process of consumption, most immediately as a consumption of Manet's painting. His remake of the work literalizes the visual metaphor of seeing oneself in a work of art. As an artist, and as a consumer in postmodern society, consumption of objects is closely linked to the act of seeing and to identity, to seeing oneself consume the object.

These self-portraits suggest a process of reading as consumption that calls attention to the circulation of Western icons in the global consumer marketplace and the commodity status of the work of art. Morimura grew up in Osaka, Japan interested in art in an atmosphere in which art training was equivalent to learning Western art technique. His early encounters with art were not with Japanese masters but with Western masters. He has described this lack of balance with respect to the Western tradition as a kind of deformation, and his own deconstructions of works with which he is intimately familiar is in part a literal expression of his personal engagement with Western art.

The history of consumption of Western art in Japan dates back to the Meiji period when academic instruction in the fine arts began by hiring Western artists to train generations of

Japanese artists. The Japanese artists were, however, always geographically quite distant from the works of art held up as models. Interaction with Western art, then, is itself based on the simulacrum of photographic representations of the canon. Reproductions were the only way to know the 'real' work. The literary magazine *White Birch* made its reputation in the 1910s in part for reproducing famous contemporary paintings of post-impressionists and cubists—in black and white. Japan was quite distant from the prewar Paris or postwar New York City that was the acknowledged center of the art world. It was not until the 1970s that art exhibitions in Japan brought real works to Japanese spectators. Morimura's devotion to the medium of photography reflects his own interests and recalls the particular history of mediation of artwork in Japan.

Morimura's discussion of identity through self-portraiture is also consistent with a more postmodern understanding of the self. In his own words, he prefers to think of identity as an ever-evolving "transformative self" (*henshin gata*) rather than a static interrogation or introspection familiar from romantic or modern eras: "I don't care for the essential investigation version of the self-portrait." (Morimura, *Kūsōteki geijutsuka sengen* 2000, 187)

Creation of the self-portrait is a performance, a dialogue among selves, much like the speaker in a lyric poem can be in dialogue with the writer. Imagining oneself in other guises makes one aware of oneself. Morimura's motto, winking at Descartes, might be "I dress, therefore I am." (*Ware yosou. Yueni, ware ari.*)

Morimura's aesthetics of impersonation (*monomane*) resonates closely with the contemporary moment, flush as it is with simulation of various kinds. Virtual performance has become part of daily life in the karaoke box, avatars are used to stand for real identities in the virtual world of chat and other social media, and games make possible close interaction with everything from pets to partners.

It is especially interesting that impersonation plays a significant role in traditional Japanese culture as well. Men have assumed the role of women in art since Ki no Tsurayuki's *Tosa Diary* (935), and in poetry men have rhetorically taken the persona of a woman lamenting their man who is preparing to go off to battle. The female roles played exclusively by men in Noh drama or the *onnagata* in kabuki also exemplify the specialized performance roles available to men. The long history of this tradition of role-playing suggests that the practice is less shocking in the Japanese context. Morimura's contemporary, ironic version of the mode offers a variant of the practice. That is to say, his impersonation suggests a model of coexistence, of cohabitation between the copy and the original, but this does not imply that the original is always superior. As Morimura himself explains, in many cases if the spectator sees an impersonation first before

learning of the original, it is temporally prior to, and in some ways more significant than, the original.

Impersonation accentuates specific features considered to be characteristic of the original and remakes them as representative of the original. Impersonation thus comments on the original and on how the original is perceived. Morimura gives the following example of this process using Japanese popular culture as a reference:

the television *talento* Korokke, known for his impersonations of Japanese stars and frequent participant in impersonation competitions, did an imitation of glamorous *enka* singer Mikawa Kenichi. The imitation was a great success. Mikawa Kenichi, whose career was experiencing a slack, then imitated Korokke's imitation of Mikawa Kenichi and experienced an upsurge in popularity. The copy was responsible for extending the life of the original. (Morimura, *Kūsōteki geijutsuka sengen* 2000, 84-88) As much might be said of Tina Fey's *Saturday Night Live* remake of American Vice-Presidential candidate Sarah Palin.

Morimura yokes old with new, East with West, and male with female, all with unusual results. In the final analysis, his ever-changing and parodic examination of self and identity through appropriation of famous works of art, film stars, or political events leaves spectators thinking, and often smiling. But it stands more chance of being remembered because his parodies maintain a dialogue with the original work, which often sheds light on the original, and contribute to their longevity through his efforts to visualize history: "In the approximately 500 years since Leonardo painted his *Gioconda* to the present, how many copies, homages, and forgeries have been made of it? One important aim, then, was to give visible form to this long built-up sedimentation of imagery—to wear this 500-year history layer on layer." (Morimura, *Daughter of Art History* 2003, 123)

Abstract

Aim. Attachment and alcohol problems have been linked with alexithymia; a multifaceted personality trait associated with mood regulation difficulties. Other factors such as obsessive thoughts and compulsive drinking behaviours conceptualised as craving, are also considered key factors associated with the loss of control over drinking. The present study investigated the relationship between alexithymia, craving and attachment in an alcohol dependent population. **Method.** 254 patients with an age between 18 and 71 years undertaking outpatient Cognitive-Behavioural Therapy treatment for alcohol dependence were recruited. Participants with a diagnosis of a co-morbid major psychiatric disorder (for example Schizophrenia), organic brain syndrome, alcohol-related medical complications or heavy sedation were excluded. Participants were detoxified prior to assessment and completed the Toronto Alexithymia Scale (TAS-20), the Revised Adult Attachment Scale (RAAS) and the Obsessive Compulsive Drinking Scale (OCDS) as part of a larger study. **Results.** MANCOVA indicated that alexithymic alcoholics reported significantly higher levels of the total OCDS score, obsessive thoughts about alcohol scores as well as the compulsive drinking urges and behavior scores compared to non-alexithymic alcoholics. Path analysis showed that anxious attachment partially mediated the relationship between alexithymia and total OCDS score. **Conclusion.** These findings highlights the importance of alexithymia in relation to craving reporting significantly higher levels of obsessive thoughts and compulsive behaviours related to alcohol in those with combined alexithymia and alcohol dependence compared with alcohol dependence alone. Furthermore, attachment may be a potential treatment target in order to reduce alcohol consumption in those with alexithymia and alcohol dependence.

The term alexithymia was derived from the Greek alexithymos, meaning “no word for moods”. In the 1970s Nemiah and Sifneos (1970) began to investigate cognitive and affective styles in patients with psychosomatic diseases. In 1973 Sifneos introduced alexithymia and described it as a multifaceted construct characterized by difficulties identifying and communicating feelings, difficulties differentiating feelings and somatic sensations of emotional arousal, a diminution of fantasy and imagination and an externally oriented cognitive style (Nemiah, Freyberger, & Sifneos, 1976). Research on alexithymia using empirically validated measures such as the Toronto Alexithymia Scale (TAS-20; Bagby, Parker, & Taylor, 1994) has found significant positive associations between overall alexithymia scores and alcohol problems. Associations between alcohol problems and alexithymia subscale scores, such as Difficulties Identifying Feelings (DIF) and Difficulties Describing Feelings (DDF) have also been found. In general these associations show that alcohol-dependent patients have higher levels of alexithymia than controls (Thorberg, Young, Sullivan, & Lyvers, 2009; Thorberg, Young, Sullivan, Lyvers, Connor & Feeney, in press). Other evidence indicates that those with combined alexithymia and alcohol-dependence experience higher levels of suicidal ideation, longer duration of alcohol abuse, and more severe alcohol problems as measured by the Michigan Alcoholism Screening Test (MAST; Selzer, 1971) compared to those with alcohol-dependence alone (Sakuraba, Kubo, Komoda, & Yamana, 2005; Uzun, Ates, Cansever, & Ozsahin, 2003). Thus, alcoholics with alexithymia appear to suffer from more severe dependency than alcoholics with lower levels of alexithymia or no alexithymia. Given that alexithymia also has the ability to interfere with alcohol treatment outcome (Loas, Fremaux, Otmani, Lecercle, & Delahousse, 1997; Ziolkowski, Gruss, & Rybakowski, 1995) it is important to get a more comprehensive understanding of the relationship between alexithymia and other key factors that have been shown to be associated with the loss of control over drinking including obsessive thoughts and compulsive drinking behaviours conceptualised as craving (Addolorato, Leggio, Abenavoli, & Gasbarrini, 2005).

Until recently craving was considered a symptom of alcohol withdrawal; however, alcohol-related compulsion may still appear after long-term abstinence in the context of cues associated with drinking or having an initial drink (Addolorato et al., 2005; Cibin, 1993). One commonly used measure of craving is the Obsessive Compulsive Drinking Scale (OCDS; Anton, Moak, & Latham, 1995). The OCDS was designed to assess obsessive thoughts about alcohol use and compulsive behaviours toward drinking. To date, only one prospective study (Al Birt, Sandor, Vaida, & Birt, 2008) in a small alcohol-dependent sample ($N = 30$) has investigated alexithymia and used the OCDS as an outcome measure of abstinence. Participants were assessed at intake and at 2-week, 24-week and 48-week follow-up, and the findings indicated that 43.3% of the patients were abstinent at the 2-week and 48-week follow-up. Compared to baseline, at 48-week follow up significant mean differences were found on the TAS-20, DIF and EOT. While the OCDS was utilised as a measure of abstinence and alcohol misuse, the relationship between alexithymia and craving was not specifically examined. For example, differences in craving among those with and without alexithymia were not investigated. Such relationships warrant further investigation, particularly, as craving plays an important role in the pathogenesis of alcohol-dependence and relapse (Addolorato et al., 2005; Bottlender & Soyka, 2004; Kranzler, Mulgrew, Modesto-Lowe, & Bursleson, 1999)

The interpretation of such associations is made easier when these relationships are situated with the context of a broader theoretical framework. Attachment theory could provide such a framework. Attachment theory is an important framework for understanding emotion

regulation where the primary function of attachment is the interpersonal regulation of affective experiences (Shaver & Mikulincer, 2007; Sroufe, 1977). Early attachment theory has proposed that bonding with a caregiver is essential for the development of internal working models for communication, affect regulation and interpersonal functioning (Bowlby, 1973; Sroufe & Fleeson, 1986). These early attachment experiences are related to adult attachment styles and studies have reported relationships between insecure adult attachment and emotion regulation difficulties including alexithymia (Bekker, Bachrach, & Croon, 2007; Hazan, 1987), and between secure adult attachment and a higher capacity for empathy and emotional awareness (Feeney, 1996; Laible, 2007). Alcohol abuse has been hypothesised to be a consequence of alexithymia (Taylor, Bagby, & Parker, 1997) with individuals using alcohol to escape feelings of rejection and establish a “secure attachment base” (Hofler & Kooyman, 1996).

Individuals with a secure attachment style tend to seek social support to cope with emotional stress, whereas insecure individuals may seek other means of affective regulation, such as the use of alcohol (McNally, Palfai, Levine, & Moore, 2003; Thorberg & Lyvers, 2006). Previous cross-sectional research has reported that insecure attachment in adults has been associated with harmful drinking and alcohol use disorders (Cooper, Shaver, & Collins, 1998; McNally et al., 2003; Thorberg & Lyvers, 2006). In addition, attachment theory has been linked to the aetiology and development of alexithymia. Attachment theories have pointed out the importance of significant others in childhood for the development of alexithymia, hypothesising that childhood events such as traumatic experiences and/or a dysfunctional mother-infant relationship may cause alexithymia (Krystal & Krystal, 1988; Nemiah, 1977; Taylor et al., 1997). These hypotheses have been supported by empirical evidence indicating that higher levels of alexithymia were related to a perception of mother’s low care, feelings of being emotionally unsafe during childhood and diminished family expressiveness of emotion (Berenbaum & James, 1994; Fukunishi et al., 1997). A positive association between insecure attachment and alexithymia has also been reported in various samples (Farinelli, Ercolani, Trombini, & Bortolotti, 2007; Scheidt et al., 1999; Wearden, Lambertson, Crook, & Walsh, 2005) including alcohol use disorder populations (De Rick & Vanheule, 2006; 2007). Based on the key role of attachment posited for the development and aetiology of alexithymia and the empirical literature cited supporting this link, we expected that anxious attachment would mediate the relationship between alexithymia and alcohol craving.

Given that the assessment of alexithymia and craving may have clinical benefits such as assisting psychologists in evaluating a patient's alcohol-dependence severity, selecting appropriate treatment approaches, and monitoring behaviour changes throughout treatment (Drobes & Thomas, 1999) further research on these constructs are needed. Therefore the objectives of the present study were to examine the relationships between alexithymia, DIF, DDF, EOT, craving, RCI, OBS, INT, anxious attachment and alcohol problems. Differences on alexithymia, DIF, DDF, EOT, craving, RCI, OBS, INT, anxious attachment and alcohol problems were investigated between those with combined alexithymia and alcohol-dependence and those with alcohol-dependence alone. Finally, anxious attachment was investigated as a potential mediator of the relationship between alexithymia and craving.

Method

Participants

Two hundred and fifty four patients (176 males and 78 females) were recruited from a hospital outpatient Cognitive Behavioural Treatment (CBT) program for alcohol-dependence. Male and female participant mean ages were 36.84 years ($SD = 11.34$) and 39.03 years ($SD =$

9.25), respectively. No incentive for participation was provided. Most patients reported daily drinking (63.7%), 17.9% were binge drinkers and 18.4% drank at least twice a week. The study inclusion criteria included being diagnosed with an alcohol use disorder in accordance to DSM-IV-TR (APA, 2000) criteria. Exclusion criteria included a co-morbid psychiatric disorder (e.g., Bipolar Disorder), organic brain syndrome or heavy sedation.

Measures

Toronto Alexithymia Scale (TAS-20).

The TAS-20 is a 20 item questionnaire that measures an overall alexithymia score as well as a three factor structure consisting of Difficulties Identifying Feelings (DIF), Difficulties Describing Feelings (DDF) and Externally Oriented Thinking (EOT) (Bagby, Parker et al., 1994). Each item is ranked on a 5-point Likert scale and five items are reversed scored with the total score ranging from 20 to 100. A higher score indicates higher levels of alexithymia. Cut-off scores have been established to categorise individuals as alexithymic if the total score was > 61, borderline alexithymic if 52-60, or non-alexithymic if < 51 (Bagby, Taylor, & Parker, 1994). The TAS-20 has shown adequate validity and reliability (Bagby, Taylor et al., 1994; Parker, Taylor, & Bagby, 2003). The Cronbach alphas in the present study were 0.84 for TAS-20 total score, 0.84 for DIF, 0.75 for DDF, and 0.57 for the EOT, respectively.

Obsessive Compulsive Drinking Scale (OCDS).

The OCDS is a 14 item scale that measures obsessive thoughts about alcohol use and compulsive behaviours toward drinking (Anton et al., 1995). To date, several factor structures have been tested in alcohol misusing populations (see Connor, Jack, Feeney, & Young, 2008). The present study utilised a three factor model (see Roberts, Anton, Latham & Moak, 1999) including an overall OCDS score as well as three subscales: Resistance/Control Impairment (RCI) assessing impaired resistance and control over drinking-related cognitions and impulses, Obsessions (OBS) measuring the frequency and impact of alcohol-related cognitions and drives, and Interference (INT) assessing how alcohol cognitions interfere with functional aspects of life. Each item is ranked on a 4-point Likert scale and higher scores indicate higher obsessions and compulsions with drinking alcohol. The OCDS has displayed acceptable psychometric properties (Anton et al., 1995; Connor et al., 2008). The Cronbach alphas in the present study were 0.92 for OCDS total score, 0.83 for RCI, 0.87 for OBS, and 0.78 for INT, respectively.

Revised Adult Attachment Scale (RAAS)-Anxiety.

The RAAS (Collins, 1996; Collins & Read, 1990) is an 18 item scale that was designed to measure adult attachment dimensions. It has three subscales, Close, Depend and Anxiety. However, given that the focus of the present study was on anxious attachment only the Anxiety subscale was utilised. Each item is scored on a 5-point Likert scale. The RAAS has shown adequate psychometric properties (Collins, 1996; Goldman & Anderson, 2007). The internal consistency of the Anxiety dimension in the present study was acceptable with a Cronbach alpha of 0.89.

Alcohol Use Disorders Identification Test (AUDIT).

The AUDIT is a 10 item measure developed to assess alcohol problems. The first seven items are rated on a 5-point Likert scale and the last two items on a 3-point Likert scale (Babor, Higgins-Biddle, Saunders, & Monteiro, 2001). The overall AUDIT score ranges from 0 to 40. A total score of 0-7 indicates low risk drinking, 8-15 hazardous drinking, 16-19 harmful drinking and 20 or higher dependent drinking. The AUDIT has shown sound reliability and

validity in various populations (see Reinert & Allen, 2007). The Cronbach alpha for AUDIT total score in the present study was 0.80.

Measure of Abstinence

Abstinence rate was assessed by the use of Alcohol Timeline Followback (TFLB; Sobell & Sobell, 1996), Breathalyzer (BAL), and monthly aspartate aminotransferase (AST), Gamma glutamyl transferase (GGT) and Carbohydrate deficient transferrin (CDT) levels (Allen, Sillamauke, & Anton, 1999).

Procedure

Participants were given information about the study, and if they wanted to participate were asked to complete a consent form and self-report questionnaires. Less than 10% of those offered a treatment program declined participation. All patients were abstinent for a minimum of seven days prior to assessment to avoid confounding the results due to acute alcohol or drug withdrawal effects. Participants were informed that their data would remain confidential and anonymous. The study took place outside scheduled treatment sessions, and clinical staff was available if any of the subjects required assistance in reading items or clarifying questions. The measures were completed as part of a larger study.

Data Analyses Methods

The first set of analyses included the calculation of Cronbach alphas and intercorrelations for the following scores: the TAS-20 total score and TAS-20 subscales (DIF, DDF, EOT), the OCDS total score and OCDS subscales (RCI, OBS, INT), the RAAS-Anxiety subscale and the AUDIT. The second set of analyses involved comparing TAS-defined alexithymia groups (alexithymic, non-alexithymic) on OCDS, OCDS subscales (RCI, OBS, INT), RAAS-Anxiety, and the AUDIT. A series of hierarchical regression analyses was conducted to establish the mediating effect of anxious attachment (RAAS-Anxiety) on the relationship between alexithymia (TAS-20 total score) and craving (OCDS total score) (dependent variable) in line with Baron and Kenny's (1986) mediational model.

In order to test for mediation, a series of criteria must be met. The predictor variable needs to be significantly correlated with the dependent variable and the predictor variable also has to be significantly correlated with the mediator. The mediator needs to be significantly related to the dependent variable even after controlling for the independent variable. If the predictor variable is no longer significantly correlated with the dependent variable after controlling for the mediator, a perfect mediation is established. If only the first three criteria are met this indicate a partial mediation (Baron & Kenny, 1986). To safeguard for the effect of measurement error, the Cronbach alphas of mediators was inspected to ensure adequate internal consistency (see Kenny, 2009).

Results

Intercorrelations

Relationships between the TAS-20 scales, OCDS scales, RAAS-Anxiety and AUDIT scale were examined by means of Pearson product-moment correlation coefficients across all participants (see Table 1). With respect to alexithymia groups 32.4 % of the sample was categorized as alexithymic, 25.4% as borderline alexithymic and 42.3% as non-alexithymic.

Group Comparisons

A two-way multivariate analysis of covariance (MANCOVA) was conducted with the independent variable of alexithymia group (alexithymic, non-alexithymic), the covariate of age, and the dependent variables TAS-20, OCDS, RIC, OBS, INT, RAAS Anxiety and AUDIT scores. The multivariate effect of TAS group was significant, $F(6, 225) = 60.69, p = .0001$, whereas the multivariate effect of age was not, $F(6, 224) = 1.08, p = .374$. Univariate effects of TAS group were significant for TAS-20 total score, $F(1, 232) = 355.53, p = .0001$; OCDS total score, $F(1, 232) = 14.27, p = .0001$; RCI, $F(1, 232) = 10.35, p = .001$; OBS, $F(1, 232) = 10.86, p = .001$; INT, $F(1, 232) = 11.61, p = .001$; RAAS-Anxiety, $F(1, 232) = 29.18, p = .0001$; and AUDIT, $F(1, 232) = 7.43, p = .007$. As shown in Table 2, compared to non-alexithymic alcoholics, alexithymic alcoholics scored significantly higher on TAS-20 total score, OCDS total score, RIC, OBS, INT, RAAS-Anxiety and AUDIT. Gender was excluded as an independent variable in the MANCOVA as a Chi-square test indicated that there was no significant gender difference between alexithymia groups ($\chi^2(1) = 3.02, p < .082$).

Mediational Analysis

To investigate the hypothesised path model a set of regression analyses were undertaken to examine the mediational effect of anxious attachment in the relationship between alexithymia and craving. Barron and Kenny's (1986) mediational analytic scheme was utilised (see Data Analyses Methods section). First, a single logistic regression analysis found a significant relationship between the predictor variable total TAS-20 and the dependent variable OCDS, $F(1, 250) = 36.18, p < .0001$, accounting for 12.6% of the variance ($R^2 = .126, p < .0001$). Second, a significant relationship was found between the predictor variable TAS-20 and the mediator RAAS-Anxiety, $F(1, 248) = 55.94, p < .0001$, accounting for 18.4% of the variance ($R^2 = .184, p < .0001$). Third a multiple regression analysis was performed with TAS-20 and RAAS-Anxiety to examine the mediational effect of RAAS-Anxiety, $F(2, 244) = 23.16, p < .0001$, indicating that both TAS-20 ($\beta = .28, t(2) = 4.26, p < .0001$) and RAAS-Anxiety ($\beta = .20, t(2) = 3.02, p < .003$) showed univariate significance (see Table 3). Given that the first three conditions of Barron and Kenny's model were met, but not the fourth criterion, these findings indicate that RAAS-Anxiety partially mediated the relationship between the TAS-20 and the OCDS.

Discussion

Our results yielded positive significant associations of alexithymia, DIF, DDF, with OCDS and its subcomponents; RCI, OBS and INT and highlight the importance of alexithymia and difficulties identifying and describing feelings in relation to the preoccupation, obsessions and compulsive behaviours regarding drinking in an alcohol-dependent sample of outpatients. By contrast, the TAS-20 EOT facet was only weakly positively correlated with the Interference factor of the OCDS suggesting that an externalised thinking style may not be as important for strong obsessions and intrusive thoughts about alcohol.

We also found that the prevalence rate of alexithymia in the present population was 32.4%, with 25.4% having sub-clinical levels of alexithymia and 42.3% no alexithymia. These prevalence rates are slightly lower than those reported in previous alcohol studies with prevalence rates of 48-67% if alcohol-dependent individuals classified as alexithymic (Loas et al., 1997; Uzun et al., 2003), but still concordant with other evidence among individuals with alcohol use disorders (see Thorberg et al., 2009). Furthermore, those with combined alexithymia and alcohol-dependence scored significantly higher on the OCDS and its sub-dimensions compared to those with alcohol-dependence alone. This finding suggests that alcoholics with clinical levels of alexithymia experience a significantly higher level of intrusive cognitions and drives about alcohol as well as an impaired ability to control these thoughts and impulses compared to non-alexithymic alcohol-dependent patients. This result extends present knowledge of alexithymia in alcohol use disorders and is consistent with

previous findings that have indicated that those with combined alexithymia and alcohol-dependence experience more severe alcohol problems than their non-alexithymic counterparts (Evren, Dalbudak, Durkaya, Cetin, & Evren, 2010; Sakuraba et al., 2005; Uzun et al., 2003). This claim was further substantiated by the present results showing that alexithymic alcoholics reported significantly higher levels of alcohol problems and dependence severity as measured by the AUDIT than non-alexithymic alcoholics. This study is the first investigation (to our knowledge) of potential differences in alcohol dependence severity among alcoholic alexithymia groups using the AUDIT, a well recognised measure of alcohol problems (see Reinert & Allen, 2007) and as such extends previous findings from other alcohol studies (Evren et al., 2010; Uzun et al., 2003).

Compared to those with no alexithymia, the alexithymic patients in this study also reported higher levels of OCDS-Interference (INT) in their daily functioning and activities due to alcohol-related thoughts, ideas, impulses and images related to drinking. This finding indicates that those with combined alexithymia and alcohol-dependence experience significantly more impairment in relation to social and work-related functioning, which may be associated with a lower quality of life (QoL). We thus speculate that OCDS-Interference might be a mechanism that partly explains the reported relationship between DIF and QoL in a recent study on QoL investigating alexithymia and the temperament and character inventory in an alcohol-dependent sample (Evren et al., 2010). The study by Evren and colleagues reported that the alexithymia facet; DIF was associated with impaired quality of life. Evren and colleagues concluded that potential factors that may mediate the relationship between DIF and QoL are at present unknown. We suggest that craving may be a viable candidate mediator of this relationship. Hence, research examining the OCDS-Interference factor as a mechanism of the relationship between DIF and QoL appears warranted.

As expected, positive moderate correlations were found between alcohol problems (AUDIT) and the OCDS, including all of the OCDS sub-scales. This finding is consistent with previous research that has reported significant positive associations between the OCDS, alcohol consumption and alcohol-dependence severity (Anton et al., 1995; Bohn, Barton, & Barron, 1996; Kranzler et al., 1999). Furthermore, significant positive associations of all OCDS scores and anxious attachment were evident. To date, there has been scarce research in relation to craving and attachment in alcoholic populations with the present results indicating that higher levels of insecure attachment are associated with more preoccupations and a stronger desire for alcohol. In addition, alexithymic alcoholics reported significantly higher levels of anxious attachment compared to their non-alexithymic counterparts in line with previous alcohol research (De Rick & Vanheule, 2006; 2007). However, unlike the studies by DeRick and Vanheule (2006; 2007) who utilised the Bermond Vorst Alexithymia Questionnaire (BVAQ; Vorst & Bermond, 2001), which is a questionnaire that was developed relatively recently and is regarded as needing further validation (see Lumley, Neeley, & Burger, 2007), we extended these previous findings and used the TAS-20, an extensively researched measure of alexithymia.

The present study also explored whether anxious attachment mediated the relationship of alexithymia with craving. The results suggested that higher levels of alexithymia lead to a stronger desire for alcohol that was partially mediated by anxious attachment. This result is an important finding, because it suggests that an underlying mechanism of impairment in affect regulation (alexithymia) is compromised attachment, which appears to lead to a craving for alcohol. Given that the Anxiety scale of the RAAS measures insecure attachment as related to a current or previous relationship and relationship quality, these findings suggest that worries

about being rejected, not cared for or unloved lead to an increased craving for alcohol. One explanation for this mediational relationship may involve the effect of stress that may significantly contribute to relapse in those with substance use disorders (Sinha & Li, 2007).

This study has several limitations. First, the cross-sectional design does not allow for an examination of cause and effect, thus whether alexithymia and craving are a consequence or cause of alcohol-dependence could not be elucidated; longitudinal research is required to address this issue. Second, previous evidence has attested to relationships of negative affect with alexithymia and craving (Sinha & Li, 2007; Thorberg et al., 2009) and some potential overlap between these constructs with anxiety and depression may have influenced the present results and should be included as covariates in future studies.

The results of the present investigation have highlighted potential important implications for clinical practice. Given the strong relationship between alexithymia and craving as well as the mediational effect of anxious attachment in the present study, we suggest pre-treatment assessment of alexithymia status, craving and attachment that may provide a more comprehensive overview of potential treatment targets in alcoholic patients. Targeting anxious attachment might potentially lead to lower levels of craving and help improve social and work related functioning and quality of life.

Taken together, the results of the present study have supported important relationships of alexithymia, DIF and DDF in relation to alcohol craving and found significantly higher levels of obsessive thoughts and compulsive behaviours related to alcohol, as well as alcoholism severity in those with combined alexithymia and alcohol-dependence compared with alcohol-dependence alone. In addition, this study has identified a key mechanism; anxious attachment that partially explained the relationship between alexithymia and alcohol craving. These findings lend support to the importance of anxious attachment in elucidating the effect of alexithymia on craving in those with combined alexithymia and alcohol-dependence. Future research should investigate whether interventions aimed at anxious attachment may reduce alcohol consumption and dependence severity.

Topic of Submission: Psychology, Cognitive Science and the Behavioral Sciences

Abstract

The present study is Study 2 of the research whose focus is a cross-cultural study between Japanese and Korean office workers about a social behavior called “self-disclosure”. An extensive literature review revealed that hierarchical interpersonal relationships and drinking situation are important cultural characteristics viewed in Japanese and Korean societies. Study 1 quantitatively investigated the effects of 4 factors, namely, topic, status difference of the target person of self-disclosure in the workplace, drinking situation and culture on the level of self-disclosure. The participants were 194 Japanese office workers and 102 Korean office workers. The result of the research indicated that the above four factors influenced the level of self-disclosure of both Japanese and Korean office workers in various manners. In general, a purpose of cross-cultural research in the field of psychology is to scientifically examine how various socio-cultural factors affect an individual’s behavior internally as well as externally. In order to achieve this goal, Study 2 explored the meanings of “self-disclosure,” “communication with coworkers” and “drinking situation” for the participants in Study 1. In Study 2 a qualitative approach was used, and the data were analyzed by content analysis method called “KJ method”. Through data analysis some common themes emerged from the Japanese and Korean participants. For example, categories named “Function and Purpose”, “Perception”, “Emotion”, “Attitude” and “Context and Actual Condition” emerged as themes, and many of the subcategories under each theme were commonly observed in two countries. However, the result revealed that there were some significant differences which reflected different socio-cultural characteristics between Japan and Korea.

1. Introduction

“Self-disclosure” is a psychological term which was introduced by clinical psychologist, Sydney Jourard (Jourard & Lasakow, 1958). It is defined as “the process of making oneself known to the other person; the other person is the target person to whom information about oneself is communicated”. In the early years of research self-disclosure was regarded as a personality trait, and the focus of research was to examine the relationship between self-disclosure and other personality traits. Here, a question is that although seeing self-disclosure as a personality trait emphasizes a function within the individual, it tends to ignore its interpersonal function, which eventually makes it difficult to understand self-disclosure behavior as a process of interpersonal relationships (Ando, 1995).

In order to understand self-disclosure as a process, focusing on the contexts surrounding individuals and their behavior is vitally important. As far as human beings are social

animals, individuals' behaviors will naturally change depending on the context they are in. Concerning the issue of context, Malinowski (1949) pointed out two kinds of context: one is called "context of situation" and the other is called "context of culture". The former indicates the context existing behind a certain behavior, and the latter indicates socio-political and historical backgrounds of that behavior.

Concerning "context of culture", what has to be noticed is that over the past few decades, a considerable number of cross-cultural studies have been made on self-disclosure between the U.S. and other countries in the world. However, little attention has been given to commonalities and differences in self-disclosure among Asian countries. Supporting the findings of the cross-cultural studies done in the past, Muramoto (2003) argues that in discussing cultural differences, it is important to give attention to the "relationship" of the people rather than a category, such as "Americans", "Japanese", etc. Moreover, Takai (1999) criticizes the tendency of the field of psychology which tends to look at interpersonal behavior as a personality trait. According to Takai, Japanese people generally make much of the context where their communication is occurring rather than the content of communication itself. Therefore, if context is not taken into consideration in conducting a research on Japanese people's behavior, it will be impossible to examine Japanese cultural characteristics which underlie their behaviors.

Under these circumstances, the present researcher conducted a cross-cultural study on self-disclosure between Japanese and Korean office workers (Nakagawa, 2003). "Contexts of culture" focused in this study were Japan and Korea, and "context of situation" were hierarchical interpersonal relationships in the company and drinking situation as an occasion of self-disclosure. The reason why these two contexts were focused is that an extensive review of literature revealed that these two factors were important socio-cultural characteristics seen in both Japanese and Korean societies. The result of Study 1 suggested that statuses of the target persons of self-disclosure in the participants' companies, namely, superior, colleague and subordinate of same sex in a friendly relationship, and drinking situation had a great influence on the content and level of their self-disclosure.

A purpose of cross-cultural study in the field of psychology is to examine the process of influence which various socio-cultural factors have on psychological aspects and behavior of the people with different cultural backgrounds. On the other hand, understanding various phenomenon obtained only by a quantitative study is not desirable because such an approach is likely to oversimplify the issue concerned (Kikuchi, 1979). Following this

rationale, a purpose of the present study is to investigate the meanings of “self-disclosure”, “conversation with coworkers” and “drinking situation” for Japanese and Korean office workers.

2. Method

2-1. Participants and Research Method

There were 296 participants overall. Among these, 194 (120 men & 74 women) were Japanese office workers working for the Japanese companies in Japan and 102 (92 men and 10 women) were Korean office workers working for the Korean companies in Korea. The average ages of the Japanese and Korean participants were 36.49 ($SD=9.98$) and 33.08 ($SD=4.78$), respectively. They were the same participants who participated in Study 1 conducted by the present researcher (Nakagawa, 2003). In Study 2 the participants were asked to complete a sentence by adding some words to each of the following 3 incomplete sentences: Item 1) “For me, talking about myself is ...” Item 2) “For me, conversation with my coworker is ...” and Item 3) “For me, drinking situation is” Here, the participants could write more than 2 sentences for each item. The questionnaire was constructed in Japanese and translated into Korean for the Korean participants.

2-2. Data Analysis

About Item 1, 188 out of 194 Japanese participants (96.9%) answered while 96 out of 102 Korean participants (94.1%) did. About Item 2, 189 Japanese (97.4%) answered while 98 Koreans (96.1%) did. About Item 3, 190 Japanese (97.9%) answered while 99 Koreans (97.1%) did. Back-translation technique was conducted for the Korean participants’ responses and the data were analyzed by a content analysis method called “KJ method” (Kawakita, 1967). First, all the obtained responses were divided into a meaningful phrase, and each phrase was written on a separate card. Then, all the phrases were categorized into small groups with a similar meaning. If one person gave more than two responses with similar meanings, they were counted as one answer. The number of effective responses for each item was follows: (Item 1) <Japan> 282, <Korea> 94; (Item 2) <Japan> 338, <Korea> 103; and (Item 3) <Japan> 322, <Korea> 93. Finally, the small groups obtained through this process were categorized into larger groups. Two graduate students were asked to classify all the cards into the categories created by the present researcher. In order to check reliability of classification, Cohen’s Kappa (Cohen, 1960) was conducted (Table 1). The result was discussed by the two raters and the researcher, and necessary adjustment was made about the item whose Kappa was under .600 .

Table 1

	Japan	Korea

Item 2	.919	.855
Item 3	.588	.512

3. Results and Discussion

3-1. Item 1: Meaning of Self-disclosure (Figs. 1 & 2)

First of all, Derlega and Grzelak (1979) presented 5 functions of self-disclosure as follows: (1) expression, (2) self-clarification, (3) social validation, (4) relationship development and (5) social control. On the other hand, Enomoto (1997) presented 6 motives of self-disclosure: (1) consultation, (2) emotional release, (3) pursuit of intimacy, (4) pursuit of understanding and empathy and (5) release from anxiety.

As indicated in Fig. 1, in the Japanese case most responses were aggregated into the category called “Function and Purpose of Self-disclosure”. In the Korean case most responses were aggregated into “Function and Purpose of Self-disclosure” as well as “Emotion for Self-disclosure”. It is worth noting that such subcategories as “promoting understanding and empathy”, “emotional release” and “self-clarification” were obtained in both Japan and Korea, and these were consistent with the concepts presented by Derlega and Grzelak (1979) and Enomoto (1997). Over 60 % of the responses in both Japan and Korea were about “promoting understanding and empathy” and among them more than 50 % were about “receiving understanding from others”. Through these results it became clear that the participants of the present study regarded self-disclosure as a function of promoting understanding from others.

Ando (1986) argues that among the 5 functions of self-disclosure “expressing emotion”, “self-clarification” and “social validation” play important roles in the inner process of an individual, while “social control” and “function of adjusting intimacy and privacy” play important roles in the process of interpersonal relationships. Based on this concept, it follows that in the Japanese case about 30 % of the responses was related to the inner process of an individual, while the rest of 70 % is concerned with the process of interpersonal relationships. On the other hand, Fig. 2 indicated that in the Korean case

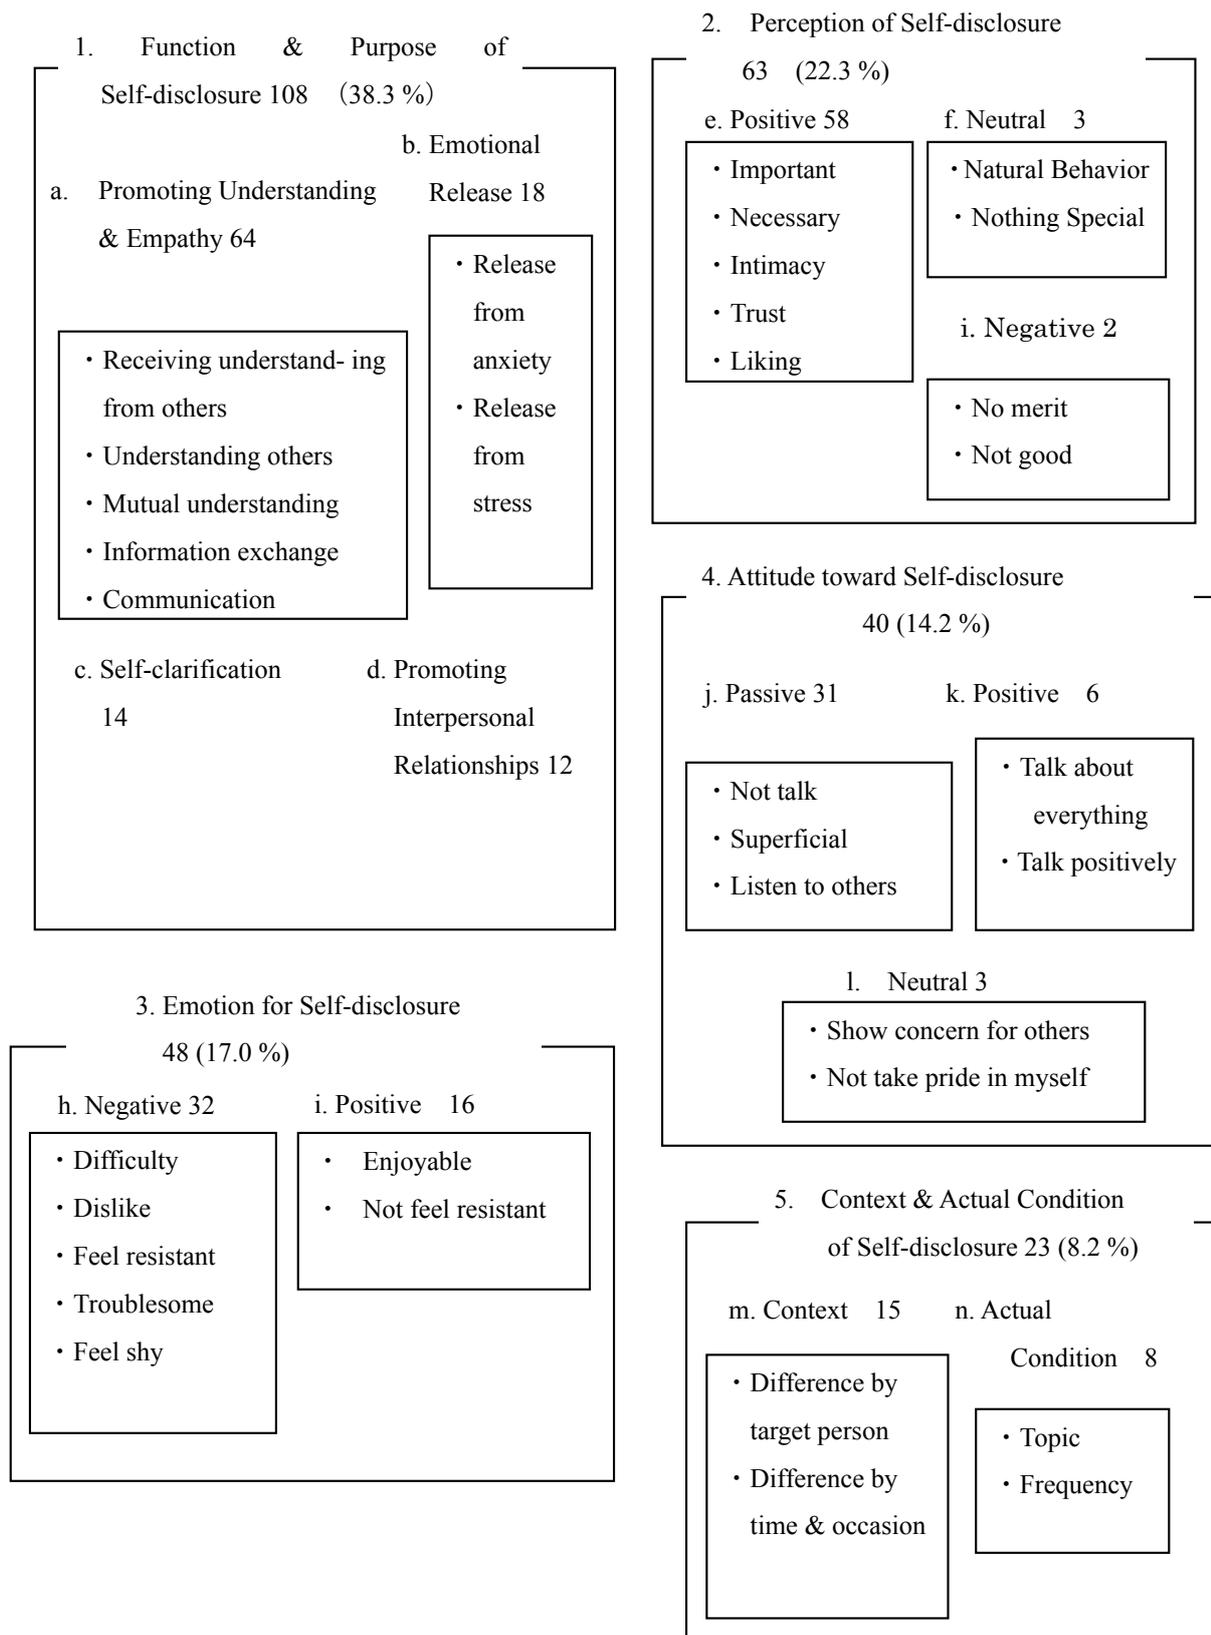

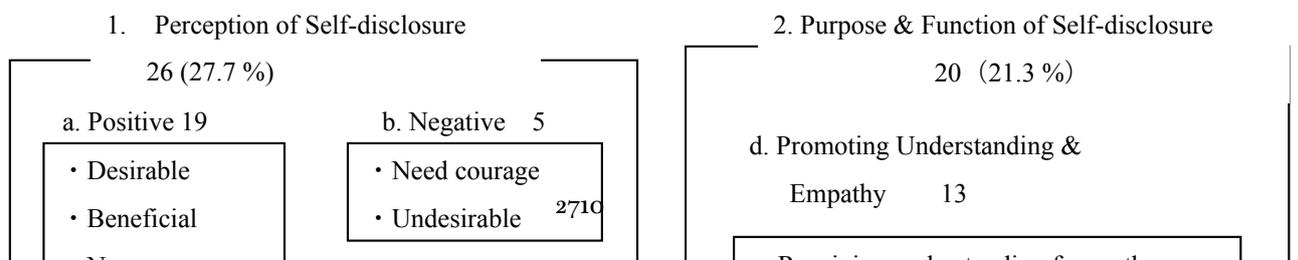

Fig. 1 : Result of Item 1 (Talking about Oneself) [Japan]

- Release from Anxiety
- Release from stress

4. Context & Actual Condition
of Self-disclosure 18 (19.1 %)

l. Actual Condition 11 m. Context 7

- Difference by target person
- Difference by time & occasion

about 35 % is related to the inner process of an individual, while the rest of 65 % is to the process of interpersonal relationships. From these results we can infer that on the whole

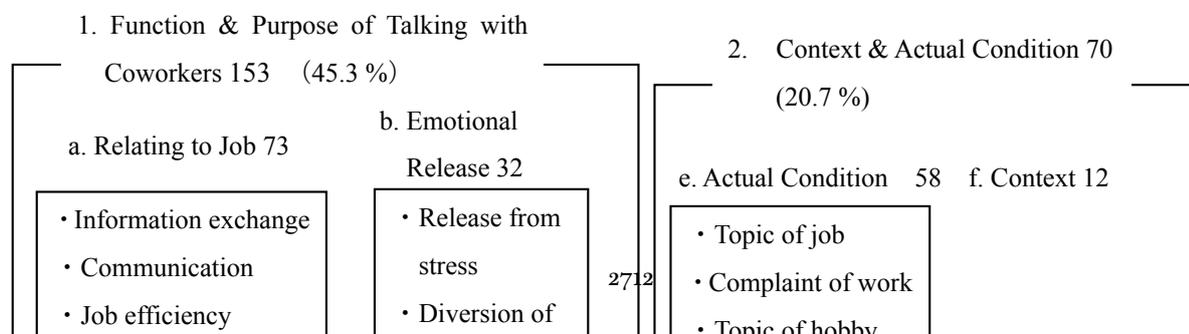

the participants in this study showed higher awareness of the interpersonal function of self-disclosure. The important point to note is that the responses concerning “promoting interpersonal relationships” appeared only in the Japanese case, and that the percentage of the subcategories which were related to the process of interpersonal relationships in Japan exceeded that of Korea. It follows from this that compared to the Korean participants, Japanese participants showed more concern for the function of interpersonal relationships in self-disclosure.

Concerning “Perception of Self-disclosure”, it became clear that both Japan and Korea had a positive perception of self-disclosure. To the contrary, a pattern for “Emotion for Self-disclosure” was opposite. In both Japan and Korea negative responses exceeded over 60% of the entire responses. Likewise, about “Attitude toward Self-disclosure” negative responses exceeded positive responses. These results lead to a conclusion that although the participants perceived self-disclosure positively, mostly they had a negative feeling and attitude for talking about themselves.

Finally, about “Context and Actual Condition of Self-disclosure” the Japanese participants gave more responses about “context”, while more responses about “actual condition” were given by the Korean counterparts. It was pointed out previously that the responses concerning “promoting interpersonal relationships” appeared only in the Japanese case. This result and the result that Japanese participants gave more responses about “context” seem to suggest that compared to the Koreans, Japanese people in this study had a stronger sense of interpersonal orientation and field-dependence.

3.2 Item 2: Meaning of Conversation with Fellow Workers (Figs. 3 & 4)

In both Japan and Korea, most responses were aggregated into “Function and Purpose”, and many of them belonged to the subcategory called “Relating to Job”. Because the participants were asked to imagine their coworkers as conversation partners, this result seems to be natural. One difference between Japan and Korea is that in the Japanese case responses concerning “Release from Stress” and “Diversion of Mind” occupied over 80% of the entire responses, but no such response was obtained from the Korean participants. On the other hand, in the Korean case all the responses consisted of “Soothing one’s troubled thoughts” and “Consulting one’s troubles”. On the other hand, there was no response about “Consulting one’s troubles” in the Japanese case. All these results made it

- Difference by conversation partner
- Difference by context & occasion
- After-five

- Do not complain
- Keeping same stance

h. Positive 10

- Talk about everything
- Listen & talk well

- Extension of work
 - No special meaning

1. Function & Purpose of Conversation

with Coworkers 25 (24.3 %)	
<p>a. Relating to Job 9</p> <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <ul style="list-style-type: none"> • Information exchange • Job efficiency </div> <p>c. Emotional release 6 ²⁷¹³</p>	<p>b. Promoting interpersonal relationships 8</p> <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <ul style="list-style-type: none"> • Mutual understanding • Constructing interpersonal Relationships • Friendship </div>

clear that conversation with coworkers had a catalysis function for the Japanese participants, while it had a counseling function for the Korean counterparts. Such functions as “Promoting Understanding and Empathy”, “Promoting Interpersonal Relationships” and “Emotional Release”, which were seen in the result of Item 1, also emerged here. Concerning “Perception of Conversation with Coworkers”, it became clear

that as seen in the result of Item 1, both Japanese and Korean participants had a positive perception. A similar pattern was seen in “Emotion for Self-disclosure”. To the contrary, concerning “Attitude toward Self-disclosure” about 70% of the Japanese responses and about 60% of the Korean responses showed negative attitude toward conversation with coworkers. Here, “Being Harmless” and “Being Formal” were key words. In addition, responses relating to “Being a good listener” emerged only from the Japanese participants. This result appear to reflect Ishii’s “*Enryo · Sasshi Model*” (Ishii, 1987). According to Ishii, when they talk, Japanese people adopt a communication style called “*Enryo* (being reserved)”, and when they listen to the other person, they use a style called “*Sasshi* (reading between the lines)”.

Finally, in “Context and Actual Condition” both Japanese and Koreans gave comments on job-related topics. Again, as conversation partners in this study were participants’ coworkers, this result seems to be quite natural. Another difference between Japan and Korea was reflected in the other topics they talked with their coworkers. For example, “health” and “love” were the topics pointed out only by the Japanese participants. On the other hand, “politics” was the topic pointed out only by the Korean participants. In Study 1, among the 7 topical categories, such as “Hobby and Tastes”, “Job”, “Family”, “Attitude and Opinions”, “Money” and “Body”, “Attitude and Opinion”, “Attitude and Opinion” including the topic of “politics” was the topical category talked about well by the Korean participants. The result of the present study supported the above finding of Study 1.

As one of the common points, both Japanese and Korean participants stated that their self-disclosure would change depending on the target person. Such key words as “friend”, “fellow” and “intimacy” emerged here. In Study 1, the levels of self-disclosure for 3 target persons in different rank in their work place were examined, and the total average obtained by 5 Likert type scale was not so high (Japan= 2.44, Korea =2.71)^{*1)}. It should be concluded, from what has been said above, that the participants understood the functions and importance of communicating with their coworkers and had a positive feeling when talking; however, even if they have a friendly relationship with their coworkers, they do not engage in a deep level of conversation with their partners.

3-3. Item 3: Meaning of Drinking Situation (Figs. 5 & 6)

As seen in the results of Items 1 & 2, most responses of both Japanese and Koreans were aggregated into “Function and Purpose”, and many of them belonged to the subcategory named “Emotional Release” which included “Release from stress”, “Diversion of mind”,

“Soothing one’s troubled thoughts”, etc. The result of the survey conducted by the Ministry of Labor of Japan indicated that 48% of the Japanese male subjects reported “drinking” as a way of releasing fatigue and stress (Hirao, 1993). However, an important point to note is that as seen in “release from stress” and “soothing one’s troubled thoughts”, besides the effect of alcohol, talking about oneself in a drinking situation has a function of counseling. In general, “money”, “personality” and “body” are regarded as the topics of high privacy. The result of Study 1 showed that the levels of self-disclosure about these private topics were higher in a drinking situation for all 3 target persons in their work place. It may be possible to say that the finding of the present study may help account for this result of Study 1.

Let us consider differences between Japan and Korea concerning “Function and Purpose of Drinking Situation”. First of all, concerning “Emotional Release”, some Japanese participants said, “A drinking situation gives me a chance to do anything. It also gives me the time for relaxation” or “I can express myself and my personality more freely in a drinking situation”. As one example of “Positive Attitude” in “Attitude toward Drinking”, the Japanese expression, “*bureiko* (being allowed to be rude)” emerged from the Japanese participants. This kind of response could not be seen in the Korean participants’ responses. On the other hand, a response, such as “We should observe manners even when drinking” was obtained only from the Korean participants.

Moreover, concerning “Promoting Understanding and Empathy” in “Function and Purpose of Drinking Situation”, the Japanese expression, “*honne*” emerged only from the Japanese participants’ responses, which occupied 34 % of the entire responses. “*Honne*” means “true feeling” and it indicates “our honest opinion or feeling which is usually hidden in daily life”. Some Japanese participants said, “In a sense, drinking situation is a place to open our mind”, or “It is an occasion where we can see privacy of our coworkers and their *honne*”. A point to note is that a similar response was not given by the Korean participants. The result of Study 1 showed a higher level of the Korean participants’ self-disclosure than the Japanese counterparts. Therefore, it was expected that the responses concerning “*honne*” would also emerge from the Korean participants, but it did

1. Function & Purpose of Drinking		2. Attitude toward Drinking	
167 (51.7 %)		58 (18.0 %)

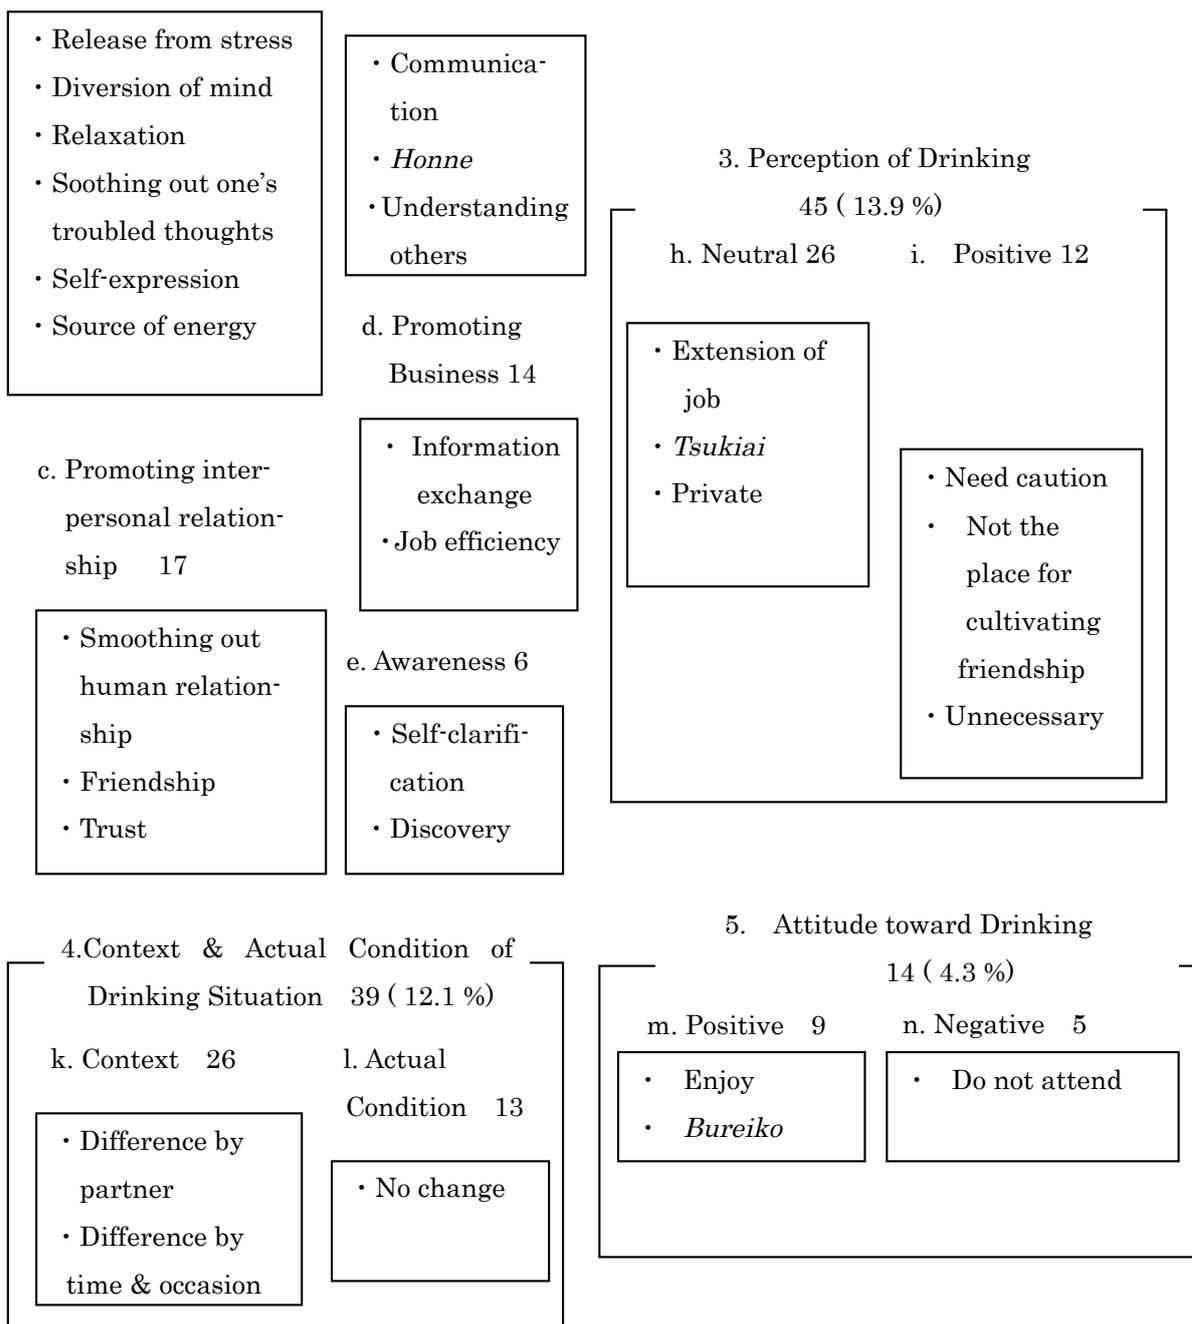

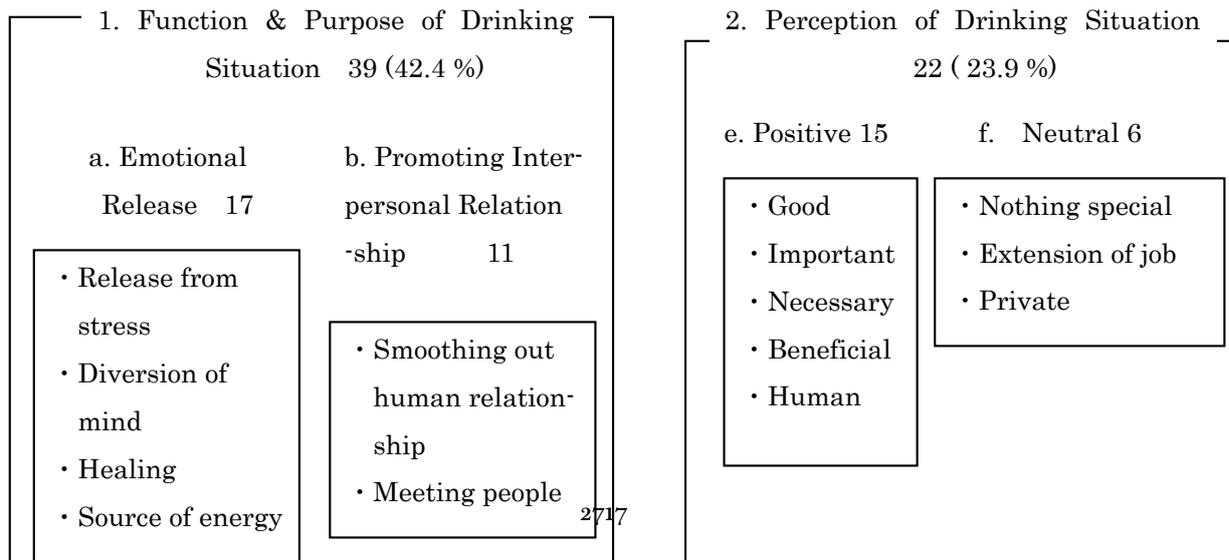

Fig. 5: Result of Item 3 (Meanings of Drinking Situation) (Japan)

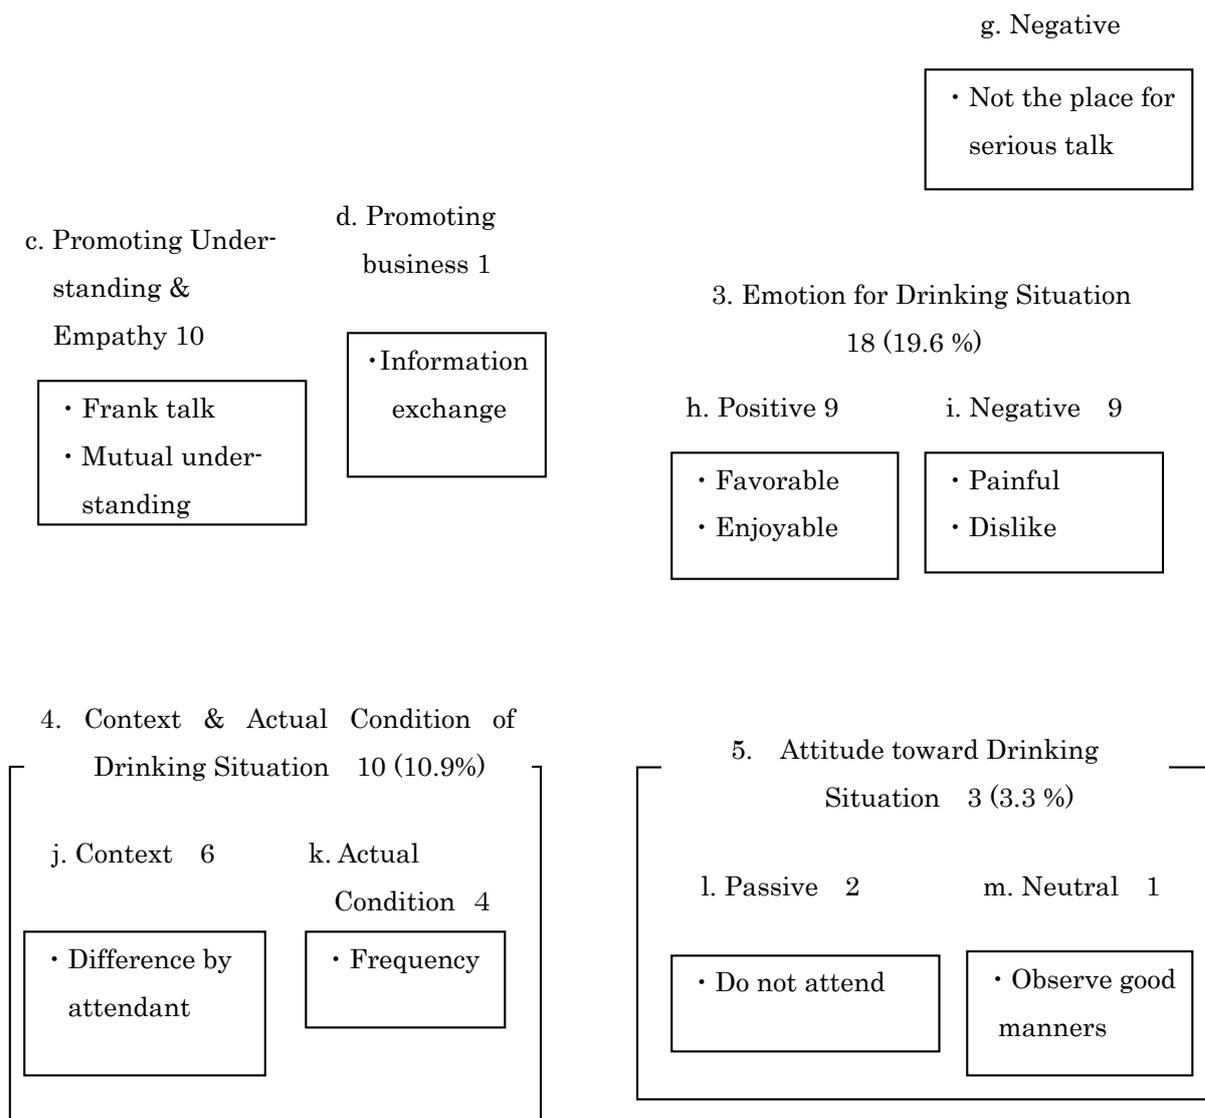

Fig. 6: Result of Item 3 (Drinking Situation) [Korea]

not. Concerning this, Osaki (1998) points out that Koreans, in general, depend highly on verbal expressions. He further argues that they are self-assertive, like debating and seeing things in black and white. There is a Japanese expression called “*tatemae* (external pretense). In Japan, “*honne*” and “*tatemae*” are often used as a set in daily conversation. “Song-Maum” and “Bon-Sim” are Hangul which are equivalent to “*honne*”, but it is said that there is no expression which is equivalent to “*tatemae*” in Hangul. For Koreans it is considered natural to express their opinions and feelings freely in public. Thus, “talking about one’s *honne*” means that he/she had hidden his/her true voice until then, which tends to give a negative image to their communication partner (J. Kim, personal communication,

Nov. 10, 2009).

It became clear from the result of Study 1 that for both Japanese and Koreans the level of self-disclosure was higher in a drinking situation and that in both drinking and non-drinking situations, the Koreans' levels of self-disclosure were significantly higher than those of the Japanese. From this result and the findings of the present study, it is possible to interpret that Koreans tend to depend on verbal communication more than Japanese. Hall (1976) presented the concepts of high context culture (HC) and low context culture (LC). Verbal communication and other explicit codes are more prevalent in LC cultures such as the United States and northern Europe. On the other hand people from HC cultures are more affected by contextual cues. According to Hall, both Japan and Korea belong to high context culture. However, from the result of this study it seems reasonable to say that the level of HC of the Korean participants was lower than that of the Japanese counterparts. Moreover, the fact that responses concerning "*honne*" were obtained only from the Japanese participants may mean that compared to the Korean participants, the impact of drinking situation which will give on verbal communication is greater for the Japanese participants.

Another difference between Japanese and Koreans was how they perceive drinking situation. In the category called "Perception of Drinking Situation" about 60% of the Japanese responses was neutral, while close to 70% of the Korean responses was positive. Also, 65% of the Japanese responses showed that the Japanese participants regarded drinking situation as "extension of work" or "*tsukiai* (obligatory occasion which office workers are encouraged to have with their coworkers after work)". There was only one similar response given by the Korean participant. From this result it follows that compared to the Koreans, the Japanese in this study regarded drinking situation as a more job-related event.

3-4. Examination of the Relationships between Levels of Drinking and Participants' Responses

In the present study 86.6% of the Japanese participants (168) and 98% of the Korean participants (100) reported that they had a chance to go out for drinking with their coworkers after work. For the demographic information the participants were asked to report their level of drinking by 4 Likert type scale, namely, "do not drink at all", "drink a little", "drink" and "drink a lot".

In the beginning, the relationship between the level of drinking and the participants' positive and/or negative responses obtained in "Perception of Drinking", "Attitude toward

Drinking” and “Emotion for Drinking” was examined. In the Japanese case, 60.4% of the participants who gave positive responses reported that they “drink” or “drink a lot”, while 61.1% of the participants who gave negative responses reported that they “drink a little” or “do not drink at all”. On the other hand, 60% of the Korean participants who gave positive responses reported that they “drink” or “drink a lot”, while 50.0% of the participants who gave negative responses reported that they “drink a little” or “do not drink at all”. From these results it became clear that the participants who drink to a certain extent showed a positive perception, attitude and feeling for drinking situation.

Next, the relationship between the level of drinking and the subcategory called “Emotional Release” obtained in “Function and Purpose of Drinking Situation” was examined. The result of the analysis showed that 89.4% of the Japanese participants who gave the responses concerning “Emotional Release” reported that they “drink a little” or “drink.” Also, all of the Korean participants who gave the responses concerning “Emotional Release” reported that they “drink a little” or “drink.” From these results it became clear that a moderate drinking would bring a catalysis effect.

4. Conclusions

The present study investigated meanings of “self-disclosure”, “conversation with coworkers in their workplace” and “drinking situation” for the Japanese and Korean office workers. As a result of the data analysis, such categories as “Function and Purpose”, “Perception”, “Emotion”, “Attitude” and “Context and Actual Condition” emerged in all three items asked in the questionnaire. As a commonality between Japan and Korea, the subcategories obtained in “Function and Purpose of Self-disclosure”, namely, “Promoting Understanding and Empathy”, “Emotional Release” and “Self-clarification” were consistent with the functions and motives of self-disclosure pointed out in the literature. In addition, it was found out that both Japanese and Koreans had a positive perception, a negative emotion and a negative attitude for talking about themselves. They had a positive perception, a positive emotion and a negative attitude for conversation with coworkers. Finally, common subcategories, such as “Promoting Understanding and Empathy”, “Emotional Release”, “Relating to Job” and “Promoting Interpersonal Relationships” emerged as function and purpose of drinking situation. They also had a positive perception of drinking situation. On the other hand, concerning “Function and Purpose of Self-disclosure”, such response as “Promoting Interpersonal Relationships” was obtained only from Japanese. Also, concerning “Context and Actual Condition”, the responses pointing out the relationship between self-disclosure and context were seen only in the Japanese case. From these results the possibility that Japanese are more

interpersonally-oriented and field dependent was suggested. The result of Study 1 done by the present researcher suggested that the Korean participant's level of self-disclosure was significantly higher than that of the Japanese counterparts, and in Study 2 the response relating to "honne" was found only in the Japanese case. From these results it was suggested that the Japanese people's level of high context is larger than that of the Koreans. About the topic of self-disclosure, "politics" was pointed out only by the Koreans, and this result supported the tendency seen in the result of Study 1. Finally, the analysis of the relationship between the participants' level of drinking and their responses revealed that a certain amount of drinking yielded positive responses from the participants, and a moderate amount of drinking brought them a catalysis effect. Miyahara (2002) pointed out that till now Japanese and Koreans had been categorized into the same category of "Asians", and their commonalties and differences in social behavior had not been clearly identified so far. It is hoped that the present study will serve a help to a better understanding of the characteristics of Japan and Korea, and more detailed cross-cultural studies will be conducted about the social behavior specifically of the people in Asian countries.

*Note:

1) Because of a small number of Korean female participants, only male data were analyzed in Study 1. However, the average scores of the entire participants were not high, either (Japan: 2.41, Korea: 2.68).

Abstract

Few researchers have investigated the developmental processes of probabilistic judgment with a wide range of age groups. This study analyzes differences in the processes of probabilistic judgment between children and adults.

In this study, 22 kindergartners, 26 second-year elementary school students, 35 fifth-year elementary school students, 47 third-year junior high school students, and 47 university students in Japan answered the following question: “Taro and Hanako play at dice. They throw their own normal six-sided die. If Taro throws a one, he will win. If Hanako throws a six, she will win. Who is more likely to win when they throw a die, or is it the same?” The correct answer is the same.

The proportion of correct answers was 18%, 27%, 91%, 87%, and 100%, respectively. It generally increased with age, and the differences were significant between participants. Fewer kindergartners and second-year elementary school students answered correctly, while the proportion of correct answers reached approximately 100% by the fifth grade. Characteristic answers among the kindergartners and second-year elementary school students included “I thought it is the same since both of them (Taro and Hanako) just lost” and “Hanako is more likely to win because six is larger than one,” respectively.

Kindergartners and second-year elementary school students tend to judge the result on the basis of the results of actual dice-throwing and the number of dice, respectively, and not probability, while fifth-year elementary school students, third-year junior high school students, and university students can judge probabilistically. These results are consistent with Piaget and Inhelder’s study (1951/1975), that claimed that by age eleven or so, children understand the characteristics of probability systematically.

Keywords: Probabilistic judgment; Children; Adults; Cognitive processes; Development

1. Introduction

Piaget and Inhelder (1951/1975) reported the existence of the following three successive periods in the origin of the idea of chance in children:

During the first period, the pre-operational stage (up to approximately seven years of age), there is neither an idea of chance nor of probability. In the second period, the concrete operational stage (seven to eleven years), ideas appear in concrete operations. In the third period, the formal

operational stage (from eleven years), the idea becomes organized in formal operations.

Piaget and Inhelder (1951/1975) focused on clarifying the developmental processes of the idea of chance mainly in the first and second periods. Therefore, it is important to conduct studies to investigate the developmental processes of mental operations, which are essential to quantify probability, after the idea of probability is acquired at the formal operational stage.

Itoh (2009a) focused on the developmental processes of mental operations in the third period. She discovered that the attained level of mental operations to quantify probability differed between third-year junior high school and university students. She identified the developmental stages of the students' quantification operations for probability as follows:

Stage IA: Basic first-order quantification of probability

Stage IB: First-order quantification of probability with additive composition

Stage IIA: Basic second-order quantification of probability

Stage IIB: Second-order quantification of probability with additive composition

Stage IIIA: Quantification of basic conditional probability

Stage IIIB: Quantification of Bayesian conditional probability (p.263)

According to Itoh (2009a), many third-year junior high school students remain at stage IA, while many university students reach stage IIA.

One of the most active topics in recent researches on probabilistic reasoning is the rationality of human beings. Judgments under uncertainty had been believed to be rational (e.g., Phillips & Edwards, 1966). However, the view of humans' rationality has been reversed since the 1970s. Tversky and Kahneman (e.g., 1974), in research on judgment under uncertainty, introduced a major approach known as the heuristics-and-biases approach. According to this approach, predictions under uncertainty are often mediated by cognitive heuristics that violate the laws of probability such as Bayes' Theorem. Bayesian reasoning, using the theorem, is a kind of conditional probabilistic reasoning, which has been found to be extremely difficult even for adults. Many researchers have discussed how people make judgments under uncertainty. However, most of them appear to focus on adults' probabilistic reasoning, and there seem to be few researches conducted from a developmental perspective. In other words, it seems that few researchers have investigated the developmental processes of probabilistic judgment with a wide range of age groups.

This study, therefore, reveals how children and adults judge probability. Situations that are familiar to both adults and children are required to investigate the developmental processes of probabilistic judgment with a wide range of age groups. Thus, a situation where two children play with dice was used in this study. This is because not only adults but also young children appear to be familiar with dice.

2. Method

2.1. Participants

Kindergartners, second-year elementary school students, fifth-year elementary school students, third-year junior high school students, and university students in Japan were chosen as participants to investigate the developmental processes of probabilistic judgment with a wide range of age groups. The participants included

22 kindergartners (mean age = 5 years 7 months, $SD = 7$ months), 26 second-year elementary school students (mean age = 8 years 0 months, $SD = 3$ months), 35 fifth-year elementary school students (mean age = 10 years 11 months, $SD = 3$ months), and 47 university students (mean age = 19.6 years, $SD = 3.2$ years) who responded to two problems—Comparison-of-P(1)-and-P(6) Problem (in a playing-with-dice situation) and Probability Conservation Problem (in a playing-with-lots situation)—as noted in section 2.2.

47 third-year junior high school students (mean age = 14.3 years, $SD = 0.5$ years) answered the Comparison-of-P(1)-and-P(6) Problem, while 44 third-year junior high school students (mean age = 14.3 years, $SD = 0.5$ years) answered the Probability Conservation Problem.

In Japan, students learn probability in the second year of junior high school¹. Therefore, in general, the kindergartners, second-year elementary school students, and fifth-year elementary school students had never learned probability as part of their formal education, while the third-year junior high school students and the university students had already learned it.

2.2. Problems

The results of the two problems are discussed in this study. One problem is the Comparison-of-P(1)-and-P(6) Problem (in a playing-with-dice situation), while the other is the Probability Conservation Problem (in a playing-with-lots situation) (Itoh, 2009b). The problems were presented to the participants as parts of a series of reasoning problems. The results of the Probability Conservation Problem are referred to compare with those of the Comparison-of-P(1)-and-P(6) Problem.

2.2.1. Comparison-of-P(1)-and-P(6) problem (in a playing-with-dice situation)

The participants answered the following question:

“Taro and Hanako play at dice. They throw their own normal six-sided die. If Taro throws a one, he will win. If Hanako throws a six, she will win. Who is more likely to win when they throw a die, or is it the same?”

The correct answer is the same. The reason is $P(1) = P(6) = 1/6$, that is, the probability of getting each side is $1/6$ regardless of the number of die.

¹ The course of study for junior high school mathematics in the Education Ministry curriculum guidelines, retrieved on January 15, 2010, from http://www.mext.go.jp/b_menu/shuppan/sonota/990301/03122602/004.htm

2.2.2. Probability conservation problem (in a playing-with-lots situation)

The participants answered the following question (Itoh, 2009b):

“Taro and Hanako are to draw lots. Taro has a bag that contains one large winning chip and two large losing chips. (The size of Taro’s chips is the same.) Hanako has a bag that contains one small winning chip and two small losing chips. (The size of Hanako’s chips is the same.) Who is more likely to draw a winning chip, or is it the same?”

The correct answer is the same. The reason is that although the size of the chips differed between Taro’s and Hanako’s bags, the chip size is an irrelevant factor to the probabilistic judgment in this situation. In other words, the chip size has no effect on the probability of drawing a winning chip.

2.3. Procedure

A series of probability problems were presented to the kindergartners, the second-year elementary school students, and the fifth-year elementary school students in a survey interview, and to the third-year junior high school students and the university students in a written format. They were instructed to answer questions.

3. Results

In the following sections, the responses of more than one participant from at least one age group are discussed.

3.1. Comparison-of-P(1)-and-P(6) Problem (in a Playing-with-Dice Situation)

The proportion of correct answers was 18%, 27%, 91%, 87%, and 100%, respectively (Table 1). It generally increased with age, and the differences were significant between participants, $\chi^2(4, N = 177) = 91.92, p = .00$. Fewer kindergartners and second-year elementary school students answered correctly, while more fifth-year elementary school students, third-year junior high school students, and university students answered correctly, $p < .05$.

The most frequent wrong response type among the kindergartners was “others”; the second one was “actual trial.” This response is based on the results of actual dice-throwing, which was based on the reasoning that “I thought it is the same since both of them (Taro and Hanako) just lost.”

The most frequent wrong response type among the second-year elementary school students was “number of dice.” It is a response that is based on the number of dice. It included “Hanako is more likely to win because six is larger than one” and “Taro is more likely to win because one is the first number.” The second most frequent wrong response type among the second-year elementary school students was the “actual trial.” It included “I threw a two in throwing the die at first, and the two is closer to the one; so, Taro is more likely to win.”

The most frequent response type among the fifth-year elementary school students and

third-year junior high school students was the correct answer. The proportion of correct answers reached approximately 100% by the fifth grade; all the university students answered correctly.

Other response types that have not been mentioned above are explained as follows:

Three second-year elementary school students answered on the basis of the features of the dice, which included the reasoning that “Hanako is more likely to win because the side of a one is red. Its color is different from that of the other sides because the other sides are black. So, it is easy to find the side of a one. The die thinks that it is red, and it is able to stop rolling.”

Two kindergartners and one second-year elementary school student answered on the basis of the features of the throwers. It included “Taro is more likely to win because he is a boy” (a kindergartner) and “Taro is more likely to win because he is a boy and powerful.” (a second-year elementary school student)

Two kindergartners, one second-year elementary school student, and one fifth-year elementary school student appeared to have guessed the result. For example, one kindergartner judged that “Taro is more likely to win” but could not explain the reason behind this judgment.

Table 1

Distribution of Response Types in Comparison-of-P(1)-and-P(6) Problem *N (%)

	Kindergart- ners	Second-year elementary school students	Fifth-year elementary school students	Third-year junior high school students	University students
Correct (“The same”)	4(18)	7(27)	32(91)	41(87)	47(100)
Number of dice	2(9)	7(27)	2(6)	0(0)	0(0)
Features of dice	0(0)	3(12)	0(0)	0(0)	0(0)
Features of throwers	2(9)	1(4)	0(0)	0(0)	0(0)
Guess	2(9)	1(4)	1(3)	4(9)	0(0)
Actual trial	4(18)	6(23)	0(0)	0(0)	0(0)
Others	5(23)	0(0)	0(0)	0(0)	0(0)
“I don’t know,” No answers	3(14)	1(4)	0(0)	2(4)	0(0)
Sum	22(100)	26(100)	35(100)	47(100)	47(100)

3.2. Probability Conservation Problem (in a Playing-with-Lots Situation)

In this section, the results of the Probability Conservation Problem are compared with those of the Comparison-of-P(1)-and-P(6) Problem. The data, excluding that of the university students, are derived from Itoh (2009b).

The proportion of correct answers was 18%, 35%, 74%, 84%, and 98%, respectively (Table 2). It increased with age, and the differences were significant between participants, $\chi^2(4, N = 174) = 65.63, p = .00$. Fewer kindergartners and second-year elementary school students answered correctly, while more third-year junior high school students and university students answered correctly, $p < .05$.

The most frequent wrong response types among kindergartners were “others” and “size of chips.” The “size of chips” is a response based on the chip size. It included “Taro is more likely to draw a winning chip because his winning chip is larger.”

The most frequent wrong response type among the second-year elementary school students was the “size of chips.”

The most frequent response type among the fifth-year elementary school students, third-year junior high school students, and university students was the correct answer.

Other response types that have not been mentioned above are explained as follows:

Two kindergartners, two second-year elementary school students, and one fifth-year elementary school student answered on the basis of the features of the drawers, that is, the features of the persons who drew a chip from the bag. It included “Both Taro and Hanako because both of them look wise” and “Taro because Hanako is a crybaby.” As these examples illustrate, the features of the drawers are sometimes not mentioned in the problem and are often imagined by children.

Table 2

Distribution of Response Types in Probability Conservation Problem *N (%)

	Kindergartners	Second-year elementary school students	Fifth-year elementary school students	Third-year junior high school students	University students
Correct (“The same”)	4(18)	9(35)	26(74)	37(84)	46(98)
Size of chips	8(36)	15(58)	8(23)	2(5)	0(0)
Features of drawers	2(9)	2(8)	1(3)	0(0)	0(0)
Others	8(36)	0(0)	0(0)	5(11)	1(2)
Sum	22(100)	26(100)	35(100)	44(100)	47(100)

Note. The number and percentage of responses, excluding that of the university students, are from “Developmental study on principle of conservation: Conservation of probability,” by T. Itoh, 2009b, *Proceedings of the poster session presented at the 20th annual meeting of the Japan Society of Developmental Psychology*, p.618.

3.3. Cross Analysis between Comparison-of-P(1)-and-P(6) Problem and Probability Conservation Problem

With regard to the kindergartners, the proportion of correct answers for the Comparison-of-P(1)-and-P(6) Problem, 18% (4 out of 22), was not significantly different from the proportion of correct answers for the Probability Conservation Problem, 18% (4 out of 22), $p = 1.00$ (Table 3).

Table 3

*Cross Analysis between Comparison-of-P(1)-and-P(6) Problem and Probability Conservation Problem (Kindergartners) *N*

		Probability Conservation Problem		
		Correct ("The same")	Wrong	Sum
Comparison-of-P(1) -and-P(6) Problem	Correct ("The same")	3	1	4
	Wrong	1	17	18
	Sum	4	18	22

With regard to the second-year elementary school students, the proportion of correct answers for the Comparison-of-P(1)-and-P(6) Problem, 27% (7 out of 26), was not significantly different from the proportion of correct answers for the Probability Conservation Problem, 35% (9 out of 26), $p = .69$ (Table 4).

Further, 71% (5 out of 7) of the second-year elementary school students who answered on the basis of the number of dice in the Comparison-of-P(1)-and-P(6) Problem responded on the basis of the chip size in the Probability Conservation Problem.

In other words, they answered on the basis of factors irrelevant to probabilistic judgment—the appearance of dice and chips in both problems.

Table 4

*Cross Analysis between Comparison-of-P(1)-and-P(6) Problem and Probability Conservation Problem (Second-year Elementary School Students) *N*

		Probability Conservation Problem		
		Correct ("The same")	Wrong	Sum
Comparison-of-P(1) -and-P(6) Problem	Correct ("The same")	5	2	7
	Wrong	4	15	19
	Sum	9	17	26

With regard to the fifth-year elementary school students, the proportion of correct answers for the Comparison-of-P(1)-and-P(6) Problem, 91% (32 out of 35), was not significantly different from the proportion of correct answers for the Probability Conservation Problem, 74% (26 out of

35), $p = .07$ (Table 5).

Table 5

4. Discussion

4.1. Correct Answers

The proportion of correct answers generally increased with age in the Comparison-of-P(1)-and-P(6) Problem. This demonstrates that the same probabilistic problem does not always pose the same difficulty for children and adults. The difficulty of a problem depends on the age—cognitive development of the participants. In addition, the results indicating that the proportion of correct answers for the Comparison-of-P(1)-and-P(6) Problem was not significantly different from the proportion of correct answers for the Probability Conservation Problem in all age groups reveal that the Comparison-of-P(1)-and-P(6) Problem is as difficult as the Probability Conservation Problem.

4.2. Features of Processes of Probabilistic Judgment

4.2.1. Kindergartners

The most frequent wrong response type among the kindergartners was the “others,” responses that appeared in the case of one participant in the Comparison-of-P(1)-and-P(6) Problem. However, no “others” appeared in the case of the second-year elementary school students, fifth-year elementary school students, third-year junior high school students, or university students. This suggests that responses among young children tend to be chaotic and diverse, but such responses converge into the correct answers as age increases. In addition, the second most frequent wrong response type among the kindergartners was the “actual trial.” It suggests that although they are required to judge the probability (likelihood) that events will happen in the future, they tend to judge them on the basis of observed experiences that happened in the past and not on the basis of probability. Judgment based on actual trials is not probabilistic because probability is a possibility that something “will” happen.

4.2.2. Second-year elementary school students

The most frequent wrong response type among second-year elementary school students was the “number of dice.” It shows that second-year elementary school students tend to judge on the basis of factors irrelevant to probabilistic judgment—the appearance. The results suggest that children around this age begin to judge probability (likelihood). However, the fact that the second most frequent wrong response type among second-year elementary school students was the “actual trial” suggests that their probabilistic judgment is still primitive and incomplete.

4.2.3. Fifth-year elementary school students

The most frequent response type among fifth-year elementary school students was the correct answer. The proportion of correct answers reached approximately 100% by the fifth grade. This suggests that children around this age can judge probability in simple situations. The results are consistent with Piaget and Inhelder’s study (1951/1975), that claimed that by age eleven or so,

children understand the characteristics of probability systematically.

4.2.4. Third-year junior high school students

The most frequent response type among third-year junior high school students was the correct answer. The proportion of correct answers for the Comparison-of-P(1)-and-P(6) Problem, 87%, was not significantly different from 72%, the proportion of correct answer for P(2) problem (Itoh, 2009a), where the probability of getting a two in dice-throwing situations is to be judged, $\chi^2(1, N = 79) = 2.92, p = .09$. In other words, the proportion of correct answers for the Comparison-of-P(1)-and-P(6) Problem is consistent with that of P(2) problem, where the quantification of probability, $P = 1/6$, is directly required.

4.2.5. University students

The most frequent response type among university students was the correct answer because all the university students answered correctly. The proportion of correct answers for the Comparison-of-P(1)-and-P(6) Problem, 100%, was not significantly different from 98%, the proportion of correct answer for the P(2) problem (Itoh, 2009a), $p = 1.00$. In other words, the proportion of correct answers for the Comparison-of-P(1)-and-P(6) Problem is consistent with that of the P(2) problem, where quantification of probability, $P = 1/6$, is required directly.

Although there were not many differences in the results of the Comparison-of-P(1)-and-P(6) Problem between the third-year junior high school students and university students, the attained level of mental operations to quantify probability differs between third-year junior high school students and university students (Itoh, 2009a) as noted in the introduction.

5. Conclusion

In conclusion, the processes of probabilistic judgment differed between young children and adults. Responses among young children tend to be chaotic and diverse, but such responses converge into the correct answers as age increases. Kindergartners and second-year elementary school students tend to judge on the basis of the results of the actual dice-throwing and the number of dice, respectively, not probability, while the fifth-year elementary school students, third-year junior high school students, and university students can judge probabilistically.

Most of the recent researches on probabilistic reasoning appear to focus on adults' cognitive processes, and there seem to be few researches conducted from a developmental perspective. This study suggests the importance of a developmental perspective in researches on probabilistic judgment. Developmental studies may illuminate the fundamental properties of cognitive processes in probabilistic judgment.

Sociology and Geography

Mapping the Geographical Distribution of Duanfen Markets

Tung-Yiu Stan Lai

Introduction

This essay is originated from the study on the vernacular architecture in South China. However, a cross-disciplinary approach composed of spatial studies (architecture, urban morphology, and geography) and anthropological studies (society, culture, and economy) is adopted. Buildings compose the urban fabric of a settlement, and the settlements further form the urban geographical pattern of a region. Any ordering structure on these levels of space, if existing, is the reorganization of environment according to the social, cultural, and economic forms of the people. This study intends to search for the spatial order on geographical level and its transformation in response to the changes in human organizations.

Urban morphology emphasizes the form of market in terms of its urban fabric (market layout). Nitz discusses on the distribution of different types of market place and town in terms of layout in East-Central Europe.¹ This approach also regards market as an origin of town. Conzen accounts one of the pre-urban nucleus forms of the Havel towns in Germany as rural farmers' market sites, developed gradually with the trade and agricultural activity of their population, exhibited no sharp outer boundary.²

On the other hand, anthropologist Skinner is interested in the distribution of markets and the patterning of marketing behavior. Specialized in the rural marketing in China, he states that marketing structures inevitably shape local social organization and provide one of the crucial modes for integrating myriad peasant communities into the single social system. (Skinner 1964, 6) Applying Christaller's economic geographical approach regarding market as central place, he also assumes that the economic function of a settlement is consistently associated with its position in marketing systems which are themselves arranged in a regular hierarchy. (Skinner 1964, 8-9) Based on Skinner, Baker further regards market as a locus for rural lineages by linking up the spatial hierarchy of marketing system with the social structure of extended kinship organizations.³ Following all these approaches, "rural market", usually as the core of a town surrounded by villages, is defined as a spatial form in terms of its distribution (marketing system), fabric (market layout), and architecture (market building) representing the social and economic structures.

This essay, by mapping the geographical distribution of markets before 1940s, aims at understanding how the rural markets in Duanfen were founded during the period when the state gave way to civil power to dominate the economic order and town planning in the rural part of South China. The focus

¹ The two types of market place constituting the town layout as discussed by Nitz are a market street as its axis, and a grid plan or chequerboard plan with a central market place. (2001, 81)

² Another origin of the Havel towns stated by Conzen is the local lord putting his castle precinct at the disposal of church. (2004, 84)

³ See, "therefore, we should expect that the strongest lineages would have been found at the lower end of the rural-urban continuum, that is, at the level of the village and the standard marketing community. ... It is above the level of the standard marketing community that we are likely to find the higher-order lineage and the clan." (Baker 1997, 509)

is to understand the founding of markets in different periods and locations which reflects the competition between the clans.

The findings upon the study can be categorized into two main aspects. Firstly, the decline of some original markets during the modern times is found, mainly due to the development of infrastructures. Secondly, a deeper understanding of the factors behind the distribution of markets is obtained. Other than the natural geography, economy, and transportation usually recognized, the “order of distance” maintained by clanship power in association with local government in Qing period was found to be also influential to the micro-distribution of markets.

Methodology

This essay in general employs Skinner’s method of market mapping developed from Christaller’s Central Place Theory. Each town is regarded as a central place with similar accessibility with its neighbours; hence travelling distance forms the most crucial factor of market locations. Any point with closer distance from a market than another falls within its “marketing area”. (Skinner 1964, 1965a, 1965b) However, minor population occupying such hilly regions is assumed. Therefore, after setting the extent of study as Duanfen, regions with altitude higher than 50m PD are excluded due to the density of villages there dropping substantially. With the use of “marketing area”, the changes in power among the clans in the region can be quantified. This forms an objective tool to understand the reasons behind the distribution of markets.

Such mapping in different periods is carried out in order to understand the changing economic and urban structures through time since the 17th century (Qing Dynasty), Republican period, until 1940s (Japanese Occupation and the later Communist period). However, the search for market hierarchy from central market, intermediate market, standard market, to minor markets emphasized by Skinner (1964, 1965a, 1965b) is out of the scope of this study. As the focus is the dynamic evolution of the marketing areas through time, this study starts with assuming all markets on the same level.

Geography of Duanfen

The current Duanfen Town, Taishan County Level City, Guangdong Province in South China is set as the geographical extent of this study. Duanfen is often mentioned in different local records as a town with high density of markets, that is 11 markets in 149km², during the Republican period.⁴ It shares many typical characteristics of the Siyi Region.

Regarding natural geography, Duanfen is surrounded by hilly areas mainly at its north, west, and south. Two valleys of Duanfen River and Datong River run in south-north and east-west directions respectively. Regarding water transportation, the rivers exit its southeast boundary and further link to the nearby South China Sea. Highway systems were built throughout the town during the Republican period, and Sunning Railway with the closest station Doushan at its eastern neighbouring town was also built to link up Duanfen with northern part of Taishan County. Regarding the population, according to the map of ROC, the density of villages matched with the distribution of markets. The density of villages in the areas far from the markets was obviously sparse. Most of the villages have been resided by clans of a single surname. Among these clans, the Meis and the Chens share about 1/5 and 1/9 of the total population of Duanfen respectively.

⁴ Like other regions in South China, the markets in Duanfen are called “xu 墟”, “shi 市”, or “bu 埠” in Chinese.

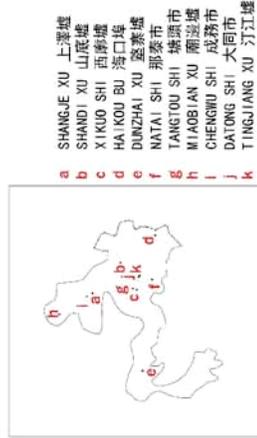

Figure 5. Transformation of the marketing areas in Duanfen.

Transformation of the Geographical Distribution of Markets⁶

1. Shangje Xu of Chens founded before 1545

This essay assumes that Shangje Xu was founded before 1545 (Ming Dynasty).⁷ The founder was Chen clan, who is the currently second largest surname in the town. It is assumed that the Chens were also one of the several largest surnames in the 16th century. It is estimated that the market was located close to the existing Chens' villages at that time.

2. Shandi Xu of Meis founded in 1771

Shandi Xu is currently the town centre of Duanfen where the government is located. The founder was Mei clan, and their earliest recorded ancestor was Mei Yunqing, who first came to Duanfen in the 14th century (Ming Dynasty). As he and some of his descendants were the regional officials of Ming or Qing dynasties, it is believed that Mei clan has been quite powerful and prosperous in Duanfen since then. It is currently the largest surname in Duanfen. Since Mei Yongqing's residence in Fengshan (the mount next to Shandi Xu) in 1372, this area became the base of Mei clan where their villages, ancestral halls, and graves were built. From this base they have further spread with villages, ancestral halls, and graves spanning over the region among the current Shandi Xu, Haikou Bu, Tangtou Shi, and Shangje Xu. Possibly the Meis have already been the strongest clan of Duanfen overwhelming the Chens since the 17th century, so they tried to found a new market after Chen clan. This might also have resulted in the conflict with the Chens.

There was a local rumour that the first market of Mei clan was originally called Jangshan Xu and was planned near Shangje Xu of Chens. However, for some reasons, it was relocated to the current Shandi Xu further southeast and closer to the clan's base in 1771. Local resident Mei Youchun (1983, 62) says that such relocation was due to fengshui reason, but Mei Yimin (1984, 71) says that this was because of the expulsion by Chen clan.⁸ Shangje Xu residents Wu Bingwang and Mei Changzhi, and Shandi Xu-born local historian Mei Weichang further say that this was because of the Chens' complaint to the local government.⁹ The original intention of establishing Jiangshan Xu closer to the existing Shangje Xu rather than the base villages of Meis can be interpreted as utilization of the existing economic demand and network. However, the later change of location of market to Shandi Xu closer to the clan's centre of origin was due to cultural factor rather than economic factor.

Regarding the change of marketing area and clanship power, the founding of Shandi Xu took over almost half of the original Chen's marketing area (43%), concentrating at the lower courses of

⁶ Numbering of sub-headings under this heading follows the numbering of diagrams in Figure 5.

⁷ Shangje Xu was recorded in *Xinning Xianzhi* [The Records of Xinning County] (1545). In the same book there recorded another market called Tangmei Xu 塘尾墟 in the same region of Cuotong Du, but no longer existed in 1893 when another county record book was issued. As there is a village called Tangmei 塘美 (the same pronunciation but different Chinese character with “塘尾”) now located south of Shangje Xu between Natai Shi and Duanzhai Xu, this market is possibly located nearby. However, due to the uncertainty of the exact location of this market, it is not included in the discussion in this study.

⁸ Both residents' points of view were recorded in their articles in a Duanfen local magazine *Yunan Zhi Hua* [The Flower of Yunan].

⁹ Wu Bingwang and Mei Changzhi, interviewed by the author, 7 September 2006; and Mei Weichang, interviewed by the author, 17 August 2008.

Duanfen River and Datong River. On the contrary, Chen's marketing area stretched over the upper courses of both rivers forming an L-shape with its western part far from market.

3. Xikuo Xu of Liangs founded in 1820

Xikuo Xu was founded in 1820 by Liang clan, currently the 4th largest surname of Duanfen, and assumed the same when it was founded. Regarding the change of marketing area and clanship power, the founding of Xikuo Xu took over the whole western marketing area in Duanfen along Datong River. As a result, the area of both Shangje Xu and Shandi Xu substantially decreased; especially Shangje lost 60% of area, mainly at the south-western region far from the market.

4. Haikou Bu of Meis founded in 1851-1855

Haikou Bu was founded in 1851-1855 by Mei clan and located at the convergence of Datong River and Duanfen River. It is also the water outlet connected to the nearby Doushan and Guanghai towns, then further to South China Sea. Its location marks the southeast-end of Mei's lands. At the north of the market is the grandest existing ancestral hall structure (vacant) of the Meis in Duanfen. This market can be interpreted as the further economic development of Mei clan when it expanded to the state that one market could not sufficiently correspond to its power.

Most of the marketing area of Haikou Bu was taken over from Shandi Xu of the same clan. If we count both markets as one combined market group of the Meis, the founding of Haikou Bu only invaded a small portion of the marketing area of another clan – the Liang's Xikuo Xu (decreased by 3%). However, its location could strategically occupy the water transportation outlet of Duanfen. Therefore, though a closer location to Xikuo Xu could take over more marketing area from it, the location of Haikou Bu was still sensible in terms of the external connection outside Duanfen.

5. Duanzhai Xu of Huangs founded in 1882

Duanzhai Xu was founded in 1882 by Huang clan, the 3rd largest surname of Duanfen. Since then, the 4 largest surnames all have had their own markets. It is located at the western dead end of Duanfen near the Dalongdong hilly region. Acting as the sole regional centre of the western part of Duanfen, Duanzhai Xu took over more than half of the marketing area (58%) of Xikuo Xu. Although surrounded by highlands over 50m PD on north, west, and south sides, it still got the inland transportation outlet of Duanfen to the western neighbouring Kaiping County. In other words, it became the in-between market of Duanfen central economic region and Kaiping, similar with the strategic location of Haikou Bu to Doushan Town.

6. Natai Shi of Qius and Tangtou Shi of Yuans founded before 1893

Although it is not certain when Natai Shi and Tangtou Shi were exactly founded, this essay assumes that they were founded before 1893.¹⁰ These two markets share some similarities. Firstly, both are very close to Xikuo Xu, and located near narrow rivers without any pier facilities. Secondly, based on the small quantity of market buildings, especially the lack of ROC colonnaded buildings, both markets are regarded as very small scale. Thirdly, they are in irregular street pattern without central

¹⁰ The earliest record about Natai Shi and Tangtou Shi was *Xinning Xian Zhi* [Records of Xinning County] (1893). Therefore, it is assumed in this essay that the dates were close to that year after the founding of Duanzhai Xu.

square, and even no traces of any planning can be found. These lead us to estimate that they possibly belonged to a level lower than other markets in Duanfen.

Natai Shi was founded by Qiu clan, the 10th largest surname of Duanfen. Regarding the change of marketing area and clanship power due to Natai Shi founded at the south of Xikuo Xu, it took over the southern portion of the latter's marketing area, plus a little portion from Haikou Bu.

Tangtou Shi was founded by Yuan clan, the 6th largest surname of Duanfen. Later in early 20th century, Yuan clan founded another market and challenged the status of Mei clan directly. Founded at the north of Xikuo Xu, the founding of Tangtou Shi took over the northern portion of Xikuo Xu's marketing area. In other words, the original marketing area of Xikuo Xu was trisected into 3 portions belonging to Tangtou Shi, Natai Shi, and Xikuo Xu itself, respectively. Possibly the central economic region of Duanfen was at its eastern part radiated from Shandi Xu and Shangje Xu. However, in order to avoid directly challenging the two strongest clans – Meis with 20% and Chens with 13% of Duanfen's population, the Liangs of Xikuo Xu (near the central economic region) with only 8% might be the only option for the Yuans to challenge during that period.

7. Miaobian Xu of Wengs founded in 1908

Miaobian Xu was founded in 1908 by Weng clan. It is located far from the central economic region of Duanfen. However, it is closer to another centre Sanhe, and very close to another market Xin'an Xu of Yu clan just outside the current boundary of Duanfen. As the Wengs were only the 11th largest surname (3%), and the smallest one among all the surnames owning their own markets in Duanfen, they probably did not have sufficient power to challenge the strong Chens. This may be the reason why a distance from Chens' Shangje Xu was kept. On the contrary, Miaobian Xu could be benefited by its northern location near the "gate" to Sanhe Town at its north, just similar with the situations of Haikou Bu and Duanzhai Xu.

Regarding the change of marketing area and clanship power, Miaobian Xu took over more than 1/3 of the marketing area (37%) of Shangje Xu. This might be the reason why the Chens no longer had the power to establish another market in northern Duanfen.

8. Chengwu Shi of Wus founded in 1893-1922

The founding year of Chengwu Shi by Wu clan is uncertain. This essay assumes that it was founded between 1893 and 1922.¹¹ It is located between Miaobian Xu and Shangje Xu, but closer to the latter at its south. In fact, Chengwu Shi's proximity with Shangje Xu can be regarded as a direct challenge to it. In fact, Wu clan of Chengwu Shi might have the power to do so. By population, it is the 7th largest surname in Duanfen (6%). Although their population was only 43% of the Chens of Shangje Xu, it was almost 2.3 times of the Wengs of Miaobian Xu, who kept a certain distance from Shangje Xu when they founded their market. The Wus also owned a decorative 2-storey ancestral hall cum school and a 5-storey high watch tower in the village Dilin Li near the market. They were all built around the period they founded the market, and proved the clan's wealth. Unlike Qing Dynasty before 1912, there were no longer any laws and governmental authorities restricting the proximity of markets in ROC.

¹¹ As Chengwu Shi was not on the list of markets in *Xinning Xian Zhi* [Records of Xinning County] (1893), we can certain that it was not founded before that year. However, as its name appeared in *Xinning Magazine* 25 (1922): 20, we are sure that it was founded before that year.

Chengwu Shi, after Miaobian Xu, further invaded more than half of the marketing area (54%) of Shangje Xu. The power of Chen clan in Duanfen was further weakened. Counting the marketing area of the clans in Duanfen, the Chens dropped from the 3rd largest to the 6th, after the clans of Huang, Mei, Wu, Liang, and Qiu. Therefore, the main competitor of the Meis shifted from the Chens in Qing Dynasty to the rising Yuans in ROC.

9. Datong Shi of Yuans founded in 1925

With the original base at Tangtou Shi, Yuan clan expanded their power and founded Datong Shi in 1925. The new market, in the name of multi-surname, was in fact dominated by the Yuans. It is located at the east of Tangtou Shi, Xikuo Xu, and Natai Shi, abutting the villages of the Meis. Considering the large extent of ROC colonnaded buildings, the construction of Datong Bridge for vehicular traffic across the wide river in 1930, and the existence of a theatre and a volleyball court at the square before 1949 as mentioned by the residents there, it is assumed that the market was quite prosperous during ROC.

The prosperous Datong Shi did not only directly compete with the existing Tangtou Shi of Yuans, Xikuo Xu of Liangs, and Natai Shi of Qius, but also took over some marketing area of Shandi Xu and Haikou Bu of the Meis. Despite the Yuan's villages were built around the base ancestral hall and market at Tangtou Shi, they still chose the location at the southeast for their market due to firstly the direct interface with river for water transportation, and secondly closer to the economic centre near Shandi Xu. Confronting the western side of Mei's villages, Datong Shi can be regarded as a direct challenge to the largest surname, the Meis, in Duanfen. Subsequently, the conflict between the two clans really happened.

10. Tingjiang Xu of Meis founded in 1932

In the early 20th century, Mei clan's sphere of influence was mainly in the eastern part of Duanfen, in the region between the two markets Shandi Xu and Haikou Bu founded by them. Just opposite to the eastern side of Yuan's Datong Shi were the Mei's villages. Established in the name of multi-clan, the Meis also shared the business of that market. However, it was criticized in the different aspects, i.e. i) old layout; ii) insufficient facilities; and iii) administrative organization dominated by single clan under patriarchal style and lack of freedom for other clans.¹² No matter such criticism was fair or not, there was surely a sense of discontent of the Meis and other surnames to the administration by the Yuans. Finally, the Meis led other clans to withdraw from Datong Shi. With the farmlands purchased from the Meis, the withdrawn clans founded a new market, Tingjiang Xu, immediately next to the east of Datong Shi. Another bridge for vehicular traffic across the wide Datong River was built by the Meis in 1936, probably in order to be independent from Datong Bridge owned by the Yuans. The layout, facilities, and administrative style of the market were all brand new, such as standardized building lots and dimensions, provision of security guards, allocation of mobile vendor's zone, setting up of hygienic rules, etc.¹³

The establishment of Tingjiang Xu could be regarded as a direct challenge or fighting back to the Yuans. Choosing a location closer to the existing Datong Shi meant maximizing the marketing area

¹² See "Tingjiang Xu Gufen Bu" [Tingjiang Xu Founding Share Book] (1933).

¹³ Ibid.

directly taken from the Yuans. Moreover, this could be benefited from the existing network already set by Datong Shi. As the east of Tingjiang Xu was also the Meis' lands, shifting the location of new market towards the east was also possible. However, this would take over more Meis' marketing area from Shandi Xu and Haikou Bu rather than from the Yuans'. Finally, Datong Shi's marketing area was greatly reduced by 1/3 approximately. The Yuans' marketing area (Tangtou Shi plus Datong Shi) was reduced by 30%, but the Meis' marketing area was increased by 11%. If we compare the marketing area owned by the Meis with those of their directly competing clans of Chen and Yuan, the proportion of the marketing areas at the last stage of the Republican period was 101:24:24 (measured in km²).

Discussion on the Decline of Markets since the Republican Period and the Shared Marketing Area of Twin-market¹⁴

Anyone visiting Tangtou Shi and Natai Shi today can easily discover that they are very different from other markets in Duanfen. Firstly, they are particularly smaller in scale regarding the number of market building lots by accounting those in row pattern, and excluding all gridiron villages and detached buildings. Secondly, they are in irregular street layout, different from all the other markets with regular patterned central square or straight street. We can assume that central square is an obvious feature accommodating market canopies and mobile vendors during market days, and regular pattern is a sign of central planning and organization. Thirdly, the remaining ROC colonnaded buildings in these two markets are extremely few. This can be differentiated from other markets all with this type of buildings as the majority.¹⁵

Therefore, we can come up with two initial assumptions: i) they are classified as lower level markets with an informal character serving a small extent of marketing area (similar with "minor markets" as defined by Skinner); and ii) their business has further declined since the Republican period. In other words, these assumptions can be regarded as the factors limiting their development of the architecture and urban fabric similar with other markets.

11A. Decline of Tangtou Shi in 1922-1930

Firstly, the decline of Tangtou Shi was probably because of the construction of highways and wider use of automobiles in the 1920s. Most of the more mobile people nearby tended to go directly to the farther but higher level Xikuo Xu, and some to Datong Shi.

11B. Decline of Natai Shi since 1930

Probably due to a large portion of the original western marketing area of Tangtou Shi was lost, the Yuans built a modern vehicular bridge in Duanfen, Datong Bridge across the wide Datong River at the south of Datong Shi in 1930. This resulted in the further elimination of Natai Shi and southward expansion of Datong Shi's marketing area.

¹⁴ Numbering of sub-headings under this heading follows the numbering of diagrams in Figure 5.

¹⁵ See Table 2. Summary of Duanfen Markets.

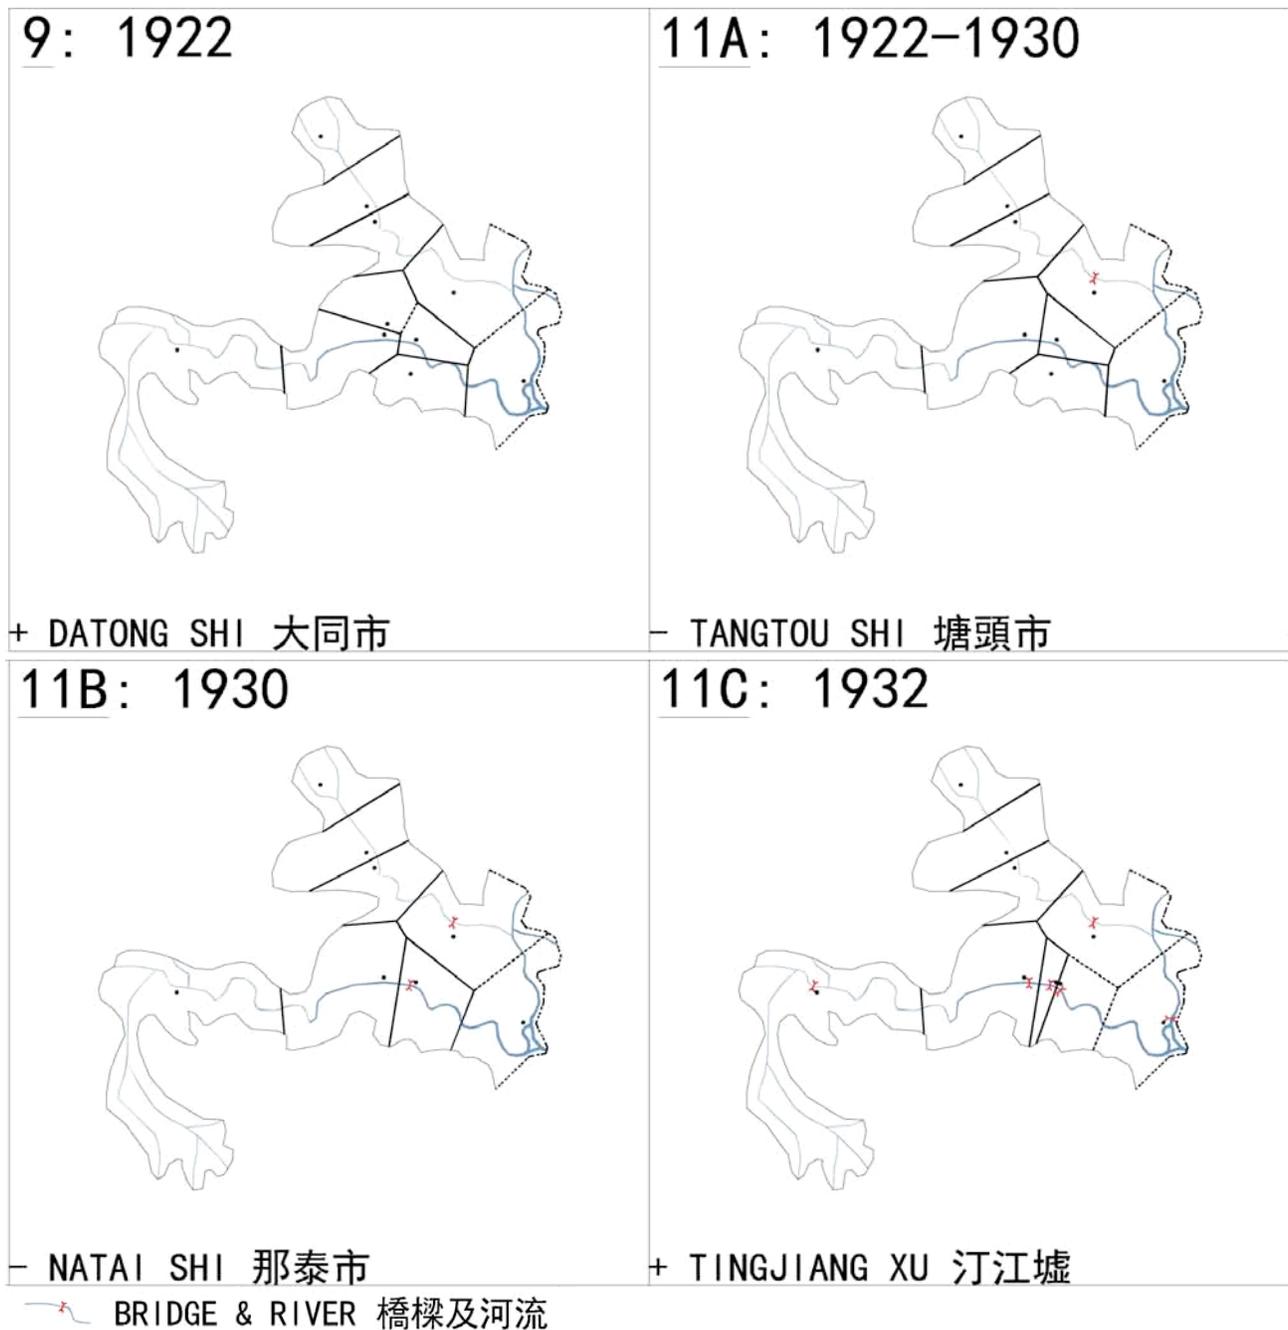

Figure 6. Modern vehicular bridges of Duanfen built in the Republican period.

11C. Tingjiang Xu and Other Bridges in 1932-1936

The benefits of bridge were believed obvious. This can be proved by the similar actions of other markets in Duanfen, such as Duanfen Bridge (at Shandi Xu) built in 1929, Haikou Bridge in 1931, Xikuo Bridge and Tingjiang Bridge in 1936. The merchants related to Tingjiang Xu, regarded as directly challenging Datong Shi, were possibly restricted in some way to use Datong Bridge constructed by the Yuans. This might be the reason why the Meis of Tingjiang Xu initiated the capitalization of bridge construction in 1936.

In conclusion, the assumption of the decline of some lower level markets and the development of infrastructures in fact matches with what Skinner suggested. More important is that he regards such closing down of some lower level markets and the subsequently general increase in the size of marketing area of each remaining market as the indications of the modern transformation from the traditional times with contradictory tendencies. (Skinner 1965a, 211–215) This also resulted in the more even distribution of marketing areas in Duanfen.

Based on the assumption of the decline of Tangtou Shi and Natai Shi, the last stage of marketing areas transformation during the Republican period in this essay is amended. The proportion of the marketing area owned by Mei, Chen, and Yuan clans was 116:25:8 (measured in km²).

BRIDGES	YEARS BUILT
DUANFEN BRIDGE 端芬□ (AT SHANDI XU 山底墟)	1929
DATONG BRIDGE 大同市□	1930
HAIKOU BRIDGE 海口□	1931
XIKUO BRIDGE 西廓□	1936
TINGJIANG BRIDGE 汀江□	1936

Table 3. Modern vehicular bridges of Duanfen built in the Republican period.

11D. Shared Marketing Area of Twin-market

In fact, due to the extreme proximity of Datong Shi and Tingjiang Xu, the difference in travelling distances from the surrounding villages to this pair of markets, also known as a twin-market, was no longer substantial. Therefore, the marketing areas of them can be regarded as overlapping. Sharing the similar marketing areas, they had to compete by other means, such as better management and facilities, clanship support, etc. Hence, including the assumption of a shared marketing area for this twin-market, the marketing areas at the last stage during the Republican period in this essay is further amended, with the proportion of Mei, Chen, and Yuan clans as 124:25:32 (measured in km²).

Discussion on the Factors Affecting the Distribution of Markets

1. Macro-distribution of Markets: Geography and Clanship

By mapping the distribution of markets in Duanfen during the Republican period, we can discover that most of them were concentrated in the south-eastern region. We can summarize the factors affecting such macro-distribution as i) the geographical conditions in Duanfen, ii) the geographical conditions in its neighbouring regions, and iii) clanship.

Firstly, the availability of more flat land and wider rivers pushed the concentration of markets at its south-eastern region. Secondly without the obstruction by hills, the connections with its eastern neighbouring markets and villages were far easier than the other sides. The available sea transport in its south-eastern neighbour Guanghai and the railway system linked with the whole county in its north-eastern neighbour Doushan also attracted the concentration of markets in south-eastern Duanfen.

Assuming that there were more than one clan in the general region demanding a market, there was usually only one clan, the most powerful one, coming out to found or leading other less powerful clans to found a market at the specific location, usually located at the land owned by that leading clan. Then, the leading clan would be further strengthened by the benefits brought by the market.

2. Micro-distribution of Markets: Order of Distance

Zooming in to the micro-distribution of markets in Duanfen, we can find a tendency of shorter distance between markets from the second market founded in 1771 to the last one in 1932. Was this simply due to the tendency of higher demand for markets? In theory, if the demand is sufficiently high in the marketing area, a new market would be founded nearby to compete with the existing market. The extremely high demand would result in the twin-market of Datong Shi and Tingjiang Xu abutting each other. However, the generally longer distance between markets in the earlier stage before the Republican period also shows an order highly related to the politics utilized by clanship. Such order is hereunder known as the “order of distance”.

During Qing Dynasty (1644-1911), from the case of the establishment of Shandi Xu, we can see that the market demand originally called for the agglomeration of markets near the existing Shangje Xu and almost resulting in the twin-market. If this had really happened, we could foresee the subsequent bisecting of marketing area, and then invasion to the benefits of the old market. As a result, the clan of old market complained to the local government, and then the clan of the new market was forced to relocate it further away from the old one. Finally, the distance between the two markets, Shangje Xu and Shandi Xu, is approximately 3.5km.

We can find such order of distance due to the linkage of politics and clanship was not unique in Duanfen. Similar case happened in Tai Po Hui (Xu) and Tai Wo Shi in another South China region, Hong Kong (Xin'an County during Qing Dynasty). During the reign of Emperor Jiaxing (1796-1820), the failure of Man clan to found a new market 0.6 km away from the existing Tai Po Hui of Tang clan was due to the complaint from the Tangs to Xin'an government. Later in 1874, an informal market nearby was allowed due to the Mans' alliance with other clans to form the “League of Seven”. With the efforts for another 20 years, in 1893, the formal market of Tai Wo Shi was finally founded next to the old market.

Back to Duanfen, another problematic case seems weakening the hypothesis of the order of distance. Why could Tangtou Shi be established before 1893 only 0.3km away from the existing Xikuo Xu? From both cases of Duanfen and Hong Kong, the establishment of markets during Qing Dynasty required the approval from the government. However, no formal statutory regulations stipulating the minimum distance between markets is found. The order of distance was usually initiated by the affected clans. Therefore, this can be regarded as a social custom rather than a clear legal enforcement. In other words, it was not absolute, but depending on the power of the clans and their relation with the government. Based on the fact of the Yuans' power to establish another market in addition to Tangtou Shi later, the phenomenon can be possibly interpreted as “power overwhelming social custom”.

The situation changed after the fall of Qing Dynasty in 1911. During the Republican period, Datong Shi and Tingjiang Xu were two abutting markets founded by two “hostile” clans. If we regard rural market as analogy of department store or shopping mall in city, where the demand is sufficiently high, such direct competition between the agglomerated stores is very reasonable in the modern free market economy. The clans are similar to the corporations controlling different stores. For instance, Tingjiang Xu was established with quasi-modern business system.¹⁶ Surely, the governmental

¹⁶ See “Tingjiang Xu Gufen Bu” [Tingjiang Xu Founding Share Book] (1933).

intervention to the founding of rural markets no longer existed since the Republican period. At least, a phenomenon of relatively modernized economy appeared.

Similar cases of twin-market controlled by different clans mainly happened after the cease of Qing's sovereignty. For example in Hong Kong, we can find Yuen Long New Market of Man and other clans (founded in 1915) near the existing Yuen Long Old Market of Tang clan (with a distance 0.2km), and Luen Wo Hui of Pang and other clans (1951) near the existing Shek Wu Hui of Liu clan (distance 1.7km). Therefore, we can summarize that not only due to the tendency of higher demand, but also because of the weaker governmental intervention ceasing the order of distance, the spacing of markets was closer, and finally the pattern of twin-market was developed.

FOUNDING YEARS OF NEW MARKET	NEW MARKETS	ORIGINAL MARKETS	LOCATIONS	DISTANCES (KM)
1771 (QING)	SHANDI XU 山底墟	SHANGJE XU 上□墟	DUANFEN 端芬	3.5
1893 (QING)	TAI WO SHI 太和市	TAI PO HUI 大埔墟	XIN'AN / HONG KONG 新安/香港	0.6
BEFORE 1893 (QING)	TANGTOU SHI 塘□市	XIKUO XU 西廓墟	DUANFEN 端芬	0.3
1915 (BRITISH COLONY)	YUEN LONG NEW MARKET 元朗新墟	YUEN LONG OLD MARKET 元朗□墟	XIN'AN / HONG KONG 新安/香港	0.2
1932 (ROC)	TINGJIANG XU 汀江墟	DATONG SHI 大同市	DUANFEN 端芬	ABUTTING
1951 (BRITISH COLONY)	LUEN WO HUI □和墟	SHEK WU HUI 石湖墟	XIN'AN / HONG KONG 新安/香港	1.7

Table 4. Selected cases of the distance between markets in South China.

Conclusion

Despite the tool adopted by this essay inspired from Christaller's Central Place Theory seems focusing on the aspects of economy and infrastructure, the cultural aspects, especially clanship, are found vital in the transformation of marketing geography. On the other hand, the mapping method derived from Skinner in fact helps to quantify the interrelationship between clanship and markets.

Finally, it is found that understanding of market distribution cannot be only achieved by investigating the macro-scale geography, but also requires analysis of the urban fabric and architecture of market. In other words, architecture, urban fabric, and geography should be combined to understand the urban morphology of rural markets.

Abstract

Istanbul metropolitan area is undergoing a rapid process of spatial transformation in accordance with Turkey's active role in integration with global economy. Witnessing a process of rapid growth and change under the influence of internal and external dynamics, Istanbul bears powerful potentialities due to its historical, cultural, economic and geopolitical situation, which are not necessarily free of serious urban problems. The planned and unplanned expansion areas of Istanbul have reached the boundaries of natural resource areas. As a result of dense and unhealthy residential areas, quality of life is gradually falling.

The affects of the social and spatial changes caused by globalization experienced worldwide are also seen within the Istanbul metropolitan area. With this rapid transformation process, foreign capital companies are investing in Turkey, especially in Istanbul. There have appeared in it shopping centers, multi-national headquarters, and high-class residential houses.

The uncontrolled urban growth in Istanbul in the last 25 years, which has been provoked by political expectations, has become beneficial for immovable investments that depend on annuity expectations. Growth dynamics depending on annuity not only leads to an uncontrolled sprawl in the city but also represents a fragmentary structure in which resources are distributed unevenly. Within this fragmentary structure, some urban areas become attractive domains for investment along with the market conditions; on the other hand, the spatial decomposition among unplanned growth areas, which lack sufficient substructure facilities, is accompanied by social decomposition.

In order to determine the extent of spatial sprawling residential areas and rise of metropolitan land use fragmentation which at the same time threatens the forested areas and drinking water basins in Istanbul.

Key words: social and spatial transformations, globalization, Istanbul.

Spatial Transformations in Istanbul

Introduction: Changes of Population and Density in Istanbul

Situated on the crossroads of historically significant trade routes, the city of Istanbul, capital of three mighty empires, has played an important role throughout the history of mankind. Istanbul had tremendous economic, natural, and cultural significance on the country as a whole and decisions concerning its planning and its development have been at a nation wide level.

The Istanbul metropolitan area is an essential center of focus within the changing world balances in the region formed by the Balkans, the Middle East, and the Turkic Republics. There are also economical potentials in addition to the natural and geopolitical location of Istanbul. These are the advantages of being a large market, the presence of a qualified and cheap workforce, and a dynamic liberal economy.

Istanbul is the biggest city of Turkey in terms of its economic development and urban population growth. With slightly more than 12 million population, Istanbul metropolitan area is in the list of 10th largest populated city of the World (TSI 2007 Census Data).

Urban lands in Istanbul have always been subject to the highest pressure and received the highest demand. Table 1 conveys population and density distributions caused by the pressure between the Eastern and Western sides of the city. The surface area of the province with a size of 5196 km² covers 0.7% of Turkey. 65.50% of this surface area is on the European side, while 34.50% is on the Asian side.

Cross-demographic rates of the two sides in Istanbul demonstrated an increase from the West to the East between the years 1970 and 2000. In 1970 75.56% of the population was settled in the European side, whereas this rate went down to 65.29% in 2000. In other words, while 22.44% of the population was living in the Asian side in 1970, this rate increased to 34.53% in 30 years. When the rate and changes of population growth are investigated, it is observed that the acceleration of population growth in the Western side of the city was very high between the years 1970 and 1980. The opening of the first Bosphorus Bridge in 1973 and the constructions of new highways, as well as an increase in the rate of private vehicle ownership contributed to the population expansion towards the Eastern parts of the city during this period.

When we look at the density changes across the eastern and the western sides of Istanbul in the last thirty years, the eastern side, with a population density below the average of Istanbul in the 1970's and 1980's, has risen to the population density values twice as much as the average of Istanbul after 1990 due to political concessions and the increased conditions of construction. The highest density increase occurred in the period of 1990-2000, which can be observed in Table 1, and 2 depicting the change of population density.

During the ten-year period between 1990-2000, within globalization process, the form and extent of spatial changes and transformations in metropolitan cities have differed in central and peripheral areas (Figure 1 and 2). Istanbul received the highest amount of interregional migration. When the national total rate of economically active population is considered, Istanbul's share increased from 10.86% in 1990 to 6.03% in 2000. In 1990 Istanbul held

22.24% of nonagricultural employment in Turkey, this rate slightly decreased to 22% in 2000, roughly corresponding to one fifth of Turkey's nonagricultural employment. In the same year, 32.2% of Turkey's labor force in manufacturing industry, and 53.3% of in-service industry was employed in Istanbul.

The population of Istanbul reached 10,018.735 in 2000, which had formerly been 7,309.190 in 1990, and thus recorded a growth of 39.23%. When we look at the demographic change in Istanbul with respect to zones, we see that in central districts there is a decrease in population with a rate of 29.38%, but in peripheral areas there is an increase of 107.97% (Figure 1, Table 3).

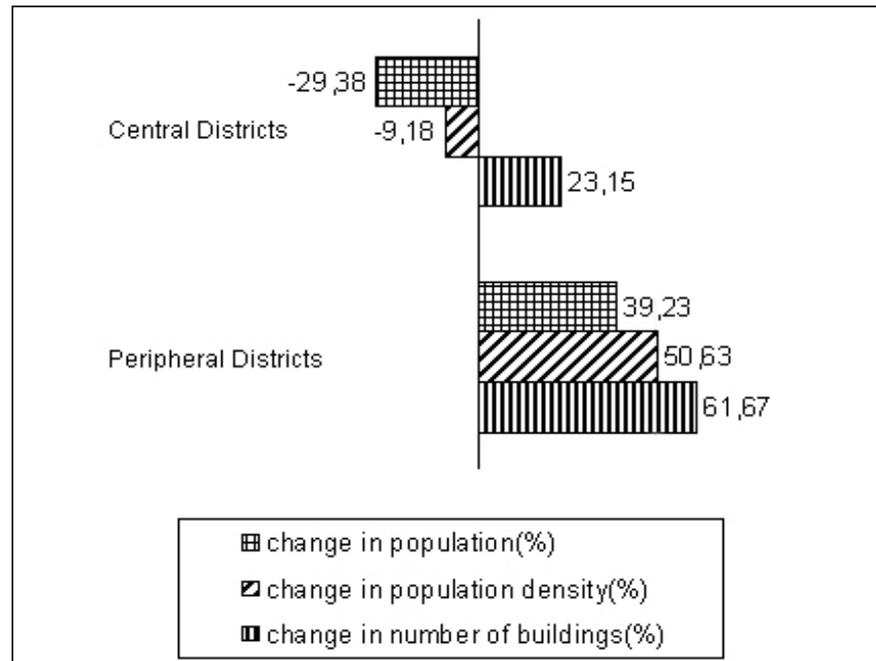

Figure 1. Changes of Population and Densities between 1990-2000, source: Berköz, 2008.

Between 1990 and 2000 the annual growth rate of population in Istanbul was 3.31%. When we consider the annual growth of population rate among the zones of Istanbul between the same years, it is seen that the average annual growth rate in central districts recorded a decrease with -3.54, while in peripheral districts the average annual growth rate of population reached 7.32, which was above the average of Istanbul with 3.31. In this period, central districts did not show an average annual growth rate of population above the annual growth average of Istanbul (Table 3 and Figure 3).

While the average population density in Istanbul was 1,280 persons/km² in 1990, this figure raised to 1,928 persons/km² in 2000. The density change in Istanbul between the years 1990 and 2000 was 50.63%. When the density change in Istanbul between 1990 and 2000 is examined, it is seen that there is a decrease in central districts with a rate of 9.18%, but an increase in peripheral areas with a rate of 106.47%, which results in a density twice as much as the density change of Istanbul (50.63%) (Table 3, Figure 4).

Assessing the number of buildings in Istanbul in terms of increase rates, we see that between 1990 and 2000 there was a 25.15% increase in the central districts, while in the peripheral districts the average of the increase rate was 78.46%. It is seen that the increase rate in peripheral districts is above the average of Istanbul (61.67%) (Figure 5).

In summary, between 1990 and 2000 the population change in Istanbul demonstrated an increase by 39.23%, and the growth rate of population was found out to be 39.9%. Thus, population change and the change in population density occurred in the same rate. In core districts, the average population change decreased by 29.38%, resulting in a density change rate of -9.18%. This outcome may be related to the increase in number of buildings in core districts (23.15%). Average population change and density change rates in peripheral districts

have been found out to be very close to each other, the first one with 107.87% and the second with 106.46%.

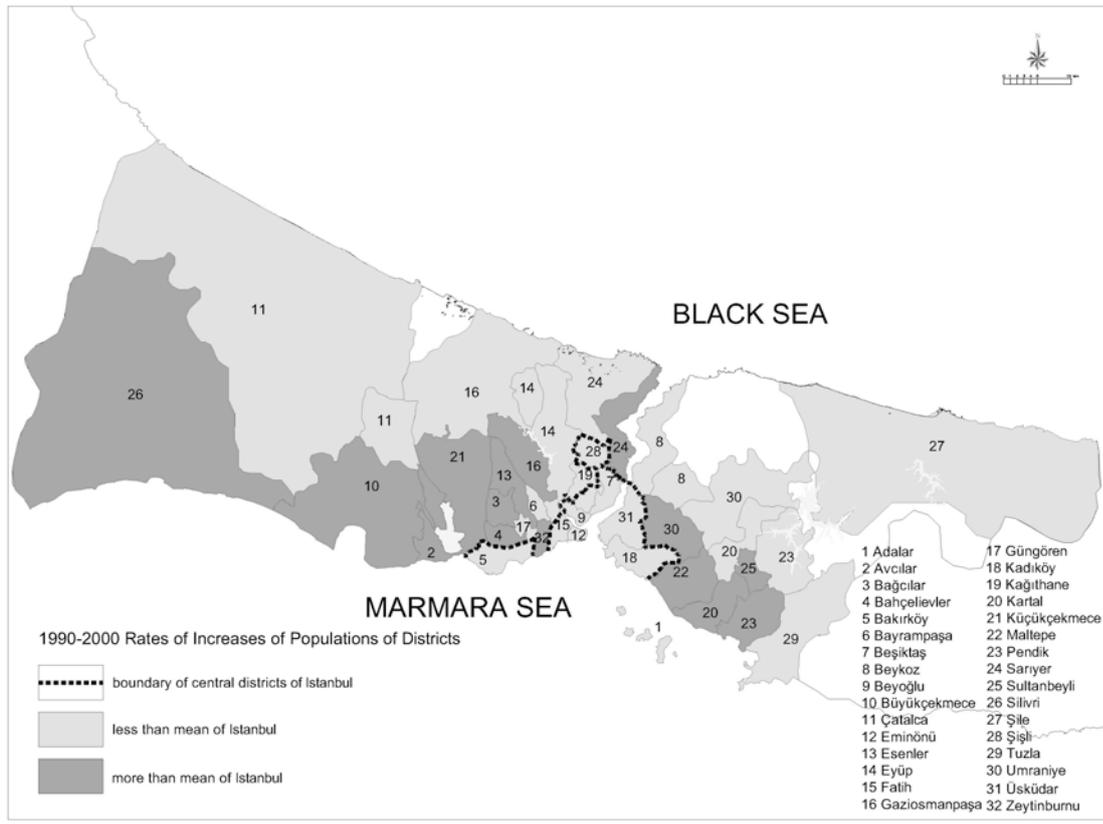

Figure 2 . Rates of Increase of Population According to Districts (1990 – 2000)

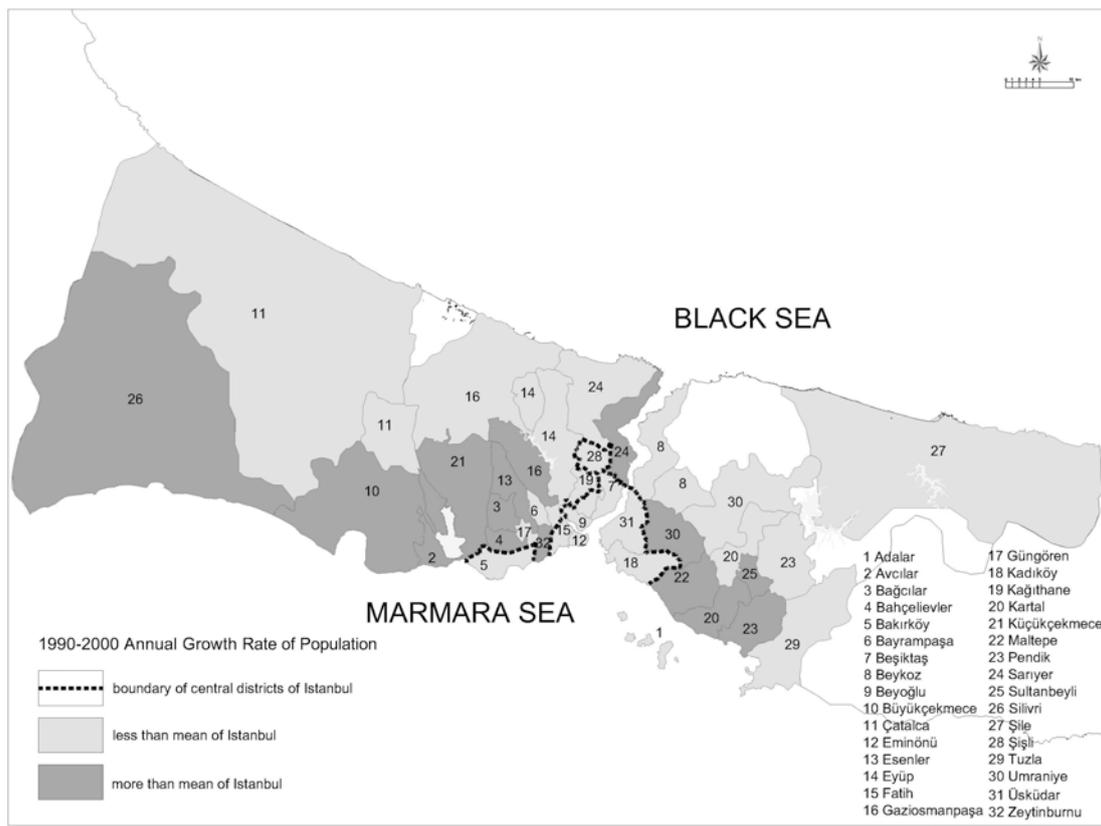

Figure 3 Annual Growth Rate of Population (1990 - 2000)

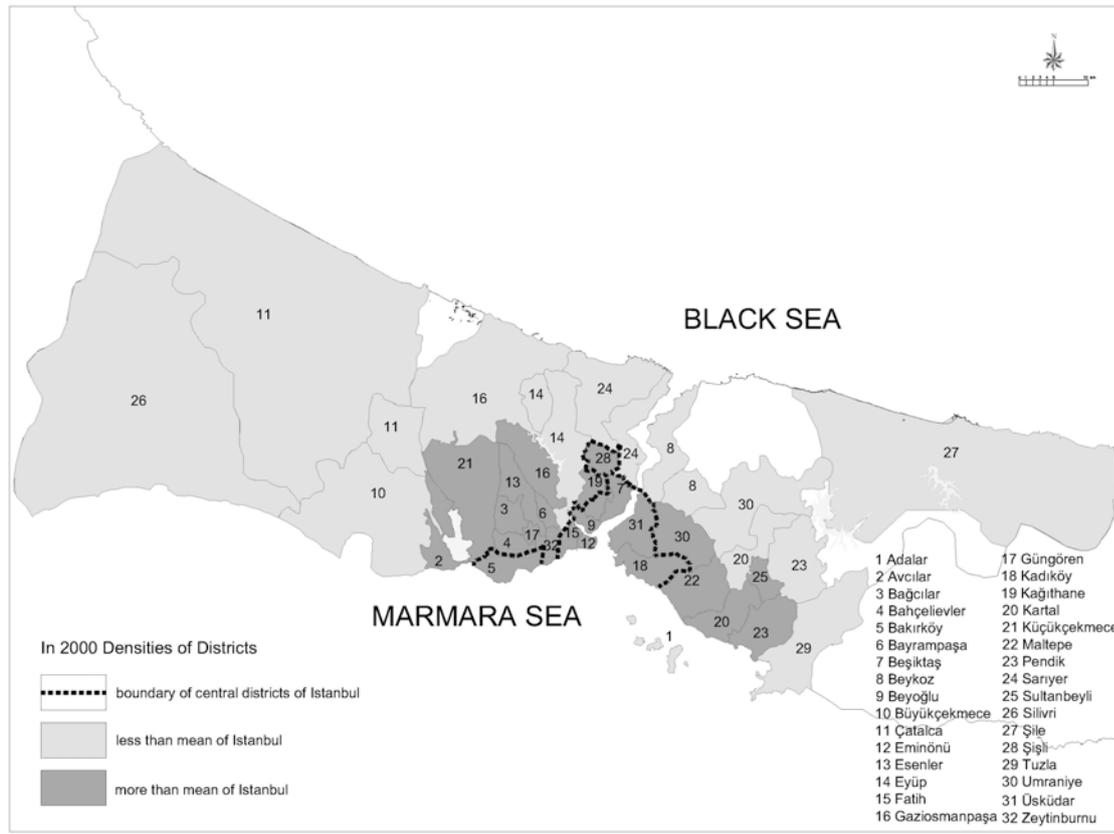

Figure 4. Densities of Districts (2000)

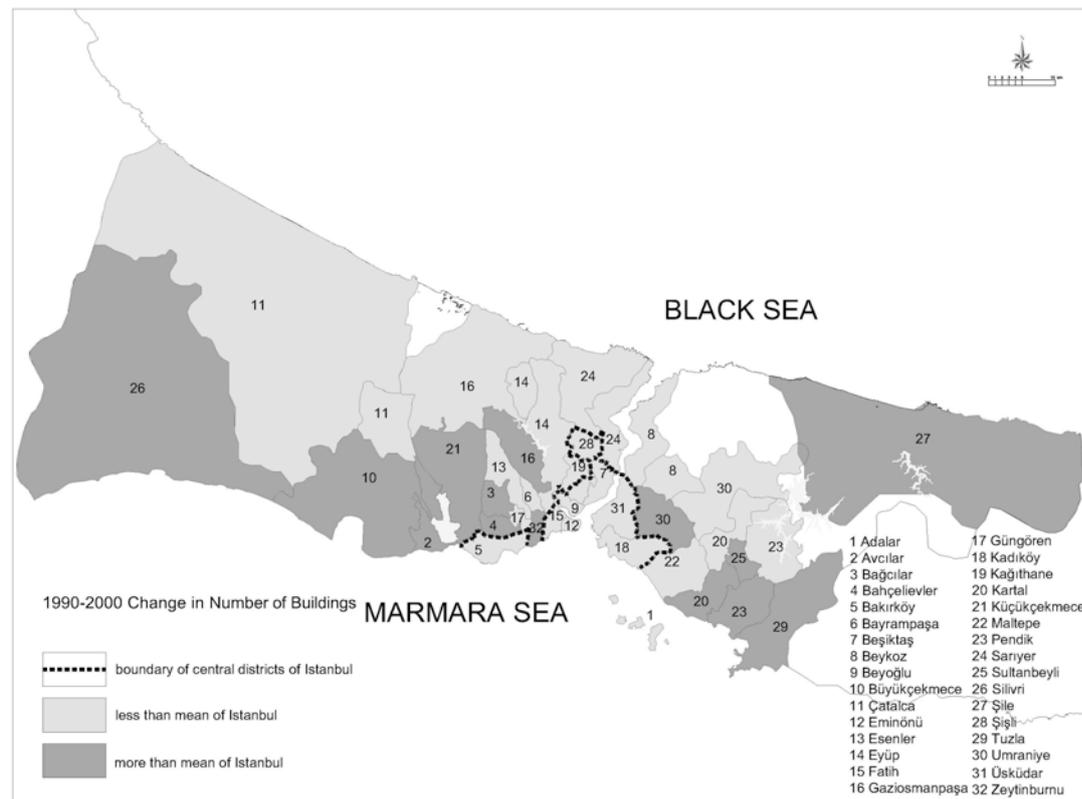

Figure 5. Change in Number of Buildings (1990 - 2000)

Between 1990 and 2000, a decline in population is observed in the core of Istanbul (Beyoglu, Eminonu and Fatih districts), while the population increased in other central districts and peripheral districts. A similar tendency is seen in work force. Between 1990 and 2000, the core of Istanbul (Beyoglu, Eminonu and Fatih districts) underwent a decrease in terms of work force, which increased in other central districts and peripheral districts. Especially the increase in work force in peripheral districts is higher with respect to that in central districts. When the sectoral distribution of work force is considered, the rate of service sector is higher in central districts, as opposed to the lower rate of industry sector. The sectoral distribution of work force in peripheral areas is different from the central districts. In peripheral districts, the shares of service and industry sectors are quite close to one another (Table 1).

Spatial Transformation of Istanbul's CBD and Residential Areas

Istanbul's CBD had preserved its monocentric structure until the fundamental effect of the Bosphorus Bridge and highways on the city's spatial transformation; that is from the 19th century to the end of the 1970's. At that time, Istanbul's CBD deployed on a bi-structured monocentric core with the traditional market arrangement in the historical peninsula and the modern center of external trade concentrated in Galata-Beyoğlu.

The concentration of office activities in Eminonu and Karakoy centers lasted until 1960's. In the 1970's, however, trade and other central activities accumulated between Ataturk and Galata Bridges in Eminonu, and in Beyoglu. In those years Eminonu district held 34%, and Beyoglu district 21% of service employment. In Beyoglu banking and insurance activities and in Eminonu retail and wholesale trade activities were in majority. Therefore in terms of both the number of employees and the employment density, Eminonu and Beyoglu centers together constituted the CBD (BINPBB, 1976). In Eminonu district the first foreign trade investment company was established in 1973. Prior to this, a hotel opened in 1966 in Beyoglu was the first foreign investment after the foundation of Turkish Republic.

After 1975, the CBD functions began to spread from the vast portion of Eminonu and a small part of Fatih district in the historical peninsula, and the center of Beyoglu district to Sisli, Zincirlikuyu, and Barbaros Boulevard. The developments pertaining to the Intermediate Zone central features have been observed in the regions such as Fatih, Kadikoy, Bakirkoy, Bayrampasa, and Gaziosmanpasa.

The opening of the first bridge on both sides of the Bosphorus Strait (1973), built in conjunction with a network of beltways, and the start of domestic automobile manufacture transformed the city into a city of cars (Kılınçaslan,1981). With the highways, and the opening of the Bosphorus Bridge in 1973, accessibility between the European and the Asian sides of the city was facilitated, allowing Kadıköy to develop into a central zone. Another influence of highways on the urban transformation in Istanbul is the rapid increase in the number of offices opened along the main arteries in Sisli and Besiktas districts (Berkoz, 1994). The establishment of foreign capital investment firms in Sisli began in 1967. In this district, the first foreign investment bank was established in 1975.

Bosporus Bridges and ring roads of access have lead to spatial transformations in Istanbul, which resulted in the shift of the CBD of the city from Eminonu and Beyoglu towards Sisli and Besiktas, as well as the development of Kadikoy on the Asian side and Bakirkoy on the European side as the first-tier sub-centers. With new highways, which followed the

construction of the above mentioned roads, the borders of the metropolitan area have also extended towards north. In addition to these, low land prices in suburban districts and the increase in private vehicle ownership accelerated the process of decentralization in the city's structure (Dokmeci and Berköz, 1994).

The first Bosphorus Bridge and its beltways were not part of the city plan but were approved in an extra-legal fashion as part of a localized plan that included highways. The bridge and road project totally change the morphology of the city and this resulted in decentralization in Istanbul. Both industry and services became decentralized and Istanbul's geographical centre developed in the northerly direction. Istanbul gained a triple spatial structure. This rapid transformation made the implementation of the city plan very difficult and localized efforts were made to control erratic settlements.

The 80's were marked by the economical alterations that Turkey underwent. Small and medium-size entrepreneurs were discarded, which had its reverberations in the construction sector with increasing capital and technological means. The Mass Housing Law, forced in 1984, accelerated the construction of big-size projects, encouraging cooperatives and private sector housing entrepreneurs to construct new mass housing areas. According to the statistics, in 1980, 60.21% of Istanbul's population inhabited the first segment over a radius of 0-10 km, 31.76% inhabited the second segment of 10-20 km, while 2.63% lived in the final segment of 30-60 km. (Aysu, 1984).

In 1984, the government identified its urban policies, one of which was to make Istanbul a center of international trade, culture and finance throughout the Middle East and Europe. By doing so, the government aimed to attract international capital to Istanbul (Keyder, 2000). The liberal policies adopted by the government in this period lead to an increase in the number of international banks and trade companies. Within the scope of new liberal policies, the government applied three basic spatial policies in order to attract international capital. First of all, Sisli – Maslak axis on the European side, and Altunizade – Kozyatagi on the Asian side became the new international centers of the city, which directly shaped urban planning decisions in Istanbul. In these urban plans Sisli-Maslak central axis was demarcated for skyscrapers. There are several reasons why this axis was determined as the new business center in Istanbul, which include: the pressure by large capital groups, who are at the same time the landowners in the area, the demand for buildings well-equipped with advanced technology in accordance with the development of finance sector, the suitability of land sizes in this area for such development, the economic power of affluent capital groups, who are also the landowners, to meet the above-mentioned building demands, the need to gather dispersed headquarters in one area, and easy accessibility to different parts of the city (Oktem, 2005). During this period, many landowners on the central axis started to construct skyscrapers. While one aspect of the urban policies involved the accumulation of business centers around Sisli-Maslak and Altunizade-Kozyatagi axes, the other aspect of these policies were concerned with decisions to make Istanbul a tourism centre. This was reinforced by the Tourism Incentive Law forced in 1982, which aimed to reinforce tourism in the country. As a result, many five-star hotel constructions were initiated in Istanbul (Dokmeci, Balta, 1999). Finally, necessary decisions were taken to provide sufficient infrastructure in order to attract international capital to Istanbul. To this purpose, the infrastructure projects such as the construction of the highways and the 2nd Bosphorus Bridge, as well as the extension of narrow roads were carried out (Kocabas, 2006). These basic policies triggered substantial changes in the profile of the city centre. Many large shopping centers were opened as new venues of consumption. Industrial facilities, which had been located within the city centre

until the 1980s, dispersed to the peripheral districts due to the increased prices in the city centre (Erkip, 2000).

The transformations experienced by the city of Istanbul during the eighties and its growth over a wide area led to demands for a second bridge over the Bosphorus Strait. This bridge and its beltways were opened to traffic during the Mayor Bedrettin Dalan period. During this same period the city's sewage system was also renovated and a project was put into practice to clean the polluted Golden Horn. Projects designed to ease the transportation problems being experienced by the city were started and they included a railed transportation system i.e. a semi-underground system and a hydrofoil maritime transportation system. Various demolitions were carried out in historic quarters of the city and the Tarlabası Boulevard was opened to traffic. These demolitions aroused -much public criticism and debate. Skyscrapers were also built in the city centre during this same time period. The construction permitted in the areas near the Bosphorus Strait led to heavy population concentrations and had a very negative effect on the city. The period between 1980 and 1990 witnessed a significant growth of unplanned housing areas in the vacant fields between Thracian and Anatolian Highways and in the northern parts on either side of the Bosphorus (Aysu, 1984). Introvert housing areas have become dominant since the beginning of the 1980's as a reflection of the social decomposition of high-middle classes on physical space. The development of enterprises constructing such communities as a sub-sector of construction sector was triggered by the economic decisions taken at the beginning of the 1980's and the potential business due to the allocation of unearned income to urban lands as a result of the economic crises in the second half of the 1970's (Karaoren, 1992).

With the second Bosphorus Bridge in 1988, the gradual increase in access connections on both sides of Istanbul also increased the mobility of high-income groups, who had the highest level of private car ownership in the metropolitan area. Thus, the housing area choices of these groups shifted to prestigious areas in Kadikoy district. Besides, the increase in accessibility between the two sides of the city led to the mobility of not only high-income groups but also low-income groups.

The predominance of services sector in Istanbul also brought about changes about employment, for the development of finance sector generated a rich social segment. In order to meet the needs of this segment, luxurious community housings were constructed on the outskirts of the city.

In nine years between 1981 and 1990, various decrees and plans were put into realization so as to make Istanbul a center of culture and finance so that the city could attract international capital. During this period, the Turkish government and the administration of Istanbul Municipality belonged to the same political party, which played an important role in the realization of these decisions. The decisions increased the appeal of central districts in Istanbul for FDI investors. The statistics regarding the distribution of the number of FDI firms in each district per year support this suggestion. In 1954-1980, 74% of foreign capital firms in Istanbul had been situated in the central districts and 26% in the peripheral districts, while these figures became 82% and 18% respectively in the period between 1981 and 1990 (Berkoz, Turk, 2008).

The decentralization trend, which started in the 1980s, continued in the 1991-2000 period. As Table 1 indicates, while the traditional central business district (Beyoglu, Eminonu and Fatih) underwent a population loss, the other central and peripheral districts witnessed an increase in

population between 1990 and 2000 (Figure 2, 3). Similarly, workforce also revealed changes. During the same period between 1990 and 2000, the density of workforce population shifted from the traditional central business districts (CBD) (Beyoglu, Eminonu and Fatih) to the other districts of Istanbul. Especially, the rise in the workforce population in peripheral districts is relatively higher than that in central districts. When the sectoral distribution of workforce is considered, central districts witnessed an increase in services sector, and a decrease in industrial sector. The sectoral distribution of workforce in peripheral districts yielded a different transformation from that in central districts. In peripheral districts the shares of services and industrial sectors are fairly close to each other. The Istanbul Metropolitan Area Master Plan in 1995 initiated the decentralization of industrial sector from central districts towards peripheral districts. However, this plan was not implemented by the central government in Turkey. In the absence of an approved plan, the city continued to develop on the basis of informal local investment plans, a process that 'guided' the development of the new commercial districts (Kocabaş, 2006). In this process that spanned between 1991 and 2000, 76% of foreign capital firms were situated in the central districts and 24% in the peripheral districts (Berkoz and Turk, 2008).

The political and economical instabilities at national level between 1991 and 2000 called off the implementation of spatial policies regarding FDIs in Istanbul. Moreover, even the idea of making Istanbul an international city was also suppressed. As a result, the development of transportation and telecommunication infrastructures was given any priority although these facilities were essential to international capital (Keyder, 2000).

Since 1990 residential areas have expanded toward the land side of the city, following the highways connected to the first and the second Bosphorus Bridges. Therefore, sprawling primarily began in the areas between this route and the coastline, gradually spreading toward drinking water basins in the north. According to the study results by Kaya&Curran (2006), the rate of green areas on the European side of Istanbul decreased by 12% from 1987 to 2001 becoming 66,000 ha which initially stretched to 75,000 ha. Moreover, agricultural areas decreased by 23%, and also urban sprawl on water basins rapidly increased.

During the 14-year period, forest and green areas decreased by 9,134 ha (12.13%) and the agricultural and bare soil class by 19,656 ha (24.79%). In contrast, the urban and industrial areas increased by 17,290 ha (128.45%) due to dense immigration (Kaya and Curran, 2006). According to the results of this study, the highest increase rate in the European side was observed in the period of 1992-1997.

When we come to the period of 1990-2000, the change of population density increase in Istanbul's peripheral districts reached to 73.2%, surpassing the change rate of population density in Istanbul (%50.6). On the other hand, the change rate of the number of buildings was 83.1%. However, the change rate of the number of buildings in Istanbul was 61.7% during the period 1990-2000 (See Figure 1 and Figure 5). Therefore, as it can be seen on the attached maps, in the period of 1990-2000 the peripheral districts of Istanbul displayed an increase in population density and number of buildings above the average of Istanbul (See Figure 4 and Figure 5).

With legal arrangements to encourage the investment of foreign capital in Turkey, the number of foreign investments especially in Istanbul has increased since the 1990's (Berkoz, 2005). As a result of foreign capital investment in Istanbul, it could be stated that a new group of luxury housing consumers, formed by high-income people working at top administrative

positions, has also articulated into the cluster of high-income group. This user mass has always chosen the housing typology of introvert and gated communities because of being safe and thus suitable to the surrounding they have been accustomed to (Berkoz, 2007).

The major water basins in Istanbul are Omerli, Elmali, Kucukcekmece, Buyukcekmece, Alibeykoy, Terkos, Sazlidere, and Darlik. These basins constitute 60% of the city's area. During the transition of municipalities built on the basins from village status to urban status, very limited urban sprawl was anticipated to meet the requirement of new settlement areas. However, as in the cases of Sultanbeyli and Sarigazi, the basins underwent an intense sprawl. A settlement area of 7,000 ha spans throughout the basins. These areas have generally developed in an unplanned and unlicensed way.

Some of the settlements in the drinking water basins of the Istanbul metropolitan area were within the borders of district municipalities connected to the Metropolitan city and their adjacent area; while others resided within the borders of independent first tier municipalities. The fact that administrative borders do not intersect with basin borders affects planning approaches. Fragmentary zoning plans or regulations in the basins and related developments in these fields occur independently of the main decisions of superior physical plans. Moreover, illegal unlicensed constructions have occurred, which fall outside the scope of law and regulations in these fields. Zoning plans covering these areas have encouraged rapid construction.

In this respect, a significant problem related to the city's sprawl was out of question from the 1930s to 1990s because access to the city centre was not convenient then. Constructions of the Second Bosphorus Bridge and the highways at the beginning of the 1990s increased accessibility. The areas became centers of attraction due to the demand of those escaping from urban life to dwell in the urban peripheries, the convenient accessibility of these areas to the city centre, and the low prices of land. As a result, construction pressure on first tier municipalities increased. Gated residences that developed within the borders of first tier municipalities had the municipality confirm the partial masters involving the sprawl conditions that they determined themselves. Consequently, these first tier municipalities developed especially on basins and forests independent of the development principles of Istanbul's superior master plan.

The legal status of Metropolitan Municipalities was rearranged by the Metropolitan Municipality Law No 5216 in July 23rd, 2007. With this Law, Metropolitan Municipality was authorized to inspect the zoning implementations of district and first tier municipalities.

As a result of agricultural mechanization and industrialization efforts, Istanbul attracted a high amount of rural-urban migration during 1950s. Istanbul is located at the centre of transportation networks extending into several countries and regions, offers a great variety of job opportunities and provides social and technical means of infrastructure at high levels. These have all affected the mass migration from rural-to-urban. The net migration rate of Istanbul has been accelerating. This percentage was 79 %0 in the period between 1975-80 and 99%0 in the period between 1985-90. While the population increase rate was 4,09% in 1960, it raised by 4,48% in 1990 (DİE, 1998). Istanbul's population increase rate is at high levels due to the reason that there is a high level of rural-urban migration.

Squatter settlements have been developed rapidly and formed around industrial areas. Newcomers live those areas and are employed in the industrial firms. Today 27% of Istanbul's population inhabit in the squatter areas (İ.B.B.P.İ.D.B.Ş.P.M., 1995). The main

reasons of the uncontrolled residential development of Istanbul are migration from rural areas and the increase of squatters promoted by continuous reconstruction pardons.

The increase in house demand, parallel to the rapid population growth, has augmented the pressure on local and central authorities. Private entrepreneurs provide a lot of alternatives in order to solve this problem: Mass housing areas (single-family and multi-family gated communities) and residents.

Since 1990 residential areas have expanded toward the land side of the city, following the highways connected to the first and the second Bosphorus Bridges. Therefore, sprawling primarily began in the areas between this route and the coastline, gradually spreading toward drinking water basins in the north (Berkoz, 2008). In the 1990's, heterogeneous housing areas inside the city started losing popularity among the urban elite class, who instead showed a tendency towards isolated and homogenous areas far from Istanbul's density. This tendency has resulted in the rapid growth of mass housing areas in the urban peripheries, which include a life style enabling the expectations of living with families at the same cultural and income level and which consist of less dense single-family housings (Berkoz, 2008).

Big pieces of land on the urban peripheries that enable the development of such homogenous housing areas and low prices of land are the reasons for the desirability of these areas in the bosom of nature, which meet the demands of high-income groups. The demand on the northern and north-eastern parts of the city in the aftermath of the 1999 earthquake in Istanbul has also enhanced this phenomenon. Safety, social comfort and villa-type walls are the general characteristics of these communities.

As a result, new residences started to spread around the peripheries in Istanbul, whose developmental features complied with the expectations of life shared by families of the same cultural background and income level. These communities were equipped with special amenities such as large variety of leisure activities, higher building standards and high-quality neighbourhood environmental infrastructures. Neighbourhood environmental structures include high-quality roads, walkways and landscapes, false-gated entrance pillars, luxurious street furniture, pocket open spaces. Encouraging car-ownership and use, gated communities have various consequences: congestion and pollution at considerable levels, and a decrease in a sustainable public transport system are two examples of these consequences. They also increase the appearance of suburban car-based residential sprawl, leading to longer commute and congestion (Berkoz, 2006).

In his "The Process of Spatial Segmentation" Perouse, J.P. (2003) highlights that there are about 4000 gated residential areas in Istanbul inhabited by 60-70 thousand people. Gated residential areas constructed after 2000 have expanded to 30-million m² area (Coliers Rescoe, 2003). Gated communities are implemented by 5 institutions: Cooperatives, Mass Housing Administration, Local Administrations, Private Entrepreneurs, and Türkiye Emlak Bank (specialized in real estate).

99 single-family gated communities have been detected within the scope of this study. There are 10.366 housing units in these communities. Most of the GCs in Istanbul (83.8 %) were constructed after 1990. The highest number of GCs is in Sariyer, Beykoz and B.Cekmece districts which bear communities constructed after 1990. 19.2% of 99 single family GCs are in central districts, while 80.8% are in the peripheral ones. In terms of housing units, 8.5% are in central districts and 91.5% in the peripheral ones (Berkoz, 2008 and 2009). The single-family housings were settled in the vacant fields in the central districts before the 80's, the

saturation of city centers with growth, and related to this, the increase in the value of lands have lead GCs to settle in the empty and inexpensive lands in urban peripheries (Berkoz, 2008).

48.5% of GCs in Istanbul accumulate around the districts of Sariyer, Beykoz and B.Cekmece, which bear the highest number of such communities. Sariyer and Beykoz districts are situated in the north-western and north-eastern parts of Istanbul, which have the most expensive land prices in Istanbul. Moreover, compared to other districts, the total number of housing units in the above-mentioned ones is very high. 78.2% of the total housing units of GCs in Istanbul are in these districts (Berkoz, 2009).

Retail trade facilities of Istanbul are facing a rapid transformation due to tremendous population increase, incomes and car ownership growth, restructuring of urban structure, changes from central to free market economy, global forces and changing life styles. In consequence, population decentralization, the rapid growth of peripheral zone with modern housing projects, construction of highways and bridges between Asia and Europe and globalization have been the chief forces changing the nature of the retail market (Ertekin et al., 2008).

The spatial distribution of shopping malls is analyzed according to zones of the city. Between 1990 and 2000, a decline in population is observed in the core of Istanbul (Beyoglu, Eminonu and Fatih districts), while the population increased in other central districts and peripheral districts. The core zone of Istanbul has only one shopping mall. When we look at the demographic change in Istanbul with respect to zones, we see that in central districts there is a decrease in population with a rate of 29.38%, but in peripheral areas there is an increase of 107.97%. The central districts zone has 36% of the number of shopping malls. The peripheral districts has 67% of the city's population, peripheral districts zone has 64% of the number of shopping malls (Table 4 and Figure 6).

When we come to the period of 1990-2000, the change of population density increase in Istanbul's peripheral districts reached to 73.2%, surpassing the change rate of population density in Istanbul (%50.6). On the other hand, the change rate of the number of buildings was 83.1%. However, the change rate of the number of buildings in Istanbul was 61.7% during the period 1990-2000 (See Figure 1). Figure 6 indicates that the rise of gated community sprawl is observed in peripheral districts of Istanbul, which bear an increase above the population density and the rise in the number of buildings in Istanbul.

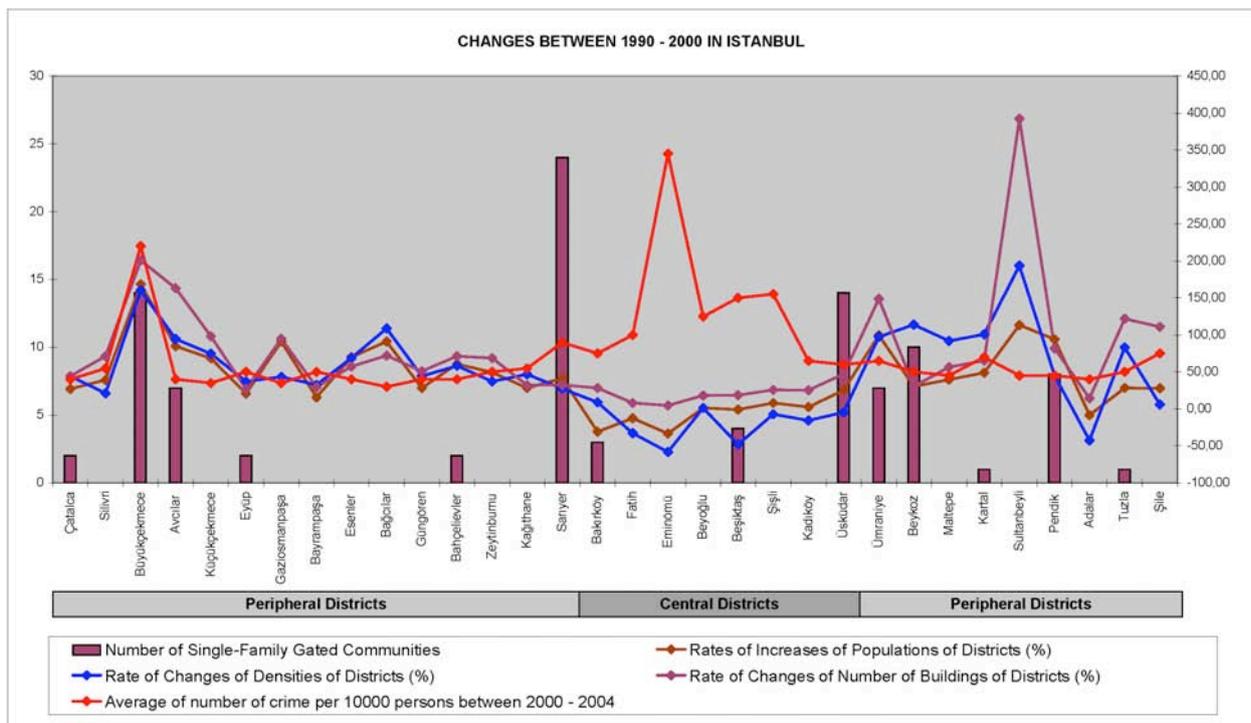

Figure 6. Changes of Population and Densities between 1990-2000 according to districts of Istanbul (Berköz, 2008)

CONCLUSION

It has been seen that during its 165 years' planning process, the city of Istanbul, similar to many other large cities, has not been able to create an institution strong enough to control the rapid urbanization process being experienced and thus many events that are not in the scope of plans have been occurring at an increasingly fast pace.

Istanbul has attracted millions of immigrants from the other regions of Turkey. The immigrated inhabitants have created a heterogeneous and scattered urban structure. The reflections of this structure are spontaneously developed, unplanned and uncontrolled settlements adjacent to planned development areas.

Plans have been also very difficult to implement as there has been a sharp increase in the values of the areas and the city and other public agencies do not have a large stock of available land. In addition, existing government lands have been appropriated by squatters and building codes have proven to have been inadequate to solve the problem in the way they did not define the procedures of construction of new buildings in a detailed way. It has been documented that the continual pardoning of land and building violators have led local authorities to accept the negative condition as the status quo. Rather than the plans being used as tools guiding the development of the city, the plans have trailed the actual developments that did occur.

The process of globalization occurring today in Turkey and throughout the world means that the creation of a telecommunication infrastructure capable of providing services at an international level is essential for Istanbul's future-directed planning and development into a regional service centre which is internationally well-known. The advancement of its transportation and communications systems will give Istanbul the opportunity of competing in global market places.

Throughout much of its long history Istanbul was one of the world's most influential cities. Currently, parallel to the rapid developments occurring around the globe, Istanbul's ability to once again develop into a leading city is dependent on the efforts to increase its competitive strength in relation to other leading cities and on its economic integration with the rest of the world. Istanbul will become a metropolis giving international services provided that the services are given at high standards, the workforce to give these services are trained in the best way and the policies are made accordingly.

The affects of the social and spatial changes caused by globalization experienced worldwide are also seen within the Istanbul metropolitan area. With this rapid transformation process, foreign capital companies are investing in Turkey, especially in Istanbul. There have appeared in it shopping centers, multi-national headquarters, and high-class residential houses.

Economic restructuring policies have also brought a rapid economic growth with an increasing income gap in the hands of a new-upper class, elitist in its living looking for a higher degree of status. People from high-income groups show a tendency to live in urban peripheries, because these communities provide high-standard urban services to their residents. Moreover, the availability of lands big enough for the development of such communities, lower land prices with respect to the city center, and the green belts surrounding these lands are among the reasons why peripheral areas are desirable spaces to fulfill the requirements of high-income groups.

The rise of GCs has gained significance due to the demand for the northern and north-eastern districts of the city since the 1999 earthquake in the Marmora Region. They also increase the appearance of suburban car-based residential sprawl, leading to longer commute and congestion.

Examining the roles of risk and protective factors in the presence or absence of problem behavior among Chinese Male Adolescents

Abstract

The main aim of the present study was to identify the risk and protective factors relevant to the problem behaviors of Chinese male adolescents. 376 Grade 11 male adolescents were recruited from 4 high schools from Jiangsu province, eastern China. These students were asked to complete a self-report questionnaire, which was designed to measure risk factors, protective factors, and problem behaviors. Results from regression analysis showed that poor parental supervision and discipline was a significant predictor of problem behavior. Although the combined protective factors offset the negative effect from the poor parental supervision and discipline, only two of six protective factors (e.g., family attachment and recognition for prosocial involvement by school) made significant contributions to the prediction of male adolescents' adaptive behavior. Findings of the present investigation have theoretical and practical implications for the design of prevention and intervention programs.

Key words: Problem Behavior; Chinese male adolescents; Risk; Protection

Examining the roles of risk and protective factors in the presence or absence of problem behavior among Chinese Male Adolescents

1. Introduction

Adolescence is a critical developmental stage because during this period, problematic behavior peaks in onset, prevalence, and incidence (Moffitt, Caspi, Rutter, & Silva, 2001). In the literature, boys have long been demonstrated by criminologists (e.g., Kruttschnitt, 1994) and psychologists (e.g., Bettencourt & Miller, 1996) to be more problematic than girls at every age. Thus, it is no doubt a great challenge for those working with young people to prevent the problem behaviors of adolescents, especially males.

Two main prevention approaches, risk-focused and protection-focused, have been suggested to decrease the prevalence of problem behavior. These require the identification of risk factors contributing to problem behavior and/or the identification of those protective factors that can reduce the negative effects of risk factors.

Researchers have been investigating risk factors that influence problem behavior for some time. Many western studies have reported that poor family management practices are significantly associated with problematic behaviors in adolescents, especially male adolescents. Additionally, this association has been shown to be stable over time (Caldwell, Beutler, Ross, & Silver, 2006; Hawkins, Catalano, & Miller, 1992; Kandel & Andrews, 1987; Rutter, et al., 2004).

Research also has suggested that a range of protective factors may provide a buffer to decrease the likelihood of engaging in problem behavior (Armstrong, et al., 2005; Hawkins, et al., 1992; Jessor, Bos, Vanderryn, Costa, & Turbin, 1995), but some inconsistent findings have emerged. Early efforts were primarily focused on characteristics of the individual such as intelligence, gender, autonomy, self-esteem, and internal coping skills (e.g., Masten & Garmezy, 1985). Research also has focused on the role of factors external to the individual such as care and support from family, school and community (e.g., Anthony, 1987; Gore & Eckenrode, 1994; Howard, Dryden, & Johnson, 1999).

Hawkins and Catalano (1992) proposed that in developing an intervention strategy, in order to better reduce the negative effects of risk factors, the protective factors should have a theoretical basis. According to this perspective, social development theory (Hawkins & Catalano, 1992; Hawkins, et al., 1992) is chosen as the theoretical framework for the current investigation.

In the Social Development Model, bonding is viewed as a key protective factor against the development of problematic behaviors (e.g., conduct problems, truancy, and drug use). Hawkins and colleagues (1992) claim that positive bonds include four important components: (1) attachment to parents; (2) commitment to schooling; (3) regular involvement in activities; and (4) belief in the expectations. Research employing this framework has documented that three distinct domains of bonding (family, school and community) need to be taken into consideration. Through bonding to affectionate parents or prosocial adults from school and community, children's motivation is strengthened to conform to positive values and behavioral norms.

However, whether social bonding represents a distinct protective factor capable of buffering the effects of risk (e.g., poor parental supervision and discipline) has not yet been determined (Hawkins, et al., 1992). Besides, according to Kirby and Fraser (1997), some risk and protective factors are likely to be culturally specific.

This study aimed to examine the effect of poor parental supervision and discipline on behavior problems, and to evaluate the social development theory as a framework for understanding such behavior in a Chinese context. The current study utilizes protective factors, drawn from the Communities that Care (CtC) instrument (Arthur, Hawkins, Pollard, Catalano, & Baglioni Jr., 2002; CtC, 2002), and operationalized through six constructs (Armstrong et al., 2005; CtC, 2002): family attachment; positive relationship with parents; positive relationships with adults; opportunities for pro-social involvement in school; recognition for pro-social involvement from school; and high school expectations of behavior.

The current research addresses the following questions: 1) Is poor parental supervision and discipline a predictor of problematic behavior among Chinese male adolescents? 2) Which protective factor is the best predictor of the absence of problem behavior? 3) To what extent can the protective factors offset the effect of the risk on problem behavior?

2. Method

2.1 Participants and procedure

Permission and ethical review were provided by the University of Sydney Human Ethics Committee. Participants in the study were 376 Grade 11 male students recruited from 4 high schools from a rural area, a small city, and a big city within Jiangsu province, eastern China. They were aged from 15 to 19 years. These students were asked to complete a self-report questionnaire, which was designed to measure risk factors, protective factors, and problem behaviors. The original English version was translated into Chinese by two bilingual translators.

2.2 Measures

All items used in the study were drawn from Armstrong et al.'s (2005) On Track Youth Lifestyles Survey (for secondary school students). Poor parental supervision and discipline in the study was measured by 8 items and protection, consisting of 6 factors, was measured by 26 items. All indicators for the risk and protective factors were measured with a 4-point response scale (e.g., from 1 'strongly agree', to 4 'strongly disagree'). These factors in the On Track Youth Lifestyles Survey have been shown to be internally consistent, with high alpha coefficients ($\geq .70$).

Student's problem behaviors were measured by 12 items based on the frequency of occurrence in the previous year. Problem behaviors cover three categories, namely truancy, use of substances (alcohol and cigarettes), and antisocial acts (stealing, receiving stolen goods, attacking, vandalizing). Responses from the questions were coded into a binary response such that "0" was coded if the respondent had never committed the problem behavior, and "1" was coded if the student had behaved in this way once or more.

3. Results

Prior to regression analyses, Pearson correlations among these risk and protective factors were tested. Inter-correlations among factors are presented in Table 1, with coefficients (absolute value) ranging from .14 to .54. The low to moderate inter-correlations provided support for multidimensional factor distinctiveness. The internal consistency of each factor is presented in Table 1 (in the diagonal). Cronbach's alphas (all ≥ 0.70) indicated that these measured items were reliable for all proposed risk and protective factors.

Based on the results, one single regression was conducted to test the hypothesized linkage between poor parental supervision/ discipline and problem behavior. Table 2 shows that poor parental supervision/ discipline was a significant predictor of problem behavior with a

standardized regression coefficient 0.37.

Table 1

Pearson correlations among these risk and protective factors

	<i>R1</i>	<i>P1</i>	<i>P2</i>	<i>P3</i>	<i>P4</i>	<i>P5</i>	<i>P6</i>
R1:Poor Parental Supervision and Discipline	.72						
P1:Family Attachment	-0.35	.89					
P2:Positive Relationship with Parents	-0.35	0.51	.70				
P3:Positive Relationship with Adults	-0.14	0.33	0.40	.72			
P4:Opportunities for Prosocial Involvement (school)	-0.21	0.23	0.40	0.31	.79		
P5:Recognition for Prosocial Involvement (school)	-0.26	0.29	0.39	0.36	0.54	.81	
P6:High School Expectation of Behavior	-0.34	0.26	0.31	0.16	0.33	0.45	.75

Note. Reliabilities (Cronbach's alphas) for factors are presented in the diagonal

Next, one multiple regression was used to explore protective factors included in the model which contributed to the prediction of behavior competence. Overall, the six protective factors explained 14% of the variance in problem behavior. As shown in Table 2, family attachment and recognition for prosocial involvement by school significantly negatively predicted these male students' problem behavior, while other factors did not make significant contributions to the prediction of male adolescents' adaptive behavior.

Table 2

Regression results predicting behavioral outcomes (standardized betas)

	Problem Behavior
Risk Factors	
(R1) Poor parental Supervision and Discipline	0.37**
Protective Factors	
(P1) Family Attachment	-0.17*
(P2) Positive Relationship with Parents	0.07ns

(P4) Opportunities for prosocial involvement in school	-0.03ns
(P5) Recognition for prosocial involvement by school	-0.32**
(P6) High school expectation of behavior	-0.06ns
Total R ²	0.14

*p<.05 **p<.01

† This is a suspected suppression effect with a reversal of the direction in standardized beta. When tested in a single linear regression, it was non-significant

4. Discussion

The main purpose of the current research was to explore the roles of risk and protective factors in the presence or absence of problem behavior among Chinese male adolescents using Social Development Model as the theoretical basis. Our analyses showed that poor parental supervision and discipline was related to problem behavior. Less parental supervision and discipline puts

adolescents at a much greater risk of engaging in problem behaviors. The findings were similar to findings from western studies (e.g., Caldwell, et al., 2006).

Findings indicated that not all of the protective factors investigated are important for the development of adaptive behavior for male adolescents. The roles that family attachment and recognition for pro-social involvement in school had in modifying the impact of poor parent supervision and discipline on problem behavior were underscored. However, overall, the negative effect of poor parental supervision and discipline was offset by these protective factors.

The findings have the potential to make a broader contribution to the Social Development Model. Social Development theory emphasizes bonding as a key protective factor to moderate the negative effect of risk in the process of an individual's development. This is because it claims positive bonding to parents or prosocial adults can enhance children's motivation to obey behavioral norms. Positive bonding can be developed through such components as attachment to parents; commitment to schooling; regular involvement in activities; and belief in the expectations. The results provided evidence that bonding can still be regarded as a protective factor against the development of problematic behaviors in the Chinese context. However, not all of the factors in this study are capable of buffering the effects of the risk factor. It leaves a question unanswered: can these components (e.g., attachment to parents; commitment to schooling; regular involvement in activities; and belief in the expectations) really develop positive bonds? Further research on this question is needed.

Findings of the present investigation provide some guidance for the design of prevention and intervention programs. To prevent the prevalence of problem behavior for Chinese male adolescents, an effective strategy is to enhance the child-parent attachment and to provide recognition for pro-social involvement by schools. Furthermore, parents should be encouraged to supervise and discipline their children.

In interpreting the results of this study and attempting to apply findings to other populations, some points need to be recognized. Firstly, there is a need to extend the sample to other grades and other parts of China – and then to other parts of Asia. Secondly, data from longitudinal designs, from multiple methods and multiple sources should be considered in future research.

Bringing robotic education into a Girls' Senior High School in Taiwan: Probing into the problem solving model of creative project work from BLOG

Chih-Yang Chao^{*}, Yuan-tai Chen¹, Yu-Te Wang², Kai-Fu Yang³, Yong-Shun Lin⁴

Abstract

Ushering K12 in engineering education is of little importance and rarely put into practice in Taiwan. The research intended to emphasize robotics is an excellent tool for teaching science and engineering, and it is a compelling topic for students of all ages. This study recorded and analyzed 24 secondary-level students and 2 teachers by adopting evaluation case study. During the process of creative project work (CPW) in robotic curriculum, we adopted ICT environment, discussed the process and contents among Blogs, and assisted with analysis of semi-structure interview record of students/teachers and the final report of CPW by students. Eventually, we probed into the impact on students between problem solving model of CPW in robotic curriculum and the effect of ICT tools when undertaking project. According to the final analysis, we drew two stages and six steps of the problem solving model from the creation of students' project work. Besides, we also found that there is no time and space limitation to communicate the questions and proceed the evaluations and feedbacks of designated topic among students/students and students/teachers by applying Blogs. Furthermore, the instant search function of Internet resource, Blogs discussion and instant messages will promote a better learning efficiency when students made. However, they also indicated some shortcomings.

Index Terms: problem-solving, creative project work, ICT, blog

1. INTRODUCTION

The senior high school curriculum guidelines in Taiwan stated that the life technology and computer science curriculums should develop students' abilities in independent thinking and problem-solving as well as stimulate their creativity and potential (Chao, et al., 2009; Ministry of Education, 2008). Secondary education in Taiwan fostering students' abilities in solving real-world problems is pointed out as one of the most important goals in life technology curriculum. In addition, the six criteria of Nets (National Educational Technology Standards) for students in 2007 involve creativity and innovation, problem solving, and decision making. In order to foster students' abilities of problem solving and hands-on exploration of science, the study aims creative project work (CPW) activity, which was the 3rd stage experiment curriculum of the High-scope three years program, pushed by NSC Taiwan, to inspire students to study science and technology. The present study investigates how the schoolgirls construct their creative problem-solving model .

First of all, the researcher will describe the tasks and assessment criteria of CPW activities then group the students by the score of previous problem-solving orientation scale 24 students were divided into 6 groups, with two groups of each level, according to high, middle and low scores. Next, the teacher will define the problem situation, on open-end and real-world problem such as "design a robot or auto-control device used by Lego NXT which can be used in the real-life and help people to solve some problem". According to problem situation, each group proposes a solution to the real-life problem which is defined in their group CPW activity, based on previously learned knowledge and relevant real-life experience, through the group discussion, brainstorming, information search and analysis, defining problems, and generating ideas.

In accordance with students' group discussion, the researcher closely observed participants' verbal and nonverbal behaviors, and teachers provide appropriate counseling for each group during the study and conduct 3 semi-structure interviews at the time point of three major CPS components (Isaksen, Dorval, and Treffinger, 1994).

According to the suggestion of using ICT tools to make or present learning portfolio by the students in the first year experimental curriculum (Chao et al., 2009). A lot of studies have focused on the use of network systems such as blogs, Wikis, and Twitter in educational settings (Ellison, & Wu, 2008 ; Huffaker, 2005; Lin et al., 2006). Students were asked to use the Blog as a platform of group discussion and results exhibition in their CPW activity, and the researcher achieved a triangulation of qualitative data and verify the correctness of the results through the content of blog, final report, data of semi-structure interviews.

2. LITERATURE REVIEW

2.1 Problem and Problem-solving

Various scholars have different views on the definition of problem. From the cognitive psychology, the problem is defined as something that has a clear solution path, which can be divided into two major categories (Sternberg, 1999).

1. Well-structured problem: The problem which can clearly give a clear status, solution method and clear goal will be referred to as a "Well-structural problem".

2. Ill-structured problem: Ill-structured problems possess multiple solutions, solution paths, no definite answer and contain uncertainty about which concepts, rules, and principles are necessary for the solution or how they are organized and which solution is best. On the dissertation of Cognitive Psychology, the problem is difficult to establish patterns and answer the mental representation, and multiple solutions. There are plenty of solutions to problems, whose appropriateness is different due to the cognition of reasons for the problems.

Chang & Weng (2005) stated that " the science curriculum should develop students' abilities in independent thinking and problem-solving as well as stimulate their creativity and potential". ISTE, according to the science and technology international standards for education (National

Educational Technology Standards For student(2007), proposed that "problem solving and collaborative learning" were the science and technology education standards for students. In addition, studies from a number of researches revealed that "creative development" is highly correlated with "problem solving". Torrance (1966) described four components of creativity, viz. fluency, flexibility, elaboration and originality, as well as emphasized that "creativity is a process involved how to detect problem, defect, knowledge gaps" and "seek answers, make assumptions, test hypotheses, and repeatedly revised assumptions and verification, and propose results". Guliford (1977) advocated it is closely related to problem solving and creative thinking. Davis (1986) indicates that the creative process is a series of steps or stages to solve problem. Cooper and Press (1995) further elaborated that the design is art, and also problem-solving; it is a creative act.

The most recent curriculum guidelines in Taiwan repeatedly stressed that "creative thinking" and "problem solving" were the key objectives of secondary education (Ministry of Education, 2008). And the development and cultivation of creativity has been the important educational goal of gifted education.

2.2 Project work

Project work (PW), from the constructivist theory, holds that traditional teaching activities are required to construct an active learning environment, which provides learners with opportunities to choose explorative topics with truth and value. In the process of exploring the problem, learner try to find the answer, cooperate with others, and use technology tools to produce learning outcomes or works(Giilbahar & Tinmaz, 2006 ; Luehmann, 2001 ; Papastergiou, 2005). In other words, PW is a teaching activity, which guides students to learn actively and try to explore and solve problems and transfers students from acceptors of knowledge to active knowledge explorers.

PW especially aims students to conduct cognitive, skill, emotional learning for interesting or controversial issues of teaching-related topics, explore the key point of problem in depth and bring up cognitive thinking, inquiry skills to achieve high-level problem-solving learning(Gubacs, 2004 ; Grant & Branch, 2005).

The basic steps of project work in general can be summarized as follows: preparation stage, problem solving stage, evaluation and feedback stage. Collaborative learning allows learners to develop an open-mind and understand that knowledge is co-constructed (Torp and Sage, 1998). Collaborative learning process of CPW is popularized by the majority of students is deemed to enhance such abilities as the cognition, skills, affection and creativity (Giilbahar & Tinmaz, 2006) .

Therefore, the implementation of PW is an important teaching activity in science or engineering education. Although many studies use statistical analysis through the questionnaire to discuss the importance of PW, but little research has been done to explore "bring engineering education into high school level" in Taiwan, and which pedagogy strategies or method, example as PW activity, creative problem-solving, can arise high school student interest in engineering. The reason may be that down-rooting engineering education was not taken seriously before, but now is really an important topic.

2.3 Creative Problem-Solving (CPS)

Some related researches state that creativity can be developed and is in the process of problem solving. Creativity in many daily activities is quite common (Runco & Richard,1998). Osborn in his book "Applied Imagination" proposed seven stages of creativity: orientation, preparation, analysis, hypothesis, incubation, synthesis and verification. Then Parnes in 1967, integrated creative thinking strategies with the brainstorming (Osborn, 1953) and came up with five stages of CPS: fact-finding, problem-finding, idea-finding, solution-finding and

acceptance-finding.

Isaksen and Treffinger (1985) expanded the CPS model by describing six stages (adding a Mess-Finding stage), rather than five, and redefined " fact finding " as " data finding ", and stressed divergent thinking and convergent thinking in various stages. Divergent thinking can stimulate the expansion of different creativity. Convergent thinking can summarize creativity and be used interchangeably with divergent thinking. Treffinger and Isaksen (1992) further refined the six stages of CPS into three general components, described as Understanding the Problem, Generating Ideas, and Planning for Action.

CPS involves the integration of both creative and critical thinking skills. Different from traditional problem-solving, CPS advocates that thinking as more flexible options as possible before selection and implementation of solutions to obtain a better idea.

The most powerful applications of CPS for students are that they can carry out their solutions in real life, involving students in dealing with real opportunities and challenges rather than with hypothetical solutions to contrived problems (Treffinger, 1994). Engineering education bridges classroom lessons to real-world experiences.

Engineering tend is one of life-technology curriculum reform direction in Taiwan senior high school (Lee & Lai, 2004). But there is a lack of study on engineering learning using problem-solving approach in senior high schools' CPW in Taiwan. Down-rooting engineering education to K12 is a global trend, Robotics curriculum is a very suitable project for development.., and implementing the robotics curriculum into senior high schools could inspire students' interests in engineering learning (Chen et al., 2009). However less research mention, can CPS teaching strategies be implemented in high school engineering education?

3. PURPOSE

This study would try to answer the following research questions based on the analysis from group Blogs, semi-structure interviews and final report of CPW:

- (a). to probe a problem solving model from the students' CPW of robot curriculum, and
- (b) what differences were between different groups of students in problem-solving process?

4. METHODOLOGY

4.1 Qualitative methods

The qualitative methods used in the study were observation, semi-interview and documents analysis from blogs. For both teachers and researchers involved in this study, the most important task has been to report and document the research experiments and findings as thoroughly as possible by providing detailed descriptions of problem solving processes and concepts developed by the schoolgirls. The purpose of data collection has been to successively create a problem solving model of the way schoolgirls develop their creative project work.

4.2 Participants

Participants were 24 schoolgirls, who were assigned into 6 groups (involved 2 high problem solving ability, 2 low problem solving ability and 2 middle problem solving ability groups), from High-Scope Science and Technology classes in Taichung Girls' Senior High School, Taiwan, R.O.C.. Each group contained approximately four students, and the collaborative creative project work lasted for sixteen weeks (two hours per week). The thirty-two hour experiment involved working in pairs to solve an open-end problem, from which students raised the subject of CPW after discussion. These students were tenth graders registered in TCGS in August, 2008, and their average age was 17. They had basic computer skills and robotics learning experience. Two teachers carrying out the teaching instructions for this CPW are from TCGS and they have 12 years teaching experience on computer and technology course.

4.3 Research procedure

Aimed to explore the schoolgirl's problem solving process in group creative project-work, and to further explore their problem-solving model, this study started with defining the relevant issues and the purpose of research from related literature, and then adopted inductive analysis of qualitative methods to elicit the result and made the recommendation. Procedure of the study was as follows.

1. Describe the content of CPW activity and group students. Students were asked to implement CPW at each prearranged time point, referring to the three major components and six specific CPS stages proposed by Isaksen, Dorval, and Treffinger (1994). Besides, in the research process, students were asked to record all group discussions in blogs.
2. In each stage, semi-structured interview was carried out by the researcher, and two tutors were involved in the CPW process to discuss and make observations.
3. Transcribe collected interview data into verbatim draft, compile and encode the information, and then inducted specific and reliable research results.

4.4 Data collection and analysis

The qualitative data were collected by the researcher from semi-structured interview, records of their blogs, final report of project work and teacher's field observation note. By following Yin's (1984) proposition "replication strategy" in the case study method, first the researcher must identify unique patterns within the data for the single case (group) and then conducted cross-case thematic analysis to categorize the differences and similarities across the participants of group in responses and activities. For example, in this study the researcher used the data collected from blogs, interviews, field observation to compare with Isaken's CPS model, with the goal of finding the recurring themes and organizing the data into systematic categories of analysis. Then the researcher refined these themes by removing overlapping ones and capturing the main thrust of the meaning of each theme (Guba & Lincoln, 1994). General themes or patterns emerged and were integrated through this data coding process.

4.5 Data reliability and validity

In order to promote the quality and credibility of the study, the indicators—credibility, migration, reliability and verifiability—that were proposed by Lincoln and Guba (1985) to increase reliability were adopted. In-field observation, analysis of participants' blog records, six times semi-structure interviews and final report of each group' project work were employed in the study to achieve a triangulation of qualitative data. Direct observation of the participants was conducted during every stage of CPW.

5. RESULT AND DISCUSSION

After comparing the problem-solving process in CPW with Isaken' CPS model, we applied inductive analysis method of qualitative research to emerge this case study' problem-solving model was two components (Seeking the Problem, Planning for Action) and five stages (Mess-Finding, Data-Finding, Problem and Idea Finding, Solution-Finding and Acceptance-Finding). Aiming to the problem solving progress of developing the designated topic, we came up with the findings and discussed all stages as follows:

5.1 Seeking the Problem (Understanding the Problem and Generating Ideas)

5.1.1. Students can look for problems in daily life, matching the "mass-finding" stage, and the difference in numbers of questions arose between high and low level problem-solving ability groups.

In this study, students were guided by "On the basis of previous learning experience, students

design a robot or auto-control device used by Lego NXT to help solve human problems in daily life, both of which can be related to the concept of energy-saving or green energy". Each group students at this stage had good performance in "divergent thinking".

"we can think about the question: can your shampoos, shower gels can be used to the last drop? From the perspective of energy resources, we should make an automatic device to improve this problem." [HG2-W2-R]

"The stores on the streets carry automatic vacuum cleaner; actually, we also need automatic mop, it can clear up the floor." [HG1-W2-R]

"The car roof can be refitted with solar energy, especially the buses. It can provide power for cars, we think it is enough for our discussion problem, and there are no further ideas." [LG1-W2-S]

However, in the discussion among high score groups and low score ones, two groups from high score group had more problem proposals, and two groups from low score group had only 1-2 discussed challenge problems, and then no more further challenge problems. We can find out students from low score group in challengeable problems are less positive and progressive than high score ones.

In addition, in the interview of second week, three groups of students mentioned simultaneously:

"The problem offered by the teacher was quite broad without absolute solution. How to set up the problem confused us so much, and it really made us discuss for a longer time without coming up with any solutions." [HG1-W2-S, HG2-W2-S, MG-W2-S]

"We only can rely on the daily things that we ever see. After taking a deep look and observe, we categorized the problem, and then compared it with previous learning, and finally we could know whether we can do it or not." [HG2-W2-S, MG-W2-S]

Therefore, we could know when students start doing project, they usually cannot make sure the problem immediately, but find out the challengeable problem from previous learning experience in their divergent thinking.

5.1.2 The "data-finding" stage occurred in every group from the interview, but presented difference in "convergent thinking" process.

From students' interview records and Blog, we can discover that there is significant differences between the students of high problem solving capacity and those of low problem solving capacity. The students from low score group did not have a consistence of data convergence. That means after they proposed the problem, they right away started problem exploring after Internet surfing and data-finding from books. However, the students from high score were different. After they listed their challengeable problems, at once they discussed their findings and searched for related information from Internet, and then proposed their discussion. Finally, they deleted those problems that cannot be done or have been done by others before, and then analyzed the data to start extending the sub-problem of problem. After the interview with the students from low score group, they thought that:

"We should search for the data according to the problems found in the challengeable problem, and try again what others had already done before. Try it!" [LG2-W4-S]

I do believe the problem is quite simple from our current project, that is, the robot that can close the window automatically. And it should be used in the daily life. [LG2-W4-S]

It is found that while the students from low score groups were operating, their performance about the positive and progressive attitude of problem solving was poorer than the students from high score groups, which means low score group students' self-learning management was poorer than high score group ones.

5.1.3 "Problem-Finding" and "Idea-Finding" arise dependently

The main purpose of the finding problem process of prepared problem step was "thinking of possible problem, and then verified the key point of problem". From the interview between students and teachers, we found that the specification of context in this step was not significant; however, there is a simultaneous circular relationship between "Idea-Finding" and "Problem-Finding".

“Wow! I don’t know still have this problem “how does the energy store?” Why we haven’t considered it before? We must confirm the problem again.” [LG1-W4-R]

“In fact, when we collect the Walking-robot information from Internet or library, we started the design concept. The design idea is “Biped Robot” to help human, but it need gyro to keep body balance. But we can’t get gyro, it will be a problem.” [MG1-W4-S]

In addition, from interviews, we found two high score groups students discuss 3-times on the back and forth between the two phases "problem-finding" and "Idea-finding".

During the stage, these two groups of students hold meeting about 7 times, showing that these two groups of students think deeply in the problem.

5.1.4 Facilitate group cooperative learning through problem solving

In the fourth week of the case study, there are 3 groups of students in the interview said that *“They feel good in group cooperative learning. From the process they found the problem to be solved, not as easy as subjects learning.”* It also vaguely said the program through problem solving and thinking could increase students’ active and self learning.

5.2 Planning for Action Component

The Component includes “Solution finding” and “Acceptance finding” two stages. “Solution finding” stage mainly chooses the best solution after assessing the advantages and disadvantages of various methods from Idea-finding. “Acceptance finding” stage mainly come to a resolution after consider the feasibility and implementation plan in the choice of solution method.

5.2.1. “Solutions finding” was recorded in each group’s blog, but in the assessment of the solution, high score students can better describe the content while low score students in the interviews only said that, “We think it is fine.”

“Using infrared sensors can detect rain, just do it no problem.” [LG2-W5-S]

“In fact, we have been thinking about where the problem may occur, but in the project work process we still find out several problems. Does we assess wrong? I think so, but I believe that because our discussing is not perfect, induce the question can’t clearly define.” [HG1-W5-S]

From blog and interview recording or report, it is not difficult to find out a phenomenon: the high score group students can analyze and discuss the problem in depth, and verify the problem imagination. However, lower-score-group students take easier problems to be study project title when they begin.

5.2.2 “Find out every evaluation standard” was difficult for each group of students.

For this level, students seemed to feel difficult in various problem evaluation standards. From the interviews and record of blog discussion, we could find out students only aimed at “feasible” or “unfeasible” to proceed the discussion about evaluation standard of problem. They were rarely using the detailed content of problem to proceed effect factor analysis. In the process, we only found out students from high score group had aimed at few problems, proposed discussion in blog, and recorded in executive achievement report.

“S1: The planning of moping route was not so easy, I thought that it should be proceeded by using infrared rays detector to detect the barriers in the rim; S2: I agree with you. However, from the aspect of mathematics probability, would it reduplicate or omit? Therefore, when we evaluate its moving route, we should aim at route planning, random route planning, barrier plus straight line planning and so on, so that eventually we would receive an accurate result of evaluation. So, shall we proceed the paper simulation of evaluation?” [HG1-W5-R]

For the standards of problem evaluation, we deemed that there was only one standard “As long as it could complete our setup to close the window when it detected the rain”. [LG2-W5-R]

In fact, it was very easy. For the second group of low score, we should mince the evaluation standards into when we should close the window, window should be closed entirely, half opened or leave an aperture, the speed when we closed the window and drive mechanism. However, students said that “we did not consider that much”, and it showed that student’s cognition of

problem solving tended to subject learning which has a single answer that accompanied with a problem solving thinking of a good structure problem. For unstructured problem, in consideration of cognition, it is called “incapable to qualification.”

6. CONCLUSIONS

Different from Isaken’ (1987) CPS model, two major components and six specific stages were proposed as this case’ CPS model, caused by the difficulty to separate between Understanding the Problem and Generating Ideas components. Problem-solving processes in each stage are non-linear and involved data-search and group-discussion. To achieve the goal of problem solving, the group members through discussion, reflection and feedback operated problem-solving circulation between each stage, and if component two can not be met within the inner-amendment, it will directly jump back to the component one to explore and confirm again and again. The view of CPS should be focused on internal behavior and thinking of individuals or groups, but not just on how to solve problems, monitor, and manage specific decisions regarding the stages and techniques to be used. As Treffinger (1995) indicated “Today's CPS calls on individuals and groups to invest a substantial degree of thought or reflection, imagination, judgment, and energy in their creative problem solving efforts”. Future research should explore the group members’ reflection activity or the benefit assessment of imagination and critical-thinking in the CPS process of project work.

The problem-solving model of project work (fig.1) was dynamic, flexible and nonlinear in this study. An approach to CPS recognizes that an effective process framework must be flexible and dynamic (Treffinger, 1995). Each stage in problem-solving involves group discussion process, the information search process, the course teachers participating and mentoring process, and also includes assessment and reflection elements. Traditional views of steps and stages for students to follow in solving problems must be re-testing because the CPS’ problem is an open-end and ambiguous situation for which one wants to successfully carry out a new method to solve. Problems for CPS were described as opportunities and challenges for successful change and constructive action (Treffinger, 1995). An inspired individual or small group could accomplish creative task, but not with formal methods. Creative problem solving would contribute students to learning and help them realize meaningful learning (Kandemir and Gür, 2009). In addition to student participation, teacher guidance, cooperative learning and information search are essential in the process of CPS. Future study may examine these three factors in quantitative research.

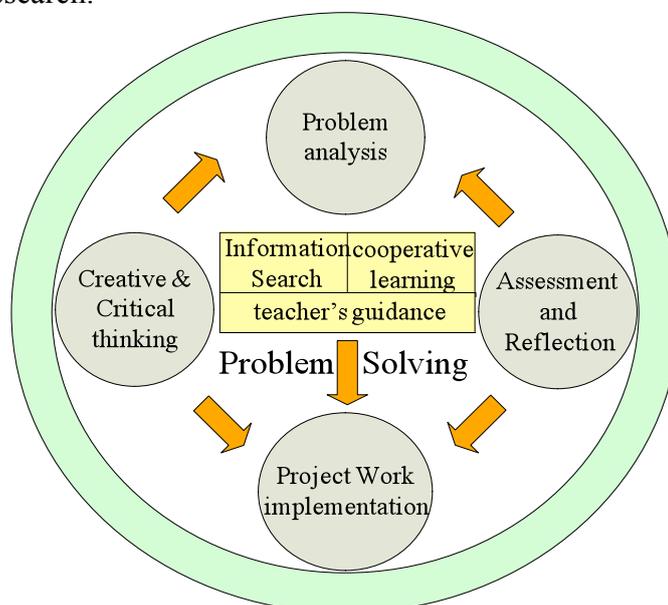

Figure1. Problem-solving dynamic model of CPW in this case

The difference exists between high and low level ability of problem-solving groups in creativity problem-solving process of project work, especially at the three stages, "discovery challenges", "seeking ideas" and "solution finding". High level ability of problem-solving group, in the "initiative, enthusiasm, thoroughness," performed better than the others, but it was the content analysis results of group blogs and field observations by qualitative method. Future study should investigate and discuss the three factors quantitatively.

Finally, it is important to note that our case study is limited because the sample may be considered as too small to draw a general conclusion. Although this study concluded the case's CPS model but it can not clearly identify the similarities and differences between the various stages, because it is difficult to measure and meaningless at this stage of the CPS study. It is important to discuss how CPS offers a powerful set of tools for productive thinking and the flexible, dynamic, descriptive uses of CPS. Accordingly, future research is needed to study the interaction between group feedback and reflection on the impact of creativity and critical thinking.

ACKNOWLEDGMENT

We would like to thank National Science Council of Taiwan who supported this three-year research project. And we also show gratitude to the students and teachers who participated in the study.

Introduction

In terms of pre-sale housing system, it is quite common to see real-estate industry display the true proportion of a sample housing units so that homebuyers can immediately experience the pre-sale housing space, structure, atmosphere and also decor as well as the future configuration for reference. Be that as it may, such designs often have to spend considerable decor and furniture purchase costs, and real-estate industry owners need to deal with the interior demolition and display furniture, which also give rise to some problems and waste after the business case is over. The way for displaying pre-sale house often directly loads the fake furnishing into the house for consumers visiting. However, after sales activities over, those decor and furniture usually directly sell to the homebuyers. That is a problem that construction industry owners can only show the configuration of one single style or pattern of the sample housing to homebuyers and have no idea to meet different consumer's need. In addition, some real-estate industry owners take non-proportional sample of the model house to show the pattern of the room and furniture configuration situation which cannot allow consumers to experience the indeed physical space. That might be an essential factor which affects consumers' purchasing inclination.

Therefore, in addition to the real décor and furniture which be displayed in the real-estate house, what will be another choice for experience the house while consumers visiting. The goal of this study aims to probe into the users' configuration behavior and satisfaction while they using Augmented Reality based configuration system in the condition of pre-sale house. Therefore, in order to conclude the goal of the study, the writer plans to offer the AR furniture configuration system in the pre-sale house for users to experience. This kind of configuration system could be a new experiential service for consumers. In addition to observe users behavior and take

their feedback as essential basis, this kind of service can be applied on construction industry is another hypothesis for this study.

As the Augmented Reality (AR) have been developed much more matured in recent years, and the technology has already been applied on vary fields. For example, military training, engineering design, and manufacturing, etc. In this study, the AR can be seen as the tool for supporting a new type of service for the real-estate industry in the pretest. AR is used to present the visual furniture model and make them combine with the real environment. In that way, the study would like to make an assumption if consumers prefer this kind of innovative service for displaying the visual furniture in the real environment and to see what their configuring behaviors are in order to make the open innovation to get the better way for improve the using condition. In the following passage, the AR technology and how the experiment works will be explained in detail.

With the increased consuming awareness in recent years, consumers' demand of home environment quality is also heightened. For consumers, they not only ask for superior geographical home conditions, but also take a great consideration of interior design like furniture configuration or interior decor. Some people might rely on the help of interior designer, but the majority of consumers still like to arrange by themselves because of their unique habits and preferences. According to the Pollster online market survey, the data reveals that 24.5% consumers buying new furniture due to buying another house (Pollster Online). Generally speaking, consumers need to go to the furniture malls while they want to buy some furniture goods nowadays. Unfortunately, consumers do not certainly understand whether the product appropriate for their house in the process of purchase, or the size of the product suit for demand. Furthermore, furniture products are mostly in the large volume and weight, they are not easy to be moved, so it is properly that plan where to place before furnishing and decorating. So if the buying new house and buying new furniture can be combined as one event and this is the so called potential service business.

User-Centric-Open Innovation

In fact, one traditional view of user needs in user-centered processes is based epistemologically on the assumption of an individual user who has needs and wants for a particular piece of technology.

In the past two decades the design of products and services has been largely driven by customers. After all, the customer buys a product or uses a service. The “customer-as-the-king” model was preceded by the “engineer-as-the king” (often designer) model, where the technical experts made the decisions for the customer. The customer was expected to accept the offered product or service (Kusiak, 2007). Through integrating users’ feedbacks and various reactions, the open innovation would come out and the improvement of the product and service will be generated into the miniature stage.

Innovation

Innovation is defined as an iterative process initiated by the perception of a new market or new service opportunity for a technology based invention which lead to the development, production, and marketing, all aiming at the commercial success of the invention (Kusiak, 2007).

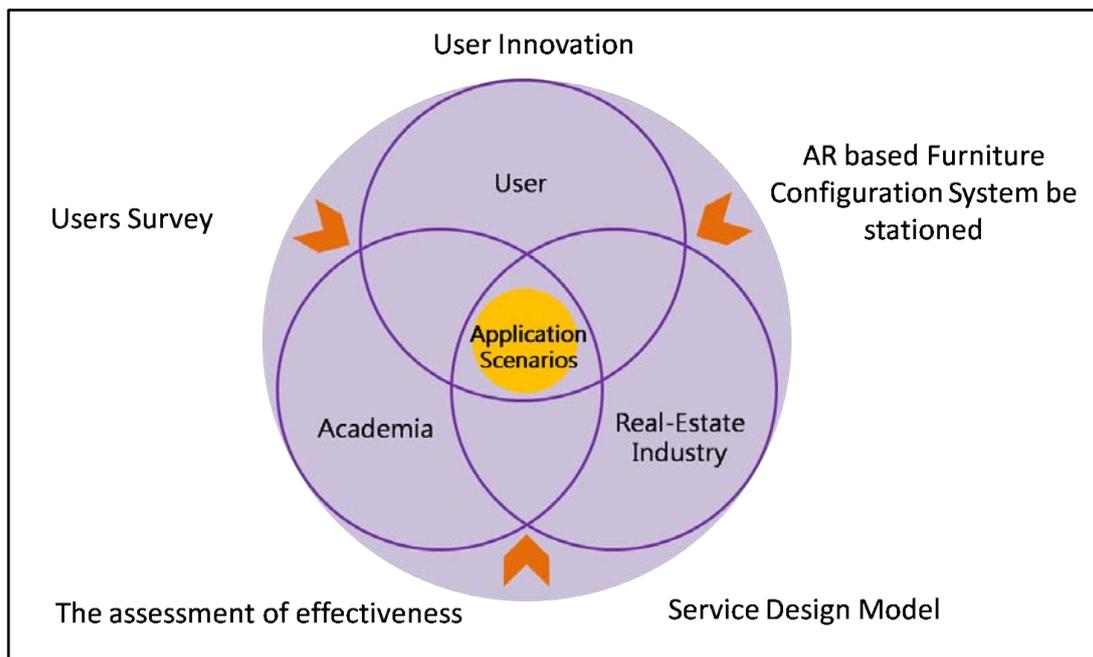

Figure 1: The relationship works among Users, Academia, and Construction Industry in this study

Research Methods:

1) Living Labs

Traditionally, while discussing where to execute the field experiment for knowing the

participants' using condition, we may think of the laboratory. In recent years, to do the experiment in real world becomes a trend to realize much more about user considerations. The living world provides the setting for the practice of participatory ergonomics. By addressing the salient issues of complexity, context, distributed cognition, and team situational awareness in this world, however, the advocate of the Living Laboratory concept is presented. The pilot projects follow a Living Lab (LL) approach. This main position of study is derived from the concept of Living Lab. The Living Lab concept originates from MIT, Boston, Prof William Mitchell, Media Lab and School of Architecture and city planning.

Living Lab is a new research paradigm integrating both:

- a. A user-centric multidisciplinary research approach
- b. A user community driven innovation based on real life experiments.
- c.

Living Labs represents a research methodology for sensing, validating and refining complex solutions in multiple and evolving real life contexts. The user experience focus involves areas of user interface design and ergonomics as well as user acceptance, extending to user co-design process, finally leading to service or product creation (Schumacher and Feuerstein, 2007). To conclude, this thesis contributes to the understanding of how data about user needs can be collected, generated, and understood through a Living Lab way of user involvement processes.

The key principles that were considered as crucial in Living Lab operations are: Continuity, Openness, Realism, Empowerment of Users, and Spontaneity (CORES), and these are described as follows (CoreLabs 2007a)

Continuity: This principle is important since good cross-border collaboration, which strengthens creativity and innovation, builds on trust, which takes time to develop.

Openness: The innovation process should be gathering of many perspectives and bringing enough power to achieve rapid progress is important. The open process also makes it possible to support the process of user-driven innovation, including users wherever and whoever they are.

Realism: To generate facilitate as realistic use situations and behavior as possible.

This principle also is relevant since focusing on real users, in real-life situations, is what distinguishes Living Labs from other kinds of open co-creation environments, such as Second Life.

Empowerment of users: The engagement of users is fundamental in order to bring the innovation process in a desired direction based on human needs and desires. Living Labs efficiency is based on the creative power of user communities; hence, it becomes important to motivate and empower the users to engage in these processes.

Spontaneity: In order to succeed with new innovations, it is important to inspire usage, meet personal desires, and both fit and contribute to societal and social needs. Here, it becomes important to have the ability to detect, aggregate, and analyze spontaneous users' reactions and ideas over time.

2) **Observation**

Observation is used as a research method in two distinct ways- structure and unstructured (Pretzlik, 1994). Certainly, there are two ways to carry out the study by observation, one is the experimental observation, and the other is a natural observation. The situations and conditions of the experiments must be strictly controlled in Experimental observation, and then observe the results. Generally speaking, the most essential advantage of observation study is that the phenomenon and user behavior can be observed immediately. Researchers can record and account the response, advice perception and expectation from the users in the experimental operation in order to understand users' acceptance and responses of the experimental system. On the other hand, researchers can also analyze the advantages and disadvantages of the system in the same time.

The real-estate house includes two conditions, both of them have the same layout, first is the house with real furniture and décor, and the other one is none of it. The former one mainly presents consumers normal house icon, even though consumers may not like the specific kind of the furniture and the décor. However, as what mentioned before, real-estate industry owners need to deal with the interior demolition and display furniture, which give rise to some problems and waste after the business case is over.

Literature Review

1) House Situation Information for Consumers

Reception Center and pre-sale model house not only sketch the contours of imaging Home for the house buyer, but also grant the extreme symbol value for the future shape of building. That is the main reason why the real-estate industry does not hesitate to spend large sums of money lay out a reception center and model house, and then the payment from the purchasers who had absolutely recovered. For consumers, the housing of goods purchased is high involvement in the purchasing behavior. Therefore, consumers will be very rational on collection production information. That is why highly-decorated reception center and pre-sale model house become a courteous reception for consumers. Sheth also pointed out that between consumer intentions and their expectations, there exists situational factors of non-interference, and the consumers will be affected by them (Jagdish N., 1974). As we know that Housing is a high-involved product. The decision-making process of consumers is extremely complicated. The consuming behavior also includes a number of elements. In factors that affect purchase intention, brand is a distinct indicator besides house features that consumers prefer. However, for consumers, model houses' roles gradually transformed from fabricated representations into reality, replacing the previous leading character of constructing housings. Consumers conceived model houses as the product. On the other words, there is an epistemological competition between simulacra and reality due to belated production of reality.

2) Augmented Reality

What is "Augmented Reality?" Augmented reality (AR) is a newly emerging type of digital content that combines real imagery (usually captured by video cameras) with virtual 3D graphic objects. Augmented Reality is the fusion of real and virtual reality, where computer graphics objects are blended into real footage in real-time. AR creates the illusion that virtual, computer-generated objects exist in the real world. All you need is a computer and a webcam. Augmented reality involves the overlay of virtual images on the real world. As computers become more and more invisible, it is becoming an increasingly important application area for computer graphics and user-interface design. Augmented Reality is virtual reality added to real imagery; imagine a camcorder where as you look through the viewfinder, you see some computer generated 3D objects drawn on top of the video picture (Azuma, 1997).

Additionally, Paul Milgram and Fumio Kishino defined Milgram's "Reality-Virtuality Continuum" (Figure 2.) in 1994. They describe a continuum that spans from the real environment to a pure virtual environment. In between there are Augmented Reality (closer to the real environment) and Augmented Virtuality (is closer to the virtual environment). Thus, AR means the overlay of virtual objects on the real environment. The .real world is enhanced with virtual information by the means of 3D objects, text, graphics, etc. AR can be seen as the inversion of Virtual Reality (VR). While VR pretends a complete virtual world, AR inserts only specific virtual objects into the .real world.

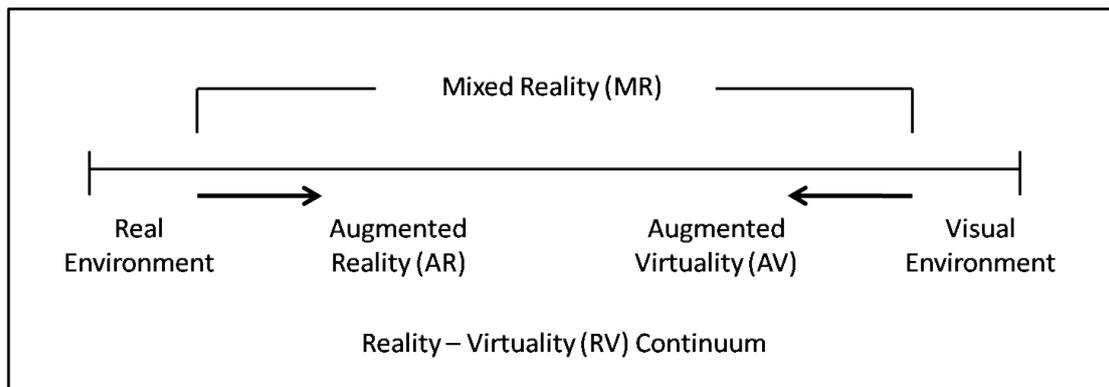

Figure 2: Simplified representation of an RV Continuum.

Experiment Design

In this study, the writer proposes the Augmented Reality (AR) system could be applied on furniture configuring service while consumers visiting the real-estate for two reasons. The first one, the possibility of replacing the physical model house, and the other one is the possibility of carrying out the innovative service combined the novel technology in this industry.

In this study, the experiments are separated into two parts: the Pretest and the Main Experiment. In the pretest, the users' habitual behaviors are needed to be collected in order to verify the essentiality of the Main experiment. In the pretest, the writer offer a list of questions in order to realize what users need while they are visiting the real-estate house. Then, users will be invited to join with the main experiment using the marker to dispose the furniture marker in which they prefer.

Since the writer would like to find what consumers consider while the visiting the real-state, the pretest questionnaire is needed since it proves essentiality of executing

the main experiment. The result of pretest questionnaire is analyzed as follow. There are twelve groups of subjects. One group represents a couple. The writer finds most of consumers ask for visiting the model house first that while visiting the real-estate house. Since they consider model house helps they realize the space condition and the model house even influences the interior design after they buy the house. On the other hand, they almost have thought of getting the new set of furniture before they buy the new house and they indeed almost agree with making the furniture configuring condition visualized while visiting the pre-sale house is quite good rather than just visiting the model house.

The information of users is as follow:

Total: 12 couples (12 female / 12 male)

Age: 21-30 year-old: 3 persons / 31-40 year-old: 6 persons / 41-50 year-old: 8 persons
/ 51-60 year-old 3 persons

Level of education: Senior high graduated: 10 persons / University graduated: 14 persons.

The frequency of visiting real-estate: 1-3 times: 14 persons / 4-6 times: 6 persons
Above 6 times: 4 persons.

1. While visiting real-estate, I will ask for visiting model house first. (Agree: 24/ No comment:0/ Disagree: 0)
2. As above, the model house helps me realize the space condition. (Agree: 22/ No comment: 2 / Disagree: 0)
3. The interior condition of model house will influence the interior design of my house after I buy it. (Agree: 18/ No comment: 4/ Disagree: 2)
4. The style of furniture in the model house is close to my preference. (Agree: 13/ No comment: 5/ Disagree: 6)
5. The layout of pre-sale house is the main reference for consideration. (Agree: 21/ No comment: 3/ Disagree: 0)
6. Before I buy the house, I have already expected to get the new set of furniture. (Agree: 20/ No comment: 1/ Disagree: 3)
7. While visiting the pre-sale house, I will think of the furniture configuring condition in the house. (Agree: 24/ No comment: 0/ Disagree: 0)

Main Experiment

When it mention to user integration in Living Labs, the participation not only of the potential customers but also of all other participator along the value-chain can be seen as the foremost required element for the successful operation of a Living Lab.

Figure 3. The equipment of experiment

To invite those who already make a visit to the model house. Then, the writer elucidates the process of experiment on using the system. The detail of process is as follow (Figure 4): (According to the concept of Living Lab, during the experiment, users can address their questions, feedback and preference whenever they like, and the writer needs to collect them as the basis data).

1. Users may choose the furniture which they like first on the category.
2. Then, take the card (figure) which fit with the furniture he chooses.
3. Users can place the cards anywhere they prefer in the room.
4. Users can see the configuring condition visual furniture combined with the real environment) in the monitor.

Figure 4. Main experiment

Normally you see your 3D designs on a computer screen, or printed. Most likely, you don't see them on a 1:1 scale; your screen is not big enough for that. With augmented reality you can project your designs in their real size in a room. You can freely walk around them and see them from different angles.

Result

The study defines “User Satisfaction with an Augmented Reality Furniture Configuration System” as a user’s overall evaluation of an AR Furniture Configuration System. According to the related literature review includes User Information Satisfaction, UIS, (Ives et al., 1983), Theoretical Integration of User Satisfaction and Technology Acceptance, TIUSTA, (Wixom and Todd, 2005), etc. Comprehensively sum up the impact of user satisfaction with essential aspects. The aspects of influencing users’ satisfaction while using AR configuring system are as follow:

1. Information Quality
2. System Quality
3. Service Quality
4. Usefulness
5. Ease of use

After the experiment was done, the writer offered another questionnaire for the users in order to definitely realize their acceptance and satisfaction.

1. It is an interesting experience for using the Augmented Reality (AR) system. (Agree: 24/ No comment: 0/ Disagree: 0)
2. I try to display the code cards according to my own preference while using the system. (Agree: 24/ No comment: 0/ Disagree:0)
3. I think the using procedure is uncomplicated and the steps are easy to be learned while using the system. (Agree: 15/ No comment:5/ Disagree: 4)
4. The route of using the system is quite appropriate. (Agree: 11/ No comment: 2/ Disagree: 11)
5. I can interact with the virtual furniture without any help by using the cards. (Agree: 15/ No comment: 1/ Disagree: 8)
6. I totally realize the corresponding relations between the cards and the virtual furniture. (Agree: 10 / No comment: 8/ Disagree: 6)
7. Through displaying the cards in the room, I can easily realize the relative location of furniture. (Agree: 14 / No comment: 6/ Disagree: 4)
8. I can put the marker in a right place where I want in the very first time while using the system. (Agree: 8 / No comment: 6/ Disagree: 10)
9. It is convenient and easy choosing the markers and adjusting them while using the system. (Agree: 12/ No comment: 6/ Disagree: 6)
10. There is no big difference while seeing the virtual furniture on the monitor comparing to the see the physical furniture. (Agree: 4/ No comment: 8/ Disagree: 12)
11. I can see the furniture configuring condition while using the system. (Agree: 10/ No comment: 8/ Disagree: 6)
12. The system helps me have the imagination of furniture allocation in advance. (Agree: 14/ No comment: 4/ Disagree: 6)
13. I think the system may reduce the mistake (size) while purchasing the real furniture. (Agree: 8/ No comment: 8/ Disagree: 8)
14. Comparing to the physical furniture, I think configuring furniture through the Augmented Reality system is much more convenient. (Agree: 8/ No comment: 10/ Disagree: 6)
15. Comparing to the model house, I think the configuring service make me more realized the space condition of pre-sale house. (Agree: 10/ No comment: 6/ Disagree: 8)
16. The furniture which display in the experiment rise my interest. (Agree: 6/ No comment: 8/ Disagree: 10)

17. I think the Augmented Reality system may facilitate and highlight the present of physical model house. (Agree: 10/ No comment: 8/ Disagree: 6)
18. While I visiting the real-estate, I hope the industry owner can offer the furniture configuring service for me. (Agree: 12/ No comment: 8/ Disagree: 4)

During the experiment, the writer also collect users' feedback as basis to make a purpose and explore how will the system being revised and how the service being adjusted. There are five points which be mentioned by users several times during the experiment.

1. The choice of futures is not enough. User wants a set of furniture. (15 times)
2. The vision of furniture is not steady. (13 times)
3. It is quite troublesome confirming the appropriate place where users put the makers. They need to put the maker and then take a look on the monitor to see if the markers be displayed on where they want. (12 times)
4. It is hard to make a relation between markers and furniture. (14 times)
5. Even if users like the furniture pattern, they want to switch another color of it. (15 times)

Through the experiment, consumers (users) received an innovation experience that they have never met. On the other hand, their feedback contributes to the Augmented Reality system applied on furniture configuration, which makes the research become more evolved. According to user feedback, the writer purposes a kind of interface which integrated users' feedback in terms of usefulness. There are three buttons on the interface (Figure 5). Each marker represents a set of furniture which includes sofa, tea table, etc. Therefore, users will not be confused by several makers. Once they choose one marker which means they choose a style set of furniture. The first buttons represents the model switcher, and it can switch to single sit, couple sits, tea table, etc. The second and the third button both represent the texture switch, and the former one presents the sofa texture switched, and the latter one presents the framework texture switch (Figure 6).

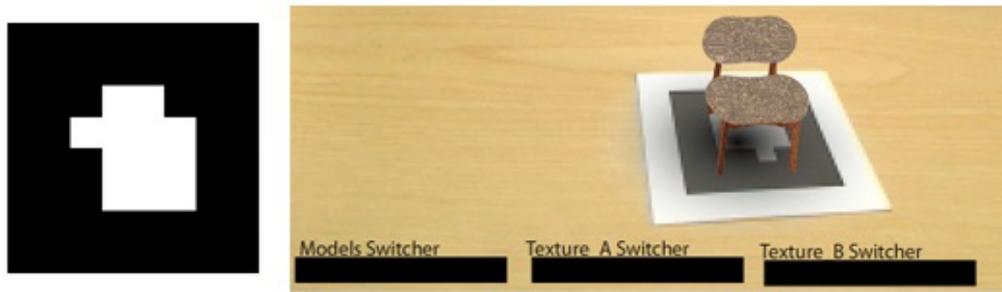

Figure 5. The user interface design

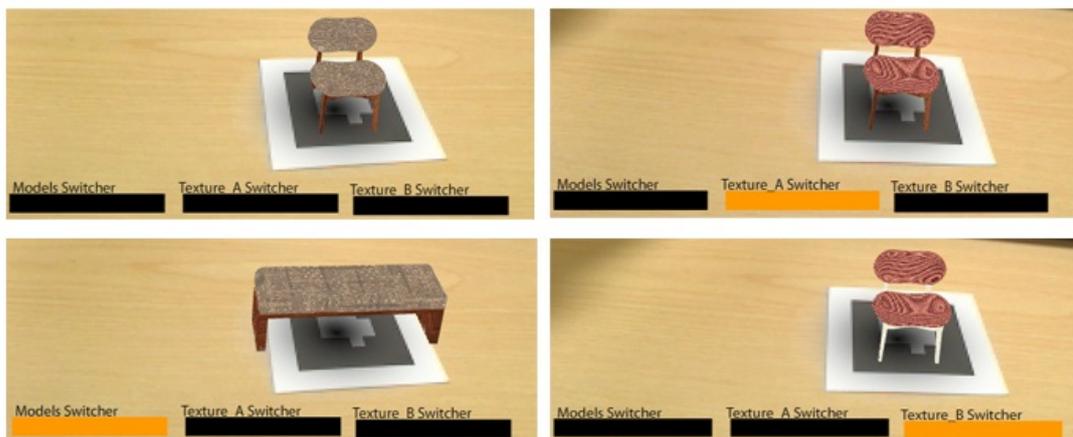

Figure 6. The user interface design

Future Study

During my research, I have identified some aspects that I consider are essential to do more research about. These aspects are related to the need of technological support for user interaction, and to assist an open user involvement process. In the study, apparently, user's acceptance is conspicuous, which means users do not exclude the new tech involved, even half of users hope industry owners offer the kind of configuring service while they visiting the pre-sale house, Even though it is a user study, the potential value cannot be ignored. Nevertheless, Living Labs will allow the better and faster development of new services and products. Due to the user need and feedback, in the following research, not only the user interface but the collaboration with furniture industry, those possible developments are needed to be contemplated in the future in order to create the possible beneficial result among industries, and also make a preferable service for users.

It is a critical issue to discuss today what kind of society we want to have for tomorrow. Should East meet West or there should be One East or One West? The question is not rhetorical and expects the apostle of world leadership to answer it delicately. The conference theme “**East Meets West**’ is apt to the new global order and inspires the intelligentsia to search for similarities of ideas that may enhance international understanding on the one hand and for differences in culture that may have to be accepted as irreconcilable on the other. More than 60 percent of the world's population lives in the region called Asia, where different civilizations, cultures, religions, social institutions, economic systems, and ethnicities co-exist. Our rich diversity also invites a wide variety of problems. There is violence against human life and dignity in the form of socio-economic disparity, environmental deterioration, and racial, religious and cultural conflicts. While globalization apparently offers the potential for broader unity across borders, there are certain sensitive issues that states or the market is unable to cope with it.

Fading Voices

I have a disturbing question today for the audiences: Are we in a process to have a world with one international understandable language English for all of us or should we have a unique world with our own voices and languages, a world encompassing the marvels of all dialects, and languages of different communities and nationalities?

Languages are an essential part of the cultural diversity of our planet. Languages and dialects are not only expressions of the human culture and the human mind, they are also the means by which we communicate with others and seek ways of explaining the world we live in. At the same time, languages are a very vulnerable part of our cultural heritage. Language diversity is one of humanity's most precious commodities. The paper raises some of issues relating to the preservation of indigenous languages of India, the way we practice them, the compulsions and frustrations of saving our identity and culture with our local languages and, what we may offer as recourse to this dying languages. It also features the linguistic setting of NE states of India, uniquely distinct for their tribal culture, customs and dialects. The foremost drive to write this paper to ignite the 'language teaching fraternity' to take it up seriously and stir a movement to save their local languages through academic discourse and with proper implementation of action plan involving local people and administration. The challenge is huge but should be and can be articulated, understood and addressed from the perspectives of sustainable planet.

An Immediate Call

The news came shocking when Boa Senior, the last woman speaker of an ancient language in India's Andaman Islands had died at the age of about 85 on 26 January 2010. The death of Boa Senior was highly significant because one of the world's oldest languages, Bo, had come to an end, and lost an irreplaceable part of its heritage, according to linguist Professor Anvita Abbi of Jawaharlal Nehru University, who has worked among Andamanese languages and knew Boa Senior. The islands are often called an "anthropologist's dream" and are one of the most linguistically diverse areas of the world. "Boa's loss is a heartless tragedy that we must not

allow this to happen to the other tribes of the Andaman Islands,” said Stephan Corry, director of the NGO Survival International, which works in the area of tribal rights. (Lawson 2010) Every time we lose a language we lose human experience, creativity, and a unique perspective of ourselves and the world. All through history, languages have naturally ebbed and flowed, rising to prominence before gradually falling from use. Unfortunately, Boa Senior was the last speaker of her tribal language but there are many like her. Experts believe that more than half of the world's roughly 7,000 languages will vanish by the end of this century alone, at the rate of one language every two weeks. (Basu 2009)

World at a Glance

Interestingly, languages do not usually disappear because all its speakers die a sudden death, but rather because of the decision of its speakers to prefer the usage of another language. The compulsion to switch over to another language could be umpteen: annexation, migration, military acts, access to new language, the phenomenon of acculturation, political decisions, the ongoing destruction of environment, habitats and living space. There's an interesting experience that David Crystal shows as a flip side: engaging a Johannesburg driver in conversation, it transpired that he was conversant with all 11 of his country's official languages – an ability which he did not think at all unusual. However, his main ambition was to earn enough to enable all his children to learn English. None of the other languages ranked highly in his esteem. (David Crystal 2000) It is estimated that more than half of the world's population communicates in only 8 languages: English and Mandarin Chinese, Hindi (with Urdu), Spanish, Russian, Arabic and Bengali and finally Portuguese. (UNESCO 2004) If we

continued the analysis downwards, we would eventually find that just 4% of the world's languages are spoken by 96% of the population. Turning this statistic on its head: 96% of the world's languages are spoken by just 4% of the population. That is the perspective within which any discussion of language death must be seen. (David Crystal 2000) The Johannesburg driver's concern holds true to some extent as some languages are disappearing because their native speakers don't regard them as quite so precious. They view linguistic adaptation--especially for their kids--as a key to getting ahead. This is understandable when about half the world's population speaks one of only 10 languages and when speaking English in particular is a profitable skill. (Arthur Miller)

Indian Linguistic Panorama

India is a diverse country, a fact that is visibly prominent in its people, culture and climate. India had always been known as the land that portrayed cultural and traditional vibrancy through its conventional arts, crafts, festivals, religions, languages and customs. The Indian literary tradition is the oldest in the world. India has 22 officially recognized languages, and a huge variety of literature has been produced in these languages over the years. With its extraordinary linguistic and cultural diversity, it is quite challenging for the speakers to resist the temptation of the mainstream languages which have the social, political and economic backing. These dominant languages attract and facilitate the easy switching over for the speakers of relatively minor languages. In this case, parents of children in the "weaker" culture may encourage their children (and themselves) to use the language of the stronger culture rather than their own language. Soon enough the young generation would lose the interest in the mother tongue and would not any longer

speak the original language. (UNESCO 2004) The Indian society is revered world over because of its unique virtue of *Unity in Diversity*. To consolidate its cultural and social heritage, it is pertinent to protect and preserve its several minor languages and dialects. Linguistic oneness is an antithesis to Indian civilization and it dampens the vibrancy of our existence for the society as a whole and the individual. According to official estimates, the country is home to at least 400 distinct tongues, but many experts believe the actual number is probably around 700. But, in a scenario replicated around the globe, many of India's languages are at risk of dying out. (Paroma Basu 2009)

ARUNACHAL PRADESH

The paper depicts the linguistic diversity and cultural vibrancy of Arunachal Pradesh, one of the North eastern states of India. It remains a beautiful hilly state with a great network of clean rivers and evergreen tropical forests. Arunachal occupies a very crucial and strategic position in the political and cultural map of India. The state offers a rich heritage of tribal culture and their age long indigenous survival practices. It is predominately a tribal populated area inhabited by several tribes with their unique set of dialects, customs, festivals and arts. The cultural practices and linguistic patterns are very exotic and unrivaled and reflect originality, cultural opulence and artistry of the people. In fact, these dialects are the great reservoir of human knowledge about tribal customs, laws, local medical practices, environmental patterns, religious sermons, artistic talents and folk literatures.

Unfortunately, the complete tribal world is dominated by the oral traditions. The domain of oral traditions and expressions encompasses an enormous variety of forms including

proverbs, riddles, tales, nursery rhymes, legends, myths, epic songs and poems, charms, prayers, sacred chants, songs, dramatic performances and so on. They transmit knowledge, values and collective memory and play an essential role in cultural vitality; many forms have always been a popular pastime. Oral traditions and expressions are typically passed on by word of mouth from generation to generation. The everyday usage of local dialects is essential to protect and consolidate the rich oral literature in response to their environment, their interaction with nature, and their history. These dialects further provide communities and groups with a sense of identity and continuity and promote respect for cultural diversity and human creativity.

As per the UNESCO 2003 Convention, all these practices are the integral part of Intangible Cultural Heritage of a group. The Convention defines ICH as the practices, representations, expressions, as well as the knowledge and skills, that communities, groups and, in some cases, individuals recognise as part of their cultural heritage. Arunachal is not an exception and many elements of the ICH are in a state of endanger, due to effects of globalization, uniformization policies, and lack of means, appreciation and understanding which – taken together – may lead to the erosion of functions and values of such elements and to lack of interest among the younger generations. The potent argument is, therefore, to preserve and protect the age-long oral traditions, performing arts, social rituals, festive events and traditional craftsmanship.

A Sojourn in dialectal galaxy

In Arunachal, the name of every dialect is same as the name of its tribe. A good number of tribes tracing their descendance from the Mongoloids inhabit in this hilly state.

The principal tribes are Adi or Abor, Nishi or Dafla, Aptani, Tagin, Mishmi, Khampti, Nocte, Wanchoo, Tangsa, Singpho, Monpa, Sherdukpen, Aka etc. They speak distinct dialects, derived from the North Assam branch of Tibeto-Burman Sub-family of the Sino-Tibetan stock. Among these Nocte & Wanchoo are said to have affinities with Bodo-Naga languages. Wanchoo is said to bear resemblance with konyak of Naga Branch. Again Sulung is known to be closer to Nishi. Miju- and Aka bear mutual resemblances. But Monpa speech is said to have similarity with Tibetan. One can see influence of Kuki-Chin and Shan upon Singpho. Though there are about twenty five tribes speaking about seventy dialects, the question of distinguishing language from dialects does not arise at this stage. None of the tribes have any script except Khampti which has a variety of Shan script. The Monpas use Tibetan script for religious scriptures.

In a multilingual society like Arunachal, English has a set of roles to play. It begins as a subject and is taught at all levels. From the primary school onwards, it is officially the only medium of instruction. It is used for inter-personal and inter-institution communication in a wide range of contexts. It is extensively practiced in schools, colleges, university, offices, secretariats, courts, etc. Despite increasing literacy and spread of education, English is not yet the language of common man. But it does enjoy mass attitudinal support and is seen as a tool for promoting unity and gaining prestige. The linguistic diversity of the place is appealing. In my research, I came across a poster as a part of national campaign for Family Planning in three different, popular and acceptable languages of the East Siang district. It is amazing to read the poster in three languages, i.e. Hindi, English and local dialect (Adi). Interestingly, the local dialects do not

have script for writing, so the dialectal speech is converted into Roman form in order to enable the local people to understand the ad in their own dialects. For example the following poster is a popular means of communication and it is interesting to know that it is not for a huge population but a few thousand people in area.

English

Delay The First

Space The Second

Stop The Third

Hindi

Pehla Jaldi Nahi

Doosra Abhi Nahi

Teesra Kabhi Nahi

Adi Lg.

Kerong Kem Ogor Mapeka

Annyi Nanem otom Langka

Angum Nape Oku Mapeka.

Still there is a sizeable population that does not understand Hindi & English, multilingual campaigns can help them to understand the essence of such ads. The Govt. advertisements or information of public interest need wide publicity and mass support in propagating its message effectively. The publicity of such multilingual advertisements is a symbol of great compassion and effective administration towards the people of the state. It immensely affects the public awareness and social mobility of the masses. Such ad campaigns make task more easy and

widespread. It is a better way of reaching one and all irrespective of linguistic barriers. It further makes people aware of their social welfare and political rights. (Chauhan 2010)

Predicament of Progress

Arunachal is inimitable in many ways. Its distinctiveness can be comprehended with the provision of Inner Line Permit specially given to the Arunachal along with Nagaland and Mizoram. Being a protected area, the Inner Line Permits are required by Indians other than natives of Arunachal Pradesh for entering into any place in Arunachal Pradesh. There could be an endless debate whether or not it is good for society? But change is inevitable. No society can afford to live in its cocoon, cloistered from the rest of the world. The notion of 'secluded' and 'protected' tribal community needs to be redefined in the wake of better tomorrow and aspirations of young generation that is moving out for the higher studies and mingling with the new sets of social cultural values of a bigger world.

Arunachal has the incredible wealth of oral literature but many things have not been documented at a basic level, In Arunachal, Hindi and English are in vogue with younger generations, and Bollywood, popular Indian cinema also attracts the masses to switch over their local preferences. It is a huge confluence of Hindi, English Assamese, Bengali, Nepali and many tribal dialects. Probably this rich linguistic diversity put the local tongues at the risk of disappearing. In Arunachal, Hindi, English and Assamese are used as the alternative means for inter-cultural and cross cultural communication. In a situation like Arunachal, more than one language is needed for social mobility and cultural integration. As there are many tribes in the state, it seems

difficult to interact with one another using one of the indigenous languages as each tribe has its own language. It is merely a day dream to establish intra-tribe communication because one tribe may have more than one dialect. In my study, it was a striking fact to acknowledge that one tribe has more than two or three languages and they all are used separately for social and ceremonial purposes. (Chauhan2010)

A new wind of change is sweeping across the Arunachal. The various aspects that we witness today deter the people from protecting the sanctity of indigenous culture. It doesn't mean that it is getting culturally impoverished rather it is adapting gradually to new culture and new practices. The political instability, the influence of Christianity, rise of material well being, large influx of people from other states and modern mass media are some of the disturbing issues concerning the local culture and dialects.

Hope for Tomorrow

The journey of mankind is progressive only when it maintains its goodness and identity in the process of change. Amidst this transition, there is some good news for tomorrow. Most tribal groups realise that their dialects are their cultural identity and it is essential part of their community heritage. With help from the government and local social organizations, some of the tribes are in a search of methodology for developing a writing system for oral languages, and in this way support and facilitate wider use of such languages in their communities.

As a part of my project, I had noticed that the Adis of Siang districts are a vibrant group of forward looking people committed to development with age long tribal practices. They promote and participate in many activities for revival

of traditional culture. The district administration promotes major tribal festivals to develop the folk dance, music, literature and arts. The Adis and other tribes have rich folk literature but unfortunately it is still in the oral form. One generation keeps it passing to the next generation by word of mouth in the absence of script, for written communication. By now the Roman Script has been accepted to some extent by all the Sub-sections of Adi community for reading and writing. The existence of roman script dates back to the British times, when it was introduced for the smooth functioning of governance in the area. Even during British rule, Christian missionaries also promoted the Roman script in Adi area as part of teaching of English. Roman Script has the advantage of typing facility. Even All India Radio station of this area did a remarkable job in promoting the Roman Script by broadcasting talks, stories, folk tales/lores, folk songs, etc. in the Adi language. As it is mandatory at AIR to submit the script of the programme before it is to be aired. (Koley 2000) Now efforts are made by local bodies to record *Aabangas* (The sacred Adi literature) in the Roman Script. To encourage writing in local language, many literary and cultural competitions take place during the tribal festivals. Till Adis and other Tribes develop their own script, the Roman form serves many practical purposes and tries to fill the vacuum of written script.

There is a strong feeling among the major tribal groups to have their own written script. Recently, Galos, one of the largest tribal group in the state, inhabiting Upper Siang, West Siang, East Siang and Lower Subansiri districts — celebrated their new-found script power and their traditional rituals. An Australian linguist Post, a professor of linguistics at La Trobe University, has helped the tribe in Arunachal Pradesh revive a nearly lost dialect, after toiling for four

years to ink a script and compile a lexicon. The efforts of the Galo Language Development Committee soon got a thumbs-up from the state government, which approved the dialect as the third language in Galo inhabited-areas of the state through a notification. The Galo dialect that was facing extinction has certainly got a new lease of life as the tribesmen can now read and write in Galo. The state government has already asked the society to despatch printed books written in the dialect to schools in Galo-inhabited areas in the state. (Telegraph 2007)

A 'Just Do It' Approach

My linguistic study with local people in Arunachal Pradesh helps me suggest A 'Just Do It' approach with some new initiatives in order to preserve the traditional culture and local dialects:

1. More government support in documentation may prevent the dialects from becoming extinct. As in Arunachal, there is a need to make Research and Cultural departments more effective, accountable and people friendly at district and block level. The digital technologies provide many tools to preserve the oral traditions in all their richness.
2. Young learners can be trained in documentation of oral traditions under the tutelage of veteran community members. In family, veterans can share folk tales, poems and anecdotes with children in which traditional creativity finds new expression.
3. All India Radio, Doordarshan and local private TV networks can be efficiently exploited to strengthen and promote various tribal art forms. Earlier leisure activities were dominated by the folk songs, and dances but now-a-days, the popular media replace those moments and consequently there are fewer occasions for the exposure of tribal favourite pastimes.

4. The most remarkable way in which a language can continue to manage its relevance is to use it in everyday situations. It is crucial to acknowledge its social role in all the aspects of tribal life.

5. Like Galos, the other tribal groups should also strive to develop their own script. The script gives the speakers a sense of identity and attachment to their local practices. And the next step is to create favourable conditions for its speakers to speak the language and teach it to their children as Galos are doing in their areas

6. It has been proven that children learn best when they are instructed in their mother language during their first years at school. The concept of mother language complements that of multilingualism, which UNESCO strives to promote, by encouraging the acquisition of at least three levels of language proficiency: a mother language, a national language and a language of communication, said Irina Bokova, director-general of UNESCO, in a statement on the occasion of International Mother Day Language 2010. (Barun 2010)

7. Governments must initiate an award policy for local writers, poets and artists and sponsor local language promotion programs and open up new language centres to study the endangered dialects.

8. A political stand on language issues may have a huge impact on preservation of linguistic diversity in a society. An effective language policy of the state can be instrumental to provide linguistic security and equality to minor languages and promote the enrichment of linguistic diversity in the state.

9. Dignify the self-image of subordinated, non majority language groups (Bastardas-Boada, Albert). There should be

social and political ambience that promotes minor languages so that people feel sense of pride and belonging to their less known tongues. Tribal speakers need to change the attitude of their community towards their own languages.

Conclusion

If we can save our kids from Pulse Polio, our youngsters from AIDS, our tigers from hunters, our new houses from earthquake and our nation from terrorist, why shouldn't we save and protect our linguistic diversity that is the part of our Indianess and our tribute to the globalised flat world? But the success of any such initiatives depends on the willingness of the communities to protect and enrich their cultural heritage.

Hope we may stand the test of time and overcome the global tussle that goes on between the indigenous and homogeneous patterns of life by being more vibrant, unique and committed to our own ageless traditions and values.

Beyond East and West: Coevolution of a Globally Shared Language in the 21st
Century.

Jonathan B. Britten
Nakamura University
Fukuoka, Japan

Coevolution of a globally shared language (GSL) may have a symbiotic and synergistic relationship with the arts and humanities throughout the 21st century and beyond. GSL coevolution may provide unprecedented means to search for similar attitudes, concepts, perceptions, and sentiments, thereby enhancing international understanding, a goal of the inaugural Asian Conference on the Arts and Humanities. Shared mental/emotional constructs, expressed differently in myriad tongues, finding voice in an emergent GSL, may allow native speakers of earth's thousands of diverse language communities to communicate on more equal terms, with greater intellectual, emotional, and spiritual resonance.

Despite the globally acknowledged importance of English as a Lingua Franca (ELF), there is no equally shared human language among the world's nearly 7,000,000,000 (seven thousand million) children, women, and men. This number is to increase by several thousand million more in the next few decades, mostly in non-English-speaking countries. Furthermore, the long-term prospects for "Global English" are very unclear. (Walraff 2000; Graddol 2006). Even if some variety of simplified English were to spread considerably beyond the 1,000,000,000 or so putative users, the language still would not be shared equally by all persons.

The current and future status of English is too involved to deal with here, but the well-established study of World Englishes (WE) is sufficient to establish that even the label "English" is increasingly untenable. Fifteen years after having attended the

second International Association of World Englishes (IAWE 2010) conference in Nagoya, I wonder whether the work of WE scholars will one day be seen as a harbinger of GSL coevolution. In any event, we can observe in WE a complex, global mixing, merging, and transformation of language, a process that could eventually expand to include many more languages. The IAWE call for papers in 2005 (no longer listed online) listed the following suitable topics, many of which parallel topics relevant to GSL Coevolution:

- Studies of world Englishes, such as anthropological, critical, 'features-based', and sociolinguistic studies
- The history of world Englishes
- Issues in the linguistic description and analysis of Englishes
- Corpus linguistics and world Englishes
- Contact linguistics - the interface between Englishes and other languages
- English-based pidgins and creoles
- Code-switching, code-mixing and linguistic borrowing
- Discourse analysis, genre analysis, and discourse strategies
- English in media and advertising
- Language planning and politics
- Power, ideology and identity
- Evaluation, testing, and intelligibility
- Second and foreign language acquisition and pedagogy
- Bilingual creativity in English literatures
- World Englishes in the classroom.

To reiterate, despite its powerful lingua franca status, we cannot consider English – or any other major world language -- the globally shared language. Nor is there any reason to expect any present or future constructed language to become the GSL. Nevertheless, the GSL concept is, initially, often wrongly associated with Esperanto. In fact it is entirely different, with good reason: constructed languages such as Esperanto are of little relevance to mainstream research and language policy.

Esperantists and related researchers in the International Auxiliary Language (IAL)

movement could, of course, exert some influence on GSL coevolution; the history of the IAL movement is long and remarkable. The salient point, however, is this: in contrast to constructed or invented languages, coevolution of a GSL is a process rather than a program. It proceeds on the edge of chaos, between the realms of chaos and control

Coevolution of a GSL proceeds, if at all, only from the desires and needs of children, women, and men throughout the world, facilitated by modern information and communication technologies (ICT). Coevolution – conscious, collaborative evolution – exploits powerful advances in ICT to redefine or even transcend cultural boundaries. If realized, the GSL would profoundly influence the arts and humanities, and in turn be influenced by them. Thus the concept of GSL coevolution provides a novel and potentially seminal framework for 21st century social change.

The process of GSL coevolution would likely be chaordic, creating subtle, evolving order on the edge of chaos. This process might gradually result in thousands of the world's mutually incomprehensible languages interacting, shaping reshaping, and creolizing the GSL, and exploring many shared as well as incompatible concepts and emotions. This process corresponds with the mission statement of the Chaordic Commons: “To develop, disseminate, and implement new concepts of organization that result in more equitable sharing of power and wealth, improved health, and greater compatibility with the human spirit and biosphere. Projects listed on the home page, of the Chaordic Commons are of obvious interest to GSL Coevolution, and indeed to educators throughout the spectrum of Arts and Humanities:

- New forms of governance
- Innovative models of business
- Emerging concepts of citizenship
- New models for ownership, investment, and philanthropy
- New approaches to public-private partnerships and multi-stakeholder alliances
- Dynamic approaches to collaboration
- New forms of leadership
- Generative models of organizational learning and change

- New, more global architectures of relationship in every field.”
(Chaordic Commons 2010)

One example of such a community is the World Language Process (WLP), an international non-governmental organization dedicated to supporting the movement toward a world language shared equally by all persons on earth. (WLP 2010) Although GSL Coevolution certainly benefits from such support. In time, the concept may find additional advocates and facilitators among educators, researchers, journalists and other writers, politicians, and leaders in fields too diverse to list.

Such support may come readily once it becomes apparent that modern ICT, now increasingly available even to children, women, and men worldwide, truly make this process imaginable. Marshall McLuhan’s vision the global village is becoming a reality, in ways even he could not have foreseen. (McLuhan 1964). Powerful tools once unavailable at any price are now in the hands of financially impoverished children via the One Laptop Per Child (OLPC) program. (OLPC 2010). OLPC, or related programs with similar goals, may be among the seminal early contributors to GSL coevolution.

For the remainder of this essay, the term “Process” will replace “GSL coevolution.” “Process” refers to the chaordic coevolution itself and to the emergent GSL at all stages of development. Process may already be inchoate but unrecognized, as some examples in this essay will suggest. Multi-lingual users of ICT are likely to be among the pioneers of Process, which may amount to a fantastically rich global creole language. Indeed, this field of linguistics – pidgins and creoles – has experts who could greatly contribute to Process. The American Comparative Literature Association’s (ACLA) recent conference on “Creoles, Diasporas, Cosmopolitanisms” gives a sense of the relevance and the possibilities.

The ACLA’s 2010 meeting in New Orleans—a city that has long prided itself on its exceptional linguistic, legal and cultural statuses—gives an occasion for reflecting on and extending the concept of the “creole.” Creole languages appropriate pieces of other

languages to make new composite grammars and vocabularies; creole societies enroll, originally by force, bodies from diverse places and tribes. The incorporation that might be singled out as the defining feature of the “creole” interacts with the diffusion and memory characteristic of the diaspora and with the attempt to construct or hold open a cosmopolitan cultural space. For much of its history New Orleans has been, simultaneously and in distinct ways, a place of creolization, of diaspora and of cosmopolitanism. These dynamics also inform much of comparative literary research. Topics of particular relevance to this theme include: translation and transliteration; embodiment and quotation; “passing,” mimesis and parody; the “broken” or “bad” versions of national languages that arise from contact situations; the mixing of genres; relations among media seen in the light of translation versus creolization; gesture and sign languages; competing mental geographies; memory and catastrophe; legal statuses of the person in relation to those of the race, the nation, the species; and the many meanings of jazz. Venez jaser! (emphasis added) (ACLA2010)

If we extend this description of creolization to the global concept of Process – GSL coevolution from a scaffolding of world languages connected by Internet social networks, (Britten 2009 B) we get a sense of the exciting potential. In terms of the ACAH Osaka conference theme, the mention of "competing mental geographies" (“East” and “West”) is highly relevant. Process, by definition, emerges from a scaffolding of world languages. A stated goal of Process is maximal inclusion of world languages, promotion of multilingualism, and protection of minority and endangered languages (Britten 2008; 2009 A). ELF and other dominant regional *linguae francae* are certain to provide prominent, oft-used scaffolding elements, but theoretically, even the most endangered minority languages can become part of the scaffolding.

We can think of Process, then, as a conscious, collaborative, global creolization.

This is a far more compelling manifestation of intercultural communication than the notion of English being *the* Global Language. Moreover, if we appreciate Process as a wide-open new territory, relevant to the entire field of Arts and Humanities, we can see extraordinary potential for diverse and divergent contributions.

Defining Arts and Humanities may be difficult, but a partial list of topics from the web site of the Arts and Humanities Research Council (AHRC) in the UK, strikes me as quite useful:

History, philosophy, religious studies and law; contemporary arts practice, theory in art, design and media, architecture, visual arts, creative writing, music, dance, drama and theatre studies; art history, conservation of art and textiles, dictionaries and databases, cultural geography, archaeology, classics and library, information and museum studies; journalism, media and communication studies, American studies, cultural studies and popular culture, gender and sexuality, lifewriting, literary and cultural theory, post-colonial studies, text editing and bibliography, English language and literature, linguistics and modern languages.

(AHRC 2010)

This list, incidentally, is followed by a nine-page PDF download providing elaboration and clarification of the categories above.

Process, by definition, emerges from a scaffolding of world languages (Britten, 2009). . A stated goal of Process is maximal inclusion of world languages, promotion of multilingualism, and protection of minority and endangered languages. ELF and other dominant regional *linguae francae* are certain to provide prominent, oft-used scaffolding elements, but theoretically, even the most endangered minority languages can become part of the scaffolding. The primary reason for this is the rapid spread of powerful, low-cost Information and Communication Technologies (ICT), which are now reaching children, women, and men throughout the world. The widely publicized One Laptop Per Child (OPC) program is one example of this powerful, low-cost ICT.

(Britten 2009 WR 3rd). Other examples are powerful Internet social networks such as Facebook – more visited than even the mighty Google, the remarkable, free Skype service, virtual realities such as Second Life, and augmented/mediated reality.

(Britten 2010)

In addition to bottom-up use of ICT, top-down “Fourth Paradigm” science and the applications of complexity theory could also provide powerful new tools to facilitate Process (Hey, 2009). Emergent fourth-paradigm approaches, the science of complexity, and more familiar approaches such as corpus linguistics (Britten 2005), could allow us to observe the coevolution of what we might consider a highly inclusive global creole. For linguists, this observation of Process in progress might even provide answers to various disputed theories of language development, learning and change. (Britten 2009 B)

Process, if fully realized, potentially would influence every nation, neighborhood, family, friendship, and individual mind. This influence need not and most likely would not involve any utopian or universalist notions. The potential pragmatic advantages are reason enough to examine the concept, but because ICT makes possible global creolization and creativity heretofore impossible, it would be appallingly unimaginative to ignore the potential for fascinating and beautiful developments. The initial stages of Process, of course, may be relatively prosaic, but very interesting all the same.

Let’s consider an example of multi-lingual, cross-cultural communication that arguably represents the beginnings of Process. The scenario is modeled on a real-world situation known to the author. A young international couple communicates daily via the latest ICT. Keiko is a Japanese citizen, a college junior who studied Mandarin as foreign language for one semester at a Chinese university. Pao is a young Laotian man who has been living in China for two years, studying computer science, in both English and Mandarin, and Mandarin as a second language. He wants to work in Japan in future, and plans to take up that language as well.

During Keiko’s semester abroad, she and Pao fell in love. After she returned to Japan, the two started communicating several times a day, mostly by email but, whenever

possible, by Skype. This free, face-to-face online communication allows for simultaneous “texting” and Internet content sharing.

Neither is fluent in English, or particularly attracted to that language, but it is the tongue that each has studied longest, and it thus serves as a lingua franca (ELF) and as the dominant scaffolding language between four languages, three major regional languages and a relatively small national language. Over the course of several years, the two multilingual students routinely “code switch” between four languages, often exploiting handheld electronic dictionaries, various Internet language-learning websites, and Google Translate. Both also sporadically contribute as volunteers to improve the corpus-based Google translation service, which sharpens their awareness of language differences and similarities.

Occasionally, through the years, the couple find themselves communicating in a kind of hybrid language, complete with idiosyncratic neologisms. They sometimes make fun of their mixed-up creation, but at other times they feel that they've actually cooked up a strange kind of creole for two. This perception, vague though it may be, arguably manifests the early stages of Process.

Millions of multilingual students worldwide share similar experiences, as shown in the popular movie *L’auberge Espanole* (The Spanish Garden, 2002) (“L’auberge Espanole” 2010) It is therefore not difficult to imagine Process accelerating, if facilitated by a chaordic community of such persons. This community could include students, amateur and professional linguists, hardware and software experts, educators, language policy planners, politicians and bureaucrats, writers, directors, other creative persons, and countless other volunteers. Because Process by definition encourages and grows from multilingualism and language preservation, the global chaordic community of Process volunteers could free several birds from one cage.

Let’s consider another example, this one strictly hypothetical, and set sometime in the coming decade or so. Consider a high-school student, a young woman who not only speaks a threatened language, but also lives on a small, gradually submerging island. Her people are faced with forced relocation within the decade, and anxiety and

depression are widespread. Globally, the plight of her people has attracted very little attention, so little that the young woman wonders whether there might be people in the world who actually take pleasure in the suffering of others. In her community, this would be an almost unimaginable mental state, given the extensive cooperation needed for survival in this subsistence community. Still, she wonders.

Using a "Process Search Engine," an imaginary, specialized uber-corpora created by global volunteers, she writes, in her own language, "taking pleasure in the suffering of others." At the top of the list, extracted from steadily expanding global corpora, is the German word "schadenfreude." A single word for such a feeling! She's impressed, both with the word and the apparent need for it in another culture. (She's also impressed with the ease and speed of the search, and that her language is empowered in this manner.

She wants to tell someone else about this, and, using her powerful, low-cost laptop computer, logs into a virtual reality site, Second Life. (Second Life, 2010) In Second Life, she enters a bright, beautiful fantasy world in which everyone "plays Process," an expression emblematic of the cooperative, creative attitude toward GSL coevolution. Speaking to a young man from a fishing village in Thailand, using a blend of simple English and emergent Process, the young woman uses her remarkable word. This kind of exchange is going on all the time, between thousands and then millions of children, women, and men all around the world, in uncountable and generally un-moderated exchanges, situated in the zone where evolving order emerges from chaos and sustainable change -- chaords -- are possible. (Hock 2000)

Another example of ICT potential to facilitate Process could be an adaptation of the recent "ChatRoulette" social network. Adapted for Process, such a system could connect willing participants in GSL coevolution, matching them according to various criteria including location, self-generated profiles, and other factors. Here the "chat" involves the kind of complex, cooperative negotiation of meaning well known to international people these days. (ChatRoulette 2010)

Process absolutely depends on ICT, and is almost unimaginable without them.

However, ICT are not sufficient. Process must be able to carry on in the unmediated world, not only in virtual life, not only through Internet communication and with augmented reality, and perhaps not primarily in either medium, but rather in ordinary face-to-face conversation. No matter how powerful or ubiquitous the ICT may be, we are eventually and ultimately brought back to our ordinary human senses and our individual thoughts and voices.

For Process to fulfill its full potential, there must evolve a globally shared internal voice, initially rather limited, perhaps, but perhaps eventually stunningly sophisticated and complex and beautiful in ways we cannot begin to fathom now, just setting off from the shores of multilingualism. Probably Process will exert a strong influence on literature, and literature will strongly influence Process. Music and lyrics would have a similar reciprocal relationship on Process, and arguably has already left signs of such influence, perhaps through the global spread of Reggae, rap, and other popular forms.

No one can predict the progress of Process, but it seems to me that literature, lyrics, cinema, and other art forms would be situated somewhere between the “top down” and “bottom up” levels (Britten 2005). The arts would be, so to speak, in the heart of Process. Artists of all ages would have seminal creative influence at all stages of Process. Children, by nature linguistically creative, will also likely play a protean role in this hypothetical language change. (Britten 2007; Lightfoot 2006)

In literature, artistic languages are a well-known phenomenon. J. R. R. Tolkien’s euphonious Elvish tongues are much studied, and Anthony Burgess’s repellent character Alex was notorious for his idiosyncratic, ultra-violent argot in *A Clockwork Orange*. These languages, however, live almost exclusively within their respective books. In contrast, Process literature could be both a mirror, reflecting Process, and a lamp, lighting the way toward inclusive global creolization. The opportunities for genius in this inchoate global literature abound.

Evidence of such work would likely alter the landscape not only of linguistics, but literature and literary studies as well, exploring and expanding the boundaries between the world’s thousands of languages, and expanding and deepening the human literary

heritage. The term “world literature,” these days associated with second language learning and/or translation, would take on a new resonance, and philologists and other scholars would have work enough for generations to come.

Friend or Enemy: The Role of Japanese in Chinese War Films

Prof. Yau Shuk-ting, Kinna
The Chinese University of Hong Kong

Introduction

The Sino-Japanese relation, a delicate relationship stretching over centuries, continues to experience fluctuations of varying magnitude. Undoubtedly, the countries' relationship hit an all time low during the War of Resistance against Japan, when the image of Japanese in Chinese war films, as Ni Jun and Zhang Chao (2005) observe, is strictly limited to that of "an invader, colloquially called 'guizi' [devil] and officially known as 'huangjun' [Imperial Army]". In the 21st century, however, such extreme or biased depiction of the Japanese race is undergoing profound transformation, where presentation of coldblooded killing machines is gradually replaced by multi-layered portrayal of Japanese as human. As China becomes increasingly influential in the global arena, the promotion of nationalism in her cinema, which frequently involves the use of Japanese figures, is definitely a topic that deserves immediate attention. With reference to three of the Chinese biographical movies, namely *Huo Yuanjia* (Fearless) (2006/Ronny Yu), *Mei Lanfang* (Forever Enthralled) (2008/Chen Kaige) and *Ye Wen* (Ip Man) (2008/Wilson Yip), this paper examines how Japanese people are presented in Chinese war films in the 21st century. These films are chosen primarily because of their depictions of real-life characters who were masters of Chinese quintessential culture during China's "century of national humiliation". In the movies, Huo Yuanjia, Ip Man (masters of Chinese martial arts) and Mei Lanfang (Peking opera master) are praised as national heroes who refuse to bow to foreign (mainly Japanese) powers in protection of their country's dignity. Secondly, the distinction between "good" and "bad" Japanese is clearly drawn in the three movies, providing meaningful insights into China's master narrative of history, which arguably frames the country's future outlook. Through exploring the role of Japanese in Chinese war films, this paper aims to provide a more comprehensive understanding of how this part of history is re-presented in China and the logic behind the selected presentation style.

Japanese view on violence

In a sense, the spirit of *bushidō* (way of the warrior) plays critical role in shaping Japanese view on violence. As *samurai* constituted the top socioeconomic class in

ancient Japan, it is of little surprise that *bushidō* penetrated different generations and still governs Japanese behavior today. Nitobe Inazō (1899; 2004) explained *bushidō*'s view on the subject as follows:

“A dastard or a braggart was he who brandished his weapon on undeserved occasions. A self-possessed man knows the right time to use it, and such times come but rarely” (77).

It should however, be noted that Japanese view on violence has two sides. While *bushidō* promotes the righteous use of force, violence is also viewed as manifestation of power and strength. Such seemingly contradicting views, according to Dower (1986), originated from Japanese folklore where powerful demons “always had two faces, being not only a destructive presence but also potentially protective and tutelary being” (13).

American view on violence

In the Western society, human rights are generally emphasized and upheld. Taking Thomas Jefferson's Declaration of Independence as example, George H. Faust (1994) summaries the spirit of equality and its implication on use of force:

“Equal rights exist for all, and government cannot take them away. The government must rest on the consent of the governed. Whenever any government violates the rights of its subjects, that government may be altered or abolished and another institute to replace it” (27).

In addition, American view on violence is explicitly stated in documentary *Bowling for Columbine* (2002/Michael Moore), where many of the American people consider firearms a necessary tool of self-defense. As they explain, the use of guns is for the protection of their families and as such is legitimate and in fact a citizen's responsibility.

Chinese view on violence

Few would disagree that Chinese life and thought have first and foremost been shaped by two sets of influential teachings, that is, Buddhism and Confucianism. Referred to as

religion or philosophy, both teaching systems disapprove the use to violence. Buddhism stresses the importance of compassion and the need to cherish all lives; which implies violence should be avoided at all costs. In fact, a quick browse through Zen master Thich Nhat Hanh's book *Creating True Peace: Ending violence in yourself, your family, your community, and the World* will certainly provide one with insight into the value of nonviolence.¹

According to Confucius thinking, the most important quality of a ruler is *de* (virtue), meaning a "political and spiritual quality or ability, which was the 'power' or 'charisma' by which a king could rule the state without resorting to force or violence" (Yao 2000: 155). At individual level, the ideal person (*junzi* or gentleman) who Confucians strive to become should be "someone whose actions are free from violence, whose bearing is completely sincere and whose speech lacks vulgarity" (Yao 2000: 214). As much as Confucians reject the use of violence, however, noted Confucianism scholar Yao Xinzhong made an incisive summary of Confucius view on violence, he writes:

"Confucians were not pacifists in a strict sense. Brutal reality forced them to seek effective ways to end war, and the conception of 'just war' was upheld. A just war is the one waged by righteous people, for good cause and for 'punishing the tyranny and consoling the people' (*diaomin fazui*). However, Confucianism is generally more in favor of influence through virtue than violence." (2000: 187).

Indeed, the three protagonists in *Fearless*, *Ip Man* and *Forever Enthralled* have been placed in the "brutal reality", yet they resolutely refuse to surrender. Given the "unjust" situation and presence of evil, these "righteous people" or national heroes have good reasons to fight back, that is, to employ violence legitimately. This in turn explains why heroes in Chinese productions always endure extended period of agony before launching their lethal attack. Such tendency is apparent in Bruce Lee's *Tangshan daxiong* (The Big Boss) (1971/Lo Wei), *Jingwu men* (Fist of Fury) (1972/Lo Wei), Jackie Chan's *A jihua* (Project A) (1983/Jackie Chan) and *Jingcha gushi* (Police Story) (1985/Jackie Chan). In *Fearless*, *Ip Man* and *Forever Enthralled*, such injustice is mainly represented by Chinese heroes being persecuted by evil Japanese. In other words,

a major function of Japanese characters is to justify violent acts by national heroes.

Japanese characters in *Fearless*

Set in China during the period of 1870 to 1910 (from Huo Yuanjia's childhood to his death), *Fearless* depicts the life story of Huo Yuanjia (Jet Li) at three different stages: A child deeply engrossed in martial arts, an arrogant fighter striving to be the best in Tianjian, a humble martial artist defending China's dignity.² Japanese characters, however, do not appear until the last stage when the Eight-Nation Alliance invades China. Of relevance to this paper is the apparent difference between "good" and "bad" Japanese, which in this case is played by Tanaka (Nakamura Shidō) and Mita (Harada Masato) respectively.

Tanaka, a Japanese martial arts master, is the last challenger to fight with Huo in a tournament organized by the Foreign Chamber of Commerce in Shanghai where Huo had to pit against four foreigners. Unlike Huo, Tanaka sees different classes in martial arts, just as he considers tea can be categorized as inferior or superior. As a proud fighter, however, Tanaka is willing to learn from and to a certain extent, admires Huo who says to him that, "There is no superior or inferior martial arts, only strong or weak martial artists. Through competitions, we can discover and learn about the real us because our real rival could possibly be ourselves". Infuriated after discovering that Huo is to fight against four challengers at the tournament, he offers reschedule the fight. An image of honorable Japanese is presented repetitively at the fighting scenes, showing Tanaka as a man of integrity who refuses to take advantage of the poisoned Huo. Furthermore, Tanaka did not claim victory but instead declared Huo the winner at the end of the tournament. His sense of justice is reinforced when Mita (who poisoned Huo) questions whether he is Japanese, he grabs Mita by the throat and shouts, "You are the shame of Japanese people". The statement, spoken by the "good" Japanese, demonstrates the director's intention to underline the message: There are decent Japanese who, like Chinese, are irritated by what some of the wicked Japanese did.

By contrast, Mita is a despicable, immoral and violent villain who would do anything to ensure Tanaka's victory, including killing Huo.³ The "bad" Japanese, along with other foreign fighters symbolizing imperial invasion, inflict humiliation on China, act as the

trigger for Huo's fight back. He is determined to prove that Chinese people are not "Sick Man of East Asia". Having experienced prolonged period of suffering (brought upon by the "bad"), Huo regards constant self-strengthening as imperative task for his countrymen. When nearing his death, he reminds his disciples, "What you have to do is not to take revenge. Hatred only generates more hatred. What's most important is to strengthen ourselves".⁴ Although a martial artist himself, it is apparent that Huo, like the Confucians, does not consider violence as the preferred solution to any problem. Like many other national heroes in Chinese war films, including *Ip Man*, Huo has been forced by the villains to defend his country. Without the "extreme evil" or "ultimate crisis", therefore, the use of violence by a modest martial arts master would be illegitimate. In fact, the intention to use demonized Japanese as justification for a hero's strike back is most prominent in *Ip Man*.

Japanese characters in *Ip Man*

In comparison, depictions of the Japanese in *Ip Man* tend to convey negative impression, although differences between "good" and "evil" Japanese have been acknowledged. *Ip Man* tells the story of an accomplished martial artist, Ip Man (Donnie Yen), who remains low-profile during peaceful times yet stands up for his country without hesitation in turbulent days, that is, when Ip's hometown Fo Shan fell under Japanese occupation in late 1930s.⁵ Like Huo, Ip also believes the purpose of practicing martial arts is to build up one's strength rather than to show off or bully others. Chinese audience in general would have no problem accepting the mentality, as the Wong Fei-hung series starring "Master Wong" icon Kwan Tak-hing repeatedly reinforce such thinking. If it was not for his family and country, Ip, a peaceful man, would be most reluctant to engage in violent behavior. Again, the presence of "bad" Japanese leaves the national hero with no choice but to become involved in fierce battle with the enemy.

In the film, the enemy again takes the form of Japanese soldiers who devastated China with no mercy. Here, the ultimate devil is played by Satō (Shibuya Tenma), a colonel who sees no value in Chinese lives. As a matter of fact, Satō represents the stereotype of Japanese soldier in Chinese films, that is, brutal and sadistic. These qualities are reflected in numerous scenes, for example: merciless shooting of Master Liao (Chen Zhihui) at the arena, ferocious beating of interpreter Li Zhao (Lam Ka-tung) and attempt

to hurt Ip's beloved family. When Ip eventually defeats Miura in the arena, Satō engages in yet another disgraceful act, shooting at the unarmed Ip.

Another Japanese character, Miura (Ikeuchi Hiroyuki), although not exactly a "good" Japanese, is depicted as a disciplined soldier. Compared to Satō, Miura is not a coldblooded monster; he has principles and observes them. When Satō killed Master Liao who was fighting in the arena, Miura becomes furious and he warns Satō with a gun, "This place is for competition, don't you dare open fire again". Similarly, he takes up the challenge proposed by Ip regardless of the authority he has to kill the hero, living up to the spirit of *bushidō*. Departing from the typical image of a Japanese soldier, Miura is portrayed as a man with depth and respect for Chinese culture.

Japanese characters in *Ip Man*, although not as clearly divided into "good" and "bad" as in *Fearless*, still reflect the existence of different types of Japanese. What remains unchanged, nonetheless, is the use of evil Japanese to justify a national hero's violent acts. As Ip punches the Japanese soldiers like sandbags and breaks their limbs furiously, he does so for the sake of a friend killed by monstrous Japanese. When Ip attacks Satō who comes to his house, he is only trying to protect his family.⁶ Ip's transformation from a low-profile martial artist to a national hero is thus made possible by prolonged suffering and humiliation he endured.

Japanese characters in *Forever Enthralled*

Unlike *Fearless* and *Ip Man*, *Forever Enthralled* captures the story of Peking opera master Mei Lanfang (Leon Lai) who defies invaders of his country and refuses to perform in Japanese propaganda.⁷ While brutal attacks on Chinese people by Japanese soldiers cannot be found in the film; there is no shortage of scenes portraying the supposed "evil" or the "good" Japanese for that matter.

Tanaka Ryūichi (Ando Masanobu), for example, is a Japanese soldier deeply fascinated by Mei ever since he saw the master's performance for the first time as a boy. In order to preserve Peking opera during wartime, Tanaka puts aside his identity as Japanese soldier and requests a Chinese actor, whose occupation is generally lowly regarded, to

perform for his people. Disappointed by Mei's refusal, however, he still keeps his promise to Mei's wife that her husband will be well taken care of. Therefore, as his superior Yoshino (Musaka Naomasa) threatens Mei with a sword, Tanaka challenges him saying, "It is an insult to treat Mei Lanfang this way". Disobedience Japanese soldier is rarely seen in Chinese films as they are often portrayed as brutal fighters who blindly carry out killings ordered by their superior.⁸ Tanaka's love⁹ for and sound knowledge in Chinese culture hence make him a "good" Japanese in the eyes of the Chinese people.¹⁰ Notably, the "good" Japanese also appears in *Bawang bieji* (Farewell My Concubine) (1993/Chen Kaige) by the name of General Aoki (Zhi Yitong).

In contrast to Tanaka is Yoshino who sees discipline as important quality in soldier. He represents Japanese soldiers typically depicted in Chinese films, that is, one who is profoundly convinced by militarism. His violent nature is presented in a scene where he insults Mei, saying that, "He just prances around the stage playing stupid woman". As Mei talks back, "But off stage I'm a man", Yoshino immediately points his sword at Mei to show absolute superiority over the actor. Chinese audience will definitely find Yoshino familiar because the master narrative has always portrayed the Chinese race as one of endurance and perseverance in face of Japanese imperialism. It is therefore through unreasonable demands and harsh insults made by "evil" Japanese, Chinese virtues are glorified.¹¹

The "good" versus "bad" Japanese

In his book *Eiga ni miru Higashi Ajia no kindai* (Modern East Asia in Cinema), Tanaka Hideo (2002) argues that Chinese writers tend to portray and promote the Japanese army as outlaws, an image inspired by their very own bandits in Chinese history (110-111). Although most of the Chinese war films associate Japanese people as the symbol of wickedness, the early 1980s starts to see the frequent appearance of "good" Japanese in Chinese films, with *Yipan meiyou xiawan de qi* (The Unfinished Chess Game) (1982/Duan Jishun and Satō Junya), *Sun Zhongshan* (Dr. Sun Yat-sen) (1986/Ding Yinnan), *Qingliang Si zhongsheng* (Bell of Purity Temple) (1992/Xie Jin), and Hong Kong's *Touben nuhai* (Boat People) (1982/Ann Hui), as classic examples. However, it can be observed from the three biographical films that while Japanese characters are given more dimensions in Chinese films, they are still broadly divided into two extreme categories, that is, the "good" and the "bad". Arguably, the emergence of "guilty"

Japanese in Chinese films represents a kind of “victory in mind” as these characters signify some Japanese remorse towards the war of aggression. Notably, depiction of the Nanjing Massacre, one of the most frequently reconstructed incidents in the War of Resistance against Japan, has taken another angle in recent movie *Nanjing! Nanjing!* (City of Life and Death) (2009/Lu Chuan).¹² As Sino-Japanese relation improves, there arises the need to portray the Japanese counterparts in a more delicate manner.¹³ Such distinction, hence, subtly implies that only the “bad” Japanese are to be blamed for past atrocities.

The War of Resistance against Japan is perhaps the less controversial topic to deal with in Chinese cinema for there has been consensus among Chinese people in different generations that the Japanese were largely responsible for the sufferings of their ancestors and comrades. The invented “evil”, like those in *Fearless*, *Ip Man* and *Forever Enthralled* are not bounded by moral values and no contradiction hence exist even if they committed the most notorious crimes. Ironically enough, using Japanese characters as villains, Chinese people are free from moral burdens and can thus express the most primitive nature of human without reservation. It should, however, be noted that the role of villain in Chinese films, although often played by Japanese, is interchangeable and circumstantial. Subject to historical background, evil people take different forms in Chinese movies but they all serve the purpose of justifying use of violence by good people. In the Ming Dynasty, for example, *huanguan* or *taijian* (eunuch) would commonly be portrayed as treacherous individuals trying to seize power from the emperor; while in other times a villain may be represented by corrupted officials, hostile landlords or *waisheng ren* (person who are external-province natives). As Professor Karima Fumitoshi (2010) of the University of Tokyo points out that “anti-Japan” is the safest subject to shoot in nowadays Chinese TV series and films. This is because there is no better alternative for them to portray as the national enemy.¹⁴

Friend or Enemy?

Taking into consideration the fact that certain groups of Chinese people can also be singled out to play the role of villain, it is natural for one to ponder upon the “Friend or Enemy” question.¹⁵ Instead of the “good” and “bad” distinction, Jiang Wen’s *Guizi lai le* (Devils on the Doorstep) (2000) goes beyond the simple dichotomy of good and evil to demonstrate that the so-called evil traits thought to be uniquely Japanese may

actually be nature of every human being. What the film attempts to reveal is ignorance fostered by the force of collectivism. What the director seeks to criticize, therefore, is not a race or a specific group but the dark side of human nature.

The film exquisitely depicts the psychological development of Japanese soldier Hanaya Kosaburō (Kagawa Teruyuki)¹⁶ in order to present the unimaginable power of collectivism. The image of Hanaya developed in four stages. First, his obsession with the spirit of *bushidō*; he is ashamed of being captive because the Imperial Army can die in glory but never be insulted. In fact, he still shows disdain when Ma Dasan (Jiang Wen) and his girlfriend try to feed him. Second, his desire to live; despite being a Japanese soldier, Hanaya too fears death. He asks helplessly how he would be killed and even cries after learning that he would be put back into the sack. At this stage, however, he is still torn between human nature (fear for death) and rationality (being the “superior” Japanese soldier). Third, Hanaya eventually confesses his reluctance to die. To stay alive, he dares to insult the Japanese emperor. Furthermore, he is actually thankful to the Chinese peasants who offer him food despite short of provisions. The last stage sees militarism revitalized in Hanaya as he returns to the army. Violent acts carried by his superiors and comrades bring back the once fading militaristic ideology. Unable to resist the pressure to become a part of the group, Hanaya finally kills Ma Dasan, a Chinese he is deeply indebted to.

If ignorance is intrinsic, then perhaps the “Friend or Enemy” question may be fundamentally irrelevant. When the evil Japanese portrayed in Chinese films is replaced, for example, by a *hanjian* (traitor of the Han people), it becomes apparent that this quality may well be universal. Like Hanaya, Li Zhao the ex-police in *Ip Man* struggles to survive in wartime when he becomes interpreter for the Japanese army. Depicted as a national hero, Ip naturally despises such act of disloyalty. Yet Li defends, “I am only trying to scrape a living”. Hanaya turns into a merciless killer under the influence of militarism and Li becomes a perceived traitor, yet they may have done so because of this innate quality. In other words, if placed in the same situation, people of different nationalities or background could have responded in similar patterns.

Conclusion

The demonization of Japanese in Chinese cinema is no exceptional phenomenon. In *War without Mercy*, Dower (1986) notes that both the US and Japan made enormous attempts to demonize each other during WWII. He argues that racial stereotypes have always existed and propaganda of Japan's white enemies (e.g. apes, primitives, madam and "beings who possessed special powers") was in no way unique; since they all "have a pedigree in Western thought that can be traced back to Aristotle" (10). Despite their determination to destroy each other, however, the two sides paradoxically have many things in common, including "race hate, martial fury, battlefield courage and dreams of peace", as well as "the most basic attitudes towards life and death". However, these similarities were overlooked at war times as "the issue of atrocities [plays] an exceptionally large role in each side's perception of the other" (11-12).¹⁷

"Bad" Japanese created in Chinese cinema can perhaps be viewed as testimony of Dower's comments. They are used to complement national heroes, evoke nationalist sentiment and shape master narrative. A closer look at the so-called villains in Chinese films reveal that "baddies" can also be played by demonized and alienated group within the Chinese race. It is for this reason that the "Friend or Enemy" question contains little meaning in this context. Likewise, "good" Japanese are invented in response to improved Sino-Japanese relation possibly driven by the need to engage in closer economic cooperation; while "guilty" Japanese are imagined in a sense of self fulfillment with "victory in mind". These "Japanese", either considered friend or enemy in a "black and white" manner, do not necessarily represent Japanese people in reality.

As China has become one of the major powers in the global arena, the country's master narrative is becoming increasingly influential in myriad of aspects. Depictions of Japanese shape Chinese perception on their Asian neighbor and thus affect the attitude of the next generation towards the Sino-Japanese relation. Therefore, while it is important to use history as a mirror, we must be cautious not to fall into the never ending vicious cycle described by Dower, that is, "Race hate fed atrocities and atrocities in turn fanned the fires of race hate" (1986: 11).

¹ The Venerable Thich Nhat Hanh is a respected peace activist and was nominated by Martin Luther King Jr. in 1967 for the Nobel Peace Prize.

² Although Huo is a real-life character, most part of the movie, except the time of his death and him being the founder of Jing Wu Sports Federation is fictional. As

co-producer of the movie, Jet Li stated, “*Fearless* is not a biopic of Huo Yuanjia, it would be more accurate to label it the biography of [my] spiritual path” (Jin 2006).

³ Speculations on Huo’s cause of death remain divided, although most of them are linked to the Japanese. Apart from the version depicted in *Fearless*, it has also been said that Japanese people offered medicine to cure Huo suffering from cough but they actually gave him poison (Secretchina 2006). Some argued that Huo died from acute liver failure and the story of him being poisoned is merely an attempt to fuel nationalist sentiment and demonize the Japanese. It is said that the disease which led to jaundice, yellowish discoloring of skin and white of the eye, explains why he was called “yellow-faced tiger” (Lam 2010). Another version of the story, supported by one of the founding members of Jing Wu Sports Federation Chen Gongzhe, suggests that improper training leading to internal injury was what killed Huo (Hong 2005). In *Huo Yuanjia* (Huo Yuanjia: Legend of a Fighter) (1944/Wu Wenchao), a movie produced in the Japanese occupied Shanghai, however, Huo is poisoned by a British man, not Japanese.

⁴ Similarly, *Jingwu yingxiong* (Fist of Legend) (1994/Gordon Chan) starring Jet Li also conveys the message that the purpose of practicing martial arts is to strengthen one’s body and that Chinese people should not be hostile against the Japanese. In fact, protagonist Chen Zhen (Jet Li) receives enormous support from his Japanese girlfriend Mitsuko (Nakayama Shinobu) throughout the film.

⁵ *Ye Wen 2* (Ip Man 2) (2010/Wilson Yip) depicts Ip’s life after his migration to Hong Kong where he teaches martial arts for living. His first group of pupil includes boxer Wong Leung (Huang Xiaoming). The movie was released in Hong Kong in April 2010.

⁶ These acts of violence, in line with Confucian teachings, would be considered righteous. The influence of Confucianism on Ip is manifested in his reply to Miura’s request to learn Chinese martial arts, he says, “Although martial arts involve armed forces, Chinese martial arts is Confucian in spirit. The virtue of martial arts is benevolence. You Japanese will never understand the principle of treating other people as you would yourselves, because you abuse military power. You turned it into violence to oppress others. You don’t deserve to learn Chinese martial arts”.

⁷ The movie depicts three periods in Mei’s life: his rise to fame as a young man after defeating his mentor Shi Sanyan (Wang Xueqi); his affair with Peking opera diva Meng Xiaodong (Zhang Ziyi); his defiance against the Japanese army. Having won the Best Film Award at the Golden Rooster Award, however, *Forever Enthralled* has been criticized as inadequate in portraying Mei as patriotic artist since episodes such as him moving to Hong Kong to escape from Japanese intimidation in Shanghai, as well as his performance of patriotic opera in Hong Kong were excluded from the film (Qin 2008). Li Xianglan recalled that the Imperial Army was trying desperately to restore reputation shortly before Japanese surrender. As a result, they sent Kawakita Nagamasa who was highly trusted by the Chinese, to persuade Mei to perform for them. Mei declined the invitation, stating that he was too old and weak for the job. However, he performed in celebration of China’s victory immediately after the end of the war (Yau 2010: 126).

⁸ Few exceptions include the Hong Kong movie *Zuichang de yi ye* (The Longest Night) (1965/Yi Wen) shot at the peak time of Hong Kong-Japan’s collaboration, which depicts Japanese military reporter (Takarada Akira) as a well-educated young man and victim of imperialism, who is deeply thankful to Chinese people’s kindness.

⁹ When asked why he runs late for the meeting, Tanaka replies, “I went to town to see

Mei Lanfang's performance". His superior considers him late on account for work but he adds, "I also happen to like Mei Lanfang very much".

¹⁰ Tanaka demonstrates his understanding of Chinese culture when explaining the situation to other military personnel, he says, "All previous occupiers of China, consolidated their rule by assimilating Chinese culture. The ethnic minority rulers of the Qing Dynasty, identified with China by their love of Peking opera. Mei Lanfang is China's greatest actor...He represents the feelings of his people...If we can tame Mei Lanfang, we can conquer China". According to Yuan Jin of Guangdong University of Foreign Studies (2009), what the director tries to express is the nationalist idea that "culture strengthens a country". Yuan argues that the ultimate purpose of *Forever Enthralled* is to link Peking opera with nationalism. Such intention is apparent, as Qiu Rubai (Sun Honglei) says, "As long as Peking opera lives, China will live on". However, the episode of Mei being threatened or lured by the Japanese is said to be pure fabrication (Yuan 2009).

¹¹ In addition to insults made by the Japanese, the film also depicts Shi Sanyan being insulted by the audience in order to emphasize his high level of professionalism. *Forever Enthralled* is frequently compared to *Farewell My Concubine* for they depict stories of Peking opera actors. In *Farewell My Concubine*, as Tian Yizhou (2009) points out, "Confronted by the Red Guard's persecution, the unyielding Duan Xiaolou [Zhang Fengyi] not only gives in, he even publicly condemns his junior; whether it is molestation or insult from eunuch...Cheng Dieyi [Leslie Cheung] chooses to swallow humiliation and bear a heavy load [*renru fuzhong*]".

¹² While the movie depicts Chinese people's acts of bravery, it also sparked controversy over the director's attempt to portray Japanese soldier Kadokawa (Nakaizumi Hideo) as victim of Japanese imperialism. Both fictional and historical figures are included in the film, such as John Rabe, a Nazi businessman said to have saved thousands of Chinese during the massacre. His story was re-presented in German-French-China production *John Rabe* (2009/Florian Gallenberger).

¹³ From Koizumi Junichirō's Yasukuni visits to Hatoyama Yukio's call for an "East Asian Community", Sino-Japanese relation appears to sway to a friendlier direction in recent years. Abe Shinzō's "ice-breaking" visit to China in October 2006, Wen Jiabao's "ice-thawing" trip to Japan in April 2007, Fukuda Yasuo's "spring-herald" visit to China in December 2007 and Hu Jintao's "warm spring" visit to Japan in May 2008 are but few examples of closer tie between two countries. Despite warmer relationship, Chinese people are, in one way or the other, reminded to remember the humiliated history. Chinese Foreign Ministry spokesman Qin Gang, for instance, made the following comment three days before the 70th anniversary of July 7 Incident which marked the beginning of the War of Resistance against Japan: "At this point of time, we should keep in mind the spirit of 'taking history as mirror and looking to the future' and properly handle related issues so as to maintain the momentum of developing China-Japan relations". He also explained, "The reason why we choose not to forget the past is to cherish the hard-won peace and happy life and open up a better future" (Xinhua News Agency 2007).

¹⁴ In a lecture delivered at the Chinese University of Hong Kong, Karima points out that Japan is the only option left for the following reasons: The US could no longer be portrayed as the evil enemy because the US Embassy protests as soon as such movie

appears (When asked why the Japanese Embassy not protest against production of anti-Japanese films, he replied there are simply excessive productions of such nature to complain about. Furthermore, it is generally agreed that Japanese people should face this part of history). The KMT is not on the list either since to the CCP, they are now the most trustworthy friend in the dispute of Taiwan Independence. Other “potential candidates” such as China’s ethnic minorities are deemed unsuitable because they are too sensitive for domestic consumption. Karima also observes that *Devils on the Doorstep* was in certain ways reminiscent of postwar Japanese movie *Akatsuki no dassō* (Desertion at Dawn) (1950/Taniguchi Senkichi) and *Aa kaigun* (Gateway to Glory) (1969/Murayama Mitsuo). However, he thinks that the last massacre scene in *Devils on Doorstep* was unconvincing and thus has failed to depict Japanese soldiers in real life, because it would be unreasonable for them to carry out mass killing after Japan surrendered as returning home safely, i.e. avoiding being accused as war criminals, should be their number one concern.

¹⁵ In *Ip Man* for example, not only does Ip fight for China’s dignity against the Japanese, he also protects Fo Shan’s reputation as the city of martial arts by defeating out-of-towner Jin Shan Zhao (Fan Siu-wong). Similarly in Kwan Tak-hing’s Wong Fei-hung series, Shek Kin played the role of villain from northern China.

¹⁶ Kagawa also starred in *John Rabe* as Prince Asaka Yasuhiko (uncle-in-law of Emperor Hirohito) who was never charged but responsible for the Nanjing Massacre. A number of Japanese actors have turned down the role due to sensitive themes depicted in the movie. After reading the script, Kagawa said he learnt that “Japanese people had done many brutal things in the past. This is extremely hard to accept but we must tell the story” (Searchina 2009).

¹⁷ Clint Eastwood’s *Letters from Iwo Jima* (2006) and *Flag’s of Our Fathers* (2006), however, strive to stay away from demonization of the enemy with attempts to project a less stereotyped picture of WWII. Lieutenant General Kuribayashi Tadamichi (Watanabe Ken) is even portrayed as the most respectable hero in the series.

Key words:

Hou Hsiao-hsien, Taiwan, Ozu Yasujiro, Albert Lamorisse, Transnational Cinema

“Chinese Cheers”: Hou Hsiao-hsien and Transnational Homage
Dr. Nicholas de Villiers (University of North Florida)

Now it happens that in this country (Japan) the empire of signifiers is so immense, so in excess of speech, that the exchange of signs remains of a fascinating richness, mobility, and subtlety, despite the opacity of language, sometimes even as a consequence of that opacity.

—Roland Barthes, *Empire of Signs* (9–10)

Actually, it is very difficult to cross national borders and shoot the film of a different culture. How many successful films have you seen? There are very few. The reason is very simple. For example, when we look at Asian-themed films made by foreign companies, it's not accurate. When we watch their films about Chinese people, it's not accurate. It's a very big challenge, because they don't know about the Chinese way of life, daily rituals, etc. But I feel this is interesting. It's a challenge; it's pretty interesting.

—Hou Hsiao-hsien interview in *Métro Lumière* (2004)

Transnational cinema offers unique opportunities for reflecting on globalization—in terms of co-production and reception¹—and the theme of “East Meets West.” Taiwanese director Hou Hsiao-hsien’s two recent cinematic tributes—to Japanese auteur Ozu Yasujiro in *Café Lumière* (2003), and to French director Albert Lamorisse in *Le Voyage du Ballon Rouge* (2007)—offer two versions of cross-cultural and intertextual reference: “East Meets East” (Taiwan/Japan) and “East Meet West” (Taiwan/France). For *Café Lumière*, Hou Hsiao-hsien was commissioned by Shochiku studios to create a film in homage to Ozu Yasujiro marking the centenary of Ozu’s birth. *Café Lumière* reveals both similarities and differences between the Tokyo of Ozu’s time and that of the present, and between Ozu’s cinema and that of Hou. *Ballon Rouge* bears some resemblance to fellow Taiwanese director Tsai Ming-liang’s film *What Time Is It There?* (2001) about a Taiwanese woman who goes to Paris and a young man in Taipei who becomes obsessed with Truffaut and the time difference between Taipei and Paris. Like Tsai’s film, *Ballon Rouge* suggests something beyond the “influence” of European cinema masterpieces and the reverence implied by the word “homage.” Rather, following Fran Martin’s reading of Tsai’s film, Hou’s work also “reflexively foregrounds the question of transcultural citation, drawing attention to the history of citations by Taiwan New Cinema and second wave directors of aspects of the European new wave cinemas,” and like Tsai’s film, “explores the question of postcolonial temporality” (par. 10). In *Ballon Rouge*, Hou foregrounds his role as a foreign director creating a portrait of Paris by including a directorial double in the character of Beijing film student and au pair Song Fang, who, in a kind of *mise-en-abîme*, is also working on a film tribute to Lamorisse’s *Le Ballon Rouge* (1956).

In *Métro Lumière*, a short French promotional film about the making of *Café Lumière* with the tongue-in-cheek credits “Made in Taiwan, Assembled in France, Big in Japan,” the narrator Dominique Blanc explains that

¹ Notably, the French and Japanese co-production, funding, and enthusiastic reception of recent films by Taiwan directors Hou Hsiao-hsien and Tsai Ming-liang, and Hong Kong director Wong Kar-wai.

Here, in Taiwan, Hou Hsiao-hsien is considered to be a master, who knows how to capture the meanderings of his country's history in the present. The film he has just finished shooting is an homage to a Japanese director who died in 1963, Yasujiro Ozu. He is the unchallenged master of sublimated everyday routine. The film *Café Lumière* is therefore a place where two artists cross paths.

The voiceover explains to its Western audience that the island of Taiwan was a Japanese colony for 50 years, until 1945. Over footage of youthful crowds in neon-lit Taipei settings that resemble Tokyo, Hou says, "I was under the influence of Japan subconsciously since I was young" through such things as translations of Japanese novels, Japanese movies, Japanese karaoke songs with Taiwanese versions, and Japanese words incorporated into the Min Nan dialect. He explains that by the time he filmed *Café Lumière*, his feeling towards Japan had changed, "It's a special nation. You can't just say it's good or anything. Basically, you need to come to an understanding, and how to get along with it. You need to know why there was a Second World War, what happened, etc."

Hou admits that his first encounter with an Ozu film, *An Autumn Afternoon* (1962) did not impress him, and he explains that this was perhaps because he was not mature enough. But later, on the recommendation of a friend while staying in Paris, he watched a silent Ozu film *I Was Born, But...* (1932), which he felt was very good. In order to make *Café Lumière*, he wanted to understand the background of "Yasujiro's" films (using the more familiar given name). He argues that, "Yasujiro's early films already had a kind of feeling and taste of life. At that time it was more cheerful and relaxed" but that "After World War II, the defeat of Japan, in the process of rebuilding Japan, there were a lot of changes and industrialization. There was a kind of worry. He added this worry to his movies, adding to his feeling towards life, making it thicker. Japan today is completely different." He explains that there is still the problem of family, but that this problem is very different from before, since "the ability of women to involve themselves in society and survive on their own is much different than before." Therefore, the plot of *Café Lumière* focuses on a contemporary Japanese young woman named Yoko who lives her life alone. For this role, Hou cast a popular musician Yo Hitoto, who was born in Tokyo to a Taiwanese father and Japanese mother. Yoko is researching a Taiwanese musician Jiang Wen-ye. Jiang was successful in Japan in the 1930s (the time of Ozu's films) and married a Japanese wife, whom Yoko interviews, looking through her scrapbook and marveling at their storybook love for each other. Already, we can see Hou's technique of creating a complex transcultural narrative through casting choices, intertextuality, and mirroring devices (Yo is half Taiwanese-Japanese, like the relationship her character is researching, and the film in which she stars).

The major departure from Ozu's ethos can be seen in Yoko's decision to keep the baby she is carrying from her Taiwanese boyfriend, but not to marry him. Ian Johnston explains:

her reaction to this is the clearest sign of *Café Lumière*'s distance from Ozu's work; of the distance of young contemporary Japanese from their counterparts in Ozu's time; and of how distant Hou and [scriptwriter] Chu

[Tien-wen]'s vision of their characters is from that of Ozu and his co-scriptwriter Kogo Noda. Yoko informs her parents that she is going to keep this child, but she is not going to marry the father. There's no sense that she in any way proposes to consult them for advice or talk the issue through with them, let alone defer to an elder in the more traditional Confucian fashion. ... The film completely validates the individual acting in and for herself. (par. 16)

So, Johnston argues, "in *Café Lumière* there are some parallels with Ozu's world, but there is also considerable distance, just as there is distance between the films of Ozu and those of Hou" (par. 4). He points out that despite some cinematic nods to Ozu in *Café Lumière*, Hou's approach to filmmaking is markedly different. Ozu's cinema is famous for its intimate "tatami shot" low camera, and for its divergence from classical Hollywood rules of continuity (such as the 180° system for camera placement and editing). By contrast, Hou's cinema is famous for its long takes and the distance kept from the characters. Most notably, Ozu's films were popular with mass audiences, whereas Johnston notes that the only concession to popular tastes made by Hou is the casting of pop stars and use of pop music to accompany the closing credits. Yet Hou makes intertextual references to Ozu's films (such as the scene where Yoko and her mother-in-law borrow sake from a neighbor, reminding us of a similar scene in *Tokyo Story*). He also borrows a salient motif from Ozu: the image of trains (symbol of modernity, the distance between rural and urban life, and between family members. In fact, Hou's much earlier film *Goodbye, South, Goodbye* [1993] already used this train motif with a similar meaning).

The narrator of *Métro Lumière* suggests that, "Hou Hsiao-hsien wants to film our present. But how does one work in an unknown language? How to invent a story in a country where one is a foreigner? How to write a script when one wants to capture the truth of the instant?" Hou argues that it is possible to "see the details of the real Japan after careful observation." He explains that he learned about his location by studying maps of the Tokyo subway system. All of his research finds textual representation in Yoko's friend Hajime (Tadanobu Asano), a used-bookstore keeper who obsessively records train sounds and creates digital artwork of himself as a fetus in the womb surrounded by the trains of the JR line. In another transcultural gesture, Yoko gives Hajime a gift from her research trip to Taiwan, a pocket watch celebrating the 116th anniversary of Taiwan's rail system. Hou and his producer and editor Liao Ching-Song explain that it was impossible to obtain permission to film on the JR line, due to safety restrictions, but that Hou felt that if he couldn't shoot on the JR "then it's all over," so they filmed on the sly for about 20–30 days with cinematographer Lee Ping-Bing, all dressed in shorts with black shirts to avoid reflection: "It looked like an open secret activity. People could tell that we were not Japanese."

Hou explains that unlike Ozu's studio era that involved precise planning, down to amount of footage used, his method involves shooting on location with an open set² and multiple

² Johnston points out another densely transcultural and intertextual gesture: "a cameo appearance by film critic Shiguehiko Hasumi—author of an excellent book on Ozu only available in the West in French—playing a café waiter delivering coffee." (par. 11)

takes on different days, working through “observation of reality and continuous adjusting.” Thus, when asked what finally “is left of the model of this homage, then? What do we see of Ozu in your film, Mr. Hou?” he says “If the audience were interested, they can watch this film with one of Yasujiro’s films, such as *Late Spring*. They should have a better understanding of Ozu’s method. He’s like a mirror in front of you. We shot similar themes, but with different methods of shooting. This is how we honor him.”

Tadanobu Asano explains that, “A non-Japanese movie director made a movie casting all the Japanese actors. Well, Yo is half Taiwanese. I’m not 100% Japanese either. All these different people worked together to make a Japanese movie ... and the end product is a very natural-looking Japanese movie.” Hou likewise remarks, “After filming, I was worried about whether the Japanese thought it was Japanese. After watching it, they all said that they had never watched a movie that was more like Japan. But they mentioned something to me. In Japan, it’s rare, almost impossible to have a Japanese director make a movie like this.” Perhaps this is because of Hou’s defiance of the usual working methods of Japanese filmmaking (by shooting on location without permits, allowing non-professional actors in the scene, shooting multiple takes). Johnston also notes that, “At times, there’s definitely an outsider’s perspective operating. A Japanese filmmaker would surely never dwell so long on the streams of passersby at the train stations or in the streets, let alone offer the repeated shots of fascinated close-ups of a train driver’s white-gloved hands. But Hou and Chu have made these characters their own” (par. 13). One could say the same about the Westerner’s (perhaps more typically “Orientalist”) fascination with Tokyo visible in Sofia Coppola’s *Lost In Translation* (2003). Yet in both of these films by outsiders with clearly different geopolitical relationships to Japan, “the exchange of signs remains of a fascinating richness,” as Barthes noted, because “the empire of signifiers is so immense, so in excess of speech” (9–10).³

Like *Café Lumière*, critics in France who responded positively to *Le Voyage du Ballon Rouge* were surprised by how well a foreign director was able to capture the *je ne sais quoi* of Parisian everyday life. On a *Culture 8* broadcast dedicated to the film, Vincent Julé, a journalist with “Écran Large,” remarks that “je n’ai jamais vu un film qui capté aussi bien la vie de Paris, mais surtout des Parisiens. Ce n’est pas cliché, ce n’est pas carte postale, non, pour moi qui habite en Paris, c’est vraiment le Paris beau, gris, tout, et c’est un réalisateur étranger qui arrive sur ça” (I have never seen a film which captures the life of Paris so well, but above all the life of Parisians. It’s not cliché, it’s not a postcard, no, for me who lives in Paris, it’s truly Paris—beautiful, grey, everything—and it’s a foreign director who arrives at this). On my reading, this is a result of Hou’s unique approach to watching/listening to his characters and settings that is simultaneously distant and intimate.

Also like *Café Lumière*, *Ballon Rouge* was commissioned, by the Musée d’Orsay, and is an homage to both Albert Lamorisse’s short film (about a lonely boy, played by Lamorisse’s son, who befriends a magically personified red balloon) and a painting in the

³ Of course, Barthes’s use of the term “empire” in his work must be reexamined in the face of more recent permutations of American and Japanese political and cultural imperialism (and their effects on Coppola and Hou).

Orsay museum, Félix Vallotton's *The Balloon*. These two intertexts act as bookends for the film itself: it starts with its young boy protagonist Simon (Simon Iteanu) talking to the off-screen balloon trying to convince it to come down from a Métro stop. The balloon follows him on to the subway, and is pushed away by adults in the same manner seen in Lamorisse's original. But for the rest of the film, the balloon is more of a background character, a possible symbol of Simon's somewhat detached position within the "complicated" adult social world of his frazzled mother Suzanne (Juliette Binoche⁴), a puppet vocalist who is recently separated from her husband and has hired an au pair named Song Fang (the actress' actual name) to look after Simon. Song Fang's character was a film student in Beijing, and is currently working on a film about *Le Ballon Rouge* (Leo Goldsmith speculates that the opening segment of the film is perhaps supposed to be an excerpt from her film rather than Hou's). She films everything she sees using her video camera, which Julé notes functions as a kind of mise-en-abîme.

Hou cleverly includes dialogue that comments simultaneously on her films and on the film we are watching (Hou's). One metacinematic moment is like a magician showing how a trick was performed: Song says, "I want to make a short film about red balloons," and explains the ability to digitally erase a boy dressed in green holding the balloon, causing Suzanne to remark that it is "incredible what you can do now." During this conversation, Suzanne refers to two other films: (1) an 8mm film of her grandfather, who was also a puppeteer, which she asked Song to get digitally transferred, and later watches on a small screen while adding commentary, surprising Simon who asks her how she knows what they are saying on the silent film; and (2) she returns a copy of Song's film *Origins*, which she had praised earlier, saying,

I found it very touching ... It has a certain abstract quality. It reminded me of childhood. My room was on a mezzanine too [pointing to their apartment]. When my parents were together, I would hear everything. It was like an echo chamber. When my parents put the key in the lock, I heard it. Your film somehow brought all that back. Sounds, images ...
Your film touches on very deep feelings I'd almost forgotten...

Suzanne's invocation of Song's film and its Proustian activation of childhood memories of adult household noises also fits Hou's film, especially the ending where Song discovers that Simon has crawled into bed in his mezzanine bedroom, and the audience is encouraged to reflect on the child's acoustic relation to the earlier sounds of Song putting things away in the kitchen.

Gilles Deleuze has noted the importance of the figure of the child within post-war cinema. This cinema, Deleuze argues, departs from the classical cinema of the "movement-image" towards a cinema of the "time-image" in which we are presented with pure optical and sound situations. Deleuze sees Ozu's cinema as an example, but the relationship between duration and perception/audition is also what makes Hou's cinema so remarkable. In *Cinema 2: The Time-Image*, Deleuze explains:

⁴ Binoche's compelling performance as a distraught French bourgeois woman links intertextually to her similar roles in Krzysztof Kieslowski's *Trois couleurs: Bleu* (1993) and Michael Haneke's *Caché* (2005). Both of those films are also by national "outsiders" who nonetheless incisively portray Paris.

In Volume 1 the crisis of the action-image was defined by ... the slackening of the sensory-motor connections ... the new image ... is the purely optical and sound situation which takes the place of the faltering sensory-motor situations. The role of the child in neo-realism has been pointed out, notably in De Sica (and later in France with Truffaut); this is because, in the adult world, the child is affected by a certain motor helplessness, but one which makes him all the more capable of seeing and hearing. (3)

The kind of European cinema described by Deleuze is often cited in the films of Taiwanese “new wave” directors. Yet Fran Martin suggests in “The European Undead: Tsai Ming-liang’s Temporal Dysphoria” that the teleological developmentalist narrative implied by the notion of European “influence” needs to be rethought with a sensitivity to postcolonial time:

In sum, the signifier “Europe” works in contradictory ways in contemporary Taiwanese film and public culture. On the one hand, “Europe” may offer itself as an imaginative resource by means of which the specific regional history of American post-war cultural dominance is implicitly critiqued by Tsai and other Taiwan filmmakers. On the other hand, however, “Europe” also functions as a mythologized cultural “other” that is sometimes conflated with “the west” in general ... it is this relation to which I think Tsai’s film [*What Time Is It There?*] speaks most powerfully in its structuring obsession with the temporal disjuncture between Taipei and Paris. I use the term “postcolonial,” then, in the relatively broad sense of designating the relation of alterity self-perceived by Taiwanese intellectuals to “Europe” as a mythic geo-cultural formation connoting modernity, a relation conditioned by the persistent modern division of the world into “east” and “west.” (par. 13–14)

While Martin notes that this division is losing credibility in a polycentric and postcolonial world, it still haunts Tsai’s films and those of his Taiwanese contemporaries. We could extend Martin’s analysis of cinematic “chronopolitics” to Hou’s films, which are haunted by both Ozu and European modernism.

Deleuze also argued that everyday banality becomes important in these films because “being subject to sensory-motor schemata which are automatic” it is “all the more liable, on the slightest disturbance of equilibrium” suddenly to “free itself from the laws of this schema and reveal itself in a visual and sound nakedness” (3). Ozu’s, Tsai’s, and Hou’s films focus on everyday banality in a way that liberates them from the need for action, and instead encourages sensitivity to the passage of time, and the image and soundtrack as purely optical and sound situations. Hou’s relationship to his subjects and locations is thus simultaneously intimate and distant, which parallels Song’s relationship to her host family. Song and Hou’s cameras record “the life of Paris” (often in reflective glass) in a way that approaches the state Roland Barthes’s described as “the Neutral” in his lecture course at the Collège de France (1977–1978):

Going out, evenings at dusk, sharply receiving tiny, perfectly futile details of street life: the menu written in chalk on the windowpane of a café (chicken mashed potato, 16 francs 50—kidneys crème fraîche, 16 francs

10), a tiny priest in a cassock walking up the rue Médicis, etc., I had this vivid intuition (for me, the urban dusk has a great power of crispness, of activation, it's almost a drug) that to fall into the infinitely futile helps one's awareness of the feeling of life → (it's after all a novelistic rule). → Tact is thus on the side of vividness, of what allows life to be felt, of what stirs the awareness of it (47)

This aptly describes the vividness of Hou's cinema that is remarkably "tactful" in its reception of the details of street life. Take for instance the café scenes with Simon and Song in which they discuss Simon's sister Louise and how she used to bring him there, while Hou transitions subtly to a flashback illustrating their present conversation—an example of what Deleuze refers to as the crystal-image:

in fact the crystal constantly exchanges the two images which constitute it, the actual image of the present which passes and the virtual image of the past which is preserved: distinct yet indiscernible, and all the more indiscernible because distinct, because we do not yet now which is one and which is the other. (81)

Hou had experimented with this technique of ambiguous flashback/illustration in his Taiwanese historical portrait *The Puppetmaster* (1993).

Like the ideal of the "au pair" (on par) relationship, Hou's narrative emphasizes mutual cross-cultural learning. For instance, the mother/employer Suzanne is studying the art of Chinese puppetry, perhaps hearkening back to *The Puppetmaster*. This also recalls *Café Lumière*'s portrayal of a Yoko returning from a research trip to Taiwan. Ironically, while the French journalist previously quoted praised Hou's film for not being like a picture postcard of Paris, within Hou's film a postcard functions as an object of exchange that throws the issue of cross-cultural communication into relief in a way that has implications for both of the films discussed here. On the train back from a lecture on Chinese puppetry techniques by puppet master Ah Zhong, Suzanne asks Song to translate for her and offers him a gift, a postcard of an image she saw at the British Museum when she was working there as a nanny, which for her represents "something profoundly Chinese." Leo Goldsmith notes that

In any other film, a French woman telling a Chinese character through a Chinese translator what she believes is quintessentially Chinese would stick out like a sore thumb, likely as an outright indictment of the French woman's blinkered provinciality. But as usual, Hou is after something far subtler, a simple marker of the intersection of East and West that calls attention to the dovetailing processes of translation and adaptation in which the characters are involved. (par. 2)

Beyond the image it bears, the postcard recalls her days as an au pair, mirroring Song's current role. This is in keeping with Hou's use of reflexive devices to examine travel and cross-cultural translation. Whether Ah Zhong recognizes himself in Suzanne's image of "la Chine profonde," or whether French or Japanese audiences recognize themselves as accurately reflected in Hou's films, what he foregrounds is the gesture, the "exchange of signs" in excess of speech. In Hou's homages, Lamorisse and Ozu may act "like a mirror in front of you," but perhaps what we see is more like the dense overlay of images in the reflective glass of Hou's cafés.

Abstract

Sedentary lifestyle is a main cause of obesity, and accompany with chronic disease. Some medical research shows NEAT(Non-Exercise Activity Thermogenesis) is a potential way to decrease obesity problem, that people could exercise everywhere and at anytime. To encourage people to increase physical activity in daily lives, We design an activity to promote people walk more. This activity is competed in teams by everyday foot counts of team members. This paper focus on encouraging people with low willingness to increase physical activities by group encouragement that other research shows those people are hard to be influenced by application only. In my research, people with low willingness and high willingness would be grouped to two teams; each team is composed of active and inactive users in same population (2 active, and 2 inactive in each team). All the participants wear pedometers to calculate everyday foot counts and convert it to activity points by uploading to a web-based platform where activity took place. In the activity, participants invest their “sport points” to win store coupons as reward, that the team of more points will win the coupons. After a three weeks pilot experiment, users with low willingness perform more walk than before and express they are encouraged by team members.

Keywords: NEAT, pedometer, willingness,

1. Introduction

Obesity is a common problem in modern society, and it usually comes with some chronic diseases such as high blood pressure and diabetes. Some studies show that people who try to lose weight by sport plans are easy to give up and then back to their weight in few years.[1] NEAT(*Non-Exercise Activity Thermogenesis*) is energy consumption from nonvolitional physical activities like walking or gum chewing. Different from traditional exercise which need to taken place in specific time and place, NEAT activities could be held in anytime and anywhere. Additionally, this kind of activities is considered to be a potential factor to maintain healthy weight. Some researches tried to make user to increase walking, the most common NEAT activity that exist in our living and pretty easy to be measured, by developing software such as games or cell phone applications.

TTM(trans-theoretical model)[2] define 5 different stages that people try to change their behaviors. From Lin's research which utilized a game to promote people walk more found people in stages of 'Pre-contemplation' and 'Contemplation' are low-willing to sport more, and 'Preparation' and 'Action' stages are high-willing people to increase sport while 'Maintenance' stage people keep their sport habits, not influenced from the application. This paper is mainly focus on promote low-willingness of sport people to increase sport by high-willing people's encouragement. Different from other researches[3-5] encourage users walk mainly by application, we design the activity compete by 2 teams and form common goal to win the activity.

2. Relevant work

To against obesity problem, some researches tried to encourage people exercise more by combining game and sport. Virku[6] combined exercise bike and virtual environment that changing with biking while bike resistance changed according to environment slope. Miru[7] developed a game, Excertainer, played by running treadmill and using two sensor bracelets to control virtual avatars' direction. Tetris Weightlifting[8] utilized two weight lifting handles to play a classic game, Tetris, on PC monitor that handles control tetrominoes. Shadow boxer[9] was a flash game guide users to play kickboxing with healthy heart rate facing a PC interface. All these researches showed people divert attention from exercise to game, and perform more sports than without games.

Although the aforementioned cases promoted people sport more, they need ran in specific places and time due to traditional exercise limitation. Therefore, some researchers advocate people increase NEAT activities that could be ran in anytime and anywhere. Consolvo[10] created a application on cell phone that users could compare their daily step counts with friends, and user would show a special icon on screen as reward if he complete his daily sport target. Chick clique[11] make young girls compete with friends each other, and platform also shows 5 sport levels defined by these girls, motivated teenage girls to walk more. UbiFit[5] was a cell phone application run in screen background as wallpaper, meaningful patterns like butterfly and flowers represented personal sport goals and performance. In Fish'n'Steps[3], virtual fish grew up according to users' step counts, and a virtual fish tank would be dirty if user walked less than his walking goal. NEAT-o-Game[4] was ran by users' walking performances. Avatars represent users racing as much as their players walk, and players' walk counts also convert to 'points' to exchange hints in NEAT-o-Sudoku, the other part of NEAT-o-Game.

These NEAT activity(walk) combination cases shows people walk more after experience these applications. Different from exercise more, users alter their used behavior such as walking more in daily live, climbing stairs rather than taking elevator, and parking cars further from

office make them walk more. But these cases usually focused on whether application could influence users' attitude and habits or not, but some participants with low sport willingness (defined as introduction) not walk more indeed. These people of low sport willingness maybe change their attitude of sports but not perform to walk more, and other users won't try to encourage them due to unfamiliar or the application design to be played alone. Therefore, these low-willingness users are who we interested to encourage sporting more.

3. Methodology

To measure users' step counts, we assign every participant a pedometer, Omron HJ-720ITC. This gadget is easy to carry even in users' pocket or backpack could measure their walking steps(Figure1). Furthermore, this pedometer could download participant's sport data through USB to its health software on PC, then convert to two kinds of file format, .CSV and .PDF(see Figure 2).And we build a website ask participants to upload their sport data both of CSV and PDF formats, CSV is the format that ease system to read, and PDF is the verification that users can't change data in it.

Figure1 user carry pedometer in pocket, this gadget(HJ-720ITC) could connect with PC by USB to upload data.

Figure2 Omron health software, ease user to convert sport data to CSV and PDF files after them uploading data from pedometers to PC.

While participants upload their sport data to the website, their step counts would be converted to “activity points”, per 100 steps switch to one point. In the activity we provide three different stores’ coupons as activity reward, and then ask users to compete by teams. Participants could invest their points to their favor stores, and the team invented more points would win the coupon of the store, all the four team members get 100NT dollars coupon each person.

Website interface

In the web platform, users could view how many points they still remain and how many their team and rival team remain, further the website shows the latest invest status.(see Figure3) And users could compare their walk counts with their team members and rival team members, or their weekly walk trend on the website.(see Figure4)

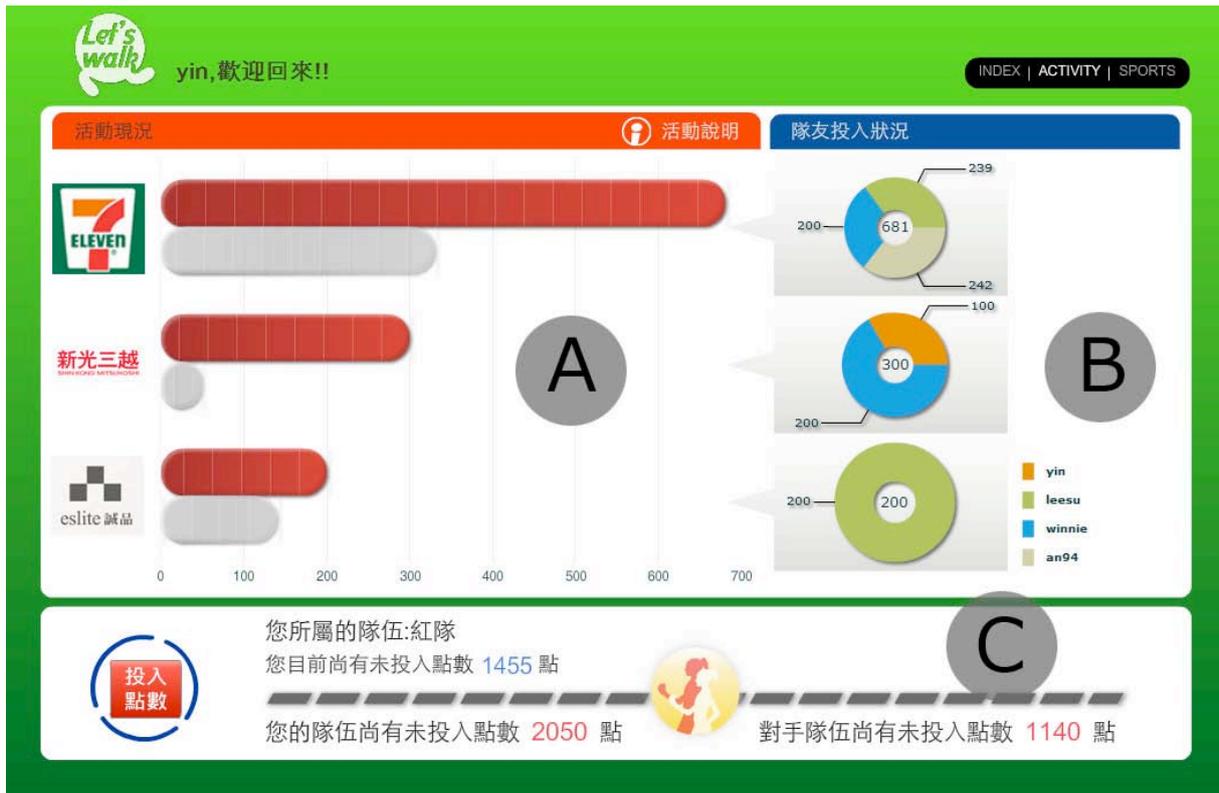

Figure3 (A)activity investing status;(B) composition of team members' points invest;(C) personal, team, and rival team point remains

Figure4 (A)team members' walk performance (B)personal sport goal (C)personal weekly walk trend

4.Evaluation

Participants

We chose 12 participants to group into 3 teams, 2 for experimental groups and 1 for control group. All the participants are girls, about 23 to 21 years old, members in the same team are classmates of NCKU, people in different teams don't know all the other team members(maybe know only one or two of other team) and all of them are not used to walk as the main sport. To classify different sport level of participants, we follow the criteria of TTM as other researches did.

Level 1(Pre-contemplation): people who don't have sport habit either not intend to start sporting regularly in next 6 months.

Level2(contemplation): people who don't have sport habit but intend to start sport regularly in next 6 months.

Level3(Preparation): people who have sport habit but not regularly, and plan to do it regularly in next month.

Level4(Action): people who start sport regularly in recent 6 months but not more than 6 months.

Level5(Maintenance): people who keep sporting regularly more than 6 months.

In Lin's research[3] pointed that users of level1 and level2 are people with low-willingness of sports that they won't increase sporting by application influence, and users of level3 and level4 are people with high-willingness of sports that they are enthusiastic about sporting more while level5 users keep their regular sport habit that not encourage from application. In this research, we recruit every team with two users of low willingness of sport and two of high willingness of sport. Different from other researches[3, 4] that participants don't know each other, all members in the same team are friends and meet each other frequently.

Therefore, we expect participants encourage each other, influenced by team members' encouragement, and not just urged by activity especially people of low-willingness of sports.

Experiment

We ran three weeks pilot experiment to evaluate how this activity influence users. The experiment has two sessions. The first week is session1 for preparation, participants are asked to upload sport data every day, and website shows their sport status include personal, team, and opponent team members as **Figure4**. In this session, activity are not activate, just make users understand the system and be used to carry their pedometers. The following two weeks are session2, 2 experimental groups started to run activity while the other control group didn't join the activity. These 2 groups invested their points that converted from step counts they walked to win the competition on the website as **Figure3**. Team members will get coupons of the store they invested point if they invested points more than the opponent team did. There were three stores they could choose to invest. The competition result is announced weekly, and we give them coupons and have an interview in the end of week.

The following table shows participants performance through the whole experiment.

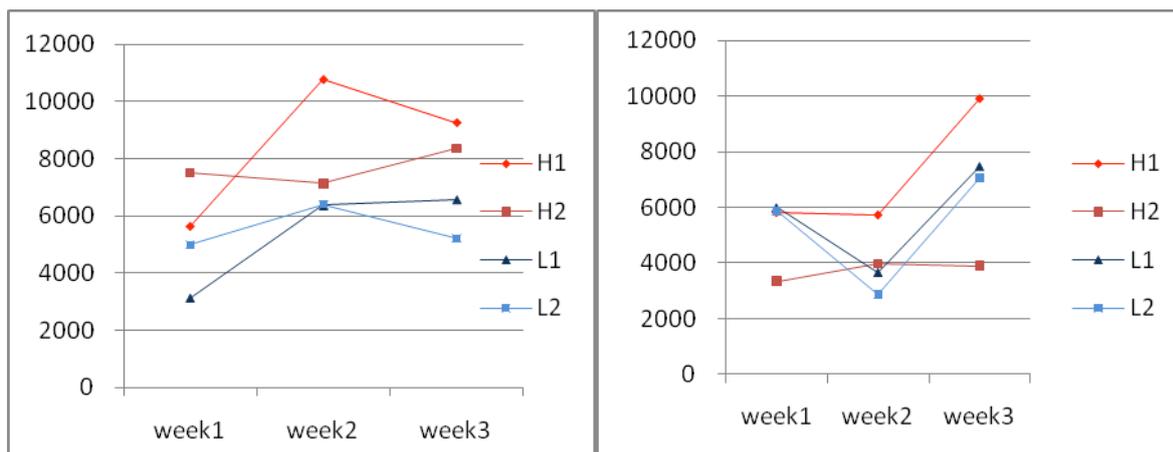

Table1&2. TeamA, TeamB groups of experimental groups' walk performances; H:person with high willingness, L:person with low willingness; the vertical axis represent the average of step counts in a week

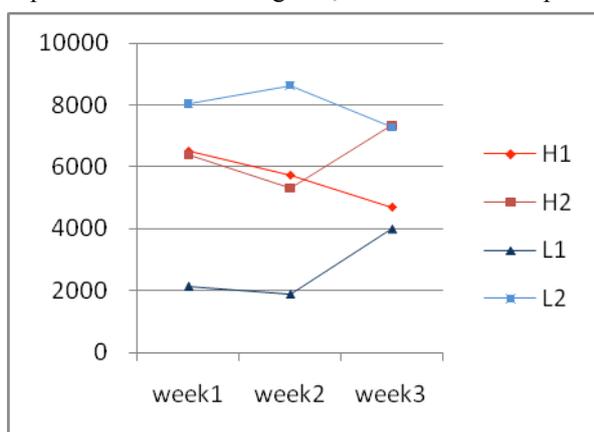

Table3. TeamC, the control group's walk performance

Through three weeks experiment(one week preparation, two weeks activity), members in the two experimental groups had increase their walk performances. But in the second week, we encounter a 5days vacation that most of students left campus back to their home town. Therefore, they didn't meet each other in that week, and some people responded that living habit was different from usual that they maybe just stay at home all the day. In the third week, generally participants walked more compare to their performance in week1. People with high willingness increase walk steps in range between 1000 to 3000 steps while low willingness ones increase between 500 to 1500 steps. On the other side, members of control group(TeamC) decrease their walk steps. Through interview with participants we found that they used to compare their own performance with others both members of the same team and rival ones. Due to these participants usually met together, they often took their pedometers to compare each other, and asked the member who walks most how she did it. The other finding is users responded that while they invited partners to go sport together, this activity eased them to convince partners to walk that they would increase step counts much more. Nevertheless, participants tend to invest their activity points in the last day or last few hours near weekly

end of activity just like bidding in online auction. In fact, most of participants didn't have strategy to win the game, but this activity still made low willingness users encouraged by team members owing to they often met together that eased them to exchange experience and went walk altogether. And the control group which didn't join activity said they feel novel to carry pedometers in the beginning but felt bored after two weeks and just try to keep their usual performance level, except one user(L1 of TeamC) who join a sport team increase her walk counts.

5.Conclusion

This research try to encourage people walk more through join an activity, especially those who with low willingness of sports. After a three weeks short experiment, participants confirm that this activity activated them walk more. And to make familiar and usually met friends in a team also eases people to encourage each other and invite friends to walk together. The whole system works fine, but sometimes user forgot to upload data to web server, or forget to carry pedometer(only two users forget to carry it for 3 uncontinuous days), maybe auto uploading hardware and cell phone application would be a future choice. This experiment is short and participants set is small. Therefore, significant statistically conclusion couldn't be done, whether participants will keep their walk performance after activity or not is still not confirmed. The further experiment with more and different types of people(age, sexual, .etc) is needed. But our idea that make low sport willingness people encouraged by high willingness friends is success, and user interaction make them walk more that aforementioned research shows only applying application is hard to promote them to increase walking.

Acknowledgement

We want to thank all the participants for their time, Jeremy Lin for website script problem solving, and Tsaiwei Lin for pedometers purchasing. All the people help me to develop this idea.

Abstract

Stress management appears to be a crucial issue in the 21st century (Lian, 2009). However the studies concerning the effect of managing stress are less represented; the complexity of Heart Rate Variation (HRV), which nowadays is the most common stress detected system using in the market, makes general users hard to be aware of their current stress situation. It is argued that the informational visualization of display design (Friendly, 2008) facilitates the interpreting process between products and customers.

The concept of stress is deeply linked to cultural environment. In the existing products concerning stress issues such as the American company EmWave or the French society Symbiofi, there is a prevalence of products coming from the Western world. In the opposite, the stress detected products for Asian are rare. Especially in Eastern Asia, large amount people are in the sub-health condition (Wang, 2001), a product design for Asian customers would present relevant advantages.

This research work is divided in two parts: first, the pilot study of OGENKI Diary used the five-point LIKERT scale from Cohen and Williamson (1988) to level the stress identity and compare normal and representational displays; we focus on perception of the design specification, user's feeling and the willing of usage and custom. Secondly, the focus group and questionnaire using picture and semantic differential methods for gathering images which represent pressure.

The combination of OGENKI diary, which proposes a new step on interactive step, and questionnaire website, which tries to offer an easily understandable representation of current stress state, and observes if the teenagers aware better their stress and will help them to understand their stressors. The aim of this study is to offer a new kind of stress auto-diagnostic specially designed for Asian teenagers in order to

elaborate later a stress coping game affiliated to OGENKI.

Keywords: Area studies, Stress management, Semantic Differential method, representational displays, auto-diagnostic

1. Introduction

1.1 Background

Although the Taiwanese youth suicide rate increased year by year and suicide became the second of ten death factors in 2006, there were only 20.6 percent of young people had asked for help of professional psychological counseling experience (BHP, 1987). In 2007 the Taipei City Government Health Bureau survey conducted on young people stated that 20.9 percent of students did not want to let people know about their difficulties. Twenty percent of students think they can resolve it, 16.7 percent think that pressure will naturally not be seen, while 0.58 percent would hurt their own (Griffith, 2009); young people do not want to find someone to help them handle pressure. Thus, it is important to offer a way to aware and prevent better from extended stress state.

The traditional treatment for stress process usually occurs in patients with symptoms of some diseases, such as the physical aspects of the long-term stomach pain, headaches, insomnia, irritable bowel syndrome, and so on ..., or the psychological aspects of depression and bipolar disorder (Chen, 2002). Most of the time when patient feel symptoms or pathological changes arise and go consult doctors or others pathologists, the diseases caused by stress have been already carried out to a certain level of importance and danger. This traditional habit may jeopardize health condition.

1.2 An ounce of prevention is worth a pound of cure

If the stress is too long, the body is tired. Anger or depression may also appear. Stress has not only physiological, but also psychological effects. When the person is in a stressful situation, his behavior as well as its perception of the environment is changed (Greenberg, 2002). But it must be remembered that each individual reacts differently to a similar situation. Therefore, if the general adaptation phase to stress persists, the body can no longer provide effort that is required; it is unable to compensate energy expenditure and our immune defenses, making us it more susceptible to external attacks. The heart, arteries, stomach, intestines, skin or immune defenses suffer from diseases such as ulcers, hypertension or even the infarction, asthma, eczema, cancer, etc. So far, the causes are unclear: although stress itself can

induce harmful behavioral changes (toxic, hyper alimentation...), it seems that it can directly generate anomalies and it, in particular, a recognized cardiovascular disease risk factor (Brotman, Golden and Wittstein, 2007).

The General Adaptation Syndrome (Selye 1936), our body reaction to stress, has its limits; physiological limits that make the body cannot go beyond its forces. This obvious assertion is taken up by Holmes and Rahe (1963) that show the amount of change unit has an influence on the health of the individual. Thus, for 10 people with more than 300 units of change in a year, 8 suffered health problems. Series of examples provide us to illustrate this idea; firstly the weakening of the immune by the General adaptation syndrome system and then the effect of stress on the brain. The immune system is greatly affected when firing the General adaptation syndrome. Many experiments on animals and human beings have demonstrated, and according to Baer et al., the cortisol, a corticosteroid hormone or glucocorticoid produced by zona fasciculata of the adrenal cortex, which is a part of the adrenal gland, usually refer as “stress hormone” would result as a consequence. There would therefore be a weakening of the immune response and thus defense system in the body.

1.3 Stress theory

Hans Selye defines stress as “the non-specific response of the body to any demand for change”. The theory of Lazarus and colleagues (1984) emphasizes that one's view of a situation determines whether an event is experienced as stressful or not. Ursin and Eriksen (2004) published the Cognitive Activation Theory of Stress (CATS) offers formal and systematic definitions of the terms and concepts used in stress research. The stress response depends on acquired expectancies to the outcome of the stimulus and the available responses. The stress response itself is an alarm necessary for performance and adequate to challenges.

Furthermore, the World Health Organization defined the third state, a state between health and disease, as “Sub-Health condition” and there are amount 60% of population in the world suffer from it. Especially in Eastern Asia, large amount people experience all kind of discomfort when all necessary physical and chemical indexes are tested negative by medical equipments (Wang, 2001). However while people getting more aware about health problematic and so new medical ways as acupuncture or homeopathy to cure are now very popular among us. But if the ways of cure have been well spread out, the notions of prevention, of precaution are still a non-well developed part in the government health policy.

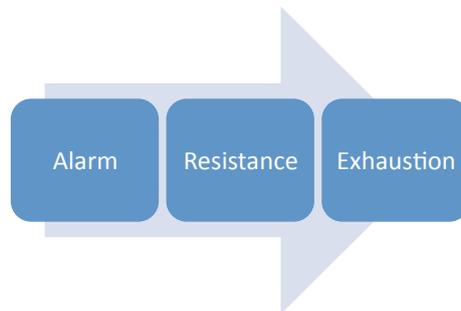

Figure 1 Three stage in the GAS model

This research will focus on the idea of prevention and take the awareness as a key issue. If there is a simple operation detection tool, so people can, without the help of a medical center, detect at home their diseases, and if such a detection tool is at low price, it could allow more frequent checks, so an early detection and early treatment can be done through it. This is preventive medicine, emphasizing both availability and real-time care, which facilitate the testing service. Now there is such thing as Point of care testing (POCT) that provides us a complete and easy way to auto-diagnostic such as people suffering diabetes, cholesterol use POCT.

1.4 Target users

Study is a significant stage in Asian culture, and the college period places a vital transforming point of life. The target user in this study is the Taiwanese youth in school. The choice is based on the reason below:

- 1.6-1 In the past five years a process of rejuvenation concerning the suicide rate has occurred. People younger and younger attempt suicide.
- 1.6-2 The young generation is the most receptive to new technologies, they literary live with them and large amount of youth in Taiwan edit blog or electronic agenda.
- 1.6-3 The young generation doesn't feel concern about mental and psychological problem because the young are associated with healthy, they don't feel or don't want to accept the real impact of mental aspects on their physiology.
- 1.6-4 We hope permit young generation to develop a sense of vigilance about the psychological aspect of health.

This generational medico-study's aim is to help them understand better their health conditions by underlining their stress and its reasons before it could rise at a high-pitch level. A self-diagnostic, the awareness of oneself stress condition can so

avoid a complicated medication.

2. Approach

2.1 A stress evaluation system of blog- OGENKI Diary

In 2006, a survey of the Minister of Education shows the average time for university student using computer is 22.45 hours a week. Today a large amount of teenagers have a very close relation with Internet and new technologies. Most of them daily write on their blogs, use digital agenda and other devices as Google calendar, etc...The OGENKI device links all these aspects; it appears as a huge hub of social Internet instruments. Through the analysis of daily information (blogs, Google calendar, and agenda) and series of three alternative daily questionnaires, the OGENKI service will estimate day by day the user's actual state of stress. OGENKI combines analysis of stress with a specific representation. The aim of OGENKI is to identify with a long-term record the situation and prevent the evolution of stress. It would also help teenagers to have a better comprehension of their stress's causes. The OGENKI device is also developed through a new approach of data representation.

2.2 Representational display-relative works

The reliability of HRV system is well proved; however its representation needs some simplification to be understood by the common user. Before, the HRV data was a privilege of doctors and specialists, new technologies permit now a real democratization of this knowledge. This comprehension needs to pass from several series of numbers to images or animations to succeed. Recently, huge efforts have been made to make HRV data more simple and clear. New codes of representation have been developed. The EmWave uses a simple code of colours to indicate to the user his actual state of stress. From green to red, these colours are easily understandable as any traffic lights. More recently, a French company called Symbiofi has developed medical PC games using HRV system. On the screen appear gauges with different colours symbolizing states of stress and cardiac activity. But even if the colour code is really important to make the user progress on his way to control stress, the real representation of stress is on the game itself. Each game has its own system, for example: attract wild beasts to a lake for drinking, the more they are symbolizes users stress control ability. In this study we emphasize the prevention from stress by procuring a more empathic interface, thus we use pictures, graphic and figures instead of numbers or light bar (Friendly, 2008).

Figure 2-4. Products and interface proposed by EmWave and Symbiofi

2.3 Representational display of OGENKI Diary

This study was initially based on the idea of general diagram using percentage to represent the level of stress, and for increasing the motivation of using to offer this new kind of representation of stress state on blog would make user's comprehension easier, and could be more interesting and interactive. As Hans Selye exposes it in 1936, distinctions have to be made between productive and unproductive stress. While too much stress diminishes people ability, a small amount of stressful events could bring positive reaction to people. Thus in this study we use the gap of 40 percent determines positive and negative stress position. Above this rate one the fish changes colour into black, then for each every 20 percent progression a new fish gets dark until the maximum of four black fishes in the small lake. The maximum of dark fishes is fixed at four; it will still remain a red fish for avoiding too serious influence of a complete series of dark fishes will discourage the user.

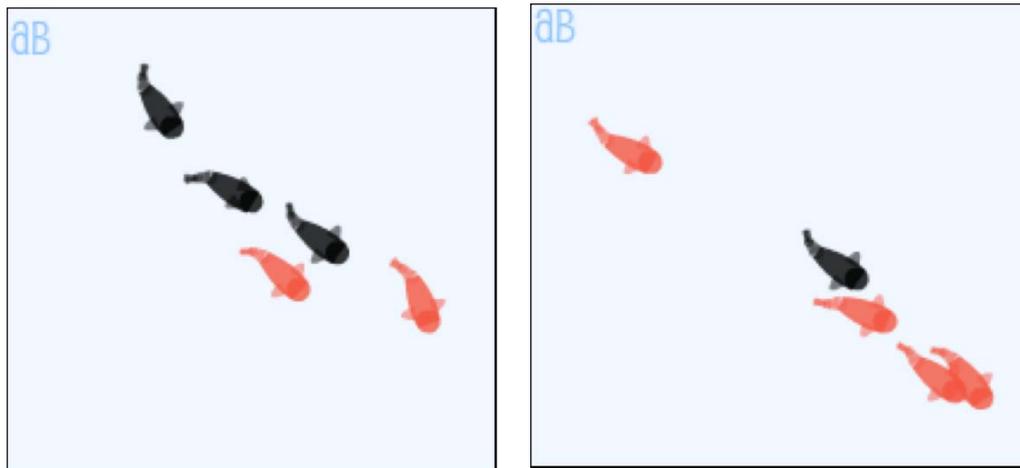

Figure 3. Representations of stress status and its evolution
(Left: High stress, Right: Low stress)

3. Pilot study

3.1 Tasks & procedure

The collect of data is day by day into one week timing. First stressful events are recorded by timing, localization, description and personal rating for building

long-term records on psychological state. Then, the user has to follow a rapid survey, a subjective evaluation, and submit it online. All data is kept on a private blog only visible by webmaster and him. The blog has a schedule, a publishing area, a questionnaire (Table 1) and a materialize stress level by representational display-goldfish shape. The participants are 7 university students are selected from the focus group result within the higher stress level. 3 male and 4 female participants have joined and participated to this study, their average age were 18.9 which are matched the ideal age to the target user group of this study.

Table 1. The five-point LIKERT scale “perceived stress scale” by Cohen and Williamson (1988)

1. In the last month, how often have you been upset because of something that happened unexpectedly?
2. In the last month, how often have you felt that you were unable to control the important things in your life?
3. In the last month, how often have you felt nervous and "stressed"?
4. In the last month, how often have you felt confident about your ability to handle your personal problems?
5. In the last month, how often have you felt that things were going your way?
6. In the last month, how often have you found that you could not cope with all the things that you had to do?
7. In the last month, how often have you been able to control irritations in your life?
8. In the last month, how often have you felt that you were on top of things?
9. In the last month, how often have you been angered because of things that were outside of your control?
10. In the last month, how often have you felt difficulties were piling up so high that you could not overcome them?

0=never 1=almost never 2= sometimes 3= fairly often 4= very often

3.2 Result of pilot study

Every participant has to record their daily stress event. By providing daily data, OGENKI can easily provide a detailed situation of stress (Fig.1). By using the five-point LIKERT scale “perceived stress scale” from Cohen and Williamson (1988, Fig.1), we know the stress level and more important, the stressors implications in the evolution of the user’s stress.

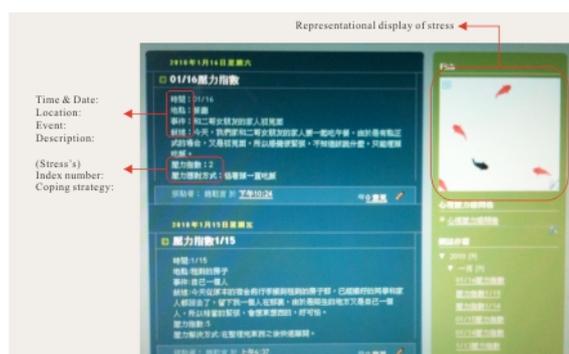

Figure 4. Personal entrance webpage

Depend on the task properties, the collective result could be divided into quantitative and qualitative part. The quantitative data could be seen as figure 4 that present each participant's stress status flow during a week. Some participants (2, 3, 5) have showed their consistence on these five components, and other participants (1, 4, 6, 7) could separate their stressor on their issues.

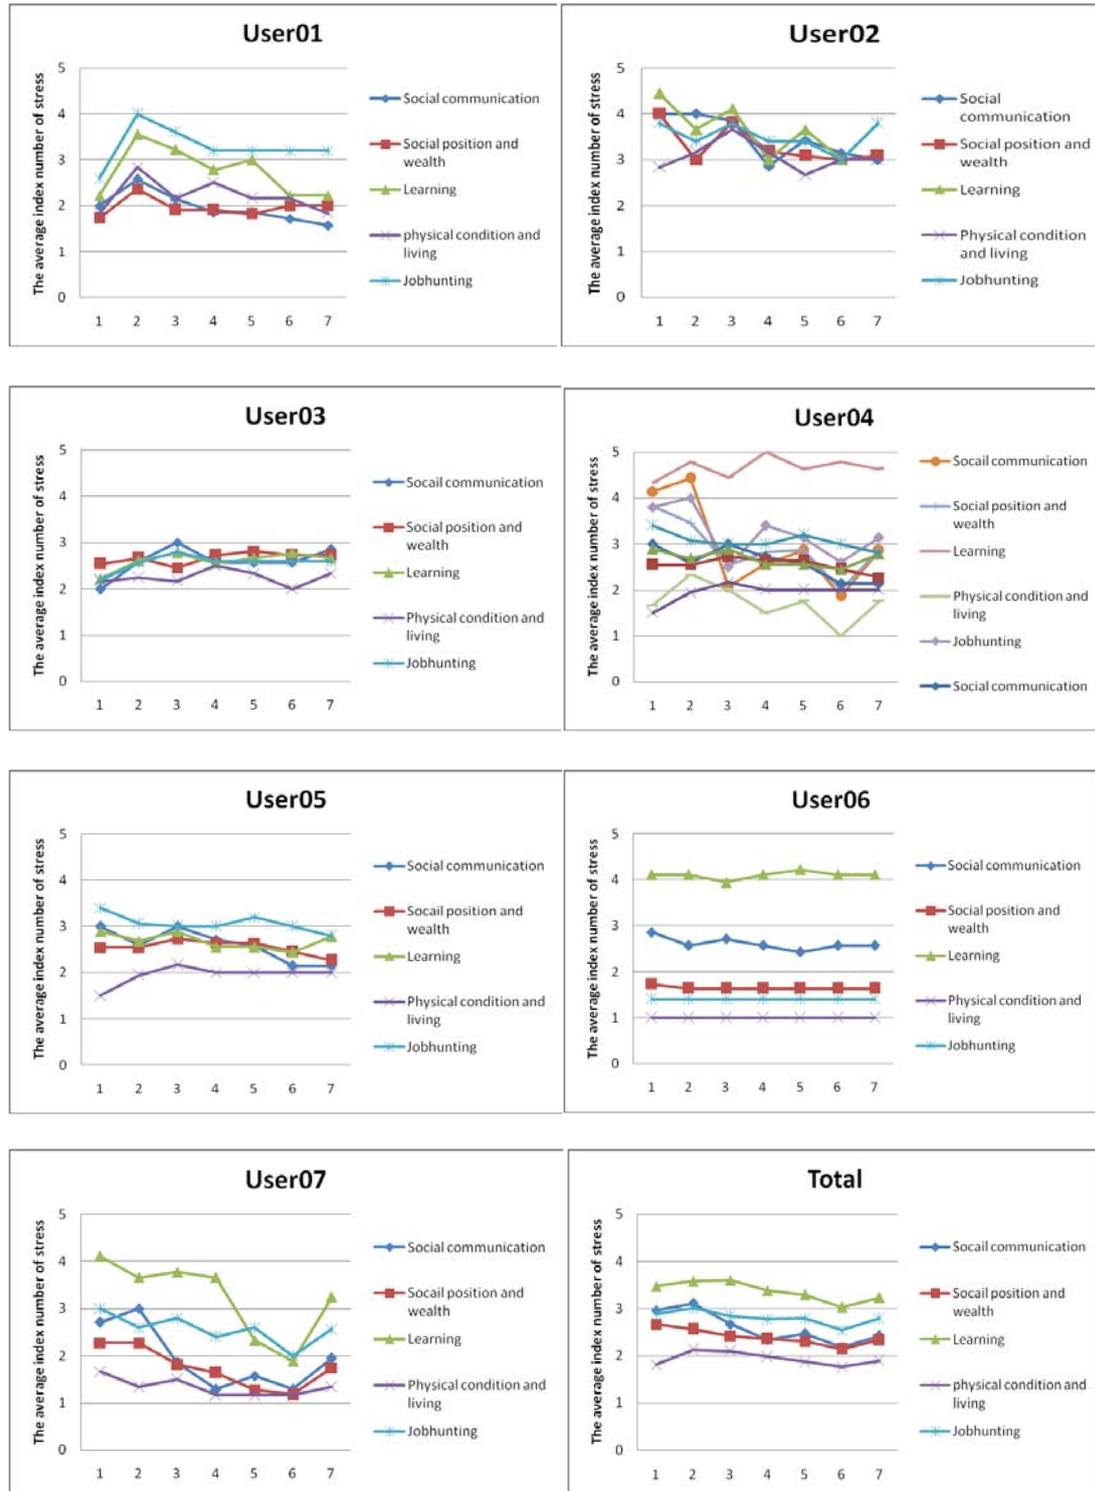

Figure 5. Stressor and stress level of participant.

Furthermore, the figure presents that most of the participants have the lowest stress level of physical condition and living (mean=1.93), indicate that those participants have health physical body and without too many stress dealing with their daily life. Studying seems to be the highest stress level (mean=3.39) of those participants. Actually during this period of their recording task, they were in the final exam period. Therefore, it might be the reason why the stress level concerning studies would be so high, and it could be the bias of the field study.

Statistic analysis directs to the average of each principle components of stress as table 2. It presents the same result as graphics' indication. Learning stress was the highest index of this process, follow the strength were job propection, social communication, social position, wealth, physical condition and living. After the repeats measure ANOVA analysis, we found the different components had significant effect ($p < .001$). It also presented in the pair wise comparisons (table 3)

Surprisingly, writing blog and questionnaire did not cause extra pressure to the participants as we estimated. On the contrary, some participants showed their willingness to keep writing the blog after the experiment was completed. The average time for them to finish writing the blog each day is 22.85 minutes, and the activities is expected to last for more than one month. As a result, most participants felt positive to deal with stress in this experiment, and thought it brought them self-achievement and self-confidence.

Table 2. Descriptive Statistic

	Mean	Std. Deviation	N
Social communication stress	2.5857	.70381	50
Social position and wealth stress	2.4009	.66105	50
Leaning stress	3.3915	.85087	50
Physical condition and living stress	1.9339	.67553	50
Jobhunting stress	2.7973	.73237	50

Based on estimated marginal means

* The mean difference is significant at the .05 level.

Adjustment for multiple comparisons:

Least Significant Difference (equivalent to no adjustments).

4. Further discussion

In this pilot study, many participants are appealed by the representational stress levelling which is a small pound at the right of the daily event record frame set up, with five goldfishes inside. With different level of stress situation the fishes would change into black one by one. (Fig.3) They think this new representational display do help them understand better their stress state in a funny way without increasing extra stress, however the participants think the goldfishes is cute but maybe not the perfect representational image to stress. Also there are others representational ways different from using percentages or graphics.

The idea developed by the Berlin school of *Gestalt* that items is more

significant that number because of the perceptions' holistic is primordial. Koffka in the "Principles of Gestalt psychology," adopts and adheres to two important concepts; mind and matter field (psychophysical field) and the same type of (isomorphism). The Observers perceived the concept of reality as a psychological field (psychophysical field), the perceived reality will created the idea of physical field (phy-sical field). The organism is a self-psychological body with activity behaviors stated into a dynamic interaction within its geographical environment field. The theory aimed that when individuals are face of situations where they find a stimulating message, they unconsciously organized their behavior in order to access to a meaningful perceptual experience (Chang, 2003). Thus graphics would not only occur user's empathic but would be more significant and meaningful.

4.1 Questionnaire and focus group

Semantic differential is a type of a rating scale developed by Charles Egeron Osgood (1957) designed to measure the connotative meaning between of objects or concepts. To understand the process from relaxation to stress definitions, in order to underling each step of the verbal conceptualization of these two physical states, we use this method on a questionnaire.

For realizing more about the stress image of Asian youth, the focus group is hold with seven participants with at list five years design execution experience who try to focus on discovering the stress image and more information through making a questionnaire. Most of the questions are opened question, letting participants elaborate their imagination for getting more idea. Besides using two questions for guiding the subjects start considerate their general living stress state, four questions are using the semantic differential methods and the last three questions are based on Gestalt questionnaire design (Koffka, 1935) to give out a representation of subjects. (Table 4)

Table 4 Questionnaire of stress image

1. How is your general stress state? (From 1 to 5. 1 is almost none and 5 is very serious.)
2. According to a research, most stress of youth are come from these five stressor, consider yourself and choose the most serious two.
<input type="checkbox"/> Social communication
<input type="checkbox"/> Social position and wealth
<input type="checkbox"/> Leaning
<input type="checkbox"/> Physical condition and living
<input type="checkbox"/> Jobhunting
3. Please name five adjectives which would bring the stress image to you.

4. Please name five adjectives which would bring the relax image to you.
5. What color would remind you the stress image? Please give two examples.
6. What color would remind you the relax image? Please give two examples.
7. What kind of “item” could represent your stress? Please give two examples. (The “item” could be a creature, a picture or a scene.)
8. Continue question 8, with your stress is accumulated how would the “item” change? (For the “item” itself could be in quantitative or quality way, or maybe the relation with background, or the whole atmosphere of scene.)
9. If there is a game could show the situation of your stress, please describe the tableau while the stress is accumulating.

4.2 Result

Totally 47 questionnaires are gathered but only 42 are accepted. Among the accepted questionnaire, 19 male and 23 female participants have joined this study, their average age are 20.1 years old. In the analysis, the adjectives which been gathered from question 1 and 2 are separated into two parts: the image of stress or relaxing itself and the affection from stress or relaxing. The first part is separated again to three parts: appearance, quantitative and quality, and motion, for selecting the answers of question 7 to building the actual picture.

Two most serious stress factors among the participants are Learning and Social communication and the average index number of living stress level is 3.7, moreover, 8 of 42 participants consider their general living stress level is 5 which is the highest level among the index. With separating the gathering of stress and relaxation, the gathering adjective still show the clearly contrary to each others in participants’ answer and the same situation is happened at the question of colour. There are 19 images of whole space atmosphere and 23 images of single item. With stress accumulating, these 19 inside there are 3 concerning surroundings changes and 16 occurring in change of ambiance. The detail result of the questionnaire is below:

Q. 1	Image of stress itself	Outside appearance: complex, blurred, dark, obscure, gloomy, profound Nature: heavy, oppressing, depressing Action: repeated, accumulated, slow, continuous
	Influence of stress on oneself	irritability, anxiety, depression, grief, silent, tired, confusing, passive, powerless, unbearable, collapse, melancholy

Q. 2	Image of relaxation itself	Outside appearance: bright, simple, gentle, colorful, cute, funny, natural, smiling Nature: lithe, gentle, sweet, soft, fragrant Action: lightning-fast, mobile, happy, jumping
	Influence of relaxation on oneself	pleasant, convivial, comfortable, relaxed, expectations, comfortable, refreshing
Q. 3		black, dark blue, grey, dark green, deep purple, flashing red,
Q. 4		white, green, sky blue, pink, yellow
Q.5	Representative	spring, tangled lines, balloons, blowfish, cactus
	Picture	prison, slaughterhouses, volcano, weather, man carrying heavy items on his back
Q. 6	Quantitative change	12
	Qualitative change	11
	Changes with surroundings	3
	Complete changes of ambiance	16
Q. 7	Example1 (Representative item)	with the pressure increases-spring is compressed
	Example 2	with the pressure increases-more and more tangled line band together
	Example 3	with the pressure increases-balloon become bigger and colors continuously change, finally he ended up blasting
	Example 4	with the pressure increases-the blowfish becomes bigger, its thorns longer and more dense, it stars to move quickly
	Example 5	with the pressure increases-the cactus becomes bigger along with its thorns become sharp
	Example 1(Picture)	with the pressure increases-space is more and more closed, windows are more and more small, the light is darkling
	Example 2	with the pressure increases-space is more and more dirty, and more and more messy articles are inside
	Example 3	with the pressure increases-volcano begins to smoke and sky starts to getting colors, it lasts with an outbreak
	Example 4	with the pressure increases-in the sunny sky appear more and more clouds, it ends with storm and thunder

	Example 5	with the pressure increases-Things on the back of the man are too many, the lman curved his body to ground and finaly fell under his burden
--	-----------	---

5. Conclusion

For trying to increase the stress’s awareness of Asian youth, this research used the OGENKI Diary on a pilot study. The result shows that six participants out of seven had significantly raise their stress awareness abilities and give positive feedback on the effectiveness of the long-term experiment. The lowest and highest stress level are physical condition and living (mean=1.93), and learning (mean=3.39). After the repeats measure ANOVA analysis, we found comparing learning and others, the different components had significant effect ($p < .001$). Besides, Participants also commented that by incorporating interesting and diversity in both functionality and interface design could help to draw user’s attention and promote longer interaction. For the reason above, the focus group and the questionnaire are made especially for understanding better on both stress image and the representational display.

The result shows comparing to the gauges which used on western stress game such as the general number bar or light bar, and the game pictures of African nature scene or the deep undersea scene; the Asian youth more consider stress image is more closed to personal and more concrete. They used the adjectives such as *complex, dark, heavy, slow, repeating, and accumulate*. The darker color such as black, dark gray, deep blue or purple would remind the stress image to the participants and in the opposite, the brighter color such as white, light blue and vitamin colors would refer to relaxing. Because of the accumulating procedure of stress, 38 of 42 questionnaire would connect the stress image is a gradual changing process. Through the adjectives of stress image, ten descriptions of the stress accumulating models are built. Furthermore, the word, stress, carries out more message of negative than positive. To considerate long-term using and extra stress causing, “OGENKI” is a better choice because it has neuter characteristic.

This study provides the data to support the OGENKI diary successfully raises the awareness level of youth people, and for the future plan, the four out of ten models, the descript pictures of stress image which are gathered in the above, will be built for using in the experiment of testing and through the biofeedback to get the real effective level. As a sequel or a game affiliated to OGENKI, we will try to develop a relaxing game which will be control by heart bit through the HRV detector.

The Construction and Implementation of Energy and Power innovative curriculum integrated with blocks in Life Technology Courses

David W. S. Tai¹ Wang, Yu-Te² Chen, Yuan-Tai³ Yang, Pao Chin⁴

Abstract

The purpose of this study is to construct Energy and Power innovative curriculum with blocks in Life Technology Courses and understand the student's satisfaction with the innovative curriculum after the implementation. In this study, there are three innovative courses: the handling race of the development of wind power unit, solar car racing and air rail car racing. In 2007 and 2008, the energy and power innovative science camp was held for junior and senior high school students in Taichung of Taiwan, with a total of 214 students to participate in. The activities involved three innovative curricula, and through competitions, students were forced to think creatively with limited blocks in order to meet the requirements of the contest. After the implementation of curricula, a survey of students' satisfaction was conducted. Analyzing the quantitative and qualitative data, there are four findings as follows:

1. Energy and Power innovative curriculum allows students to have access to energy and power-related knowledge, and students find the curriculum design is degree of moderate difficulty.
2. After the implementation of innovative programs in Energy and Power innovative curriculum, students are willing to practice and promote the

importance of energy conservation in daily life.

3. Energy and Power innovative curriculum in Life Technology Courses, which is integrated with blocks and conducted through competition, can increase students motivation to learn.
4. Students are highly identified with energy and power innovative courses, and expresses their willingness to come back to participate in related programs.

Key Words: Energy and Power innovative curriculum, Life Technology, block

Introduction

Creativity means an individual's ability to integrate sensitivity, fluency, adaptability, originality and refinement in a supportive environment through a series of thinking process in order to derive a different perspective that gives a new meaning to the intended object, the outcome needs to satisfy not only the individual but also others (Chen Long-An, 1995). In the creativity education portal site run by the Ministry of Education, it states the general idea of creativity entails ingenuity, innovative mechanism and entrepreneurship, concrete results are seen in the creative performances by the public in various fields. Innovation proficiency is a key index in the social development of a knowledge-based economy; creativity is the educational index in measuring learning achievements. Creativity is the intellectual foundation of innovation while innovation is actual practice of creativity. Creativity and innovation is a reflection to one another, complementing each other. The birth of originality is based on the exhibition of creativity; achievement of originality is determined by the outcome of innovation.

In September 2008, EU had designated 2009 the year of "originality and innovation in Europe", EU's executive commission even pointed out that education is the best way to enhance originality and innovation (Fan Rong-Jing, 2009). Wu Jing-Ji (2009) believes creativity is a new form of citizen's right thus every citizen is entitled to it, after you are given such right, you become responsible to contribute to society, and the overall quality of innovation in the society is enhanced resulting in a virtuous cycle. Ugur (2004) considered creativity is a requirement for individual to solve problem effectively. People with creativity are able to make contribution to the fields of science, technology and arts in society and they also act as leaders in an interactive world. Plucker et al. (2004) also believed creativity helps leadership in workplace,

professionalism in job and healthy development of people in dealing with daily activities and emotions. Murdock (2003) also proved that creativity plays an important role in student's ability to problem solving, creative thinking and emotion management.

In order to cultivate creativity among students and to integrate creativity with the 9-year curriculum education, Ministry of Education had introduced "white paper on creativity education" in January 2002, collecting the data and studying the performance with respect to the development of creativity education around the world and the various stages of pre-school, elementary school, high school, college and adult education; in other words, the objective of the White Paper on creativity education is to realize the vision of a "Republic of Creativity" that entails the following 5 aspects: (1) cultivate an attitude of lifetime learning and willingness to create; (2) provide a learning environment that is energetic, happy and respects diversity; (3) accumulate rich, extensive and friendly knowledge; (4) develop industries that appreciate intellectual properties and are knowledge intensive; (5) establish a culture of diversity, innovative and enthusiastic to sharing. (Ministry of Education, 2002)

International Technology Education Association (ITEA) defines technology as follow: technology is people taking action in innovation, including general knowledge, content of technology and the process of systematic development; solves a variety of problems and extends people's capacity; domestic development of technology education in Taiwan, from handicraft, industrialization all the way to the day-to-day technology of today are mostly referred to USA. Nevertheless, in the case of current 9-year curriculum education and life technology course at high school, it is still based on the transmission of general knowledge and the development of problem solving skills among students; in the time of following the American approach to build up the problem solving skills of students, we also need to ask have we considered the issue

that there is not enough “innovation and design” content being incorporated in life technology course, the fact is the essence behind technology is the extension of innovation. In light of the recent trend of emphasis on “innovative design” in global technology industry, how to direct high school students towards innovative thinking in life technology course has become a crucial part in the development of life technology course for high school education. “Life technology” course is intended to build up student’s ability in adapting to the requirements in a society of technology, in addition to teaching the knowledge related to technology, the course also provides motivation and environment to stimulate student’s creativity in order to develop their proficiency in innovative thinking and problem solving skills while preparing them with better adaptability in facing an ever-changing society. In response to the implementation of new course, as a teacher of life technology, in addition to developing student’s skills in technology, a teacher should also take student’s ability in innovative thinking and problem solving into consideration.

Blocks are meant to be taken apart, adjusted and reassembled. Although the components are made of plastic products, they still meet the eco-friendly core values of 3 R’s, namely Reduce, Recycle and Reuse. Blocks offer many opportunities for students to express and practice concepts such as rhythm, graphics and design. Through the use of blocks, users are able to repeat past experiences. Using blocks as materials, students not only have easy access to the materials but also save time in purchasing components and assembly; during time of teaching the course of life technology, more time could be dedicated for exploring the subject instead of wasting time in testing, adjusting and making unnecessary mistakes.

Therefore, this research is to based on the current course of life technology, integrate the use of building blocks in teaching method and develop a series of creativity course on energy and power. Science camps on energy and power are held

on holidays to implement course materials and the objective is boost student's interest in leaning technology and motivates students to take an active approach to learning that would ultimately induce creative thinking from students towards life technology. The expectations of a series of "hands-on experience" and "learning through play" are enhanced creativity, more active in learning, development of team work and problem solving skills while meeting the requirements set by the Ministry of Education on the general high school life technology course guidelines emphasizing student's proficiency in applying the knowledge of life technology, creative thinking and problem solving.

Literature Review

1. Creativity course of life technology

"Life technology" course is intended to build up student's ability in adapting to the requirements in a society of technology, in addition to teaching the knowledge related to technology, the course provides motivation and environment to stimulate student's creativity in order to develop their proficiency in innovative thinking and problem solving skills while preparing them with better adaptability in the face of an ever-changing society. In response to the implementation of new course, as a teacher of life technology, in addition to developing student's skills in technology, a teacher should also take student's ability in innovative thinking and problem solving into consideration. Ministry of Education (2008) believes learning science allows us to learn various explorative activities: abilities in observing, questioning, planning, experimenting, consolidating, evaluating as well as criticizing and creating. Special activities such as testing or field observation to conduct learning process make us acquire the ability of problem solving in addition to getting to know the importance of details, patience and being practical during exploration.

Curriculum guidelines set by the Ministry of Education (2008) for high school life technology course pointing out the objectives of life technology course: (1) Direct students to understand the influence of technology on individual, society, environment and culture. (2) Develop student's proficiency in applying technical knowledge, creative thinking and problem solving skills. (3) Cultivate proper view on technology, attitude and work habits among students while stimulating their interest in the research and development of scientific studies and exploring career options.

The two credits in "Life Technology" course is a requirement in Taiwan's high schools. The required core course "Technology and Life" explores the technical aspects of everyday life, strengthens student's basic understanding of technology. Adding "Innovative design and production" to the core course emphasizes methods of innovative design, principle and application in Project-Based Learning.

It could be seen from the documentations above, creativity education is an important part of teaching life technology, teachers should be able to design appropriate course curriculum on creativity, properly apply various creative teaching method in classes, plus using Project-Based Learning that allows hands-on experience for students to enhance their ability in creative thinking and problem solving skills.

2. Researches on integrating blocks with teaching

Blocks are part of integral teaching tools for students as they present great challenges of infinite combinations to students regardless how they are arranged. Using blocks as materials, students not only have easy access but also save time in purchasing components and assembly; during time of implementing their own designs, more time could be dedicated for exploring the subject instead of wasting time in testing, adjusting and making unnecessary mistakes.

According to the studies of Wolfgang (2003), those who like to construct

complicated objects with blocks during pre-school stage are more likely to achieve better performance in mathematic in high school; therefore the use of building blocks is the best tool to enhance a child's thinking and mathematic skills. Hong Qiu-Ping (2005) had incorporated LEGO in teaching through group activities at senior grade of elementary school level, the findings were students using teamwork approach recorded significant improvement in creativity. Lin Yi-Nong (2006) used pentomino lessons to conduct study on students of elementary schools and found out student's visual perception to space could be enhanced through lessons of geometrical blocks. Yang Xiu-Hui (2007) had discovered students scored improvements in the following areas, willingness to participate teamwork, better understanding of self, self-expression, communicating and sharing, appreciation, performance and innovation, attention focus, higher level of interest, active exploration, self-confidence, independent thinking and problem solving after taking parts in sessions playing block games. Jorgen (2007) also learned in respective studies that blocks are able to strengthen student's proficiency in solving problem concerning logics.

It could be seen from the above documentation that blocks are highly suitable to be part of the teaching activities of creativity education, in a time of reduced hours in life technology course in high schools but more emphasis is placed on innovative design, blocks become the best choice in creativity education under time constraints.

3. Researches on competitive style teaching method

In a time that schools at all levels are promoting creativity education, various forms of "technology competitions" have become the best way to put lessons into practice. It is the hope of each entity to verify simple scientific theories through problem solving in various competitions as taking an energetic and interesting approach would strengthen student's teamwork ability, stimulate their creativity thus

achieving the objective of creativity education. Yi Xiao-Wen (2008) integrated competitions of creative science theme as part of official curriculum, studies had shown that under the course designing, students would actively explore problems in addition to conducting group discussion to learn more about the solutions of other classmates then achieve common goal through teamwork. Having competitions on creative designs is to stimulate student's creativity as the process of creative design requires students to seek optimal solution to a problem in a regulated environment, and they would have to produce a real product. Creative design competitions targeting high school students are not like the standard commercial competitions of similar nature as stimulation of creative structure, and learning through process are actually the most important and valuable parts. (Zhang Mei-Zhen, Wang Yu-Hong, Huang Jun-Fu, 2008). During the course of the technology competitions, teachers have a easier time in observing student's performance in the context of competitions, with appropriate yet diverse assessment measures, it is able to measure the results of learning activities and student's ability in applying what they have learned. According to the interviews and surveys conducted after the technology competitions, it was discovered that the coaches who lead the teams and the students who participate in the events are all have positive feedback on technology competitions being able to enhance creativity, boot interest in leaning life technology, promote teamwork spirit, apply scientific theories and job skills (Lin Shi-Hua, 2005; Zhang Jia-Hui, Huang Qian-Fang, 2005; Wang Bao-Ti, Peng Ying-Jiang, 2005).

In conclusion of the above literature on competitive activities, problem solving is able to enhance student's teamwork capacity and stimulate their creativity while boosting their interest in learning.

Method

1. Research framework

This research is to incorporate building blocks in the teaching of life technology classes, develop junior high school, high school level creative courses on energy and power, and to conduct science camps utilizing such courses during holidays in order to understand student's satisfaction level about the use of blocks as part of life technology courses on energy and power, research framework as shown in Fig 3-1.

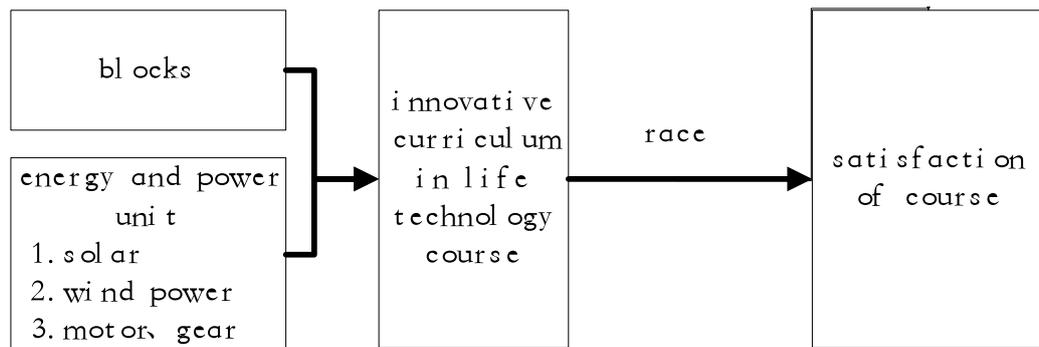

Fig 3-1 Research framework

2. Samples

This research targets the subjects attended the two occasions of energy and power science camps held in 2007 for junior and high school students, the number of junior high school students was 66 (solar car racing), the number of high school students was 50 (the handling race of the development of wind power unit), 3 occasions of energy and power science camp was held in 2008, total number of junior high school students who participated was 98 (air rail car racing), 3 students from each school were allowed at each occasion, students came from junior high schools and high schools in Taichung city of Taiwan.

3. Research tools

The main objective of this research is to understand the satisfaction level towards incorporating the use of blocks in life technology course on energy and power, and to

be used as reference for developing the foundation of course structure and implementing the teachings of life technology courses. Therefore, the research had prepared questionnaire studying satisfaction level, the questionnaire was divided into dimensions described as practical, implementation, motivation and willingness, Likert 5 point scale was used, highly agree was 5 points while highly disagree was 1 points. After the questionnaire was completed, it was reviewed and revised with the help from two teachers of life technology courses to ensure the effectiveness of the questionnaire.

4. Data analysis

An independent sample t-test was used in this research, test value is 3 which is then used in analyzing each question and compare with 3 to determine whether it has reached significant level. The significant level was $\alpha=0.05$.

Results and discussion

1. Student satisfaction level survey

Creativity courses of this research were implemented through conducting science camp on the topics of energy and power, after the course was completed each time, anonymous survey of student satisfaction level was conducted to obtain one-sample of satisfaction level, t-test outcome are as shown in Table 4-1, 4-2 and 4-3, the following 4 results are derived from data:

(1) Practical dimension of creativity course satisfaction level survey reached significant level

According to Table 4-1, 4-2 and 4-3, it could be seen that questions in the practical section had reached significant level, this means students who took parts agree creativity courses give them access to knowledge on energy and power, plus students

felt that difficulty level of creativity course content is appropriate, furthermore, students who took part agree creativity courses are very helpful for them.

(2) Implementation dimension of creativity course satisfaction level survey reached significant level

According to Table 4-1 and 4-2, it could be seen that questions in the implementation section of survey had reached significant level, which means students took part in this research are willing to implement energy conservation practice, and to promote the importance of conserving energy to friends and families.

(3) Motivation dimension of creativity course satisfaction level survey reached significant level

From Table 4-1, 4-2 and 4-3, it could be seen that only “when I saw there are so many parts and I don’t know what to do?” of the motivation section did not reach significant level ($M=3$), the rest of the questions had all reached significant level. As for the reason causing “when I saw there are so many parts and I don’t know what to do?” not reaching significant level, it was probably due to the fact that student did not know how to respond when first being exposed to creativity course related to blocks, of which, sky rail car race scored the lowest points and this means students have the highest level of uncertainty when facing components, further exploration to the cause would lead to the discovery that this course are more challenging by nature plus the content was never been seen by students since junior high school level. Furthermore, other questions had all reached significant level, which means students were highly motivated to learn because blocks had been used in teaching activities in the form of competitions.

(4) Willingness dimension of creativity course satisfaction level survey reached significant level

From Table 4-1, 4-2 and 4-3, it could be seen that willingness in each question had reached significant level, which means students agree this event was highly helpful and they are willing to take parts in similar courses again in the future.

Table 4-1 Satisfaction level of the course on the handling race of the development of wind power unit

Dimension	Category	M	SD	T
practical	1. I feel this course gives me knowledge on the technology of energy (i.e. solar power, energy crisis, global warming)	4.40	.571	17.324***

2. Qualitative data from students

Questionnaire of this research includes open ended questions such as “suggestions of this creativity course” in order to understand student’s other comments on creativity course, and after questionnaires being collected, 35 students answer this question, the comments from students were divided into groups as shown in Table 4-4:

Table 4-4 Feedbacks from students

Category	Suggestion	N
Sense of identification with the course	very entertaining	11
	It is not a bad idea having students from different schools to build teamwork spirit in a short time.	1
	It's like creating an object “together”.	

	I hope there would be more events like this in the future.	2
Suggestion to the implementation of competition	Second rounds might be necessary during competition	3
	Final product is in vertical style but there is no award for creativity	1
	Issue certification	2
	Wish time would be longer	8
	Wish there could be more components	3
	There is room of improvement for the location of the competition	4
Suggestion to creativity course	The question is a little too difficult	1
	No example available	2
	Wish there would be some pointers	1
	Explanation is not clear enough, have no idea of the overall concept	2
	too much limitation	1

From the quantified and qualitative data as in Table 4-4, it could be seen that students were highly identified with this event, also Table 4-4 is able to understand the questions aroused during the course of competition and actual practice of creativity class, content of creativity course and game regulations could be modified according to the comments from students in order to make this creativity course even better.

Conclusion and recommendations

1. Conclusion

Syh-Jong Jang (2009) had discovered teaching methods that incorporating technology in the design of practical activities would induce creativity from students, objective scientific concept is nurtured in the minds of students. Many scholars have also learned that the use of blocks as part of course is able to boost student's willingness in participating teamwork activities, help them better understand who they are and develop their potential in addition to enhanced ability in expression,

communicating and sharing, appreciation, innovation, active exploration, independent thinking and problem solving skills (Wolfgang et al, 2003; Hong Qiu-Ping, 2005; Jorgen, 2007; Lin Yi-Nong, 2006; Yang Xiu-Hui et al, 2007). The research of Zhu Yi-Xian and Cai Sheng-An (2008) discovered school children were more interested in competitive courses as well as the questions should offer room for imagination while appropriate limitation is set to force participants to think, this would produce positive effect on student's ability in expressing creativity in technology and their continuous growth. Therefore, this research had studied the development of 3 creativity courses that incorporate the use of blocks as part of curriculum in energy and driving force classes, the content was implemented in the form of competitions during science education camp. Students were given limited number of blocks and were forced to think creatively on the theme of the competition in order to fulfill competition's objective. This research has reached the following 4 conclusions after analyzing the quantitative and qualitative data obtained from questionnaires.

- (1) Energy and Power innovative curriculum allows students to have access to energy and power-related knowledge, and students find the curriculum design is degree of moderate difficulty.
- (2) After the implementation of innovative programs in Energy and Power innovative curriculum, students are willing to practice and promote the importance of energy conservation in daily life.
- (3) Energy and Power innovative curriculum in Life Technology Courses, which is integrated with blocks and conducted through competition, can increase students motivation to learn.
- (4) Students are highly identified with energy and power innovative courses, and expresses their willingness to come back to participate in related programs.

2. Recommendations

Einstein once stated “imagination is more important than knowledge”. 1933 Nobel Physics prize winner Schrödinger believed “the importance of creativity is not to discover what people have seen before but rather to see what other don’t see out of everyday phenomenon”. Many countries think creativity is the critical point of global competitiveness, executive commission of EU event pointed out that education is the best way to enhance originality and innovation; therefore, “how to enhance student’s creativity during the course of teaching?” has become an important question to teachers. Professor Zhang Shi-Zhong of Taipei Education University thinks the 21st century will be the century of games (the century of learning from games), teachers should be able to skillfully use the diverse range of materials available in conjunction with appropriate teaching methods so students get to “hands-on experience”, “learning through play” to enhance creativity and learn more about active learning, teamwork, problem solving, interpersonal relations, stress management, expressing through language, etc.

Elementary science teachers' motivation toward professional development: the role of gender, academic background and teaching experience

Chao-Shen Cheng & Ying-Tien Wu

*Department of Science Application and Dissemination, National Taichung University,
Taiwan*

kplove3306@gmail.com; ytwu@mail.ntcu.edu.tw

Abstract

In the last decade, teacher educators have paid increasingly attention to teachers' professional development, and have proposed the idea, "teachers as learners". From the aforementioned perspective, science teachers' motivation toward professional development should be one of the important issues for educators and researchers in science education. Therefore, this study aimed to develop a six point Likert-type quantitative instrument for assessing elementary science teachers' motivation toward professional development. By using the instrument developed in this study, 407 Taiwanese elementary science teachers' motivation toward professional development was assessed. The results showed that the instrument was deemed to be sufficiently reliable for assessing science teachers' motivation toward professional development. In this study, the teachers attained highest scores on the "cognitive interest" scale (mean=5.21), followed by the "educational service" scale (mean=4.82), the "social contact" scale (mean=4.71), the "external expectation" scale (mean=4.34), the "professional advancement" scale (mean=4.24), and the "social stimulation" scale (mean=4.23). It was found that the male and the female teachers tended to possess similar motivation toward professional development. However, compared with their counterparts, the teachers with science majors tended to show significantly higher motivation toward professional development in "professional advancement" and "social contact" ($p < 0.05$). Moreover, the teachers having more science teaching experience also possess significantly higher motivation toward professional development in "professional advancement" and "educational service" ($p < 0.05$). The findings of this study may provide science teacher educators some insights into how to improve elementary science teachers' willingness to participate in professional development.

Keywords: elementary science teacher, professional development, motivation

Introduction

In the current reforms in science education, new perspectives in science teaching and learning have been developed. Consequently, the goals of science education have been re-defined. In reforms in science education, teachers are recognized to play a critical role in science education reforms (AAAS, 1989; NRC, 1996). To achieve the new goals of science education, science teachers may have to change or modify their views and beliefs about science teaching as well as their teaching practices. As a result, teachers' professional development has been regarded as one of the most influential factors for the successful implementation of science education reforms (Driel et al., 2001).

“Motivation” refers to the process whereby goal-directed activity is instigated and sustained (Schunk, Pintrich & Meece, 2008). For a long time, the role of students' motivation in their learning has always been one of the important issues for many educators and researchers (e.g., Pintrich, 2004; Coleman, Galaczi, & Astruc, 2007). In particular, it has been revealed that motivation has a reciprocal relationship with learning and performance (Pintrich, 2003; Schunk, Pintrich & Meece, 2008). In other words, motivation influences learning and performance, while, on the other hand, what and how well learners learn also influences their motivation.

In the last decade, teacher educators have paid increasingly attention to teachers' professional development. Loughran (2007) has proposed that teachers should view themselves as learners in their professional development. As students' motivation towards learning has been recognized to play an important role in learning (e.g., Pintrich, 2004; Coleman, Galaczi, & Astruc, 2007), science teachers motivation should be crucial to the success of their professional development. However, still not many studies have addressed the aforementioned issue. Therefore, this study aimed to investigate elementary science teachers' motivation towards professional development.

By gathering questionnaire responses from 407 elementary school teachers in Taiwan, this study addressed the following questions:

1. What motivation towards professional development do the elementary science teachers reveal?
2. Do the teachers with different backgrounds (such as gender, academic levels, and academic backgrounds) show any significant difference in their motivation toward professional development?

Methodology

Sample

The participants of this study were 407 elementary science teachers from elementary schools in the middle part of Taiwan. Among these teachers, 183 (45%) were male and the remaining 224 (55%) were female. About three quarters of them (296 teachers, 73%) had undergraduate degrees, while others (111 teachers, 27%) owned graduate degrees. These teachers also had different teaching experience. 217 (53%) teachers had less than 5 years science teaching experiences, 119 (29%) had 5-10 years science teaching experiences, and 71 (18%) more than 10 years science teaching experiences. Besides, 262 teachers had science –related academic backgrounds, while the others (145 teachers) were with non-science majors.

Instrument

To explore elementary science teachers' motivation toward professional development, the Educational Participation Scale (EPS) developed by Boshier (1991) were modified in this study. The Educational Participation Scale (EPS) developed by Boshier (1991) has a seven factor structure for motivation: cognitive interest in a particular subject, communication improvement, social contact, educational preparation, professional advancement, family togetherness, and social stimulation. In this study, the Motivation toward Professional Development Survey (MPD) classifies the features of science teachers' motivation toward professional development into the following six factors: Cognitive interest, Professional advancement, Social stimulation, External expectations, Educational service, and Social contact. Six elementary science teachers were selected to clarify the wording of each item. The initial pool of items in the survey included a total of 36 items, which were presented using a six-point Likert scale (ranging from 1, "strongly disagree" to 6, "strongly agree").

The details of the six scales are as follows:

1. *Cognitive interest (CI)*: Science teachers who score highly on this scale participate in professional development for their own interest. That is, they care about the inherent joy of professional development that impels their participation. A sample item of this scale is "I learn for the joy of it while participating in professional development".
2. *Professional advancement (PA)*: Science teachers who score highly on this scale participate in professional development mainly for the purpose of maintaining their current job or getting a new job. A sample item of this scale is "I participate in professional development for getting a better job".
3. *Social stimulation (SS)*: Science teachers who score highly on this scale are usually lonely or bored in regular life or teaching and they participate in

professional development to meet others and to grapple with the problems in their social life. A sample item of this scale is “I participate in professional development to take a break from my routine”.

4. *External expectations* (EE): Science teachers who score highly on this scale participate in professional development because of the expectations from someone at work. A sample item of this scale is “I participate in professional development due to colleagues’ encouragement”.
5. *Educational service* (ES): Science teachers who score highly on this scale are committed to "doing good" in education. That is, they think professional development helps them do good work in science education. A sample item of this scale is “I participate in professional development to help me acquire better instructional methods for my students”.
6. *Social contact* (SC): Science teachers who score highly on this scale participate in professional development because of the joy of interacting with others. A sample item of this scale is “I participate in professional development to make more friends with the same interest”.

Major findings

Factor analysis

In this study, exploratory factor analysis was used to clarify the structure of the elementary science teachers’ motivation toward professional development. The extraction method was conducted by principle component analysis, and the rotation method was varimax with Kaiser normalization. The factor analysis revealed that the teachers’ responses on the items of the questionnaire were grouped into six factors, which were: “Cognitive interest”, “Professional advancement”, “Social stimulation”, “External expectation”, “Educational service” and “Social contact”, and they accounted for 75.03% of variance. The eigenvalues of the six factors from principle component analysis were larger than one. An item was retained only when it loaded greater than 0.50 on the relevant factor and less than 0.50 on the non-relevant factor. Thus the initial 38 items were reduced to 26 items, and there were respectively 6, 3, 5, 4, 4, and 4 items in these six scales. The factor loadings for retained items are presented in Table 1. The reliability (alpha) coefficients for these scales respectively were 0.92, 0.83, 0.90, 0.91, 0.91, and 0.92, and the overall alpha was 0.93. Therefore these scales were deemed to be sufficiently reliable for assessing elementary science teachers’ motivation toward professional development.

Teachers' scores on the scales of the MPD

Table 2 shows the teachers' average item scores and standard deviations on the six scales of the MPD. According to Table 2, students scored highest on the

“Cognitive interest” (an average of 5.21 per item), followed by “Professional advancement” (an average of 4.24 per item), “Social stimulation” (an average of 4.23 per item), “External expectation” (an average of 4.35 per item), “Educational service” (an average of 4.82 per item), and “Social contact” (an average of 4.71 per item). The results indicated that the science teachers in this study, on average, were more oriented to attend professional development for their own interest.

Table 2: Teachers’ scores on the scales of MPD (n=407)

Scale	# of items	Item mean	SD
Cognitive interest	6	5.21	0.36
Professional advancement	3	4.24	1.09
Social stimulation	5	4.23	0.93
External expectation	4	4.35	1.31
Educational service	5	4.82	0.58
Social contact	4	4.71	0.61

Gender differences on science teachers’ motivation toward professional development

Table 3 shows that no significant difference on their motivation toward professional development was found between the male teachers and the female teachers in this study.

Table 3: Gender comparisons on the scales of MPD

Scale	Gender	Mean	S.D.	t
Cognitive interest	Male	5.18	0.56	-0.94
	Female	5.24	0.62	
Professional advancement	Male	4.35	0.99	1.79
	Female	4.16	1.08	
Social stimulation	Male	4.21	0.94	-0.46
	Female	4.26	0.98	
External expectation	Male	4.29	0.92	-1.01
	Female	4.40	1.30	
Educational service	Male	4.79	0.74	-0.85
	Female	4.85	0.79	
Social contact	Male	4.70	0.74	-0.43
	Female	4.73	0.81	

Science teachers' motivation toward professional development between different academic level groups

Similarly, the teachers' motivation toward professional development between different academic background groups was also compared. As shown in Table 4, the teachers with different academic background did not revealed significant difference on their motivation toward professional development ($p>0.05$).

Table 4: Comparisons on teachers' responses of MPD among different academic level groups

Scale	academic level	Mean	S.D.	t
Cognitive interest	Master	5.29	0.59	1.54
	Bachelor	5.18	0.60	
Professional advancement	Master	4.28	1.18	0.45
	Bachelor	4.23	0.99	
Social stimulation	Master	4.36	0.97	1.69
	Bachelor	4.18	0.96	
External expectation	Master	4.34	0.91	-0.12
	Bachelor	4.35	1.22	
Educational service	Master	4.92	0.74	1.55
	Bachelor	4.79	0.77	
Social contact	Master	4.84	0.77	1.90
	Bachelor	4.67	0.78	

Teachers' motivation toward professional development between different academic background groups

Table 5 shows that the teachers with different academic background had significant differences in terms of "Social contact" ($p<0.05$). Moreover, the teachers with science majors tended to show significantly higher motivation toward professional development in "professional advancement" ($p<0.01$).

Table 5: Comparisons on teachers' responses of MPD among different academic background groups

Scale	Academic background	Mean	S.D.	t
Cognitive interest	Science majors	5.25	0.55	1.54
	Non- science-majors	5.15	0.68	
Professional advancement	Science majors	4.34	1.00	2.70**
	Non- science-majors	4.06	1.10

	Non- science-majors	4.61	0.84	

** $p < .01$ 、 * $p < .05$

Role of teaching experiences motivation toward professional development

According to their teaching experiences, the teachers were divided into three groups of different teaching experiences: 1-4 years (n=217), 5-8 years (n= 119), and finally more than 9 years (n=71). The results of the analyses between different teaching experiences groups and their motivation toward professional development are presented in Table 6. The teachers having more science teaching experience also possess significantly higher motivation toward professional development in “professional advancement” and “educational service” ($p < 0.05$).

Table 6: Comparisons on teachers’ responses of MPD among different teaching experience groups

Scale	teaching experience	Mean	S.D.	F
Cognitive interest	1 ~ 4 years	5.18	0.61	1.16
	5 ~ 8 years	5.28	0.55	
	9~ years	5.20	0.64	
Professional advancement	1 ~ 4 years	4.36	0.98	3.03*
	5 ~ 8 years	4.13	1.17	
	9~ years	4.07	0.99	
Social stimulation	1 ~ 4 years	4.25	0.94	0.98
	5 ~ 8 years	4.29	1.00	
	9~ years	4.09	0.96	
External expectation	1 ~ 4 years	4.40	1.300	0.61
	5 ~ 8 years	4.31	0.94	
	9~ years	4.24	0.91	
Educational service	1 ~ 4 years	4.80	0.73	3.71*
	5 ~ 8 years	4.96	0.74	
	9~ years	4.65	0.87	

Social contact	1 ~ 4 years	4.72	0.74	1.23
	5 ~ 8 years	4.78	0.77	
	9~ years	4.60	0.90	

** $p < .01$ 、 * $p < .05$

Conclusions

With the instrument developed in this study, this study explored a group of Taiwanese elementary science teachers' motivation toward professional development. The major findings of this study are summarized as following: This study found that the teachers attained highest scores on the “cognitive interest” scale. Moreover, there is no gender difference on science teachers’ motivation toward professional development was found in this study. Similarly, the teachers with different academic background did not revealed significant difference on their motivation toward professional development. Only the teachers with different academic backgrounds showed significant differences in terms of their motivation in terms of “Social contact” and “professional advancement”. Besides, the teachers having more science teaching experience also possess significantly higher motivation toward professional development in “professional advancement” and “educational service” ($p < 0.05$).

In recent years, teacher educators have paid increasingly attention to teachers’ professional development. The findings of this study may provide science teacher educators some insights into how to improve elementary science teachers’ willingness to participate in professional development. Also, the understanding of science teachers' motivation toward professional development, as revealed in this study, may provide science educators useful information when they designs professional development programs.

Abstract

In the automobile industry, whose main activity lies in manufacturing and repairing vehicles, the dynamics of change has an ever increasing pace. Both the permanent identification of clients' needs and their satisfaction on time must be ensured. The automobile manufacturing companies must provide at all time the logistic support that is needed in order to introduce the new products on the market. The great challenge posed by the current economic context will make the difference between automobile manufacturers, as a part of them will be forced to close down or to merge with other manufacturers. It is widely known that Toyota always manages to ensure the level of performance required to satisfy the demands of their clients, demands which are continually changing. As concerns cost management and the assurance of a high efficiency level using a performant management system based on the managerial functions of foresight, organization, coordination, motivation and control, Toyota production system is superior compared to current manufacturing systems. Our paper aims to present the strengths specific to the Toyota system and to highlight the ways in which these concepts can be applied and, of course, improved by the companies doing business on the automobile market at present.

1. Introduction

In the automobile industry, whose main activity lies in manufacturing and repairing vehicles, the dynamics of change has an ever increasing pace. Both the permanent identification of clients' needs and their satisfaction on time must be ensured. The automobile manufacturing companies must provide at all time the logistic support that is needed in order to introduce the new products on the market.

Together with creating and selling new products, it is necessary to continually train the staff responsible for the maintenance of the new vehicles. The staff must acquire a high level of technical competence. The organisations that invest in personnel training ensure a high level of competitiveness, thus gaining a clear advantage over the competition.

The great challenge posed by the current economic context will make the difference between automobile manufacturers, as a part of them will be forced to close down or to merge with other manufacturers.

The care, availability and empathy with the client have been and will always be key factors distinguishing between companies. Besides these factors, there is also the assurance of mobility services for the clients whose vehicles become unavailable temporarily following the need to have some technical maintenance done, the staff competence and availability of spare parts.

2. General consideration

It is widely known that Toyota always manages to ensure the level of performance required to satisfy the demands of their clients, demands which are continually changing.

As concerns cost management and the assurance of a high efficiency level using a performant management system based on the managerial functions of foresight, organisation, coordination, motivation and control, Toyota production system is superior compared to current manufacturing systems.

At present, the clients who wish to purchase vehicles can be placed into two big categories:

- clients whose criterion of comparison is the level of technical performance and the extra features besides the standard ones;
- clients whose criterion of comparison is the price of the vehicle, the warranty period and other essential cost control elements.

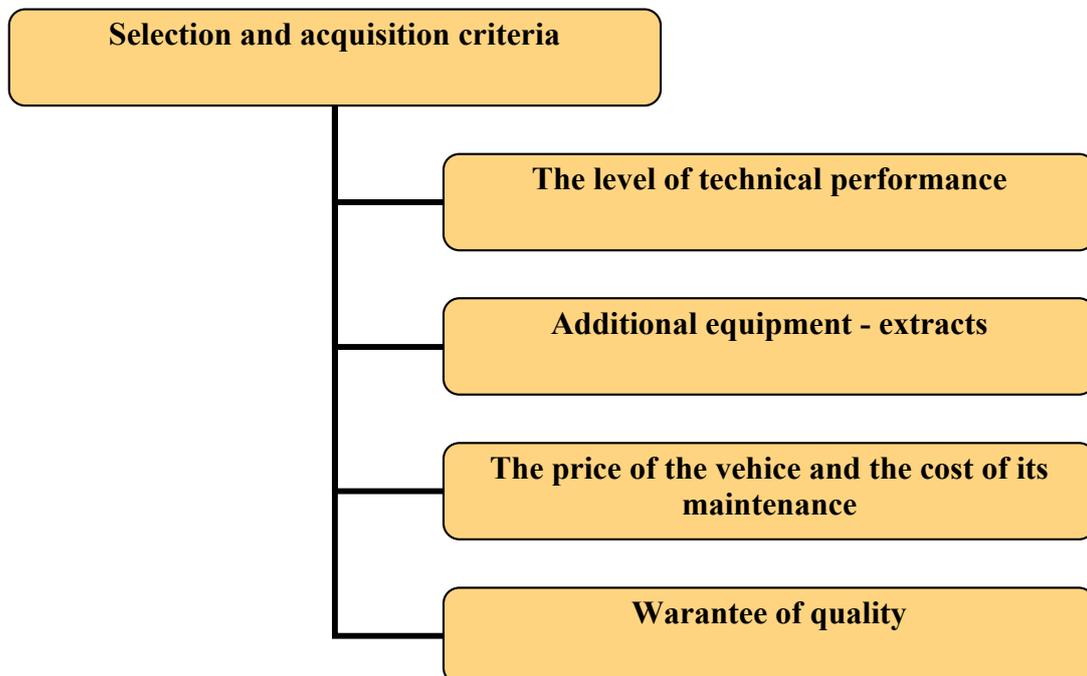

Figure 1 Selection criteria for vehicle acquisition

Mr. Taiichi Ohno is the creator of the production system Toyota - Just in time. His answer to the question regarding the state of Toyota was remarkably simple.

It highlighted the Japanese concept of complete loss elimination “All we are doing is looking at the time line, from the moment the customer gives us an order to the point when we collect the cash. And we are reducing the time line by reducing the non-value adding wastes.”

3. A case study about Toyota Company

Our paper aims to present the strengths specific to the Toyota system and to highlight the ways in which these concepts can be applied and, of course, improved by the companies doing business on the automobile market at present. For succeeding to detain the leading position, the strategic aim of the organization has to be that of representing permanently the first option which a partner has, which implies that this option has to be recognized not only for the offered products and services but also for the respect toward the milieu and society.

The organization must offer the business partners products and services of the best quality, which ought to add constantly the true value of their business. At the same time, it has to reach the expectations of the employees but also those of the producers by means of a permanent effort of constant improvement.

The values of the Toyota organization were clearly defined and embedded throughout the time, so that each member of the Toyota team, from each level, is aware of these values and acts according to these not only in the relation with the external clients but also in the relation with the internal clients.

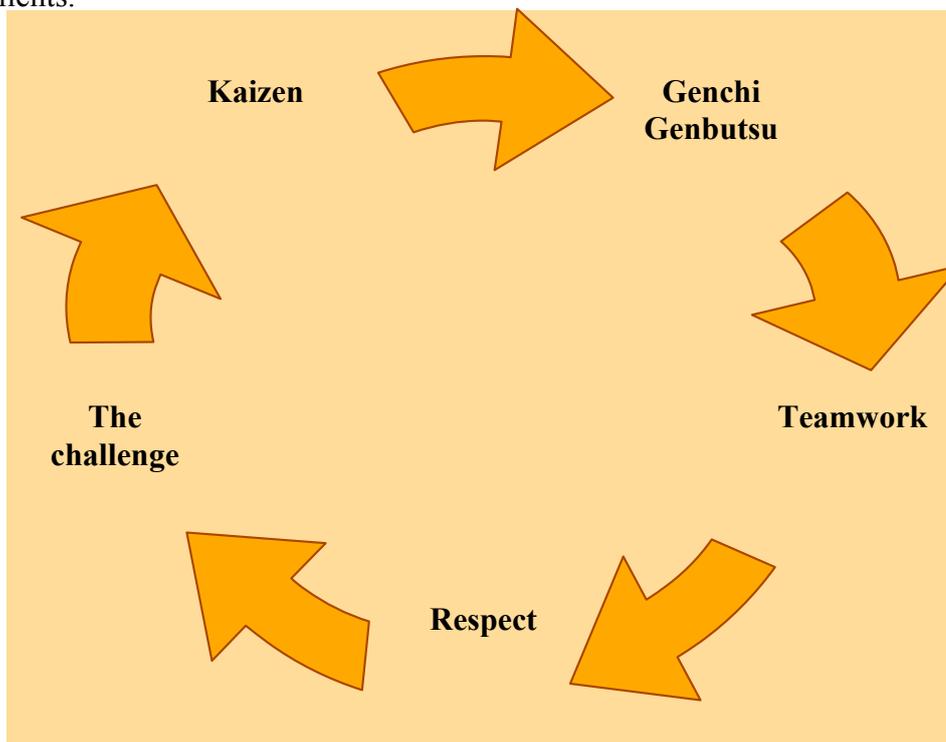

Figure 2 Values promoted by Toyota organization

The challenge in the Toyota concept consists of maintaining a vision on long-term dealing all challenges with bravery and creativity, and the permanent orientation is canalized toward a constant improvement.

The applying of the Kaizen principles assures the constant and permanent improvement of all the processes. The essence TPS is represented by “kaizen” or the constant improvement of the techniques and the working procedures for assuring the maximum of quality and efficiency. The Genchi Genbutsu concept implies the immediate move to the source which generated a certain nonconformity regarding the analysis and discovery of the real causes which generated it, in order to take the right decision in true time.

Toyota organization respects its partners, makes all the efforts to identify their requirements and acts constantly for attaining and maintaining the business partner. Within the organization the personal and professional development of each member of the team is constantly analysed and stimulated. The permanent increase of the level of performances not only at the level of each employee but also at the level of the team is carefully administrated.

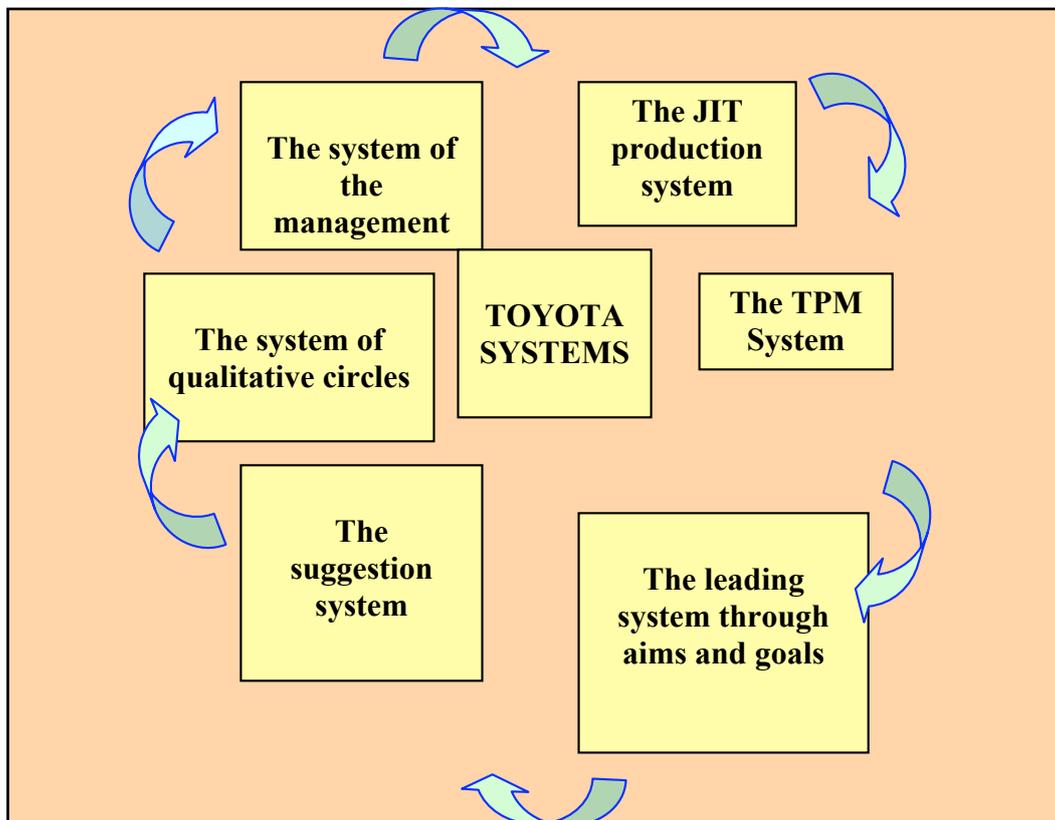

Figure 3 Systems used by Toyota

Parallel with the values described above, the following systems are applied within the Toyota organization:

- The system of the management of the total quality, according to which the quality is foreground even if the organization has also other aims, which refer to dates and costs;
- The JIT (Just in Time) production system. It is the system of production created by Taiichi Ohno inside Toyota. According to this concept, within the processes of production the component parts of the cars are delivered in exact amounts only in the moment in which they are needed. The concept “Just-in-Time” succeeds in creating a “tractor” system of production, which reduces the necessity of maintaining big stocks of pieces or materials permitting the rapid enfoldng of the processes according to the permanent modification of the clients requirements. This system includes the following concepts:
 - Takt (the necessary time for producing a piece);

- Jidohka (a device which stops a car whenever a raffle is produced). The production is interrupted in the moment in which any nonconformity is detected by an employee or by a facility (machine). All the nonconformities are directly eliminated but they constitute a knowledge source for the identification of the methods, through which the process ought to be improved. The invested quality in production is the essence Jidoka. It is the true beginning of a positive evolution and guarantees the maximum quality in the fabrication of each product;
- The reduction of muda and mura (the reduction of the loss, of the wastage under any form of manifestation, of the difficulties and of the stress at the job).
- TPM system (Total Productive Maintenance). It represents a system of maintenance of equipments, devices and of tools which permit the maximum increase of the efficiency in using them, involving thus the entire personnel of the organization. An important role is played by the user of the equipment;
- The leading system through aims and goals established at all the levels and functions of the organization, in which the Kaizen strategy is put to work in this sense;
- The system of suggestions is considered to be essential in attracting and involving each employee in the process of constant improvement, even if their suggestions are not always significant, and they know that they will not obtain remarkable economical advantages in this manner;
- The system of the quality circles, which imply the organizing of the work in small teams, encouraged by the leading, which dedicates itself to the solving of some problems existent within the aria of working at a particular moment.

An extremely important role in the permanent increase of the level of performance of the Toyota organization is played by the planning and organizing process pertain to the technical and non-technical preparation of the employees. The Toyota working system succeeds in offering satisfaction to the employees and in the same time to build the most competitive products existent on the market.

Toyota Production System (TPS) contains a complex set of procedures, of working instructions, of values and scientific knowledge, with the help of which it offers the members of the team the freedom of optimizing all processes through constant improvement. Currently, TPS is known as a reference system both for the industry of vehicle constructor and for other categories of producers.

The TPS methods permit the organizations, which embedded a system of management of the quality, to obtain a high level of productivity and in the same time to satisfy and to exceed the expectations of the clients concerning the quality. Toyota Production System fulfills all the requirements of the clients concerning the efficiency and the promptitude through the interconnection of the stages of production with the real requirement of the market. One of the main preoccupations of the TPS is that of reducing the costs through the elimination of any type of wastage.

TPS begins from the client's order and ends with the delivery of the ordered product on time. It is based on a sequence of an elaborated assembling which uses the amounts required exactly where they are needed, called "Just-in-Time". It is based on the flexibility of the work

force, on the multi-qualification of the personnel but especially on the stimulation of the creative thinking and on the promoting of the innovative ideas.

In Table 1 there are presented some specific methods included by Toyota Production System (TPS).

The management of human resources has an essential role not only in the perfection of the organizational system but also in the embedding of the management of the total quality.

Table 1 TPS specific methods and objective

No.	TPS specific methods	Objective
1	The Kanban system	Assures the maintaining of a production “just in time”
2	The method of the smooth production	Assures the rapid adaptation of the production system to the modification of the requirements
3	The reduction of the specific time for the preparation of the cars	Assures the reduction of the total time pertain to the process of production
4	The standardization of the operations	Assures the accomplishing of each operation in true time and eliminates completely the wastage generated by the useless actions, it obtains a line of production with a high level of efficiency
5	The multi-qualification of the technicians-workers	Assures the flexibility of the human resources and at the same time permits the increase of the level of competence of the personnel
6	The continual improvement	Assures the increase of the level of performance, implication of all the categories of personnel, the belonging to a group, and the system of suggestions is encouraged, the level of motivation of the personnel is increasing
7	The visual control system	Assures the identification of any nonconformity and the elimination of it in the shortest time
8	The functional management system	Assures the promotion of the control of the quality within the entire organization

Within this system the employees have well defined responsibilities in each production process and are encouraged to come up with ideas for the improvement of the permanent system. Thus the wastage of the resources is eliminated regardless of their category. All the Toyota fabrics are designed in such a way to assure a maximum efficiency of production and in the same time to protect the milieu offering the employees special work conditions. Toyota stresses upon the existence of a team spirit which creates a favorable milieu in the constant increase of the level of performance. In an organization where the rules are clearly and precisely defined and embedded, an organization inside of which each member knows in every moment what he has to

do, it is possible to succeed in obtaining a high level of quality even when using reduced personnel resources. The politics of the organization has to be very clear defined so that the general managers and the managers of the quality can have different points of view regarding the administration of the quality, a situation which generates the incoherence of the management system and calls forth the decrease of the level of performance.

4. Conclusion

In the constructive industry of cars the quality must be obtained and administrated even from the level at which the raw material, which is necessary for the production of the components pertained to the cars, is selected. When the producer has finished the construction of the car, the distribution network has to assure the sale and the maintenance of the product. The partners which assure the distribution and the maintenance of the cars must focus upon the assurance of the quality of the processes from each work level, from the level of the technician. The further services for the mending of the cars are support services. For example, if the technician does not execute correctly an intervention, if the employee who orders the pieces identifies erroneously a mark or he orders it with delay, the result of these process mistakes will show every time the impossibility of keeping our promises toward our clients and automatically it will give rise to their discontentment. At present even if the Toyota producer confronts itself with a problem regarding the image caused by the technical problems, which appeared at some of the new car models launched on the market, the company did not conceal the fact that these problems exist and it shifted immediately to the mending of the nonconformities by getting the cars back to the service proving once again the efficiency of the processes, which assure the constant improvement, pointing out how important the care for the client is. The authors consider that the essential element, which makes the difference between the TPS concept and the rest of the production system, is the desire of the Toyota employees of being the best (“ichiban” concept), the desire of making permanently efforts regarding the increase of the quality of the products and the processes.

Abstract

The acquiring and successful management of the quality of services offered throughout the processes taking place within the organisation is essential to ensuring a long term partnership with the client. The organisation strategy must ensure client satisfaction and should not focus solely on the product or service provided. We cannot control or improve what we do not know in detail. Thus, the service and supply processes must be very well defined and regulated using work procedures and instructions, as an inadequate approach may lead to a negative impact on the image of the organisation. In the analysed organisation an analysis has been conducted on the performances obtained after the service processes were carried on, being carefully monitored, followed by the recommendation of measures needed in order to continually improve the quality of the services provided. The information regarding the clients' perception of the way in which the organisation meets his or their demands has been also processed. To ensure the continual improvement of the quality of the services offered by the organisation we must keep measuring the results of the performed activities. Thus we have the opportunity to invest in the development and continual improvement of the processes generating the competitive success of the organisation, turning it into a leader on the present market. Our final aim is attained when the client is satisfied with the quality of the services provided.

1. Introduction

This scientific paper aims to present the activity of vehicle maintenance as part of the After-Sale Services department in an organisation where a quality control management system is implemented. This study describes in detail the service processes, with the supply activity to be described in a further paper.

The acquiring and successful management of the quality of services offered throughout the processes taking place within the organisation is essential to ensuring a long term partnership with the client.

The services of the analyzed organisation are:

- maintenance and repair services for automobiles and commercial vehicles during or outside the warranty period;
- repair for damaged vehicles, whose cost is supported (fully or partly) by the insurance companies or by the client;
- sale of spare parts, vehicle accessories and collection items;
- Periodical Technical Inspections (P.T.I.);
- towing for vehicles weighing up to the authorised maximum weight of 3500 kg.

The quality of the services provided by the organisation must be ensured at all times, starting with scheduling vehicles for repair and ending with interviewing clients with a view to identifying the level of satisfaction obtained. The study aims to identify the areas in which special attention must be paid for a period of time in order to determine the causes that generate the interruption in the information flow.

In order to obtain and maintain a high level of client satisfaction regarding the services offered by the organisation, it is necessary for all the processes taking place in the analysed organisation, starting with scheduling the vehicle and ending with the clients picking up their vehicle following the payment of the cost of the services provided, to be optimised adequately in order to eliminate idle time. At the same time, communication with the client, together with internal communication between the different departments of the organisation must be achieved in perfect conditions.

2. General consideration

The organisation strategy must ensure client satisfaction and should not focus solely on the product or service provided. We cannot control or improve what we do not know in detail. Thus, the service and supply processes must be very well defined and regulated using work procedures and instructions, as an inadequate approach may lead to a negative impact on the image of the organisation.

In the analysed organisation an analysis has been conducted on the performances obtained after the service processes were carried on, being carefully monitored, followed by the recommendation of measures needed in order to continually improve the quality of the services provided. The information regarding the clients' perception of the way in which the organisation meets his or their demands has been also processed.

Following studies conducted in the USA it has been highlighted that the organisations lose half of their clients every 5 years and 70% of the interviewed clients claim that they have renounced the services of the organisation because it did not manage effectively the „concern for the client.”

An important sum of money must be allotted for keeping current clients and ensuring their loyalty. Philip Kotler points out that replacing lost clients generates a cost 5 times higher than the cost of keeping them.

To ensure the continual improvement of the quality of the services offered by the organisation we must keep measuring the results of the performed activities. Thus we have the opportunity to invest in the development and continual improvement of the processes generating the competitive success of the organisation, turning it into a leader on the present market.

The final aim of defining and continually improving the service processes is to ensure the quality of services offered to the clients by the organisation. The sales, service and supply departments work together, having as a strategic objective the assurance of the client's satisfaction, who perceives the organisation as a whole.

Every person from within the organisation is responsible for ensuring the client satisfaction. It is an extremely important aspect that cannot be the responsibility of a single department or of a single person appointed to deal with this issue.

Our final aim is attained when the client is satisfied with the quality of the services provided, and with the cost, impressed with the environment where he/she waited for the workover to be completed, with the special treatment he/she benefited from, all of these aspects generating a positive experience which will determine the client to feel confident to return to the service department.

3. A case study

In this study we will analyze the service processes that take place in an organization that provides vehicle repair services.

In order to keep under control all the specific processes of the vehicle repair activity, we must identify the main stages in their structure and then to break down each process into specific activities.

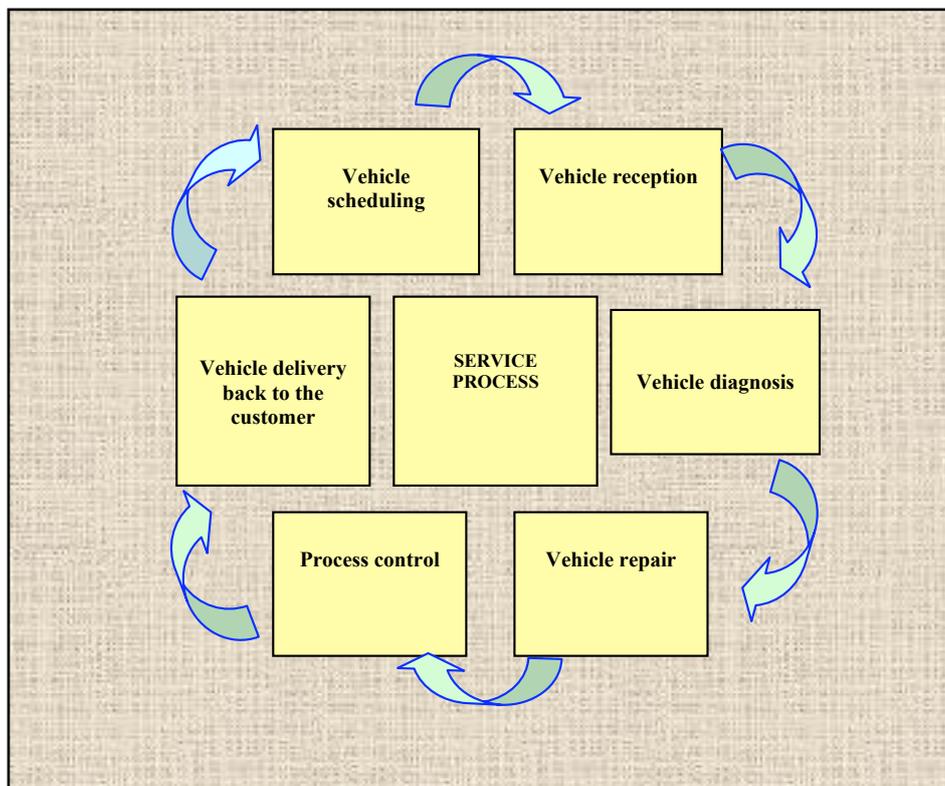

Figure 1 The service process stages

1. **Vehicle scheduling.** It represents the activity that has as objective the judicious allocation of the necessary resources for the required repairs that make the vehicle function according to the producer's specifications.

To this end, the foremen should continuously keep updated the availability of the human resources in the electronic management system whereas the vehicle scheduling should be done by assigning each vehicle to the technician that has the required competence to successfully deploy and complete the service intervention.

If, for example, one of the technicians is unavailable, the foreman will delete in real-time the specific data of his availability and will immediately distribute the vehicles assigned to this technician to the other technicians so that the vehicles' deadlines are followed through.

Where the time allotted to the repair is not well defined, disfunctionalities will occur in the repair process.

Taking into account the critical success factors mentioned in figure 2, the process can be shaped by implementing the following measures:

- the service adviser (the receptionist) should be regarded as the key element of a successful customer relationship management.
- the scheduling should be done electronically, in real-time.
- it is recommended that the maintenance work and the low complexity degree repairs be scheduled also by the person that works at the Info Desk. Thus, the time that the customer has to wait till one of the advisers becomes available reduces.
- the management system of the service activity should offer the receptionist the possibility to see at all time the status of each repair so that he can intervene in real-time to fill the blanks that are caused by repairs that are finished before the allotted time.
- the service adviser should also contact the customer if the time allotted to the finalization of the repairs is extended overpassing the customer's deadline. When he schedules the vehicle, the receptionist should check whether the vehicle needs to undergo an intervention determined by the producer(technical campaigns), so that the required markers for these repairs could be supplied without delay.
- the customer should be informed during the scheduling of the intervention about the payment arrangements for the provided services.
- the availability of the markers necessary for the scheduled repairs should be checked, the appointment of these being necessary to avoid the situations in which the necessary markers are used to repair other vehicles.

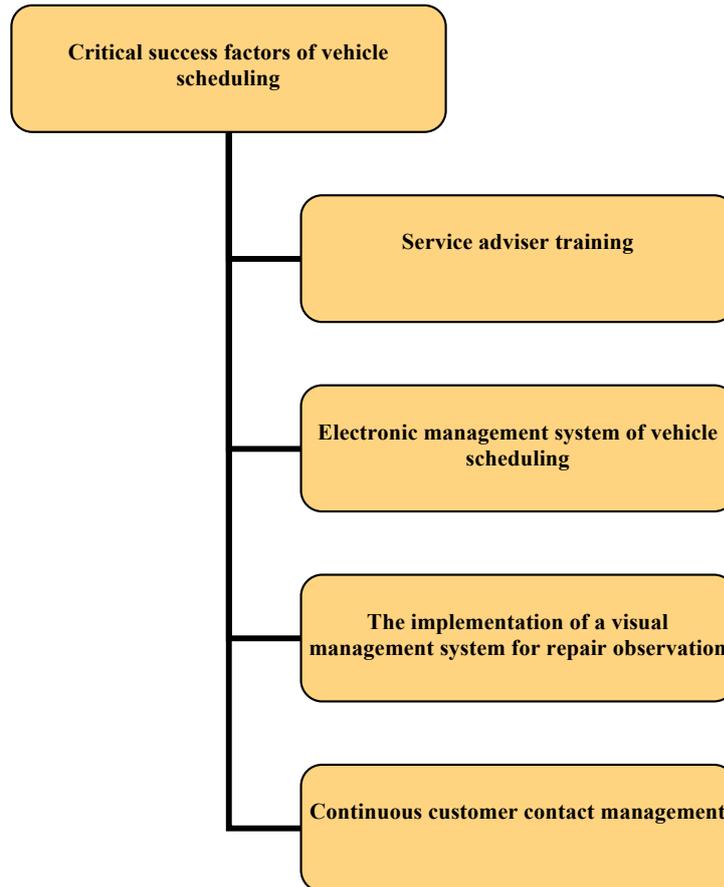

Figure 2 Critical success factors for vehicle scheduling management

2. **Vehicle reception.** This activity consists in taking over the vehicle from the customer according to the service instructions.

The visual verification of the vehicle is made in three different stages: at the bottom, with the vehicle lifted up on the elevator at half-height and, with the vehicle completely lifted.

This is the moment when the service adviser and the customer communicate at a maximum level of efficiency, and the customer receives all the necessary information in order to decide what repairs will be made.

After the take-over of the vehicle a contract between the service and the customer will be drawn up, contract according to which the service intervention will be carried out. The customer should receive in real-time the computed price of the requested work.

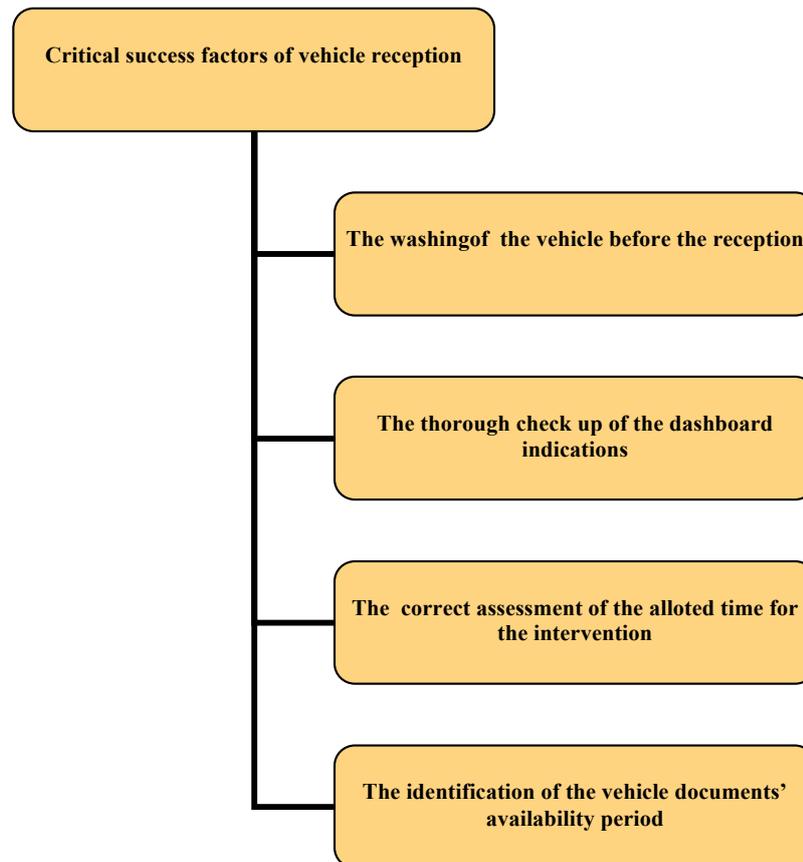

Figure 3 Critical success factors for vehicle reception management

The process can be shaped by implementing the following measures:

- it is recommended that the take-over of the vehicle be made only after the vehicle is washed, if anything there is the risk that certain nonconformities (scratches, small damages...) are not identified until after the customer handed over the vehicle.
- The service adviser should be extremely careful about the exterior and the interior of the vehicle, but what is very important is to check the dashboard indications and to check whether there are any witnesses who can signal certain malfunctions known or unknown by the customer during the vehicle reception.
- The customer must be informed about the deadline of the work, and whether in the given time only diagnosis operations will be made or the repair will be finished, or if other service interventions are required, except the repairs that the vehicle was scheduled for.
- It is also recommended to check and to inform the customer about the expiry date of the Periodic Technical Inspection (PTI), the validity of insurance policy and any other information regarding the safety but also the legality of putting into circulation the vehicle on public roads.
- The concern towards the customer can be proved especially by showing respect for his asset, namely the vehicle, by applying the protection elements (applying a

protection cover on the fenders, the chairs, the wheel, and using gloves when working).

- The service advisers should reply to customer demands showing empathy, they will give all the necessary details regarding the period of the intervention, the parts, the accessories, the price of the work, any other technical details, as well as the suggested solutions for eliminating the referred nonconformities.

3. **The diagnosis process.** The correct diagnosis of malfunctions represents the element that underlies customer satisfaction insurance. The organizations must invest continuously in the training activity whose tactical objective is to increase the qualification level of each of the company's employees. By increasing the professional competence level, the malfunctions are easily identified in a relatively short time, the long-term effect is the increase of the company's competitiveness and attracting the customers. The process must be shaped so as to insure a correct and efficient diagnosis:

- the history of the service interventions of the vehicle that were performed before must be consulted.
- The work should be scheduled according to the capability of the technical personnel to deal with the high complexity risk diagnosis cases.
- Where errors regarding the work distribution complexity have arisen, the foreman must reassign the work to the technicians that have the required training level.
- It must be checked whether the vehicle is involved in technical campaigns made by the producer.
- The diagnosis stages described in the technical documentation must be read precisely.
- The last information given by the producer regarding the identification of new repair methods must be consulted.

4. **The repair process.** The repairs must be made only after consulting the technical documentation made available by the producer.

The experience of the personnel that works in the technical compartments is extremely important, but regardless of the technicians' experience degree, the repairs must be made only after consulting the updated technical documentation. It is necessary that the process be shaped so that it ensures a correct real-time diagnosis:

- the deadline of the repair should be highlighted so that all the delayed repairs could be easily noticed through visual management.
- The customer must be immediately informed by the service adviser regarding each aspect that modifies the repair process status (eg.: certain difficulties can arise when dismantling a marker which will lead to the extension of the deadline).
- In order to be able to contact the customer in real-time, the foreman should continuously manage the status of the ongoing service orders and should inform the service adviser about any modification that occurs.

- For each additional intervention, other than the interventions agreed upon with the customer when taking the vehicle into service, the customer must approve with it before they start the repair.
5. **The interoperational control and final control.** The control function ensures the achievement of the required quality level for each intervention. The process can be shaped by implementing certain correct and specific measures as follows:
- At every repair order the documents that describe the state of the systems in the vehicle structure must be annexed before as well as after the finalization of the repairs.
 - The technicians must write down on the work order the values of the tightening torques so that at any time the foreman should be able to perform the interoperational control and final control operations.
 - For the interventions made on the vehicle's security systems (eg.: breaking system, steering system...) or on the systems that influence environment pollution (exhaust system, fuel supply system) extra verifications will be made in the periodical technical inspection grid in order to certify the quality of the work. The conformity of the data will be mentioned on the service order in writing.
 - The foreman should write on the final verification chart all the remarks about the unfixed nonconformities before the vehicle has left the service, so that at the reception, the service advisor could bring all these to the customer's attention (confirmation by signing the final verification chart).
 - It is mandatory, at the finalization of the interventions, for the foreman to do a road test, in similar conditions that the customer described as malfunctions, so that the elimination of the nonconformities can be confirmed.
6. **The vehicle delivery back to the customer.** On the whole, the activity consists in presenting (verbally and visually) the performed repair by the service advisor, the detailed explanation of the repair value, the payment for the interventions made and the actual delivery of the vehicle back to the customer taking into consideration the specific factors described in figure 4.

The process can be shaped by implementing the detailed measures as follows:

- the vehicle must be washed, cleaned, all possible traces of the intervention must be removed.
- The conformity of the vehicle's exterior and interior status must be checked with the status on the vehicle's reception date.
- All replaced parts must be returned to the customer in their original packages, protected so to prevent any fluid leaking.
- If any differences from the initial status are observed, the customer must be informed about them. In this case, the service adviser asks for the customer's approval to be able to remediate the nonconformity, telling him at the same time the new deadline of the intervention. If the customer doesn't want to leave the vehicle in service for remediating the nonconformities on the spot, the receptionist

will write in the final verification chart that the vehicle will be brought back in service for further repairs, mentioning which are the nonconformities that the service will fix on their own expense.

- The customer must be contacted in order to receive his vehicle from service only after the receptionist makes sure that the vehicle is ready to be returned to the customer.
- The service adviser must schedule the exact date and time for handing over the vehicle to the customer by avoiding to overcrowd the end of the work program, thus avoiding also the customer's discontent due to waste of his time resources.

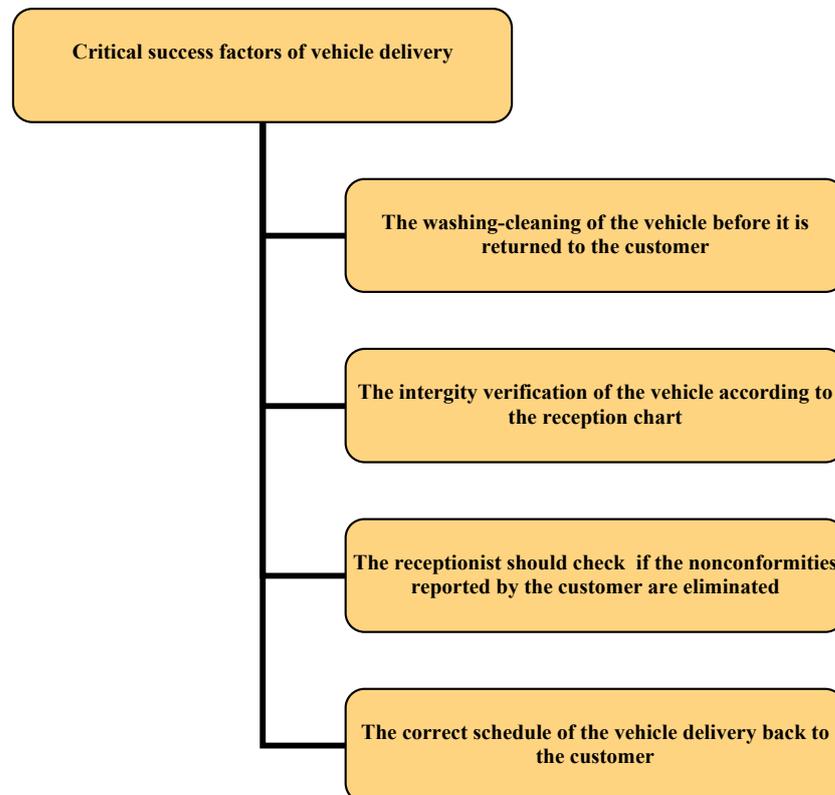

Figure 4 Critical success factors for vehicle delivery management

The relationship with the customer doesn't end once his vehicle is returned. To ensure the continuous improvement of the organization's services it is imperative to measure continuously the results of our actions. It is extremely important to identify the zones where the information flux may be interrupted so that we can prevent the nonconformities. Thereby we have the opportunity to invest in further activities that generate success and to give up those that are inefficient. We can obtain a feedback by using different methods that require: filling out questionnaires, the implementation of a system of suggestions, possibly online, the phone contacting of customers or certain analysis can be made regarding customer demands and priorities.

4. Conclusion

In our opinion, we can make a simple survey based on maximum 3 questions whose answers should be enlightening in order to evaluate the quality of the services provided by the organization. The score is obtained by giving marks from 1 to 10. Some of the questions can be the following:

- Are you satisfied with the attitude of the personnel that you interacted with?
- Were the terms agreed upon when the vehicle entered the service respected (time, price)?
- Was it necessary for you to return to the service various times so that the malfunction could be fixed?

The time the customer answers should be very well chosen. Thus the customer should receive the questionnaire after he left the vehicle in service in order to have the necessary time to think and to fill in the correct data mentioned in the questionnaire. In situations where the customers were not satisfied, the organization should have implemented a system to process and manage customer complaints. After doing the research I noticed that in most of the cases, the customers' discontent towards the provided services was generated by communication deficiency. The organization must also put at customer disposal loyalty programs that can make them feel special, important, systems that can surprise the customers, aiming to please each and every customer about all the aspects of the performed intervention, to be a pleasure for them to come back. The final purpose of defining, improving, reshaping the service processes is the insurance of service quality provided by the organization and the increase in efficiency aiming to maximize the profit.

Abstract

The current work presents a part of the results obtained from a research on some categories of managers and teachers from several universities in Romania. The research highlights a wide range of interpretations related to the quality of the organizational climate; the different relationships between the managers, the teachers; the motivation level, in order to achieve performance, as well as the leadership manner of the managers in these organizations based on knowledge. Such an analysis may represent the basis of future actions that can contribute to improving the climate and the performance of teachers within the academic educational system in Romania.

1. Research objectives

From the multitude of psychosocial and managerial conditionings within the organizational climate, this research follows: the objective conditions under which the teaching activity takes place; the quality of the organizational climate; the functional relationships between managers and teachers; the motivational policy of the organization; the leadership style of certain managers within the higher system of education;

2. The structure of the questionnaire

Within the structure of the questionnaire number 2 there are also questions about the organizational climate that reflect the objectives of the research, and the answers received highlight interpretations of the teachers that allow conclusions to be drawn that are congruent with the research topic.

3. The adopted methodology

The performed research is based on the “stratified sampling” method determined by the heterogeneity of the test subjects (age, sex, education, teacher’s academic degree, etc.). The research represents a sequel of a more ample work, made between 2008 and 2009, using the same samples and adopting the same methodology, questionnaires and data processing system. Within the investigation and fill in action of the questionnaires, 60 teachers were chosen, whose affirmations and opinions are presented hereinafter.

4. The climate within the organizations in the educational environment

The performed study highlights a series of conditionings that have a decisive influence over the quality climate and the performance of the organizations within the educational environment, according to figure 1.

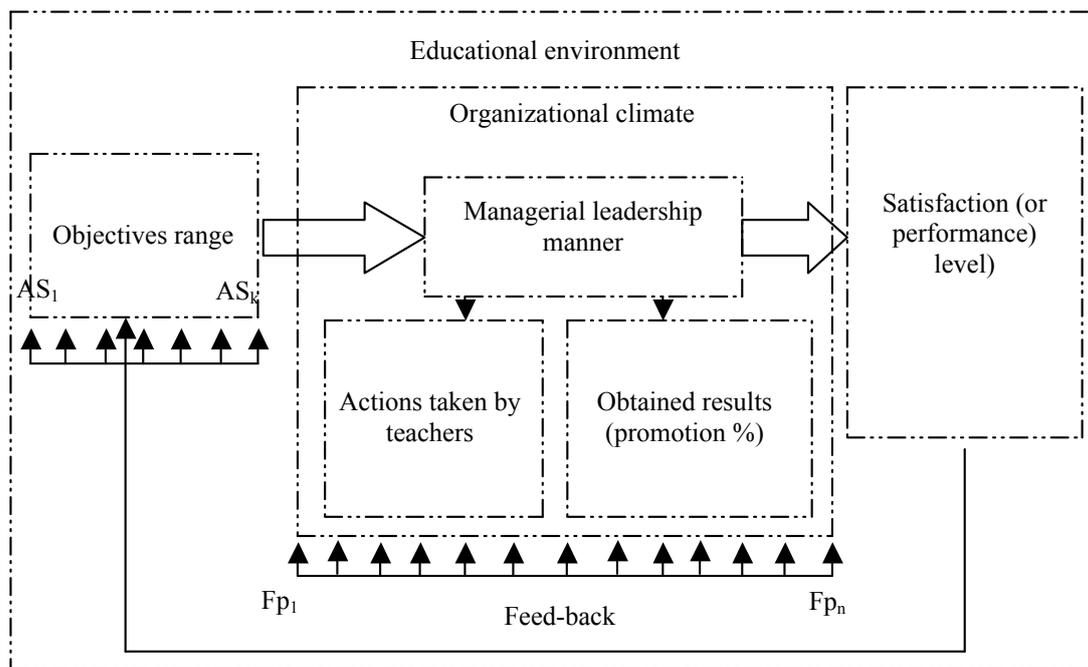

Figure 1 The conditioning of the influence factors over the organizational climate quality

where: AS₁.....AS_k. – stress agents;

Fp₁.....Fp_n – specific disturbance factors

Irrespective of the generating sources for these categories of factors and stress agents, the generated effects are different in the educational environment compared to the economic environment.

5. Results analysis

The obtained results allow the organizational climate analysis in relation to the conditionings comprised in the research objectives. The program used allows the interpretation of the answers and their presentation. This determines the development of certain conclusions that are very useful and carry an interesting significance.

5.1. The objectives of the organization and the way they are set

The received answers highlight the attitude of the test subjects regarding: knowing and understanding the objectives (tasks); their manner of establishment and wording; understanding the priorities that come up; defining the role that they hold in the organization.

In table 1 the percentage values expressed are presented.

5.2. The establishing manner of the tasks and the ranking of jobs

The answers highlighted the opinions regarding: the layout of the teaching activities; task assignment, according to the job description; ranking method of jobs and functions; resource providing and necessary information about the performance of the tasks assigned.

In table 2 the percentage values expressed are presented.

5.3. The functional relationship between managers and teachers

The affirmations expressed by the test subjects highlight: managers' receptivity to new ideas; concern towards collectively discussing the arisen issues; the quality of the existing relationships between managers and teachers; conflict solving methods.

In table 3 the percentage values expressed are presented.

5.4. The motivational policy of the organization

At the questions regarding the motivational policy, the test subjects expressed their opinions regarding: the manner in which they are encouraged to develop their competences; the ratio between the received salary and the work done; the chances to be promoted offered by the organization; bonus granting; the standards practiced by the organization.

In table 4 the percentage values expressed are presented.

5.5. The leadership method of (certain) managers

The answers at the questions in the questionnaire highlighted different opinions about: the support received from the direct boss; the efficiency of the leadership method of the direct boss; the check efficiency over own work; favouring performance in work (teaching activity); favouring group interests to the detriment of the organization's interests; disclaiming responsibility by managers.

In table 5 the percentage values expressed are presented.

Question no. (from the questionnaire)	Question name (main/secondary or derived)	Affirmations/opinions – according to scoring grid (%)							Percentage value expressed

• disclaiming responsibility by managers;	4,98	29,88	23,24	4,98	4,98	-	31,54	-	99,60 %	

6. The interpretation of the results

After experimental data processing the following findings were stressed:

6.1. The analysis of the task factor

- a) The majority of the expressed opinions indicate a positive attitude of the test subjects towards the task factor. Over 70% of the test subjects mentioned that they know and understand the objectives and the tasks assigned to the organization they are part of.
- b) Such a positive attitude contributes to insuring an absolute efficiency in the organization's activity, according to figure 2.

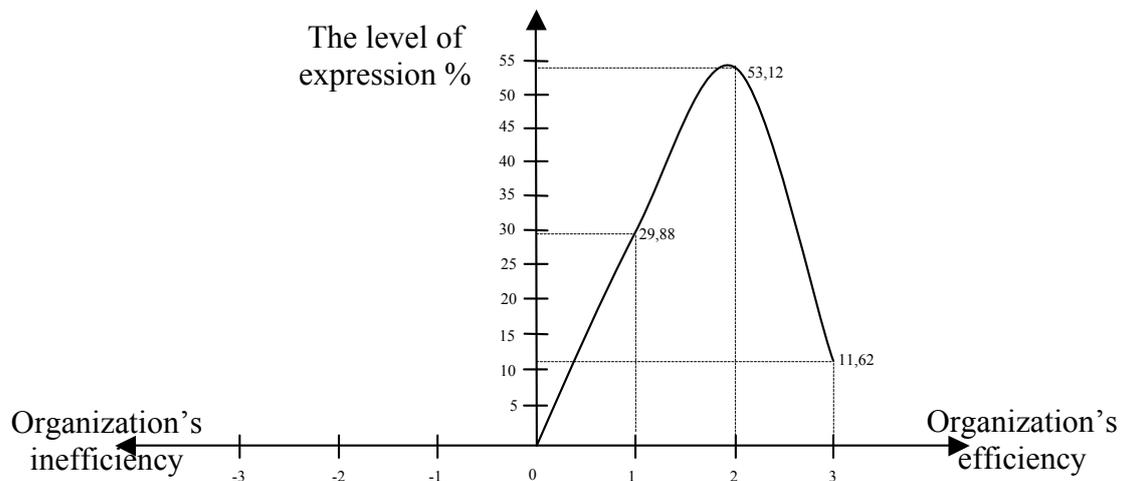

Figure 2 The positioning of the task factor values in relation to Gauss curve

Note: all the values from the derived questions are positioned under the curve

6.2. The analysis of the structure factor

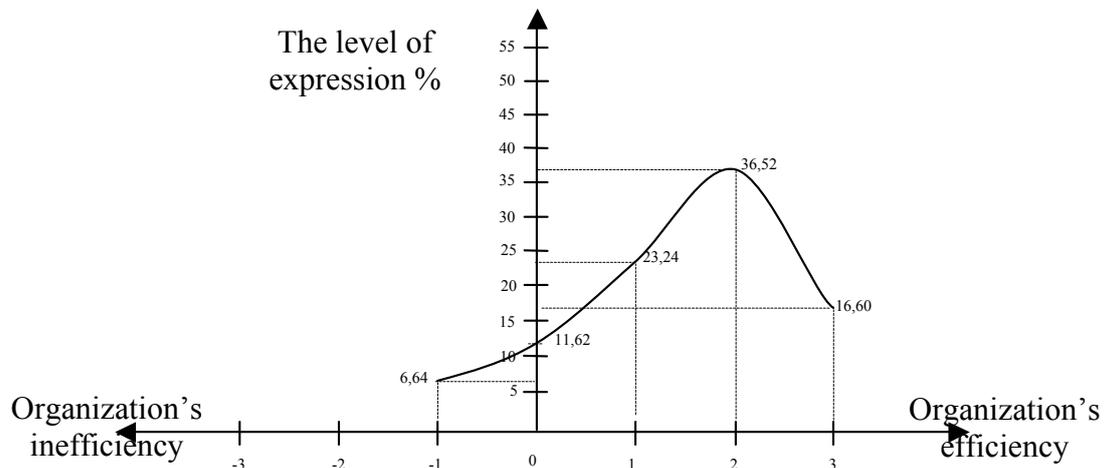

Figure 3 The positioning of the structure factor values in relation to Gauss curve

- a) The expressed opinions stress an efficient means of organization of the organization's structure, resulting that the jobs and the functions are correctly ranked, over 75% of the test subjects affirming this, according to figure 3.
- b) There is deficiency in the task assignment manner and in the resource and information supply process, almost 22% of the test subjects affirm this.

Note: A movement of the opinions towards the left side of Gauss curve is observed, indicating a tendency of the organization's structure towards inefficiency.

6.3. The analysis of the relationship factor

- a) The expressed opinions stress out certain deficiencies concerning the quality of the professional relationships between teachers, these being regarded sometimes as non-conflict ones, according to figure 4.
- b) Over 20% of the test subjects back up the necessity of concerns betterment in order to eliminate the elements that cause the inefficiency of the organization's activity generated by the inadequate concern of certain managers in the collective discussion about the arisen problems or in the conflict solving methods.

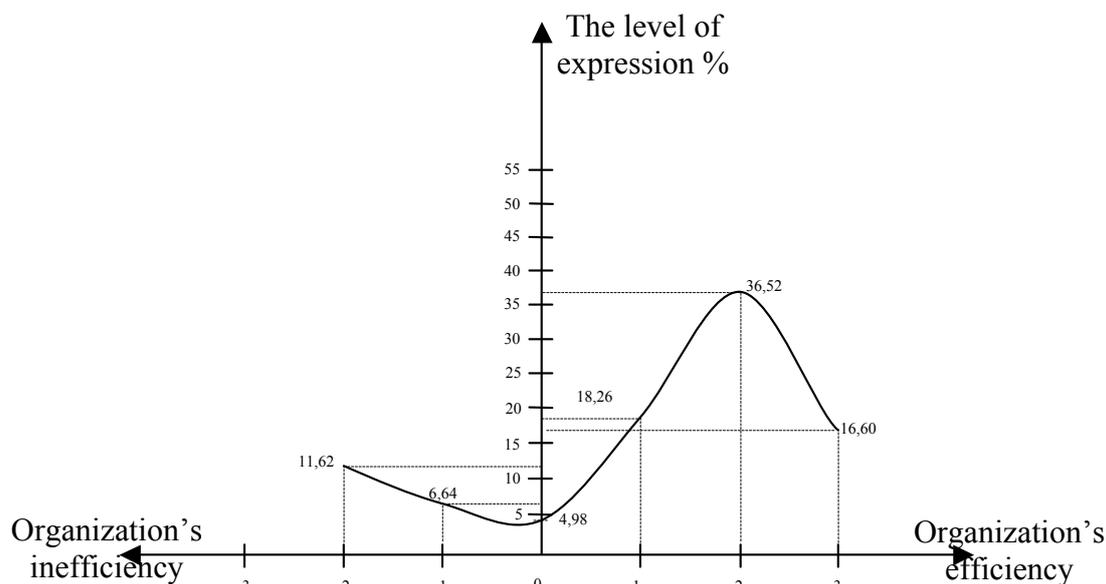

Figure 4 The positioning of the relationship factor

Note: A movement towards the organization's inefficiency area of the opinions regarding certain discontent of the test subjects concerning the quality of the relationships between managers and teachers is observed.

6.4. The analysis of the motivational factor

- a) A movement of the opinions towards the inefficiency area is observed, the test subjects showing a degree of discontent towards the attitude of certain managers regarding the promotion chances, bonus granting and the salary level.
- b) The analysis of this factor underlines a stress state that has negative influences on the organization's performance, according to figure 5.

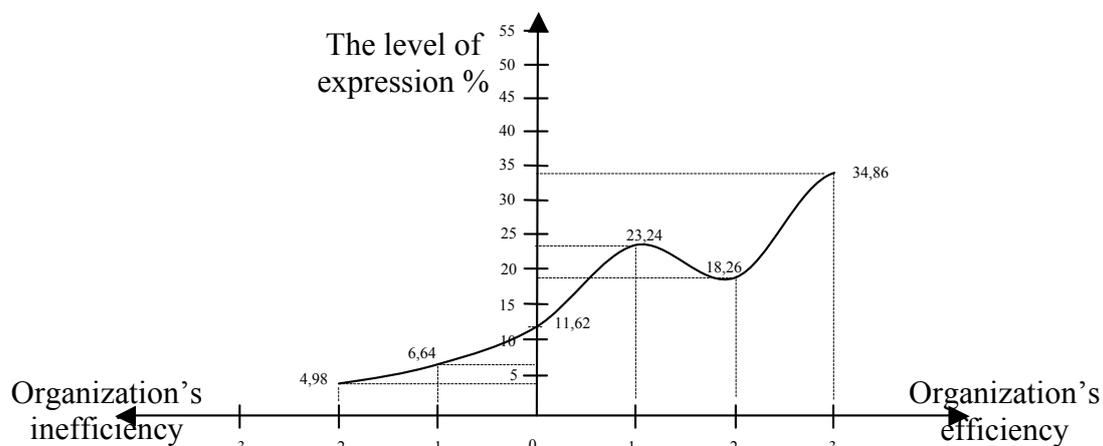

Figure 5 The positioning of the motivational factor

Note: The obtained values are dispersed exceeding Gauss curve. The graphic expression of the opinions reflects the necessity of improving the motivational forms.

6.5. The analysis of the management factor

- a) The opinions of the subjects underline a range of options that express a high degree of discontent towards the lack of support, the management manner efficiency and the control activity of managers.
- b) Discontent towards the lack of responsibility and favouring group interests to the detriment of organization interests was expressed.

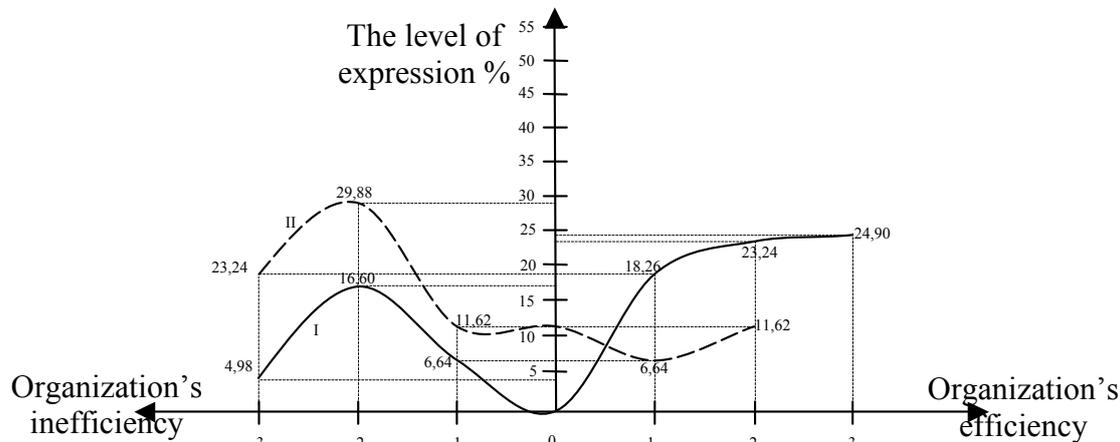

Figure 6 The positioning of the management factor

Note: Curve I – indicates the dispersion of the opinions regarding the managers’ leadership manner;

Curve II – indicates the dispersion of the opinions regarding the favoring of certain group interests;

The curves in figure 6 reflect the tendency to render inefficient the activity of an organization by:

- The inefficiency of the managers’ leadership manner;
- Favoring certain group interests;

7. Conclusions

To improve performance and to reduce the influence of environment factors and stress agents, it must also be considered those non-financial instruments (leadership, communication, prestige, etc.) that can increase the satisfaction (motivation) level of the teachers in the educational system.

An efficient organizational climate may be attained by taking certain measures that can lead to the diminution (or elimination) of the causes that determine the opinions positioned in the inefficiency area of the organization.

Abstract

The presented paper represents the research concerning the quality of communication in a public university type institution. The studied communication process is approached from the perspective of the teaching staff integration within the institutional framework and also takes into account the observations expressed by the teaching staff about the way in which the student community appreciates quality concerning the information they get and the information system they have access to. The starting premise of the research based on applied questionnaires is the existence of a strong organizational culture within which quality is the key. After a review of the quality management principles we chose to study-comment the application of two of them, the principle of client focus and the one of whole staff implication, meaning all the members of the organization no matter the level within its structure. To apply both principles an essential tool is the institutional communication process, on the quality of which relies the entire qualitative development of the organization's activity. Excellence in communication thus becomes a feature of the organization's strategic management and implicitly a feature of institutional communication in the milieu in which the study was conducted.

1. Principles of quality management transposed into the quality of the process of institutional communication

For the assuring of an analysis of the quality it is important to define the basic principles, which have to be taken into account regarding the programming of the quality. In the case of the embedding of a new management system of the quality it is very important to establish such basic principles. In the train of a study initiated by ISO, where over 1000 organizations participated, and which had as a main target the identification of the principles which should be taken into account in the process of the constant improvement of the performances of the organization concerning the satisfaction of the requirements of the clients and of all the interested parts, there have been identified eight principles of the management of the quality: the focus toward the client (user and consumer); leadership, the implication of the entire personnel; analysis based on processes; the systematic analysis of the management; the constant improvement; to take decisions based on facts; benefic reciprocal relations with the producers.

We will deal at first with the principle of **the implication of the entire personnel**. The human resources from all the levels represent the central element of an organization, and their total implication permits that their skills can be valorized for maximizing the benefit of the

organization. The embedding within the organization of this principle presupposes the existence of a system of efficient and qualitative communication and the guarantee that the entire personnel understands and adopts the politics regarding the quality of the system to which they belong to and it integrates itself efficiently in eliminating any kind of communication border, which can intervene in the activity of the institution. The application of this principle presupposes: the assumption of the responsibilities for solving the problems; the actual implication in the identification of the opportunities regarding the improvement of the developed activity; the valorizing of the competences and of the experiences; the sharing of the knowledge and of the experience within the working teams; the concentration toward the satisfaction of the clients' needs; the development of a creative spirit in defining the future aims of the organization; an exceptional representation of the organization in the relation with the clients, with the local community and with the society in general; the obtaining of performances on the score of the rolled activity; the development of the feeling of belonging to the organization.

We deal with the principle of **the focus toward the client (user and consumer)** to show that the main mission of the organization, which aspires to a management of the quality, is to satisfy the demands and the expectations of their clients. The quality has to be defined according to the clients' requirements, and these are transposed in specifications, on which the products are achieved with certain characteristics of quality. In order to satisfy the clients' requirements it is imposed to improve the quality in every domain of activity which belongs to the organizations, and not only those involved in the achievement of the products and of the services. The organizations need well thought strategies for satisfying the clients' requirements, thus, the application of the principle "focus toward the client" implies: the understanding of all the needs and expectations of the clients concerning the products and the services; the assurance of an equilibrium between the manner of dealing with the needs of the clients and of the other interested parts (owners, the personnel of the organization, the producers, the local community, the society in general); the communication of these needs and expectations in the entire organization, the assessment of the clients' satisfaction for the constant improvement of the results; the management of the relations with the clients.

The organizations have to understand not only the needs of the client but also the capacity of their own organization to satisfy these requirements. An inefficient communication between different entities involved in the projection and achievement of the products may lead to major differences between what the client desires and what he receives in the end.

2. Excellence in communication, an attribute of the quality of the system of management of the institutional communication

The theory of the excellence sustains the fact that for an organization the communication has a special value because it permits the construction of a solid relationship with its strategic publics. This theory was developed by a group of researchers from the University of Maryland USA, coordinated by J.E. Grunig. The researchers involved in this project started from searching the factors, which determine the "excellence" of the public relations of an organization and investigated over 300 organizations, some of them having the repute for the quality of the communication, and others known for the failures in the process of the public relations. From these researches resulted the principles of the excellence in communication. 1) the preoccupation of the leaders of the institution for the quality of the communication; 2) the contribution of communication in the achievement of the strategic plans of the organization: the public relations must be used also in the strategic planning; 3) the assigning of the management function for public relations on the principle according to which the performance appears there where the specialists in public relations become "managers", creators of communication strategies based on research, planning and counseling; 4) the adoption of the model of symmetrical bilateral

communication: in this model the communication is rolling in two directions (public-organization; organization-public), taking into account also the reactions of the public, not for identifying the manner in which these reactions can be changed but for changing the behavior of the organization; 5) the obtaining of the efficiency in public relations through the development of the potential of the communication department in applying the model of the symmetric bilateral communication and the extension of the function of strategic management of communication: there where the competence for accomplishing the research with quantitative and qualitative methods exists, and for the practicing of the managerial functions (human resources, creating and applying budgets, planning campaigns, etc); 6) the demonstration of a high quality of communication through the implication of the communication departments in dealing with some problems of public concern, as an answer to a series of actions of some civic or communitarian organizations; 7) extremely good public relations appear in institutions based on organizational, participating, organic cultures with mechanisms of intern dialogue and with a higher degree of work satisfaction; 8) the quality of the communication is better in the organizations, which promote the diversity. To these factors it can be added the preoccupation for ethics that is the commitment of the organization to respect the principles of communication responsible also for codifying these values in ethical codes, preparing its employees for a moral behavior in the internal and external relations.

Starting from the fundamental concepts of the communication, J.E. Grunig and L.A. Grunig (1992, p. 83) sustain that “the researchers and the practitioners can use any of these concepts in order to measure the quality of the strategic relations of the organizations”, but there are theories according to which the attributes of the excellence in communication are: reciprocity, trust, credibility, legitimacy, openness, reciprocal satisfaction and reciprocal understanding.

3. A study concerning the quality of the communication, the degree of identification regarding human resources with the milieu in which they roll their activity, as demonstration of the application of the principles of quality and of the theory of excellence in communication

The study was launched in the lines of the teacher department of the University “Lucian Blaga” in order to identify the manner in which the access to information is perceived and also to identify the degree of existence of some borders of communication, to establish the quality of the internal communication and of the degree of identification of the human resources with the milieu in which they practice their activity, with the culture of the organization, to which it belongs, and the fact that the material presented is a part of a project of an extended research regarding the management of quality of communication within the public institution of the university type.

We have specified above that excellence in communication represents an attribute of the quality of the management system of the institutional communication, and the two principles of the management quality, the focus toward the client and the implication of the entire personnel confers excellence. A holistic analysis of the term client may permit the attribution of the client quality to the human resources of the organization. To the human resource of a particular organization it may be attributed implicitly the client position/quality. The human resource involved in projects of development concerning the organization may benefit as a client from all facilities and may have access to all the levers for personal development. For this fact to be possible, the human resource must recapture itself within the organization, the mission and the aims of the institution must coincide with their own aspirations regarding the professional development. In this perspective, from the designed questionnaires applied on an representative pattern of teachers in an academic milieu resulted, according to the presented graphics, the fact that a significant percentage of the ones questioned consider that the aspirations of professional

development coincide well and very well with the mission and the aims of the institution and implicitly, the subjects consider themselves integrated in the organization.

Higher and higher levels are imposed to the modern organization, based on lasting principles of development, and not only in the field of the technology and management based on strategies and directions of innovative development, but also in the field of the increase of the performances of their own human resources, in the field of the increase of the level of knowledge and abilities of communication inside the organization but also outside it.

These aspects impose the correlation of the personal aims within the professional field of human resources with the aims of the organization.

In the strategy of the modern organization, the excellence can be defined also as a preoccupation of the top management for developing the perspectives of the human resources in the constant development, openness toward initiation and implication of the personnel in projects, which bring more knowledge not only to the organization but also to the teams of embedding, in the university milieu the projects of research which bring results to the initiated university, but also to the academic teachers with the quality of a member in programs.

Table 1 First set of experimental data

The mission and the objectives of the institution coincide with my aspirations of professional development

	Frequency	Percent	Valid Percent	Cumulative Percent
Valid Not at all	2	2,0	2,0	2,0
Dissatisfactory	4	4,1	4,1	6,1
Satisfactory	15	15,3	15,3	21,4
Good	39	39,8	39,8	61,2
Very good	38	38,8	38,8	100,0
Total	98	100,0	100,0	

In the present study, in this perspective the questioned ones considered in significant percentage the fact that the mission and the aims of the institution coincide with the personal aspirations of professional development.

The academic milieu, within which the prospecting was achieved, is well represented in statistics and national and international studies concerning the openness and the results in the field of the scientific and innovative research.

This also justifies the answers and the percentages with positive assessments – 55,10% good and 23,47 very good – for the item “I am encouraged to specialize myself, and to develop my competences and my professional potential.”

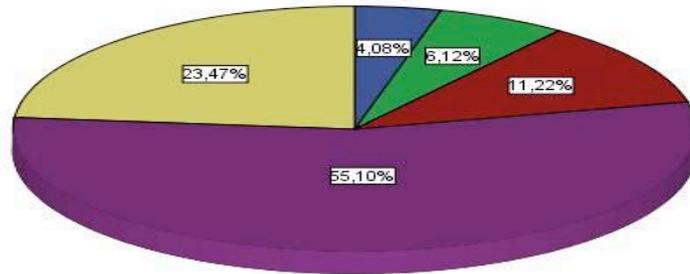

Figure 1 Capture number 1 of scientific research

Table 2 The second set of experimental data

I am encouraged to specialize myself, to develop my competences, my personal potential

	Frequency	Percent	Valid Percent	Cumulative Percent
Valid Not at all	4	4,1	4,1	4,1
Dissatisfied	6	6,1	6,1	10,2
Satisfied	11	11,2	11,2	21,4
Good	54	55,1	55,1	76,5
Very good	23	23,5	23,5	100,0
Total	98	100,0	100,0	

The professional development of the members of the organization depends directly on the quality of the information, which they dispose of or the quantity of information held. The communication built on the principles of the quality management, the transparency of the decisions, their originality and their avant-gardism will lead to the right and realist perception of the organization as an entity, which addresses not only the internal milieu but also the one of the community to which it belongs. A section of the scientific research represents a study regarding the access of the teacher to the information inside the organization. The manner in which the questioned disposes of the informational resources of the organization influences directly his/her attitude toward the rolling of the entire process of development of the organization, but also of the accuracy of the personal decisions, of the actions in which he/she is involved according to the direct reality.

To emphasize the existence of the attributes of excellence in communication, we will selectively present aspects resulting from the reworking of the data from the study, which viewed all the possibilities of access of the teacher to the information inside the organization, *if the necessary information is received in due time, if the information is available for the qualified*

persons and for the verification of the preoccupation of the organization for the quality of the information of which... *I accidentally receive the information that I need.*

Table 3 The first information of scientific researc

4. Conclusions

We consider that the constant improvement of the products and the services offered by the organization becomes reality through the constant refinement of the processes rolled within the institution, through the identification of the requirements of the client-citizen. Starting from the

theoretical aspects we underline the fact that between the enounced directions in the operational plans of institutional development there have to be scheduled periodical analysis of “the state of health of the communication in the institution”, studies of the evolution of the relations developed by the human resources inside and outside the organization, the dealing of the politics concerning the modern personnel, by planning studies that are concerned with the internal marketing. An important role in this process is taken by the manager who has visions over the perspectives of the development of the organization, by the team that is chosen by the manager for fulfilling the aims and the manner in which the leader of the institution creates the bond named communication within the organization. The importance of the institutional communication relies on the fact that it has the role of emphasizing and naturally of valorizing the politics of the institution, which implies the permanent presentation of the strategy, of the structures and of the identity. Within the presented study I analysed the degree of developing the management of communication built on the principles of the quality management, of the transparency of the decisions, of their originality and their orientation toward the client’s requirements-human resource. In the applied questionnaire there were closed questions formulated, with the purpose of obtaining results very close to the reality, and the elaboration of these questions through the SPSS program was accomplished by means of the analysis to a general level of the answers according to five answer versions, very good, good, satisfactory, dissatisfactory and not at all. We show that an attribute of the excellence in communication results from the composition of some very good public relations in institutions based on organic, participating organizational cultures with mechanisms of internal dialogue and with a higher degree of satisfaction regarding the work. The human resource - a client which benefits from an access to information due to the organization, which adopts the symmetrical bilateral communication, which identifies its own aims of development within the aims of the organization, which agrees and certificates the fact that it benefits from useful information in due time, and from the qualified sources it defines itself as a human resource whose expectations are respected and fulfilled. These aspects lead to the substantiation of the quality principle emphasized above—the implication of the entire personnel - in this case through the development of an efficient system of communication through the stimulation of the creative spirit of the human resources and the development of the feeling of belonging to the institutional milieu as an answer to the reception of the organizational culture.

Introduction

The 21st century has seen the world entering into the information era and ushering in what has been termed as the *knowledge society*. This is a century that has seen the world change rapidly from a labour driven economy to a knowledge and innovation-based economy. In this era, harnessing the power of information and knowledge has never before been so crucial. There is a fresh recognition and reconsideration of the role of education in development and growth of nations. Through scientific enquiry, knowledge is being produced and used as a vital aspect in economic, political and social development in the world.

Higher education, where much knowledge is produced in any given country, has become an essential component in boosting innovative performance across economic sectors. Together with other factors, higher education is understood to make a necessary contribution to the success of national efforts to boost productivity, competitiveness and economic growth (Bloom et al 2006).

Given the pre-eminence of knowledge in this century, and its role in the development of nations, it is important that it is professionally captured by use of scientific research, stored, and disseminated to various sectors to aid in national development. Statistics, however, indicate that scientific research in Africa is still struggling to keep pace with the rest of the world. This is an obvious threat to the growth of Africa's economies.

The UNESCO analysis of the state of science in the world provides a picture about the situation of scientific research in Africa as compared to the rest of the world. Africa accounts for only 0.6% of Gross Expenditure on Research and Development (GERD), with South Africa's share representing as much as 90% of the 0.6%. Only 0.6% of world

researchers and 0.9% of the world share of scientific publications were provided by Sub-Saharan African countries in 2001, and about half of this contribution was accounted for by South Africa alone. This is a grim picture of scientific research in Africa as a whole and Kenya in particular.

What is the implication of social and academic research in Africa as a whole and Kenya in particular as an aid and guide to development?

This paper attempts to describe some major issues facing research in Kenya. It gives impressions on the needs and problems in relating research to African development. The paper presets an argument regarding academic research and its contribution to national development needs in Kenya. It looks into issues such as how Kenyan universities can encourage faculty members to progress beyond basic research and take on challenging cutting edge research; and how Kenyan graduates can move beyond the 'schooling' syndrome to a 'learning' culture.

An Overview of University Research in Kenya

Research is one of the core pillars of the university system in the world. It is the engine that generates new knowledge and provides ideas for national development. Higher education is biased towards research, especially at the graduate level. Universities are increasingly being called upon to provide research results and also opportunities for transfer of knowledge that has been generated through research to industries and private businesses (Ntiamoah- Baidu, 2008).

In Kenya, universities have been arguably conventional sources of graduates. They concentrate on preparing graduates to secure jobs, instead of preparing them to become engines of community development. A lot of research is carried out by these graduates, but it is carried out for the sake of fulfilling academic qualifications. In the 1970s and 80s, for example, the volume of research carried out by the university of Nairobi (the only public university in Kenya at that time), was one of the highest in Africa (Ngome 2003). Yet, this research was not disseminated to the private sector for implementation. This trend continues even to this day.

For faculty members who engage in research, their commitment to research is upon promotional opportunities or student supervision rather than improving learning outcome and generation of knowledge (Rodrigues, 2008). Currently, dons in Kenya are rating themselves, not on the quantity of research and publications, rather on the number of students that one is teaching. This is especially true after the introduction of the parallel degree programs in the country. The mission of dons of providing effective research, dissemination of information and service to community has been compromised severely.

It is not quite clear what kind of education will unlock the mystical door of development.

Research Culture in Kenya's Universities

One of the problems that Kenya is facing in terms of educational contribution to national development is the culture that prevails around studying. This culture spills over from the

primary through the university and to the faculty researchers. The country continues to uphold an education system that is centered on schooling rather than learning. There is a culture in Kenya that teaches students that education is a means to an end; a passport to a job. Students are not trained to be analytical and intelligent in the sense of the world. With such a mentality, students study to pass examinations, rather than to develop a deep understanding and mastery of their own life and environment. They expend large amounts of mental energy on strategizing how to remember facts and formulae.

Graduates from such an education system cannot generate new knowledge; they can't solve problems in society because they lack innovativeness which their education system denied them. They suffer from the 'paper qualification syndrome'. This is a feeling of job qualification by virtue of holding certificates that show one has passed exams; while at the same time lacking the correspondent skills and attitude required to perform effectively in the job. In such a state, research that is geared towards national development is impossible to generate. It is important for educational planners and teachers in Kenyan educational institutions to impact into graduates that the concept of education goes beyond classroom learning.

University research suffers from a deficit of effective organization and management. It lacks a vision, appropriate policy frameworks and strategic planning; and lack of a service culture within the structures responsible for administering, coordinating and promoting research.

Kenya's researchers have not been able to tailor their research content and pedagogy to the socio-economic realities of their nation. They seem incapable of developing local solutions for local problems. Faculty members together with university students have failed to create relevant research questions from the needs of society, which can fit in national policy, contribute to national development and address various problems in the country.

Education in Kenya has largely operated in isolation from the economic sector that it is supposed to serve. The result is that the product of that education has been found wanting in vital skills that are needed in the economic mainstream of the country.

Knowledge is often perceived as something that needs to be preserved and documented before it vanishes. Because of this mentality, when research is carried out by both students and staff in Kenyan universities, it is often 'tucked away' on library shelves for what looks like a 'preservation exercise'.

For most university researchers in Kenya, the primary motivation for carrying out research is promotion. The value of research in institutions of higher learning is hinged on the 'publish or perish' syndrome. There is a general lack of hunger for new knowledge and research for development in Kenya's Universities.

Disseminating Research Information

Research alone is not a prerequisite for development. The challenge in Kenyan Universities is to make research and development results accessible to those who require it.

One of the ways through which research work can be disseminated to various stakeholders is through publishing. Scholarly publishing is as a result of scientific enquiry, which in turn enables implementation of findings for the purpose of national development. Academic publishing is one sure way of distributing information. It is however shrinking because publishing houses have hefty charges to publish author's works. Publishing houses in Kenya have also been accused of playing it safe by sticking to recognized authors. This is a blow to upcoming authors in the country. Also, In Kenya, publishing comes against an intense background of a weak technological infrastructure base. Castells (1998) terms this condition as "technological apartheid". Giving an example of the Internet, Castells (2001) says that it is the technological tool that distributes information, knowledge and networking capacity. He says "development without the internet is equivalent to industrialization without electricity in the industrial era (ibid, 260). In sub-Saharan Kenya, the use of internet as a tool for disseminating information is extremely low. People would rather use the net for social networking

Kenyan Universities also lack a strong culture of national conferences, lack of national scientific journals and poor communication networks, which could aid in research dissemination. This is a problem that is spread in the wider African society. In 1995 for example, sub-Saharan Africa was responsible for 5, 839 published academic papers, Asia had 15,995 papers, Latin America and The Caribbean had 14, 426 (TFHE, 2000). The problem of lack of scientific journals is also coupled with lack of qualified researchers due to brain drain. For example, roughly, 30% of the region's university-trained professionals live outside Africa (Inter-academic council, 2004). Up to 50,000 African-trained PhD holders are working outside Africa (Cornish, 2005).

While carrying out research, Kenyan universities act in isolation (Camara and Toure, 2010). There is a very wide gap between academic institutions and the economic and development markets in Kenya. Because of this, knowledge produced in Universities cannot inform national policies and programs in various sectors. Universities should be socially embedded so that they can be in position to aid in tackling society's problems.

Research and National Development

According to Dasgupta and David (1994), economic growth in the modern era is grounded on exploitation of scientific knowledge. It is only through thorough research and proper dissemination and utilization that scientific knowledge can become a component for economic growth.

But there are scholars who feel that such a step is not easy to take. According to Juma (2006), addressing Africa's development challenges will require the creation of a new generation of universities that can serve as engines for both community development and social renewal. Juma (ibid) feels that institutions of higher learning should be key players in domesticating knowledge and diffusing it into the economy; but they can only do that

through close linkages with the private sector. And that, Juma says, will require major adjustments in the way universities function in Africa.

Nyuyen (2009), supports Juma's views by saying that Universities have a responsibility, not only to provide teaching and carry out research, but also to contribute directly to economic growth of the society in which they are embedded

Conclusion and Recommendations

In conclusion, research in Kenya's universities is perceived as an ivory-tower pursuit. When it is done, it is not availed to relevant fields to aid in national development. Research however, should be perceived as critical to eradicate poverty and to prepare the country to cope with other problems of development. The University in Kenya must become a primary tool for the country's development through the knowledge and research that is stacked in University library shelves. This paper recommends the following;

Researchers in Kenya's Universities have to learn to think through their problems and find solutions to them. They must change the asymmetric relationship with donors that knowledge and research generated and owned by Kenyans to solve Kenya's problems must be generated.

Universities should seek to break the isolation that has characterized them over recent decades, and influence and connect research with national development priorities.

Kenya needs a strong community of researchers who can discover resourceful and timely ways to deal with poverty's many causes. We need universities with a strong emphasis on graduate research as opposed to graduate teaching.

An important goal for the Kenyan government should be to develop a sustainable research culture in higher education in order to provide human resource and expertise towards designing national policies. Kenya must emphasize research and prioritize the role of science in development.

Topic: Representations of the East in the West in the archiving of protest in Belgrade in '96/'97

Balkanising Taxonomy by Nela Milic, Goldsmiths University

The Realm of Memory

This introductory part contextualises a contemporary history of the study of memory and its place in the modern discourse of Serbia. Considering that I am implicated in this research as an event participant and I am trying to conduct the research at the same time, I take on Benjamin's advice: "He who seeks to approach his own buried past must not be afraid to return again and again to the same matter; to scatter it as one scatters earth, to turn it over as one turns over the soil."

Walter Benjamin, 1927-1934

Inevitably then, I will address the Serbian trade which is well known around the world – war mongering, depicting the theoretical environment within which I am now working in/from. The issue of representation and working from the Western European platform will be discussed at length, as well as the emergence of visual methodology employed in this research and its importance for understanding the link between the technology and the revolt.

In the municipal elections on 17 November 1996 in almost all cities of Serbia the opposition coalition Zajedno ('Together') won. The results were overruled through overt government intervention in the civil service and in judiciary institutions. Hundreds of thousands of citizens came out on the streets, and rallies against the electoral fraud were organised. The participants were predominantly young or middle-aged, well educated, urban, and middle class (Bobovic & Milic, 1997).

What is Memory

This paper will focus on a social set of influences in memory and Frisch's approach to it as "... the leap across time from the then of happening to the now of recall" (1990) It will contain a combination of the experiences of the past, the set of circumstances within which these experiences occur and the way in which the individual reflects on these experiences in her present circumstances. This complexity of memory as time-related notion is of the interest here rather than its biological/psychological attribute. The politics of memory that will be deliberated is born in this layering of meaning, reflections, experiences, circumstances and its dichotomy is presented as the closure of the past in the present, or the construction of the future by means of a living and active past faced with the present. (Cassin, 2002) My research frame will leap from the individual notion of memory to the event of protest, encompassing its political, social and cultural aspects.

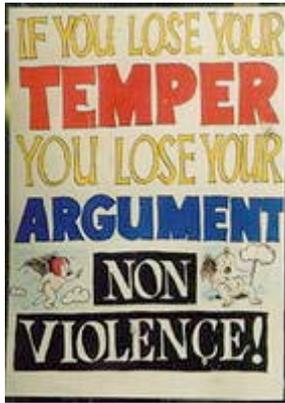

In her inaugural professorial lecture at Goldsmiths University in 2009 entitled *Biopolitics*, Vikki Bell attains that “Sociologists consider how the past holds us and continues to shape the present”. She talks of memory as “the voice”, like it has its own life, both reality and fiction, devising a separate category existing along with what it was then and what is “then” now. She does not forget to call on its destructive and redemptive potentials, particularly when addressing the violence of power that will be analysed in a chapter on identity and nationalism. I am touching on these notions in this paper too, as they inevitably creep in when we try to “locate the memory” in the collective, especially in Serbia where recent history is widely known along those constructs (ethnicity).

The interest in memory has penetrated all levels of society. Even the basic search engines - Wikipedia for example - list complex results, like the phrase “politics of memory” and state its connectedness to identity and its vulnerability from culture, social norms and governments. As an example here and in most of the writing on memory, Holocaust has been presented as a point of departure when studying and doing “the work with memory”.

As Serbian war crimes have been almost synonymous with the Holocaust, it is impossible to explore the memory of the culture of protest '96 – '97 without addressing this issue. Balkan wars Serbia was involved in are for many the only knowledge of Serbia and its imagery now constitutes their memory of the country. They might have never been in Serbia, but they do remember the striking footage of it which I do not want to contest from the present, but complement it with visual data and a textual analysis of Serbia's protest in attempt to contribute to the positive records of Serbia's history under then president Milosevic.

Representation of Serbia in memory and elsewhere will be analysed in the context of Serbia itself – how Balkan academics (and who are they) write about the Balkans and Serbia and what is their construction of Serbia and the western cultures. Equally, I'll address how West European academia perceive and define Serbia and the effect it has on the political, social and cultural dynamics of the East and the West Europe. As knowledge itself is re-presentation, I will question the process of acquiring it in relation to the current image Serbia holds in the western cultures.

Serbia's protestors, however they felt about their heritage, had an interest in and the enthusiasm for the West European cultures. Their visual and textual references – pictures and statements on banners, vouchers and walls in the capital of Serbia, were of a democratic nature and they demonstrated a desire to be accepted as such – contemporary European instead of a “trigger happy” nation depicted in the media mainly by the war criminals. Protestors were eager to be understood as members of civil society by partaking in a peaceful movement, as the ones seen around the world and opposing the violence, executed on the orders of the Serbian regime.

However, non-violent demonstrations could not overturn the dictatorship and it took the death of the president, Hague Tribunal trials, several elections and ongoing negotiations with the West European and US peace organizations, military echelons and governments to drive Serbia (to) where it is now – still eager to join Europe where it is geographically situated, by being politically acknowledged as a member of the European Union. It is in this desire for EU status that problems with the national memory arise and play a leading role in rebuilding the state, the nation and its image. This is the focus of the spectrum explored here, taking memory as intrinsically social and artistic, wrapped up in the issues of nation-states and supporting the blocks of the old and emerging disciplines like sociology and digital art my research is situated in.

The politics of memory

In Serbia, politicians have been praying on national stories – myths and legends accessible in the school curriculum that hosts publicly promoted knowledge inherited from the past. From the primary school then to adult life Serbs know the official version of history in the state. State was not to be questioned for anything for decades, let alone the history, until the changes hit East European nations separating from communism and the dominant groups and territories in the region. Memory acted as a double-edged sword leading to understanding and overcoming existing ethnic, religious or social divisions or, as in Serbia, perpetuate them...

Contending historical narratives is closely connected to group identities as we noted earlier about the Serbs, the nation branded for the war crimes. If we are to analyse the ethics of this matter, it would be necessary to discuss war criminals as victims too and that requires a considerable diversion from the protest (and is very difficult to negotiate), but my research cannot be without acknowledgment of this route that is more visibly signposted than the main road of protest I want to take.

My work (art or otherwise) is burdened by a popular view of Serbia today – a view through the war crimes. To “balance the books” (Timothy Snyder, 2005) and include the opposition (that was always existent in the country and particularly creative) to these crimes, the glorious moments of Serbia’s history would need to be asserted and this is again not the attempt in this research, although the protest surely is a moment of glory. This research aims to deliberate on the culture of that particular uprising that got forgotten by both Eastern and Western Europe in the overwhelming narrative of wars. How can I then get out of the “hole of shame”, so Serbia and the Western Europe try a different approach to this country’s past. Finding an appropriate

and acceptable balance of the opposing understandings of past events is crucial for grasping the realm of memory. Through memory, the protest will be grasped and through the balance, the memory of it will be grasped too.

“The war of politics and the war of memory are intertwined.”

Phenicie & Laplante, 2009

Otherness

Serbia is positioned as “the other” in a shared narrative of Western states. This technology of separating “the other” from “the we” can be found as implemented in a wider context, outside (of) the nation states, where one set of knowledge has the power to hold the threads of universal history through its economic, political or cultural strength, placing epistemological questions at the beginning of the argument and enlightening it throughout.

In the above described conditions, the innocent, as well as marginalised groups are punished under the umbrella of the “other” - through their representation being buried below the ones who stand for them as “all”. The Western Europe and civil society everywhere, even in Serbia recognizes that, but at the same time the nationalist Serbs (“the others” in the above situation) need to stop regarding their criminals as heroes for this take to change. So, there are many othernesses in the category of “the other”. The politics of memory in case of Serbia fuels yet another war – the one of representation. I will strive to decode the language of that representation and find a more acceptable way of narrating this imperfect past. This new articulation will be attempted through the complementary employment of text and image and as a historical representation; it will examine the role of collective memory and of its perceptions in the dominant European discourse - nationalism prominently existent in Serbia since Milosevic’s reign.

I am not inviting amnesia or forgetting here, but suppression, just for a moment, to inspire a possibility for progress in Serbia. As the more positive elements of Serbian past, like the revolt in ‘96/’97 become included in the account of its history, we should be able to look at the nation with understanding its relation to the war crimes conducted parallel with their ability to invite the violence or, in the time of protest elaborated here, not engage with it.

Let’s not misunderstand that I am holding that Serbia’s war crimes, as quickly accessible as its recent history, got a hard sentence, I am not addressing the war crimes, but stating that there is no other platform to speak from because and if I even attempt to question it, as a Serb by origin, I am on dangerous ground, verging on disrespect towards the victims of those crimes, living and the dead. In clutches of such a strong and widely disseminated narrative, supported by penetrating and harrowing images of devastation, I find myself and the whole of Serbian nation buried under the victims of these crimes.

Mani reminds that overcoming the cleavages of the past can be done if the pain and suffering of the victims is recognized both on the collective (public) and on the individual (private) level and that those responsible for the past atrocities are brought to justice (2002). Except the search for justice in Serbia illuminated by the political changes, meant that personal developments in the

area of responsibility, remorse and grief were shunned. Hence, it is hard to make a first step in this journey- excavations are overrun by the new properties of the nation – mostly an interest in material culture and its accessories like fame and fortune in-built in the religious aspiration rapidly developed in Serbia since the fall of communism.

“There is no one history, but, since there are different perspectives and perceptions, there are also different interpretations...”. (Schlogel, 2008) In order to move on from its violent history widely accepted in the Western and many Eastern cultures, Serbia appears to be jumping the queue, bypassing the laws, forgetting the responsibilities, holding on to selective memories and all for the EU embrace and on the encouragement of especially Western states which played an important role in both war mongering and brokering of the peace deals. On another hand, how then to support remembering if in Serbia, memory is mostly interpreted as the drag to the past rather than the discourse of the future? “A liberated treatment of the past is possible in liberated societies that are liberated in every way...” (?)

There is logic in arriving to this state of affairs, between Eastern and Western Europe. Theories of “other” stress that these tensions always existed between dominant and marginal entities. Levinas (1969) marks: “The intentional relation of representation ... is to be distinguished from every other relation” especially that of “mechanical causality.” The object here is a result of our interpretative acts, hence it is always the same that determines the other.

We, humans are constituted by the relationship of being for the other. We do not rise to the responsibility for the other, but face to face relations call on this just as the participants of protest in Belgrade were confronted by the faces of their nationals prompting the revolt to grow daily to hundreds of thousands of people. The upraisal was inspired by the care for the other that turned the subordinate citizens liberal, offering a shelter to protesters when police roamed the streets. The viewers of the footage from the streets when it emerged through satellite channels were facing the other on the TV screen whilst sitting in their homes, but acted as protestors indirectly when “the other” (streetgoers) were in need.

Face to face does not know the other, but respects it in its totality. The face of the other exceeds the idea of the other in me - the other shatters one own selves. One always looks at oneself through the eyes of the other (De Bois, 1900). To respond to the face means to be awake, respond to precariousness of the life itself. (Butler, 2004)

Nation

In Anderson's (2006) writing, memory features as residing on communal standing. However, that outlet has been so influenced by the Western interpretations of nationalistic political developments in the case of Serbia that it holds mostly these Western views and proposing different approaches find that space already crowded with views of various parliamentarians, academics, PRs... If narration is at the centre of the nation (Bhaba, 1990), the Serbs have to narrate the protest themselves to improve the nation's own view of their image and understanding they have of themselves. Being branded as war criminals so widely and for so long, Serbs now think of themselves as such.

Anderson also deliberates on how revolutionary governments continue to use the legacies of dead regimes. The evidence of this view exists in Serbia, but the new government after Milosevic is hardly revolutionary. Anderson explains how staples of the "imagined community" are further preserved by the illumination and glorification of certain aspects of history. Am I to be accused of this as writing about the luminous protest and not focussing on incriminating remnants of the past (the war crimes in Serbia). Doesn't one have to have some kind of meaning/meaningful past?

Quoting Alon Confino, Maria Todorova (2004) writes about the nation: "...an exploration of a shared identity that unites a social group" whose need of memorial past reveals the newness of the nation as a concept. Nation has to draw on founding myths to appear as very old and located within evolutionary narrative, like the stories of founding fathers and genealogies of the heroes. Common glories are evidently homogenous in the nation. Protest in '96/'97 is ejected from modern Serbia's history saturated by the war narratives in the Western Europe, but in Serbia either. The problem is that it might not be commonly agreed that the uprising in Belgrade is considered a shining historical event.

Serbia's attempt of revolution in '96/'97 was considered as a peace loving, non-violent struggle... but the police and the government that acted with violence are Serbs too. This process of nation development enlightens the difficulty with translating strategic narratives across linguistic or cultural boundaries within and/or between nations.

A battle for Kosovo in 1839, is a founding myth in Serbia used by all nationalist propagators, but the historical outcomes of the Turkish and Serbian clash might be providing a different/same account for the opposing side. This story is glorified amongst Serbs and so serves as a regressing, reductive, old fashioned tale Serbs seem to hold on to in Serbia and in the Serbian tales in the West. But is this a misunderstood legend on both accents – Serbian and Western?

The access to the media set a stage to a modern nation – a limited and sovereign entity that protesters embraced in order to restore Serbia's identity shuttered by the regime projecting images of war and devastation. Via technological advancements at the time – Internet and mobiles, demonstrators sent a very different picture of Serbia to the world.

Working with / from Western European platform

It is hard to find the data to support the view of the Balkans outside of the discourse of nationalism and any creation of such information invites its positionality within the body of work existent on nationalism. Eric Hobsbawn (1983) has described a situation in which political institutions and ideological movements were so unprecedented that even tradition had to be invented, but isn't this the case in all national histories? A destroyed state or national suffering is often used as a self-evident argument in the service of nationalism.

Mieke Bal (1999) takes this idea further: "If memory is fiction rather than imprint (Carruth, 1995), then every history is non-existent". In many newly formed states, traditions had to be invented, and all sorts of new devices and symbols were taken into usage, for example, national anthems and flags. In the new state – Serbia, once a republic of Yugoslavia, much has changed after/between the wars. The insignia of the old power, the national anthems and the flags, fell and new ones were devised, or old ones re-introduced. This reveals that history is not a finished story, but constantly re-written one, from the perspective of the present. So, the protest explored in this paper will be the version of the event only for "now". It would be strange if, along with fundamental alterations, our memory, our understanding of the past also did not change. (Schlogel, 2008)

"There is no document of civilization which is not at the same time a document of barbarism... barbarism taints also the manner in which it was transmitted from one owner to another."

Walter Benjamin, 1940

Eurocentrism – Asymmetry of memory

Apart from its local contexts, Serbia sits in the context of Eurocentrism. Eurocentrism advocates that the history of Europe is exceptional and implies the standardization through imitation and catch up. From Amin's perspective, Eurocentrism is common to both vulgar Marxism and

mainstream political theories. What he means here is that Eurocentrism simplifies complex differences in its nations and so, has the same outlook on other states and nations.

This is evident in its treatment of the Balkans. Serbia suffers from the developments of capitalism. European Union closed its doors till Serbs surrender war criminals, but the eagerness to join in is invited, desperate and aggressive at the same time, while capitalism settled in the state in its most vicious form.

Schlogel (2008) agrees stating that East/West difference in experience produces different centres of historical interest, differing perspectives, a different sensibility with respect to different themes and there are different caesuras with different meanings.

“Speaking about ‘marginalised regions’ always implies a specific position or perspective: there are parts of our world more central than others. By focussing on the Balkans as ‘marginalized’, I assert that other regions like Western Europe or North America are more central. It is in this sense that Western Europe is deliberated in this chapter. We are questioning European cultural concept of Serbia from the perspective of its periphery.”

Previsic, 2009

In Eastern Europe, one had always been more interested in what was happening in the West: in literature, ideas, fashions and freedom. In Western Europe, alternations remained within bounds and all kinds of fears dominated (of floods of job-seekers, the transfer of industries, growing criminality etc.). In 1989 after their own national communisms, de-Stalinisations, personalities, Eastern European states begun the tempestuous re-evaluation of the past – of the last 50 years, sometimes of the whole national history. The debate took place at many levels: in struggles over monuments, street names, textbooks and schoolbooks; public controversies over dates, anniversaries and holidays central to the collective consciousness; the setting up of memorials and museums. Schlogel (2008) This is still going on in Serbia, parallel with other political developments, but directed towards the entrance to the EU, rather than revision of the recent history, introspection and reflection on the past.

There are struggles over the interpretative superiority and the setting of political agendas that are driving the arguments. How such controversies are conducted is a matter of political culture and also of historical culture, of ways of dealing with the past. After the war narratives got embedded in the collective history of Serbia examining any national issues without them is impossible. A memory that has no time for victims of terror under Milosevic’s region and does not include the inmates of the Hague Tribunal, is selective and lacks credibility. To avoid this approach, intellectual infrastructure needs to be in place: access to archives, free publication of sources, independent historical writing and, above all, an independent public sphere, but they are not a guarantee against the creation of new myths and against re-ideologisation. Schlogel (2008)

My research is the attempt to gain a hearing for different narratives of Serbia that now only owns a forced narrative of a common history of conflict - a painful, polyphonic history of insults, injuries and unreasonable demands. If Serbs could bear to hear this - these stories, their own stories, it would be more than one can expect at the moment. The future is doubtful, troubled and

dominant discourse in Serbia, so the past has more appealing, nostalgic qualities. It is, like memory, hard to believe in it, but persists in the mind. What is required is the non-threatening space in which dominant interpretations and national narratives can be heard. In both Eastern and Western Europe there must be a pause of delivering representations and allowance of empty, silent space before the deliberations with no comment attached can begin. If this can be supported, the fuller account of the past is possible.

Today, the Balkans leads in nationalism studies, and in other - art history and related disciplines, it is almost invisible. This is one of the reasons why my research is particularly in the area of arts and culture, as it is not a simple cross wiring east/west (Gordan) that happened, but the Eastern Europe truly suffers from mis-representation and under-representation in the Western European cultural context.

Both micro/macro are colonised and my task is to add to how we liberate the local. We do not want to create more Europes elsewhere, but question the one we've got, its autonomy, the language(s), cosmopolitanism, art and politics.

My model – witnessing as a research methodology

Memory is not static. Configurations of audiences and publics that witnessed the protest are changing as a result of migration and media technologies, and I'll look at how do such changes affect the meanings and practices of (mediated) citizenship? Many exiles, living in the Western Europe, this researcher including, modified the ideas of citizenship emerged during the protest which was the result of a fraudulent election. The voices/choices of people were tempered with in the Serbian election in '96 and the notion of the liberty/freedom in governing these exploded the sense for citizenry in the face of the nation.

Serbs have been witnessing state actors working with the media, the military, NGOs, corporations, and other institutions for years to project strategic narratives nationally and internationally and felt they as a nation, have lost the say in their own history. This sense remains with the contemporary circumstance of being defined by the Western Europe state actors who yet again do not include the stories of the citizens involved in the process of reclaiming their voice – the protest '96/'97.

“The political function of the story-teller is teaching to accept things as they are. From this acceptance, which we can also call good faith, the faculty of judgment springs” (Arendt, 1972). Portelli (2009) makes my journey even harder: You can’t put people in books – you encounter and listen to them and then books get produced. I am constraining myself from judgements and I worry about their appearances, especially in relation to the Western Europe that did not offer adequate support to the protest and even more so, I am trying to give an opportunity to protesters to lead on building the nation through this kind of practice – no judgements, but rather self assessments.

Visualising data

In 1989, after the fall of communism in Eastern Europe, the archives – the depots in which the memory of a society, of a nation is stored – were opened. “A historical activity got underway that previously could only have been carried on abroad, in the West”. (Schlogel, 2008) Interestingly, it is still the case in Serbia, at least for this research that the information is inaccessible and the protest collection is better to be compiled in the Western Europe. Not only because then Serbia’s leaders attempted to cover up the existence of resistance by forbidding its records, but current Serbia’s leaders are more concerned with the party politics and European Union membership prospects than the issues and preservations of the past. Here, in the Western Europe, emerged a space in which the normalisation of Serbia’s historical memory could take place and restoration could begin (p.5), however basic and partial.

My theses is an act of building a digital collection that is also an act of building a community around the collection. I have already achieved this in part, with *Balkanising Taxonomy* where I gathered researchers around the Balkan archive donated by Jane Page in 2007 to Constance Howard Research and Resource Centre for Textiles at Goldsmiths University. This project served as pilot for methodology and pointed to the direction I am now taking with my theses project: building and analysing of Belgrade’s protest archive. I am hoping that this work could begin the possibility of an alternative model of cultural memory altogether and devise research protocols that will sustain the discipline of Balkan studies.

Archive here is understood to cover a range of objects, from a personal badge collection about the protest to a photographic album, from a repository of a writer’s papers in a library to an artist’s installation of objects. Regardless of its content, the archive will work to contain, organize, represent, render intelligible and produce narrative of the protest. I am trying to put foundations to an alternative platform of this repository. The archive has been revered from afar and aestheticized for so long, but not understood as a potential object of critical practice which is how I am trying to introduce it in my research.

I am doing this research as memory fades - memory fed by personal experience - direct memory, both mine and protesters'. I attempt to capture it before it vanishes with me and other individual men and women or is replaced by new, more pressing memory. The ones who were born later can never have the experiences that others have had, can never catch up with them. To think oneself into the horizon of experience of another generation is a question of education, tact, sensitivity. (Schlogel, 2008) I am trying to use all of these traits and create something for the living by embracing the responsibility for the dead, but do it in a manner that will not develop a remembrance so concerned with the past that it forgets the present. "Devotion to the dead that is not borne by respect for the living is somehow unconvincing." (Schlogel, 2008) Sometimes it is easier to exist in the past, which is transparent and self-contained, than in the obscure present. An obsession with history could be so that one can avoid the present.

Instead of focussing on the archive as the repository of truth, I intend to 'perform' archive of the culture of protest as a result of a way of acquiring knowledge and making art that is specific to Serbia. Archive saves and protects memory and is a record of desire for preservation. However, the rhizomatic structure of the archive defies any linearity in terms of the selection, gathering, chronologically, and systematisation of the images and their authors. "The archive does not employ the simple method of adding and including neglected or excluded images," it preserves = pre/serves them. (Milevska, 2006)

There is no single introduction to the archive (arche – true beginning), there are multiple and erratic beginnings. There is no temporal or spatial threshold to the research, even though I am trying to construct one in order to capture a breath of uprising in Belgrade. When I hit the first entry/point/record, I only find there are more accesses to it, but the sole encounter between the researchers and the sought document/image is what makes research matter. "The archive is a labyrinth with many dead ends and no short cuts". (Milevska, 2006) That search, my research itself is an unstable archive and it is rarely the new factual information that excites me so, as the evident tension in interpretations of the records when placed next to each other.

"It is through a continuous oscillation between hypothesis formulation and revision that we move towards understanding." (Coetzee & Rau, 2009) This understanding is precisely what archives can give us.

The English language for Oriental Studies students as a bridge between Eastern and Western
cultures

Julia Falkovich

National Research Tomsk Polytechnic University

The English language for Oriental Studies students as a bridge between Eastern and Western cultures

The new age, new conditions of professional and business environment were the impetus to review the general methodology system as well as specific English teaching methods and techniques. These new conditions imply “discovery” of Russia, its aspiration to be integrated into international community, some core changes in politics, economy, culture as well as ideology and mentality. The increasing pace of multicultural communication, relations between the Russians and other nations, new goals and new ways of communication pose new problems for teachers of English as a second language. English teachers being in the center of attention of specialist have faced up the fact of teaching language as a tool in their professional sphere.

It is obvious that the most hopeful approach to solution of the problem stated is to teach language only within the context of culture and mentality of the nations who speak it. This approach together with competence and context approaches is widely used by English teachers of National Research Tomsk Polytechnic University (NR TPU) while working with Oriental Studies students. The unique feature of this specialty is its specific character that means not being linguistic and not engineering at the same time. The graduates are supposed to be both specialist in the region under study (Pacific Rim) and translators. Moreover their majors are English, Japanese, Korean and Chinese that implies integration of Western and Oriental culture at the lessons of English. The task of the teacher is to form foreign language communicative competence of a student to use it for specific purposes in his business environment. This competence is regarded as a core one in conditions of maintaining close economic relations with the Pacific Rim that will in its turn foster the entering of Russian goods, technologies and services on the Asian market.

While considering the importance of the project on English language for Oriental Studies students curriculum it is necessary to take into account geopolitical situation of Siberian region in particular where the most important spheres have always been external economic relations with the Pacific Rim. The specialist training who are able to work in this direction provides the increasing importance of NR TPU as one of the leading Tomsk higher educational establishments as well as integration of the University into international educational environment.

Thus, English as the second language is an essential subject in curriculum that is designed for Oriental Studies students in National Research Tomsk Polytechnic University. 3000 academic hours are allocated to acquire this course. That is why the English language acquisition can serve as a substantial basis for intensifying necessary background knowledge on Oriental culture as well as being a bridge between Eastern and Western cultures. The task of the English language teacher is to provide authentic material, to compile the tasks that are relevant and of particular cultural interest to Oriental studies students.

Moreover, English language acquisition as a means of cross-cultural and professional communication has become the aim of English language teaching at NR TPU. This aim meets the requirements and corresponds with the international quality standards of higher education. One of the main components of the unique concept of English language teaching at NR TPU is a review of objects and means of English language acquisition level monitoring in accordance with international standards as well as certification of language competence level of NR TPU students. The new certification system is 5-level system of the leading certifying international committee that is Cambridge ESOL, UCLES – University of Cambridge Local Examinations Syndicate).

Following international examination system allowed to change aims, content, strategies and methods of English language teaching at TPU that in its turn resulted in qualitative changes of requirements to the types and forms of testing system. This testing system allows to find out the level of students' competences formation. The model of language teaching of students which has international exams in its basis can be regarded as external linguistic monitoring and it of no doubt increases the education quality and demand in specialists not only at Russian but also at international level.

Being within the framework of new system requires new means and methods of teaching. English language teaching staff of NR TPU work out new principles of teaching, devise new sets of teaching materials that are based on new technologies and new international trends of world vision as well as contemporary topics are taken into consideration. "Modern technologies" is a comprehensive term that embraces a variety of tools. The keynote today is using of multimedia materials that can be not only teaching but also strong motivation basis for English language acquisition by contemporary students. Therefore materials aimed at using in electronic version are being currently devised. These materials are designed not only at full-time students but also distance learning students that helps to solve the problem of English language acquisition at every corner of Russia.

Besides, there is a specific system of requirements to the English language level of Region Studies graduates of NR TPU where goals, intermediary and final results of specialists' multilevel language training are stated. The goal of a program is to form profession-oriented communicative competence in the sphere of the English language as well as highly qualified specialists training who have the second qualification as translators.

The system of requirements suggested furthers successful adaptation of graduates in the labour market not only of the Russian Federation but also overseas. The system of requirements correlates with levels of the English language acquisition according to European Council statements. The given system is based on the principles of variation, continuation as well as multilevel approach that allows to partially eliminate the gap between secondary and higher education in Russia. Variation is provided due to teacher's possibilities to use a wide range of sources to collect the material for the lessons.

In NR TPU curriculum the general requirements to the students' English level acquisition are stated. These requirements are based on NR TPU Educational standards as well as minimum of the State Educational standard. Main competences formation are based on meeting the main requirements on "The English Language" discipline as an element of the humanities module and the social and economic module, together with the professional disciplines module which represents the first stage of students' training in the language of the region under study (Japan, China, Korea). The whole system of the English language training for Region Studies students consists of three modules.

The first and second year students are engaged in the first module of academic program. The teaching of language during the first and the second years is the first stage of language acquisition and is characterized by comprehensive language training. The goal of the program is to master the pronunciation and the English language in all aspects of speech production and comprehension in everyday and cultural spheres. At this stage it is of high importance to integrate content-based tasks that not only cover a wide range of cultural issues on Japan, China and Korea but also instigate motivation to be tolerant and understanding to people from completely different cultures. One of the tasks that can be proposed to the students is to compile a set of questions concerning traditions, standpoints of Japanese, Chinese and Korean students and interview them

using either Internet or even questioning of international students who study in Tomsk. Then the results must be processed and presented at the lessons while students in charge comments on cultural differences between the nations.

The second module is devoted to business issues across western and oriental cultures. The given module is intended for third year students of Region studies specialty and its goal is to further mastering of all aspects of speech production and comprehension namely in the sphere of business communication as well as the formation basis of the written translation and consecutive interpretation skills. As an example the task to carry out business project taking into consideration oriental pattern of conducting business can be provided. The students collect the information on rules of conducting business, think of a project that could be interesting to them and cooperate with their counterparts through Internet. One of the good projects is establishment of crowdsourcing fund in the Internet.

The senior Region Studies students (fourth and fifth years of studying) are part of content-based module that focuses on the sphere of international relations, history and cultural issues of countries under study. Professional skills, etiquette knowledge as well as cultural, social and political situation in the Pacific Rim are covered in the program.

All three modules of the program are finished with the state interdisciplinary final exam on “The English language”. Its goal is objective evaluation of the level of theoretical and practical English language training of graduates for independent professional activity in a given field (theoretical and practical acquisition of the foreign language as well as foreign culture an international communication). The final exam is evaluated according to the general qualification requirements stipulated by National educational Standard, directive 350300, that is “Region Studies of the Pacific Rim”. The set of materials for the state exam include content-based texts covering business, cultural, political spheres as well as history of Oriental countries. Thereby this gives an opportunity for students to determine their aims and tasks during the first years of studying within the framework of State Exam requirements.

It is necessary to underscore that the specific character of Region Study specialty at NR TPU is expressed by introducing the element of ESP as early as the first year of studying in comparison with the other specialties in NR TPU where ESP is taught during fourth, fifth and even sixth years of studying. Therefore it is impossible to use common teaching materials which is the basic element in teaching students of both linguistic and non-linguistic departments. It is noteworthy that there are not enough teaching materials such as electronic books and traditional course that meet the requirements of the subject. This is due to the fact that Region Studies specialty is relatively new although teachers all over Russian tries to solve this problem. Moreover higher importance is attached to formation of tolerance of Russian students to different cultures. When analyzing existing teaching materials it is quite evident that most of them are not professionally oriented for the specialty and they contain not much information about countries under study whereas the materials described are oriented toward General English vs content-based academic programs in higher educational establishments.

Due to this fact it is notable that the profession-oriented approach to the English language prioritizes education in the form of early professionalization, because foreign language teaching during the first years of the University program is followed by the study of professional subjects and the content of foreign language teaching enriches the future specialists with not only background but also professional knowledge.

As a result there is a necessity to devise material that is profession oriented, culture oriented as well as covers wide range of language aspects. Following several criteria is required while devising the material. These criteria are:

- the material shall correspond with contemporary educational standards;
- the material shall meet the requirements of the national educational standards;
- the materials shall meet the needs of students as well as correspond with goals and tasks of the “English language” discipline;
- the material shall comply with at least B2 level according to European Council scale.

The task of material compilers was facilitated by the relatively high language level of Region Studies students. Therefore there is no need for teacher to spend time on explaining some basic language concepts and notions. It becomes possible to introduce culture studies at the very first stage of the program (first module). So, authentic, up-to-date materials need to be selected. Super Highway System together with electronic encyclopedias are main source of contemporary teaching materials nowadays. The work program of the “The language of the region under study” provides the guidelines on materials selection. The topics correlate with the topics of “General English” discipline which is taught in all specialties of NR TPU.

It was decided to to devise a course book that is the mainstay of the study process at the same time using some special materials from books that have already been developed. The books were developed on the following pattern: the set of exercises for vocabulary mastery was developed on the topics selected, the vocabulary is used in the texts, the exercise involving translation of sentences including the words under study are attached, a glossary and test covering lexical and cultural knowledge elements related to the topic under study. Within the framework of the stated task seven course books and two electronic course books were developed (See Table 1.). Here an overview of the materials developed is presented:

1. **Introducing Asian Countries: A cultural Reader** by L. Agafonova, I. Sidorenko includes materials concerning cultural studies of Asia that contribute to the formation of ideas about cultural diversity of countries in the region and it also contributes to the development of multicultural awareness of the students as well as tolerance and right behavior with representatives of other nations. The book is designed for students of Humanities Departments and Institutes who study Region Studies of the Pacific Rim. It can also be used for a wider audience of English language learners during courses or for self-study.
2. **Cultural Aspects of Pacific Rim Studies** by V.Kropotova, J. Falkovich is designed for students in Humanities Departments and Institutes who study Pacific Rim. The aim is to teach skills during the first module of the English language program that allow students to use English in the professional communication sphere. This compilation consists of 11 units containing texts that cover cultural issues of Japan, china, Korea as well as a set of exercises related to them. Each unit has a glossary. At the end of the book there is a final test concerning all units of the compilation.
3. **The Culture of Japan, China and Korea** by V.Kropotova, J. Falkovich is developed for students of the 2nd year of studying. The aim of the book to teach skills of research reading, to expand the range of vocabulary and familiarize students with FCE format as well as extend their cultural knowledge.
4. **International Organizations and Their Role in the Modern World** by V.Verkhoturova, A. Nikitenko is aimed at mastering skills that allow students to use English in their professional communication sphere. The book contains authentic material on a thematic module called “International organizations and their role in contemporary world” Sets of exercise that are developed according to modern tendencies in the theory

- and practice of second language teaching are directed at mastery of all skills as well as ensuring vocabulary on the topic.
5. **Religion** by A.Nikitenko, N. Mishenko is developed for 3rd year students. It consists of four units logically connected with each other. The first unit is devoted to the general overview of main religions, the second unit underscores the 5 world religions, the third focuses on Pacific Rim religions and the fourth dwells on religious cults and sects. The glossary is attached to the book. The material of the book was discussed together with Japanese and Chinese students through Internet.
 6. **The Political System of Japan, China and Korea** by O. Ovchinnikova is a practical book that is designed for fourth and fifth year students of Region Studies. The aim is to teach translating skills and develop the cultural awareness on Oriental countries as well as enrich the student's vocabulary and provide extensive material for discussions and carrying out online projects. This book can also be used for extracurricular reading and for students' self-study. It contains texts on major topics, sets of exercises as well as a final test to the topic and a glossary.
 7. **Foreign Policy** by O.Ovchinnikova, A. Ibrasheva is a course book designed in their 4th and 5th year of studying Region Studies of the Pacific Rim. The course book can be used in lessons for extracurricular reading as well as for self-study. Its aim is to master reading and translating skills for texts dealing with the key topics as well as enriching students vocabulary.
 8. **Korea. Art and Culture** by N.Mishenko is an electronic course book about cultural aspect and art of Korea is developed for 3rd year students but can be of high interest to all students and teachers because it is an example of good piece of material that is really content based as well as contain comprehensive range of language material. The e-book contains seven units. They are Celadon, Painting, Calligraphy, Sculpture, Useful arts, Architecture, National clothes. Each unit provides students with full information on the topic and is accompanied by bright photos and pictures that give a more comprehensive idea about topic under study. There are exercise in each unit that check comprehension both of content and language. The combination of various types of exercises are used: Drag and Drop tasks, Gap filling, Matching, True-False statements. The glossary is also attached to the e-book. The software allows students to switch to any unit of the book quite easily without going through each page. The instantaneous presentation of the results of completed tasks facilitates the work of teachers as well as students to use the materials for self-study. The wide range of information presented allows students to use the course book to prepare discussions, online projects, reports and presentations on the topic together with photos that give an idea of everyday life of the nation. The e-book maintains interdisciplinary connections as there is correlation with topics of major subjects such as cultural studies, history, regional studies.
 9. **Japan** by A.Ibrasheva is e-book about culture and art of Japan that covers wide range of issues concerning rich culture of Japan. The book is aimed at mastering of reading skills as well as expanding knowledge of social and cultural life in the mysterious Japanese society as Western nations perceive it. The electronic course book contains bright illustrations that depict the artistic forms vividly.

While summing up it is noteworthy that all the course books developed are not only the mainstay of the studying process but also are an integral part and additional source of information about Asian countries. Moreover this material help teacher to build bridge across Oriental and Western cultures with the help of the English language.

Table 1

Printed books	Name	Number of Pages	Authors
---------------	------	-----------------	---------

	The Political system of Japan, China and Korea.	82	O. Ovchinnikova
	International Organizations and their Role in the Modern World.	82	V. Verkhoturova, A. Nikitenko.
	Cultural aspects of the Pacific Rim	116	V.Kropotova, J.Falkovich
	Foreign Policy (China, Japan).	141	O. Ovchinnikova, A. Ibrasheva
	Introducing Asian Countries: A Cultural Reader	96	L. Agafonova, I.Sidorenko
	The Culture of Japan, China and Korea	194	V.Kropotova, J.Falkovich
	Religion		N. Mishenko, A. Nikitenko.
Electronic books	Japan Korea. Art and Culture		A. Ibrasheva N. Mishenko

As a conclusion it must be underscored that teachers working with students of Region Studies at NR TPU have accumulated profound work experience while developing material to facilitate the process of English training as well as to build bridges across East and West. The following materials have been devised:

- a unified work program on English including General English, Business English and ESP;
- a system of requirements for the level of the English language for graduates;
- a basis for final examinations and state exams while taking into consideration contemporary competence and context approaches;
- printed books for students of 1-5 years of studying;
- electronic course books;
- a video course based on BBC materials.

Moreover there is an ample opportunity to integrate computer technologies into the lesson that allows to make the lesson not only more interesting and fruitful in terms of language but also more profession oriented by implementing interactive communication with representatives of the countries under study as well as working out Internet on-line projects based on authentic material. The work with computer implies using world wide web along with electronic course books devised by teachers especially for Oriental Studies students. During such lessons students apply and broaden the language knowledge and get an extensive range of cultural data.

The range of Internet projects can be comprehensive. There are two main types: www-project and e-mail projects. The main idea of www-project is to find the information in the Internet that is necessary for doing some task and to present the results of the search. The topic of the project can be either identical to the topic under current study or it can be interesting and urgent for students within the general framework of English learning process.

Suggested topics are as follows:

- studying the information about the region or city, revealing the problems, advantages and disadvantages of the city, comparing with situations in the cities in the native countries, suggesting ways to tackle the problems;
- making itinerary how to travel by train, coach or car either within the country under study or to the country under study;

- search of information about the foreign firms, products, way of advertising the products in these firms, prospects of studying and work abroad (Japan, China, Korea)
- search of potential fellow-students in the countries under study

To work on projects the teacher must not only provide the topic and access to the Internet but also be ready to carry out the project. It is necessary to form the groups, fix the time frames, think of the materials to be used except Internet, find Internet addresses and provide students with them, choose the most appropriate form of results presentation.

Another type of Internet projects is E-mail projects that are aimed at mastering written communication skills. Although there are two types of written communication in the Internet that is simultaneous (chat) and asynchronous (e-mail, forum, blog). At NR TPU the asynchronous form is used to teach Oriental Studies students. It is explained by the possibilities this form of communication gives. It allows to work with the text more thoroughly than while having instant communication. E-mail communication can be very effective while taking form of e-mail projects. The project is a success if planned carefully, the topic is of current interest and corresponds with students' level of English.

As a rule e-mail projects are carried out when several groups from different countries take part. The language of communication is second for all the parties involved in the project. The students of Tomsk Polytechnic University had experience of communicating with students from China and Korea where the topic of communication was the attitude towards politics of young people in their countries. Planning of the project is of vital importance. First it's necessary to find partners, discuss the topic with them, arrange the time limits of the project, the frequency of letters exchange, and the outcome of the project, e.g. the presentation with the results of survey.

The teachers take advantage of e-mail project in terms of learning language as it gives a possibility to communicate with real partners. It is important for students that the texts are created not to demonstrate their knowledge for the teachers and get the good mark but to know that the texts are designed for their counterparts to provide them with interesting and important information or to discuss topics of current interest. Thus the teachers witness more responsible attitude of students to the text produced, the language competence is mastered as well as motivation is enhanced. One of the resource available for making Internet projects is International Education and Resource Network.

To sum up, it is worth mentioning that now the work on developing translation and consecutive interpretation courses is under way. Moreover new online projects and interactive activities are the center of teachers attention along with the work on adapting and rewriting the teaching materials that already exist.

The significance of NR TPU results in this sphere was recognized at the federal level when the collective of teachers won the award of Russian Scientific fund of Humanities in year 2007 to hold the regional seminar devoted to English language, Oriental languages (Japanese, Korean, Chinese) as well as Oriental culture. Moreover, some of materials have been recommended to use at Universities of the Russian Federation by the Ministry of Education.

**Play and Kill - Film Teenage Violence in Western and Eastern Contemporary Societies:
Van Sant's *Elephant* and Fukasaku's *Battle Royale***

Ana Barroso

PhD. Candidate, University of Lisbon

“Which is better- to have laws and agree, or to hunt and kill?”

William Golding, *Lord of the Flies*

“The human body is the best picture of the human soul.”

Wittgenstein, *Philosophical Investigations*

Violence as a catalyst for narration and identification or as a stylistic and aesthetic spectacle is always an interesting topic for debating and investigation beyond the controversial influence of the media in real-life events, especially when it's too challenging, as it depicts teenagers played by real teen actors committing the most horrific acts. The scope of this work is to debate how teen violence is represented in both films that are not concerned in providing answers but asking questions and demanding a pluralistic reading beyond their entertaining function. The spectacle of explicit gore and brutality in *Battle Royale* contrasts with the minimalist approach of violence in *Elephant*, but despite the totally different stylistic approach, the mutilated bodies resulting from the eruption of irrational violence is what can be terribly disturbing for the viewer and often a complicated issue to frame, as Coulthard points out:

As the very terms *gratuitous* and *excessive* indicate, violence in film is somehow essentially questionable or suspect; framed by ethical and social responsibilities and issues, the presence of graphic violence is thus frequently thrown into a discourse of justification or condemnation based on its perceived relation to actual violence, audience identification, and response or character, narration and style (Coulthard 2007: 157)

Having this in mind my paper focus on moving images as something that depict more than gratuitous violence to question the power of the image in our society and the need to reflect

deeply on its substance. The movement of the damaged and dying bodies through space relates closely to the camera mobility and it's the matter concerning image that we must concentrate on and not looking for social and psychological meanings just to find a scapegoat for a society that suffers from an overdose of luxury and anxiety and is more and more lost in a "thin sea of representations that represent other representations whose active content has been exploited until they are empty images without meaning." (Heim 2000: 29)

Battle Royale is based on Takami Koushun's 1999 novel of the same name. When it was released in the West critics and film journalists were eager to find pop culture references to analyze its concept such as the international reality TV show *Survivor*, William Golding's *The Lord of the Flies* and Kubrick's *The Clockwork Orange*. Even if the plot can be pitched in one sentence¹, the film works on different levels, despite the shocking action, the gore scenes and the entertainment it encompasses. And it became a hit both inside and outside Japan, attracting many teenagers eager to watch the film that was R15 rated in Japan and alleged by Japanese parliamentarians to be "very harmful to the youth" (Mes and sharp 2001: 1) and saw its commercial release forbidden in the USA².

If on the surface *Battle Royale* is an entertainment action film full of gruesome and bloody scenes underlined by black humor³ so appealing to the teenage audiences, on a deeper level it shows a good sense of social absurdity. The rules of the game are simple as the teacher explains on the video: it lasts for three days; only one survivor is allowed; all the players are fitted with a high-tech collar that tracks their position and there are zones in the island where they can't remain after they are informed these are forbidden. They are giving food and water supplies, weapons and other survival kits. The punishment for not obeying the rules is death: their collar will be detonated. The irony of it all is that even if they obey all the rules, they will be killed too, except one. So death becomes the intrinsic value for entertainment. The game starts and the audiences watch the game/ film: not yet being familiar with these violent teenagers, they get ready for fun and distraction. The overlapping of video game and film medium is intentionally confusing. Teenagers both as the product of consumerism and as the potential consumer of this kind of entertainment is the underlying motif of the film but its goal is not to parody game shows or video games but exposing the various layers of possible readings concerning youth and violence without the pretentious idea of presenting solutions for a problem. However this question

¹ A class of junior high-school students is taken to a deserted island to take part in a game where they must kill one another until only one survivor remains.

² Apparently because of the Columbine massacre.

³ For instance, the scene when a severed head with a hand grenade stuffed into his shocked mouth flying through the air or when a student with an axe buried deep in the centre of his head assures that he is absolutely fine.

became controversial and a political issue was raised when politicians wanted to ban the film arguing that it could get teenagers into copycat incidents. Fukasaku's answer to this argument was a subtle and emphatic turning-away from this contemporary violence: in the film the winner is excitably interviewed by TV news crews, but everything that happens in the island is far from the cameras. The students in the film aren't violent because they are used to watching violence on the screen. That's the false premise.

Being the present reality stuffed with virtual worlds, it's important to reflect upon the role of the subject in-between. The game the students are playing is being watched by the spectator outside the film. So, the artificial world is hands-in-hands with the reality of the viewer, who no longer is completely away from the screened fictional world, but, even if he can't control it, he's also somehow being implicated. The issue here is not to discuss the influence of fictional and virtual worlds in our present attitudes and behaviors, but nonetheless we must accept that the way we are looking at our reality is filtrated through fiction. Behind all the screened events, a reality emerges. That's why it is so important to understand the several layers of production of an illusory reality. The teacher Kitano says at one point: "Life is a game", something we can take as an allegory of the media for the making of present and future human relations. The game, being sponsored by a commercial enterprise, becomes the metaphor of the society where the individual and morals are being tested: "this dystopic youth picture is not set in a subcultural ward, quarantined from reality. It's an allegory of society eating its young and a black comedy about forcing delinquent teenagers to kill each other as a media event." (Davis 2006: 202)

The video game as social phenomenon and as a tool redefines the narrative world in images in terms of physical and psychological involvement of the player and the viewer, considering identification and alienation. As spectators of a game within a film we can't immerse in the game the teens are playing, we aren't allowed to control anything but we can experience through perception the emotional struggles of the characters and feel an ambiguous doubleness. Lacking the interactivity of computer based-media, the film structure, however, blurs the distinction of the two different fictional spaces and consequently of perception, where shocking images are also a source of pleasure. As the game progresses, the body count and the number of the remaining players are displayed on the screen and the spectator experiences a continuous and complementary hybrid perception. This doesn't mean that the boundaries between of the two mediums is erased but creates a dubious feeling of engagement from the part of the viewer that makes up his/ her lack of bodily movement. This engagement is perceptual and emotional.

Both the theme and the tone of the film are given by an introductory text in the opening scenes: set in an alternate near future, the Japanese government passed the Millennium Education Act (Battle Royale) to reassert its authority and to stop youth apathy, violence and widespread school boycott. Images of the previous Battle Royale game finale are displayed and the camera focuses upon a photograph of a Class of Zentsuji Middle School: students and teacher Kitano. The resentful teacher as the only present adult who talks to the teenagers mostly through video may well be considered as a representation of the adult world, responsible for the society it has shaped but also fearful of the uncontrollable behaviors it generated. Surrounded by soldiers, who exist to assure that order and safety rule, he is no longer the victim of a student's stabbing but the representation of the political power that once had to carry out a tremendous violence "to establish the basis for its Right" (Neyrat 2006: 99) but can't control it. So, there is no exit for this political aporia, except termination. The only survivor of the game, the one who can kill and escape killing, will succeed in getting away from the deserted island and return to society to become one of its valuable members. Being the fittest implies to accept the rules imposed on him/her such as competition, individualism and survival instinct. This imposed Darwinism leaves a void for a stronger questioning and reflection upon our contemporary societies, mainly the interstices of violence, success and youth.

Following Peter Fitting theories, we may accept that the film, set in a dark future in the context of a deep economical and social crisis is a *critical dystopia*⁴ since: "the description of the dystopian society contains an implicit warning that this may be where we are heading, as well as an account of those elements in our present that have produced this future." (Fitting 2003: 156) The brutal premise of the film is inevitably followed by a brutal film concerning both the graphic violence and its context: the solutions are far worse than the problem. An implicit critique of a conservative politics wrapped in a wild capitalism is at stake. The burst of the bubble economy brought contemporary societies to an economic downturn and to a level of uncontrollable anxiety where adults, who are supposed to be the role models for a more equalitarian and free society became, instead, a bizarre example for self-determination and freedom. In the film there is a boy who constantly credits his father for something he's good at and another says he's able to do Molotov cocktails because his uncle taught him how to do it. Nevertheless this adult motivation seems to lead to a dead end and not a better future. An antagonistic dialects runs throughout the

⁴ The author distinguishes between *critical dystopia* and other dystopias: while generally speaking, a dystopian setting only serves to provide a justification for the film's events, a *critical dystopia*: "implies an explanation of how the dystopian situation came about as much as what should be done about it" (Fitting: 2003: 156)

film⁵, because adults and teenagers are in opposite poles as Fukasaku explains: “I put this film in this context of children versus adult.” (Mes and Sharp 2001: 4) These violent teenagers became a political problem to be eradicated from the society because it can't deal with their demands of subjectivizing the events they undergo as individuals and not as products of a massive cultural and social determinism. It's important to recall that the captive classes are randomly chosen; even the most innocent and pacifist teenager can become an executioner. The political speech is perceived as a lie and helpless to restore social order.

The students with their petty immature rivalries, emotional vulnerabilities and unshakeable romanticism behave as they should for their own age, making the film an accurate portrayal of youthful concerns and worldviews. The fact that most actors are real teenagers and not young adults playing teenagers what makes the carnage more disturbing for the adult spectators. Besides, girls and boys are equally violent and capable of the most possible atrocities, something that destabilizes mass culturally derived values and conventions that characterize our society, since in most mainstream action films girls and women are given the roles of victims. However, when girls and women step out of their roles, the violent narrative and images can have a “disruptive and traumatic impact” (Neroni 2005: 59) in the social order. Of course, popular culture has accepted female violent roles, but most films address violence as something instrumental, rational and fully justified which invites a degree of audience's empathy and identification. Violence becomes a redemptive act. In *Battle Royale* the protagonists of the game can't even understand the apparently purgative goal of it. The emphasis on graphic bodily injury displayed in the film is something structural and not ideologically empty even if the violent acts seem gratuitous, irrational and excessive. For instance, the scene in which a group of girls are chatty and giggly and, all of sudden, they mow one another down with paranoia and fear. These pointless and illogical reactions may suggest that violence is “employed as a lazy signifier” (Slocum 2001: 2) but as the narrative evolves we learn something about these teenagers' backgrounds (through the flashbacks) who become much more than faceless identities to rise as personalities whether they are sadist, vulnerable, sensitive, selfish or ruthless, engaging the viewer into something deeper than bloodbath images, as Peter Bradshaw points out: “(...) as the film progresses, the violence and suspense take second place to the intensity of the adolescent crushes and unspoken yearnings, which emerge, purified, under these horrific laboratory conditions.” (Bradshaw 2001:1)⁶ The violence happens outside an ethical framework of justice

⁵ The relationship between Kitano and his daughter Shiori is the most striking of this antagonism as she hates him and he tells her we must accept the consequences of hating someone.

and it's just the result of extreme political measures of prevention. As the students are randomly chosen there is no sense in trying to discuss teenage delinquency and violence as a problem that is urgent to discuss and solve. Apparently is rather a joke. That's why the director chose to extrapolate it and focus on the things behind.

If there is no sign of an imminent US release for *Battle Royale*, Van Sant's *Elephant*, vaguely inspired by the Columbine massacres, has also cause a great deal of controversy for the exposure of teen violence. The film is a record of a day at an anonymous high school on the day of a massacre but it offers no explanation for the tragedy or insights into the psyches of the killers. The film is not, even if there are pockets of resistance⁷, about the Columbine tragedy, as Harris Savides, the film's cinematographer, explains:

We weren't setting out to make a movie about the Columbine killings, so we were careful about not to. There was to be no explanation and no resolution. We weren't going to slap anybody's hand or preach. The audience was going to take what they wanted from this film and interpret it the way they felt. In the beginning we were given all the Columbine material and Michael's Moore *Bowling for Columbine* (2002) as research, which we looked at to understand how to structure our scenes and find out accurately what was done in Columbine, so we would have an understanding of what went on. (Savides 2004: 180)

According to McRoy, Van Sant's film is "a meditation on the limits of 'seeing' and the impossibility of 'knowing.'" (McRoy 2005: 52) The distant camera and the long takes avoid a moral message and open a plurality of readings and perspectives to the spectator. The formalist aesthetics of the film, given by a poetic manipulation of the camera goes hands-in-hands with a realistic style inspired by documentary filmmakers such as Frederick Wiseman⁸ and this apparent incongruity is the basis for the illusion of objectivity that the film intends rather than

⁷ Some critics understood the film as pointless and empty because it avoids a social and moral message: "To make a film about something like the student shootings incident and provide no insight or enlightenment would seem to be pointless at best and irresponsible at worst, and that it was what Gus Van Sant has done in 'Elephant.'" (MacCarthy 2003: 1) The critic didn't take into consideration that the violence in the film is not glamorized or purposeful and the social context can't explain anything really, since these are high middle class teenagers who were integrated in society.

⁸ "It's not that I don't want you involved in the characters, but I want you involved by *watching* them, an observation, the way documentarian Frederick Wiseman sits back and lets things occur." (Peary 2003: 1)

questioning violence as controversial topic displayed by the media and its hypothetical influence on teenagers. The spectator observes the students wandering in the endless and labyrinthian corridors and some of them rise above anonymity, as the camera follows them for a long time in their daily routines and we hear about their anxieties and expectations but in the end the knowledge we get of this characters is almost none. The spectators are allowed to observe what the characters observe but they are never given the true chance of figuring out the world as they perceive it. The director was looking for an authenticity in the film and that's why the cast is made of non-professional teen actors and there is a lot of improvisation in their dialogues so their conversations don't seem too artificial and imposed by a screenplay written by an adult who invests adolescents with an emotional maturity beyond their age.

The upsetting realism with which the film defines its events is blurred with techniques such as the non-linear narrative, the still shots, the slow motion, the circular pans, the repetition of the same scenes with a different angle and perspective and the surrealistic use of sound in some scenes (for instance the sound of animalistic howling and screeching during and after the shootings) create layers of meanings that often end in a sense of absurdity that resists easy interpretation. Also the natural lighting used in the beginning of the film to establish some documentary verisimilitude gives way to a very controlled system of illumination to inflict a certain *feeling* to the film, as Harris Savides explains: "Rather than seeing the world changing I thought it would be great if we walked through the door and it stayed bright and then we made really slowly which was more integral to the film. It seemed to work better with the tone and the way things were moving." (Ballinger 2004: 182-183)

Elias, the photographer in the film, takes pictures of his colleagues and this obsession with capturing images may well express the power images have as a representation and manipulation of reality. Elias asks a couple to smile while they're posing for the camera. These photos are not realistic but manipulated and controlled by the photographer because he wants them to convey what he wants them to express. In this sense, MacRoy argues that *Elephant* is a film about spectacle:

It is a work concerned with the power of the filmed (or photographed) and the risks one takes when one either imposes dogmatic systems of signification upon visual signs, or mechanically embraces hyper-mediated images that have been virtually decontextualised through their repetition and incorporation into popular culture. (McRoy 2005: 53).

When the two killers watch a Nazi-documentary on TV, the spectator may try to find a motif for the insane acts of the boys but that would be a reductionist and distorted perception of the eruption of violence. After all, the boys are very ignorant of the cultural and historical background that is being shown on the documentary they are watching. One of them even asks: "That's Hitler, right?" And when Eric is playing the violent video game he shows "no aggression or pleasure" (Higgin 2006: 73), so it would be very naïve of the spectator to consider it one of the causes for the massacre. Before the killings start, Alex says to Eric "Most importantly, have fun." The comprehensibility of such acts remains obscure, in spite of the apparent information given to the audience to make them understand the reasons for the massacre: the violent video game Eric plays on the computer, the gun ordering through the Internet, the spitball thrown at Alex in the classroom and the Nazi-documentary.

The fact that our society is living an era of saturated images raises implies the manipulation of our reality. By not giving answers to the audiences, the director demands a more intelligent perspective of the viewer: images are malleable and not objective, so if meanings are to be conveyed, they are always controlled and subjective. It is up to the viewer to keep a distance from the images he watches and find meanings on his own. Taking meanings for granted is part of the problem, not of the solution. Van Sant does not concentrate in dramatizing characters or events, so "the film is unclear about whose story is this", as Dancyger and Rush state and justify: "This unwillingness to provide a definite answer is heightened by an act structure that is not character-based, but rather abstractly thematic." (Dancyger and Rush 2007: 55) It's important not to concentrate on the motivations of the two boys for their act. After all, when the spectator meets them, almost half of the film action has already happened. The narrative structure is anchored in temporality and not in motivations. The cinematic devices used by the director reinforce this idea: for instance, the shots of the clouds in the sky are shown periodically, either in time lapses or in time delay. The inexorability of time for the inevitability of the tragedy reinforces the subjectivity of time and reality. The fact that some sequences are repeated from a different perspective also contributes to this purpose. The scene when John meets the killers just before the tragedy is one of the most striking examples. The viewer watches a reprise of the meeting from three different points of view: Alex and Eric's, John's and Brittany, Jordan and Nicole's. The loop and the elliptical structure are also cinematic devices for emptying the frames of any special signification as they are different perceptions of the same event and the nonchronological order of the events emphasizes the subjectivity of time. Perception and memory coexist and it's hardly possible to distinguish the true event from its recollection, or the real event from fiction. In this way, we

may argue that the film follows Derrida's theories on time and temporality which state that linearity and punctuality "emerge only in on the basis of the workings of a temporality of delay, curvature, and an elliptical movement back and forth between intending act and intended content." (Hodge 2007: 35) The confusion between fiction and reality is intentionally brought up by the director during the killing spree at the cafeteria when we see Alex sitting in a chair and drinking from a cup of coffee that was on the table. This scene mimics the footage captured by the surveillance camera during the real Columbine massacre. The camera shifts from looking to moving through space implying that reality is always displaced and scattered with fiction:

À la croisée du réel et du fictive, au coeur des mouvements et des entrecroisements de l'un et de l'autre, les événements (...) portent l'attention sur la dispersion de la réalité (inspire ou non d'un 'fait réel', fidèle ou non à ce qu'on en sait ou ce qu'on on retient). (Arnoldy 2009: 146)

The camera drifts from person to person and place to place implying the invisible people and things that are there but people choose to ignore. As the camera makes a circular pan in Alex's room while he's playing Beethoven on the piano it focuses a drawing of an elephant hanged on the wall. Van Sant explained that the title refers to Alan Clarke's film with the same title⁹ but also evokes the parable of the elephant as something that is present but people are only able to see the parts of it but never the whole: "'J'en ai retenu l'idée de ne pas donner d'explication à la violence. Elle surgit dans le quotidien, de façon aussi saugrenue qu'un éléphant dans un magasin de porcelaine mais qu'on ne voudrait pas voir. D'où le titre du film de Clarke, que j'ai repris pour lui rendre hommage." (Nicklaus 2003:1) The space of the school looks comfortable and peaceful and there aren't any signs of aggression¹⁰, rage or anxiety among the students that could predict the violent spree. It's just kids with their everyday problems and banal conversations regarding school, family and fashion. However, there's a scene at the cafeteria where we watch Alex and listen to a disturbing noise that contrasts violently with the surrounding environment, suggesting Alex's alienating mind. And that's something threatening about the apparent ordinariness.

The act of seeing functions as both the act of perceiving and being perceived so the materiality of the image is too important to be surpassed by the goal of finding meanings and messages beyond its own materiality, because they only serve to complicate the perception of the actual. The realm

⁹ A 1989 BBC film about violence in Northern Ireland.

¹⁰There's a scene where Alex is hazed in the classroom when someone throws a spitball at him, but we wouldn't consider it an act of violence, it's just kids' playing. Besides if we should consider the fact of Alex being a victim and as a student not well accepted by his peers as a possible reason for a revengeful action, why is Michelle, the lonely girl, the first victim of their acts?

of language, the inability to access the signified through the signifier can be seen in the scene when Alex says the meaningless words “Eeney... meeney... meiny... moe...” to Nathan and Carrie (the couple who was hidden in the cold-room) to decide which one will be killed first. There is no specific motivation behind the killings. Students interact, some with the killers, others not, some die, others escape but for no particular reason.

The visual idiom of video gaming is used in some crucial moments during the shootings as the third-person perspective gives place to first-person shooter perspective. The same happens when Eric is playing the video game in Alex’s room. The migration of certain videogame conventions into film narrative proves that the director is well aware of the changes regarding vision and perception of film during the last decades, influenced by the videogame as a medium as Galloway points out: “Additionally, the film uses a boxy 1:33 frame shape, rather than the wide aspect ratio often used in feature films, to reference the boxy shape of television monitors and the console game systems that rely on them.” (Galloway 2006: 60)

Teen violence can’t be seen as a matter of social conventions but as a philosophical ground for questioning our being in the world as Žižek proposes: “precisely because the universe in which we live is somehow a universe of dead conventions and artificiality, the only authentic real experience must be some extremely violent, shattering experience.” (Reul and Deichmann 2001:1)

Philosophy

Values in the modern world.

Mischenko Natalya Victorovna

Tomsk Polytechnic University

Our world is undergoing the process of changes. It is becoming smaller as the process of globalization speeds. People are not now tied to the place they were born in. They have more and more opportunities to choose where to live or work. But being able to travel freely people can face the problem of misunderstanding while communicating or doing business with the representatives of other communities. It is often the question of a different set of values they possess and acknowledge. Value is a notion which has been under consideration since the ancient times. There has hardly been any philosopher who didn't turn to the problem of values. Indeed many of them had their own concepts of values. Many believe that each country has its own set of values. The wider view distinguishes values into western and eastern ones. The questions to be discussed are the following: What are the values existing in the modern world? and What can be done to overcome the gap in communication between people possessing different values? Here we are going to discuss several ideas on the values.

The first concept of values we are going to discuss belongs to Erich Fromm, German scholar and philosopher. Erich Fromm considers that a person needs values although there can be a gap between what people conceive as values and what the real values people are ruled by though unconsciously are. Fromm says that in industrial society religious and humanistic values can follow under the category of realized or conceived values. Among the unconscious values the can be ones which are the production of the social system such as social position, consumption, entertainment etc. [1]

The existence of these sets of values, realized but ineffective on the one hand and unconscious but acting on the other hand results in a conflict inside a personality which can lead to the feeling of blame and suspiciousness. And of course the values no matter unconscious or realized they are can be structured. There are some highest values which use the values beneath them as the means of realization of the highest ones. Human feeling undergo the process of development and form the system of the so called psychological and spiritual tradition of the West. When the values were based on the afflatus they were obligatory for those who believed in the afflatus under which as it refers to the west God was understood. Religion has long played an important role in the life of people in Russia as well as in western society and in Europe. So it isn't anyhow surprising that a lot of philosophers paid attention and talked about religious values of the people.

So if to consider West there arises a question: can the hierarchy of values be based on something apart from afflatus? Erich Fromm gives three models which do not take afflatus as the basis of values. [1]

The first model is absolute relativity which announces that the values are the matter of everybody's preferences.

Another model says values are characteristic features of the society. Those who support this approach consider that the survival of the society with its own social structure and contradictions should be the highest value for all its members. From this point of view ethical norms are equal to social and social norms serve to immortalize this society. It's quite obvious that the ruling elite of the society uses all the means possible to convince that the norms on which the ruling power lies are sacred and universal depicting them either as afflatus or as belonging to a human nature.

One more idea about the values is a conception of biologically immanent values. The supporters of this view say that the feelings such as love, tenderness, solidarity are rooted in the nature of all animals. But of course not everybody can agree with this as not all the human emotions and feelings can be identified with those of animals. Moreover if to take Darwin's theory into consideration it appears that aggression and competitiveness are the main values as evolution and survival of the species are based on them.

Fromm supports the following concept based on what Albert Schweitzer called "reverence for life". [1]

Valuable can be considered everything which helps in entire development of human abilities and what supports life. Negative or bad can be regarded everything which suppresses life and paralyzes the internal activity of a human. This general principal of values is developed by all the norms of great religious systems such as Buddhism, Judaism, Islam and Christianity. Fromm states that the overcoming of one's own greed, love for the neighbor, search for the truth are the values which are common for all the humanistic philosophical and religious systems of East and West.

Thinking that values which Fromm called humanistic should be respected because they are accepted by all the highest forms of culture, can we suppose that there are norms which should motivate our private life and motivate all the social initiatives and activities? In fact a person can choose what is dominant in their life. But whatever they choose they create a character structure with only one orientation. It doesn't happen that only one set of values is established. There is a choice and everybody should decide what alternative to choose. And it is obvious that every person will choose as preferable the set of values which is closest to their own character and way of thinking. So people of different characters can become adepts of different sets of values. Even if it were possible to prove that one set of values is superior to the others, it would be unlikely to prove it to people who are inclined to support other values. But Fromm suggests that it could be possible to come to some objective norms if they are the ones which facilitate the wellness of people and lead to the maximum vitality and internal development.

Pascal also states that opinions about our values belong to the sphere of feelings but not our mind. Though in fact he puts the religious values on the highest level.[1]

Some philosophers think that it is useless to structure values into some tables as there won't be any harmony inside it as there can be a conflict between values which don't even give the direction but give the opportunity to choose the direction.

One more Russian philosopher Bakhtin M.M. states that any generally valid value becomes really important only in individual context. [3]. So the value is unique for every person. But there is no contradiction between different unique words of personal values as there are values which are valuable for the whole society in every historical epoch though again every person should accept these values through one's own prism. So every person is a kind of center of values in oneself. But as there are many people existing in the world they start entering the field of dialogue and this dialogue in its turn becomes a center of value in its turn. So we can conclude that the dialogue between people is of great importance as it becomes the carrier of values each person contributes to it. [1]

Values belonging to different nations are sometimes considered the reflection of the collective consciousness. But the difference in values isn't connected with the fundamental differences in

the structure of consciousness but mainly with the different historical development of different people.

Russian philosopher Tugarinov V.P. says that an individual can't be a member of one group, but at the same time of different groups.[4] So it seems impossible to share the values of only one group while you are belonging to some other ones at the same time. So again we come to the idea that it is quite natural to be guided by one's own values but take care that these values don't oppose the ones accepted in the groups with which the individual has to interact. And as a consequence we come to the idea of tolerance - the guide in our communication with other worlds of values.

To compare the values of two different parts of the world we should turn to what is perceived as values of some eastern countries on the example of China, South Korea and Japan. The countries were chosen for analysis because they are studied by the students of Tomsk Polytechnic University (those who specialize in area studies). All the information is taken from the Library of Congress.

In China the values for a long time were those connected with different teachings or beliefs not to say religions.

One of the most influential teachings in China was Confucianism and Confucian elite disparaged religion and religious practitioners, and the state suppressed or controlled organized religious groups. The social status of Buddhist monks and Taoist priests was low, and ordinary people did not generally look up to them as models. Then, though, more and more Chinese chose Buddhism or Taoism teachings as closest to them. Unlike Confucianism these two last ones do not talk so much about the sufferings but mostly concentrate on the harmony and finding internal serenity and balance.

Now we can speak about the state toleration of religion. Much of traditional ritual and religion survives or has been revived, especially in the countryside. [5]

Now we can mainly talk about the diffusion of religion in China. Many scholars, even if they did not hold public office, put a great deal of effort into popularizing Confucian values by lecturing on morality, publicly praising local examples of proper conduct. In this manner, over hundreds of years, the values of Confucianism were diffused across China and into scattered peasant villages and rural culture. [5].

So in fact we can see that morality has played a great role in Chinese society for centuries, morality which included respect and reverence which can be considered the values of the society as well as the attempt to find peace and harmony.

The social values of contemporary South Korea reflect the synthesis and development of diverse influences, both indigenous and foreign. Probably the most important of these is the neoConfucian doctrine of the Chinese philosopher Zhu Xi (1130-1200). The rulers of the Choson Dynasty (1392-1910) adopted it as their state ideology. [7]

Neo-Confucianism combines the social ethics of the classical Chinese philosophers Confucius (Kong Zi, 551-479 B.C.) and Mencius (Meng Zi, 372-289 B.C.) with Daoist, or Taoist, and Buddhist metaphysics. One of the doctrine's basic ideas is that the institutions and practices of the ideal human community are an expression of the immutable principles or laws that govern the movements of the cosmos. Through correct social practice, as defined by the Confucian sages and

their commentators, individuals can achieve a kind of spiritual unity with heaven. Neo-Confucianism defines formal social relations on all levels of society. Social relations are not conceived of in terms of the happiness or satisfaction of the individuals involved, but in terms of the harmonious integration of individuals into a collective whole that mirrors the harmony of the natural order. So we can see that there's a philosophy very different from the idea that "only those things are valuable, which are valuable for me as I'm the center of my world of values" Here the center of the world of values is the society and every its member should accept what is good for the group to become an equal member and not to disturb harmony.

Society was defined in terms of the Five: "between father and son there should be affection; between ruler and minister there should be righteousness; between husband and wife there should be attention to their separate functions; between old and young there should be a proper order; and between friends there should be faithfulness." Only the last was a relationship between equals. The others were based on authority and subordination, including the first relationship, which involved not so much mutual love as the unquestioning subordination of the son to the will of his father. [7]

Although relatively minor themes in the history of Korean ethics and social thought, the concepts of equality and respect for individuals are not entirely lacking. The doctrines of Ch'ondogyo, an indigenous religion that originated in the nineteenth century and combines elements of Buddhism, Daoism, shamanism, Confucianism, and Catholicism, teach that every human "bears divinity" and that one must "treat man as god." [7] In fact this contradicts western practices very much as no one can even imagine oneself being equal to god.

Western social and political values such as democracy, individualism, the equality of the sexes and national self-determination were introduced by late nineteenth-century Korean reformers and by West European and North American missionaries. These concepts have played an increasingly prominent role in South Korean life in recent decades.

Although by no means democratic, the Confucian tradition itself contains anti-authoritarian themes. Mencius taught that the sovereign and his officials must concern themselves with the welfare of the people and that a king who misuses his power loses the right to rule--the doctrine of the Mandate of Heaven. In Korean as well as Chinese history, there were many Confucian statesmen who, often at the cost of their own lives, opposed the misuse of power by those in authority. This in its turn again face us with the idea that personal interests were not among the values in South Korea and every individual should be in harmony with the values suitable for all the society rather than one'

There is the tension, for example, between self-control and solemnity on the one hand, and almost explosive volatility on the other, at the level of individual behavior; between the duty-bound austerity of Confucian family life and ritualism, and the ecstasy and abandon of shamanistic rites; between the conservatism of agricultural villages and the looser social organization of fishing communities; between the orthodox concept of male supremacy and the reality of much "hidden" female power; between the "higher" rationalized, humanistic, or scientific culture imported from China, Japan, or the West, and much older indigenous or native cultural themes; between hierarchy and equality; and between slavish deference to authority and principled resistance.

This in its turn again face us with the idea that personal interests were not among the values in South Korea and every individual should be in harmony with the values suitable for all the society rather than one's own ones. But on the other hand there's an interesting fusion of different values in the society. There is the tension, for example, between self-control and solemnity on the

one hand, and almost explosive volatility on the other, at the level of individual behavior; between the duty-bound austerity of Confucian family life and ritualism, and the ecstasy and abandon of shamanistic rites; between the conservatism of agricultural villages and the looser social organization of fishing communities; between the orthodox concept of male supremacy and the reality of much "hidden" female power; between the "higher" rationalized, humanistic, or scientific culture imported from China, Japan, or the West, and much older indigenous or native cultural themes; between hierarchy and equality; and between slavish deference to authority and principled resistance. [7]

According to government statistics, 42.6 percent or more than 17 million of South Korea's 1985 population professed adherence to an organized religious community. There were at least 8 million Buddhists (about 20 percent of the total population), about 6.5 million Protestants (16 percent of the population), some 1.9 million Roman Catholics (5 percent), nearly 500,000 people who belonged to Confucian groups (1 percent), and more than 300,000 others (0.7 percent). [7]

Except for the Christian groups, who maintain a fairly clear-cut distinction between believers and nonbelievers, there is some ambiguity in these statistics. As mentioned above, there is no exact or exclusive criterion by which Buddhists or Confucianists can be identified. Many people outside of formal groups have been deeply influenced by these traditions. Moreover, there is nothing contradictory in one person's visiting and praying at Buddhist temples, participating in Confucian ancestor rites, and even consulting a shaman. Furthermore, the statistics may under represent the numbers of people belonging to new religions. [7]

Given the great diversity of religious expression, the role of religion in South Korea's social development has been a complex one. Some traditions, especially Buddhism, are identified primarily with the past. Confucianism remains important as a social ethic; its influence is evident in the immense importance Koreans ascribe to education. Christianity is identified with modernization and social reform.

But being as it is it says that people are having choice nowadays in the question of choosing beliefs and values. May be it can be a sign of the attempt to put oneself into the middle of a world of values in the search of the ones reflecting individual inclinations.

Contemporary Japan is a secular society. Creating harmonious relations with others through reciprocity and the fulfillment of social obligations is more significant for most Japanese than an individual's relationship to a transcendent God. Harmony, order, and self-development are three of the most important values that underlie Japanese social interaction. [6] Basic ideas about self and the nature of human society are drawn from several religious and philosophical traditions. Religious practice, too, emphasizes the maintenance of harmonious relations with others (both spiritual beings and other humans) and the fulfillment of social obligations as a member of a family and a community.

In Japanese mythology, the gods display human emotions, such as love and anger. In these stories, behavior that results in positive relations with others is rewarded, and empathy, identifying oneself with another, is highly valued. By contrast, those actions that are antisocial, or that harm others, are condemned. Hurtful behavior is punished in the myths by ostracizing the offender. [6]

No society can exist that tolerates significant antisocial behavior in the long term, but Japan is among the societies that most strongly rely on social rather than supernatural sanctions and emphasize the benefits of harmony. Japanese children learn from their earliest days that human

fulfillment comes from close association with others. Children learn early to recognize that they are part of an interdependent society, beginning in the family and later extending to larger groups such as neighborhood, school, community, and workplace. Dependence on others is a natural part of the human condition; it is viewed negatively only when the social obligations it creates are too onerous to fulfill. [6]

In interpersonal relationships, most Japanese tend to avoid open competition and confrontation. Consensus does not imply that there has been universal agreement, but this style of consultative decision making involves each member of the group in an information exchange, reinforces feelings of group identity, and makes implementation of the decision smoother. Cooperation within a group also is often focused on competition between that group and a parallel one, whether the issue is one of educational success or market share. Symbols such as uniforms, names, banners, and songs identify the group as distinct from others both to outsiders and to those within the group. Participation in group activities, whether official or unofficial, is a symbolic statement that an individual wishes to be considered part of the group.

So what can we conclude from everything said above?

The existence of values in the world is well-grounded to say the least. Values are the frames which can consolidate the society around one common idea.

A lot of sets of values in almost every country are based on the religions, teachings or beliefs. When based on them they usually put the necessities of the group above the interests of an individual. But while in Christianity for example the people were really suppressed by the power of God, in eastern religions people were directed to find harmony inside them at the same way showing respect to the members of their society.

It is also obvious that lately people have become more open to the ideas other than the basic religions or beliefs of their own regions as a consequence of technological advances destroying some prejudices, globalization and other factors. So the people started accepting some other sets of values, some of them putting the individual inside the world of their own values. It is reflected in the ideas of Fromm, Tugarinov, Bakhtin and also seen from the phenomena of the fusion of religions in Korea as well as from the tolerance of religions other than previously existed in the areas in many countries.

In this view the most sound turns out the idea of an individual being in the center of their own values but taking care that these values don't oppose or suppress the values of other individuals interacting with them within the groups. It may seem that the more the number of people is the more difficult to find common values between them, but it's not the case. The more people are interacting the more common grounds appear as in fact the main thing is the survival and then the welfare of the humankind which leads to the mutual tolerance and more attempts to find these grounds as soon as the world becomes closer. And the more intensive the exchange of values the more possibilities is that people will if not accept other values if they contradict with their ones but at least understand or tolerate new ideas.

Diaspora Circulation and Cultural Amnesia as Agents of Change in V.S.

Naipaul's *Half a Life* and *Magic Seeds*

Abstract

Memory constructs the bridge between our individual past and our collective past, our origins, heritage, and history, which is always with us. This past resonates in our present, in our voices, even our silence, and defines what we come to believe as 'our homes'. (Agnew, p.3) What we call past is the constant production of present, and both past and present are essentially social constructs; therefore, it manifests itself as a seminal upshot of society, place, history, ethnicity, culture, nation, and genealogy. The study of diaspora discusses those across geographical or metaphorical boundaries of their homeland, the result of transformation and dislocation. V.S. Naipaul is one of the most significant writers of what comes to be called post-colonial literature, the literature of the exile, and the literature of diaspora, as his life is the upheaval of such exile and immigration to the New World. Though he is later honored by the Nobel Prize for literature in 2001, his works are bodies of uncertainty, doubt and incompleteness in the atmosphere of the exile. This paper aims to analyze the traces of diaspora criticism in his latest novels: *Half a Life* (2001) and *Magic Seeds* (2004). These two novels, which are at the same time the only sequel Sir V.S. Naipaul has ever written, unfold the life of the protagonist Willie Somerset Chandran in his undestined quest of identity in the

New World, London, later to become a Ulysses figure aimlessly wandering the hostland with the awareness that there is no escape from this multiplicity of his new existence to unity.

Key Words: Alienation, Amnesia, Diaspora, Diaspora Criticism, Hybridity, Subaltern

Diaspora Criticism

The word diaspora was originally used to describe the dislocation of the Jews, Armenians, Parsis, and Greek peoples. In contemporary criticism, the term is useful to discuss the displacement resulted by flight, exile, and forced migration enabling the discussion over the relationship between citizens, nations and national discourse. In this discussion, diaspora is distinguishable in a system of dispersal and dislocation, collective trauma, the troubled relationship with the majority, and a promoting return movement, though these features may not be present in all the diasporic individuals. The term diaspora is not always associated with a desire to return and the orientation to origins; otherwise it is also represented in the individuals who become the creators of a culture in diverse locations. Diaspora can denote a transnational sense of culture and ethnicity transcending geographical boundaries. However, the diasporic individual suffers a matter of in-betweenness

by being here, and remembering there, between memories of the place of origin and his residence in new landscape.

In the discourse of diaspora, the term is examined in three ways: as a *social form*, as a type of *social consciousness*, and as *mode of cultural production*. (Agnew, p. 5) In social discussion, the term is used to refer to those individuals in different parts of the world, but intervene with the others in the new home. The second group of scholars, conferring about the diasporic consciousness, regards those individuals in disparate societies and cultures, yet emphasizing their sense of belonging and exclusion, their mental state, and their sense of identity. In the third concern, the diaspora production discusses the construction of identity and culture in the new land through hybridization. These three categories in diasporic criticism overlap and intersect with one another unfolding the essence of a diaspora. In this system, the migrants become the acting agents of the new societies by the intervention with their social, political, and intellectual resources to build identities that transcend national boundaries; therefore, they are the mimicking victims. The mobile individual experiences the process of 'flexible citizenship', in another sense, this process is mingled with oppressiveness of race and gender which leads to a deliberate intervention with the new system and generating new images of themselves devoid of racist stereotypes. Thus, the new identity is deterritorialized. Memory is noteworthy in this discussion of diasporas as in this structure memory

is gendered, anesthetized, politicized, and nationalized. Memory is an act of remembering which makes a connection between past and present. Memory, by essence, is the source of imagination enabling a recollection of the past and constructing a haven of nostalgia, a longing for past, a desire for imaginary home, a safe land of birth and origins, a traumatic journey, yet necessary, to past. This kind of suffering quest of identity within the tunnels of memory manifests itself mostly in the mental and existential life of those diasporas passing the social and geographical boundaries to other lands. In the late twentieth century because of the growth of communication and migration, the study of diaspora becomes of crucial importance. These migrants enable ties between their homeland and the place of the new residence. Diaspora criticism discusses the very tie resulting displacement, cultural hybridity, transnational connections, and 'home'.

The Incompleteness of Diaspora's Life in *Half a Life* and *Magic Seeds*

No doubt that identity is a social construction, dependent on place, time, and social context; therefore, identity is of unstable nature. In the discussion of diasporic identity scholars unfold the structure by the discussion of an unavoidable process of intervention, called *hybridity*, which is neither indigenous nor exogenous. Bhabha discusses hybridity as a process of "constant change and

adaption, or from being marginalized”. (Qtd. in *Diaspora, Memory*, p. 12) This process is a result of difference perception from the minority perspective which longs for cultural hybridity. The hybrid culture is not always of the same traits as it is contingent on the roots and origins of the individuals that transcend these cultural diversities. The controversial aspect of diaspora discussion lies in this fluid nature of hybrid identity which needs a reconsideration of gender, race, class, and other social facets of an individual beyond national borders. The geographical transformation of diaspora makes him and the ethnic location a ghostly one where the unreality of the new home is surpassed by the metaphorical unreality of the home. Diasporas are the construction of racialized, sexualized, gendered and oppositional subjectivities.

The diasporic individual is the embodiment of double consciousness, the duality of which is resulted by his transformation between ‘here’ and ‘there’. This consciousness is formed by the individual’s sentimental attachment to his homeland and simultaneously involving in social, economic, cultural, and political ties with the diasporic home. The individual’s search for home, the feeling of exile, subjection, marginality, loss, displacement and many other postcolonial features are the quintessential components of the criticism of diaspora. Jawaharlal Nehru (1935) maintains in his autobiography that “I have become a queer mixture of the East and the West, out of place everywhere, at home nowhere. Perhaps my thought

and approach to life is more akin to what is called Western than Eastern, but India clings to me... I am a stranger and alien in the West. I cannot be of it. But in my own country too sometimes I have an exile's feeling." (Qtd. in *Diaspora, Memory*, p. 15)

Naipaul's *Half a Life* was published in 2001, and it was a pledge to return to conventional novel for the first time since *A Bend in the River* (1979). The novel's orientation is on a fictional character, presenting his family background, his childhood, youth, and his first marriage. A large section of the novel is narrated in third person, omniscient, point of view, though it is detached through the novel by the characters' storytelling, first Willie's father to Willie and then Willie to his sister.

At the beginning of the novel, Willie Chandran asks his father the origin of his middle name, Somerset, the answer of which is constructed through a sizeable section of the novel as he replies. "Without joy, 'you were named after a great English writer.'" (*Half a Life*, p.1) The phrase 'without joy' can be cynically applied to whole the novel, since all the sequence of events happens in the same atmosphere. The novel opens with monotonous, futile, life of Willie's father, a high-caste Indian sadhu who marries a low-caste woman as his sacrifice to life. The novel continues with Willie's years as a foreign student in London and later as the husband of a "half-and-half" Portuguese African on her East African estate.

The London section of the novel is a manifestation of Willie's insecure social and sexual life in the racially mixed London of 1960s. The title of *Half a Life* can be interpreted in several ways. Literally, the books poses Willie's life to a midpoint of forty one years, on the other hand, its main characters are racially or socially mixed, half-and-half faces in a new land. On a profound level, the story is the implication of Willie and his father's half lives, having been sexually stunned by their upbringing in a ritualized society where marriage is arranged and boys are not taught how to deal with the realities of life. This lack of sexual awareness in both Willie and his father is a recurring theme of the novel which later reveals itself in Willie's life as becoming friend of his friend's girlfriends and starting to have affairs with these half committed characters within the sequel, even after his return from India in the second novel. Eventually, after many years of his marriage to the first unattached woman who shows a serious interest in him, he finds satisfaction for a time in his affair with a married neighbor. Through these series of changes in his life, however, he finds that "some half-feeling of the inanity of my life grew within me, and with it there came the beginning of respect for religious outlawing of sexual extremes" (*Half a Life*, p. 211) Later he discovers the lover with whom he experienced the true meaning of satisfaction is deranged, and that this sexual satisfaction is compromised.

In *Half a Life*, this half life is not just sexual. Another definite thematic concern in this novel is 'placelessness' that is intertwined with the very essence of Willie's life, and other displaced characters through the novel. Willie's mother is from a low-caste family, a "backward", who is sent to a Hindu caste school where she was persecuted: "They didn't know about religion of the people of caste or the Muslims or the Christians. They didn't know what was happening in the country or the world. They had lived in ignorance, cut off from the world, for centuries". (*Half a Life*, p. 39) As he grows up, his love for his mother changes to rejection with his awareness of the world. His father's feeling toward him is mingled with a sense of despise for his similarity to his mother.

Alienated from his family in India, he leaves to London with no wish to return. After taking his degree, he finds that there is no job for him in England, unlike Naipaul. The story of Willie's life and his unpromising future in London is a kind of cautionary tale for what Naipaul's life might have been without the impulse or the endeavor he underwent to become a writer in spite of early discouragements. This blankness of the future and his ability to keep writing task feeds into the despair and desolation through the novel. His sister, Sarojini, ineligible in the Indian marriage for having a mixed-caste background, makes an international marriage and becomes another displaced character of the novel moving place to place as a requirement of her husband's work. There is nowhere for Willie and

Sarojini to consider as the real home. Willie lacks a definite feeling for both past and the future life. For a short time, he converts this despairing rhythm of his life into an opportunity: "Towards the end of his second term, he saw with great clarity that the old rules no longer bound him. ... The possibilities were dizzying. He could, within reason, re-make himself and his past and his ancestry." (*Half a Life*, p. 60) But he discovers that this sense of not being bound to past is not the making of a life of fulfillment as he felt no belonging. At the end of the novel, Willie leaves Ana, his wife of eighteen years, telling her: "I'm tired of living your life." (*Half a Life*, p.227) This time, he heads for Sarojini whose husband is, apparently, no longer present in her life. No future is projected for them. The first half of their lives has passed in futility and the next half is unknown.

Racial tension is another underlying element of the novel, but Willie shares no allegiance to any group. Willie's only solution to these tensions is avoidance and flight. Leaving Ana in her East African country estate at the end of the novel, he reports, "I didn't think I could live through another war. I could see that it would have a point for Ana. I didn't see that it had a point for me." (*Half a Life*, p.227)

The lives depicted through the novel are mostly joyless, monotonous lives, though the novel is not devoid of its moments of grim humor of characters' absurd life. *Half a Life* is Naipaul's return to pure fiction in more than twenty years. His own presence in both of the novels is central; however, in this desolate unfulfilled

life, he has used fictional characters to make a distance between himself and the frank expression of sexual matters. The novel is masterly crafted, though it embodies a depressing atmosphere unlike his earlier works.

In *Magic Seeds* (2004), Naipaul takes up the story of Willie from the part he left in *Half a Life*. Despite many thematic links with his previous works, this is the first sequel he has crafted. Willie is no longer resolute; he has learned, but not developed. All the wisdom he has gained during these decades manifests his cynical outlook to life. After deserting his wife, Ana, he takes refuge with his sister, Sarojini, who makes him believing that he did have a place in the world, and it was with the oppressed freedom fighters. Naipaul's profound suspicion of "the corruption of causes" makes Willie find his struggle thoroughly futile, corrupt, and destructive. He observes that the reason they are fighting for is not the village people, but only they were "exploiting them all the time. Our ideas and words were more important than their lives and their ambitions for themselves." (*Magic Seeds*, p. 161) Nevertheless, he is trapped in the movements, unwillingly, for many years.

Sarojini's role in the novel is full of ironies. She lives a prosperous life in Berlin with a part time husband who acts as a self-appointed recruiter of guerillas. She and her husband make documentaries for which they travel a lot. When Willie is in an Indian jail, she retreats to their father's ashram, writes a letter to Willie's earlier publisher, and arranges a letter to be written on his behalf. Surprisingly, Willie

notices he has become “the pioneer of modern Indian writing” (*Magic Seeds*, p. 168) His only chance to be freed from the mayhem is to leave permanently to his aimless life in London. There he has many affairs with his friends’ wives and attends futile courses and empty social events.

On the night after confronting a wedding with loud African music, he feels he has something to write to Sarojini: “It was wrong to have an ideal view of the world. That’s where the mischief starts. That’s where everything starts unraveling. But I can’t write to Sarojini about that” (*Magic Seeds*, p. 280).

Naipaul ends his novel, which he has already called the end of his writing career, in frustration, passivity, and a negative wisdom of his longtime distrust of causes. Ironically, this thematic message on which Naipaul has based much of his work is not even worth mentioning in a letter to Sarojini. This repudiation is another fundamental shortsightedness of Willie in the same way as he was unable to use his writing as an escape from the barren of his life and later moving to Africa to live an unfulfilled life with Ana; on the contrary, this knowledge of life is not only worth writing to Sarojini, it could have been the start of a life time writing career.

The language in both novels is simple and fablelike; the fictional characters make emblematic dialogues, yet natural, with long and well-constructed sentences.

Magic Seeds opens with a more dynamic life, albeit futile, that *Half a Life* never achieves. On the other hand, the political adventure in *Magic Seeds*, though never fulfilled like the sexual ones in *Half a Life*, gives it more shape and substance. Despite the fact that Willie is defying the importance of the experience he had among the guerilla brothers in India, it overshadows his future life in a crucially essential level, though this Naipauline future is as uncertain as it was at the end of *Half a Life*. Willie comes to the point that “with the deepest kind of aches that there was no true place in the world for him” (*Magic Seeds*, p. 228).

Finding Naipaul’s voice between the lines of his narrative revives the work with a permanent energy resulted from the hazy line he draws between fiction and non-fiction. In his last two novels, *Half a Life* (2001) and *Magic Seeds* (2004) he scrupulously pictures the dreadful life of a diaspora deserting his homeland in quest of the modern world and education, to actualize all he had read and heard in his missionary school in India. There he does start his journey to exile, unaware of the aftermaths that he may face on the path to success. Homelessness, displacement, and exile are portrayed in both of the novels as the consequence of the ‘othering’ practiced on those who live in periphery and those who see themselves as the center of the global village. However, this is of great significance that Naipaul delicately differentiates himself from the postcolonial theorists as

Edward Said and Homi K. Bhabha in his perception of the East and West and the way he deals with the developed and developing nations in his fiction.

First, and foremost, the diversity unfolds the great distinction between Naipaul's polemic and that of Said's. Said's conception of the "Orient" is a justification of the subjugation of the people he calls "the Orient" and in general all the colonized places of the world. There is nothing human in his discourse and it is almost in the theoretical realm. Said's discourse, primarily, does not deal with human individuals; however, they can only take the place of the victims in this discourse. Conversely, in Naipaul's fiction, the individual's ethics and actions as a progressive subjectivity can create the resistance of the diaspora in the exile. While he emphasizes the resistance of the individual to the dominant discourse, he also presents the impossibility of stability in the new land which is the result of the diasporic life. This contradictory view questions the possibility of the characters to form a solid subjectivity. In the sequel, Willie Chandran takes on many roles through the sequence of the story: first as a teaching-college student, later as a writer, as the husband of a hybridized woman in Africa, the purposeless revolutionist back to his land, and later a permanent floater seeing home in his spirit of journeying. While he is exile to England, he comes to the understanding that the solidity of life is an impossible mission for him as a diaspora, and that the center of the new world is not holding a unity among its multicultural nation. The

authenticity of the roles he plays is devaluated by his late knowledge of his true essence as a diaspora. Naipaul, significantly, is the explorer of the real individual beneath these written roles which appears in his alternative first person narrator. The narrator criticizes his present existence and condemns his futile knowledge of the world as the very reason of his failures as a complete flaw through the novel. This notion of individuality, though a “mimic man”, is the distinctive feature of Naipaul’s discourse. The concept of mimicry is at the core of the negotiation that the exile makes in the West’s discourse which claims his intention of resistance.

The second analysis concerns Homi K. Bhabha’s controversial work, *The Location of Culture*. He concerns the notion of subjectivity in a position that multiplies the difficulties of association with radical difference, which means within the process of subjectivity, all the notions of self, the nation, community, and culture can lose solidarity and be deformed. In his assertion to colonial discourse he claims that “the West is suffering from precisely the problem of the child who must dislocate himself or herself from the world in order to feel himself or herself whole.” (Dascalu, p. 130) Therefore, Bhabha attributes the reason for the creation of “Otherness” as a way of uttering wholeness by West through the colonial discourse. In this discourse, Bhabha does not believe in an essential self as a victim in the underlying layers, though.

The exile narrative represents another significant notion that is the “stereotype” in the new landscape, also considered by Bhabha. The stereotypes will always remain the same image as it always was which limits the movement of the individuals in the new world. Naipaul’s narrator, Willie Chandran, in both of the novels fulfills the stereotype of the roles he is given to in different episodes of his life. This role playing poses his nature as an inauthentic entity. He comes to the understanding, as he wrote to Sarojini, that:

I don’t know what you will think of this. You might think I am talking like an old fool, and I probably am. But I cannot pretend at this age that I am making my way. In fact, every day I see more clearly that here, though I am a man rescued and physically free and sound in mind and limb, I am also like a man serving an endless prison sentence. I don’t have the philosophy to cope. I daren’t tell them here. (Magic Seeds, p. 232)

He is quite aware of the fact that a man of his background is exposed to “liminal” life in the landscape; due to the act of mimicking, the exile deforms the possibilities of his own existence. Acting the stereotype of the new discourse distorts him into a Frankenstein figure within which his essence floats. This puzzled existence of the exile is the very “hybrid” constitution that defines the exile, the hyphenation of being in-between; hence this in-betweenness makes the reality of the exile open to flux. The quest of the protagonist to multiplicity is bound to certain amount of ambivalences of the country, the language, and the people he left behind and those he encountered in exile. The diasporas in exile

personify no certainty as the result of these ambivalences in exile. The uncanny world of the exile presents him with the mimic manners of the new world as well as suffering the distinctive background within the new ethics. This is the reason that the exile takes his journey to a personal discovery, a journey within, which unfolds the futility of the journey without.

Having left India at an early age, Willie is unable to get a hold of his own history. Though he makes attempts to find the truth, this remains another ambivalent phase of his journey. There are many ambiguities in his quest which avoids the exile figure to construct a unitary self in the multiplicity of the new landscape and to orient himself against his background. In this drifting state, the diaspora pursues his journey, as Willie did, to find 'home' as it always lay elsewhere till the reality of this 'home' becomes dubious in his permanent journey. This is the essence of the dialectic of incompleteness that captivates Willie in both of the novels. First in *Half a Life*, the first half of his life which ends with his abandoning of his wife, second in *Magic Seeds* which ends "unraveling" regardless of his lifelong quest. The inner self of the exile is in conflict with the outer façade which is the result of change, assimilation, collaboration, dislocation, and many other notions concerned with the Literature of Diaspora. In this land of incompleteness the exile asks himself 'who am I?', 'where do I come from', 'where am I going?' which remain unanswered with his struggle to find home. The

diaspora's quest will never be closed up, as Willie's story remained incomplete, to offer the most important notion of the diaspora's life as being unfulfilled, fluid, and failing in flux of ambivalences.

Never at home in India, when I was a boy. Never here in London. Never in Africa. I lived in somebody else's house always, and slept in somebody else's bed. In the forest of course there were no rooms, and then the jail was the jail. Will I ever sleep in a room of my own?' And he marveled that he had never had a thought like that before. (*Magic Seeds*, p. 177)

TRANSNATIONAL HUMAN TRAFFICKING PROCESSES IN THAILAND

Pol.Lt.Col.Pattakorn Sasanasuphin *

Assistant professor.Dr.Dusadee Aryuwat **

Center for Research on Plurality in the Mekong Region (CERP)

ABSTRACT

This research focuses on transnational human trafficking processes in Thailand. In studying, I will apply qualitative research methodology and will conduct in-depth interviews and semi-structure interview with who become business human transnational victim, transitional human trafficker and an officer who related responsible directly with human transnational trafficking. The findings showed that transnational human trafficking was compose the behavior, using controls way and advantage seeking improperly that extremely transnational human trafficking and seeks for from the emigrant who, become transnational human trafficking victim. The beneath confiscate at Thailand is entrance of secret gambling place country, there is the procedure that is related to with the procedure migrates transnational (victim lead departs the birthplace, proceeding the travel document, the travel and stay temporary in entrance of a secret gambling place country, the travel and stay before temporary arrive at the objective in destination country, and the work and stay in destination country). The strictness in the policy takes a foreigner of destination country, and geography international Thai state and destination different country make extremely transnational human trafficking has the behavior, supervision and advantage seeking from improperly Thai emigrant who becomes a victim happen in many the step of the procedure migrate transitional and modify the format condensed intensity and the violence go to follow the step differ in the procedure transnational human trafficking. The strictness level in the policy takes a foreigner of destination country and geography international Thai state and destination country, there is the procedure is related to the migrates transitional and migration transitional policy of the country entrance of a secret gambling place different citizen and side stability policy of Thailand. The extremely transnational human trafficking has the behavior, supervision and advantage seeking from improperly foreigner emigrant who becomes a victim in many step of the procedure migrate transitional and modify format, condensed intensity and violence go to follow the differ step. In the procedure migrates transnational and the strictness in policy of transnational country entrance of a secret gambling place citizen and side stability of Thailand policy that modify to go to the modernity.

KEY WORD: Transnational human Trafficking, Social network, Transnational Migration

INTRODUCTION

The difference level of economic development in the world, get cause of discriminating in social. The person, who live in the lower position that is inferior to in the social and then must try struggle seek for the way for improving position in economical and social position. But they do not can to do because of there are a lot of restriction that make person limitations aforementioned have no a chance or have only a little in the social in the country where is the homeland. They must seek for the way for building chance in new habitat or new country, assemble with system Technology communication development and the communication that have the progress more in globalization era. The new globalization makes news and data information, acknowledgement about economical state. In addition, the problem of political conflict in some country get bring transnational migration to the country, where have the development economical rate progress more. It is the new phenomena in the world include Thailand. Thailand is the centre of migration transnational land in South-east Asia. But the transnational migration cannot be happen easily because there is the limitation about policy of pertaining transnational migration. The people, who want to migrate must depend on someone who will supporter or agent, that have proceeding activity character in the format of transnational migration network. Both of in about the travel, dwelling, and the work in destination country. The transnational migration network have many types but finally be push forward to transnational human trafficking processes.

THE PURPOSE OF RESEARCH

To study transnational human trafficking processes in Thailand. Under the context that Thailand is a starting country source and Thailand as a destination country.

THE CONCEPT AND THEORY USE IN RESEARCH

1. TRANSNATIONAL HUMAN TRAFFICKING CONCEPT

The transnational human trafficking concept is mention about the human trafficker character in many dimensions do with the victim. That be arrangement seeks, buying, sale, shipping (carrying is from), submit (sending goes to pass), to procrastinate and to detain or taking keeps which, the differs way differs. In person control have to coerce, using force against victim, the stealing takes, defrauding, temptation, using power improperly or give money and alms to parent or caretaker's victim gives the agreement to mistake doer in advantage seeking from a person that the self takes care.

The transnational human trafficking concept was applied in this research cover 3 issues are 1) the behavior in the differs character, that human trafficker do with the human transnational victim, such as, transportation character, the arrangement seeks, shipping, submit, the arrangement live or taking keeps which person trading character. 2) the differs way to control, such as, coerce, using force against victim, the stealing takes, defrauding, temptation, using power improperly or give money and alms to parent or caretaker's victim gives the agreement to mistake doer in advantage seeking from a person that the self takes care. 3) the character of

advantage seeking improperly, such as seeking advantage of labor, mean lead comes to a beggar, labor enforcement, using labor by cruel oppress, using child labor, taking wage labor advantage, making is falling under enforce, taking person down is the slave or, enforcing cuts an organ for the business. Seeking advantage in sexual, mean advantage seeking from the prostitution, the production of pornography.

2. SOCIAL NETWORK CONCEPT

The concept social networking is a concept that describes the style of the element, social relation and features of social network that influence behavior to transnational migration and human trafficking in transnational human trafficking.

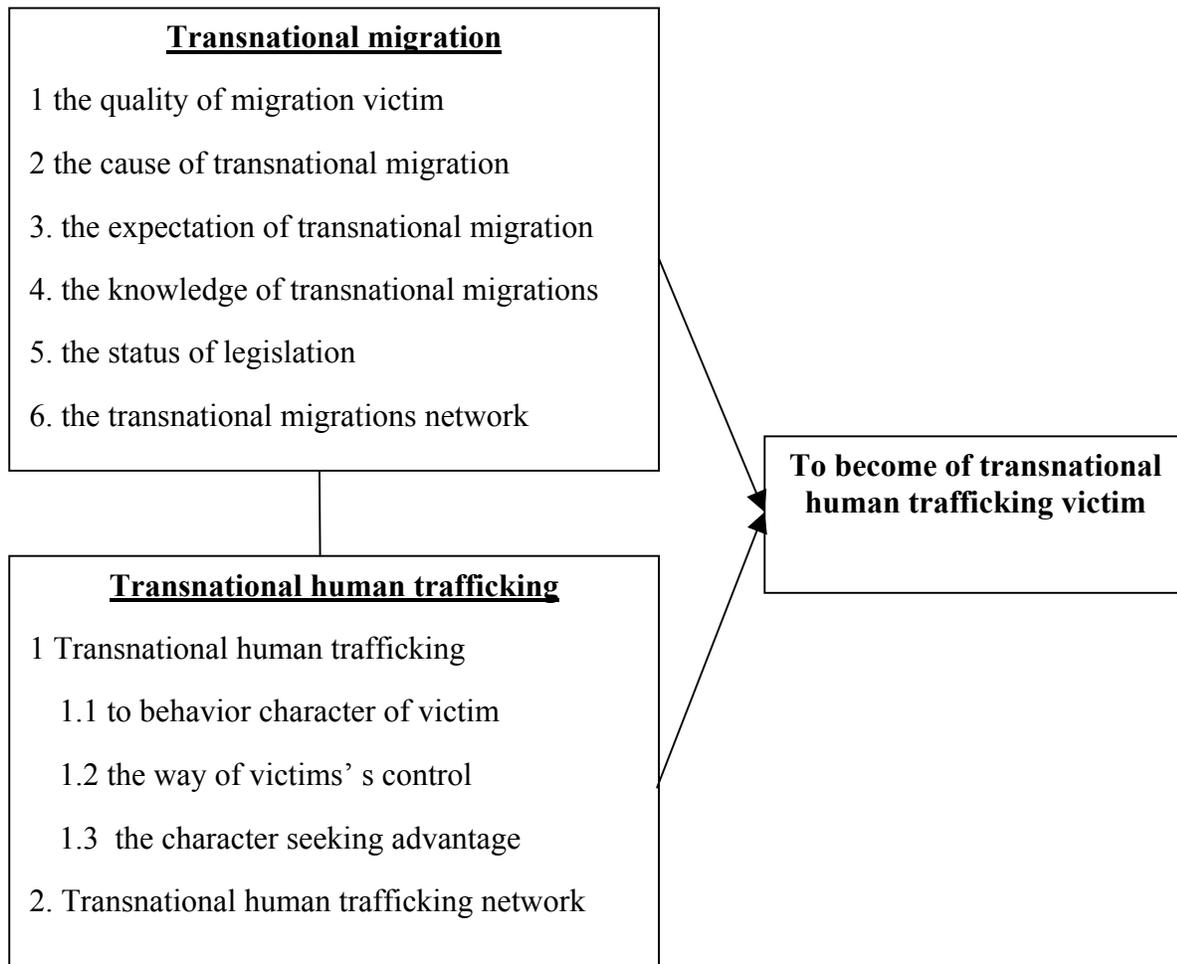

The social network was applied in this research, follow the idea of Boissevain (1973; 1974). That is the main concept and the other concepts helps to add in the analysis by use the way fixes limits of social network traditionally standard the character of the social relationship differs, at exist under social network in transnational human trafficking. The person, who become transnational human trafficking victim is the core in social network analysis in this time.

3. TRANSNATIONAL MIGRATION CONCEPT

The concept of transnational migration concept, as concepts discussed means to seek or chances with your local to create changes in life. Therefore, moved from a country where existing across the territory breaks to obstruct international to the country as a local address. To stay or activities means that different individuals.

The transnational migration was applied in this research bring to analysis in system migration manner (Castles and Miller, 1993) and making a decision analysis transnational migration follow worth idea and the expectation (De Jong and Fawcett, 1981).

CONCEPTUAL FRAMEWORK

RESEARCH METHODOLOGY

This research will apply qualitative research methodology to collecting data relevant of transnational human trafficking and will conduct in–depth interviews and semi- structure interview with who become business human transnational victim, human trafficker and an officer who related responsible directly with human transnational trafficking. Under the context that Thailand is a starting country and destination.

RESEARCH TARGET

1. The person who become to transnational human trafficking victim. Thai and Lao people, who live in assistance of Ministry of Social Development and Human Security of Thailand and Royal Thai Police 12 people.

2. The transnational human trafficker that accused of offences or adjudication is forbidden by the process of Thailand in about human trafficking or other multinational law related to transnational human trafficking of Thailand and controlled in prison at Ministry of Justice of Thailand include 12 people.

3. The staff related or responsible directly to the opposition of transnational human trafficking in Thailand, such as police, the officers of the Ministry of social development and human security and private organizations officials include 12 people.

RESEARCH INSTRUMENT

1. Use In-Depth Interview with the interview as tools to collect data from 23 transnational human trafficking victims and 14 transnational human trafficker.

2. Use Semi-Structure Interview (SSI) with the interview as tools to collect information from 12 staffs related or responsible directly to the opposition of trade human multinational in Thailand.

RESEARCH RESULT

Research found that transnational human trafficking in Thailand includes actions to control and to seek the benefits they human trafficker seek from Thai victimized human trafficker have the processes below:

1. Under Thai context as a starting source country, transnational human processes have associated with the processes of transnational migration.

1.1 As a victim in labor are 2 forms.

1) The transnational human trafficking processes, victim Thai people that migrants with travel documents. They trafficking do and controlled victim to migrants in Thailand by persuade and false information about wages or revenue. Working environment or accommodation and features of employer deceptive results found that most victims trust in the human trafficker which is a company ship labor than to trust in the information and find some fraud victim is by deceit, victims travelling documents, travel/counterfeit documents work belongs to another person, including in countries of destination of some countries. Which human trafficker ships Thai have bill do document departure from the country of destination prior to departure, but when to the end of contract, the employer is not executed documents departure move form destination country for the victim. By the claim that there is no cost to complete the document, make the victim some cannot depart from the destination country.

The part of advantage work seeking from destination country found that victims often seek benefits by take advantage of wage labor, or take advantage of the labor in others such as, the style of paying wages or remuneration does not satisfy the contract or as expected.

2) The Transnational human trafficking processes, victim Thai people that migrants

without a travel document. The human trafficker do and controlled victim to migrants in Thailand by persuade and false information in a manner similar to the 1 form but differ is 1) the human trafficker most trade as more companies deliver labor 2) most victims whom risks, both as individual risks, unemployed or under change or what drugs (alcohol or drugs) and usually places risks such as park bus or restaurant and 3) use the time soon to persuade, and information and victim most trusted in more than a trafficker and in the travel/lodging in Thailand found that most of the victims was performed and how intensive and severity.

Be it for narcotic drugs, intimidation or to enforce and have some scheme was to imprison delay as can depart from Thailand easily or southern Thailand to wait for the departure from Thailand. Section arrived destination found that most trade bait transports into destination countries, without permission. The victim worked as crew will be transported by trade lead sea boat Thai nationality. Come listen for prey and will be sent to the employer when out of the territorial waters of Thailand. Section seek benefits found that the employer will use to buy their victims by the bounty to the employer shippers and bring their victims by workers, such as housewives or fisheries. The human trafficker seek advantage from the most victims in intensity and severity mandating use labor or services in a way to force the threat, victim working without paid employment by employers claim that wage labor is deducted as bounty paid their trademarks.

1.2 As a victim in sexual are 3 formats

1) Transnational human trafficking, prey Thai people that migrants using documents arrived destination directly.

The human trafficker do and controlled victim to migrants in Thailand by persuade and deceit, information that is false or does not match reality, or does not meet the needs of victims about income. Working environment or features of the customer or a category of tasks. (Human trafficker will trick to countries where there is no strict categories work which full more scams to domestic destinations, weaker in foreign policy, get people often deceived about revenue. The most victims trust in the expertise of partners who provide data and persuade rather than confidence in the background information for information about income will receive higher. The way to access and fraud victims include: understanding the risks of prey (who risks or occupation to risk or select individuals in vulnerable places, such as services or restaurant or Salon). To create trust in the human trafficker by to refer experience, finances-professional and will be free to travel documents before by trafficker will travel documents (passport and visa). In the part of destination countries have no rigid, the human trafficker will document, victim loans to represent the state of the destination country and restore with interest a number higher than law and found some fraud victim is by deceit, victims travelling documents, travel/counterfeit documents, work, or is a party section seek to advantage work found that the employer will purchase the victim.

2) The transnational human trafficking processes, prey Thai people that migrants using document to another country before entering the destination country.

If the destination country have the weak policy been foreigner and include rigorous getting visa and countries of destination are rigid inner but victims have a bad resume (arrested prosecution/exile). In destination countries, the human trafficker do and controlled victim to migrants in Thailand by persuade and fraudulent, false information in similar to persuade and trick victim to transnational human trafficking in from 1.

In 1.2, but differ in the human trafficker, who is a commercial operator

travel documents that are knowledgeable and experienced in travelling abroad than in 1 from.

If the destination country have the intensity, human trafficker will document travel to another country with reliability and rigorous to inspect foreign people into the country of destination is less than the country of destination and use to request temporary residence to wait for travel on the next day.

3) The transnational human trafficking, prey Thai people that migrants without a travel document. The human trafficker do and controlled prey to migrants in Thailand by persuade and fraudulent, false information similar to a 1 from and a 2 from in 1.1 but differ is;

(1) Most of destination countries have large territory or boundaries or proximity to Thailand.

(2) Most of victim as a child or youth are less often in precarious, working in a restaurant or internet cafe.

(3) The bluff is fully about the kind of work in the destination country.

(4) The bluff has 2 steps, the human trafficker and most victims may not close but simply known as friends or working in the same.

(4.1) Most victims mainly youngest as a friend, relatives or people recognize more companies deliver labor.

(4.2) Most victims whom risks such as, unemployed or under change or used drugs (alcohol or drugs) and usually places risks such as park bus or the restaurant.

(5) The bluff is fully about the kind of work in the destination country.

(6) Because of most destination countries are a country with territory or boundaries or proximity to Thailand to trick will occurred 2 steps. The first step, the human trafficker have to lure victim to work in southern Thailand or the province can depart from Thailand. The second step, the human trafficker have to fool their victims to the destination country.

(7) The Victim is controlled through the processes of migration and work/residence in a destination country with intensity and severity as the narcotic drugs, placing anaesthetics, intimidation or to enforce and have some scheme was to imprison delay to depart from Thailand and arrived destination and found that most trade bait transport into the destination country without permission.

2. Under Thailand context is a destination country

Transnational human trafficking have the processes associated with the process of transnational migration,

The degree of international policy have been people of Thailand migration policies of multinational source countries. Our geographic Thailand destinations and formats they trade aims to seek advantage from migrants victim:

1.1 As a victim in labor dimension, the human trafficker do and controlled prey to migrants in source countries by persuade and fraudulent, false information about the environment, income, working environment or place features of the employer and type of work. The data find victim foreigner portions are human trafficker do and controlled by purchasing or provide money for parent' benefit to provide parental consent provision trade from migrants and seek advantage from their victims, and also find prey foreigner usually consult parents or relatives before decisions migrants from the region. But the victim chooses to decide themselves than believe consulting, the human trafficker, who most deceptive belongs in the same village or as a separate village experienced in helping in the migration to other local and usually relatives

live/work in Thailand as a colleague, and a guarantee or security in travel and has some method of trade meeting invite statement and fraud victim and other members in the village of simultaneous (especially migrants were far away from redevelopment).

Most of victims as a child or juvenile youngest a risk factors, such as no education or study, farming career, family as poor, member of the household have numerous or illness and have family problems. The human trafficker used deceit once or twice, at a time not long. The fraudulent results found that most victims are trusted in a whole host of experience. As economic or they have the same citizenship rather than the data. The human trafficker relies not having knowledge or under-served or needs migrants of victim and promising to give money to the victim or other adults to reach the destination country including guarantee security or receiving them travel expense before.

The travel in destination countries find that the human trafficker mainly transport of victim by foot from the village and the seat get employment or bus, and a temporary residence in the country of source and found some victim was to imprison detained for collecting victims and wait for timely departure from source countries. Since human trafficking transport victims in most labor side aisles or natural disaster, by using the vehicle such as, ferries employee, motorcycle or how to walk the shortcut from the source forest into Thailand.

In traveling in Thailand found that victims often provide temporary residence has some victim and was detained by quarantine detention house of trade along the frontier province and the province is located close to Bangkok for human trafficker will contact employers and filtered victims and human trafficker passes prey mainly using vehicle such as, a car or van and some victims was transported to the employer by train. The human trafficker will control the intensity and violence and intimidation or enforce through travel and found some of the victims come from countries that do not have a territory or boundaries adjacent Thailand, Vietnam, China, North Korea or Bangladesh was held human trafficker stay temporarily in the countries of Thailand, before entering Thailand.

The work and seek benefits found that most employers will buy their victims by pay, with employer shippers and provide victim most painstaking labor such as, cheese factory, factory of sheep shrimp, fruit factory and beggar. Most of labor victims are not allowed to work in the category, including not registered for work of the cabinet of the Thai Government because there are complications in the guidelines and higher money to pay. The human trafficker who are employers not to take victim to register itself and the victim most seek to benefit from trafficking by enforced labor or services. A work without paid labor The human trafficker who are employers claim that must deduct bounty paid to all before and some are prey is take advantage of wage labor, or take advantage of the labor of others and use of labor by savage oppress in paying wages or remuneration does not satisfy the contract or meet expected or does not match the data and persuade (to be deducted by the workers, not learned before).

The victims have to work hard under the bad environment, no break time or even illness and employer with a bad attitude per foreigner. The victim is a child many workers, children in the worst, in a way to force prey heavy without break time than the law or to work in a crowded place, dirty or unsafe.

1.2 As a victim in sexual, The human trafficker do and controlled the victim to migrants in source countries by persuade and fraudulent, false information about the environment. The data found prey foreigner portions are human trafficker do and controlled by purchasing or provide money parents of the victim and to provide parental consent provision

trade in prey from migrants and seek advantage from their victims and also find prey foreigner usually consult parents or relatives before decisions migrants from the region. But the victim chooses to decide themselves than believe consulting.

Most of the human trafficker is relative, a friend or member in the same village experienced in helping in the migration to other local, and usually relatives live/work in Thailand as a colleague, and a guarantor information or security. By fraudulent or purchase a victim to home with the victim or parents, who influence the decision of the victim. By the victim as a child or juvenile youngest studies in intermediate occupation money but earn less as people who have risk factors (but probably less than prey foreigner in labor). Such as, the poor family, member of the household have numerous or illness and have family problems by using deceit two to three times. Each time take more victims in labor.

The fraudulent results found, most victims are trusted in a whole host of possibilities to relatives or to them or have the same citizenship rather than the data. The human trafficker relies not having knowledge or worse experiences of victims and promising to give victims or other adults to reach the destination country including guarantee security or receiving costs to complete documents and travel before.

The travel in destination countries find that the human trafficker mainly transport prey by sitting car or private car from migrants. And mostly no temporary residence in the country by commercial source will provide prey for most travel with travel documents, including passports, which most of the forged documents containing false information such as, books through territory temporarily (Temporary Border Pass) type worksheet, astay not exceeding 3 on 2 night. The human trafficker to transport their victims based channels that were authorized by law using public transport, such as boat ferry passenger, van or car from source countries into Thailand. In traveling in Thailand found that victims often provide temporary residence has some victim and was detained by quarantine detention house of trade along the frontier province and the province is located close to Bangkok to the human trafficker will contact employers and filtered victims and the human trafficker passes prey mainly using vehicle such as a car or van and some are victims was transported to the employer by train. The human trafficker will control the intensity and violence and intimidation or enforce through travel and found some of the victims come from countries that do not have a territory or boundaries adjacent Thailand, Vietnam, China, North Korea or Bangladesh was held the human trafficker stay temporarily in the countries of Thailand, before entering Thailand.

The work and seek benefits found that most employers will buy their victims by pay, with employer shippers and provide victim most prostitution (allowing customers to molest or immoral to exchanges with money or benefits). The sexual victims has legal status in the initial stages, but illegal from the overdue period allowed and work without permission, including not registered for work, the Cabinet of Thailand itself and prey most seek to benefit from trade by prostitution or sexual services. Some victims are, the human trafficker seek to benefit by being forced prostitution, a forced prostitution without paid (the human trafficker claims must deduct as bounty). The victim received a little money for personal expenses, no break time even illness, or have menstruation.

The human trafficker will control prey which mainly resident law later, by intimidation whether assault remove life or arrest send to the state of the Thai. The human trafficker gives bribe to Thai state officials and the source country and the victim to hide if the raid arrest of the Thai officers.

ABSTRACT

The research focus on the health risk at the Thai-Lao border. The study aims are 1, Present health risk situations at the Thai-Lao border. 2,How mechanism process and method of government, local organizations and communities manage these health risk. 3, Determine factors and processes to support integrate management health risk on Thai-Lao border .The study also aims to apply the concept of risk theory and human security to analyze the negative impacts of modernity and globalization are process of closer interaction of human activities within economic, political, cultural and other social spheres and along spatial , temporal, and cognitive dimension. Globalization is changing the nature of social to risk societies and health risk . One of the effect of globalization is the spread of diseases and the potential for devastating new diseases to ravage humanity such as SAR or Avian flu .Population movement between Thailand and Lao PDR at the North-Eastern region border crossing point and the risk situations for the spread of HIV/AIDS are relate to the communities health risk. The rapid increasing movement of people and goods mean that many “Third world” diseases are new threatening the developed world .This research examines the hidden damages that confront people with social and health risk . In this dissertation I will apply qualitative and quantitative research methodology and will conduct in-dept interviews, observation, with activists from governance , local organizations and communities to explore the present social and health risk on Thai-Lao border area and examine how the people and communities confront and adjust to these situations . The analysis will propose a concept of health risk management health risk assessment and provide practical guideline for policies at the border area

Key word: globalization, modernity, risk society, health risk and human security

INTRODUCTION

Today, Modernity effected to globalization has vastly increased cross-border flow of goods, services, people and ideas ; consequently , it has facilitated the spread of infectious diseases and communicable diseases across the world . Globalization is a process of closer interaction of human activity with in economic , political cultural and other social sphere and along spatial , temporal and cognitive dimension. Globalization brings in both opportunity and challenges from a private person to a super – power country at large : people travel freely more across borders from one to another country and people are becoming more and more interdependent ; after all , the wild world is compressed into a small global village . Thus , instability in one country is likely to be a potential threat to the stability of another .Threat to the security of the state and humanities .In the meanwhile, Globalization is changing the nature of social to risk society including health risk.

The globalization of communicable diseases and infectious diseases is such that an outbreak in any country is potentially a threat to the whole world . The need for international cooperation on epidemic alert and response is greater today than ever before due to increased population movements , growth in international trade and biological products , social and environmental changes.

As border disappear , people and goods are increasingly free to move , creating new challenges to global health . These can not be met by national government alone but must be dealt with instead by international organization and agreements.

At the border for Thai- Lao communities globalization is changing the nature of health to health risk. There are many effect of globalization which spread diseases and the potential for devastating new disease to ravage humanity such as SAR , Avian flu , HIV/AIDS, Malaria, Haemorrhagic fever, and Tuberculosis ,etc. Rapid Population movements between Thailand and Lao PDR at the Northeast border region crossing points and the risk situations for the spread of communicable disease and infectious disease are related to communities health risk and human security. It examines the hidden damages that confront people with social and health risks which governance local organizations and communities need to explore the present social and health risks in the Thai-Lao border area . This dissertation is guided by the following question research : to what the characteristics and level of health risk situations are impacting people and communities in the Thai-Lao border and how the people and communities confront and adjust to these situations.

The main objective of this paper focuses on the health risk at the Thai-Lao border. The aims of the study are 1. Present health risk situations at the Thai-Lao border . 2 How mechanism process and methods of government , local organizations and communities management to health risk 3. Determine factors and processes to support integrated management of health risk at Thai-Lao border

The analysis will propose a concept of risk theory such as health risk management , health risk assessment and human security then provide practical guidelines for policies in the border area.

Methodology of dissertation is apply qualitative and quantitative research methodology and will conduct in–depth interviews, observation with activists from governance local organizations and communities to explore the present social and health risks at Thai-Lao border area, and examine how the people and communities confront and adjust to these situations.

The study area is at the Thai-Lao borders along the Mekong river at Chongmek area ,Siridhorn District and Kemarat District Ubonratchathani Province, Where two borders different way to acrossing ; Chongmek area by vehicle transport , Kemarat area by river boat only .

THEORETICAL BACKGROUND

DEFINITION OF RISK

Risk is a contestable slippery and ambiguous concept making it very difficult to define. There are numerous definition that depend on the situation context , field of application and adopt perspective. Risk is often normatively defined in probabilistic and mathematical term as is relate to the expected losses which can be caused by a risky event and to the probability of this event happening. It is mapped to the probability of some event with is seen as undesirable. The harsher the loss, as it relates to the likelihood of the event, the worse the risk . The negative concept of risk as risk avoidance or risk aversion can be contrasted with a more positive account base on risk taking in venture capitalism and finance as a measure of the variance of possible outcomes. The systematic management of actuarial risk is called risk management. while the methodology for evaluation risk is called risk assessment. Techniques and methods for management and assessing risk can vary considerably across different profession with the resultant effect that some profession , such as social work, are defined according to their ability and propensity to deal with risk. This has led Kemshall (2002) to argue that social work is predominantly concerned with handing and assessing risk as apposed on social need and justice.(Webb.S.A,2006)

Modernization itself has created new dangers and risks : these have been ‘manufacture’ and produced by industrial and technological process – and arguably by lifestyles –rather than occurring as random or natural events. Ulrich Beck (1999) argued that in late modern society we encounter new types and unprecedented magnitude of risk. (Flynn R,2006).

Furedi (1997) note that risk is a term used in many different ways in different context; and refer to ‘the probability of damage, injury, death, or other misfortune associated with a hazard. Hazard are generally defined to mean a threat to people and what they value’

Risk chance of a loss and loss itself .Characterized by the change in welfare that results from the relation of the hazard and from the success or failure of risk management measure applied.

The term of “ risk society” is not intended to imply an increase of risk in society , but rather a society that is organized in response to risk . It is a society increasingly preoccupied with the future (and also with safety) which generates the notion of risk (Giddens, 1999) Risk can be defined in the risk society as a systematic way of dealing with hazard and insecurities induced and introduced by modernization itself (Beck,1992)

CONCEPT OF RISK MANAGEMENT AND SOCIAL RISK MANAGEMENT

The essential tasks of risk management are to 1. Determine what hazards present more danger than society (as represented by its government) is willing to accept ; 2. consider what control options are available and ; 3. decide on appropriate action to reduce (or eliminate) unacceptable risk. At the broadest level risk management includes a range of management and policy- making activities ; agenda setting; risk reduction decision making, program implementation , and outcome evaluation.

Risk management is more than simply risk minimization .It entails efforts to increase potential benefits and to provide a process for planning risk- taking strategies and for monitoring and reviewing the results. Any risk management process must be both flexible and adaptable . A major challenge will be in promoting achievement- oriented visions of risk management

Risk management = Process of compromise and negotiation

Key steps for risk management are (Titterton M,2005)

1. **Consult and communicate** consultation with all involved is essential in order to reach clear and shared understanding . Communication between professionals is the main factor in many of the recent inquiries about people with serious mental health needs.

2. **Prepare risk plan.** The plan should include clear on who has been consulted or who is responsible for planning and implementation , the steps that will be taken to minimize possible harms.

3. **sign up** sign up is the process where the individual, his or her family and formal and informal carers are fully aware of the risk assessment and risk decision.

4. **Share information** An information strategy for managing the risk is essential : everyone involved must be prepared to share information and maintain awareness.

5. **Monitor and review.** Provision must be made for regular monitoring and reviewing: the frequency of reviews ,intensity of monitoring and extent to which other staff and agencies are involved should be made clear and written down.

6. **Support staff.** Support and supervisory arrangements for staff involved in making difficult risk decisions should be clearly spelled out .It is vital that staff are given support when there is an adverse outcome to the risk decision.

SOCIAL RISK MANAGEMENT ARRANGEMENTS

Over time different kind of social risk management arrangement have evolved . These fall into three main categories : (i) information management (ii) market-based arrangement, and (iii) public arrangement on a large scale. Each of them has relative strengths and limitations.

Informal arrangement. These arrangement have existed since the dawn of mankind and still constitute the main source of risk management for the majority of the world's population. In the absence of market institution public provision of support , the way that individual household respond to risk is to protect themselves to informal(family or community) or personal arrangement (self-protection and self insurance) Although they sidestep most of the information and coordination problems that cause market failure , they may not be very effective in helping the household weather adverse event.

Market-Based Arrangement. Individual households will also take advantage of market-based institutions such as monies , bank ,and insurance companies when they are available. However, in view of these instrument limitations due to market failure , their usage will be initially restricted but will rise with financial market development . Empirical evidence suggests that the establishment of a sound banking system and noninflationary policy serves to reduce risk . Because formal market institution are reluctant to lend to household without secured earnings , microfinance is also an important instrument of social risk management.

Public Arrangement . Public arrangement for dealing with risk came into being with the development of the modern welfare state but are relatively scarce and have very limited coverage in the developing world for fiscal and other reason .When informal or market-based risk management arrangement are not exist , break down , or are dysfunction, the government can provide or mandate (Social) insurance programs for risk such as unemployment , old -age, work injury ,disability, widowhood , and sickness. The mandatory participation in a risk pool can circumvent issue of adverse selection , in which individuals with low risk profile avoid participation in insurance pool due to premiums while individuals with high risk profile join in order to access to payouts. Since these program typically apply to those in formal employment , their coverage in developing countries is generally low. On the other hand , government have a whole array of instrument to help households to cope after a shock hit , such as social assistance , subsidies on basic goods and service . and public work programs. Which of these measures a government chooses to implement depends on its distributive concerns, its fiscal resources, its administrative capacities and the type of risk involved. (Holzmann R, 2001)

SOCIAL RISK MANAGEMENT STRATEGIES

Risk management can take place at difference moments – both before and after the risk occurs , the gold of ex-ante measures is to prevent the risk from occurring , or, if this cannot be done ,to mitigate the effects of the risk , Individual efforts, such as migration, can prevent risk, but in many cases , this requires support from government (for example, disaster prevention) . Mitigating the effects of risk through risk pooling by definition requires people to interact with other individuals, and poor people are typically less able to participate in formal and also informal arrangements. These leaves most poor households with the residual option of coping with the risk once it has occurred . They are normally poorly prepared to do this and , therefore , often experience irreversible negative effects.(Stanko D,2004; Holzman R, 2001)

Prevention strategies. These are strategies that are implemented before a risk event occurs. Reducing the probability of an adverse risk increases people's expected income possible strategies for preventing or reducing the occurrence of risk, many of which fall outside of social protection, such as sound macroeconomic policies, disaster prevention strategies, public health investment, environment policies, and investments in education. Preventive social protection intervention typically form part of measures designed to reduce risks in the labor market, notably the risk of unemployment, underemployment, or low wages due to inappropriate skills or malfunctioning labor market.

Mitigation Strategies. As with prevention strategies, mitigation strategies aim to address the risk before it occurs. Whereas preventive strategies reduce the probability of the risk occurring, mitigation strategies help individuals to reduce the impact of future risk event through pooling over assets, individuals and over time. For example, a household might invest in a variety of different assets that yield returns at different times (for example, two kinds of crops that can be harvested in different seasons) which would reduce the variability of the household's income flow. Another mitigation strategy is for households that face largely uncorrelated risk to "pool" them through informal and informal insurance mechanisms, while formal insurance pools risk from a large pool of participants, which results in less correlated risks, informal insurance has the advantage that all the participants have access to more or less the same amount of information.

Coping Strategies. These are strategies designed to relieve the impact of the risk once it has occurred. The main forms of coping consist of individual saving, borrowing, or relying on public or private transfers. The government has an important role to play in helping people to cope, for example, when individuals or households have not saved enough to handle repeated or catastrophic risks. These people may have been poor during their entire lifetime and, thus, had no possibility of accumulating assets. The smallest income loss would make these people destitute and virtually unable to recover. (Holzman R, 2001; World Bank, 2003)

CONCEPT OF HEALTH RISK ASSESSMENT

People have been interested in health throughout history. During the past several decades, this interest has intensified and has also begun to include many new perspectives. The field of risk analysis has grown rapidly, focusing on the identification, quantification, and characterization of threats to human health and the environment—a set of activities broadly called risk assessment. Risk assessment has its roots in the environmental sector, where it was developed as a systematic way of comparing environmental problems that pose different types and degrees of health risk. Such environmental risk assessment generally comprises four elements: hazard identification, exposure assessment, dose–response assessment, and risk characterization.

1. **Hazard identification** This initial risk assessment activity is directed at determining if a substance (or other health-threatening risk agent) could cause particular adverse health effects in human population. For example, Will exposure to a particular substance cause cancer? Will it harm the nervous system or immune system? Will it give rise to reproductive defect or other serious health condition or disabilities?

2. **Exposure assessment** This step attempts to identify the nature and size of the population exposed to the risk agent, along with the magnitude, duration, and spatial extent of exposure. Depending on the purpose, the exposure assessment could concern past or current exposures or those anticipated in the future.

3. **Dose–response assessment.** This step seeks to identify the quantitative relationship

between a dose level and the resulting incidence of injury or disease. Most substances even many of those used for beneficial purposes cause harm when consumed in large enough quantity. For example, an anesthetic may cause headaches at low dose, a medically advantageous sleep at higher dose, but lethal at very high dose. Thus, the riskiness of a substance cannot be determined with confidence unless the dose-response relationship is quantified.

4. Risk characterization This concluding task in a risk assessment combines the principle findings of the hazard characterization, dose-response, and exposure phase of the risk assessment into an integrated picture of the nature and expected frequency of adverse health effects in exposed populations. Ordinarily the 'bottom line' forthcoming from a risk characterization is a primary determinant of the risk management phase that follows risk assessment. (Robson M G; Toscano W A, 2007)

CONCEPT OF HUMAN SECURITY

The concept of human security emerged in response to global tragedies and social upheavals, along with the rise of globalization, economic co-operation and growth area. Recent threats of globally organized terrorism add to the current problems faced by the international community. Although these may not be new problems, Modern communication and transportation have effectively interconnected the world in ways that were unimaginable just a century ago. Today, a problem in one country can and often does spill over into a neighboring country and may affect an entire region or even the entire international community. Countries face situations in which even internal and inter-country disputes may now bring about outside intervention. During and before the Cold War, these disputes were almost the sole concern of the governmental authority of that particular country. Human security calls for international co-operation and involvement of non-state actors such as international organizations and non-governmental organizations (NGO) in dealing with these problems.

Human security means protecting vital freedoms. It means protecting people from critical and pervasive threats and situations, building on their strengths and aspirations. It also means creating a system that gives people the building blocks of survival, dignity, and livelihood. Human security connects different types of freedoms- freedom from want, freedom from fear and freedom to take action on one's own behalf. To do this, it offers two general strategies: protection and empowerment. Protection shields people from dangers. It requires concerted effort to develop norms, processes and institutions that systematically address insecurity. Empowerment enables people to develop their potential and become full participants in decision-making. Protection and Empowerment are mutually reinforcing and both are required in most situations.

CONCLUSION

Closer international human activities are effected by globalization and modernity is related to risk society. In terms of risk is the actual exposure of something of human value to a hazard and it is often regarded as the combination of probability and loss. Dissertation of Health risk at the Thai-Lao border focuses to examine hidden damages that people confront with social and health risks which governance, local organizations and communities to explore the present social and health risks at the Thai-Lao border area. This grounded theory applies qualitative and quantitative research methods and then conducts in-depth interviews, observation with activists from governance local organizations and communities to how the people and communities confront and adjust to these situations.

The analysis will propose a concepts of risk theory ; risk management ; health risk management ; health risk assessment and human security then provide practical guideline for policy in the border area Mekong- subregion.

Sexual Harassment Against Women Teenage Through Virtual Space

Ms.Anugoon Manochai*
Assistant professor.Dr.Dusadee Ayuwat **
Center for Research on Plurality in the Mekong Region (CERP)

ABSTRACT

This research focuses on the violence is enable with communicate from new technology. Chat Room and E-Mail and Web Board on internet similar lead to danger location against teenage virtual space increasing interact to teenage. Thailand society receive globalization into family such as, structure of family become single family, father and mother have work for support survival of family and result of development of nation .Then Thai society in agriculture become industry. Objectives of this study; study process of sexual harassment against women teenage through virtual space, study level of sexual harassment against women teenage through virtual space and study factors that influence the level of sexual harassment against women teenage through virtual space. The first step of research; interview teenage victim who used to communicate by internet such as, Chat so the victims fall to trust of anonymous and last them received sexual harassment. Secondly, survey interview with students who have study degree of secondary school which interview schedule would to measure level of sexual harassment Include factors influencing to level of sexual harassment against women teenage through virtual space. The result of study lead to plan policy from government for protect women teenage in Thailand to cope of communication with new technology , teenage have knowledge and protect themselves between powerful technology , organization have deep data for plan to study and solve problem .

Key word : Sexual harassment , Women Teenage, virtual space

INTRODUCTION

The developed of capitalism have affect families, that can see from the structure of the family has changed from a single family. The size of family members are smaller and have parents or foster parent children alone more. Furthermore, States living and economy of the people in society associated with capitalism. The family must help each other find enough income to the family's expenses, that make the father and mother to work outside the home. The economic oppression and modern society, bound proximity between family members start to fade parents don't have time to care with children and grandchild gap between ages unable to understand the needs of each other.

When society contributing to the progress and electrifying of innovative media and technology. Media and technology then spread rapidly in the daily life of people in all groups. Most of research show, adolescents adolescents are used to view pornographic cartoon, pornographic and internet behavior with sexual issues involved.

The adolescents used time to play the internet each day 94.01 minutes and view pornographic cartoon 30.25 percentage, see pornographic movies 39.27 percentage, and view pornographic web regularly amounting 27.23 pornographic (Project track illustrate children and youth in the province, 2006)

Furthermore, the internet contains many information such as, a service formats graphics and sound it make user teens interested, enjoy and worth tracking. Internet have trace information services from the World Wide Web in a variety of styles and a communication-electronic mail (E-Mail), communication by talking through a network of internet (Chat).

At any rate, adolescents use the internet and electronic mail for the electronic communication in a group of friends. So adolescents have opportunity that adolescents are victim to sexual violence was made from people whose behavior and maliciously come every opportunity and criminal nationwide prose live. There is a damaged were rape actions by force as women from the year 2006 to 2008 approximately 12034 people that damage was made sexual violence, as has been threatening bodily gender and adversely impact the mind affect family and continue through society widely.

While the sexual violence that have damaged in physical space. People do have both known and unknown, if people don't know should trust only.

OBJECTIVES

- 3.1 To study process sexual harassment against women teenage through virtual space
- 3.2 To study level of sexual harassment against women teenage through virtual space
- 3.3 To study factors that influence the level of sexual harassment against women teenage through virtual space

THEORETICAL CONCEPTS BACKGROUND

THE CONCEPT OF SEXUAL HARASSMENT

From the definition of sexual violence against women defined by the UN as declaration to eliminate violence against women. B.E. 2537 define “ violence against women means violence

any trace, because the differences between women and men which often prevents harmful or suitability physical, sexual or emotional women.”

This definition still enlarge to cover reach the dimension of the area, that violence behavior that happen both of in public area and individual area (Public/Private Space), the definition in the United Nations Organization can distinguish a kind of sexual violence do a woman in 3 characters :

1) Violence in the family and at home have affects to the body, sex and mind, including the violence that occurred in the relationship between a person such as, violence in the family, battering, sexual abused in the household.

2) Violence that occurs at work. This type of violence occurs frequently, but often not recognized society because women often do not dare to advertise or disclosed experiences of violence that they receive.

The powers relationship between men, which is “boss” and “ women which is “ kidnaps ”, women have often made of disability negotiation. The format of the violence in public consists of rape, attempt to rape, sexual abuse, sexual harassment and opportunity of intimidation at work, etc.

3) Violence oriented structure that present policy and regulations or caused by careless of State employment policy such as, sexual discrimination education policy that limited the opportunities of the girl or the law and political system that discrimination against women, etc.

PROCESSES OF SEXUAL HARASSMENT

Sexual harassment is a social issues that affect people at work, school and military camp. The solving completely must use many interdisciplinary, such as psychology, sociology, medical profession, law, and the education, which menacing sexual majority victim is a woman , (Gruber, 1997 ; Paludi & Paludi, 2003).

Furthermore, the virtual area as well and as the area where evil. In the positive is not twitter has discover fun to enjoy. But in the negative has to disdain, to threaten such as leave computer viruses, sending spam agitators hackers information. (Barak & King, 2000; Joinson, 2003)

VIRTUAL SPACE

Virtual space is distributed in every geographic region. A group of people socialize not have to be people in the community. Just have common interests , no need to travel experience together can communicate across boundaries between share news, ideas and experience from Computer-Mediated Communication (CMC) users can deliver identity to experience a society the virtual area (Burke & Richard, 1993).

In a virtual space that should look carefully one is a offensive, inappropriate materials spreading content inappropriate happen easier for children and adolescents such as, observe explicit sex, video sex in pairs and groups including the variety of sexual acts ; the adult sex with minors and sex with animals (Rice & Dolgin, 2008)

Holms (2005), mentioned of Attraction communication in the virtual space. Users freedom in new areas that conjure become the reign called Popular Cyber culture enjoys a deliverance to freedom and emancipation in communication.

Grabner-Krauter and Kaluscha (2003), studied trusted online and study the role of the trust of the E-Commerce thought about trust, it conflicts with create. Not only must understand the relationship between trust.

In the concept, find the element of trust in the description. The element of trust online with 4 types 1) dispositional trust 2) trusting beliefs 3) trusting intentions) and 4) behavior related to trust.

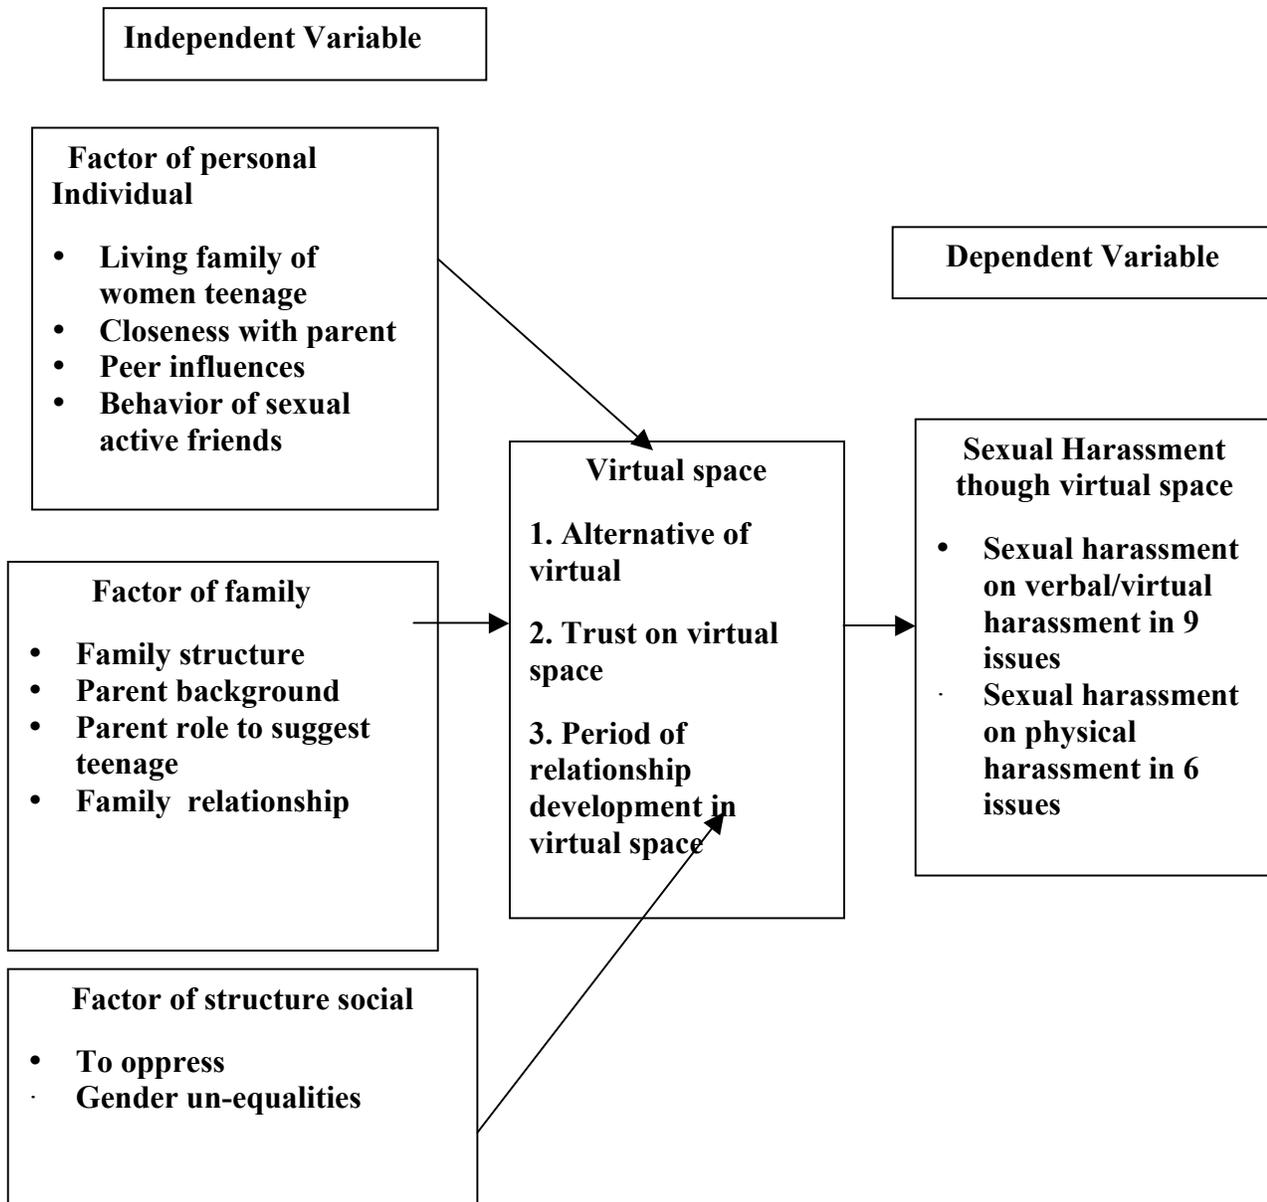

Because of adolescents in Thai society, family parents also have a role in the family can supervise and assist cases risks using virtual space. While the current family work and with the current economy of capitalism parents do not have administrative role and help because. The parent wants to work outside the home, including patients who do not have witnessed the good with children, make teens have the opportunity in a virtual space and with a teen that has its own behaviors.

Either, interaction created in a way that people know each other directly, never known before or just known as with respectable faith the homey familiar. The confidence is a decision in the trust. Therefore, in the element of trust is associated with reliability convinced by considering the behavior of people and situations in conjunction with and trust in education.

From the education trust in the virtual space. There is an element of trust is 4 reasons 1) dispositional trust 2) trusting beliefs 3) trusting intentions and 4) behavior related to trust, the trust of the people.

I use the concept of Grabner-Krauter and Kaluscha (2003), is a conceptual framework, the concept of trust by element of trust in 4 reason as in this fig below.

CONCEPTUAL FRAMEWORK

METHODOLOGY

In this research used qualitative methodology include: adolescent girls in school age 15-18 years, increasing the threat through virtual space which threats, sexual here covers sexual threats with verbal/and or sexual threats to the physical, who notify the police in a local ceremony since 2006 to 2009 in case sexual threats to understand the processes that young female sexual threats through a virtual space and to use as guidelines interview.

RESEACH RESULT

1. Virtual space fillings with sexual, found the convenience and modern of the virtual area, it makes people talk in the association quickly. Make a link to an appointment to meet them in real space. The sexuality online, found the 6 areas such as, pornography, sex shop sexual, sex education, sex contact and sexual subcultures.

2. Women as the target of threats, use a strategy aggress men in opinion in online chat. Sometimes the offensive to women as a target group discussion, the create interaction in online, found that most women like men aggressive interactions including men find ways, women like falls love of innocence and then men have created produce sexual communication within a virtual space.

3. Delude procedure, how the actors do when known as chat rooms, they can open the chat rooms that private quickly for talking private. Most of children in online is like in the web area in chat rooms and they were talking together as the hours. In the United state, 1997 have chat rooms that are public number 400 forum is the most used online, especially in the afternoon after the school from which people visit discussions regarding sexual topics and have inappropriate contents.

Furthermore, the effects of cyber, the type of abuse prevention in cyber tell adults have realized communications in cyber and found complexity of the stranger on cyber that affect to bully. So, should add caution against children and youth in to increasing.

4. Trust in virtual space, that relationship in the virtual space become a proximity of meaning that more communication also no restrictions in virtual space. The virtual space do know the actual name, address telephone number, exchanged pictures, wrote letters to each other and make meet. Virtual area is the area with many of the boundaries and privacy that boundaries

5. The victim from anonymity, Pina, Gannon, & Saunders (2009), study sexual threats from past documents for a period of 30 years. The research found, that phenomena of sexual threats should understand your sexual threats in order to avoid by the education society, culture, sexual role, biological characteristics, social learning. But they have a lack of references and assessment, treatment, education, sexual harassment, so be aware and suggests that studies relationships of actors threatening.

CONCLUSION

The data from teenager girl interview, that threats through a virtual apace. Most of teen girls in to the area of virtual space because she wants to talk with some people but the predator live in the forum chat room regularly and will get to know young women by tried to show sincerity and find information about the private story of teenage girls.

The predator tried to meet teenager girl on a physical space. For the period of time that woman teenager knows with person menace least is 2 weeks, period of time part long ago most is 3 months. Furthermore, the fall of victim; the predator often the faction makes an appointment the place which a province where the predator live, study or work.

Marginalization Process of the Transgender

Ms. Piyaluk Potiwan*
Dr. Maneimai Tongyu**

Center for Research on Plurality in the Mekong Region (CERP)

ABSTRACT

This article has some key aspects of the processes through which sexual identities are formed in Thailand. First, I discuss identity as social and political processes intricately related to the concepts of mobility and embodiment. Then I study connections between these processes and the concepts of sexual identity and transgender political action by demonstrating how transgender have long worked to come together as a movement to engage in a complicated process of social identity formation. I show how this is particularly challenging for transgender in the face of negative social constructions in public policy. By discussing the allocation of public policy values to sexual identities in terms of Thai norms and Thai politics.

Key words : marginalization process; transgender and identity.

*Ph.D.Candidate of Sociology, Faculty of Humanities and Social Science, Khon Kaen University.

**Lecturer of Sociological Program, Faculty of Humanities and Social Science, Khon Kaen University.

INTRODUCTION

In Thai politics, sexual identity is a dynamic of component. My purpose in this article is to examine the processes through which sexual identities are formed in Thai society. Sexual identity and transgender have particular meanings. I use sexual identity to refer to the matters of sexuality, sexual orientation, sexual desire, and sexual behavior with which a person or people may identify among a variety of discourses in society (Woodward 1997, 39). As this is intertwined with matters of gender and sex, my definition is particularly flexible so as to include the experiences of a diverse range of individuals, who challenge dominant heterosexual norms. I specifically use transgender to male who transfer to female. The term also conveys a highly political, activist, and inclusive meaning for non-normative sexual identities (Goodman 2001, 83).

THEORETICAL BACKGROUND

Feminist theory defines identity by noting that the concept is discussed in essentialist personal and group terms and less often as a sophisticated social process. The understanding of identities as social constructions, is an essential central part of moving beyond analyses of identity. In general, this is where the notion of identity as a process is positioned. Philosophers like Andrew provides a very succinct description of this structural positioning of identity. "The recognition that identity is not merely constructed, but depends upon some other, opens up the theoretical space for marginal or oppressed groups to challenge and re-negotiate the identities that have been forced upon them in the process of domination. Ethnic identities, gay and lesbian include transgender identities and female identities are thus brought into a process of political change" (Edgar and Sedgwick 1999, 187). Being intricately related to identity, therefore, identity politics is also a process.

The sophisticated nature of the process of identity politics can be seen in "The Combahee River Collective Statement," a statement of collective authorship by a small organization of African American lesbian feminists marginalized by the predominantly white and heterosexual women's movement in the late 1960s and early 1970s. Identity politics involves fighting oppression and building a more complicated understanding of identity through the discursive practices of "consciousness-raising" and "life-sharing" (Combahee River Collective 1997, 64). "We realize that the only people who care enough about us to work consistently for our liberation. This focusing upon our own oppression is embodied in the concept of identity politics. We believe that the most profound and potentially the most radical politics come directly out of our own identity, as opposed to working to end somebody else's oppression". Such consciousness-raising must then be combined with coalition-building in order to effectively make gains in the fight for social justice. Fighting oppression on multiple fronts is nearly impossible for anyone group and necessitates the formation of alliances. Key Spatial Metaphors for Conceptualizing Identity and Identity Politics Mobility and embodiment are other key concepts to consider in precisely conceptualizing what it means to examine identity and identity politics. These concepts, by providing spatial metaphors, each convey notions of movement and transition. In this way, then, they are non-essentialist notions that emphasize the central nature of identity and identity politics as social and political processes. Social scientists Luis Guarnizo and Michael Smith argue that identities are mobile in that "the discursive fields through which people

travel as they move through life constitute alternative, social structured bases for the inner tension and contention over selfhood and identity” (Guarnizo and Smith 1998, 21). Identity from this perspective is constantly changing and evolving and is “a state of ‘becoming’ rather than ‘arrival’”. These mobile identities may include race, ethnicity, class, nation, gender, sex, and sexuality. Feminist discussion of intersection emphasizes the multiplicity with which this process of becoming is imbued.

TRANSGENDER IDENTITY AND THAI POLITICAL

Early Sexual Liberation in theoretical background, I begin to engage sexual identity and transgender political action as a part of the broader theoretical discussion of identity and identity politics here by discussing several early sexual liberation in the Thailand context. Transgender do convey a keen awareness of the spatial themes of mobility, positionality, and embodiment, and thereby provide important historical registers for these key concepts. They also are valuable sources for drawing connections between sexual identity and sexual political action. In “A Homosexual Organization such as gay and lesbians are describes a particularly accelerating aspect of the mobility of queerness in the late 1997s. There was frustration, alienation, and cynicism, there are new characteristics among us. They are full of love for each other and are showing it; they are full of anger at what has been done to us. And as they recall all the self-censorship and repression for so many years, a reservoir of tears pours out of our eyes. And they are euphoric, high with the initial flourish of a movement”. In recognizing that many of us have mixed identities, and have ties with other liberation movements. In the sexual politics, homosexual activist describes their struggles with coming out and his newly heightened sense of positionality as an unhappy, lonely gay man feeling isolated by norms. It’s no use for us to pretend we give a shit about the kind of success this society offers, no use to pretend we’re winners, no use to pretend we’re happy. This deeply personal pain is a necessary precursor to making the choice to seek transformative social change. “A lot of us in sexual liberation understand this situation, understand where we’re at, how we got there, and what we need but we don’t know what to do next, what the next step is, and it hurts as much as ever. ... Perhaps we’re almost ready to start changing ourselves and making ourselves the revolution.

These early sexual liberation teach us that public policy changes need not necessarily be the goal of transgender political action. The tone is one of consciousness-raising and mobilization for visibility and positive identity formation. Indeed, we can still see the goals of this early sexual liberation movement in the legacy of Homosexual Organization , Sexual Politics and Transgender Movement what about the relationship between sexual identity and changes in public policy for positive sexual formations. They can challenges transgender can face when government and public policy send negative messages, such as denying public recognition of same-sex relationships today. These negative messages are difficult to overcome without policy changes. This can be the same for negative messages sent by scientific institutions, as it was before 1973 when the American Psychological Association pathologized queers as mentally ill individuals. I begin to address the negative construction of transgender people by public policy in the following section, but here it is important to remember how transgender come together in the first place to take action and deeply engage in a process of positive sexual identity formation.

Certainly identity is what frequently holds a group formation together, and in this way, identity is a fundamental precursor for social mobilization.

In terms of sexual identity and sexual political action, then, transgender engage this fragmented identity realm for positive identity construction. This is rather paradoxical, of course, as transgender individuals are different by their very definition and defy categorization under any particular identity rubric. Therefore, transgender activists face the challenge of coming together to participate in a social movement aiming to reconstruct well-defined sexual identities in fluid and positive way, while at the same time looking beyond the limitations of egalitarian rights-based identity politics arguments. This is not easy, and transgender interest groups and social movement organizations face criticism for the ways they have handled these challenges. Political scientist explains how transgender groups often “embrace the basic tenets of liberal democracy and ignore important class-based issues that could allow them to build important coalitions with one another and with other groups committed to meaningful political, social, and structural change. ... There is little discussion of entrenched structural privilege of the kind associated with class, ethnic, gender, and racial discrimination”. Therefore, recognizing the limitations of liberal rights-based arguments and broadening the focus of the transgender movement is central to advocacy for transgender issues. Fortunately, the politics of public policy, being based on group process and the pushing forward of particular agendas, necessitates the building of alliances. Certainly finding partners for transgender, as a negatively- constructed group, presents further challenges, and options for mobilization can be limited.

Certainly the challenge of building coalitions in the realm of identity politics is considerable, but that is to be expected in a diverse society of multiple identities. “The problem with social diversity is that while it opens up the possibility of individuals and groups developing a greater sense of identity and belonging in their specific cultural ‘homes,’ whether these are organized around nation, ethnicity, race, gender, sexual preference or whatever, the sense of a wider belonging to the polis or even the community of the human race is often obliterated” (Weeks 1994, 3; emphasis in original). In the face of such a daunting challenge, transgender can still seek out alliances and work to make sure that “there are common interests that can be articulated which complement and sometimes transcend the specific interest” (Weeks 1994, 3). As political scientist describes it, transgender are “sexual strangers,” though not necessarily in a negative way. “The position of the stranger is not only difficult, it is rewarding. Let us not abandon it for a citizenship that abandons others and suffocates that in each of us that does not fit; instead, I hope to help imagine and enact a postmodern citizenship of solidarity from the insider out, in which many bodies, many passions, many families, many workers, find a place”.

THE ALLOCATION OF PUBLIC POLICY FOR TRANSGENDER

Public policy is a key venue in which values are allocated to transgender in the process of sexual identity. I discuss this allocation of values here in terms of Thai norms, particularly that of the separation of powers between three branches of government. I see democracy as more than majority rule. Certainly elected officials gain their authority through the will of the majority, and that drives representation in the executive and legislative branches of government. But the judicial branch is important in a democracy, as well, especially for protecting minority groups, like transgender from majority domination. In Thai democracy, values are allocated by public

policies that emanate from government. And all of these institutions of government present certain challenges for transgender, as a negatively constructed minority group, to manipulate. Legislative Branch Values, the laws produced by the legislative branch are “messages about who matters and who does not. The Thai Congress is the primary voice for the Thai people and is particularly important in constructing identity”. But, the serious implication for transgender, Thai society illustrates, engaging in “moral rhetoric discourse” has long been a part of Thai democracy, commonly making transgender rights arguments problematic for legislators. (Feldblum 1997, 994). Political scientist supports with assessment that politicians rarely recognize the “parallel between the freedoms of sexual choice and intimate association and the freedoms of religion and expression” or acknowledge that “wrestling with and coming to our own religious and moral judgments is an essential component of self-determination and self-definition”. Even contributing political support to a transgender employment anti-discrimination bill can be a difficult prospect in this environment, as legislators worry about “the moral implications of government trumping an employer’s moral objections to an employee’s conduct in order to achieve the moral goal of non-discrimination”.

In this way, Thai society allocates values to transgender based on sexual behavior so that, in the name of community values, transgender are stigmatized and marginalized. Here we see Thai society using, as philosopher and lawyer describes it, the “coercive apparatus of the state to enforce homogeneity of sexual conduct” (Kaplan 1997, 23-24). But how far can the Thai society go in using its power to define homo- sex as immoral. The manner in which society has addressed the same-sex marriage issue further illustrates this issue of allocating values of immorality to homosexual conduct.

CONCLUSION

This article has been centrally concerned with articulating some key aspects of the processes through which sexual identities are formed in Thai. I have compiled arguments from a variety of scholarly sources and precisely discuss the concepts of identity and identity politics; relate these key concepts to sexual identity and to sexual political action, particularly that of the transgender movement; and analyze the roles played by public policy in the process of sexual identity making by discussing the manner in which the allocation of values in these venues marginalizes transgender. I discussed identity and identity politics in this article as social and political processes intricately related to the concepts of mobility and embodiment. I also drew connections between these processes and the concepts of sexual identity and sexual political action by demonstrating how transgender have long worked to come together as a movement to engage in a complicated process of positive sexual identity formation. This transgender movement has been faced with many of challenges, namely negative social constructions in public policy. By discussing the allocation of public policy values to sexual identities in terms of Thai norms, the consequences of the negative construction of transgender produced by majority institutions were examined, transgender marginalization in the government. The judicial branch, as a protector of minority rights, was able to provide a small amount of power for transgender. There also were indications that transgender continued to mobilize and build alliances, particularly in Thai society.

Therefore, I emphasized in my analysis, perhaps the most important facilitator of change in favor of transgender interests will be the broad based, fluid alliances that the transgender movement will be able to build in its campaign for visibility and public consciousness raising.

ABSTRACT

This study using the Nepal Demographic and Health Survey data set considers the use of the leave-out strategy of instruments, which is very popular in the economic literature, and a potential weakness that arises when this strategy is followed in studying the effect of water accessibility on child health where community-level access to clean water is subject to endogenous project placement. We use the leave-out community ratio of household access to in-yard water sources and community water infrastructure as instruments for hours in fetching water time, and the data on disease symptoms to examine the extent to which community-level access to clean water is subject to endogenous project placement. The results of IV estimate indicate that a true effect of hours in fetching water time is downward biased despite a strong correlation of instruments with the endogenous variable. The results further show that community-level access to clean water is significantly associated with both water-irrelevant and water-relevant disease symptoms, which suggests that the correlation between community-level access to clean water and child health is at least partially due to endogenous project placement potentially with respect to unobserved community wealth. The paper concludes that the OLS estimate has a potential endogeneity bias problem and IV estimate under the leave-out strategy of instruments is subject to endogenous project placements and is not valid. A policy implication of this study is that careful attention should be paid to both self-selection and endogenous project placements in studying the effect of water accessibility on child health.

1. Introduction

Studies in the economic literature have commonly used the leave-out strategy of instruments¹ to address the potential endogeneity and possible measurement error of water accessibility on child health (see, for example, Ilahi and Grimard 2000; Glick, Saha, and Younger, 2004; and Mangyo, 2007). It is therefore important to examine the conditions that determine the validity of the leave-out strategy of instruments. In this paper, we look at the potential weakness of this instrumentation strategy in examining the effect of water accessibility on child health.

The idea behind this instrument is that community-level access to clean water reflects past infrastructure projects conducted by government or non-governmental organizations (NGOs) rather than individual choice of water access by individual households. Thus, this instrumenting strategy is effective against self-selection of households into better access to clean water but is potentially subject to endogenous project placements. For example, unobserved community wealth may be positively correlated with both community-level access to clean water and child health, leading to an upward bias. For another example, unobserved pollution levels of communities may be positively correlated with community-level access to clean water (more urbanized areas may have better access to clean water) and negatively associated with child health, leading to a negative bias.

Ilahi and Grimard (2000) address the potential endogeneity of the availability of in-yard water by using the leave-out community ratio of households with in-house access to water in cross-sectional data from Pakistan. The focus of the study was on the relationship between access to water and time allocation of women, who have primary responsibility for water collection. The examination of hours in water collection using the leave-out strategy in Madagascar and Uganda finds that feasible public investments would not lead to large reductions in water collection times or change the relative burdens of overall works in men and women (Glick, Saha, and Younger, 2004). They also find that an investment in water does not necessarily have a dramatic effect on female time use. In a panel data study, one of the limited studies in the economic literature, the use of leave-out community ratio as the instrument for change in in-yard water source finds that the access to in-yard water sources improved child health of well-educated mothers in China (Mangyo, 2007).

Previous studies found a positive relationship between water access and child health. Many of them have examined the relationship between access to piped water and child health, and some of them have also explored the interaction between safe water and other household characteristics (see, for example, Cebu Study Team, 1991; Jalan and Ravallion, 2003; and Esrey, 1996). Galiani et al. (2005) finds the privatization of water supply led to improvement in child health through improved access to clean water. Indeed, the largest gain in terms of reduction in child mortality has appeared in the

¹ The use of community-level access to water as the instrument for household-level access to water by calculating the ratio of sample households with water access for each sample community but excluding the self-household both from numerator and denominator.

poorest population. A study in Nigeria finds that water supply and sanitation projects have helped to improve weight-for-height but not for height-for-age for children under the age of three years old (Huttly et al., 1990). Thomas and Strauss (1992) examine the relationship between parental characteristics, community characteristics, and child height in Brazil. They find that the availability of modern sewerage, piped water, and electricity has significantly affected child height, and the impact of mother's education on child height does not solely reflect resource availability. Esrey et al. (1985) analyzes the impact of water access on child health in five countries. They find no impact of water availability on height or weight in Bangladesh and water access has a minor impact on weight-for-age in the Philippines. On the contrary, water availability has improved height-for-age and weight-for-age in Colombia. In Nigeria, improved water access has a positive impact on weight but adversely affected height. Using longitudinal data from household survey conducted in the Philippines, Cebu study team (1992) studies the impact of behavioral inputs with other exogenous factors on child health especially on diarrheal outcomes. The authors used family specific fixed effects to control for unobserved heterogeneity. Similarly, Jalan and Ravallion (2003) estimate the impact of piped water on child health in terms of the incident and severity of diarrhea in rural India. They find a lower incidence of diarrhea among children living in piped water households. However, none of them have addressed the endogenous nature of child health and water accessibility.

In this paper, we use the data from the Nepal Demographic and Health Survey 2006. In Nepal, the supply of improved drinking water has encouragingly increased since 1990. The water supply coverage reached about 81 percent in 2005, which drastically increased from the 46 percent reported in 1990 (NPC, 2005). However, there is still a problem of physical accessibility of water source and sanitation. According to WaterAid Nepal (2004), only 42 percent of rural communities of Nepal have access to improved water supplies within return journey times of less than 15 minutes. Some households in hills have to spend as much as five hours per day for collecting water.

We assess the extent to which the community-level access to clean water is subject to endogenous project placements by utilizing data on disease symptoms. If the correlation between child health and community-level access to clean water is at least partially due to endogenous project placements, such unobserved differences across communities not only affect water-relevant symptoms but also water-irrelevant symptoms. Here, water-relevant symptoms include diarrhea, while water-irrelevant symptoms include fever and cough. For example, there is no reason to expect that unobserved community differences in wealth affect only the incidence of diarrhea but not the incidents of fever and cough.

Our econometric results show that the leave-out community-level access to clean water appears to be correlated with unobserved differences across communities, implying that our instrument is not valid. Our econometric results find that community-level access to clean water is negatively correlated with the incidents of both water-relevant and water-irrelevant symptoms. One plausible story behind this finding would be unobserved community wealth is positively correlated with community-level access to clean water and negatively correlated with the incidents of both water-relevant and water-irrelevant symptoms. Thus, our econometric estimate of the impact of fetching water time on child health fails to pin down the true effect. However, our study presents a potential weakness

of the leave-out instrumenting strategy which has been popular in the economic literature. Our study clearly shows that the leave-out community-level instruments are subject to endogenous project placements and could do more harm than good.

The remainder of this paper is organised as follows. In section 2, we describe the dataset, descriptive statistics and variables description. Section 3 presents the empirical specification. The results and discussion are present in Section 4 and we close with conclusions and recommendation in Section 5.

2. Data and variables

2.1. Data description

Analysis of data was based on 5,783 children (4963 cleaned data) aged 0-59 months included in the Nepal Demographic and Health Survey (DHS), which was carried out from February to August 2006. The DHS collected demographic, socioeconomic, and health data and formed a nationally-representative sample of 10,793 women aged 15-49 years in 8,707 households (MOHP, New ERA, and Macro International, 2007). The DHS sampling design² allowed for community level estimates in 260 clusters for 5 development regions in the country.

The survey regression analysis³ rather than non-survey ordinary least square (OLS) was used to control the DHS sampling design. Survey regression deals with three important sample characteristics: sampling weight, stratification, and clustering (Gutierrez, 2008), and it is appropriate to adjust for sampling design effect.

2.2. Variables description

Table 1 presents the variable definitions. Two anthropometric measures (z-scores of height-for-age and weight-for-age), which were standardized based on World Health Organization (WHO) international reference standards,⁴ were used as health indicators of children. Child height-for-age and weight-for-age were used to measure the longer-run child health in terms of nutritional status. Weight-for-age largely indicates the same aspect of health as height-for-age, but it is influenced by recent phenomenon.

The physical accessibility of drinking water was defined in terms of fetching water time in hours⁵ (round-trip). The household physical accessibility of water is likely to be

² At the first-stage of DHS sampling, 260 primary sampling units (PSU), 82 in urban areas and 178 in rural areas, were selected using systematic sampling with probability proportional to size. While in the second-stage of sampling, the average of 30 households per PSU in urban areas and average of 36 households in rural areas were selected by using systematic sampling.

³ A survey design characteristic was set by Stata command: *svyset*. This command was set for clustering (primary sampling unit), sample weight, and stratification (sample stratum number). The weighting factor was used after dividing the sample weight by 1000000.

⁴ WHO released the new growth standard, in April 2006 and recommended new cut-offs for data exclusion. The data were excluded if a child's height-for-age z-score was below -6 or above +6 and weight-for-age z score below -6 or above +5. This cut-offs points were wider than those for the old cut-offs for the 1978.

⁵ To check the accuracy of reported time, a dummy variable for water accessibility was also used for analysis. The obtained results are consistent with the results presented in this paper. (The result with a dummy variable of water access is not presented in this paper due to space limitation).

correlated with other socio-demographic factors that can also affect child health. Therefore, the effects of hours in fetching water time on child health were estimated after statistically controlling for the effects of other potentially-confounding factors. These factors included at child, household, and community characteristics. The variables included at the level of the child were child age in months (0-59 months) in order to control for the age affect on child health. Sex of the child and the status of being twins were also included. Hatkar and Bhide (1999) showed that the twin frequently gives lower birth weight.

As parental education is likely to be highly correlated with child health and water access, exclusion of education of either parent is likely to bias the coefficient estimate on hours in fetching water time in the negative direction. Therefore, both mother's and husband's education were included as categorical variables indicating whether the mother or husband had primary or secondary education with no education as the reference group. Mother's age at first birth was included as a dummy variable indicating whether the mother was younger than 19 years of age⁶ or not at the time of giving birth to the first child. Children of teenage mothers also have typically been found to suffer from lower birth weight (Mwabu, 2008). Maternal age can influence intra-household bargaining power of mothers relative to other household members (Smith et al., 2003). This possibility was controlled by including a dummy variable indicating a large age difference (more than 20 years, which was imaginarily set) relative to head of household, which was not necessarily the woman's husband. As there is difference in racial composition in various geographical location of Nepal, in the absence of race controls, mother's height was used as an indicator for differing races.

DHS data do not have information on household income and expenditure. Instead of income and expenditure, the wealth index⁷ was used to measure the long-run household wealth. Filmer and Pritchett (1996), using Nepal Living Standards Survey data, have demonstrated that wealth index to use as a proxy for long-run wealth was more reliable than conventional consumption expenditure based measures. It is argued that household size may not be truly exogenous. If women have access to modern contraceptive for birth control, household size could be determined by mother or families.⁸ The household size could be exogenous where family planning is not so widespread. However, it is possible that even in the absence of family planning, child mortality can influence household size (Linnemayr et al., 2008).

The variables at the community-level included are geographical region (Mountain, Hill, and *Terai*), community water sources, and a community-level share of individual response on the use of all the basic vaccinations⁹ and the use of modern contraceptive

⁶ The cut-off point of below 19 year was chosen because the child height-for-age increases with the age of mother at the time of birth up to approximately 18 years.

⁷ The DHS data contained wealth index which was derived from using principal components analysis (PCA) procedure.

⁸ In Nepal, 44 percent of married women used modern contraceptive in 2006 (MOHP, New ERA, and Marco International Inc., 2007).

⁹ The basic vaccination was defined as children who received 3 doses of Polio and Diphtheria (DPT), and one dose of Tuberculosis (BCG) and Measles vaccinations under 5 years old.

methods, which were used as a proxy for the availability of health care services. Furthermore, seasonal dummy was also included to control the effect of season on child health.

2.3. Descriptive statistics

In Table 2, the means and standard deviations of key variables used in the regression are presented. About 39 percent of children show a weight-for-age z-score below -2 standard deviation and 11 percent of them show a z-score below -3 standard deviation, which according to the WHO, is a sign of underweight and severely underweight, respectively. Similarly, fifty percent are stunted and 21 percent are severely stunted.¹⁰ The mean age of mothers at first birth is 19.4 years and about 43 percent of mother gave birth under the age of 19 years. 36 percent of women resided in the households where their age differences were more than 20 year from their household heads. The education status was lower for women with around 20 percent for both primary and secondary education while around 30 percent men had primary education and more than 45 percent had secondary education. Slightly less than fifty percent (47%) of the households in the sample had access to water on premises and 45 percent households had water source on round-trip journeys of less than 30 minutes. While only 8 percent of households needed to travel round-trips of more than 30 minutes for water collection.

3. Empirical specifications

The theoretical framework linking child health to access to clean water is conceptually similar to that of Thomas and Strauss (1992). The model is based on Becker (1981) in which a household maximizes a utility function.

Assuming linearity, the estimation of reduced form function can be written as:

$$H_i = \beta_0 + \beta_1 W_h + \beta_2 Z_i + \beta_3 Z_h + \beta_4 Z_c + \varepsilon_i \quad (1)$$

where H_i is a vector of anthropometric measures of children; W_h is water access ; Z_i includes child specific characteristics; Z_h includes household characteristics; Z_c is the set of community characteristics which affect child health; ε_i is the child specific disturbance term. $\beta_0, \beta_1, \beta_2, \beta_3,$ and β_4 are the coefficients to be estimated.

The effect of hours in fetching water time on child health was estimated by the following community fixed effects model:

$$H_{ic} = \alpha_c + \beta_1 W_{hc} + \beta_2 X_{ic} + \lambda_c + \varepsilon_{ic} \quad (2)$$

where the subscripts i and c are individual and community indicators, respectively; X_{ic} is the set of individual or household control variables; λ_c is community-level fixed effects; and ε_{ic} is the idiosyncratic disturbance.

¹⁰ According to WHO, children whose height-for-age z-scores are below -2 standard deviations and -3 standard deviations from the median of the reference of population are considered stunted and severely stunted, respectively.

Hours in fetching water time might be correlated with unobservable community wealth which, in turn, would be correlated with child health; therefore, the OLS estimate of equation (1) would produce a biased result. The direction of bias, moreover, may be upward or downward. Therefore, it is difficult to know the true magnitude of the impact of fetching water time on child health although it may be possible to establish an upper or lower bound for the true effect in equation 1. The community effects from the composite error can be purged by using community dummies in the fixed effects model (2). The use of community fixed effects remove any bias which arises from unobserved community-level heterogeneity that might be correlated with both child health and hours in fetching water time.

Even with community fixed effects, households might have controlled over convenient access to water and child health within communities. However, this may not cause a bias if water accessibility is mostly determined by government or NGO water projects because, in this case, individual households have no control over access to clean water. Nevertheless even if the water project is determined by NGO or government, one issue that still causes a potential endogeneity is that water projects might not be placed randomly across villages. If such water facilities were placed in the areas where population health was poorest, the impact of the facilities would exhibit a downward bias. On the other hand, facilities might be placed in more accessible and more prosperous areas, which leads to a positive bias.

To address the issue of endogeneity of water accessibility by individual households, the leave-out strategy of instruments was used in which the community shares of water infrastructure and water accessibility were used as instruments for household-level water accessibility. Specially, the non-self community ratio¹¹ of households with in-yard water access was used as the instrument for household-level hours in fetching water time (Ilahi and Grimard, 2000; and Mangyo, 2007). Similarly, the non-self community ratio of households with improved water sources was used as an instrument. As indicators of improved water sources, the share of piped water into the dwelling, the share of stand pipe or public tap, and the share of tube well water source were used as instruments for hours in fetching water time. The non-self community ratios reduced the endogeneity of household water access by exploiting variation in community-level difference in water infrastructure which reflects government or NGO projects in water access rather than individual demand by each household.

In equation 1, it was assumed that there was no observable variables' interacting with regressors. However, it was argued that the education of mother had complementary relationship with convenient access to water sources. This possibility was addressed by using two-stage least square (2SLS) regressions which were estimated separately for educated and less educated mothers.

To address the issue of endogenous project placement, data on disease symptoms categorized as water-relevant such as diarrhea and water-irrelevant such as cough and

¹¹ The non-self community ratio is calculated as the ratio of household with in-yard water source excluding self-household to the total number of household in the cluster excluding the self-household.

fever were used as dependent variables, and variables determine the diseases symptoms such as wealth index, education, hours in water fetching time, child age, sex, twin, season, basic vaccination, use of modern contraceptive, prenatal care, mother's height, and teenage mothers were used as independent variables in probit analysis.

4. Results and discussion

4.1. General results for OLS, community fixed effects, and IV estimates

Tables 3 and 4 report the results of regressing child health on the main variable of our interest, hours in fetching water time and other control variables. The z-scores of height-for-age and weight-for-age were used as health measures. Four regression models: (i) weighted ordinary least square (OLS), (ii) weighted community fixed effects, (iii) weighted two-stage least square (2SLS), and (iv) unweighted two-stage least square (2SLS) were computed for each health measure. The standard errors for weighted regressions, columns 1 and 3, were adjusted for clustering and stratification. The standard errors for unweighted regression, column 4, were robust to heteroskedasticity and adjusted for clustering.

The OLS estimates of child height and weight for fetching water time show the insignificant results with the expected negative signs only for child height. Most of the control variables such as child age, twin, mother's height, mother's education, season, wealth index, and mountain were significantly correlated to child height and weight. These variable effects on child health were consistent with previous studies. Utilizing community fixed effects made the estimated coefficient on hours in fetching water time smaller in magnitude for child height but did not make much difference for child weight. This implies that unobserved determinants of child height may be swept out by community fixed effects. Thus, community fixed effects eliminated any biases in the estimated coefficients due to unobserved community factors such as heterogeneity in unobserved predetermined community endowments that affect hours in fetching water time and child health. The implication is that communities with favorable unobserved environment for water access also have a favorable unobserved child height environment. On contrary, the coefficient estimates on fetching water time in the child weight equation was not significantly affected by the presence of community fixed effects.

Community fixed effects in column 2 perfectly control for unobserved heterogeneity across communities. However, self-selection of households into convenient access to clean water would cause a bias even after controlling for community fixed effects. To deal with this problem, we used instruments. The columns 3 and 4 in Tables 3 and 4 present the instrumental variable (IV) estimates with fetching water time treated as endogenously determined. These columns display the results of using community-level water infrastructure¹² and community-level in-yard water accessibility¹³ as instruments for household-level hours in fetching water time. The first-stage regression results are reported in Table 5. The F-statistics on the excluded instruments in the first-stage regressions were more than 18 which showed that the endogenous variable and the excluded instruments were strongly correlated. The literature on instrumental variable regressions argued that if first-stage F-statistics on excluded instruments is more than 10, excluded instruments have a strong correlation with the endogenous variable (Bound et al., 1995). In addition to this result, other tests were also computed in unweighted IV

¹² Non-self community ratios of household with access to piped water, stand pipe or public tap water, and tube well or borehole water sources

¹³ Non-self community ratio of household with access to water sources on household premises.

regression in column 4. The P -values of the Hansen test¹⁴ for overidentifying restriction and Durbin-Wu-Hausman test¹⁵ for identifying the equality of the IV and OLS estimates are given at the bottom of the Tables 3 and 4. The Hansen test did not reject the null hypothesis of instruments being correctly excluded and the Hausman test rejected the null at the 5 % level that OLS is consistent. Although the economic literature is doubtful about the reliability of Hausman test, in this case, the explanatory power of Hausman test could be considered higher because the excluded instruments from the leave-out strategy were very strongly correlated with hours in fetching water time. Nakamura and Nakamura (1998) mentioned that the power of an endogeneity test depends on the proportion of the variability of an endogenous variable that is explained by the exogenous variables. For these reasons, the main results for child height and weight are presented based on IV estimates.

The significant coefficient estimates on the control variables in columns 1 and 3 in Tables 4 and 5 are not substantially different except for the coefficient estimates for hours in fetching water time, which are almost 4 times larger for IV than for OLS for child height and around 7 times for IV than for OLS for child weight. The sign of coefficient on hours in fetching water time was as expected (negatively correlated); however, only the coefficient estimate of child height (-0.770) was significant. Here, the estimated coefficients on fetching water time were more negative for IV estimation than for OLS for both child height and weight. This was unexpected because self-selection of households into convenient access to clean water implied a less negative coefficient estimate on fetching water time with IV than with OLS. For example, unobserved wealth across households was positively correlated with child health and negatively correlated with water fetching time. Our instruments were effective against self-selection of households, thus, IV estimation should have produced less negative coefficient estimates on fetching water time.

However, our instruments are subject to endogenous project placements, which may be the main reason why our instruments turned out to produce more negative coefficient estimates on fetching water time with IVs than with OLS. We will discuss this issue in the section 4.3.

4.2. Is maternal education a complement or substitute to water access?

Since mother's education has a significant impact on child health, it could also have either a complementary or substituting relationship with convenient access to water. Such possibility was examined by using 2SLS separately for educated and less educated mothers. The 2SLS estimation finds the differential effects of fetching water time on child health by maternal education. The first two columns 1 and 2 in Table 6 present the

¹⁴ The test value was obtained by using Stata command *ivreg2* for unweighted IV regression with the null hypothesis of the instruments being correctly excluded. This command was used in non-survey regression as weighted survey regression did not support the command *ivreg2* in Stata.

¹⁵ This was a general version of Hausman test where the null hypothesis was that the OLS estimator was consistent. Wu-Hausman F-test also rejected the null hypothesis at the 5% level for both child height and weight. In these tests, standard errors were not adjusted for heteroskedasticity and clustering since the tests do not apply under robust standard errors.

2SLS results for educated mothers,¹⁶ and the last two columns 3 and 4 for less educated mothers.¹⁷ The point estimate showed that the effect of hours in fetching water time for educated mothers was -0.638 on height, which were statistically significant at the 10 % level and the sign was as expected. On the other hand, the point estimate for less educated mothers was not statistically significant at the conventional levels. For child weight, the coefficient estimates on fetching water time were not statistically significant for both educated and less educated mothers.

These results were consistent with previous studies on water access and child health. Jalan and Ravallion (2003) found that when mothers were well educated, the impact of piped water on both the duration and prevalence of diarrhea among children below five years in rural India were significantly lower. They also argued that skills and knowledge such as proper storing of water and boiling would be required to make water drinkable, so educated mothers may be able to adopt these skills more easily. Mangyo (2007) also found that access to in-yard water sources improved child health as measured by height and weight in China, only when mothers were relatively educated. Therefore, these results were consistent with the previous literature.

As this result supported that water accessibility and education had a complementary relationship in producing child health as measured by height. This indicated that the benefit from water accessibility was biased toward educated mothers.

4.3. The effects of non-random water project placement

It has been argued that even if community-level water access were exogenous to household demand, the water project might have been placed in areas that were purposely chosen by some criteria. Thus, some unobserved community characteristics could have been correlated with both child health and water access. As previously discussed, our instruments produced more negative coefficient estimates on fetching water time in comparison with OLS, which was unexpected because self-selection of wealthy households into convenient access to clean water suggested less negative coefficient estimates on fetching water time with IV. However, endogenous project placements could be the main reason why we obtained the unexpected results with IV. For example, if water projects historically were mainly provided in rich areas rather than in poorer areas, our instruments (community-level access to clean water) were positively correlated with unobserved differences in wealth across communities, which made our instruments invalid.

The issue of non-random placement of water projects was explored by using the data on disease symptoms.¹⁸ The diseases symptoms included were child diarrhea, fever, and cough. The diseases symptoms were grouped into two categories. Diarrhea was grouped into the water-relevant symptom category, while the remaining two conditions were

¹⁶ Educated mother was defined as mother either having secondary or higher education.

¹⁷ Less educated mother was defined as mother who has primary education.

¹⁸ Children data of DHS 2006 contain information about some diseases such as cough, diarrhea, and fever. The data included information on: whether the child had diarrhea in the last 24 hours or within the last two weeks; and whether the children had fever or cough in the last two weeks.

grouped into water-irrelevant symptoms. To increase the reported number of the water-irrelevant disease symptoms, a dummy variable of the water-irrelevant diseases was equal to one if either one of the two water-irrelevant symptoms was reported or zero if neither of the two water-irrelevant symptoms was reported. The data showed that about 26 percent of water-irrelevant diseases symptoms were observed in the subsample¹⁹ where mothers had no education and 33 percent were observed for mothers having education. Similarly, in the case of the water-relevant disease symptom, 13 percent of children reported the symptom in each sample of educated or uneducated mothers.

Table 7 presents the result of survey probit instrumental variable regression (SVY: IVPROBIT).²⁰ The dependent variable was a dummy variable indicating the incidence of either the water-relevant or water-irrelevant diseases symptom. Table 7 showed that the incident of the water-irrelevant symptoms was positively correlated with fetching water time²¹ with the instruments (community-level access to clean water) although the positive association was statistically significant at the conventional levels only for households having no education. This implied that endogenous placements of water projects were toward wealthy areas. Our instruments (community-level access to clean water) were positively correlated with unobserved community wealth and negatively correlated with fetching water time (See Figure 1). This story was consistent with our earlier finding that the coefficient estimate on fetching water time was more negative with IV than with OLS. Of course, given the positive correlation with unobserved community wealth, our instruments were invalid.

5. Conclusions

This paper examined the effect of water accessibility in terms of fetching water time on child health, addressing the endogeneity of fetching water time. First, self-selection of wealthy households into convenient access to clean water would be a source of bias if no measures were taken. To deal with this problem, we used community-level access to clean water as instruments for household-level access to clean water. The idea behind this instrumental variable strategy was that community-level access to clean water reflected past water projects initiated by NGOs and/or local governments rather than individual choices by individual households.

Although this IV strategy would be effective against self-selection of wealthy households into convenient access to clean water, community-level access to clean water may invite another problem: endogenous project placements. To explore this possibility, we used data on disease symptoms. The idea here was that if water projects were randomly placed across communities, no correlation was expected between community access to clean water and water-irrelevant symptoms such as cough and fever. In contrast, if the historical allocation of water projects were more toward richer areas, we would expect a negative

¹⁹ The sample size for mother having education was 1912 and 3051 for mother having no education.

²⁰ Stata command *svy, subpop (): ivprobit* was used for this regression. The option *subpop* was used for sub-population analysis of education and no education groups.

²¹ In a separate 2SLS regression using in-yard water sources as a dummy ('1' if water sources were on household premises, '0' otherwise) instead of fetching water time showed the similar results as presented in Table 8 in terms of sign and significance. (This result is not presented in this paper due to space limitation).

correlation between community-level access to clean water and water-irrelevant symptoms because of unobserved community wealth.

We found that fetching water time was positively correlated with water-irrelevant symptoms with community access to clean water as instruments. This implied that the historical distribution of water projects were more toward wealthy communities or communities with unobserved factors that are positively correlated with child health. Thus, our instruments were invalid, implying that we failed to pin down the magnitude of the effect of fetching water time on child health.

Our contribution in this paper was that we clearly showed a potential weakness of the instrumental strategy of the leave-out community ratio which was very popular in the economic literature. Unless we paid due attention, the estimated effects using the leave-out community ratio as instruments could be biased due to endogenous project placements.

Table 1

Description of main variables used in analysis

Variable	Description
Height-for-age (HAZ) and Weight-for-age (WAZ)	Z-scores of Height-for-Age and Weight-for-Age which are based on WHO International Reference Standard
Fetching water time	Hours (per time) spent to get to the nearest water sources, get water and come back. 0 if water is available in-yard or plot.
Child age	Child age in months ranging from 0 to 59.
Mother height	Height of mother in centimeters
Teenage mother	Equals to 1 if mother at the time of first birth was less than 19 years of age, 0 otherwise
Male	Equals to 1 if child was male, 0 otherwise.
Twin	Equals to 1 if child was twin or multiple births, 0 otherwise.
Wealth Index	Continuous variable of assets of the household
Mother/husband Primary Education	Equals to 1 if mother/husband had primary education, 0 otherwise.
Mother/husband Secondary Education	Equals to 1 if mother/husband had either secondary or higher education, 0 otherwise.
Mother education	Equals to 1 if mother had either primary or secondary education, 0 otherwise.
Mother no education	Equals to 1 if mother had never attended school, 0 otherwise.
Age difference to head of household	Equals to 1 if the gap between mother age and head of household head was more than 20 years, 0 otherwise.
Season	Equals to 1 if month of interviews was February (2) or March (3) or April (4), 0 otherwise.

Table 1 (continued)

Variable	Description
In-yard water	Non-self community ratio of household with access to water sources on household premises to total number of household within the community.
Public tap	Non-self community ratio of household with access to stand pipe or public tap water to total number of household within the community.
Tube well	Non-self community ratio of household with access to tube well or borehole water to total number of household within the community.
Piped water	Non-self community ratio of household with access to piped water to total number of household within the community.
Modern contraceptive	Non-self community ratio of women who used modern contraceptive to total number of household within the community.
Basic vaccination	Non-self community ratio of children who received all the basic vaccines to total number of household within the community.
Hill	Equals to 1 if people lived in hilly regions, 0 otherwise.
Mountain	Equals to 1 if people lived in mountain regions, 0 otherwise.
Plain area (<i>Terai</i>)	Equals to 1 if people lived in <i>Terai</i> region, 0 otherwise.
Diarrhea	Equals to 1 if diarrhea was prevalent in children, 0 otherwise.
Water-irrelevant	Equals to 1 if either fever or cough was prevalent in children, 0 otherwise.

Introduction

Discipline of History in social sciences has come to us without inclusion of women in its content. Absence of women in history was not even realized till British colonialists made efforts to understand and know Indians whom they wanted to administer. This initiated vigorous attempts on the part of British statesmen to gather information from whatever sources they laid their hands upon. Scanty information and vague observations about Indian society helped them to frame opinion that was unchallenged and unquestioned. Gender imbalance in the content of history determined the perspective of historians to an extent that even if women were there in history they were made to remain invisible.

This paper examines how historians developed a perspective to consider gender as a category of analysis and provided a multi-dimensional approach to the discipline. I have broadly divided the paper into three parts. The first looks at how colonialists included women in the contents of history; the second looks at how women became their own agency to create women's single histories; and finally, how momentous events and factors were used to include gender as a category of analysis. The time frame is from colonial to post colonial era though the colonial phase is examined to understand the background against which Indians create their own saga.

I

Immense efforts were made on the part of British administrators to carry field surveys and write reports to acquaint their masters about Indian social patterns and systems. This created archival sources which were accepted uncritically and acknowledged as first hand sources of information by later scholars. References to Indian social practices like female infanticide, child marriage and sati were made more frequently to draw the attention towards deplorable position of Indian women. This invited the attention of Indian enthusiasts and became a matter of serious concern for Indian socio-religious reformers who almost accepted British version of the position of Indian women.

This served British interests as they could more loudly claim a 'benevolent role' to impart justice and fair play to improve the deplorable position of Indian women. Though unintentionally, perforce women became inclusive in contents of history that British wanted to project. Imperial Gazetteers, Administrative Settlement reports and census data on social practices exhaustively dealt with women related issues and projected gender bias in society which was adequately reflected in history writing.

This equally served Indian interest as it drew attention of few privileged Indian enthusiasts who claimed to undo the centuries old wrongs being done to women. It was they who decided what was oppressive for women and when, what reforms could remove exploitation. Colonialists' requisite need to administer India put women on the anvils of history and Indians' aspirations to improve their lot stamped the visibility of women in their narratives and accounts.¹

This initiated an interactive phase of the east and the west on the social aspects of Indian history with special focus on women related issues. A stock taking of modern historical thinking revealed that from the outset the attempt to modernize India had been associated with the plea for women's emancipation and even the reformers like Rammohun Roy, Ishwar Chandra Vidyasagar and M.G. Ranade directed their criticism against man's inhumanity to women. Questions on age old subordination were raised and answers were given suggesting various reforms and passing legislations. This hardly made a change in her position but issues related to women served the interest of both colonialists and Indians. By only looking at the subordination of women colonialists found more reason to justify the need of introducing western ideas in Indian society. Views of Trevelyan, in the first half of nineteenth century, however stand an exception when in the context of the advent of western learning to the east he saw it not as an invasion but a home coming. He held the belief that it was time to repay the debt of civilization which Europe owes to Asia. Sciences cradled in East, matured in West are now to be spread all over.

Struggle of Indian reformers suited more to enhance their social position and strengthened their movements. Involvement of Indians almost made them a part of that history which colonialists inclined to project. By end of 19th century this benefited women also as they moved from shambles of exclusion to inclusion and found space in the writings of Indians also. Pandita Ramabai (1887)² and Katherine Mayo (1927)³ critically elaborated on the condition of women. Since Mayo's account was viewed with acceptance by westerners both in Britain and America it drew the attention of Mahatma Gandhi to respond immediately as he was convinced that Mayo intended only to condemn Indian civilization.⁴

II

Against the background of colonialists intervention of making women inclusive in the contents of history the nationalist phase contributed more meaningfully in the 20th century and made women visible as they waged their own battle not only for reforms but for right to equality. Long drawn debates on whether Indian society could remove the stigma of social stagnation turned women from being inclusive to being visible also. Western critiques invoked even the traditionalists to identify the dignity of women in the Indian tradition. The result was highlighting the high status of women in the Vedic Age as seen by Altekar (1938)⁵ who fulfilled the urge of nationalists to challenge the colonialists discourse.

Altekar mainly focused on the views of law makers on education of women, marriage and divorce, position of widow, women in public life, proprietary rights of women. The work is rooted in nationalist understanding of women's question. as it is an effort to raise the status of women to ensure healthy development of coming generations. With the purpose of establishing high status of women the work was regarded final version of nationalist answer to James Mill's *History of British India* (first published in 1826) that argued that women's position was the indicator of society's advancement. Having studied Hindu society, Mill concluded: "nothing can exceed the habitual contempt which the Hindus entertain for their women. . . . [they] are held, accordingly, in extreme degradation." Altekar wanted to correct the record by giving readers an appreciation of

Hindu culture's treatment of women. His intention was not to ignore problem areas, he wrote, but to put them in "proper perspective" and derive solutions from Indian history. Altekar's paradigm though limited and biased continues to dominate historical writing on women⁶.

This enthused historians in the mid 20th century to write separate histories of women. Demand for rights equal to men gave a shift to a phase of corporate feminism that continued more rigorously in the post independent India. A new turn to look at the position of women in context of gendered position became common. Just as reformist phase of the colonialist phase gave way to the phase of the demand of equal rights similarly Altekar's paradigm made way for focusing women's history in relation to men. Women's perspective was included which added new dimensions to the discipline and by using its distinctive approach women's issues got new questions for which new answers were searched. Historians, sociologists and philosophers borrowed from each other and enriched their disciplines by adding more works pertaining specifically to women in the ancient, medieval and modern periods of history.

Opening of new perspectives in women's history were evident. The crux was to free women and treat her humanly. Number of writings on prominent nationalist women by Neera Desai⁷, P. Thomas⁸, as well as Manmohan Kaur⁹ have summed up women's political role in the struggle for freedom. Desai followed a conventional framework and began with Vedic society and moved through the Buddhist period, Puranic Hindu society, and Muslim rule to the British Raj. Women were found under male domination in a patriarchal society except during the *bhakti* movement with its democratic tendencies, promotion of vernacular languages, when women was accepted as spiritual equals. Desai also mentions of the influence of the western ideas on Indian men to improve her position through reforms and traced women's entry into political and social organizations in the twentieth century, hailing their achievements while deploring their elitist nature. In her conclusion she recognized the importance of the Constitution for proclaiming gender equality, but focused attention on its impact on women's lives. In her view, "the old fossilized, oppressive institutional and ideological legacy" worked to prevent women from enjoying rights granted under India's constitution. Though a sociologist by training, Desai used the methodology, sources, and framework of history for this study. The documents used were conventional but she read them for information on gender. And her question—why haven't most women benefited from the promises of new India?—was new, even radical, for the times.

Thomas moved chronologically from the Indus Valley civilization to post independence India. Like Desai, he does not see a golden age in ancient India, and rather focused on increased subjugation of women under Brahmanism. Thomas contended that by the middle ages, Brahmanism had deprived women of their individuality and they remained in subjugation until the 19th century when her emancipation began and culminated in the legal and constitutional rights. Thomas traced improved position of women to British rule, a general awakening in 20th century Asia, and the Indian freedom movement. He even sees how in the late 19th century Indian women ("feminist") took control of the movement for women's rights and began to determine their own destiny. Participation in

Gandhian mass movements and evolving political bodies turned women as their own agents in history. Despite positive changes made after independence, he finds little impact and noted that it was only a decade later that the upper classes could benefit. Like Desai Thomas also used conventional sources, but read them for details about women and gender ideology. Thomas concentrated on finding the cause of women's subjugation to find ways for changing society and held Brahmanism, that is, the institutionalization of a priesthood responsible that suppressed both women and other Indian communities preventing sex equality, true democracy, and Indian pluralism.

Desai and Thomas wrote women-centered texts, espoused feminism, and championed democracy and pluralism. Written only two decades after Altekar's *Position of Women*,² these books mark the beginning of scholarship on women that placed women and gender questions at the center of the analysis and interrogated records in new ways. One can discern that these attempts to re examine and re interpret focused on ancient and modern periods. For the exception of Rekha Misra's work¹⁰, medieval period of history was almost bypassed.

III

Focused writings followed in context of wider social unrest when women's movements gathered momentum in 1970s. Simultaneously, the intellectual climate was transcending from the prior historical emphasis on providing education for women to the view that women's lives and experiences were a legitimate area of academic inquiry and theorizing. In the mid 1970s women historians focused on a critique of the present and excavated the past. *Toward Equality: the Report of the Committee on the Status of Women in India* (1974), was a pointer.¹¹ It examined "the Constitutional, legal and administrative provisions that have a bearing on the social status of women, their education and employment," and tried to assess the impact of these provisions. The report had the effect of dramatically altering the study of women and gender in India.

These studies began to question whether constitutional guarantees of equality and justice actually meant anything to women. Earlier works were reinterpreted. Although Indian reformers of 19th century were commended for their efforts on behalf of women, but the authors also criticized them for limiting change to the domestic sphere. They believed that during the freedom movement leaders like Mahatma Gandhi made efforts to engage women as active participants that further helped the scope to place the movement for women's emancipation in its proper perspective as a part of the larger movement for social transformation. Looking at women's position in the mid 1970s the authors of *Toward Equality* concluded women's status had not improved since independence and there was "total invisibility and neglect" of women's economic roles.

The impact of the report was seen in women's studies headed by Dr. Vina Mazumdar to support further research on women's lives and work in contemporary India. Indian Council of Social Science Research and other institutes sponsored a number of studies on working women and the conditions of their lives. The decade following the publication of this report witnessed many interdisciplinary anthologies on Indian women. Devika Jain¹²,

and B. R. Nanda¹³ all edited books with articles challenging conventional assumptions about women and their history, and raised new questions about women's political success, the representation of women in nationalist propaganda, and the nature of women's lives. New directions were thus much in evidence. Imtiaz Ahmed¹⁴ related women's political success to their family connections.

Institutions like Nehru Memorial Museum and Library made special efforts to discover and recover documents. A number of historians were engaged in Oral history project at the institute to systematically record voices of women and transcribed their interviews. Some of the important voices recorded include: Ambujamal, daughter of Srinivasa Iyengar, Zohra Ansari, Savitri Burman, Kamaladevi Chattopadhyaya, Rama Devi Chaudhri, Nirmala Gandhi, Begum Hajraha, Lakshmi Sahgal, Lado Rani Zutshi, Hansa Mehta, Memo Bai and Prem Behn Kantak.

Shudha Mazumdar's work in 1970 took years to convince people that an unknown woman's life was worthy of attention. In Madras, C. S. Lakshmi carried out wide-ranging interviews with Tamil women from all walks of life, then focused specifically on women writers, singers, dancers, and musicians, and hunted for obscure periodicals by women in archives and private collections. In north India, Gail Minault began her discovery of the records that led to *Secluded Scholars* while Gail Pearson searched police records in Bombay for details of women's participation in Congress-sponsored marches and demonstrations. Other feminist scholars, such as Rama Mehta, Bharati Ray, Aparna Basu, and Vina Mazumdar, among others, turned to older generation and women in their communities to learn about the past. What stands out about this period is the passion for social justice shared by researchers and forming connection between the academic exercise and activities of the women's movements.

Decade of *Towards Equality* coincided with emergency imposed by Indira Gandhi and women empowerment but no sooner was the emergency lifted in 1977 India witnessed a renewal of feminist activity. The publication of books such as *We Will Smash This Prison: Indian Women in Struggle* by Gail Omvedt (1980), *The Endangered Sex: Neglect of Female Children in Rural North India* (1981) by Barbara D. Miller, and *In Search of Answers: Indian Women's Voices from Manushi* (1984) edited by Madhu Kishwar and Ruth Vanita, were rallying cries that focused world attention on the deadly nature of son preference and systematic and pervasive violence against women. At the same time these books made it clear that Indian women were organizing to protest injustice and fight for their rights.

In the next phase historians largely took over the writings and challenged categories reassessing women and revisiting the Third world women. J. Krishnamurthy¹⁵, and Kumkum Sangari and Sudesh Vaid¹⁶, signaled a new direction in the study of women and gender in India. Krishnamurthy stressed the importance of studying women as participants in their own right and, at the same time, in relation to men. She raised the question of sources, lamented the dearth of material in official records about economic issues, and explained how "the ideology of the women's movement" suggested new ways of reading from the margins and interpreting silences. Some of these articles took issue

with periodization and conventional assumptions about women's progress in modern India, others discussed how reformist colonial law affected women and challenge Altekar's simplistic assumption that women's emancipation began with British rule. Although some of the nationalist historians included the role of women in Indian history in their agenda in early 1930's. but it was not till historians tilted their interest towards social history that feminine experiences and the changes in gender relations became relevant to them. Not only did her participation in historical process was looked into but also the peculiarity in comparison to men. Essays in J. Krishnamurthy's volume referred to position of women during colonialism revealing certain methodological problems in connection with the invisibility of women in early history.

Sangari and Vaid linked academics to activism and stressed the importance of understanding how the British reconstituted Indian patriarchy. They expressed special concern with the resurgence of patriarchy in post-independence India manifested in atrocities against women, such as dowry murder and widow immolation, communal violence, and the marginalization of women in production. Authors challenged previously held assumptions about public and private spheres, the relationship of materiality to social issues, and the nationalist reform agenda for women. Moving away from women's history and embracing feminist historiography, the editors defined the latter as a rethinking of history and historiography that could be done by any historian about any topic. The goal was to "recast" women, then gender, and finally history even at the cost of using other disciplines. The immediate concern was to understand how patriarchal institutions and discourse, reconstructed during the colonial period, continued to be effective in keeping women in their place.

Since the search for women's voices was of major importance in this period resulting in more publications, and valuable collections of women's writing from the 6th century BC to the early twentieth century were translated. There have also been a number of single memoirs of prominent women., Manmohini Zutshi Sahgal, *An Indian Freedom Fighter Recalls Her Life* (1994), edited by Geraldine Forbes, and Lakshmi Sahgal's *A Revolutionary Life: Memoirs of a Political Activist* (1997). Attempts to retrieve women's writings and voices have stimulated reflection on a wide range of issues from agency and victimhood to women's cultural differences.

Even during the active phase of writings on women it could be observed that new trends in historiography continued to abstain from their inclusion. Subaltern Studies initiated by Ranajit Guha in 1980s challenged elitist colonialist, nationalist, and Marxist historiography however neglected women and gender issues till the 5th vol. (1987) was the first to include women in the form of Gayatri Spivak's presentation of translations of Mahasweta Devi's literary subaltern women and Ranajit Guha's "Chandra's Death." In her essay of introduction to *Selected Subaltern Studies* (1988), Gayatri Spivak commented on the absence of women in subaltern writing and observed that even when they were present, female figures were "drained of proper identity." In "Can the Subaltern Speak?" Spivak addressed the problem of writing the history of colonial women. She found that in both colonialist and subaltern historiography, "the ideological construction of gender keeps the male dominant." And when women were written about there was a danger of

valorizing "the concrete experience of the oppressed" without due recognition of the dual oppression of colonialism and patriarchy, and the further oppression of western scholarship. It was not until the 9th volume (1996), that the majority of the *Subaltern Studies* essays included women or gender in the analysis. This volume included the first serious attempt to grapple with the problem of "constituting gendered subjects as subalterns" in Kamala Visweswaran's article "Small Speeches, Subaltern Gender: Nationalist Ideology and Historiography." Visweswaran drew attention to Subaltern complicity with and failure to break from the nationalist pattern of resolving the woman question with the ideology of the home and, thereby containing women's agency. Using examples from her work in the Tamil Nadu Archives on women in the nationalist movement, Visweswaran alternated between examples of women's involvement and speaking and the "dual strategies of containment of women's agency . . . and repression." In the conclusion, she suggested it may be possible to rescue the female subaltern for history by looking at "the point of erasure."

Publication of a number of synthesizing works that sum up the existing scholarship and portray women as agents constrained by patriarchal attitudes and institutions include Radha Kumar's *A History of Doing: An Illustrated Account of Movements for Women's Rights and Feminism in India, 1800-1990* (1993) and is a wonderfully illustrated look at women's movements and activism. Forbes *Women in Modern India* (1996) focused attention on how women perceived their world and acted in it. Drawing on women's writings, organizational records, magazines and journals, oral histories, and private papers and letters, she presented socially and politically active upper and middle-class women as thoughtful participants in the events of their time. In 1994 two important books for understanding women in society were published: Bina Agarwal's *A Field of One's Own* and Susan S. Wadley's *Struggling with Destiny in Karimpur, 1925-1984*. Agarwal has written an encyclopedic account of gender and land rights while Wadley's study of this north Indian village lets the villagers tell their own story.

Kum Kum Roy's attempt¹⁷ to collect articles of prominent historians written over a vast span of time on the theme dealt with issues and perspectives in historical writings, women and economy, social sexual construct of womanhood and religious beliefs and practices. Kum Kum Roy¹⁸ by using indological sources and Brahmanical texts explored new queries in emergence of monarchy and brings gender history more closer to mainstream of the discipline of history. It proves how scope of history is widened and understanding becomes more meaningful when gender is used as a category of analysis.

A cursory glance at the writing of women's history in India in the later half of twentieth century clearly reveals that the category woman has been successfully deconstructed and interdisciplinary approaches have become a trend. Additionally there has been a major shift in the questions asked. Scholars no longer investigate "women's problems" but rather ask why are women and their issues seen as problematic. It does not suggest that everyone working on women and gender have moved together from one stage to the other. Women's history has been influenced by trends in history as well as newly uncovered sources and the changing political climate.

The writing of history has been dramatically affected by the efforts of scholars to search out and preserve women's records. Great strides have been made in the past two decades but there is still a great deal to be done. Just as Mill justified British rule by referring to women's status, modern politicians seek to use history, and especially the history of women, for their own ends. Serious efforts to question the "Golden Age" and the basis of "Women Power," have been unpopular with political regimes that would like to lay claim to a mythical past and a problem-free present. Rewriting women's history and not simply inserting women in history is specific to Indian experiment. Reinterpretations and new dimensions have unraveled earlier biases and exposed history of oppression and feminist scholars have played no little role in contributing to the discipline of history.

It still needs to be questioned whether increasing and enriched scholarship on women and gender issues has really changed the field of Indian history? How far have we moved from Orientalists' construction of Indian women and made an attempt to understand women in her new vibrated mode of being a participatory aspirant for education in the late nineteenth and early twentieth century. These changes provided new incentives to subtly move into gender in the years that followed the decades of International Year of Women. Rosalind O'Hanlon has rightly drawn the advances by the historians in addressing questions of social change in colonial Indian society__ the break with colonial rhetoric about tradition and Indian women; a new understanding of the modernizing Indian woman in late nineteenth and early twentieth century, and new insights into gender.

On the bridge between East and West, which lane is fastest?

Abstract: The French Expedition to Egypt (1798-1801) under Napoleon Bonaparte is widely regarded as the culture shock that propelled Egypt into modern times. It helped Egypt build bridges to European culture. The image of a bridge between East and West has been repeatedly used to represent the medium of communication between two different cultures. Of the many media the bridge metaphor represents, translation is, perhaps, the most effective activity that contributes to establishing and keeping channels of cultural exchange open. This paper examines the Egyptian experience of building bridges through translation policies and practices. It also focuses on the emerging trends in state sponsored translation programs and the increasing importance of audiovisual translation.

Key words: bridge, national policy, discourse of translation, audiovisual translation, translation and modernization.

Introduction

Modern Egypt began with the rule of Muhammad Ali Pasha who took power (1805-1849) in the wake of the French defeat at the naval battle of Abu Kir Bay near Alexandria in 1801. For almost five centuries before, Egypt and most of the Arab world was part of the Ottoman Empire which denied Egypt the opportunity to develop as an independent and viable country. Although the French expedition proved to be a military disaster for both conquered and conqueror alike, it built a bridge that continues to this day. On this bridge many lanes were introduced that feed the cultural contact and exchange between Egypt and the outside world. Different lanes represent different possibilities, programs and policies. Translation is one of these lanes.

Apart from Napoleon's geopolitical goals and the dismal performance of the Egyptians in the face of a modern army led by an ambitious European leader, the fact that the Expedition shocked the Egyptians is undeniable. Perhaps one of the reasons the Expedition is favorably¹ viewed by Egyptian historians is the bridge that Egypt successfully built between herself and the West. Napoleon's other army of 157 French *savants* who accompanied the regular army to undertake study and document life in ancient and modern Egypt, is another bridge that aroused interest in Egypt, both modern and ancient. The French *pièce de résistance* that was to show for Napoleon's expensive military adventure in the East was the publication of the invaluable *La Description de L'Egypte*, published between 1809-1826. Later, Egypt opened up to the West through a

¹ In 1998, at the Bicentenary of the French Expedition, some views objected the anniversary which was seen as celebrating defeat and colonialism.

state-sponsored program of sending educational missions to Europe. One major manifestation of the new age was the establishment of *Madrasat Al Alsun*² (School of Languages) which was primarily tasked with the training of translators.

The Bridge Metaphor

Modern translation discourse in Arabic employs two major figures of speech that reflect the role of translation and its effect on the local culture. The first is the *window* and the other is the *bridge*. The window image tends to express a desire to know about the other, to learn about other things and to let in foreign influences. The image is not without its limitation for it can be controlled, at will, to let in a carefully calculated amount of foreign influence and with the window comes control or censorship. In other words, there is a window-keeper, who at best monitors and at worst controls, the flow of foreign influence between the country and the outside world. This window allows only one current, in one direction, at one time!

The *bridge* metaphor on the other hand, tends to represent a slow process that reflects determination and also the conscious awareness of the cost and time involved in building and maintaining the bridge. It tends to be subject mainly to market and context controls as it allows a multi-channeling of traffic to reach its destination. Naturally some lanes would be faster than others. For instance, sending educational missions to the West to study and learn the sciences, techniques and skills is a slow and expensive option. While the benefits are undeniable as the graduates disseminate their newly acquired knowledge upon their return, it may not be as cost effective or immediate as direct translation. This can be seen in a translated book or a subtitled film, which can reach a wider audience more rapidly and more quickly and inexpensively.

In September 2009, the Saudi King employed the image of a bridge between Saudi Arabia and the world at the inauguration of the SR10 billion research university KAUST (King Abdullah University of Science and Technology) on the Red Sea. The Qatar Foundation, in collaboration with the Carnegie Mellon University in Qatar (CMUQ) adopted the motto “Bridging civilizations” for their first translation conference.

The Arabic discourse of translation relies to a great extent on its earlier history and refers, precisely, to the Islamic dynasty of Baghdad in the (8-12th Century AD). Quite often, reference is made to the Caliph Al Ma'moun who presided over the rich Abbasid rule and had *Darul Hekma* (House of Wisdom) which was a state-sponsored translation centre, a library and book-production house combined. What is significant here is the fact that the State sponsored the activity of translation, actively attracting translators and handsomely paying them. It is reported that the monthly pay was 500 dinars. Abbasid dinars were gold and weighed 3.75 grams! (Abi Zaid: 2009) This is why the current discourse on translation never tires of savoring this historical fact and the esteem translation enjoyed by the government of the day.

² Originally called *Madrasat al Tarjama* (School of Translation) before changing its name to the more expressive and popular *Al Alsun* (literally Tongues) which covers languages and translation.

Naturally the two major metaphors, the bridge and the window, are used interchangeably and are not mutually exclusive. It depends on the authority or the program that sanctions, sponsors or stops the translation activity.

The Egyptian example of responding to the need for modernization in the wake of a cultural shock (brought about invariably by a military confrontation) is not uncommon. Japan's response to Commodore Perry's "Black Ships" and the opening of Japan to the West in 1853 and later the efforts for modernization under the Meiji period (1868-1912) reflects the same pattern. Japan translated a great deal in the 19th century. Japanese experts were even sent to Egypt to study the Egyptian experience of modernization. Later, the Chinese translated the Japanese translations of Western knowledge. It is, therefore, significant to examine the impact translations made on cultures seeking modernization. This is an area that is under-researched in translation studies, particularly in Asian and Arabic translation contexts. The role of translation in emerging economies, and precisely, the role of state-run translation programs is a major area in applied translation research.

Muhammad Ali and Modernization

Apart from the undeniable colonial and imperialist aspects of the confrontation between France and Egypt, the cultural aspect and more significantly the role of translation is the main focus in this study. It is of particular interest here to note that the French used translation as a military means to facilitate their conquest of Egypt. Napoleon brought with him two printing presses, one in French and the other in Arabic. While the ships were still at sea he worked on the production of Arabic-language leaflets that he printed and later "dropped" on the streets of Alexandria. Napoleon had brought with him captured Arab sailors from Malta to work on the printing presses and to serve as interpreters. To serve as military interpreters, Bonaparte had also brought Arabic linguists from the School of Oriental Languages in Paris (Al Shayyal: 1950).

Napoleon's failed military expedition to the East (Egypt, Palestine and Syria) helped create a new era (Charles-Roux: 1937). Muhammad Ali Pasha rose to power in Egypt and embarked on a massive modernization program. The Pasha wanted Egypt to have a strong government, a modern army and a place on the world map. Modern schools were established and they attracted the children of the rich and ruling families, almost all were Turkish. The city of Alexandria was fast becoming an international port where numerous multilingual and multicultural communities were present and thriving³. By the 1820s he began sending educational missions to Europe and the first missions were sent to France.

Educational Missions

Rifa Tawhtawi (1801-1873), a cleric from the Al Azhar University was selected to accompany the 1826 educational mission to France. Tahtawi was born in the same year the French left Egypt and his impact on Egyptian cultural life would be cataclysmic. The 25-year old imam would learn French, read extensively and translate from French into Arabic. In Paris, he had numerous discussions with some of the officers and scholars who

³ It is insightful to read what Tahtawi said about Marseille after landing. He said "It looks like Alexandria".

had accompanied Napoleon to Egypt. He summed up his experience of staying in Paris from 1826-1830 in his book *Takhlis*⁴(The summary) which is one of the earliest attempts at travelogue and the first known writing on East meets West (Newman: 2002). The professional career of Rifa Tahtawi which extended for 40 years is full of lessons and is as relevant today as it was in the mid nineteenth century. Perhaps the significant part of this professional career is his submission on the necessity of establishing a school for translation and the training of translators which the Governor of Egypt, Muhammad Ali Pasha, granted to Tahtawi in 1835 (Baker 1998: 323). Thus *Madrasat Al Alsun* (School of Languages) was inaugurated and it was to be the leading school of languages, translators and produce liberal thinkers that would fuel the fervor of modern Egyptian nationalism.

It must be remembered that Tahtawi was a clergyman immersed in Arabic linguistic and religious studies. In France, he learned and mastered French and discussed, *en extenso*, matters with officers who had been to Egypt and served under Napoleon. Greatly influenced by his mentor Sheikh Hassan Attar, another pioneer from Al Azhar University, he was keen to listen, observe and learn from the French. Upon his return, he sat for the translation exams and passed and earned his position as an Arabic-French translator in the School of Medicine. This was perhaps the one step in his long career that paved the way for the modern *Nahda* (Rebirth) in Egypt and to the rest of the Arab world and some parts of Africa. The School of Al Alsun, unlike all other modern schools, was different in two aspects: the director was an Egyptian, Tahtawi himself, and more importantly, all students were Egyptians!

From 1835 till his death in 1873, Tahtawi would continue taking on more responsibilities in addition to his teaching, managing and translation. He was in charge of revising the translations completed by his students before publication; he was also to become the editor of Egypt's first newspaper and the director of the Government Translation Bureau.

The vision of Muhammad Ali Pasha in establishing schools and sending educational missions abroad was supplemented by a national translation policy that trained specialized translators, translated reference material and compiled dictionaries. The efforts of Tahtawi in translating western languages into Arabic are generally referred to as the second largest translation movement, after that of Baghdad. (Mahmoud: 1990)

A Window or a Bridge

In the seventies, Egyptian president Anwar Sadat inaugurated the new age of *Infatih* (Open Door Policy) with Law 43 in 1974, which was designed to open Egypt to western capital, investments and to liberate the economy. The policy, without a careful study of the social impact, had devastating effects on the poor and the disadvantaged which is akin to the negative effects of globalization today. The argument that grand modernization policies, which not only bring change but also challenge to the status quo, must be accompanied by education programs to support them is seen in many communities, contexts and countries. For instance, the liberalization of the economy, the establishment

⁴ In keeping with the vogue in his time Tahtawi chose a long title for his book "The Extraction of Gold in the Summary of Paris".

of a multiparty system and the introduction of the market economy etc were deemed daring changes that came, too quickly, in the wake of a socialist government that lasted for almost a generation. All these well-intended initiatives may have fared a lot better if the necessary literature was made available or indeed translated and made accessible. In the mid-seventies, calls were made for a national translation policy that would cater for the changing needs of society (Falasteen: 1976). In the late eighties and early nineties of the last century, and again in Egypt, the government tried to reverse the negative effects of the Open Door Policy by further economic liberalization through Thatcher-like privatization of public sector companies, the introduction of the share market and the encouragement of foreign investment; almost all of which spelt *Globalization*. Here, the lack of national translation policy in providing the public with the necessary background information, to understand and to be prepared for the social and economic changes, once again undermined government efforts. What the public required was the basic knowledge that to understand and appreciate the implications of a changing economic climate. For instance, the spreading effects of globalization created a different environment that demanded explanation. That explanation was acquired later but not without paying a high price as young graduates discovered the need for English language skills, better computer skills, business specialization, understanding of economic pressures and the ability to understand what changes the new policies would bring. The Egyptian example can be seen elsewhere with varying degrees of similarity, in many parts of the Arab world.

The 2003 United Nations report into Human Development in the Arab World points out that the current translation effort is not conducive to development. It estimates that more books are translated into Spanish each year than have been translated into Arabic for the past millennium. The report shook many quarters in the Arab world out of their comfort zone and the need for the state to take up the national responsibility of translation came to the fore.

Translation did not stop in Egypt with the death of Tahtawi in 1873 but the modernization momentum was suddenly switched off with the occupation of Egypt by the British in 1882. Before the occupation, industrial schools were linked to the needs of the national modernization program and the School of Translation was producing the necessary technical material for the knowledge being acquired. Medicine was being taught in Arabic and Tahtawi's translation was making the terminology accessible and available. It is insightful to note that the two disciplines of Egyptology and medicine were introduced to Egypt prior to the advent of the British. However, the two areas of knowledge took two different roads afterwards. Medicine became more and more dependent on English and today instruction in medicine at all Egyptian universities is carried out in English. Egyptology became 'Egyptianized' and through the earlier translations, from all languages, it took root and has become an Arabic discipline where academic instruction is in Arabic and there is now a thriving body of knowledge through writing and publishing in Arabic.

It may be worthwhile to pause here and to re-examine the bridge metaphor as far as it is related to the teaching of medicine in English. It had been suggested that by teaching medicine in English a bridge would be established to the West were Medicine is more

advanced. The argument has been that it is easier, faster and more economic as doctors become the subject specialists and the *interpreters* of the acquired knowledge as they see their patients. This argument gained more credence with the increasing importance of English as the international *lingua franca* of science and technology and indeed as the majority of academic and professional research is published in English. However, such a suggestion is criticized as flawed at the social, economic and educational levels: the bridge did not benefit the community but only the professionals who accumulated not only the knowledge but also the wealth of applying this knowledge through the confines of the English language. Egyptian doctors, in the course of their daily work, talk medicine to each other in English while they talk *about* medicine in Arabic to their patients. This limits the diffusion of medical knowledge not only among other allied professions such as nursing, health care, pharmaceutical and chemistry but also among the masses which may have devastating effects varying from knowledge of simple hygiene rules to necessary measures in dealing with new epidemics such as SARS, Avian Flu or N1H1 or the other ‘silent’ epidemics like obesity and diabetes which have become national public health crises.⁵

Virtual Bridges

There is no doubt that the digital revolution of the last decade of the Twentieth Century has helped make the world a lot smaller and more attuned to the common issues facing the globe from greenhouse effects to the scarcity of water and the need to find renewable energy sources. Digital technology in this respect has created a bridge, a virtual bridge, which links many parts together. Powerful personal computers, the development of multi-media technology, and faster Internet have all contributed to the many screen-based gadgets that we have at our disposal today from public multilingual touch screens to DVDs, satellite channels and laptops.

The coverage of the Gulf War in 1991, primarily by American news channel CNN, became the first ever televised war as a direct result of unprecedented levels of investment in digital satellite technology. When the Arabic language channel Al Jazeera was launched in 1996 it challenged the authority of the monolingual American channel. Today, CNN has a web site in Arabic and Al Jazeera has a dedicated channel in English. What can be discerned here is that the idea of a virtual bridge was born with two distinct forms: partial and whole. Some of the big news corporations implemented what is called “versioning” i.e. creating a version of the ‘relevant content’ into a target language. The BBC for instance, heralded this trend and now has its main specialized news translated into 32 languages. CNN by contrast, has only two versions: Arabic and “Mexican”⁶. Al Jazeera has an English version that is a lot more than a version of its original content. This partial virtual bridge has the mechanism of a ‘reverse lane’ where readers can write and share their views in their own language. Despite the significant benefit, Egyptian web sites which offer versioning in more than two foreign languages are very scarce. This is at

⁵ A recent study by the Arab Genomic Studies (CAGS.org.ae) in Dubai estimates that 73% of the population suffer from Obesity and 23% from Diabetes.

⁶ The CNN web site shows Arabic and “Mexico” rather than Spanish. (Site accessed April 2010)

odds with the potential the country already has both linguistically, and historically. Popular and important organizations such as the Egyptian Museum in Cairo, the Tourism Organization, the Antiquities Organization, Cairo airport, Egyptair and Al Azhar University all need to not only have a fresh, contemporary on-line presence but also be equipped with numerous languages. For instance, the Korean Tourism Organization (www.visitkorea.or.kr) has its content available in twelve languages including Arabic and the culture magazine *Koreana* is also published in print and online in nine languages including Arabic⁷. Similarly, the United Nations has an internet presence in the six working languages of the world: English, French, Russian, Spanish, Chinese and Arabic, although not all versions are kept up-to-date. The other form of the virtual bridge was the creation of a dedicated cultural and/or news channel in the Arabic language by a foreign country. Thus the United States, Iran, Russia, France, Germany, United Kingdom, China and Turkey have all launched their dedicated Arabic satellite (news) channels thus 'narrowcasting' to the Arab viewer who is eager to know more and learn more about the outside world. Israel and Korea are also currently studying the launch of their own Arabic language channel.

In the Arab world however, there are now 750 satellite channels beaming Arabic content, some of which is subtitled into English, French and Spanish, and foreign programs subtitled or dubbed into Arabic.⁸ The large number of satellite channels attest to the new audiovisual culture that is now sweeping the world. Some of the channels that broadcast subtitled Arabic programs are the 'national' channels such as Nile TV or *Al Masriya* (the Egyptian). These two Egyptian channels which commenced broadcasting in 1990 and 1994 respectively, broadcast subtitled Egyptian programs for expatriates residing or working in Egypt and for the rest of the world. The style and practice of the subtitling remains an area that has been neglected given the long history of both channels. The potential role these two channels can play in building bridges with the East and West rely heavily on the quality and style of the subtitled material. At a time of religious and racial disagreement and the inescapable socioeconomic impacts of globalization and the global financial crisis on those from Manhattan to Moscow and from Kiev to Kuala Lumpur, the quality and style of translated messages are critical be they in politics, sports or films.

The Digital Versatile Disc (DVD) which celebrated its first decade in 2008 has had a tremendous effect on accessing not only professional and technical knowledge but also cultural and historical. The DVD remains one of the most powerful tools available to universities, companies and governments seeking to reach millions of people quickly, efficiently and economically. The simple DVD can store sufficient data (4.7 GB) to carry subtitles in up to 40 languages (Carroll: 2004) and the soundtrack in up to eight languages. While American films on DVD come with subtitles in as many as 16

⁷ I am indebted to Professor In Seop Lee, the dean of the Graduate School of Interpretation and Translation at Hankuk University of Foreign Studies, for his assistance regarding the state of Arabic in Korea.

⁸ Dubbing in Arabic is another area that has not received its fair share of academic attention. Dubbing of Spanish and Turkish drama has gained a lot of popularity in the past decade. The practice, though of professional quality particularly in Syria, has not been examined professionally or linguistically. Dubbing Arabic films or drama into other languages is scarce.

languages, most national cinemas including the Egyptian, subtitle their films into a handful of languages only. The reasons are primarily economic, yet despite DVD production costs being relatively low, the exploitation of this medium has yet to be fully actualized.

Audiovisual Translation

Although Egyptians have been reading subtitled foreign films since the first all-talking feature film *Lights of New York* (1928) and subtitled foreign TV programs on their televisions almost daily since 1960⁹, little attention has been given to audiovisual translation. While it is true the activity of subtitling was a one-way direction all the time, the digital revolution has opened lanes on the bridge between East and West. Here the direction of traffic on the bridge is very significant: it is reversed, as Arabic audiovisual programs are now being subtitled for target audiences all over the world.

Egyptian cinema, the oldest and largest in the Middle East has more than four thousand titles to its credit. This heritage is the main entertainment content upon which all Arab televisions rely. In 2002, Egyptian films began to appear on DVD. The style and practice of 'film translation' as it is called in Arabic, is still a theme that is unrepresented in the translation literature and is barely examined at Arab translation conferences (Gamal: 2008). The potential that audiovisual translation offers Arabic culture from literature to film and from investment to tourism is immense. It may very well be the case that major religious, racial or political issues are better understood or at least better managed, through the production and subtitling of a single DVD. As a means of cultural exchange it offers a vehicle that is affordable, durable and portable. DVDs have more technical features which allow translation production more effective and accessible. In an age where most content is going digital and online, Egyptian culture needs to invest in the policies and practices of examining audiovisual translation to compliment the already internationally respected productions of Naguib Mahfouz, Yousif Chaheen and actors such as Omar Sharif (Gamal: 2009).

Exporting subtitled Egyptian cinema into major European and Asian languages is an untapped potential despite the already available resources of translation schools, film industry and potential markets. Over the past few years, attempts at creating national translation centers in Egypt and other Arab states such as Tunisia, Saudi Arabia and the United Arab Emirates have been warmly welcomed. However, most of the efforts appear to be dedicated to translation into Arabic and with casual disregard to the rising importance of audiovisual translation.

For instance in Cairo, the National Translation Centre (established in 2006) has produced a list of one thousand titles with an obvious bias towards literary translation though it moved away from English and French and turned its attention to other languages. In its focus on translating books into Arabic, the Centre does not concern itself with translating into foreign languages or into means other than print translation. The same can be said of

⁹ Egyptian television began broadcasting in July 1960. The first Arab television broadcast was in Baghdad in 1956.

the two more recent and much more ambitious translation initiatives in Dubai (Tarjem) and in Abu Dhabi (Kalima)¹⁰ were they are equally concerned with translating books into Arabic. Both initiatives from the United Arab Emirates promise to add a new translated book each day on the Arab shelf for the next three years. This comes at a time when the UAE is also showing great interest and making huge investment in film festivals and media production.

In building bridges between East and West, it is crucial to bear in mind the whole picture. In an age of globalization, students need to be aware of a new set of business skills such as time management, foreign languages, research skills and life-long learning. The economic environment has changed where permanent part-time jobs are now the norm; outsourcing is a fact of life and multi-tasking is a prerequisite in any job. This picture will also point to the fact that 40% of the Arab population is under the age of 15 and this age bracket requires a completely different mindset to cater for its needs and requirements. Audiovisual culture as can be seen through the today's technology, from Youtube to Facebook and from iPhones to iPads, is increasingly replacing print media. The main source of information is shifting; no longer from books but from screens.

Screens Everywhere

Gambier points out that “we are surrounded by screens” (2003:171) and despite the fact that subtitles have been around for a long time it was not acknowledged by academia till very recently and at selected European institutions only (Diaz-Cintas: 2006). Subtitling has been the preferred mode of film and drama translation in the Arab world despite the brief albeit popular Mexican and Turkish dubbed TV drama. The subtitling of Arabic filmic material into other languages, and not that of just English and French, is the challenge ahead. Over the past decade, the number of Arab film festivals in Egypt, Tunisia, Algeria, Morocco, Syria and The United Arab Emirates has increased. Film festivals showcase the local production and strengthen the metaphor of a bridge to other cultures. The *raison d'être* of these festivals is to show subtitled films both in Arabic and in English and despite the obvious relevance and importance of audiovisual translation no investment has been made by the film industry in the newly emerging specialization of film translation. With the large number of Arab satellite channels which primarily rely on subtitled foreign films and drama, there is an over-reliance on the commercial sector to provide the translation service. In the absence of a strong academic tradition of examining audiovisual translation, the current commercial situation amounts to “an industry without a profession”(Gamal: 2007). The only valid, and coincidentally the longest-running training program in audiovisual translation, is currently at the American University in Cairo where the program continues to grow from strength to strength.

<http://www.mbrfoundation.ae/English/Pages/default.aspx>

Conclusion

Cultural bridges are often built through travel, marriage, trade, migration or war. History shows that quite often a bridge is built when relevant stimuli are present. However, this could be a slow process and with negligible benefits. The distinction between a window on the West and a bridge to the East, is more than the simple semantics. Without well-planned objectives and programs the results may backfire. Antony and Cleopatra had all the right stimuli but even their marriage was not enough to cement the bridge between East and West.

In discussing cultural bridges it is perhaps a testimony to human endeavor and spirit to note that as Egypt was rediscovering its future with the translation efforts of Rifa Al Tahtawi, another young Frenchman was doing his best to help Egypt rediscover its past. For this, Jean Francois Champollion (1790-1832) had successfully found the key to decipher the ancient Egyptian language in 1822, only three years prior to Tahtawi's landing at Marseille.

In this paper, two ideas were presented. The first is the need for translation to be state-sponsored and not to be left to the whims of the market. The second is the significance of the new genre of audiovisual translation which reflects the shape of the new digital revolution.

Translation will continue to be a bridge between nations, cultures and may even cross over troubled waters. Translators, as diplomats and trainers, are now replacing military interpreters in capacity-building programs in Iraq. Covering new topics and themes from human rights to governance and from quarantine to agriculture, interpreters and translators are charting new terrains in Iraq - this time, as peace time interpreters and translators.

Abstract: Humanitarianism is an essential and integral part to ensure human sustainability. In some degree, China's modern humanitarian approaches are mainly the byproducts of westernization or Europeanization during Chinese pursuit of sustainability. Given the characteristic traditions and political development, China shows a special picture characterized of atypical dialogue, dramatic collision, and disjunctive inheritance between humanitarianism and Europeanization. This research will further depict a detailed roadmap i.e. how the European human-centered elements affect the Chinese people-based and government-dominated disaster-response system, which have finally changed Chinese traditional response styles and improved its humanitarian effectiveness on the human sustainability.

Key Words: Humanitarianism, Sustainability, Europeanization, Dialogue, Collision, Disjunction

1. Introduction

Human community has been moving to the globalized “risk society”. In the era of risks, natural catastrophes and human-made disasters have posed serious challenges on human sustainability. As a general disaster-response approach, humanitarian assistances are assumed to positively and quickly alleviate human suffering and provide necessary public goods in emergency situations. Even in some emergencies, humanitarian aids are almost the single hope of victims. Humanitarianism plays an essential and integral part to ensure human sustainability.

With its vast geography, billions of people, and complex climate conditions, China has been one of the most frequent and serious disaster-affected countries in the world. In some sense, the history of China is actually a history filled with kinds of natural and human-made disasters. From BC 206 to AD 1936, there were at least 5,150 natural disasters (including floods, droughts, hurricanes, earthquakes, grasshoppers, plagues, etc), which means there was at least one disaster per 4 months in China.¹ However this number hasn't even included human-made disasters like several tragic wars. Therefore, China provides a platform to launch diverse humanitarian practices by different actors, *esp.* the European humanitarian actors, which finally impulse Chinese to handle western humanitarian aid and examine Chinese traditional disaster response system critically.

* The research is supported by RENMIN University of China Graduate Science Foundation (Name: Research on International Humanitarianism in China, 1949-2009; No. 10XNG008). A small part of this paper has been presented at the International Conference on Social Science and Humanities by IACSIT, Singapore, Oct. 9-11, 2009. A larger revision has made and many new details have been added in this edition.

+ Corresponding author. Email Address: maoweizhun@gmail.com. Two second authors are alphabetically listed by family names.

¹ Deng, Yunte (1984), *History of Disaster Relief in China*, Shanghai: Shanghai Bookshop Press.

As a result that modern humanitarianism and sustainability root from the West while China is a traditional country in the East, this research will try to answer the following questions, i.e. how and to what extent have western (especially European) humanitarianism shaped Chinese humanitarian approaches, both as a relief target and as an aid provider in the pursuit of a sustainable country as well as a harmonious world? How have the European human-centered elements affected Chinese people-based and government-dominated disaster-response system, which have finally changed Chinese traditional response styles and improved its humanitarian effectiveness on the human sustainability?

2. European Footprints: Modern Humanitarianism and Human Sustainability

To define humanitarianism is a tricky thing. However in accordance with a more recognized definition by International Committee of the Red Cross (ICRC) in late 1980s, humanitarian actions mean the impartial, independent, and neutral provision of relief to those in immediate need because of the human-made and natural disasters. In a short, the essence of humanitarian actions is “to save lives at risk”.² As a representative humanitarian organization, ICRC proposed seven core principles that construct the prevailing humanitarianism, i.e. humanity, impartiality, neutrality, independence, voluntary service, unity, and universality.³ Although the definition has been in debate since 1990s,⁴ the core that *humanity* is the fundamental principle and *humanism* is the philosophical foundation can't be removed, only if the humanitarian actions exist. The proposition of humanity requires casting all the attention to people, which means to “prevent and alleviate human suffering wherever it may be found”, “to protect life and health and to ensure respect for the human being”, and “to promote mutual understanding, friendship, cooperation and lasting peace amongst all peoples.”⁵

“Sustainability” is a more complex term, which has brought hot debates as well, both practically and theoretically, called the ambiguity of ‘sustainability’.⁶ It is an integrated concept as well, which generally includes tri-aspects, i.e. economic, environmental, and social dimensions. Additionally, it especially emphasizes “how these different systems interact, interlock and affect each other”.⁷ When sustainability turns out, “it must occur simultaneously in each of the three dimensions.”⁸ At present, a great plenty of challenges to sustainability source from a number of extreme natural hazards (like earthquakes, volcanoes, tsunamis, extreme weather and climate change, etc),⁹ which may causes thousands of victims trapped on the edge of death and suffering, namely the humanitarian emergencies.

² Barnett, Michabe and Thomas Weiss, “Humanitarianism: A Brief History of the Present”, in Barnett, Michabe and Thomas Weiss eds. (2008), *Humanitarianism in Question: Politics, Power, Ethics*, Cornell University Press, p.11

³ Pictet, Jean, (1979) *The Fundamental Principles of the Red Cross: Commentary*, Geneva: Henry Dunant Institute

⁴ The debate mainly includes two aspects, i.e. firstly some scholars and practioners required to extend the definition to the linkages of relief, reconstruction and development (LRRD); secondly, the relevant principles are also criticized esp. with the rising of Médecins Sans Frontières (MSF), which actually go beyond the orthodoxy that politics should not be regarded as a part of humanitarianism, as a kind of “more rebellious and rowdy humanitarianism”. See Barnett, Michabe and Thomas Weiss, “Humanitarianism: A Brief History of the Present”, p.37

⁵ Pictet, Jean (1979), *The Fundamental Principles of the Red Cross: Commentary*

⁹ Frey, Hildebrand, and Paul Yaneske (2007), *Visions of Sustainability: Cities and Regions*, London and New York: Taylor & Francis, pp.95-96

Humanitarianism seems to have a close relation with sustainability. On the first hand, human sustainability is one of the goals of humanitarian actions, which aims to provide reliefs and recover a sustainable condition for the victims in disaster. On the other hand, humanitarianism and sustainability interact and intertwine a lot when they accessed into China through a perspective of the social analysis. Firstly, both share some common values like human-centered development, human well-being, equity, community well-being and human security, etc.¹⁰ Moreover, they emphasize a series of social dynamics including “discourses in society, social actions, their consequences, and the associated learning and adaptation.”¹¹ Lastly, regarding the actors, they both call for “a broad participatory process involving all layers of societies, both in the public and private sectors”.¹²

In respect to the current humanitarian system, it has also been a product of western creations since its birth, and Europe has been playing a significant role and contributing a lot to the development of humanitarian system.¹³ Moreover most of professional expertise in current humanitarian actions is also marked “*Made in Europe*”. Just like H. Slim mentioned, “the formal [humanitarian] system has adopted many of the routine practices of modern welfare provision in Western states.”¹⁴ In addition, most of famous relief agencies also have their origins or headquarters in Europe, such as ICRC, Oxfam, MSF, Actionaid International, CARE, and Catholic Relief Services, etc.

3. People versus Human, Government versus Society: Sino-European Disaster Responses

To deliver relief for the disaster victims is a basic governmental function. However when a state designs the relevant disaster response system, they will refer to some values and define the actors. Traditional China had built their disaster and famine response systems, which put emphasis on the people-centered principle and government-dominated basis; while Europe had made many relief related laws, policies and rules, which takes human-centered/humanity and social participation for granted. Hereby the “people-centered” (*Minben*) is an abstract and political term compared with the rulers, like emperor (*jun*) and minister (*chen*); while human-centered (*renben*) value puts various actors on an equal position. And these two disaster response systems finally demonstrate different results.

Chinese complex system and its detailed disaster response laws couldn't guarantee the effectiveness of relief delivery, especially when a dynasty moves to its end. Take Qing Dynasty as an example, it has the most complete disaster relief system, including related bureaucratic structure and laws, however the perfect system can't maintain; and more seriously, it even caused human-made disasters, especially when the dynasty was involved into corruption and weak governmental capacities. In fact, the complete system was unenforceable and existed in name

¹³ Barnett, Michabe and Thomas Weiss, “Humanitarianism: A Brief History of the Present”. This argument is not intended to deny the humanitarian spirits such as life saving and suffering relief embedded in diverse cultural traditions and different civilizations, however modern humanitarianism (not only its philosophical root but also organizations) can definitely date back to some Christian thoughts like caritas and the history of the Renaissance and Enlightenment when humanism started to become popular.

¹⁴ Slim, Hugo (2006), “Global Welfare: A Realistic Expectation for the International Humanitarian System?”, *ALNAP Review of Humanitarian Action in 2005*.

only. It is incredible but true that this system and its actors became the crucial killer in the emergent disasters. G. Staunton once confirmed Chinese related system was in a lower level of effectiveness to meet victims' needs compared with European system, in spite of its perfect and complete nature.¹⁵ K. Wittfogel pointed out the advantages of Chinese relief system, i.e. stronger central authority and administrative capacity, which can mobilize plentiful human capital and money etc. in a emergency; however when central authority is weakened, all the advantages will transform to serious disadvantages with prevailing corruption, information control and complicated bureaucratic procedures.¹⁶

A different story was told in Europe although its relevant laws seemed to be rough and the disaster response system depends on the local governments and churches. England created its relief related law in 1601, i.e. the *Poor Law* or *43 Elizabeth*, which was a most influential relief law in Europe. This law with its amendments (1723 & 1834) legally guaranteed the relief as a governmental function and set relevant governmental agencies, which includes the poor and disaster victims into the system of social security. This measures defined governmental relief actions and make sure a good resource allocation to disaster relief,¹⁷ which finally became a model of western disaster response system.

Since 18th century, China was gradually trapped into a stagnant situation with the dream as a "Celestial Empire" (*Tianchao Dagu*); meanwhile, Europe moved into its Industry Revolution. China as the world power center gradually declined. After warships and cannons destroyed China's isolate policy by Britain in First Opium War in 1840s, European culture was unavoidable to access into China and a process of westernization is started, "Europeanization" to be exact. During Europeanization and power transferring, European elements were slowly or quickly, completely or partly, or successfully or failingly embedded into Chinese comprehensive structures, which triggered series of cultural conflicts between China and Europe in a large scale. In fact, the introduction of European humanitarian approach and the subsequent reform of Chinese related humanitarian traditions were the byproducts of this westernization process.

4. European Humanitarian Actions in China

4.1 Go With Empire: Missionary Involvement and Church Charity

Christian charity (especially Catholic) was the first approach that accessed into Chinese humanitarian arena. It is necessary to note preaching often lay on the top of missionary agenda and their relief actions were just regarded as a subordinate and supporting instrument. From 16th to 18th century, there were more than 800 missionaries to come to China and Sino-European communication moved into "Missionary Era".¹⁸

In the missionary era, Missionary staffs took the responsibility as the humanitarian technician, church acted as the humanitarian agencies, and catholic communities are the humanitarian vector.

Matteo Ricci was the first person who attended to participate in humanitarian relief in China, who was called the first “home universale”.¹⁹ He is also recommended as his merit of “inculturation”²⁰ and the pioneer of communicating China and western cultures.²¹ In 1583, Michele Ruggleri and Ricci built their first church in Southern China. And they demonstrated the first relief attempt in 1586, that is, Ricci provided the shelter service for the victims who were trapped in the flood in Zhaoqing. When he moved to Beijing, the capital of Ming Dynasty, Ricci once assisted the governments to deliver relevant relief to the flood victims in 1604.²²

A second relief by missionary happened in 1634, when a serious famine hit Shanxi. Alfonso Vagnoni tried his best to help the affected people and even built an orphan asylum that was financed by missionaries and local Christians.²³ Compared with charity action provided by Ricci, Vagnoni contributed a larger-scale and more organized relief in China.

A much larger scale humanitarian action organized by Europeans with official appointment happened during Kangxi Era (1661-1722). Joachim Bouvet, Petrus Jartoux, Dominique Parennin and Jose Suarez started their humanitarian actions in Beijing after a serious flood and subsequent famine in Shandong, when millions of displaced people flowed to the capital. Jartoux thought this official appointment by Emperor Kangxi indicated the emperor's trust on foreign missionaries. The Fathers designed a good procedure about relief signal and delivery address. With the money from government and public collection, they made a good job to deliver food for the victims and meanwhile to provide sanitation service. These hungry people were in a good order, which made Chinese officials a little jealous, argued by Jartoux. This action last for 4 months and deliver the food for more than one thousand victims.²⁴

Timothy Richard was an epoch-making figure in the Chinese humanitarian actions, who had lead a largest-scale relief actions with John Nevius in the drought-famine-plague disaster complex in nine provinces of North China, especially in Shanxi Province. This drought last more than 3 years and finally caused a most serious famine, namely “*Dingwu Qihuang*”.²⁵ In this drought and famine disaster, there were 200 million people affected and 13 million killed. 1/3 population in Shanxi Province lost their lives. The dying Qing government was incapable to handle it as a result of fragile governmental capacity, internal and external threats. In order to deal with the catastrophe, they had to take foreign assistance by the catholic missionaries into a relief system. This relief is the first “organized and planned” disaster relief activities that took foreign missionaries into account in China. During the relief, on the one hand, Richard urgently called for the money collection in Britain and “London Major Disaster Relief Foundation” was built, which provide millions of money for the disaster victims. On the other hand, he advised Qing government to migrate people to some places with low food price and meanwhile recommended the measurement, i.e. Food for Work (*Yigong Daizhen*), meaning give people work in place of

relief subsidies.²⁶ However the cultural collision between Chinese and European perspective on humanitarian actions frequently occurs, which was just a brief interlude.²⁷

Table 1 Brief Situation of Western Humanitarian Actions In China by 1937		
Assistance Items	Number	Note
Hospitals	70 (5000 sickbeds)	French Catholics
Hospitals	300 (21,000 sickbeds)	Britain and US Christian
Clinics	600	
Orphan Asylums	306	Data in 1930
Orphans or Abandoned Infants	74,752	Data in 1930
Catholic Welfare Homes	232	Data in 1930

In sum, social welfare and charity events by Christians mainly focused on three aspects, i.e. medical service, children and elderly charity, and relief service. (Table 1) They provided technical conditions and experiences for Chinese humanitarian actions, directly and indirectly. The building of European medical facilities promoted the development of medical technology in China and raised the public health awareness.²⁸

4.2 Humanitarianism Modernization: Enlightenment, Organizations & Socialization

The birth of "International Committee for the Relief of Wounded Combatants" in 1863 indicated the appearance of Red Cross Society and the modern humanitarian system turned out. When the first *Geneva Convention* was signed, this humanitarian system was finally recognized by international laws.

The enlightenment about Red Cross spirits for Chinese was triggered during Sino-Japanese War in 1890s. It was already more than two decades after the birth of Red Cross Society when Chinese started to acknowledge this organization. A series of articles about Red Cross Society were published on *Shen Newspaper* (1898-1899) and other newspaper like *Takungpao Newspaper*, which existed from 1872 to 1949. These articles are mainly about the nature of humanitarian spirits in Red Cross Society, and the aims, missions and functions of the organization, etc., which attracted public attention and Chinese awareness. Meanwhile, some Chinese attempted to introduce relevant relief technologies like medical services and some of them tried to appeal to Qing officials for the organizing of Red Cross committee in China. Sun Yat-sen, who became a famous revolutionary leader in China afterwards, once translated one of medical relief books of Red Cross into Chinese; and Sun Gan, a Chinese businessman in Japan and a staff in Japanese Red Cross as well, sent an appeal about building Red Cross organization in China to some officials in 1897.²⁹

²⁹ Chi, Zihua (2004), "The Origin of the Red Cross and Its Spreading in Modern China—to Commemorate the 100th

Finally with the onset of Russo-Japanese War in Northeast China in 1904, a lot of Chinese refugees and victims lost their home. In order to save the victims, the first China Red Cross organization, namely, International Red Cross Society of Shanghai, was established, with the joint efforts of Britain, France, Germany and United States.³⁰ This event indicated the origin of modern humanitarian aid system in China, which went beyond Chinese traditional or pre-modern charity organizations.

In addition to Red Cross Society of China, a few important relief organizations were established with both Chinese traditional characters and western features. On January 26, 1878, China Disaster Relief Foundation was built in Shanghai by Christian missionaries as the main force, and diplomatic men and businessmen, which was mainly engaged in money collection and food delivery, etc. From the perspective of humanitarian actions, the relief actions indicated the European humanitarian approaches were officially recognized and accepted by Chinese. From then on, missionary and church involvement into Chinese disaster relief hasn't been strange for Chinese any more.

Subsequently the westernization and organization of Chinese humanitarian activities continued. After the 1931 flood relief in China, some people who participated in the relief activities thought it was necessary to build a permanent organization to deal with the future disasters and deliver relief to victims. Then China International Famine Relief Commission (CIFRC) was built, which played a great role in the first half of 20th century. It was argued to be a relief organization "with complete disaster response mechanism". It existed as the "first scientific and professional" non-profit charity organization until Shanghai was occupied by Japanese and CIFRC transferred to part of International Red Cross of Shanghai.³¹

4.3 European Elements in Collision with European Elements?

Something interesting took place when China moved forward. Chinese Communist Party (CCP) as the ruling party in China has been regarding Marxism as its leading theory. However with its typical revolutionary approach and class analysis perspective, mainstream European humanitarian approaches were mostly abandoned as the "bourgeois humanitarianism" that is "a tool used by the bourgeoisie" and "to cover up capitalism's merciless exploitation and oppression, to cover up class contradictions, and to deceive the proletariat and the working people."³²

Within this kind of political atmosphere, all the things that had plausible relationship with western countries were destroyed or repudiated, whatever tangible or intangible, during in the typical Cultural Revolution (1966-1976) and some other unusual moments. However it was not the success of Chinese traditions, which had to confront the same tragedy either. The humanitarian system since the beginning of 20th century was thoroughly abandoned by ultra-Left trend of thought as well. In the 1959-1961 Famine and Tangshan Earthquake in 1976, the government even refused all the possible humanitarian assistance, regardless of the hungry

people and the misery deaths.³³ At the same time, this government sent a lot of foreign aid to its third world brothers in Africa and socialist friends such as Albania and Vietnam etc. in spite of its own economic shortage. In this period, the humanitarianism was actually kidnapped by politics, just like an old saying, that is, castle gate fires, fishes in moat suffer.

4.4 Back to Track?

With the development of Chinese Open Policy, China accelerated its pace to come back to global families. Although the debate about Marxist humanism and humanity was still hot, Chinese attitude to international humanitarian relief changed step by step. China has finally got rid of the humanitarian isolate policy.

When a big disaster complex of “drought in North meanwhile flood in South” and subsequent famine hit China in 1980, Chinese government realized the necessity of urgent international humanitarian actions. It is “the first time that Chinese government accepts international assistance” and China began “to deal with disasters with the hand of assistance”. However the humanitarian assistance was restricted in a given province and limited on specific aid materials through a single channel, which indicates a conservative attitude of government.

The first time that China actively asked for international aids through multi-channels can date back to May 1987, when a serious forest fire last a month, killed more than 200 people and 50,000 people lost their home. Afterwards in 1991 flood in East China, Chinese government began to “directly and in a larger-scale” ask global community for aid.³⁴

In the following years, China encountered SARS Crisis, many earthquakes and other natural disasters, especially Wenchuan Earthquake in May 12, 2008. To deal with them, China government and China Red Cross would actively require international assistance. On the other hand, China also continues to deliver relevant humanitarian aid as an aid provider for the foreign disaster-affected countries, such as the Indian Ocean Tsunami in 2004.³⁵

Regarding the humanitarian system in China at present, it has been re-established with the new actors like international and native local Non-governmental Organizations. A few famous relief NGOs like Oxfam, Actionaid, World Vision, etc. have established their office in China for many years however with Chinese official acquiesce rather than formally legal acceptance. Some disaster-response NGOs also have a feasible relationship with governmental departments that are part of national humanitarian system. Take Oxfam Hong Kong as an example. It has been an active role in China humanitarian system; however it hasn't registered in Chinese government. After Wenchuan Earthquake Oxfam Hong Kong has built an official cooperation with The State Council Leading Office of Poverty Alleviation and Development and International Poverty Reduction Center in China, which is allowed to participate in the reconstruction projects in earthquake-hit region.

5. ECHO on Action & China: “From Monologue to Dialogue to Collaboration”³⁶

A few decades ago, European Community began to participate in the worldwide humanitarian affairs as a loosely unitary actor. In April 1992, an official organization within EU structures was built, named European Community Humanitarian Aid office (ECHO), with the aim to handle humanitarian issues and enhance its effectiveness on behalf of European Commission in the world. In fact, ECHO usually functions as a feasible role in the world to promote the three pillars of EU. It is regarded as a most robust part targeting to advocate EU’s values and demonstrate its “soft power” globally.

As a single entity, ECHO takes about 16% of global humanitarian aid from 1995 to 2007 on average and even accounted for about 32% in 1996 according to financial contributions; and as the world's largest humanitarian donor, ECHO with EU members usually contribute about 30% of global humanitarian donor share and even provided more than 52% in 1998.³⁷

Relevant to the Sino-Europe humanitarian activities, ECHO has been deeply involved into the China’s disaster response and humanitarian activities since its birth. During the last nearly 20 years, ECHO has been gradually acknowledged by more and more Chinese, including scholars, governments, NGO professionals and the publics.³⁸ From 1998 to 2008, ECHO has input about 21.73 million Euros to China in almost all the serious natural disasters in China, especially for the floods in 1998 and Wenquan Earthquake in 2008.³⁹

With Regard to the typical Chinese humanitarianism, ECHO has exerted its influence through at least three ways, i.e. the advocator of EU’s values on human sustainability, the humanitarian standards designer, and the regional disaster-response model for China.

Firstly, as one of the most feasible and characteristic actors, ECHO undertakes the tasks to advocate EU’s value on human sustainability, which rooted from the *EC 1257/96 of the Council* on 20 June 1996. It has been cooperating with international humanitarian agencies (like OCHA) and relevant Chinese official agencies in Chinese humanitarian activities as a donor.⁴⁰ As a pioneer on humanitarian relief and general human values, EU may positively motivate the Chinese humanitarians and even the affected people in the disaster-hit areas, on the general human values (like human security, rights to survival, and human rights based approach, etc.) and on the common humanitarian principles (such as humanity, neutrality, impartiality and independence, etc.). ECHO approaches like people-oriented and need-based have greatly spread among related agencies in China as well.

Second, ECHO is a major humanitarian standard designer in global humanitarian affairs. ECHO has been emphasizing the issues like the speed and quality of humanitarian delivery. ECHO calls for relevant agencies to follow “a set of internationally recognized standards and principles” like the *Sphere Project*.⁴¹ Some relief NGOs and staffs have begun to apply the

³⁶ The title is borrowed from Cowan, Geoffrey and Amelia Arsenault (2008), “Moving from Monologue to Dialogue to Collaboration: The Three Layers of Public Diplomacy”, *The ANNALS of the American Academy of Political and Social Science*, Vol. 616, No. 1, pp. 10-30

³⁹ Calculated according to the data from ECHO, *ECHO Annual Review (1998-2008)*, ECHO, EU.

⁴⁰ ECHO usually didn’t directly intervene in China. ECHO (2008), *Annual Report on Humanitarian Aid*, 2008, ECHO, EU, p. 87

⁴¹ EU (2007), *The European Consensus on Humanitarian Aid*, Joint Statement by the Council and the Representatives of the

relevant standards in some cases.

Third, ECHO has constructed a regional and institutional model to deal with humanitarian emergencies for China and its neighboring countries, especially when the regional integrations are booming. With this successful experience, some Chinese scholars in think tanks appeal to build one kind of international cooperative disaster response system. The significance of disaster preparedness in ECHO approaches has been emphasized by Chinese scholars as well.⁴² With its largest and charming humanitarian power in the world, ECHO also provides a model for China to consider this kind of feasible approach in pursuit of its dream as a strong power.

Furthermore, China started to cooperate with ECHO on some humanitarian issues in the global scale, which indicates an interactive effect, such as in the relief activities after India Ocean Tsunami etc. In addition to the relief cooperation in the natural disasters, China also began to cooperate with EU on some certain human-made emergencies. Following the deteriorating situation of Darfur, China and EU collaborated with each other on the political dialogue, peacekeeping, conflict resolution and refugees aid etc. regardless their potential difference.

However ECHO is still in collision with China on several aspects, especially like the attitude to the humanitarian intervention and the tricky relationship between human rights and sovereignty, etc. These divergences are not only from the fundamental values between western and eastern countries but also triggered by the political consideration from a perspective of *realpolitik*.

In sum, the relationship between China and ECHO seems to be an epitome of the long history of Sino-EU humanitarian interaction in fact. As a traditional and powerful humanitarian actor, ECHO demonstrated an unsymmetrical interaction with China through its humanitarian fund and value input, which is defined as “Monologue” in an initial phase; later China started a “Dialogue” phase with ECHO, during which China would re-examine the humanitarian inputs, reflect the cons and pros about the response systems, and try to deal with the humanitarian assistance on an equal level; finally, China and ECHO move to a Collaborate phase and cooperate on some humanitarian issues.

6. Concluding Remarks

European elements acted as the main pulse that has been promoting Chinese modernization and development in a comprehensive scope, especially the modernization of humanitarian system and the value of sustainability. Chinese humanitarian aid system was modernized by “European elements” through the steps as followed, i.e. cultural buildup in a strange background; the enlightenment of humanitarian thoughts; buildup of charities and other humanitarian practices; acceptance by Chinese publics and governments; and finally the establishment of professional humanitarian organizations.

During this long process, Europe and China have played different roles in varied phases, which told a story about roles transition, such as the enlightener or teacher versus a student, a competitor versus another competitor, and the collaborating relationship in the world.

Governments of the Member States meeting within the Council, the European Parliament and the European Commission, 18 December 2007

⁴² Conference on Asia-Europe Disaster Response Capacities Building, 29 May 2009, Chengdu, China, available at: <http://www.chengdu.gov.cn/govAffairInfo/detail.jsp?id=259191>

As the pillar of global humanitarian actions since 19th century, Europe has directly and indirectly affected Chinese humanitarian approaches on several aspects as followed. First, Europe took the leadership in humanitarian actions on modern humanitarian value and organizational structures, which established a model for China and other countries. Under the setting of “strong state versus weak society”, European intervention greatly improved the degree of socialization of disaster relief with the mobilization of other agencies.

Second, Europe provided humanitarian experts, advanced humanitarian technologies and plentiful relief experiences, which has been shared and contributed to the development of modern humanitarian system like China. And Europe has made a lot of disaster response and relief laws that has become the legal model of other countries including China.

Besides the direct influence, European cultures also contribute to raise human awareness and reflection about Chinese traditions and stimulate the growth of Chinese civil society. European humanitarian approaches that emphasize the human-centered and broader participation of various actors have changed Chinese traditional disaster-response ways featured of people-centered and government-dominated.

Generally, the bilateral value interaction is characterized the atypical dialogue, dramatic collision, and disjunctive inheritance, which depicts a characteristic picture. First of all, the dialogue of two culture centers is an atypical process. The arrogance and superiority of both civilizations encountered in an atypical way and through the atypical approach. The Ritual Controversy when George Macartney came to visit Emperor Qianlong made the Europeans realize the fragility of China and the impossibility of a peaceful dialogue.⁴³ Therefore warships and cannon knocked the door of China and forced the Chinese to take the dialogue. In the development of Chinese humanitarian system, European discourse dominated the whole process actually. But humanitarian actions should base in the local culture “to have the necessary resource or technology”, and western models of aid are not always “transferable”.⁴⁴

Moreover, a lot of dramatic collisions occurred when two civilizations met. When politics with religion play a significant role in the bilateral interaction, the collisions would be intensified. When the humanitarian relief and charity were interrelated with Christian preaching, and when the Christian activities were binding with imperial interests and colonizing behaviors, how could the disaster-hit countries and their people accept the humanitarian actions with the given principles? When the pendulum goes to another side, the extreme nationalism will come true just like the anti-Christian especially anti-Catholic movements in the end of 19th century. In this sense, the tension between Euro-centrism and localization of Chinese humanitarianism experienced a series of dramatic episodes.

Lastly, the inheritance of humanitarianism has often been disrupted due to diverse causes. On the one hand, Chinese haven't found an integrated framework for European elements and Chinese traditions in its humanitarian system and two parts are disjunctive; on the other hand, the most significant disjunction surprisingly rooted from the interrupts owing to political reasons that

regard Europeans as one kind of threats. This kind of perception made Chinese officials to reject all the stuffs marked “Made in Europe”, typically like the Catholic prohibition in 1715 and the dispute between Marxism and mainstream European thoughts after 1949. These events finally made China isolate with humanitarian actions.
