Pre-Service Teachers Teaching Effectiveness: The Nueva Vizcaya State University Experience

Bonimar A. Tominez, Nueva Vizcaya State University, Philippines Leila M. Dela Cruz, Nueva Vizcaya State University, Philippines

The Asian Conference on Education & International Development 2015 Official Conference Proceedings

Abstract

In the world of teaching, teachers are constantly amazed by the ingenuity of their teaching; they learn to be imaginative and inventive; they make a difference in the lives of their pupils and they get so much unreserved affection, respect and love in return. Thus, teachers must guarantee to continue cultivating their learners, to uncover their potentials and to mold them as well-rounded citizens. This study ascertained the teaching effectiveness of pre-service teachers of the Nueva Vizcava State University, Philippines. As a descriptive-correlation study, this paper presumed that the domains of teaching effectiveness which include the pre-service teacher's personality, lesson planning, content, teaching methods, classroom management, and questioning skills were associated to their demographic variables. The satisfactory teaching effectiveness in teaching methods of married pre-service teachers is attributed to the reality that they have wider responsibilities other than teaching. Their satisfactory display of teaching effectiveness in content and classroom management is highly associated with factors in the learning environment. Their significant teaching effectiveness in personality is connected to how the school factors influence them to be good models to their learners. Generally, they reflect a notable teaching effectiveness in questioning skills as they were properly mentored to be articulate in asking questions and in stimulating the higher order thinking skills of their learners.

Keywords: pre-service teachers, teaching effectiveness, teaching method, content, classroom management, questioning skills, lesson planning, teacher personality

Introduction

Teaching is a rewarding vocation for those who can merge the scientific and artistic features of the profession. It is characterized by a demand for quality education, increasing racial and ethnic diversity among learners, and more instructional responsibility. Effective teaching is marked by teachers who have control of the knowledge base on teaching, can carry out a repertoire of best practices, have attitudes and skills needed for reflection and problem solving, and consider teaching as a lifelong process (Arends, 1988).

Preparing to be a teacher is a long and complex practice filled with excitement and challenge. It commences with the many early experiences one has with his parents and siblings and continues as he observes teachers through the formal classroom instruction. It concludes with professional training and teaching experiences that last a lifetime for those who choose teaching as a profession.

Article 1, Section 1 of the Commission on Higher Education Memorandum Order (CMO) #30 series of 2004 (Revised Policies and Standards for Undergraduate Teacher Education Curriculum) states that, to wit:

"Quality pre-service teacher education is a key factor in quality Philippine education. In the Philippines, the preservice preparation of teachers for the primary and secondary educational sectors is a very important function and responsibility that has been assigned to higher education institutions. All efforts to improve the quality of education in the Philippines are dependent on the service of teachers who are properly prepared to undertake the various important roles and functions of teachers. As such, it is of utmost importance that the higher standards are set in defining the objectives, components, and processes of the pre-service teacher education curriculum."

The New Teacher Education Curriculum (NTEC) stipulates that practice teaching is the most important experience in the pre-service preparation of future teachers. It is a 6-unit course offered to pre-service teachers who have completed the six (6) experiential learning courses. This course offers them the opportunity to experience actual teaching in the learning environment. They are required to display their abilities to effectively execute learning activities and evaluation in the classroom. Further, they are expected to experience all the features of full-time teaching responsibilities under the tutelage of a cooperating teacher (Vega, 2008).

Compliant to the above CMO, the Nueva Vizcaya State University, through its College of Teacher Education, offers the Bachelor of Elementary Education (BEEd) program to cater to students who prefer to teach in the elementary level. Hence, the university maintains a functional partnership with the Department of Education (DepEd), Division of Nueva Vizcaya through a Memorandum of Agreement (MOA) for the deployment of the university's pre-service teachers in their experiential learning courses. After a MOA was signed, and approval for deployment was secured, these pre-service teachers are positioned to the different districts and schools in full immersion.

Further, as the BEEd program of the university attained Level III re-accredited status in 2011 by the Accrediting Agency of Chartered Colleges and Universities of the Philippines (AACCUP), it needs to continuously meet the challenges of improving the curriculum and pedagogical skills and practices of the elementary teacher education students. This can be done through a closer look on the performance of its pre-service teachers during their internship as this would give hints on certain factors in their pedagogical performances that the university needs to improve on and dwell more in pedagogy before students enter the internship program.

This study sought to establish the teaching effectiveness of elementary pre-service teachers of NVSU Bayombong, Nueva Vizcaya. Specifically, the study ascertained the demographic profile of the pre-service teachers in terms of gender, civil status, district where cooperating school belongs, cooperating school assignment, grade level assignment, and teaching position of cooperating teacher; to establish the level of the pre-service teachers' teachers' teaching effectiveness in terms of teacher's personality, lesson planning, content, teaching methods, classroom management, and questioning skills; and, to ascertain the significant relationship on the level of the pre-service teachers' teaching effectiveness and their demographic profile.

Methodology

This research employed the descriptive-correlation study. The descriptive research describes, analyzes and interprets the conditions that presently exist. The correlation study determines the extent to which different variables are associated to each other.

This study was conducted at the College of Teacher Education of the university and in the different DepEd districts and elementary schools. The different cooperating schools with the corresponding districts and codes are reflected in Table 1.

| Districts | District | Cooperating Schools | School |
|-------------|------------|-----------------------------------|----------|
| | Code | | Code |
| Bagabag | District 1 | Bagabag Central School | School A |
| Bayombong 1 | District 2 | Bayombong Central School | School B |
| | | Bayombong South Elementary School | School C |

| Solano 2 | District 5 | Solano South Central School | School L |

 Table 1. Distribution of pre-service teachers to the different districts and cooperating schools in DepEd, Division of Nueva Vizcaya

Solano North Elementary School School M

This is a two-year study that utilized the elementary pre-service teachers who were assigned to have full immersion at the DepEd elementary schools as respondents. For the purpose of uniformity, 50% of the total population of pre-service teachers was taken from year 1 (n=37) and the other half was taken from the roster of pre-service teachers in year 2 (n=36).

The research instrument used in the study is a questionnaire with two parts. The first part consisted of the respondents' demographics. The second part is a standardized rating scale with indicators of pre-service teachers' teaching effectiveness (Experiential Learning Courses Handbook, 2009).

The pre-service teachers were evaluated by their Cooperating Teachers, Cooperating Principals, and Supervising Instructors during their first, second and final demonstrations, respectively. These ratings served as secondary data.

Descriptive Statistics such as frequency, percentage, mean and standard deviation were used to describe the demographic profiles of the pre-service teachers while inferential statistics such as the correlation procedures were used to determine the relationship of the identified variables. The 0.05 probability level was the critical point of reference used in this study.

Results And Discussions

Demographic Profile of Pre-Service Teachers

The BEED program of the university is dominated by female and single students. Majority of the pre-service teachers were assigned to have full immersion in the districts that are of close proximity to the university. The pre-service teachers were almost equally deployed to DepEd central and elementary schools that are within the 50-kilometer radius from the university. Majority of the pre-service teachers were given the privilege to teach at the intermediate level while the rest were deployed to teach at the primary level which indicates that they were prepared and honed to teach in all grade levels in the basic education. Many pre-service teachers were supervised by in-service teachers whose positions are Teachers 1 and 2, and Master Teachers 1 and 2 while few were coached and mentored by elementary grade teachers whose position is Teacher 3 which further reflect that pre-service were directed by teachers with varied teaching positions.

Level of Teaching Effectiveness of Pre-Service Teachers

Teacher's Personality. The pre-service teachers manifested an admirable teacher personality (overall mean=1.15). This reflects that they brought in the teaching-learning environment a well-rounded personality that motivates their learners to stay focused in the subject matter. This further indicates that they manifest a remarkable personality in the teaching environment as they were prepared to be living examples to their learners. And this may be associated with the belief being held by both the

faculty and students in the university that "oneself" is the best visual aid that he or she can offer to his or her pupils.

Lesson Planning. The pre-service teachers did excellently in their preparation of lesson plans (overall mean=1.12). This reveals that they organize their teaching well by selecting learning experiences that appropriately match the subject matter. Further, they prepare state-of-the art lesson plans that are relevant to the objectives of the lesson. This also manifests that they were taught to prepare their lesson plans efficiently and effectively by their pedagogy instructors. This could also be attributed to the proper guidance offered by their cooperating teachers and their being receptive to constructive criticisms from those who mentored them in pedagogy.

Content. The pre-service teachers manifested an excellent performance in content (overall mean=1.23) This may be attributed to how they were taught by their pedagogy teachers to be consistent in bringing learning experiences that have direct bearing with the lesson. Additionally, interns were constantly reminded to connect the subject matter with the learner's experiences to make learning more meaningful and interesting.

Teaching Methods. The pre-service teachers displayed a remarkable performance in teaching methods (overall mean=1.18). This reflects that they persistently adapt teaching strategies that connect the objectives of the lesson to the needs, abilities and interests of the pupils. Further, the pre-service teachers employ a variety of instructional technology to stir up the thoughts and imagination of the learners.

Classroom Management. The pre-service teachers were evaluated outstanding (overall mean=1.15) in managing classrooms. This indicates that they are excellent in planning and executing procedures that help get things started quickly and surely as well as in setting up rules that reduces disruptions and guarantee safety.

Questioning Skills. The pre-service teachers were evaluated very satisfactory in their art of questioning (overall mean=1.27). This signifies that they are better in building the higher-order thinking skills of their learners. Further, they demonstrate an approach of asking questions that lead to the development and understanding of the lesson.

Overall. The teaching effectiveness of the pre-service teachers was rated outstanding (overall mean=1.18). Findings indicate that they brought in the teaching-learning environment a well-rounded personality that motivates their learners to stay focused in the subject matter; they organize their teaching well by selecting learning experiences that appropriately match the subject matter; they were constantly reminded to connect the subject matter with the learner's experiences to make learning more meaningful and interesting; they persistently adapt teaching methods that connect the objectives of the lesson to the needs, abilities and interests of the

pupils and employ a variety of instructional technology to stir up the thoughts and imagination of the learners; they are excellent in planning and executing procedures that help get things started quickly and surely as well as in setting up rules that reduce disruptions and guarantee safety; and they are geared towards stimulating the minds of the learners to become imaginative and productive in their higher-order thinking skills.

Relationship between the Pre-Service Teachers' Demographic Profile and their Teaching Effectiveness

Cooperating Teachers. The significant relationship between Civil Status and the preservice teachers' teaching effectiveness in terms of Teaching Method as reflected by the correlation coefficient value of r = 0.298 indicated that those who are married garnered significantly lower level of teaching effectiveness.

Table 3. Correlation matrix showing the result in testing the relationship on the extent of the pre-service teachers' teaching effectiveness as assessed by the cooperating teachers and their demographic variables

| Demog Variab | graphic le | Personali ty | Lesson Planning | Conte nt | Teaching Methods | Class Mgt | Questioni ng Skills |
|-----------------|----------------------|-----------------|--------------------|-------------|---------------------|--------------|------------------------|
| Civil status | Corr. Coefficient | .130 | .209 | .186 | .298* | .145 | 146 |
| | Sig. (2- tailed) | .273 | .076 | .115 | .010 | .221 | .318 |

*Correlation is significant at the 0.05 level (2-tailed).

Findings reveal that married pre-service teachers showed a lower level of teaching effectiveness in the area of teaching methods while their counterparts manifested an excellent teaching effectiveness. This could be ascribed to the reality that married interns have other bigger concerns than teaching.

The findings of Covino and Iwanicki (1996) supports the above results when they concluded that effective teachers, regardless of civil status, are adept in utilizing a range of teaching strategies, and they demonstrate more depth and differentiation in learning activities. Stronge and Hindman (2003) also articulated that effective teachers promote higher learning gains by affording instruction that meets learner needs through the use of techniques such as guided practice, hands-on learning, questioning, problem-solving, and feedback.

Cooperating principals. The significant relationship between Cooperating School Assignment and the pre-service teachers' teaching effectiveness in terms of Content reflected a correlation coefficient value of r = -0.233 indicating that students whose cooperating school assignments were in Schools E, F and G garnered significantly lower level of teaching effectiveness in learning content.

Table 4. Correlation matrix showing the result in testing the relationship on the extent of the pre-service teachers' teaching effectiveness as assessed by the cooperating principals and their demographic variables

| Demograph | ic Variables | Personali ty | Lesson Plannin g | Conten t | Teachi ng Method | Class Mgt | Questioni ng Skills |
|------------------------|----------------------|-----------------|------------------------|-------------|------------------------|--------------|------------------------|
| Cooperatin g school | Corr. Coefficient | 229 | 142 | 233* | 224 | 243* | 211 |
| assignment | Sig. (2- tailed) | .051 | .230 | .047 | .056 | .038 | .073 |

*Correlation is significant at the 0.05 level (2-tailed)

Likewise, the significant relationship between cooperating school assignment and the pre-service teachers' teaching effectiveness in terms of classroom management reflected a correlation coefficient value of r = -0.243 indicating that those whose cooperating school assignments were in Schools E, F and G garnered significantly lower level of teaching effectiveness in managing classrooms.

Findings reveal that the teaching effectiveness of pre-service teachers in terms of content and classroom management is influenced by their cooperating school assignment. This indicates that those who were deployed in Schools E, F and G demonstrated lower level of teaching effectiveness in content and classroom management. This further indicates that their teaching effectiveness may be affected by many internal and external factors of cooperating school.

Covino & Iwanicki (1996) stressed that whatever factors there may be in the learning environment, effective teachers consistently nurture a positive climate by setting and reinforcing clear expectations throughout the school year particularly at its beginning Additionally, Cruickshank & Haefele (2001) found out that the classrooms of more experienced teachers are better organized around routines and plans for handling problems than are those of rookie teachers.

Morine-Dershimer (1989) also clarified that classroom variety requires teachers to craft adaptations in their teaching plans to contain the educational needs of individual learners and thus sustain the learning of all pupils. Variations such as explicit activities intended to support learner's manifestations of feelings, opinions and personal experiences linked to the subject matter can accommodate individual variation, celebrate multiplicity, and add to better pupil outcome. These experiences allow teachers to modify their instructions to realize a better fit for all learners.

Stronge & Hindman (2003) further concluded that effective teachers acquire skills and approaches that assist them establish and sustain a safe, orderly, and dynamic environment. Their classrooms commonly display proactive discipline, efficient procedures and routines and multitasking. They further expressed that effective teachers set priorities, plan lessons, distribute time and set up high expectations for pupil learning and behavior. Effective teachers develop clear goals for pupil outcome and associate classroom activities to these goals. They make the most of instructional time through limited disruptions and smooth transition. They further create conditions in which pupils can succeed and feel secured in taking academic risks.

Supervising Instructors. The significant relationship between District where cooperating school belongs and the pre-service teachers' teaching performance in terms of Personality as reflected by the correlation coefficient value of r = -0.278 indicated that pre-service teachers who were deployed in District 1 and District 5 garnered significantly higher level of teaching effectiveness in teacher personality.

Further, the significant relationship between Cooperating school assignment and the pre-service teachers' teaching effectiveness in terms of Personality as reflected by the correlation coefficient value of r = -0.278 indicated that those who were deployed in School A garnered significantly higher level of teaching effectiveness in teacher qualities.

Table 5. Correlation matrix showing the result in testing the relationship on the extent of the pre-service teachers' teaching effectiveness as assessed by the supervising instructors and their demographic variables

| Demographic V | ariables | Personali ty | Lesson Plannin g | Conte nt | Teachin g Method | Clas s Mgt | Question ing Skills |
|----------------------------|----------------------|-----------------|------------------------|-------------|------------------------|------------------|------------------------|
| District where cooperating | Corr. Coefficient | 278* | 201 | 182 | 224 | 217 | 157 |
| school belongs | Sig. (2- tailed) | .017 | .088 | .123 | .056 | .065 | .185 |
| Cooperating school | Corr. Coefficient | 245* | 192 | 149 | 179 | 153 | 179 |
| assignment | Sig. (2- tailed) | .037 | .103 | .209 | .129 | .196 | .130 |

*Correlation is significant at the 0.05 level (2-tailed)

Findings reveal that the teaching effectiveness of the pre-service teachers in the area of teacher's personality is influenced by the district where cooperating school belongs and their cooperating school assignment. These indicate that those who were deployed in District 1 and District 5 and School A manifested significantly higher level of teaching effectiveness in teacher's personality. The results may be due to how the school factors such as cooperating teachers, principal and facilities motivate and influence them to be considerate, caring, prim and proper so as to be good models to their learners.

To support, Stronge & Hindman (2003) concluded that effective teachers display compassion and equality in teaching. They reveal a positive outlook about life and teaching. They are reflective thinkers who exhibit high expectations for themselves and their learners.

Overall teaching effectiveness. The significant relationship between District where cooperating school belongs and the pre-service teachers' overall teaching effectiveness in terms of questioning skills as reflected by the correlation coefficient value of r = -0.238 indicated that students who were deployed in District 1 and District 5 garnered significantly higher level of teaching effectiveness in terms of Questioning Skills.

Table 6. Correlation matrix showing the result in testing the relationship on the extent of the pre-service teachers' overall teaching effectiveness as and their demographic variables

| Demographic Variables | Personali ty | | | Teaching Methods | Class Mgt | Questio ning skills |
|--|-----------------|------|------|---------------------|--------------|---------------------------|
| District where Corr. Coeff. | 174 | 170 | 198 | 223 | 230 | 238* |
| cooperating Sig. (2- school belongs tailed) | .141 | .151 | .093 | .058 | .051 | .043 |

*Correlation is significant at the 0.05 level (2-tailed)

Findings reveal that the teaching effectiveness of the pre-service teachers in the area of questioning skills is influenced by the district where cooperating school belongs. This indicates that those who were deployed in District 1 and District 5 manifested higher level of teaching performance in as much as questioning skills is concerned. This could be ascribed to how remarkably the pre-service teachers were mentored by their resource teachers coupled with their continuous desire to be articulate in asking questions and in stimulating the higher order thinking skills of their learners. Additionally, those who were deployed in these districts may be considered as the "cream of the crop" of their batch.

Regardless of any factors, Wenglinksy (2002) concluded in his study that teachers with greater subject-matter knowledge tend to ask higher-level questions, involve students in the lessons, and allow more student-directed activities. Further, Stronge (2007) stated that teachers with subject-matter knowledge provide more opportunities to involve students in meaningful discussions and student-directed activities.

Conclusions and Recommendation

Conclusions

Pre-service teachers bring in the learning environment a well-rounded personality that motivates their learners to stay focused in the subject matter; they organize their teaching well by selecting learning experiences that appropriately match the subject matter; they are constantly reminded to connect the subject matter with the learner's experiences to make learning more meaningful and interesting; they persistently adapt teaching methods that connect the objectives of the lesson to the needs, abilities and interests of the pupils and employ a variety of instructional technology to stir up the thoughts and imagination of the learners; they are excellent in planning and executing procedures that help get things started quickly and surely as well as in setting up rules that reduce disruptions and guarantee safety; and they are geared towards stimulating the minds of the learners to become imaginative and productive in their higher-order thinking skills.

The agreeable teaching effectiveness in teaching method of married pre-service teachers is attributed to the reality that they have bigger responsibilities other than teaching. Their reasonable demonstration of teaching effectiveness in content and classroom management is highly linked with the internal and external factors in the learning environment. Their remarkable display of teaching effectiveness in personality is attributed to how the district and school factors motivate and influence them to be prim and proper so as to be good models to their learners.

Generally, the pre-service teachers reflect a notable teaching effectiveness in questioning skills as they were properly mentored to be communicative in asking questions and in stimulating the higher order thinking skills of their learners.

Recommendations

University Administration and Curriculum Planners. Results of this study afforded a basis for curriculum enhancement as well as revisit of existing policies on admission and retention in teacher education programs in order to come up with stronger policies geared towards quality teacher education, quality teacher education graduates and better education for the Filipinos. Curriculum enrichment for teacher education programs must focus on meeting the diverse needs of students including that of the needs of pre-service teachers who have family responsibilities. Moreover, curriculum planners must consider giving more weight to Experiential Learning courses (from 1 unit to 3 units per Field Study course) to better equip the students with the necessary competencies they need as they enter the world of teaching.

University Professors and Supervising Instructors. Findings of the study presented feedbacks on the effectiveness of the use of teaching strategies and methodologies in the classroom in so far as the teaching of pedagogy to teacher education students is concerned. Pedagogy subjects must focus more, but not confined only, to the development of the classroom management skills of pre-service teachers. Further, communication skills development and the art of questioning must form part of an enrichment course to be offered to elementary teacher education students. Additionally, supervising instructors and faculty members of Teacher Education Institutions must strengthen the exposures in Field Study courses and internship programs of pre-service teachers by deploying them not only in public elementary schools but to include private schools. The tie-up between a TEI and a private school can be reinforced through a Memorandum of Understanding (MOU).

Department of Education (DepEd) Administrators and Cooperating Teachers. In the light of the findings of the study, weaknesses and strengths of pre-service teachers were revealed, hence, providing the DepEd people with data that help them provide better "mentoring" to pre-service teachers and neophyte teachers under their tutelage.

Pre-service Teachers. Findings of this study provided feedback on their teaching effectiveness which becomes a basis for keeping themselves informed of the latest trends of education and be updated through their attendance to continuing education

such as seminars, conferences and training as well as membership to professional organizations once they enter the teaching profession.

Future researchers. Further study must be done to determine other factors that contribute to the effective teaching of pre-service teachers using triangulation and or other research methodology.
